Research has shown that students have a poor understanding of the bonding in metals and models for metallic structure and bonding at all level (Coll & Taylor, 2002; Coll & Treagust, 2003; Coll, 2008; Taber, 2003). Cheng and Gilbert (2014) indicated that the students were unable to visualize the metal structure in a scientific way. Taber (2003) investigated learners' mental model for metallic bonding in his interview study and characterized learners' conceptualizations of metallic bonding. He found that while some of the students did not think the metallic substance represented would have any bonding, others thought there was some form of interaction in metals, but this was not proper bonding at the beginning of the study. Some of them suggested there would be ionic or covalent bonding in metals or metallic bonds existed between two metals. The "sea of electrons" metaphor for the metallic bond is used in teaching metallic bonding commonly. Taber (2003) found that students seemed to accept the "sea" metaphor uncritically, and to develop images of cations and/or electrons floating, swimming, etc. in the sea without thinking through the consequences of such a model. Other students seemed to develop the "sea" metaphor in relation to ideas about orbital overlap or electrical forces, to provide both a more meaningful framework for interpreting the metallic bond, and a model that is more coherent with developing understanding about other types of bonding (Taber, 2003). One of the problems that led to students' misconceptions about the metallic bonding is that students at both high school and undergraduate level tend to develop hybrid models. Students can use different model together and integrate them which they treat as coherent and finally they can create their own mental models. Besides, representations of scientific models have placed in textbooks or teachers' explanations while teaching models. Sometimes they might be rather confusing. For this reason, to grasp how students visualize the visual representation of metallic structure is important..

The aim of this study is to identify mental models of the metallic bonding and metallic structure of a group of undergraduate chemistry students after taking general chemistry course and taught metallic bonding theories and models.

METHODS

Research Participants

The participants consisted of 64 (43 female and 21 male) second-year chemistry education students who taught more sophisticated models of metallic bonding in their first academic year as part of general chemistry course.

Data Collection

This is a survey that a written survey enabled to use a sample large enough to reflect the variety of models hold by students. The open-ended response questions were chosen in this study since the metallic bonding can be explained by using a number of different models. Students were asked to provide a drawing of structure and bonding in the copper metal and written explanations of metallic bonding. The drawing task question (1) aimed to probe into their mental visual representations of metallic bonding. In the second question, the main purpose was to obtain students' mental verbal description about metallic bonding.

Data Analysis

This study categorizes the students' descriptions of metallic bonding and bonding in a metallic structure by looking for structurally significant differences that clarify how students describe metallic bonding and draw bonding in the metallic structure. For this reason, analysis of students' answers was based on the phenomenographic method. This method was developed by Marton (1981). He described phenomenography as a "research method for mapping the qualitatively different ways in which people experience, conceptualize, perceive, and understand various aspects of, and phenomena in, the world around them." To determine the reliability of analysis was used intra-judge reliability which would involve a single judge scoring at the same test at two different times (Gay and Airasion, 2000, p.176).

RESULTS AND FINDINGS

From the analyses of students' drawings about the metallic structure of cupper asked in question (1), six types of mental models and two hybrid models were identified. The types of mental models obtained from the first question, and students' frequency/percentage are given in Table 1. From Table 1, it was said that a preferable model was *simple particle model* (SPM) that was thought of the elementary grades. Nearly quarter of students (23.4%) drew *simple particle model* (SPM) to show the structure of cupper metal. the Second and third ones were a *unit cell model* (15.6%) and *electron-sea-model* (9.4%), respectively.

Table 1: The frequency and percentage of students' mental model of the structure of metal

Types of Model	f	%
Simple Particle Model	15	23.4
A Unit cell model	10	15.6
Electron-Sea-Model	6	9.4
Covalent bonding/electron cloud model	4	6.3
Models based on Molecular Orbital Theory	4	6.3
Close-packing model	2	3.1
A Unit cell model and Close-packing model together	2	3.1
A hybrid model of a unit cell and particulte models	1	1.6
A hybrid model of covalent bonding model and a unit cell model	1	1.6
$_{29}Cu{:}1s^2 2s^2 2p^6 3s^2 3p^6 4s^1 3d^{10}$	4	6.3
No answer/I do not know	15	23.4
TOTAL	64	100.1

In the second questions, students were asked to describe what the metallic bonding was. It was found that nearly 40% of students described metallic bonding as "The bonding which is occurred **among metal atoms** is called as metallic bonding".

CONCLUSION

It was concluded that most of the students' mental models were simple, in contrast with the sophisticated complex models taught. While some of the students thought the metallic bonding as the covalent or ionic bonding, some of the students had hybrid models of the metallic bonding theories used during lessons. Justi and Gilbert (1999) proposed that models constituted of elements of different historical models treated as if they constituted a coherent whole be called as a hybrid model.

It was also found that the metallic bonding was also not seen as a real bonding and students thought that there was some form of interaction in metals as indicated in Taber' study (Taber, 2003). It was found that almost quarter of students still used the Simple Particle Model they brought from elementary school science courses. It can be said that the students' prior knowledge influences how new knowledge is constructed from the data of this study.

RECOMMENDATIONS

First of all, the students should be presented fundamental conditions of the bond occasion in generally taking into account electrostatic attraction and energy. The main problem about difficulties concerning the bonding is that students do not make sense why the atoms come together to occur the chemical bonds. It should be avoided that the simple explanations about bonding such as electron sharing or transferring. While using different models to explain the same topic, why these different models used should be clarified.

ACKNOWLEDGMENTS

THE RELATIONSHIP BETWEEN INFORMATION LEVEL OF INDIVIDUALS REGARDING INFORMATION TECHNOLOGY AND THEIR PERCEPTIONS CONCERNING INFORMATION SECURITY: UNIVERSITY STUDENTS AS EXAMPLE

Faruk Süleyman BERBER
Süleyman Demirel University

Ecir Uğur KÜÇÜKSİLLE
Süleyman Demirel University

ABSTRACT: As a result of the developments experienced in information technology, many such services as bill payment, shopping, e-government transactions, access to libraries and information sources, finding the routes to go are possible to find in virtual worlds. Transferring all these businesses and operations to the IT environments comes along with the security problems. Because the threats, which come to the information shared in these environments, increse rapidly and show great diversifications, the importance of works to be done on the security of information is increasing with each passing day.

Today, especially those information and communication devices having internet access are used extensively by individuals. Every day, many new threats, with which the individuals encounter while they are using these devices, and new measures to be taken against these threats can be added to the present ones. This situation requires users to keep up to date constantly their information on this subject. In this study, the data which is obtained by measuring the relationship between information level of university students concerninig information technologies and their perceptions about information security was shared, and measures which can be taken against information security threats and solution proposals were presented.

Key words: Information security, perception of information security, digital threats.

INTRODUCTION

Information security, sometimes shortened to InfoSec, is the practice of defending information from unauthorized access, use, disclosure, disruption, modification, perusal, inspection, recording or destruction. It is a general term that can be used regardless of the form of the data may take (e.g. electronic, physical). Information security, computer security and information insurance terms, often are used interchangeably. These fields are relevant and can be reached on the protection of the integrity and privacy of the information they share is common objectives with regard to (information security, n.d.).

When examined institutions and individuals, it is seen that the biggest reason why the mentioned ones experience problems related to the information security is that they do not have eduquate information regarding this delicate topic. Nowadays, there are a growing number of individuals who use information technologies. Some of these individuals use the information technology in a number of such ways like the penetration of other digital media , data theft, and therefore threatens the security information to damage. In the past this kind of threat was performed by a small number of professional attackers; today the number of attackers has grown rapidly; attackers profiles are changing and the number of the attacks is also increasing day by day. The software can be easily downloaded via the Internet by hackers to attack and thus more information about the individuals may also be attacked; information on this subject on the internet, as documents and videos would be easy to access by the hackers, so taking serious measures on personal and corporate information security have been essential for those using information security.
In this study, the relationship between university students' information and communications technology(ICT) knowledge on the level of information security perceptions, which can be measured with a questionnaire findings and shared their information security measures to be taken against threats and solutions are presented.

Current Threats

In the Internet environment, our children, our young users and even unconscious users may face a number of unexpected and unwanted threats, dangers and situations. These are;

- Pornographic, hatred, anger and containing violence, illegal content, can be exposed on the internet to the users,

- In the online environment, the address will endanger themselves or their families and their credit card numbers when they share information like telling third parties through email or chat programs who was at house at that moment or how many people were there at home at that time,
- making purchases over the Internet without telling their parents with their parents' credit card (by children)
- They can communicate with issues such as the age of the great and evil people and criminal organizations as may be; in different ways and may also show itself in distress.

All these risks are sufficient to reveal the importance of the issue (Canbek & Sağıroğlu, 2007).

Individuals and organizations that use information technology, all information and document sharing to you move the digital environment, business dealings and transactions made in digital media is increasing, which, naturally, on current threats and hazards associated with data security leads to significant increases cost.

At the beginning of the most experienced areas of current threats and dangers that come mobile platforms and applications are running in a web environment. Web applications are the easiest communication ways for individuals and organizations to have easy access to all information they want, which appears to be the fastest and most effective medium as well. However, this information which is accessed via the web, during storage and sharing, it is necessary to take serious measures in terms of data security. The access to this web application on mobile platforms, reveals much more risky information security threats with it.

Attacks on the information shared on the web, in relation with the growth of the services provided on the web is increasing every day. That the security of web applications are not taken serious enough, secure software development techniques are not used and the individuals and institution have lack of sufficient knowledge about information security can be explained the major reasons for these attacks to increase.

Today, there are many studies related to web application security. One of these works, started to be developed in 2001 by Mark Curphey and still ongoing was OWASP (The Open Web Application Security Project) project. Free tools for improving web application security, standards, making forums regarding web applications security, writing the article are subject works of OWASP's. Another study conducted by Jeremiah Grossman and Robert Auger was founded in 2004 to develop open standards and web applications related to security issues such as dissemination and exploitation of workers and it is called as the Web Application Security Consortium (TheWeb Application Security Consortium-WASC). Determined by OWASP and WASC which are recognized in the world about web application security, the most common attacks on web applications are listed below. This attack methods were included in the list as the basis for current threats and developments (Vural & Sağıroğlu, 2008).

- Authentication
- Authorization Vulnerability
- Cross Site Script
- CommandExecution
- SQL Injection

When looking at this attack methods, it is clear that during the development of web and mobile applications, the necessary measures should be taken. Taking these measures is the responsibility of developers at most. In addition, all web and mobile application service users whom we describe as as end-users, should have to know what these threats are and what kind of measures they shall take. and that's what this is threatened by the need to take measures which are required to know.

The extensive use of information technology has brought new security risks with it. Specifically, with the increasing use of mobile technology it is also seen that there are huge increases in crime in this area. The rapid development of technology and increasing skills of attackers increased the necessity of special staf raised in this area to detect the crime and criminals. In most of the smart phones, without the use of specialized hardware and software, it is almost impossible to detect malicious software. This hardware and software is expensive in terms of cost, and they are also extremely complex and difficult in terms of use. The community should be informed about the threats the mobile devices are facing and thus a sufficient level of awareness should be created, and they should be informed about the measures to be taken as well. In addition, companies using these technologies in their infrastructures, must be provided with the necessary safety measures to take (Ekim, 2013).

Institutions and individuals who are aware of the threats that may occur on mobile devices and environments, should take the necessary protective measures, and they need to educate both their staff and users and raise awareness on this issue (Sağıroğlu & Bulut, 2009).

PURPOSE OF RESEARCH

In this study, to determine the level of awareness of users about information security are conducted with a survey according to individuals' Internet use years and to find their relationships if there were any. Survey on the results, examining the relationship between knowledge level of information security perceptions of university students on the use of information technology is intended to make several observations. The findings are shared, measures can be taken against information security threats and solutions are presented.

Students; the level of knowledge about information technology, access methods to the Internet, Internet usage frequency, internet habits (shopping, e-government, gaming, email, etc.), various survey questions to learn about the security measures they have software and implements they use directed and their answers to these questions on ICT compared with knowledge. Comparison results are examined in detail; mobile and web platforms using intensive information security perceptions of university students were measured, the results were analyzed and solutions were presented not only for students but also for all users who can all apply the online content while using.

Following sections focus on the outcomes obtained from the survey conducted between December 1, 2015 - February 1, 2016 through total of 300 students studying at the University of Süleyman Demirel.

THE METHOD USED IN RESEARCH

The Universe and Sample

The survey was administered to students at Süleyman Demirel University and the universe of research "Süleyman Demirel University Students" was determined due to measurement of the level of knowledge in information security matters based on internet usage. One of the questionnaire of the student was omitted from the evaluation. When taken into consideration of university students who are at the age of 299, it is seen that the demographic data ranges from 17 to 29.

Data Collection Tools

The IT security survey developed for this study was used as data collection tool. Including age and gender, there are two demographic parameters in the survey conducted. Information processes actions of the social networks that most crimes occur, internet banking, desktop software and the browser downloads are made, questions are used to measure the level of awareness on the issues.

Acquisition and Analysis of Data

Datas from Süleyman Demirel University in different sections of the main Information Technologies is collected in courses through students studying 2015-2016 school year and obtained from a survey applied in the fall semester. According to statistical data, it is encoded and transferred to computer environment properties. The data in the same environment analysis using the R package program has been made ready. Analysis are Kruskall Wallis tests, Chi-square and Anova tests.

RESULTS

The data in this study which was obtained by statistical findings was mentioned below. The findings are; gender, year of internet use, social networks are used by individuals, according to internet banking and e-commerce use, it contains results.

Investigation of Students According to Their Ages and Gender

The sample consisted of 300 people and the results of 299 persons were taken into consideration. The data on the gender distribution of the participants is given in Table 1. Accordingly, it is the 136 men and 163 women's research group.

Table 1. Respondents Gender Distributions

Gender	Rate (%)
Male	45.33
Woman	54.67

The age of the audience, min, max, average and standard deviation values are shown in Table 2.

Table 2. Participants Age Distributions

Variable	N.	Min	Max	Average	Standard Deviation
Age	299	17	30	19.3813	1.61633

The age of the participants who were surveyed between 17 and 30, and the average of the 19 can be seen in Table 2. The reliability analysis for the masses; Table 3 is providing 93% reliability and it can be seen.

Table 3. Reliability Statistics

Cronbach's Alpha	N of Items
, 931	98

Investigation of Distribution of Students According to Internet Usage Rates
Distribution of Students According to Internet use rate is shown in Table 4.

Table 4. Descriptive Statistics

Variable	N.	Min	Max	The mean	Std. Deviation
How many years do you use the internet?	300	1.00	18.00	6.7133	2.98455
Valid N (listwise)	300				

6 years the average mass of Internet users can be seen in Table 4. Using the internet at least 1 year to 18 years in mass and it has emerged as the people who use the internet.

Investigation of Use In The Daily Work of The Corporate E-Mail Address

Internet usage frequency of amount in hours per week (Table 5) and relational level between corporate e-mail address in response to those who declare using it in their daily work was measured by cross tabulation methods and results in Table 6 are also shown.

Table 5. DescriptiveStatistics

Variable	N.	Min	Max	The mean	Std. Deviation
Weekly frequency of internet usage?(h)	300	1.00	24.00	.0867	2.10410
Valid N (listwise)	300				

Table 6. Crosstab data

Count		Corporate e-mail address I use in daily business.					Total
		Never	Rarely	Sometimes	Frequently	All The Time	
Weekly frequency of internet usage? (h)	1.00	4	0	2	0	2	8
	2.00	10	0	2	1	0	13
	3.00	2	5	2	2	3	14
	4.00	6	4	7	2	3	22
	5.00	9	3	9	4	7	32
	6.00	2	2	3	1	0	8
	7.00	78	46	34	24	17	199
	8.00	0	1	0	0	0	1
	14.00	0	0	1	0	0	1
	15.00	1	0	0	0	0	1
	24.00	0	1	0	0	0	1
Total		112	62	60	34	32	300

Internet usage frequency of responses to the question when Anova test was done, and the Sig. level 0.123 and 1.83 F value stands out. Results can be seen in Table 7.

Table 7. Anova Test Results

	Sum of Squares	DF	MeanSquare	F	SIGs.
BetweenGroups	32.060	4	8.015	1.830	, 123
WithinGroups	1291.687	295	4.379		
Total	1323.747	299			

In respect to corporate e-mail addresses for use in their daily work of students, it is observed that more data loss suffered conditions such as viruses and has been observed to increase the level of awareness of safe internet use which increases the frequency of corporate e-mail usage. This significantly reduces the probability of encounters with particular file viruses that cause financial losses.

The Investigation of Those According to Their Ages Who Transmit Information Crimes to Relevant Authorities

It is tested that the age groups of those transmitting Information Crimes to the relevant authorities whether they are suitable for the normal distribution. Kolmogorov-Smirnov test in all of the significant level was seen as below 0.05 in the group and that has shown us that the distribution is not normal. Here, some comments were made by using Kruskal-Wallis H test, which is a non-parametric one, as a comparison would be performed among the the groups.

Kruskal-Wallis test included a sample of more than 3 groups and assumptions which are necessary for the single-factor analysis of variance and thus it was applied. Accordingly, the value of the variable age which is observed increases the possibility of transmission to the relevant authorities cyber crimes and it decreased, therefore.

In respect to the test results, it is observed that the significance level is of 0,131. The level of significance appears to show differences between the groups and it is greater than 0.05. It is observed that the more age increases the more likely it is to transmit Information Crimes to the authorities.

Rates of Students Making Internet Shopping

People using Internet banking and e-commerce platforms seem to be more consistent audience about information security and basic IT skills. According to analysis, standard deviation between people in terms of internet usage time is 2.98 including students starting 1 year before the mass use of the Internet and has experienced students that use the Internet is for 18 years. According to internet shopping statistics; while not any shopping is 1 and shopping always is 5 in score; average is 2.67, while the standard deviation of 1.3763. Statistical relationship between Internet usage years with no action on the internet shopping can be explained by the cross-table method. Accordingly, it is increasing the action of making purchases over the Internet by increases in year of Internet usage.

The Relationship Between Age and Internet Banking

According to analysis, the use of internet banking has been seen mostly in 18,19 and 20 years old. In respect to the correlation matrix; it is seen that there is a strong correlation between age and Internet banking. By using social networking sites like Facebook and Twitter, it is seen that accepting invitations sent between applications in social networking has emerged as a strong bond. It has been reached there that there is a relation between age and negative evidence at downloading music over the internet, downloading movies, programs to download and downloading files. The Anova test done; and F value of 5.243 was found. Kuruskal-Wallis test was applied to the siglevel 0.0. According to the test results, the hypothesis which says that ‘’there is a relationship between age and the use of internet banking’’ was rejected.

The Comparability of application invitations, which were sent on social networks, by age

In order to analyze the relationship between age and the adoption of state of the invitation sent applications on social network, it is primarily need to examine the relationship between normality group. The decision to Anova test or Kolmogorov-Smirnov tests were decided to be applied for the application.

While observing the relationship between age groups for normality, Kolmogorov-Smirnov test is able to comment on the significance level. Here, the p-value at the 95% confidence level value in all age groups seems to be under 0.05. In this case, it is determined that one-way Anova, which is not following normal distribution, is given. As the values are not in normal distribution, non-parametric Kruskal-Wallis H test was conducted. The distribution of responses between the two groups was observed in the test results. . As we see the significance level is higher than 0.05 in relation between age and acceptance of invitations through social networks, it is considered that there is a difference. In other words, acceptance of invitations increase by decreasing of the age.

CONCLUSIONS & RECOMMENDATIONS

In the analysis, parameters of year in internet usage and age has significant difference on information levels about informatics security. As increasing of year in internet usage and age, decrease is observed in possibilities of transmitting crimes to relevant authorities. By increase in year of internet usage, knowledge increases in social nets, desktop softwares and digital file sites which are the platforms that crimes are faced mostly. Relevant with increase in age, knowledge in informatics security increases and shopping decreases through internet. As the year in internet usage increases, users become more informative but not sensitive for transmitting the crimes and it is the same for the increase in age parameter as well. Internet banking users are more careful against to troubles in social nets, chat softwares, file share sites. There should be some actions for informing society about informatics security, adding info security courses to elementary, middle , high education and thus there should be urgent action plans for governmental structures to take precautions. All users who use informatics technology should care about precautions against treats and they should be updated.

PERSPECTIVES OF UNDERGRADUATE STUDENTS ABOUT POSTGRADUATE EDUCATION

Cemalettin YILDIZ
Giresun University

Resul GÖL
Uşak University

ABSTRACT: Nowadays, demand for postgraduate education is increasing so the necessity to determine undergraduate students' perspectives to postgraduate education is revealed. Thus, the aim of this study is to determine the perspectives of 4th grade mathematics students studying at faculty of arts and sciences and faculty of education about postgraduate education. In the study, qualitative research design was used. 129 undergraduate students participated in the study on fall term of 2015-2016 academic year. 69 students of them were from a faculty of arts and sciences and 60 of them were from a faculty of education. A form including open-ended questions was used to gather the data in the study. Data obtained were analyzed by descriptive and content analysis techniques. At the end of the study, it was found that 50.4% of the students did not want to get a postgraduate education, 41.1% of them wanted to get a postgraduate education, and 8.5% of them did not have an idea about this subject. Also, it was found that students wanted to get a postgraduate education to have much salary, to specialize in the fields, to make academic career, to improve oneself, and since they thought that being appointed as a teacher was more difficult. In addition, the most important reasons for some students who did not have an ambition or attempt to get a postgraduate education were found as they want to be a teacher, they thought they wouldn't have enough time to get postgraduate education, and they would have financial problems. Lastly, it was determined that students were offered to get a postgraduate education by their relatives, friends, and educators and they got information about postgraduate education mostly from their educators, friends, and internet.

Key words: mathematics education, postgraduate education, teaching profession, academic career

INTRODUCTION

Scientific studies, public service, education and training activities are considered primary duties of universities (Erdem, 2005). Moreover, another task of universities is to spend effort to raise their students as qualified and skilled individuals who are capable of exhibiting their interest, skill, and performance and of doing research afterwards of their undergraduate education (Sayan & Aksu, 2005). Postgraduate education is considered as a structure guiding for specialization of individuals awarded their undergraduate degrees in the world and in Turkey on disciplines master and doctorate programs through scientific studies.

According to the Higher Education Law with 2547 serial number, execution of the postgraduate education is the task assigned to institutes; and it was stated that institutes are the frameworks which carry out postgraduate studies, education, scientific research, and practice at universities and faculties (URL 1). Postgraduate education is an activity similar to undergraduate education which applies numerous programs in formal education model and which awards certain degrees (Karakütük, 2001). When individuals complete an undergraduate study, they are entitled to apply postgraduate education programs opened by educational sciences, natural sciences, social sciences, health sciences, and advanced technology institutes (Demirtaşlı, 2002). Postgraduate education enables individuals to gain socio-economic, socio-cultural, and psycho-social developments beside knowledge, skill and attitude in academic process (Schaefer & Lamm, 1995).

Among the prioritized purposes of the postgraduate education, there is one which includes raising scientists who could introduce wise solutions; adjust to society and guide society in their problems (Gömleksiz & Yıldırım, 2013). Purpose of postgraduate programs is to prepare qualified scientists who create information in their fields afterwards of the undergraduate education, who puts them into practice; in other words, who could vitalized the information that they create, who are beneficent to their society and able to make unique researchers (Bozan, 2012; Ergun & Çilingir, 2013; Günay, 2011; İlhan, Öner Sünkür, & Yılmaz, 2012; Karaman & Bakırcı, 2010; Kurnaz & Alev, 2009; Küçükoğlu & Ozan, 2013; Şahin, Calp, Bulut, & Kuşdemir, 2013). Furthermore, the purpose of the postgraduate education is not only making investment in own qualification, but also it is raising individuals who are problem solver, researcher, and questioning and to view those individuals as scientists at universities in the future (Bülbül, 2003). Accordingly, postgraduate education is the program aiming to raise scientists required in education, industry, science, fine arts, and health domains of countries.

If it is taken into consideration that education is positively and directly related with economic development level of countries, postgraduate education programs have great responsibilities in terms of raising qualified labor force and relevant competent scientists (Aslan, 2007). Therefore, postgraduate education programs are required to offer solutions for society's socio-economic, information communication technology, social-psychological, and cultural development (Dilci, 2009). Kilmen (2007) reported that number of applications to postgraduate education programs in Turkey has increased; postgraduate education has been further qualified; undergraduate degree is not sufficient alone therefore having graduate degree brings exclusivity to individuals. Additionally, Karakütük (2009) stated that postgraduate education has gained prominence recently in Turkey; and this development emerged necessity to raise faculty members for the new universities. Since expectations from postgraduate education have increased, it is necessary to pay utmost attention to this process; and to determine appropriate targets related with raising competent scientist; and individuals who would be recruited for the graduate programs are required to be selected sensibly.

There are studies in the relevant literature regarding expectations of teachers from postgraduate education and the issues within this process encountered by them (Alabaş, Kamer, & Polat, 2012; Alhas, 2006; Aslan, 2010; Başer, Narlı, & Günhan, 2010). There are as well studies on opinions of faculty members concerning postgraduate education (Bülbül, 2003; Dilci & Gürol, 2012). However, there are only limited up-to-date studies investigating into opinions of senior university students about participating into postgraduate studies. When the subject viewed from this angle, as the demand for postgraduate education increases in our contemporary period, it is necessary more than ever to determine opinions of university students' inclinations about postgraduate education. Consequently, it is considered that determination of views of senior university students regarding moving their education further with the postgraduate education is important. Therefore, in the present study, it was aimed to reveal point of views of senior students from faculty of arts and sciences and faculty of education regarding postgraduate education.

METHOD

This section includes information on the research method, study group, data collection tool, and data analysis.

Research Method

The study uses qualitative research method. Qualitative research is the method which allows systematical investigation of inferences that arise from the experiences of participant individuals (Ekiz, 2009).

Study Group

The research was conducted on 129 students in the fall semester of the academic year of 2015-2016. Of these students, while 69 were from arts and sciences faculty, 60 were from education faculty. In order to ensure maximum diversity of participant individuals who could be part of the examined issue (McMillan & Schumacher, 2006; Yıldırım & Şimşek, 2008), maximum diversity sampling method was preferred for the study. Some demographic characteristics of the undergraduate students were exhibited in Table 1.

Table 1.Demographic Characteristics of Undergraduate Students

		Faculty of Arts and Sciences		Faculty of Education		Total	
Characteristics	**Categories**	**f**	**%**	**f**	**%**	**f**	**%**
Gender	Male	29	22.5	20	15.5	49	38.0
	Female	40	31.0	40	31.0	80	62.0
Type of High School	Anatolian Teacher High School	-	-	10	7.8	10	7.8
	Anatolian High School	10	7.8	16	12.4	26	20.2
	Regular High School	46	35.7	33	25.6	79	61.1
	Superior High School	13	10.1	-	-	13	10.1
	Health Vocational High School	-	-	1	0.8	1	0.8
Department	Equal Weight	20	15.5	14	10.9	34	26.4
	Quantitative	49	38.0	46	35.7	95	73.6

According to Table 1, 62% of undergraduate students were female, 61.2% were graduated from Regular High School; and 73.6% were graduated from quantitative-based department.

Data Collection Tool

In the present study, a form composed of open-ended questions was utilized as data collection tool. In the beginning of the study, nine questions were determined by the researchers. Researchers submitted to these questions to three different researchers for their review; then, the ultimate form was established based on the received feedbacks. Thus, the final form utilized in this study was created. Afterwards of the pilot practice of this form on 23 students, four questions were combined into one and ultimate number of questions was reduced to six. Then, the survey was implemented in a classroom environment when students are available.

Data Analysis

Data collected through open-end questions were analyzed in terms of descriptive and content aspects. In the content analysis, the relevant codes were structured. Then, these codes were collected under certain categories. After researchers determined codes and categories, their frequencies and percentages were estimated. Since some students indicated opinions about multiple codes in one answer, total number of frequency of codes could be greater than the total number of student included in the study. In order to facilitate readers' job, codes and categories were exhibited in tables. Finally, findings were supported by referring citations of students.

Collected data was transferred into written form by researchers. Two of the data among the one transferred into written form were randomly selected by two researchers and coded by them individually. Consistency between codes prepared by researchers was estimated based on the formula of [Agreement / (Agreement + Disagreement)] (Miles & Huberman, 1994); and the conformity among coders was estimated at 0.91. Based on the ethical considerations, students were coded as S1, S2, S3, … , S129.

FINDINGS

Frequency and percentage values of codes created based on opinions of students regarding meaning of graduate education were exhibited in Table 2:

Table 2.Inferences of Students Regarding to Graduate Education

Categories	Codes	f	%
Academic Inferences	1.Academic career	67	51.9
	2.A better life	5	3.9
	3.Doing research	4	3.1
	4.Creativity	3	2.3
	5.Making friends	2	1.6
	6.Having exclusivity	1	0.8
Personal Inferences	7.Self-improvement	64	49.6
	8.Nothing	12	9.3
	9.Difficulty	7	5.4
	10.Waste of time	5	3.9
	11.Exhaustion	2	1.6
	12.Stress	1	0.8
	13.Self-esteem	1	0.8
	14.Happiness	1	0.8
Professional Inferences	15.Specialization in their fields	21	16.3
	16.Success	9	7.0

According to Table 2, it was observed that undergraduate students' inferences about graduate education were accumulated under three essential categories of "academic inferences", "personal inferences", and "professional inferences". Of these categories, "academic career", "self-improvement", and "specialization" codes have come to prominence basically. Some of the answers given by undergraduate students to the 1st, 7th, and 15th codes were exhibited below:

"I would like to complete my master degree and to continue with doctoral study. Hence, I would like to have a good career. (S86)"
"I consider postgraduate education as a requirement to be a scientist. (S92)"

"Postgraduate education is the decision which always takes me a step further to be specialized in my field... (S118)"

Frequency and percentage values of codes prepared based on opinions of undergraduate students regarding continuing with postgraduate education afterwards of their graduation were exhibited on Table 3:

Table 3.Whether Students Have Desire or Initiative to Continue with Postgraduate Education, or not

Categories	Codes	f	%
Positive	1.Being reluctant to continue with postgraduate education	65	50.4
Negative	2.Being desirous to continue with postgraduate education	53	41.1
Neutral	3.Undetermined about continuing with postgraduate education yet	11	8.5

According to Table 3, it was observed regarding inclination of students to continue with postgraduate education that 50.4% of undergraduate students were reluctant; 41.1% were desirous; and 8.5% were indecisive. Examples of opinions of undergraduate students about these three codes were given below:

"Postgraduate education is waste of time for me because I do not like studying. Indeed, spending time for a laborious job seems boring to me. I am tired of studying courses along my entire studentship. (S20)"
"I am willing to start my postgraduate education as soon as possible. (S12)"
"No any idea. (S49)"

Frequency and percentage values of codes prepared based on opinions of undergraduate students regarding reasons of their willing or initiative for continuing with postgraduate education afterwards of their graduation were exhibited on Table 4:

Table 4.Reasons for Students for Their Willing or Initiative to Continue with Postgraduate Education

Categories	Codes	f	%
Professional Development	1.Better salary	20	15.5
	2.Specialization	16	12.4
	3.Success	6	4.7
	4.Learning new methods	1	0.8
	5.Making difference	1	0.8
Academic Development	6.Academic career	24	18.6
	7.Because it is difficult to be appointed as teacher	16	12.4
Personal Development	8.Self-improvement	22	17.1
	9.Increasing self-esteem	4	3.1
	10.For greater independency	3	2.3
	11.For curiosity	2	1.6
	12.For my future	2	1.6
	13.For better make use of my spare times	1	0.8

According to Table 4, it was observed that reasons of undergraduate students for willing or initiative to continue with postgraduate education were mostly classified under three categories of "professional development", "academic development", and "personal development". It was understood that "better salary", "specialization", "academic career", "difficulty to be appointed as teacher", and "self-improvement" codes have come to prominence ones under these categories. Examples of answers given by undergraduate students to the 1st, 2nd, 6th, 7th, and 8th questions were given below:

"I think postgraduate education provide us opportunity to earn higher salary. (S20)"
"I want to be specialized in a certain subject and to be competent on that field. (S105)"
"If I have graduate degree, I would have a good career. (S98)"
"We study, continue our education. Nevertheless we are not placed at a job. It is very difficult to be appointed as teacher. Therefore, I want to continue with postgraduate education. (S123)"
"I am thinking about continue with postgraduate education because I believe it will be helpful for me to develop myself… (S71)"

Frequency and percentage values of codes prepared based on opinions of undergraduate students regarding reasons of lack of their willing or initiative for continuing with postgraduate education were exhibited on Table 5:

Table 5.Reasons for Undergraduate Students not to Have Willing or Initiative to Continue with Postgraduate Education

Categories	Codes	f	%
Personal Issues	1.Desire to be a teacher	60	46.5
	2.Thinking that there would not be sufficient time	15	11.6
	3.Thinking that postgraduate education would take long time	8	6.2
	4.Thinking that postgraduate education would be difficult	7	5.4
	5.Considering postgraduate education as waste of time	7	5.4
	6.Considering undergraduate degree is sufficient	7	5.4
	7.Unwillingness to study	6	4.7
	8.Finding postgraduate education boring	6	4.7
	9.Having difficulty with foreign language	6	4.7
	10.Overaged	5	3.9
	11.Family issues	4	3.1
	12.Unwillingness to do research	4	3.1
	13.Not feeling ready	4	3.1
	14.Lack of supporting friends	4	3.1
	15.Lack of self-esteem	3	2.3
	16.Unwillingness for academic career	3	2.3
	17.Finding postgraduate education laborious	2	1.6
	18.Experiencing transportation issue	1	0.8
	19.Need for a break after the undergraduate education	1	0.8
Material Issues	20.Expecting material issues	27	20.9
Academic Issues	21.Discrimination in student acceptance process	5	3.9
	22.In sufficient student quotes	5	3.9
	23.Closure of some departments	4	3.1
	24.Exploiting graduate students by faculty members at the university	2	1.6

According to Table 5, it was observed that reasons of undergraduate students not to have willing or initiative for postgraduate education were concentrated under three categories of “personal issues”, “material issues”, and “academic issues”. It was understood that “desire to be teacher”, “thinking that there would not be sufficient time”, “expecting material issues”, and “insufficient student quotas” codes under these categories have been prominent. Examples of answers given by undergraduate students to the 1st, 2nd, 20th, 21st, and 22nd codes were given below:

“Postgraduate education is something good, but since we need to make economic contribution into our family after undergraduate degree, our first target will be chasing opportunity to be appointed as teacher or having a job... (S83)”
“There is no sufficient time. I think there would not be sufficient time for graduate study afterwards of undergraduate education. (S54)”
“I wish I could make graduate study. However, the most important factor hindering this is economic reason. (S3)”
“Since there are discriminations at universities, the reason could be the fact that some students have privileges over others instead of superiority in skills and knowledge. (S77)”
“I am hesitating about not be placed when there is no sufficient quotes for students. (S67)”

Frequency and percentage values of codes prepared based on opinions of undergraduate students regarding the persons suggesting postgraduate education were exhibited on Table 6:

Table 6.Persons Suggesting Postgraduate Education

Categories	Codes	f	%
Other	1.No suggestions	51	39.5
Educators	2.From faculty members at the university	32	24.8
	3.From relatives	15	11.6
Relatives	4.From family members	28	21.7
Friends	5.From friends	17	13.2

According to Table 6, it was observed that the person who suggest postgraduate education to undergraduate students were concentrated under four categories of "other", "educators", "relatives", and "friends". It was understood that "no suggestion", "from faculty members at the university", "from family members", and "from friends" codes under these categories have come to prominence. Examples of answers given by undergraduate students regarding these five codes were given below:

"Nobody suggested. (S42)"
"One of my lecturers at the university whom I respect and like suggested. He thinks that I will be a very good academician. (S123)"
"Some of my relatives suggested that I should definitely continue with postgraduate education. (S45)"
"My family wants me to continue with postgraduate education because they think that person who complete postgraduate education have superior social status within the society. (S16)"
"My friends suggested. They think that I would be successful in this field. (S65)"

Frequency and percentage values of codes prepared based on opinions of undergraduate students regarding the information resources of undergraduate students about postgraduate education were exhibited on Table 7:

Table 7.Information Resources of Undergraduate Students Regarding Postgraduate Education

Categories	Codes	f	%
Educators	1.From faculty members at the university	66	51.2
	2.From administers from senior level	2	1.6
Friends	3.From friends	62	48.1
Internet	4.From internet	54	41.9
Other	5.Not informed	18	14.0
Relatives	6.From relatives	3	2.3
	7.From family members	2	1.6
Academic Resources	8.From books	1	0.8

According to Table 7, it was observed that information resources of undergraduate students regarding postgraduate education were concentrated under six categories of "educators", "friends", "internet", "other", "relatives", and "academic resources". It was understood that "from academicians at the university", "from friends", "from internet", and "not informed" codes under these categories have come to prominence. Examples of answers of undergraduate students given to the 1st, 3rd, 4th, and 5th questions were exhibited below:

"I have investigated experiences and behaviors of my university lecturers only. I have consulted their opinions. (S8)"
"I gathered very positive information from my friends. I realized that they developed themselves with help of the postgraduate education. (S11)"
"I made more research on internet to gain information. (S92)"
"I could not claim that I have gathered information. (S93)"

DISCUSSION & CONCLUSION

As result of the present study which aims to determine point of views of undergraduate students regarding continuing their education process with graduate studies, following conclusions were drawn:

It was understood that undergraduate students' inferences about the postgraduate education were classified under three titles of "academic", "personal", and "professional". It was revealed that while 51.9% of undergraduate students' inferences about postgraduate education were "academic career"; 49.6% were "self-improvement", and 21% were "specialization". In study of İyibil and Akpınar (2013), when opinions of pre-service science teachers who continued with postgraduate education are taken into consideration, it was determined that 36% of them perceived postgraduate education as specialization; 28% as academic career; and 26% as continuance to formal education afterwards of the undergraduate education. As it was seen from the relevant literature, it was understood that undergraduate students attribute different inferences to postgraduate education.

It was determined that 50.4% of undergraduate students were reluctant to continue with postgraduate education; 41.1% were willing to continue with postgraduate education; and 8.5% were indecisive about postgraduate education. İyibil and Akpınar (2013) reported in their study that 60.43% of prospective teachers were reluctant to continue with postgraduate education; 32.37% were inclined to continue with postgraduate education; and 7.2% were indecisive about this issue. Accordingly, it is possible to conclude that the interest among undergraduate students toward postgraduate education has been increased over the time. In the studies of Türer, Balçın, Sevindik, and Er (2013), Bahadır and Özdemir (2014), they revealed that attitudes of undergraduate students toward postgraduate education were positive in general. Majority of teachers either prefer a graduate study in their fields or educational science in their fields; therefore, it is necessary that Ministry of National Education and universities to develop various educational policies supporting efforts of teachers (Ünal & İlter, 2010). As the number of students graduated with undergraduate degree increased, students are obliged to have advanced study degrees and to be equipped with different competencies (Karaman & Bakırcı, 2010).

It was understood that reasons of undergraduate students for continuing with postgraduate education or having initiative for postgraduate education were concentrated under the titles of “professional development”, “academic development”, and “personal development”. Among the reasons of undergraduate students for willing or having initiative for postgraduate education, reasons such as “better salary”, “specialization”, “academic career”, “difficulty to be appointed as a teacher”, and “ self-improvement” have come to prominence. Based on these findings, it was understood that undergraduate students view postgraduate education as an investment made to enhance their salary and social status in the future (Bülbül, 2003). Price incentive for academicians in 2014 could have been influent on this situation. Tavukçu, Özkardaş, Erzurum, Çiftçi, Şahin, and Bilgin (2013) determined in their study that reason of prospective classroom teachers to continue with postgraduate education as specialization in their field and to have professional career. Alabaş, Kamer, and Polat (2012) determined in their study that teachers prefer postgraduate education for personal development, professional career, and academic career. These results exhibit similarities with the findings reported by the present study. Şahin, Demir, and Arcagök (2015) reached a conclusion in their study that prospective teachers consider postgraduate education as a mean for self-improvement at teaching profession and in academic area. Results obtained from these studies indicate that postgraduate education has become an inviting area for university graduates.

It was observed that reasons hindering willing or initiatives of undergraduate students to continue with postgraduate education were “personal issues”, “economic issues”, and “academic issues”. It was understood that there were “desire to be a teacher”, “thinking that there would not be sufficient time”, “think that there would be economic issues”, “thinking that there would be discrimination in student recruitment process”, and “insufficient student quotas” among the reasons indicated by the undergraduate students, which prevent them to continue with postgraduate education. In the study of Gömleksiz and Yıldırım (2013), it was reported that graduate students suffer from economic problems. As it can be understood from their point, some undergraduate students are in pursuit of economic welfare by following chances to be appointed as a teacher. It is known that postgraduate education is rather burdensome process for students without any social and economic security. Moreover, it is an interesting finding that some students think that there is discrimination in recruitment process of students for graduate programs. In this regard, it should not be underestimated that there is significant conscious responsibility for faculty members taking position in recruitment of students for postgraduate education.

It was determined that graduate programs are mostly offered by “educators”, “relatives”, and “friends” to undergraduate students. Furthermore, it was determined that suggestions were mostly coming from “students’ instructors from their universities”, “family members”, and “friends”. Şahin et al. (2015) came to conclusion in their study that prospective teachers think that they will experience problems in this process; and their supporters in this decision were family members, friends, and academicians from their universities. The fact that undergraduate students were given suggestions from their academicians at the university, their families or friends regarding postgraduate education indicates that they were aware about this subject.

Finally, it was understood that the resources from which undergraduate students were collected information about postgraduate education were concentrated under titles of “educators”, “friends”, “internet”, “relatives”, and “academic resources”. Furthermore, it was determined that “instructors from the university”, “friends”, and “internet” under these titles have come to prominence more than others. İyibil and Akpınar (2013) reported in their study that information resources of prospective teachers were academic personnel, internet, and friends. This finding conforms to the results of the present study. In the same study, İyibil and Akpınar (2013) also reported that 40.29% of prospective teachers were not informed about postgraduate education. In this study, only 14% of undergraduate students were not informed. Accordingly, it is possible to state that majority of undergraduate students could have access to the information resources regarding postgraduate education and they are informed about postgraduate education.

RECOMMENDATIONS

Based on results of the present research, following recommendations were made for future researches:

1. Based on the findings of the present research, it was determined that one of the reasons for postgraduate education to be preferred was economic reason. Concerning the academic profession, a perception that it is an education process which enables individuals to realize their scientific ideas rather than giving them prosperous economic conditions. Accordingly, prospective teachers could be given seminars (Demirkol, Doğru, & Demir, 2014) or conferences about postgraduate education for better elucidation.

2. If it is taken into consideration that some students from faculty of arts and sciences and faculty of education are willing for graduate study because they think that their job placement as teacher is rather difficult, various regulations could be introduced to prevent undergraduate students to prefer postgraduate education because of their concern about employment. In this regard, the Ministry of National Education could offer priority in job placement for prospective teachers with graduate degree.

3. It was determined that the most important reasons for reluctance of some students to continue with postgraduate education were their desire to be a teacher, their thoughts that they would not have sufficient time, and experience economic difficulty. These circumstances could be prevented so that undergraduate students could continue their postgraduate education. In this regard, graduate students could be provided convenient job placement opportunity for the educational institution where they continue their graduate study (Gömleksiz & Yıldırım, 2013). Furthermore, number and volume of scholarships provided to graduate students could be increased.

4. Academicians would prefer to inform undergraduate students in their university period about the postgraduate education. Thus, it would be ensured that students could be informed about pros and cons of postgraduate education along their regular education process to prepare them cognitively and sensibly.

5. As expectations from postgraduate education increases, it should not be ignored that the person who would be recruited for this education are required to be selected delicately and fairly.

6. The results of the present study were obtained based on the findings from the opinions of the students at the departments of mathematics and elementary school mathematics teaching. Further studies could be conducted to include students from other faculties (law, engineering, etc.).

7. For more extensive investigation, opinions of persons who incent students for graduate studies could be consulted.

ABSTRACT: The aim of this qualitative study is to determine middle and secondary school students' approaches related to computers and internet. To achieve this aim a form consisted of 8 open-ended questions was used. The implementation was carried out to 322 middle school and 161 secondary school students in Trabzon and Giresun cities on 2015-2016 school year. It was tried to determine understandings of students related to computer and internet, their computer program and internet sites preferences, the difficulties they have in computer and internet usage, and their suggestions regarding effective usage of computer and internet. The qualitative data obtained were analyzed by content analysis and descriptive analysis methods. Data obtained showed that students saw computer mostly as a tool for amusement and a tool which helped to lessons and they saw internet as the fastest way to reach information and a communication way, they used office programs in computers and preferred communication sites. Also, it was determined that students had some problems in computer and internet usage arising from themselves, others, computers, and internet. Thus, they thought that there had to be in-service training courses related to these problems. Some suggestions were given to students, families, and institutions to make students benefit from computer and internet more effectively.

Key words: Computer usage, internet usage, middle school students, secondary school students

INTRODUCTION

Computer and internet technologies are extensively utilized by almost all industries in our contemporary world. It has been observed that utilization areas of technologies have expanded dramatically; and mean user age has decreased remarkably. Additionally, utilization of these technologies in learning field has increased as well (McDonald & Hannafin, 2003; Polat & Güzel, 2011). Furthermore, it is expected that computer and internet would more extensively be used in education by both students and teachers than ever (Martinovic & Zhang, 2012).

According to the "Household Information Technologies Usage" statistics published by the Turkish Statistical Institute (TSI) in 2015, it was determined that 54.8% of individuals aged 16-74 were household computer users; and 69.5% have internet access at home. Concerning type of access device of users, it was observed that 25.2% was using desktop computer, 43.2% were using laptops, and 96.8% were using cell phone. On the basis of these results, whereas computer usage rate of males aged 16-74 was determined as 64%; this rate was 45.6% for females. Furthermore, internet usage rate of males aged 16-74 was determined as 65.8%, it was 46.1% for females. The largest computer user group rate was 70% exhibited by the group aged 16-24. The highest internet usage rate was 77% exhibited again by the group aged 16-24 (TSI, 2015). When these findings were compared with data from the previous years, it could be realized that house hold computer and internet technology usage has increased with increasing pace.

In parallel to the technology services, volume of information created in virtual environments has significantly increased (Lyman & Varian, 2000). Substantially increasing information volume has also introduced some problems. Regarding technology usage, some difficulties such as accessing Turkish characters; necessity to use keywords in foreign languages; deficiency in infrastructure; and technical problems; internet connection problems; poor computer education; and negative impact of computer on socialization have arisen (Çuhadar & Battal, 2010; Karaman & Açıkyıldız, 2006). These problems have adverse effect on effective usage of technologies. Therefore, it is important to determine processes accurately, in which students could acquire the information that they need; and to reveal the problems that they encounter in this process (Nesset, 2008). Additionally, the need for maintaining capability of middle and secondary school students to access the information along their further ages in the information technology environment which is evolving with a great pace necessitates design of solid policies and review of education contents in teaching programs (Şerefoğlu Henkoğlu, Mahiroğlu, & Keser, 2015). Moreover, it is evident that students, parents and institutions such as the Ministry of Youth and Sport are required to undertake joint roles and certain responsibilities regarding the risks associated with computer and internet, and solution of problems (Gökçearslan & Seferoğlu, 2016).

Studies concerning cognitive and social contributions of computer and internet have increased in the literature (Deniz, 2008; Greenfield & Yan, 2006; Johnson, 2010). Besides basic functions of computer and internet such as communication and accessing information, there are benefits such as contribution into social capital, strengthening social unity and awareness, coordination among groups and enhancing communication (Akbulut, 2013). These benefits have transformed computer and internet into new born babies for families (Akbulut, 2011). According to the relevant literature, it was observed that studies on computer and internet were concentrated on students' computer and internet usage areas, experiences, purposes, reasons (Batmaz, 2012; Deniz & Coşkun, 2004; Demir, 2006; Doruk, 2007; Dursun, 2004; Ersoy & Yaşar, 2003; Gökçearslan, 2005; Tuti, 2005); and on effects of computer and internet on students' success (Dönmez Usta, Karslı, & Durukan, 2016; Hacısalihoğlu Karadeniz & Akar, 2014; Kaya, 2010), and attitudes (Bahar, Uludağ, & Kaplan, 2009; Deniz & Köse, 2003; Köse, Gencer, & Gezer, 2007; Usta, 2011). However, unlike the existing literature, in the name of preparing students as stronger individuals for their future, it is necessary to determine inferences attributed to these new concepts by students; computer programs used by them; internet websites visited by them; encountered problems; and relevant suggestions for solution. Therefore, it could be seen that there is certain need for a study to determine computer and internet usage approaches of middle and secondary school students since it has been seen that computer and internet usage rate among students have substantially increased recently; and the highest rate was measured with the group aged 16-24 (TSI, 2015). From this point of view, the purpose of the present study is to expose approaches of middle and secondary school students toward computer and internet. Accordingly, following questions were tried to be answered along the purpose stated:

1. What computer and internet infer for students?
2. What are the most frequently used computer programs and internet websites by students?
3. Which problems are encountered by students during usage of computer and internet?
4. What are the suggestions of students for effective usage of computer and internet?

METHOD

This section includes information on the research method, study group, data collection tool, and data analysis.

Research Method

The present research is a qualitative study to explore approaches of middle and secondary school students toward computer and internet. Qualitative study could be described as a process of effort spent by individuals to resolve and comprehend problems experienced by both themselves and by others in their proximity through unique methods (Creswell, 2014). In the present study, findings resulted from personal experiences of individuals who were evaluated through qualitative research approach were investigated systematically (Lincoln & Guba, 1985; **Strauss & Corbin, 1998**).

Study Group

In order to reflect diversity of participants who could be stakeholder of the issue oriented as much as possible (McMillan & Schumacher, 2006; Yıldırım & Şimşek, 2008), maximum diversity sampling, one of the purposeful sampling methods, was employed in the study. Participants of the study were 483 (322 middle and 161 secondary) middle and secondary school students from Trabzon and Giresun cities in the fall semester of the academic year of 2015-2016. The participants were applied "Computer and Internet Approach Form". Some demographical characteristics of participants, determined through this form, were summarized in Table 1 below:

Table 1.Various Demographical Characteristics of Students

Demographical Characteristics		Male		Female		Total	
		f	%	f	%	f	%
Age Groups	10-12	78	16.1	96	19.9	174	36.0
	13-15	81	16.8	73	15.1	154	31.9
	16-18	39	8.1	109	22.6	148	30.6
	19 and above	3	0.6	4	0.8	7	1.5

Grades	5^{th}	36	7.5	39	8.1	75	15.5
	6^{th}	48	9.9	60	12.4	108	22.4
	7^{th}	42	8.7	40	8.3	82	17.0
	8^{th}	34	7.0	23	4.8	57	11.8
	9^{th}	2	0.4	13	2.7	15	3.1
	10^{th}	2	0.4	4	0.8	6	1.2
	11^{th}	3	0.6	52	10.8	55	11.4
	12^{th}	34	7.0	51	10.6	85	17.6

Whereas 41.6% of participants were male (201); 58.4% were female (282); distribution of age groups of 10-12, 13-15, 16-18, and 19 and above were 36.0%, 31.9%, 30.6%, and 1.5%, respectively. Distribution their grades 5^{th}, 6^{th}, 7^{th}, 8^{th}, 9^{th}, 10^{th}, 11^{th}, and 12^{th} were 22.4%, 17.0%, 11.8%, 3.1%, 1.2%, 11.4%, and 17.6%, respectively.

Data Collection Tool

The researchers prepared a form consisted of eight open-ended questions in order to collect data from students along the purpose of the study. In this form, there are the meanings assigned to computer and internet by the students, their computer program and internet website preferences, problems they encounter in computer and internet usage, and questions regarding effective usage of computer and internet. During preparation of this form, the studies on computer and internet usage patterns of middle and secondary school students were reviewed first. The form prepared according to the purpose of the study was submitted to two experts from the relevant major and a Turkish teacher for their opinions. The experts from the major were asked to review the form in terms of whether the questions in the form serve the purpose of the study; and the Turkish teacher was asked to review the question sentences to determine whether they are clear and comprehensible, or not. Moreover, a pilot study was conducted on 30 students for the prepared form. At the end of the pilot study, necessary amendments were made on the form along the views of experts and the teacher; and the ultimate form used during data collection process was created. During data collection process, students were informed about the purpose of the study first. Then, the form prepared by the researchers was applied on students in the classroom environment under surveillance of teachers in conventional written form. The participant students were asked to answer the questions in detailed way that they represent their personal views.

Data Analysis

Data collected within the scope of the present study was analyzed through descriptive and content analysis methods. Firstly, collected data was transformed into MS Word format. As the MS Word files were being prepared, it was paid attention to transfer answers of students in their original form. Secondly, data in these MS Word files incurred descriptive analysis individually. Furthermore, codes and categories were prepared by means of the content analysis. Afterwards of the descriptive and the content analyses, the researchers made required changes by comparing codes and categories that they created. Upon the researchers determined the codes and categories, frequencies and percentages of codes were estimated. Since some students displayed their views about multiple questions at once while they were answering open-ended questions, total frequency of codes could sometimes be greater than number of total participant students. Finally, collected data was organized in tables to be exhibited to the reader and direct citations from answers of students were displayed as well. For consistency evaluation among codes, "Reliability = [Agreement / (Agreement + Disagreement)]" formula was used (Miles & Huberman, 1994). According to the estimation based on this formula, conformity among coders was estimated at 84.1%.

FINDINGS

Based on analysis of answers of students to open-ended questions, their approaches toward computer and internet were exhibited under four titles:

Meanings Attached to Computer and Internet by Students

Frequency and percentage values of codes created based on answers given by students to the questions concerning meaning of computer to the students were summarized in Table 2 below:

Table 2.Meaning of Computer to the Students

	Codes	f	%
1	Tool for entertainment	171	35.4
2	An auxiliary tool for courses	118	24.4
3	Nothing	45	9.3
4	A tool which makes life easier	28	5.8
5	Device for watching film / video	20	4.1
6	An unhealthy device	10	2.1
7	Everything	10	2.1
8	Device to watch movie episodes	8	1.7
9	Device for listening music	8	1.7
10	An addictive tool	6	1.2
11	A tool which harms social connections of people	6	1.2
12	A mean enabling us to be happy	4	0.8
13	Miracle technology device	4	0.8
14	Lover	2	0.4
15	Family	1	0.2
16	Information storage tool	1	0.2
17	The most significant invention of this age	1	0.2
18	A tool enabling us to download files	1	0.2
19	A window opening to the world	1	0.2

According to Table 2, it could be seen that students view computer mostly as an entertainment tool and assistance for their course work. Examples of students' answers given to the first four codes were displayed below:

"It stands for entertainment because there are lots of games. (Student 2)"
"Computer is an assistant tool for my course work. (Student 13)"
"It means nothing. (Student 89)"
"It makes my life easier. (Student 53)"

Frequency and percentage values of codes created based on answers given by students to the questions concerning meaning of internet to the students were summarized in Table 3 below:

Table 3.Meaning of Internet to the Students

	Codes	f	%
1	It is the fastest way to reach information	176	36.4
2	Establishing communication	121	25.1
3	Doing research	74	15.3
4	Assistance to courses	66	13.7
5	Social media	51	10.6
6	Makin life easier	44	9.1
7	Playing game	40	8.3
8	Life itself	29	6.0
9	Being happy	26	5.4
10	Nothing	14	2.9
11	News	12	2.5
12	A world makes me feel free	10	2.1
13	Making people sociopath	7	1.4
14	Listening to music	5	1.0
15	An invention miracle of technology	5	1.0
16	Addiction	5	1.0
17	Watching film / video	3	0.6
18	Resource of inspiration	1	0.2

According to Table 3, it could be realized that students view internet as the fastest way of reaching abundant information and as a tool for establishing communication. Some of the expressions indicated by students to the first codes were displayed below:

"Since internet includes all sorts of information inside, I can reach information very fast. (Student 18)"

"The best way to communicate with other people. (Student 57)"
"Computer has significant place for me with respect to doing research. (Student 35)"
"It is a tool that I get help for my homework. I use it for my homework. (Student 3)"
"It means social media for me. (Student 27)"

Students' Computer Program and Internet Website Preferences

Frequency and percentage values of codes created based on answers given by students to the questions concerning the most frequently used programs in computer were summarized in Table 4 below:

Table 4.The Most Frequently Used Programs by Students in Computer

	Codes	f	%
1	MS Office programs (Word, PowerPoint, Excel)	255	52.8
2	Web Browser programs (Google Chrome, Yandex)	132	27.3
3	Photograph / image editing programs (Adobe Photoshop, Retrica, Paint)	25	5.2
4	Game programs (PlayStation Games, Minecraft, League of Legends, Grand Theft Auto, Shadow Fight, Counter Strike, Dragon City, Live for Speed, Point Blank, Stardoll, Wolfteam)	22	4.6
5	Other programs (FrontPage, Winamp, Adobe Acrobat Reader, Keylogger, Winrar, WordPad)	10	2.1
6	Antivirus programs (Eset Nod32, CCleaner, ComboFix, Deep Freeze)	8	1.7
7	Downloading programs (Internet Download Manager, Utorrent)	8	1.7
8	Video maker programs (Windows Movie Maker, Camtasia Studio, Bandicam)	5	1.0
9	Video / film / game players (Adobe Flash Player, Vlc, Gom, and Windows Media Player)	4	0.8
10	Design programs (CorelDraw, AutoCAD)	3	0.6

According to Table 4, it was determined that the most frequently used programs by students were MS Office programs such as Word, PowerPoint, and Excel. Example expressions indicated by students with respect to the 10 codes were given below:

"It is PowerPoint because I like to do things in there. (Student 36)"
"It is Google Chrome because I could do everything on the internet. (Student 38)"
"I use mostly Paint because. It is quite fun to draw image. (Student 15)"
"I like soccer games. I play Pro Evolution Soccer 2015. (Student 18)"
"I could download and open some documents by means of the Adobe Reader. (Student 16)"
"I use Eset antivirus program. (Student 25)"
"I download some stuff by means of the Internet Download Manager. (Student 54)"
"It is Camtasia Studio. I make various videos because I enjoy it; I cut and edit videos. (Student 22)"
"It is Vlc Media Player. I watch videos. I spend time. (Student 61)"
"It is CorelDraw. I could do anything in graphic and design areas. (Student 63)"

Frequency and percentage values of codes created based on answers given by students to the questions concerning the most frequently accessed websites on the internet were summarized in Table 5 below:

Table 5.The Most Frequently Accessed Websites on the Internet by Students

	Codes	f	%
1	Communication websites (facebook, instagram, youtube, whatsapp, twitter, ask.fm, tumblr, google+, messenger, snapchat, wattpad, connected2, hotmail, vine, weheartit)	333	68.9
2	Education websites (e-okul, morpa kampus, onedio, eodev, meb vitamin, sanal okulumuz, wikipedia, your learning place, matematikciler, okulistik, teknofem)	63	13.0
3	Game websites (oyuncini, stardoll, habbo, kraloyun, pottermore, moviestar planet, trackmania forever, twitch)	35	7.2
4	Shopping websites (markafoni, morhipo, gittigidiyor, hepsiburada, trendyol)	25	5.2
5	Film episodes websites (dizipub, koreanturk)	7	1.4

According to Table 5, it was determined that students mostly accessed into the communication related websites. Furthermore, it was observed that students accessed in websites related with education, game, shopping, and film episode watching. Examples of expressions indicated by students regarding the five codes were given below:

"I access in Facebook to catch up with the agenda. (Student 66)"
"Eodev because I do my research on homework from here. (Student 11)"
"Pottermore. Because I like playing game on Pottermore. (Student 18)"
"Markafoni. I make shopping. (Student 31)"
"Dizipub. I watch the episodes of my favourite movies. (Student 67)"

Difficulties Encountered by Students while They Use Computer and Internet

Frequency and percentage values of codes created based on answers given by students to the questions concerning the difficulties encountered by students during usage of computer were summarized in Table 6 below:

Table 6.Difficulties Encountered by Students during Usage of Computer

	Codes	f	%
1	Illiteracy about usage of some programs	28	5.8
2	Frequent formatting necessity of computers	25	5.2
3	Slow operation of computers	13	2.7
4	Illiteracy about computer usage	11	2.3
5	Poor keyboard usage skill	9	1.9
6	Headache or eye pain caused by computer usage	7	1.4
7	Difficulty on program downloading	5	1.0
8	Foreign words in some programs	5	1.0
9	Charging problems with laptops	2	0.4
10	Failure in formatting process	1	0.2

According to Table 6, it was determined that students encounter commonly with difficulties such as illiteracy about usage of some programs and frequent formatting needs of computers. Examples of students' expressions regarding the first four codes were given below:

"Since I do not know some programs, I experience difficulties. Especially with MS Office programs. (Student 48)"
"When the computer freezes, I could not do anything. I need to format the computer. (Student 10)"
"Slow operation of computer and frequent hang up. (Student 45)"
"I am literate on computer usage. (Student 11)"

Frequency and percentage values of codes created based on answers given by students to the questions concerning the difficulties encountered by students during usage of internet were summarized in Table 7 below:

Table 7.Difficulties Encountered by Students with Internet

	Codes	f	%
1	Malware infection from internet	47	9.7
2	Slow internet speed	39	8.1
3	Lack of internet connection	22	4.6
4	Experiencing loss of connection to internet	20	4.1
5	Illiteracy about internet usage	15	3.1
6	Existence of harmful / forbidden website	8	1.7
7	Loss of internet access time to time	3	0.6
8	Hacker attacks	1	0.2

According to Table 7, it was observed that the most common difficulty encountered by students with respect to internet usage was internet-born virus. Examples of students' expressions given regarding he first four codes were given below:

"I experience difficulty when virus comes from internet to my computer. (Student 46)"
"Sometimes internet speed is quite low. (Student 40)"
"Lack of internet connection at home. (Student 62)"
"There are times that I cannot connect to the internet. (Student 34)"

Suggestions of Students Regarding Effective Usage of Computer and Internet

Frequency and percentage values of codes created based on answers given by students to the questions concerning their suggestions regarding effective usage of computer were summarized in Table 8 below:

Table 8.Students' Suggestions Regarding Effective Usage of Computer

	Codes	f	%
1	People could develop their conscious through computer training courses.	171	35.4
2	All students could be provided computer.	62	12.8
3	Computer prices could be reduced.	59	12.2
4	Computers may not be used due to their adverse impact on health.	25	5.2
5	Superior computers could be manufactured.	23	4.8
6	Educational and instructional programs could be developed.	16	3.3
7	Advertisements could be published.	14	2.9
8	Computer courses could be given at schools.	13	2.7
9	Computer course hours could be increased.	12	2.5
10	Computer-generated homework could be assigned.	11	2.3
11	Number of computers could be increased at schools.	8	1.7
12	Internet laboratories could be established at schools.	7	1.4
13	Posters could be prepared.	7	1.4
14	Computers could be used under parents' supervision.	6	1.2
15	Relevant conferences could be organized.	5	1.0
16	Antivirus programs could be used.	3	0.6
17	Mottos could be prepared.	3	0.6
18	Brochures could be printed.	3	0.6
19	Seminars could be organized.	2	0.4
20	Educational and instructional websites could be published.	2	0.4
21	Students could be allowed to access into computer labs at schools at all the time.	2	0.4
22	Movement of Enhancing Opportunities and Improving Technology Project could be supported.	2	0.4
23	Practical computer courses could be provided.	2	0.4
24	Public announcements could be increased.	1	0.2
25	Turkish versions of computer programs could be introduced.	1	0.2
26	Free computer centres could be established.	1	0.2
27	Computer support hotline could be established.	1	0.2

According to Table 8, it was determined that the most frequently expressed suggestion by students regarding effective usage of computer was "Establishing computer courses for public to develop their conscious about computer usage". Examples of expressions indicated by students regarding the first five codes were displayed below:

"There is necessity to open more computer courses. Programs to enhance conscious of individuals are required to be extended because especially parents are illiterate about this subject. (Student 10)"
"All individuals could be provided computer. (Student 15)"
"I wish I could lower computer prices so that everyone could get one. (Student 24)"
"They should not be used to often because many people could get some diseases. (Student 18)"
"Superior computers are required to be developed. (Student 54)"

Frequency and percentage values of codes created based on answers given by students to the questions concerning their suggestions regarding effective usage of internet were summarized in Table 9 below:

Table 9.Students' Suggestions Regarding Effective Internet Usage

	Codes	f	%
1	Training sessions could be introduced.	89	18.4
2	Internet usage tariffs could be reduced.	86	17.8
3	Access to the harmful / inappropriate websites could be limited.	80	16.6
4	Internet access could be provided to all houses.	58	12.0
5	Students could be assigned research studies.	47	9.7
6	Internet speed could be developed.	29	6.0
7	Advertisements could be published.	28	5.8

8	Unlimited internet service could be provided.	18	3.7
9	Internet service could be free of charge.	15	3.1
10	Posters could be prepared.	11	2.3
11	Internet packages could be enlarged.	6	1.2
12	Seminars could be introduced.	6	1.2
13	Internet could be made available in everywhere.	4	0.8
14	Conferences could be organized.	3	0.6

According to Table 9, it was observed that students commonly suggested that "internet courses are required to be provided for improving conscious of people about internet usage", "lowering internet fees", and "prevention access into harmful / inappropriate websites". Examples of expressions given by students regarding the first five codes were indicated below:

"I would train people about effective usage of internet through public courses. (Student 25)"
"Internet fees could be less. (Student 40)"
"The Ministry of National Education could ban unfavourable websites so that psychology of students could not be influence adversely. (Student 10)"
"The government should provide free internet to all homes. (Student 22)"
"The research assignments should be given. Thus, we use internet more effectively. (Student 28)"

DISCUSSION & CONCLUSION

In the present study, it was aimed to determine approaches of middle and secondary students toward computer and internet.

It was determined that students views computer more like as an entertainment tool and as an auxiliary tool for their courses. This situation suggests that students consider computer as an entertainment and education tool. These findings exhibit similar direction with studies of Batmaz (2012), Ersoy and Yaşar (2003). Computers have been one of the irrevocable elements of our lives in every aspect (Akbulut, 2013) because individuals own computers to catch up with novelties introduced by technology, to access information conveniently and quickly and to make their lives easier (Özkan, 2010).

It was determined that students view internet as the fastest way of accessing information and as a communication tool. Therefore, it was understood that students consider internet as a tool for accessing information and establishing communication. Şerefoğlu Henkoğlu et al. (2015) reported that students embrace advantageous aspects of internet; and that students perceive internet as an environment in which they could find all information conveniently and quickly. According to other studies with similar purpose, I was observed that internet is used mostly for having information about daily news, listening to music, watching movies and videos, sending e-mail, playing game, chatting, entertainment, downloading music, film or file (Batmaz, 2012; Bayraktar & Gün, 2007; Ceyhan & Ceyhan, 2011; Deniz & Coşkun, 2004; Ersoy & Yaşar, 2003; Kraut, Patterson, Lundmark, Kiesler, Mukopadhyay, & Scherlis, 1998; Kuzu et al., 2008; Tsai & Lin, 2003; Yang & Tung, 2007). In this regard, in addition to the fact that students use internet as an entertainment, game and social media, and communication purpose, they use it for educational purposes and their criterions are required to be paid attention.

It was revealed that students use MS Office programs most. MS Office programs are followed by web browser and image/photograph editing programs. The least used programs were the ones used for designs. In this regard, it is realized that students view computer as a programming tool that could be utilized for multiple purposes. Köse et al. (2007) determined that students use MS Office programs intensively. Gökçearslan and Seferoğlu (2005) determined in their study that students are dispose to computer software with game content rather than educative programs; and reported that game programs are significantly important in purchasing of a household computer and that 79% of household computers were composed of game programs. Therefore, necessary emphasis is required to be placed on issues of utilization degree of students from computer programs and their positive or negative impacts on students.

It was determined that students most frequently visited websites related with communication. In terms of establishing communication means, it is possible to state that internet usage is rather common among students (Özkan, 2010). Communication websites were followed by education, game, shopping, and film episode websites. In this regard, it was observed that students use internet websites first of all for communication than for many other purposes. In the research conducted by Batmaz (2012), it was stated that students establish their communication over Facebook. Dursun (2004) emphasized that student stake advantage of electronic mail services communication for establishing communication. In a study conducted by Yıldız and Abdüsselam (2016), it was determined that males and females prefer Facebook more with respect to other social media tools; additionally, males use Facebook more than females; and females use Instagram and Twitter more than males. On the other hand, it should not be underestimated that the internet perceived as communication opportunity could be turned into a threat over the time "because parents lack sufficient technology literacy (Akbulut, 2013)".

It was observed that some students experience various problems such as lack of skills to use programs, frequent formatting necessity of computers, virus infection from internet and poor internet speed. In this regard, it was understood that the problems encountered by students while they were using computer and internet were in cognitive and technical dimensions. It is known that some students do not utilize from computer and internet because they do not know how to use them, experiencing difficulty in accessing computer and internet, and getting infected by internet-borne viruses (Abdüsselam & Yıldız, 2015; Akgün & Topal, 2015; Canbek & Sağıroğlu, 2007; Yıldız & Abdüsselam, 2016). These difficulties cause hard time for students in effective and quality usage of computer and internet. Accordingly, students are required to be informed about cognitive (Akbulut, 2013) and technical (Canbek & Sağıroğlu, 2007) results of computer and internet usage. In this regard, the Ministry of Youth and Sport has been conducting a study aiming to cover 100 thousand youth, referred as "safe internet and social media" (Gökçearslan & Seferoğlu, 2016). Number of such studies could be increased.

It was revealed that the most frequently drawn suggestion by students concerning effective usage of computer and internet was that computer and internet courses should be established. Therefore, it was understood that awareness of students are required to be developed regarding effective computer and internet usage through training courses. In the study of Korkmaz (2010), it was determined that utilizing from peer education in internet usage would provide significant advantages to students regarding internet usage. Dursun (2004), in his study conducted on university students, reported that students developed their computer and internet usage skills by themselves; and the environments specific to computer and internet usage at higher education were not sufficient. Ersoy and Yaşar (2003) reported in their study that students were not capable of using especially internet effectively and productively; they were able to find sufficient support regarding internet usage from their parents and teachers. In this regard, it was considered that establishing courses on effective usage of computer and internet could be beneficent for individuals.

There are two limitations with the present study. The first one is its limitation since 10^{th} grade students were not sufficiently included in the study in which the relevant data was collected from the students by means of the form containing open-ended questions. Only 1.2% of students (n=6) in the study group were from the 10^{th} grade. The second limitation of the study was that research data was collected only by means of a form; and no any interview or observation data was included in the considerations.

RECOMMENDATIONS

On the basis of research results, following recommendations were drawn:

1. Since students view internet as the fastest way of accessing information in general, it could be beneficent that awareness of students regarding paying attention to ethical codes during doing research on internet.

2. Students could use filter software such as "Internet Family Protection Package" and "Safe Internet" against viruses and malware / inappropriate websites.

3. Parents need to inspect computer and internet usage of their children time to time since it is important for children to use computer and internet under supervision of their parents.

4. It should not be underestimated that children are required to be informed about usage of computer and internet effectively and safely. This process could be accomplished either by means of educational activities such as training courses at schools, seminars, and conferences. Moreover, advertisements could be published about effective and safe usage of computer and internet, public announcements could be made, mottos could be communicated, posters and brochures could be prepared.

5. Students could be encouraged to visit internet websites that could assist them in terms of academic point of view; computer programs and applications could be taught. Furthermore, educational and instructional new programs and websites could be prepared for students so that they could utilize these technologies in a qualified and desirable way.

6. Effective usage of computer and internet could be covered more extensively in courses of “Information and Communication Technologies” and “Information Technologies and Software” at school.

7. It could be beneficent for students to increase their awareness about software and hardware problems that they could encounter about computer and internet. Ministry of National Education could establish a support hotline to provide assistance to students in this regard.

8. Students’ awareness could be raised about health problems such as headache and eye pain, associated with long-term computer usage.

9. The form to determine “Students’ Approach toward Computer and Internet” developed under the scope of the present study could be applied in all middle and secondary schools under the roof of the Ministry of National Education.

10. Approaches of prospective teachers, teachers, and academicians toward computer and internet could be investigated.

11. Observation activities could be conducted to investigate approaches of students toward computer and internet usage and to determine the difficulties that they encountered.

THE EXAMINATION OF 7TH GRADE STUDENTS' ACHIEVEMENTS IN MATHEMATICAL PATTERNS

Mihriban HACISALİHOĞLU KARADENİZ
Giresun University

Cemalettin YILDIZ
Giresun University

ABSTRACT: The aim of this study is to determine the 7th grade students' achievements in mathematical patterns presented by figures, tables, number sequences, and word problems. This research is a situation determination study where quantitative methodology is used. The sample of the study consisted of 47 female and 50 male students, totally 97 students from 7th grades in Giresun city on 2015-2016 academic year. Pattern topic oriented 7 questions were used as the data gathering tool. The questions which focused on the attainments of pattern topic were prepared by the researcher. It was determined that students could perform specialization in figural patterns but they couldn't reach a generalization. In other words, it was observed that students could find the required steps according to a given rule and so they could easily reach the situation which involved operational knowledge. Also, it was seen that although students found the number of figures in the next step of the pattern, they couldn't find the general rule that represented the pattern. Another result of the study was that students could recognize patterns of number sequences but they couldn't find the general term of the pattern. Lastly, it was determined that students couldn't understand patterns which were represented as word problems and they failed at these kind of pattern questions but they had success in pattern questions represented by tables. In this context, it can be offered to give much place to representation forms of patterns by figures, tables, number sequences, and word problems while students are given experiences of patterns.

Key words: elementary school mathematics curriculum, numbers and operations learning domain, algebra learning domain, pattern representation forms, 7th grade students

INTRODUCTION

Mathematics, as the leading discipline aiming at what is learnt in real life, is a field that has an application for sciences like engineering and technology and in the real world (Hacısalihoğlu Karadeniz, Aydın Güç, & Tülek, 2014). It can be said that "mathematical patterns exist in nature (Devlin, 1998)" as there are patterns in sunflowers, cabbages, and the flow of water. Mathematical patterns are an important subject which are often encountered in daily life and allow connections to be made with other disciplines. For this reason the study of patterns has been included in the mathematics curricula of many countries (Australian Education Council, 1994; Ministry of National Education (MoNE), 2005, 2009a, 2009b, 2013b; National Council of Teachers of Mathematics, 2000).

The pattern, which is a regular order of mathematical objects such as numbers, figures, etc., has been defined in various ways by mathematics educators (Tanışlı & Özdaş, 2009). For example, the pattern can be described as a repeating regularly arrayed combination of elements such as geometrical figures, symbols, signs, actions or mathematical objects (Burns, 2000; Fox, 2005; Souviney, 1994; Waters, 2004). According to Guerrero and Rivera (2002) the pattern is the rule functioning between the elements of structured mathematical objects (numbers, figures, etc.). According to Olkun and Toluk-Uçar (2006) the pattern is like a poem which is composed of regularly arrayed repeating objects or figures. Papic and Mulligan (2007) have defined the pattern as spatial or numeric regularity.

The patterns used in the school curricula are divided into four categories: a figure (visual), a table or graphic, a number sequence, and a word problem (Yaman & Umay, 2013). *Patterns given as a figure (visual)* may be either an increasing series of points or may be composed of figures made from matchsticks, counting rods, unit squares, unit spheres, blocks, and tiles (Ley, 2005). In *patterns given as a table or graphic*, the students record the outcomes in each line systematically and look for a pattern among the resulting outcomes (Schliemann, Carraher, & Brizuella, 2001). In *patterns given as number sequences*, the students are expected to determine the connections between the given terms of the pattern, to write the unknown one in the sequence (Yaman & Umay, 2013), and to express the pattern rule using the connection that they have found (Ley, 2005). Moreover, the patterns may also be represented as a word problem (Yaman & Umay, 2013).

When the curricula are examined, it can be seen that the topic of patterns may be highlighted from the pre-school period. In the renewed and updated pre-school curricula, the attainment, "*He/she forms a pattern with the objects*", is given with regard to the cognitive domain (MoNE, 2006, 2013a).

In the primary school mathematics curriculum (1st-5th grade), which was renewed in 2005, patterns are given in the learning domains "*geometry*" and "*numbers*". The topic was given in the form, "*He/she determines the pattern of connection. He/she determines the elements which are missing in a pattern*", in the sub-learning domain "*pattern and tessellation*" in the learning domain "*geometry*" for the 1st grade. Patterns were discussed under the heading, "*He/she forms number patterns*", in the sub-learning domain "*natural numbers*" in the learning domain "*numbers*" in the 2nd grade. The topic of patterns was given as, "*He/she determines the connection in a pattern and extends the pattern*", in the sub-learning domain "*natural numbers*" in the learning domain "*numbers*" in the 3rd grade curriculum. Patterns were expressed through the idea that, "*He/she associates a pattern with numbers and completes the missing part*", in the sub-learning domain "*natural numbers*" of the learning domain "*numbers*" in the 4th grade. Finally, an attainment related to patterns given is observed as, *"He/she forms the pattern, using the rule and procedure; he/she determines the number or numbers which are not given in a pattern*", in the sub-learning domain "*natural numbers*" in the learning domain "*numbers*" in the 5th grade (MoNE, 2005, 2009a).

In the elementary school mathematics curriculum (6th-8th grade), which was renewed in 2005, it is seen that the topic of patterns is also given in the learning domain "*geometry*". The topic of patterns was given in two attainments as "*He/she forms patterns using polygons and identical and similar ones of the polygonal areas*" and "*He/she creates tessellations by translation*", in the sub-learning domain "*pattern and tessellations*" of the learning domain "*geometry*" in the 6th grade. Similarly, the topic was introduced as "*He/she makes a tessellation by tessellating an area with polygonal models*", "*He/she determines the codes of the tessellations created with uniform polygonal models*" and "*He/she makes tessellations by reflecting, translational, and rotational motions*" in the sub-learning domain "*pattern and tessellations*" of the learning domain "*geometry*" in the 7th grade. There after patterns were represented in *"He/she builds patterns from linear, polygonal, and circular models and determines the fractal ones from among these patterns*" in the 8th grade (MoNE, 2009b).

The elementary school mathematics curriculum was updated in 2013 and grades 5, 6, 7, and 8 were renamed the "Middle School Mathematics Curriculum". There are two attainments which explicitly contain the topic of patterns in the updated middle school mathematics curriculum. The attainment "*He/she produces the desired sequence number and figural patterns, the rule for which is given*", the first one of these attainments, belongs to the sub-learning domain "*natural numbers*" within the learning domain "*numbers and procedures*". The attainment "*He/she express the rule of the arithmetic sequence using a letter; he/she finds the desired term for the sequence, the rule of which is expressed with a letter*", the second attainment, belongs to the sub-learning domain "*algebraic expression*" in the learning domain "*algebra*" of the 6th grade (MoNE, 2013b).

Grades 1, 2, 3, and 4 of the elementary school mathematic curriculum were renamed the "Primary School Mathematics Curriculum". In this curriculum, the topic of patterns was given with the attainments "*He/she recognizes the single-rule number pattern, he/she finds the pattern rule*" and "*He/she completes the pattern by finding the missing element in a number pattern*" in the learning domain "*introduction to algebra*" in the 1st grade. The attainments for the learning domain "*geometric patterns*" at the same grade were given as "*He/she finds the rule in a pattern consisting of geometric objects or figures and he/she completes the pattern by finding the missing element of the pattern*" and "*He/she creates a single-rule geometric object or figural pattern of maximum three-element*". The attainment in the learning domain "*introduction to algebra*" in the 2nd grade of the pattern curriculum was given as "*He/she extends the number pattern, the rule of which requires one procedure*". The attainments for the learning domain "*geometric patterns*" in the same grade were given as "*He/she determines the missing elements in a repeating geometric pattern and completes the pattern*" and "*He/she creates new patterns having the same connection with different materials using the connection in a geometric pattern*". The attainment for the learning domain "*introduction to algebra*" in the 3rd grade of the curriculum was given as "*He/she creates a number pattern. He/she creates a pattern, with one procedure as the rule*". The attainments of the learning domain "*geometric patterns*" of the same grade were given as "*He/she makes a design using the figure models. He/she draws the pattern on dotted or squared paper*". In the 4th grade of curriculum the learning domain "*introduction to algebra*" is further extended with the attainments "*He/she determines the rules of a number pattern containing a maximum of two different procedures and extends the pattern*" and "*He/she creates and describes repeating, increasing, and decreasing number patterns*" (MoNE, 2015).

When the curricula in which the new approaches have begun to be implemented in Turkey since 2005 are examined, it can be understood that the topic of pattern has been given a place in every curriculum. According to MoNE (2009a, 2009b) the main objectives for placing patterns to be in mathematics curricula are to reveal the students' situations in their cognitive schemes, to enhance the psychomotor skills of the students, and to explain mathematics to the students, moving from the abstract to the concrete, using their daily activities.

This study is needed because there are few studies related to patterns conducted with primary school and middle school students in Turkey. Thus, this study will likely make a contribution to this gap in the literature. Accordingly, this study aims to reveal 7th grade students' perceptions of mathematical patterns represented as figures, tables, number sequences, and word problems.

METHOD

This section includes information on the research method, study group, data collection tool, and data analysis.

Research Method

This study is a case determination study using quantitative methodology. Considering the study participants and the subject of the study; this research is a case study method. Because case study method pave the way for profoundly examining the subject, investigating the relations of data and explaining the cause and effect relations (Çepni, 2014).

Study Group

The study group comprised of 97 7th grade students consisting of 47 female and 50 male students being educated in a middle school in the center of Giresun during 2015-2016 school year. The names of the students were kept confidential due to ethical reasons and the students were coded as follows: "S1, S2, S3, … , S97".

Data Collection Tool

In this study, totally 7 questions regarding pattern presentation forms were used in order to collect data. The questions were prepared by focusing on two attainments related to patterns in the middle school mathematics curriculum which was updated in 2013 and they were practiced by the students in classroom environment during a single class period individually. The questions used in the study and the attainments on which the questions were focused are provided in Table 1:

Table 1.The Questions Used in the Study and the Attainments on Which these Questions Were Focused

Attainments	Questions
A1. He/she produces the desired sequence in number and figural patterns, the rule of which is given.	**Q1.**Find the sum of the first 7 terms of the pattern, the rule of which is 3a+1.
	 **Q2.**How many squares are there in the next step according to the figure above? Find the general rule of the pattern?
A2. He/she express the rule of an arithmetic sequence with a letter; he/she finds the desired term of the sequence, the rule of which is expressed with a letter.	<table><tr><td>n</td><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td></tr><tr><td>4n+2</td><td>6</td><td>▲</td><td>14</td><td>18</td><td>○</td></tr></table> **Q3.**What is the sum of ▲+ ○ using the pattern, the rule for which is given in the table?

Q4.A model of a pattern which is created by circles is given above. Fill in the table below by determining the pattern used for each step in the model.

Sequence number of the number in the pattern	The number of circles used for the number
1	2
2	4
3	6
4	8
5	…
6	…
…	…
n	…

Q5. Cem, who is a mason, builds a wall by working for 3 hours on the first day and for 4 hours more on the second day than the first day and by repeating the same rule on all subsequent days. What is the general rule and pattern of this activity?

Q6. An entrance fee for a car park is 5 Turkish Liras and is 2 Turkish Liras for every hour thereafter. Find the general rule of this pattern.

Q7. Find the algebraic expression corresponding to the number pattern 0-8-16-24-32-40-…

The 1st and 7th questions are the questions given as a number sequence. The 2nd question is given for determining the next step of a pattern represented as a figure and for finding the general rule of the pattern. The 3rd question includes the determination of the desired sequence of a pattern given in a table. The 4th question which was represented as a figure and a table requires specialization of a figural pattern primarily and than a generalization of it. The 5th and 6th questions are represented as word problems and require finding the general rule of a pattern.

Data Analysis

While analyzing the data, the questions answered by the students were categorized as; correct (answers containing all aspects of the valid answer), partially correct (answers containing one aspect of the valid answer, but not all aspects thereof), incorrect (scientifically incorrect answers), and blank (leaving blank, giving meaningless answers, answers such as “I do not know” or “I did not understand”) and the frequencies (f) and percentages (%) were calculated.

FINDINGS & COMMENTS

The frequencies (f) and percentages (%) calculated according to the answers of the students which are correct, partially correct, and incorrect, or left empty are provided in Table 2:

Table 2.The Answers of the Students Given to the Questions

Attainments	Questions	Representation Forms of the Patterns	Answers							
			Correct		Partially Correct		Incorrect		Blank	
			f	%	f	%	f	%	f	%
A1	Q1	Number sequence	30	30.9	2	2.1	43	44.3	22	22.7
	Q2	Figure	3	3.1	36	37.1	19	19.6	39	40.2
A2	Q3	Table	81	83.5	7	7.2	3	3.1	6	6.2
	Q4	Figure and table	45	46.4	43	44.3	8	8.3	1	1.0
	Q5	Word problem	5	5.1	25	25.8	39	40.2	28	28.9
	Q6	Word problem	4	4.1	6	6.2	59	60.8	28	28.9
	Q7	Number sequence	35	36.1	6	6.2	29	29.9	27	27.8

The findings and comments related to the questions are provided below.

Findings and Comments related to Q1

When the findings for the first question are examined it is seen that 44.3% of the students gave incorrect answers, 30.9% of them gave correct answers, 22.7% of them left the question blank, and 2.1% of them gave partially correct answers. Examples of correct, partially correct, and incorrect answers given to the 1st question by the students are provided in Figures 1, 2, and 3:

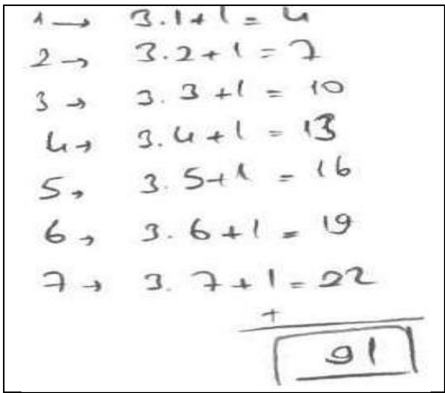

Figure 1. The Correct Answer Given To the 1st Question By S26

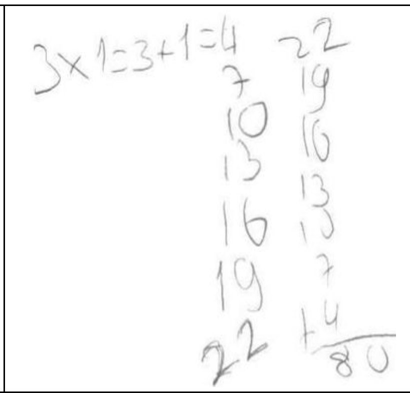

Figure 2. The Partially Correct Answer Given To the 1st Question By S47

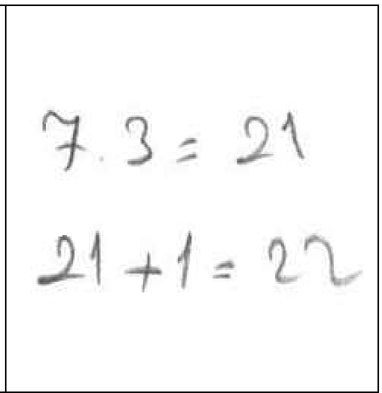

Figure 3. The Incorrect Answer Given To the 1st Question By S34

In this question the students were asked to find the sum of the first 7 terms of a number pattern, the rule of which was given and the expected answer was "4+7+10+13+16+19+22=91". When we examine Figure 2, it is seen that students found all the required terms but they made a mistake in the process of addition. When Figure 3 is examined it was determined that S34 found only the 7th term, not the sum of the first seven terms of the pattern like the majority of the students.

Findings and Comments related to Q2

When the answers given to the 2nd question are examined it is seen that 40.2% of the students left the question blank, 37.1% of them gave partially correct answers, 19.6% of them gave incorrect answers, and 3.1% of them gave correct answers. It was determined that although 37.1% of the students found how many squares would be in the next step of the pattern, they could not obtain the general rule expressing the pattern. Examples of correct, partially correct, and incorrect answers given to 2nd question by the students are provided in Figures 4, 5, and 6:

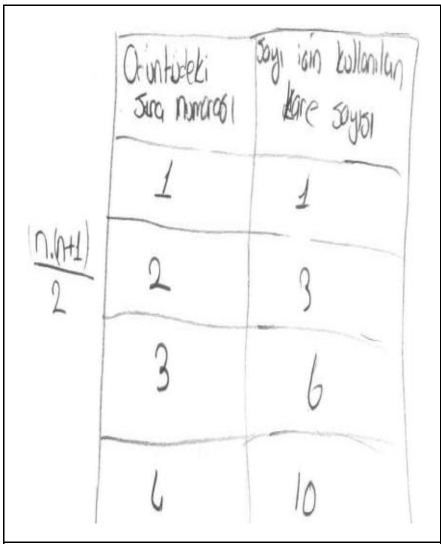

Figure 4. The Correct Answer Given To the 2nd Question By S76

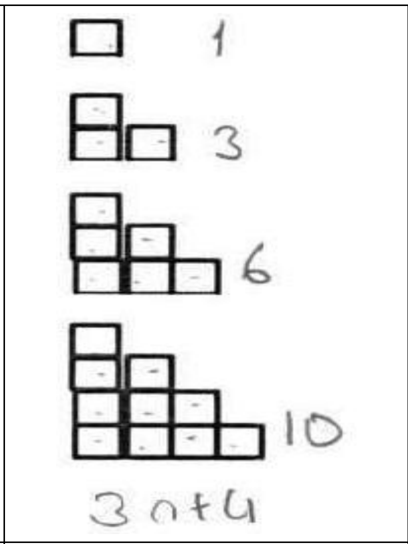

Figure 5. The Partially Correct Answer Given To the 2nd Question By S61

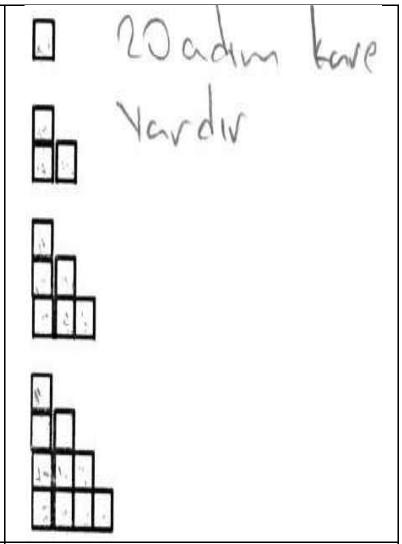

Figure 6. The Incorrect Answer Given To the 2nd Question By S19

What is expected from the students is that they reach the rule "n.(n+1)/2". When Figure 4 is examined it is seen that S76 used the table for solving the 2nd question represented as a figure and solved the problem correctly. "Making a table, i.e. arranging the data during solving some problems, or knowledge obtained during problem-solving into a table, facilitates seeing the connection between data or the obtained knowledge. Thus, the rule used for obtaining the results is found and the problem is solved" (Altun, 2015, p.76 and 123). When Figure 5 is examined it is seen that although the student correctly found the number of the squares, he/she got the rule of the pattern wrong.

Findings and Comments related to Q3

When the findings for the 3rd question are examined it is seen that 83.5% of the students gave correct answers, 7.2% of them gave partially correct answers, 6.2% of them left the question blank, and 3.1% of them gave incorrect answers. Examples of correct, partially correct, and incorrect answers given to the 3rd question by the students are provided in Figures 7, 8, and 9:

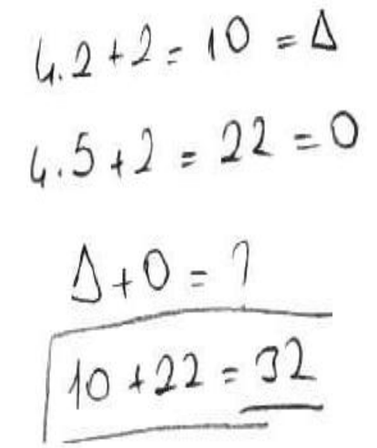

Figure 7. The Correct Answer Given To the 3rd Question By S73

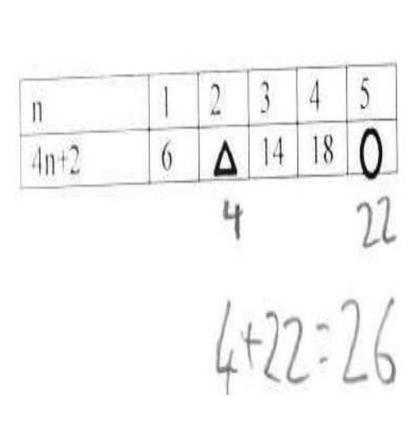

Figure 8. The Partially Correct Answer Given To the 3rd Question By S71

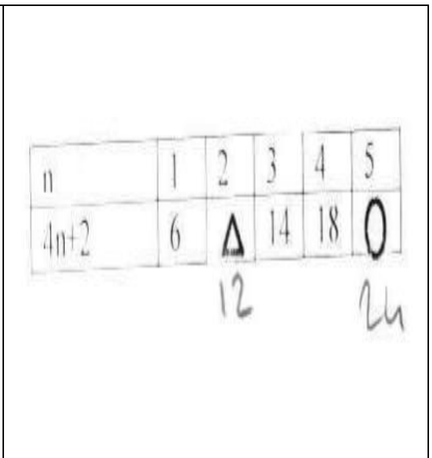

Figure 9. The Incorrect Answer Given To the 3rd Question By S72

In this question, which was represented as a table, what is expected from the students is that they obtain a result which reveals the procedure to be "10+22=32". It is seen that the majority of the students did not have any difficulty answering this question which requires the skill of procedural knowledge. The students who gave a partially correct answer to the question could not get the result as they found a value belonging only to one of the terms, as in Figure 8. "The primary school mathematics curriculum aims to make connections between concepts and procedures and to teach conceptual learning rather than procedural learning. Moreover, the curriculum expects the students to use mathematical terminology correctly and develop their communication skills via concepts, terms, and numbers" (MoNE, 2015, p.4).

Findings and Comments related to Q4

When the findings for the 4th question are examined it is seen that 46.4% of the students gave correct answers, 44.3% of them gave partially correct answers, 8.3% of them gave incorrect answers, and 1.0% of them left the question blank. The 4th question which was represented as a figure and a table, is a question which requires students first to specialize a figural pattern and then to reach a generalization. Specialization means to choose particular or systematic examples in order to understand and give a meaning to a problem, and to examine these examples with the problem (Keskin, Akbaba Dağ, & Altun, 2013). During specialization there are a number of actions such as choosing one or more example, giving examples, identifying, displaying, explaining, and drawing an example (Arslan & Yıldız, 2010). While 46.4% of the students in the study group gave correct answers for this question, 44.3% of them could make a specialization but could not reach a generalization. Examples of correct, partially correct, and incorrect answers given to the 4th question by the students are provided in Figures 10, 11, and 12:

Sayının örüntüdeki sıra numarası	Sayı için kullanılan daire sayısı

Figure 12. The Incorrect Answer Given To the 4th Question By S31

In this question, represented as a figure and table, what is expected from the students is that they obtain the general rule "2.1, 2.2, 2.3,…,2n". With reference to Figure 11 it is understood that the majority of the students who gave a partially correct answer filled in the table by expressing the sequence number of the number which represents the variable "n" in the table as a number rather than writing the general rule.

Findings and Comments related to Q5

When the findings for the 5th question are examined it is seen that 40.2% of the students gave incorrect answers, 28.9% of them left the question blank, 25.8% of them gave partially correct answer, and 5.1% of them gave correct answers. Examples of correct, partially correct, and incorrect answers given to the 5th question by the students are provided in Figures 13, 14, and 15:

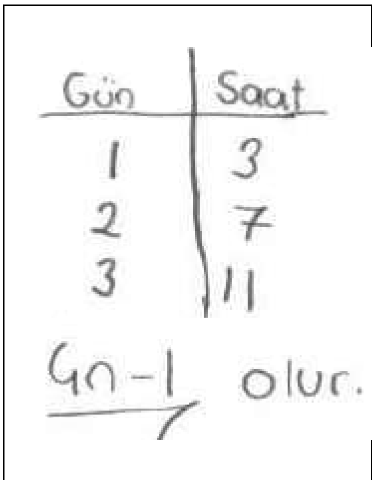

Figure 13. The Correct Answer Given To the 5th Question By S75

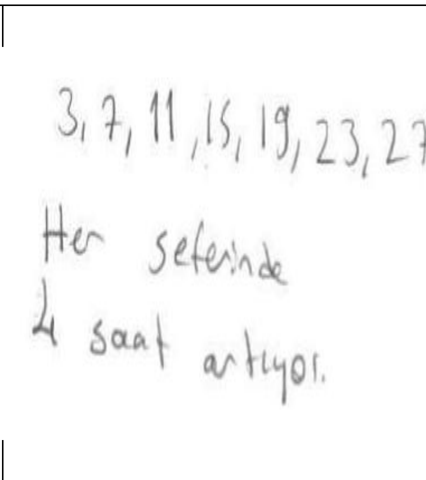

Figure 14. The Partially Correct Answer Given To the 5th Question By S12

Figure 15. The Incorrect Answer Given To the 5th Question By S59

In this question, represented as a word problem, what is expected from the students is that they obtain the general rule "4n-1". When Figure 13 is examined it is seen that S75 solved the question by making a table. When Figure 14 is examined it is seen that S12 continued the number pattern correctly in order to find the general rule but got the general rule incorrect. It can be understood from Figure 15 that the student tried to find the correct answer using the figural pattern but failed.

Findings and Comments related to Q6

When the findings for the 6th question are examined it is seen that 60.8% of the students gave incorrect answers, 28.9% of them left the question blank, 6.2% of them gave partially correct answers, and 4.1% of them gave correct answers. Examples of correct, partially correct, and incorrect answers given by the students to the 6th question are provided in Figures 16, 17, and 18:

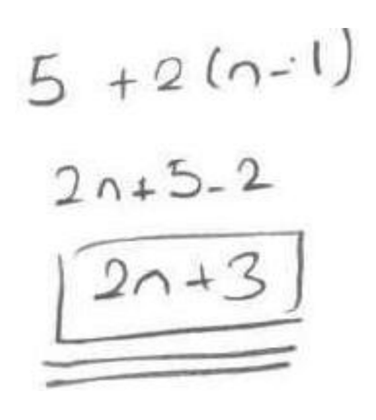

Figure 16. The Correct Answer Given To the 6th Question By S15

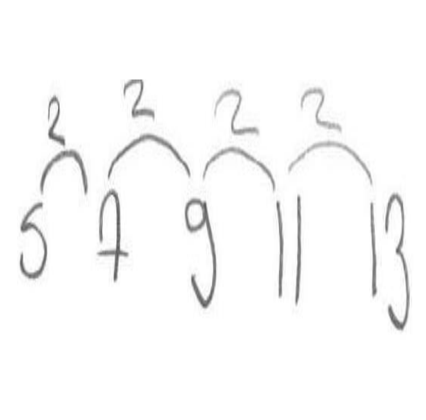

Figure 17. The Partially Correct Answer Given To the 6th Question By S44

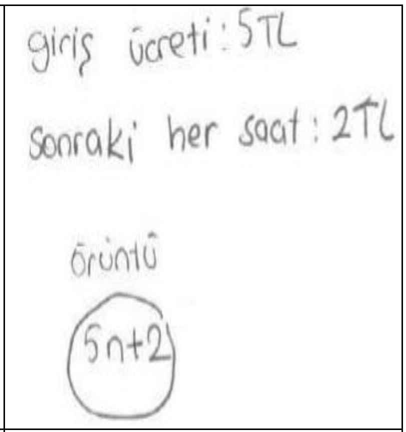

Figure 18. The Incorrect Answer Given To the 6th Question By S37

In this question, represented as a word problem, what is expected from the students is that they reach a generalization as “2n+3”. When Figure 17 is examined it is seen that S44 determined the number pattern expressing the pattern but could not obtain the general term in the 6th question represented as a word problem.

Findings and Comments related to Q7

When the findings for the 7th question are examined it is seen that 36.1% of the students gave correct answers, 29.9% of them gave incorrect answers, 27.8% of them left the question blank, and 6.2% gave partially correct answers. Examples of correct, partially correct, and incorrect answers given to the 7th question by the students are provided in Figures 19, 20, and 21:

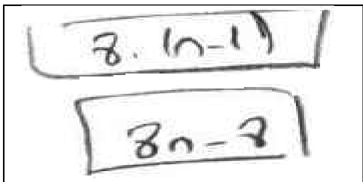

Figure 19. The Correct Answer Given To the 7th Question By S18

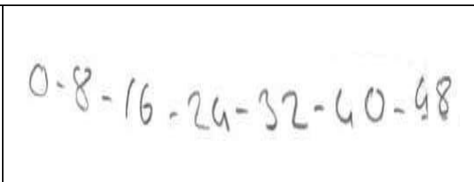

Figure 20. The Partially Correct Answer Given To the 7th Question By S20

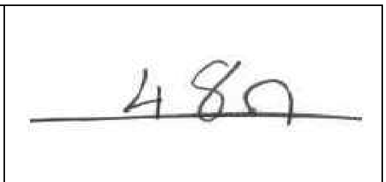

Figure 21. The Incorrect Answer Given To the 7th Question By S25

In this question, given as a word problem, what is expected from the students is that they obtain the general rule “8.(n-1)”. When Figure 20 is examined it is seen that S20 found the number pattern but could not make a generalization. Generalization is defined as extending the effect of the results obtained by the students using mathematical thinking and problem-solving, or restating the results using some examples in a more general and broader way (Mullis, Martin, & Foy, 2005; Stacey, Burton, & Mason, 1985). Students have to perform the following steps to make generalizations: determining connections, preparing examples to test hypotheses, finding a number of different examples, classifying the examples systematically, determining which exercises have the same results, carrying out similar tests and making assumptions (Bell, 1976; cited by Pilten, 2008).

CONCLUSIONS & RECOMMENDATIONS

At the end of the study, it was seen that the students could make specializations but could not reach a generalization for the patterns given as figures. It was concluded from the answers given to the questions by the students that although the students could find out how many figures would be present in the next step of the figural pattern, they could not find the general rule expressing the pattern. In addition to this, it was determined that the students were able to find the desired steps according to a given rule, and thus they easily attained procedural knowledge. This situation indicates that the students had memorized the procedures performed on the concept and its definition. Attention must be paid to conceptual learning to overcome this difficulty (Hacısalihoğlu Karadeniz, Bozkuş, Gündüz, & Baran, 2015). In procedural knowledge, while the idea is to know how to use a concept or procedure without necessarily knowing the reason for it, in conceptual knowledge the process of understanding becomes prominent (Baki, 1997). Conceptual knowledge encompasses the core meanings of the rules, generalizations, and the connection between them and procedures (Bekdemir, Okur, & Gelen, 2010).

In the studies of Soylu and Aydın (2006), it was determined that procedural and conceptual learning could not be balanced in the mathematics teaching process and that subjects could not be learned at a conceptual level as the procedural and conceptual learning could not be balanced. In the studies of Kaya and Keşan (2012), it was determined that the students were more successful in questions which required procedural knowledge and that they better understood these questions. Palabıyık and İspir (2011) specified in their studies that pattern-based algebra teaching increased the success in conceptual algebra of students in the experimental group and did not cause any difference in success in procedural algebra in the experimental and control groups. Similarly, as a result of the study carried by Bekdemir et al. (2010) it was revealed that score average of the students related to procedural knowledge was higher than the score average related to conceptual knowledge. Having difficulties in making connections between the problem and the subject and not correlating and reading what is given in the graphics indicated that the students had inadequate knowledge and could not internalize or learn the subject (Baki & Kartal, 2004). These findings from the study support the findings of this study. Every science field has its own teaching methods in accordance with its objects (Soylu & Aydın, 2006). A teaching process suitable for the structure of mathematics should be planned such that the students are able to understand both conceptual and procedural knowledge in mathematics and to make connections between them (Van De Wella, 2004).

As concepts in mathematics are the connections structured within the cognitions of individuals, these concepts cannot be learned and the next stage of the learning process becomes difficult if mathematical connections are not created in the mind of the student (Soylu & Aydın, 2006). The updated middle school mathematics curriculum (MoNE, 2013b) intends that the use of informal knowledge obtained from concrete experiences, feelings, and the daily life of the students support conceptual learning. When this situation is considered what is expected from the teachers is that they create environments in which the students can make connections between their past knowledge and new knowledge (Hacısalihoğlu Karadeniz et al., 2015).

It was concluded in the study that the students could reproduce a pattern related to the number sequences but could not find the general rule containing the pattern. As another result, it was determined that the students did not understand the questions represented as a word problem, thereby they were not successful in solving these kinds of questions. However it was seen that the students were successful in the pattern questions given as a table. In this context, activities involving the figure, table, number sequence, and word problem forms of patterns should play a greater part in the lessons.

In order to eliminate the difficulties related to the patterns encountered by the students, various examples should be given from environments closely related to these concepts; students' attentions should be attracted by using appropriate materials or models in the class; and the students should be allowed to better understand the subject using different methods and techniques such as games or drama. Similarly, the topic of pattern should be correlated with daily life by using concrete materials, enriched activities, and different models for the process of teaching patterns. Thus, "students will be able to understand the concepts, make connections between concepts and procedures (MoNE, 2013b)" and achieve the *general purposes of mathematics education* by coordinating these with daily life and the other disciplines.

EXEMPLARY TECHNOLOGY INCORPORATED CONTEMPORARY ACTIVE LEARNING ENVIRONMENTS FOR STEM COURSES

Mustafa Erol
Bozok University, Faculty of Education, Department of Science Education, Yozgat, Turkey

Ahmet Özcan
Bozok University, Department of Foreign Languages, Yozgat, Turkey

ABSTRACT: Unprecedented innovations have been experienced since the second half of the twentieth century although there have not been fundamental changes in learning environments throughout the history. The reasons of these changes can be grouped mainly into two categories: 1) The development of new learning-teaching approaches such as constructivism, active learning, lifelong learning, etc. 2) The fast incorporation of technology into education like in every part of our life. More developments in learning environments will not be surprising in the near future.

This study aims to present and analyze contemporary active learning classrooms (ALCs) which are technology incorporated, large enrolled, student-centered, and highly interactive. For this aim, literature review has been carried out about technology incorporated ALCs, which are being innovated continually and designed especially for STEM courses, and prominent contemporary classrooms have been compiled. Then, some ALCs such as SCALE-UP, TEAL, TILE and Next-Gen ALC v2.0 have been deeply analyzed in terms of their physical environment, pedagogical approach, teaching and learning processes, etc. Moreover, traditional classrooms and technology incorporated contemporary ALCs have been compared. It is concluded that the use of these ALCs should be disseminated and instructors should be prepared to guide and facilitate learning in these classrooms.

Keywords: Active learning, contemporary classrooms, technology incorporated, STEM courses, SCALE-UP

INTRODUCTION

For long years, governments have been allocating a large portion of their budgets in education in order to increase the quality of learning and teaching in schools. For this purpose, new schools are being constructed, educational and curricular reforms are taking place, and teacher education programs are being updated. However, the results show that the outcomes are not consonant with the efforts (Gonzalez & Kuenzi, 2012).

There are many reasons of this failure and learning environments may be one of these. While curriculum is constructivist and classrooms are modern and equipped with some technological devices like smart boards and computers, classroom design is still traditional in many schools, in which desks are located one after another and the teacher is in front of the classroom. This design also negatively effects especially the implementation of the constructivist curriculum which is student-centered and supports active learning in its nature. Park & Choi (2014) specify "educational spaces convey an image of educational philosophy about teaching and learning". They indicate that traditional classrooms may be a representation of educational philosophy of essentialism which focuses more on "injecting content into students' brain" rather than having them active and enabling them construct the knowledge. Therefore, it is possible to say that students cannot really be active in these traditional classrooms.

The idea of classroom dates back to ancient Greek where students surrounded their teachers during Socratic dialogues. There was not a regular classroom space, teachers and students came together in an irregular shape. Medieval universities were first to use structured spaces for education, there were two vertical lines of desks facing each other. Then linear rows of desks started to emerge where the teacher stood at the front center of the space. The term lecture, *lectus* in Latin, as a means of delivering the original knowledge through instructor's reading to students was important in those days because paper and books were rare. With the industrial revolution, a need for bigger classrooms arises due to the increase in the number of the students to be educated, and the traditionally designed classrooms were shaped (Park & Choi, 2014). This traditional layout is still used in a widespread manner in many classrooms today (Parsons, 2015, p. 18).

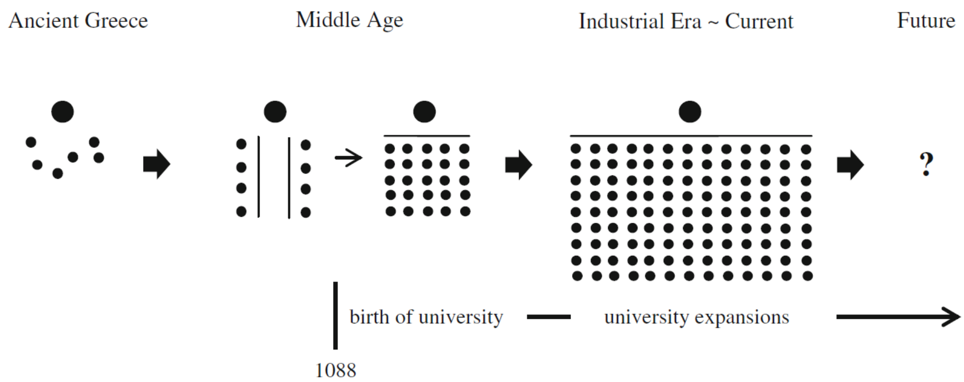

Figure 1. Historical changes in classroom design (Park & Choi, 2014)

Strange & Banning (2001, p. 12) states that physical environment effects learning and development processes. Even if it is a technology incorporated classroom, the design of the classroom will hinder active learning in a traditional one because academic architecture has its own hidden curriculum, and the design and construction of the classrooms effect learning (Orr, 1993). In order for retention and achievement, students should involve actively in peer and student-faculty interaction (Astin, 1993) and this can be done thanks to active learning classrooms (ALCs).

ALCs are technology incorporated collaborative learning environments which support constructivist educational paradigms (Charles, Whittaker & Lasry, 2014). In ALCs, teachers' role of relaying information shifts to learning coach and facilitator. These classrooms also promote collaborative learning and teamwork, active discussion and encourage students to talk and participate more (Alexander et. al., 2009). Therefore, in order to achieve these goals, ALC furnishings and architecture are designed intentionally in a different way shifting the focus toward students' collaboration and reshaping the traditional authority structures (Charles, Whittaker & Lasry, 2014). They also consist many technological devices to provide an active learning opportunity (Erol, Ozcan & Luft, 2016) and visualization, connectivity, sharing and artifact creation (Charles, Whittaker & Lasry, 2014). A current ALC may be depicted as in Figure 2 to replace the question mark in Figure 1.

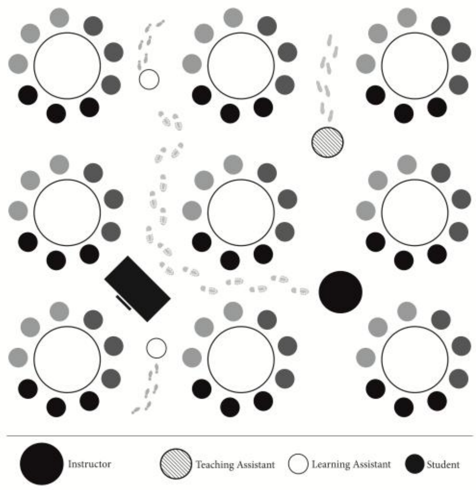

Figure 2. Contemporary active learning classroom design

As shown in Figure 2, the traditional idea of instruction, in which teacher is the resource of the knowledge and s/he teaches by "lecturing" and students learn by sitting on their desks, is flipped in ALCs. In these flipped classrooms, the teacher is not the authoritative figure in front of the students; instead s/he is the facilitator and coach of the learning. The teacher walks around the classroom, works with the students on the tasks and guides and discusses with them. In some ALCs, there may be some teaching and learning assistants who help both students and teachers during the activities. In these classes, students sit in groups and face to face rather than one after another.

Before the construction of contemporary ALCs, there have been some initiatives such as Workshop Physics, Open Laboratory, and Peer Instruction.

Initiatives of ALC Implementations

In a *workshop* physics classroom, which was firstly implemented by Dickinson College, all lectures are taught in a laboratory with new computer technology. Students preferred workshop courses (Singer, Nielsen & Schweingruber, 2012, p. 127) and their success was better on the conceptual exams, but not in problem solving (Laws 1991, 2004). *Peer Instruction* approach (a Harvard University initiation) has been shown to boost conceptual understanding and problem-solving abilities and to provide instructors with valuable feedback on their teaching (Mintzes & Leonard, 2006). *Open Laboratory* allows students flexibility in scheduling laboratory attendance and permits students to spend more time if necessary to complete lab. The system also encourages the students use of visual media which is less personnel dependent instruction (Godbey, Otieno & Tofan, 2006). *Interactive Lecture Demonstrations* (initiated in University of Colorado) are designed to enhance conceptual learning through active engagement of students in learning process. Students observe real physics demonstrations, make predictions about the outcomes on a prediction sheet, and collaborate with fellow students by discussing their predictions in small groups, and then examine the results of the live demonstration (Sokoloff & Thornton, 2004).

Active learning has been reported to increase academic performance in Science, Technology, Engineering and Mathematics (STEM) courses (Freeman et. al., 2014), therefore, ALCs are widely used in STEM education. In an educational view STEM education involves more inquiry and project-based approach than traditional lecture-based teaching activities (Breiner et. al., 2012). STEM contains educational practices both in formal and informal settings across all levels from pre-school to post-doctorate (Gonzalez & Kuenzi, 2012). These are generally active learning practices that promote student engagement in learning process, increase academic performance and facilitate interaction between the students and instructors (Erol, Ozcan & Luft, 2016).

Aforementioned ALC initiatives fall under *studio* style classroom. In these classrooms, physical design of the room is different; students sit together and look at each other (Perkins, 2005) and the environment is quite interactive (Gottfried, 2007). Although it covers small number of topics in the course book, it enables students to comprehend the concepts deeply and supplies a higher order thinking skills because lab and lecture are combined and no major problems were reported by the researchers who studied in it (Perkins, 2005). The pedagogy of this classroom is based on peer instruction (Kohl, 2012) learning cycles, active learning, scientific research, and cooperative learning (Gottfried et. al., 2007). The research show that studio teaching promotes better learning, improve student attitudes, and result in better grades (Beichner & Saul, 2003; Perkins, 2005), gains in problem-solving skills and exam performance (Kohl & Kuo, 2012).

Aim

Among the studio type classrooms, some are commonly and successfully implemented, especially in STEM courses, such as SCALE-UP (Student Centered Active Learning Environments Upside Down Pedagogies, initiated in North Caroline State University), TEAL (Technology Enabled Active Learning, initiated in Massachusetts Institute of Technology),TILE (Transform, Interact, Learn, Engage, initiated in University of Iowa), and Next-Gen ALC v2.0 (Next Generation Active Learning Classroom, initiated in Dawson College). These ALCs have very similar characteristics with each other. They are technology-enhanced and contemporary environments that promote active and engaged learning. The students are grouped in these classrooms; they sit around tables and have laptops on them. There are projectors, smart boards and screens on the walls; also each group has their own boards. These ALCs are student-centered in their nature, students work actively and collaboratively; and the instructor guides and facilitates students' learning (Benson et. al., 2007; Beichner, Dori & Belcher, 2006; Florman, 2014) Therefore, they enable flipped instruction, hands-on activities, and collaborative learning.

This literature review aims to analyze these ALCs in terms of some aspects such as class design, technology incorporation, teaching and learning processes, and challenges. For the examination of these classrooms, an extensive research has been carried out on active learning classrooms and technology incorporated educational environments. Then, contemporary ALCs used in STEM courses have been compiled. The ALCs analyzed in this study are SCALE-UP, TEAL, TILE and Next-Gen ALC v2.0. These ALCs have been deeply investigated in terms of their physical medium, pedagogical approach, grouping and assessment procedures, teaching and learning processes, and challenges. At the end of the study a comparison between traditional classrooms and ALCs are made.

Undoubtedly, there may exist a great number of ALCs around the world and they can have significant differences from each other. This study is limited with prominent ALCs mentioned above. However, it gives a general perspective about the characteristics of ALCs, especially to use in STEM courses. Beichner, Dori & Belcher (2006) state STEM instructors should follow the contemporary approaches. This study will help STEM instructors and educational authorities to learn the characteristics of and to be aware of contemporary ALCs. It is also hoped that this study will contribute to the implementation and dissemination of ALCs.

Exemplary Active Learning Classrooms

Some of the exemplary technology incorporated contemporary ALCs successfully implemented in STEM instruction are SCALE-UP, TEAL, TILE, and Next-Gen ALC v2.0. All these classrooms are similar to each other and they have distinctive properties from the traditional classrooms in many aspects. The characteristics of these ALCs have been analyzed under several themes such as class design and technology incorporation, pedagogical approach, lectures and curriculum coverage, teaching and teaching staff, learning and students, hands-on activities and experimenting, assessment, and challenges.

Class design and technology incorporation

The main aim of these ALCs design is to engage the students in active learning. Lecture time is spent in a special technology incorporated medium (Beichner et al., 2007; Gaffney et al., 2008). Based on the enrollment, the room may involve small or large number of students (eg. 36-99, or even more) sitting on round tables. Each table accommodates 9 students in 3 groups having their own laptops with internet. There are whiteboards, multiple projectors and screens on the walls so that every student has a view (Singer, Nielsen & Schweingruber, 2012). The instructor has a sympodium with interactive digital pen display, linked to projectors (Benson et. al., 2007). The students are exposed to a mixture of desktop experiments, cooperative activities, presentations, and web-based assignments. The desktop experiments and computer-aided analysis of experimental data allow the students have direct experience of various phenomena (Dori et. al., 2003). The Next Generation ALC v2.0 of Dawson College was based on providing a dedicated multi-touch interactive white board to each student group, and an asymmetrical truncated circle table design born while trying to promote peer collaboration. A “horseshoe” arrangement was developed to have larger space for activities (Charles, Whittaker & Lasry, 2014).

Pedagogical approach

Active learning is the way of instruction that rooted in constructivist and social constructivist learning theories (Charles, Whittaker & Lasry, 2014). Effective implementation of authentic learning centering upon daily life experience is the pedagogical approach of ALCs. They emphasis on learning by guided inquiry rather than sitting and listening the instructor. Team based active learning (Johnson, 1991) and in-class learning by guided inquiry (Lee, 2004) approaches are used in ALCs (Benson et. al., 2007). The ALCs help students concretize the content with the desktop laboratory experience in a media-rich classroom and use collaborative and active learning (Dori et. al., 2003). In ALCs, the teams are constituted to be heterogeneous within groups, but homogeneous across groups (Beichner, Dori & Belcher, 2006). They focus to increase student-faculty interaction and engagement (Van Horne et. al., 2014).

Lectures and curriculum coverage

In these ALCs mini-lectures are replaced with full period lectures (Benson et. al., 2008). During the class, lecture time is reduced to about 15-20 minutes (Benson et al., 2009; Oliver-Hoyo and Beichner, 2004; Perkins, 2005) at the beginning of the class period. The reduced lecture continues with group learning activities, and the students are generally more motivated than the ones in other sections (Benson et. al., 2007). Many studies support the notion that "less is more," meaning that exposing students to less information can result in better learning (Tobias, 1990; Dempster, 1993; Nelson, 2001; Fratt, 2002; D'Avanzo, 2003; cited in Perkins, 2005).The content covered is less than traditional class but the learning is greater (Perkins, 2005).

Teaching and teaching staff

ALCs have not only one instructor, but also some teaching and learning assistants. The instructor and teaching assistant(s) roam the facility and asks questions (Beichner, Dori & Belcher, 2006). Modules of the content should be relevant to daily life experience and be prepared as activities do be carried out in the classroom. The instructor assigns activities and then visits each table, engages students in conversations about their work

(Beichner, Dori & Belcher, 2006). Learning assistants, upper-grade undergraduates, may serve as coaches asking leading questions, answering questions, and formatively assessing student work for the benefit of students and to inform instruction (Benson et. al., 2007).

Learning and students

ALCs have specialized active learning format that relies largely upon social interaction among students, instructor, and learning assistants (Benson et. al., 2008). In some studies, this format has resulted in an improved retention rate (Benson et. al., 2007) and it has increased the learning gains significantly (DeBeck & Demaree, 2012; Dori et. al., 2003). Student have also favored the teaching methods and the course activities and had positive comments after the course (Benson et. al., 2007). Carefully planned high engagement learning activities take place in ALCs like discovery learning and inquiry-based learning (Benson et. al., 2008), they shift learning process from a teacher-centered to a student-centered one (Beichner et al., 2007; Gaffney et al., 2008).

Hands-on activities and experimenting

In ALCs, students engage in hands-on activities and they have experience with computer simulations, work cooperatively on problems, and conduct hypothesis-driven experiments. (Singer, Nielsen & Schweingruber, 2012). They introduce a laboratory component into the courses (Dori & Belcher, 2005; Beichner, Dori & Belcher, 2006). The virtual experiment can be performed by the students (Beichner, Dori & Belcher, 2006).

Assessment

Monitoring the real time assessment of students by the teaching staff is central to these ALCs. Formative assessments are carried out during the learning activities (Benson et. al., 2008) and instructors can easily assess the conceptual understanding of students (Beichner, Dori & Belcher, 2006). Grades in the ALCs are not curved. Because collaboration is an element, it is important the class not be graded on a curve to encourage students with stronger backgrounds to help students with weaker backgrounds (Beichner, Dori & Belcher, 2006).

Some Challenges

In addition to success of the ALCs, there are some challenges regarding to shift from a traditional class to a contemporary technology incorporated active learning classes: (1) All course materials, like lecture notes, projects, exams may need a redesign (Perkins, 2005). (2) Preparation of the instructors takes lots of time and planning must be well done (Van Horne et. al., 2014; Perkins, 2005). (3) The classes are student focused; it sometimes requires giving up an uncomfortable amount of control (Perkins, 2005). (4) Planning class time to cover all the necessary topics are not easy, instructors reminds the deadline of the activities (Van Horne et. al., 2014). (5) The instructional team (instructor, teaching and learning assistants) needs extra skills. (6) A better professional development program is required for instructional team. (DeBeck & Demaree, 2012). (7) Some teaching strategies (eg. whole class discussion) may not fit ALCs (Van Horne et al., 2014). (8) Staff reluctance and lack of experienced personnel may be encountered. (9) Scarce of the financial resources may be a problem.

Active Learning Classrooms vs. Traditional Classrooms

While the ALCs analyzed in this study have similar features with each other, they distinct from traditional classroom environments significantly in many aspects. Therefore, a comparison between the ALCs and traditional classroom is needed to show their differences. Table 1 compares the characteristics of traditional classrooms with ALCs, with reference to the literature. As traditional classrooms are common and well-known, their features have not been referenced.

Table 1. Traditional classrooms versus technology incorporated active learning classrooms (ALCs)

Dimensions	Traditional Classrooms	Technology Incorporated ALCs
Physical environment	Classical classroom design enabling only instructor-student interaction	Large enrolled (Beichner et. al. 2000; Beichner & Saul, 2003; Benson et. al., 2007; Rogers et. al., 2015), comfortable (Beichner & Saul, 2003), round tables with nametags (Gaffney et. al., 2008), interactive environment (Van Horne et. al., 2012; Florman, 2014) visualized (Beichner,1999; Dori et. al., 2003)
Lectures	Lecturing through the 50-90 minute classes	Lecturing reduced to about 10-20 minutes (Benson et al., 2009; Oliver-Hoyo & Beichner, 2004; Perkins, 2005)
Technology incorporation	Supportive tools like smart boards, projectors etc.	Ultimate level of technology incorporation (team or student laptops, instructors station, projectors, video and document cameras, TVs,

		clickers, software, etc.)(Beichner at. al., 2000; Oliver-Hoyo & Beichner, 2004)
Activities	Individual and group activities, question-answer, problem solving	Out-of-class readings, group discussions, hands-on activities, internet search, Socratic dialogues (Beichner, Dori & Belcher, 2006; Benson et.al., 2007)
Laboratory activities	Separate laboratory hours, individual or group works in lab.	Laboratory works integrated to the lectures (Gaffney et. al., 2008; Perkins, 2005), team work (Beichner,1999)
Curriculum coverage	More topics can be covered	Essential topics can be covered in great depth (Perkins, 2005)
Grouping	Rare or none	Students work in groups (Gaffney et al., 2008).
Responsibility	Teachers are responsible for students' learning	Students take learning responsibility (Beichner et. al., 2000; Gaffney et al., 2008)
Instruction	Teacher – centered	Minimized lecturing, peer instructions, student-centered (Benson et al., 2007)
Learning	Passive learning	Active learning (Beichner, 1999), peer review, critique (Perkins, 2005), research environment (Kohl & Kuo, 2012), team based (Benson et al., 2007), group learning activities (Gottfried et. al., 2007), inquiry learning (Oliver-Hoyo & Beichner, 2004), collaborative learning (DeBeck & Demaree, 2012),
Instructor	Lecturer, authoritarian, active through the class	Mentor, acts as learning guides, provides materials (Perkins, 2005), assigns activities, walks from table to table, engages students (Beichner, Dori & Belcher, 2006)
Teaching assistant	Separate lab or recitation role	Roam the facility, asks questions (Beichner, Dori & Belcher, 2006), provides materials (aid instructor) (Perkins, 2005)
Learning assistant	No LA	Serves as coach, answers questions, asks leading questions, and formatively assesses student work (Benson et al., 2007)
Student	Passive learner, no interactions with peers, motivation is difficult	Active learner, group member (Perkins, 2005), generally more motivated (Benson et al., 2007)
Assessment	Classical exams: quizzes, mid-term exams, final exam	Formative assessment, real time assessment (Benson et al., 2008)
Basic challenges	Teacher-centered, generally monotony medium, boring for students	No lecture notes (Beichner et al., 2000), preparation of instructors takes lots of time, planning must be well done, sometimes uncomfortable amount of control (Perkins, 2005), classroom management needs extra qualification, the efficacy is limited by the skill of the instructional team, professional development program is desired (DeBeck & Demaree, 2012).
Benefits	Economic space, no need for extra qualifications for the staff	Team work ability (Beichner & Saul, 2003), higher cognitive skills (Oliver-Hoyo & Beichner, 2004), communication skills (Erol, Özcan & Luft, 2016), critical thinking (Beichner,1999), scientist students (Handelsman et al., 2004), presentation skills (Beichner et al., 2000)

CONCLUSION

In the last years, an extensive change has been occurring regarding to educational environments. This change is seen especially in STEM courses with the emergence of approaches like active learning, collaborative learning, flipped instruction, etc. Therefore, educational authorities, teacher trainers and STEM instructors must be aware of these approaches and classrooms.

Technology incorporated contemporary ALCs held in this study are technology-rich environments that may be large-enrolled and enable a great number of students become active at the same time. These ALCs adopt a constructivist approach and students have daily life experiences by doing experiments, research and hands-on activities. Lecture in the ALCs is generally minimized; however they result in better student performance and more learning. There may be more than one staff (the instructor) in these ALCs such as teaching and learning assistants. They do not teach; rather, they guide students' activities and facilitate their learning. Formative assessment takes place in ALCs and students' collaboration and engagement in activities and group works have also importance for grading. Compared to traditional classrooms, ALCs have been proved to yield better results in terms of learning, retention and affective dimensions.

Besides the advantages above, ALCs have some challenges. It may be hard for both instructors and students to adopt an ALC who are accustomed to traditional learning environment. Although they are student-centered and may seem easy to handle for instructors, they require substantial time and effort to prepare for the courses and to instruct them. Moreover, curricular and instructional materials should be adopted for these ALCs, and they will need more financial resource.

In order to overcome the challenges, teacher education programs should be revised and in-service training activities should be carried out. Additionally, the authorities should invest in comfortable classrooms and contemporary technological tools. Also, continuous faculty encouragement programs should be an academic culture to introduce and use ALCs.

STEM instructors may use the ALCs analyzed in this study. They may also be suitable for other courses rather than STEM with minor changes, even for social sciences. Change may be a challenging and slow process, especially for the ones who are accustomed to traditional; however, it is a prerequisite in this age where rapid changes are emerging. When the educational stakeholders take a decision for change, the success will likely to come.

ABSTRACT: The research focus in on reviewing and analyzing the current usage of ICT in teaching in schools in Macedonia in Albanian language. Despite the fact that schools are currently undergoing a rapid development technological some have already completed, are equipped with cabinets and computer labs are supplied with internet, created the platform for teaching electronics, some schools have created web sites their were part of the pilot projects: e-school, e-learning, are supplied with cabinets and contemporary laboratories of many other developments that will impact on achieving the best possible, but teaching by using the benefits that technology provides in most cases is not the desired level, so it is efficient but followed the traditional form despite reforms that are being made. Technology opportunities and resources that schools have available, not rationally utilized and maximized by teachers who should lead these processes. Therefore this research provides insights into most used technologies for teaching that could be beneficial also for other regions as well. The insights and recommendations have been provided and discussed.

Key words: instructional technologies, technology enhanced education, review of technological opportunities

INTRODUCTION

New technologies are constantly arising and they influence the way how people interact and learn. Recent developments in digital technologies, especially web 2.0 tools such as blogs, wikis and social media, and mobile devices such as smartphones and tablets, have given the end user, the learner, much more control over access to and the creation and sharing of knowledge. This empowers learners, and innovative instructors are finding ways to leverage this learner control to increase motivation and relevance for learners.

Information and communication technology represents one of the main areas in contemporary human life and especially in teaching, is an integral part of his daily activity and aim readiness to deal with the problems of the present and future . Information technology and communication is a continuation and extension of previous knowledge in this field and has to do with the acquisition of knowledge and skills necessary for successful use and independent hardware information technology and communication (ICT), use respective programs can be edited, created, designed and published web pages with various data via internet (Brooker, 2003)

Through this web-pages aim to provide examples of different learning and that these examples and help teachers explanation as students learning through practical examples and easier to understand and become familiar with many more subjects.

In higher education, information and communication technology, has enabled the lectures, seminars and various presentations, exams etc., Held in the form of so-called "online" despite the remoteness of the facility ie there is no reason to justify ourselves in this long-distance educational institutions, so the only condition to be fulfilled is to have communication infrastructure that is appropriate for internet and communication programs.

Use of websites being implemented in all the vital processes as a vital necessity for the development of knowledge worldwide. Even in the sphere of education, as in every area of life, the use of websites has brought about a radical turn in the development of a culture of learning, making knowledge more advanced and more accessible, increase skills conceptual and perceptual students during class, facilitating learning.

All this it enables progress independent development, brings dynamism in teaching / learning, promotes and develops training as communication, mathematics, foreign languages, social studies, programming, design, critical thinking and finding election problems of different nature, use multiple sources etc., for all students.

New Demands of a Knowledge-Based Society

There are several separate factors at work here. The first is the continuing development of new knowledge, making it difficult to compress all that learners need to know within the limited time span of a post-secondary course or program. This means helping learners to manage knowledge - how to find, analyze, evaluate, and apply knowledge as it constantly shifts and grows.

The second factor is the increased emphasis on skills or applying knowledge to meet the demands of 21st century society, skills such as critical thinking, independent learning, knowing how to use relevant information technology, software, and data within a field of discipline, and entrepreneurialism. The development of such skills requires active learning in rich and complex environments, with plenty of opportunities to develop, apply and practice such skills. Lastly, it means developing students with the skills to manage their own learning throughout life, so they can continue to learn after graduation.

Analyses of Web Quests

A Web quest, "according to Bernie Dodge, author of the WebQuest concept," is an activity-oriented in which most or all of the information used by learners is drawn from the web. Web quest are designed for use in leisure, focus on using information rather than looking for it, and to support students in thinking at the levels of analysis, synthesis and evaluation (Condie, et al 2007).

Web Questa are simple websites, where they can be built with any software that allows to create websites. Users of information and communication technology can develop code in Notepad or Notepad ++ is the most advanced, while the used templates that offer p.sh Microsoft platform or OpenOffice. More advanced developing Web software, they are numerous and by combining, but are recognized as Dreamweaver, FrontPage, etc.

There are pages of various websites that are geared specifically to enable the creation of web Questa, as Questgarden, Zunal, Teacherweb, etc., All these allow the teacher to create and modify those for the student to be more understood. These web sites offer less control over the design, but they make the creation process more simple and direct.

Methods for creating web Questa are easier than thought, so always looking to make a web quest but not sure where to start. Therefore, the use of information technology and communication has concrete answers and can make the process easier for the activity in question. Web quest are probably the most talked about activities and widely used web-based nowadays, which are used for constructive approach to learning and a deeper knowledge of specific topics. Through the use of web Questa students are not limited to learning to take only from books, brochures, magazines, etc., From which students would benefit and also used their imagination to solve various problems being detected or established method of easy to use. So, the creation and completion of a quest-Web is a very effective way that students can use the computer. This includes strengthening the two forms and more powerful electronic tools that have recently it is: the Internet and related programs. Web quest is a demanding task for which material should be used that are online and other materials also. Each student has one or more roles and have to use language constantly during operation of the task (Mazrek, 2015).

Communication, teamwork, problem solving, and critical skills and creative thinking are becoming more important in today's world than having students who learn by heart the default content. Web Questa allow students to seek and find what there is in the subject and enrich any elements to it that topic and that will be to the benefit, to do more than learning information by heart, but meaningful . Here, teachers can express their ability to make changes in the curriculum to accommodate different needs that students understand and remember for a long time.
Distinctive features - web Questa distinguished from others based on the Internet site of three features, such as:

• Web questi is based class
• Web questi emphasizes their thinking (such as analysis, criticism kreativitete or different)

• The teacher selects the appropriate resources, emphasizing the use of information

The purpose of the web Questa group work is accomplished by dividing the roles and tasks. Questa web structure - composed of five essential parts, such as:
• Introduction
• task
• process
• sources
• Evaluation and conclusion

Questa web tasks - their duty is to be a description of what will introduce a web quest.
Process - shows the steps of the processes through which has passed to achieve successful introduction of adequate material and examples.
Resources - in order to provide a better presentation of the web Questa should take into account other relevant sources.
Evaluation - ways of presenting web Questa students for specific projects will be evaluated, their preparation and presentation must be fair, clear, consistent, comprehensive specifications for certain tasks adequately.

Questa uses the web in education - teachers use web Questa for:
• Keep children active at a certain time using the Internet (student activities organized by Questia web and they can stay focused on the use of information rather than find it)
• Makes students to think in a higher level of analysis, synthesis and evaluation,
• Critical thinking and problem solving through authentic assessment, learning group,
• Motivating students to learn independently,
• Familiarity with technological components,
• Provision of guidance, through which solved problems and ideas arise for the use of other resources to better understanding,
• Increasing the skills and the development of thinking, etc.

Blogs

BLOG is the acronym of "WEB" and "LOG". Blog is a website which is maintained by a person who continually enriches with different information on the subject which elaborates. Information that can be edited are different formats like text, pictures, audio, video, etc., Where the content of the information displayed in chronological order form. Information Technology, blog made one of the most common forms for the preparation of web-websites nowadays, relying on methods of creating BLOG's and maintenance, maintenance is easy and does not It requires a deep knowledge of ICT. Viewed from a practical perspective, Blogs is a personal online diary where teachers can write on topics that have to be explained to students and bloggers threads (teachers) can be varied and rich with examples. Web journals dealing with one or more subjects in which visitors can write commentaries or ask questions. Each can in a simple way and without any special technical knowledge to show their opinion. The contents change frequently and this makes the web more popular journals (Duhaney, 2001). In addition BLOG can be seen in the format micro blogging by posting on social networks: Facebook, Twitter, Video Blogging etc.

RESEARCH METHODOLOGY

The research methodology used is quantitative research. Primary quantitative data has been mainly collected from questionnaires particularly designed for this research which has been distributed to the management and administration of school institution.

The target group were teachers of different subjects and school levels, schools, urban and rural, high school, vocational school, art school and special school (school for children with special needs).

The research methodology is based on the questionnaire instrument which has been distributed to educational institutions in the municipality of Mitrovica. The questionnaire consisted of 32 questions, where: 9 questions – consisting basic information and other questions have been distributed for assesing the specific impacting factors.

35 Questionnaires have been distributed to school Principles and recived 34 of responses from them. 550 electronic questionnaires have been sent through e-mail to teachers and recived only 115 responses and waited approximately 3 months for the responses.

RESULTS AND FINDINGS

Access to computers - Based on the results presented from the survey results that all schools are equipped with computers, which is an indication of very important on the one hand and a disturbing indicator on the other hand, since the level of use their very low.

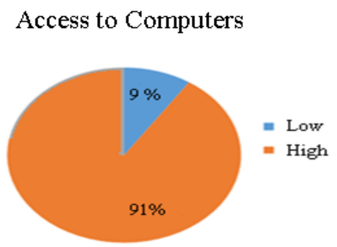

Figure 5. Analyses of Access to Computers

Long experience as Director, Computer possession, following some training in technology is inconsistent with the level of full use of technology for the management and creation of climate use in schools.

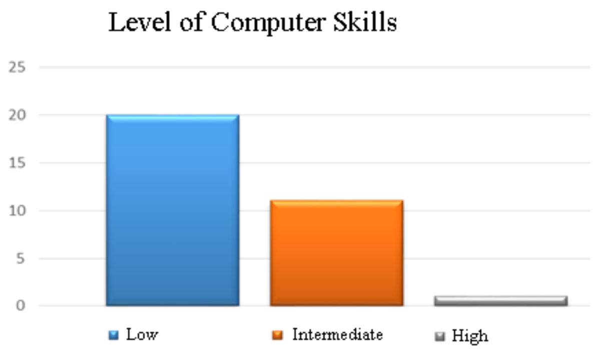

Figure 6. Analyses of Computer Skills level

Computer skills - from 63% of directors have little knowledge in the use of technology, despite the fact that all possessed a computer, 34% and 3% average knowledge of enjoyable knowledge. The following image is reflected in the rate of computer ownership by directors.

Website - figure 50% of those who are beginners in the use of the Internet is alarming, because all communication nowadays is oriented towards and through Internet technologies. Everything in the world of technology today is preceded by communication via the Internet. Development and advancement of all processes that occur in school is dependent primarily by communication through internet technologies.

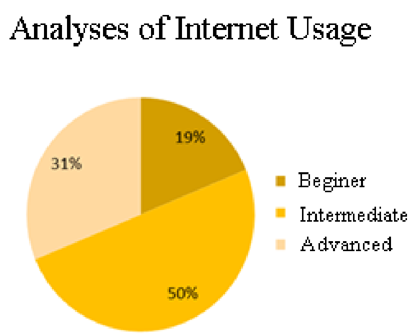

Figure 12. Analyses of Internet usage

Reports - Measure the percentage of 91% electronic reporting is inconsistent with the computer skills of directors. To this percentage is due to staff-subordinate directors engage others to prepare reports on electronically.

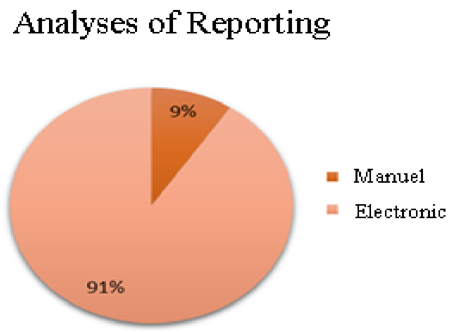

Figure 13. Analyses of Reporting

Compiler reports - greatly principals hire teachers for the preparation of reports. This result gives us realize even one of the reasons why the level of technology use is low, so they are upheld to their subordinates and this did not make them to engage and commit themselves more in the use of technology, given the fact that they have the legal obligations which sets out the duties of school principals, as p.sh management database to school, reporting through EMIS 1 -s, statistical reports, descriptive, analytical etc. The figure shown on the next page, seen rates makers electronic medical reports.

Delays reports - Clearly not the best approach to technology affects the delayed reports. These delays cause reporting problems because they know that these reports have their hierarchy of school - education director - Minister.

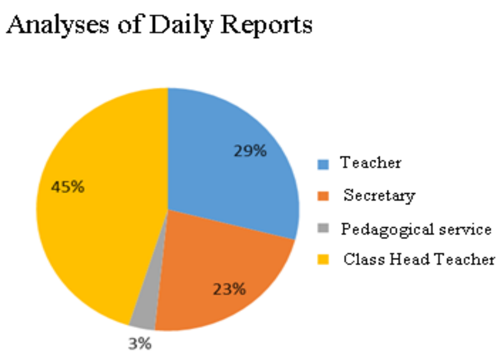

Figure 14. Analyses of Daily Reports

Communication - The tabular overview of this communication appears that the directors of subsidiaries engage in most cases teachers stand out because the result that 44% of the media use that is inconsistent with the level of use of technology by the directors.

Table. 1. Coverage of exploitation technologies of communication directors expressed in numbers and percentages

Coverage of exploitation technologies of communication directors expressed in numbers and percentages		
Communication technologies	Nr.	%
Phone	2	6
Phone & Hard Copy	3	10
Phone, mail Hard Copy &	11	34
Phone, mail & Social Networks	2	6
Phone, Hard Copy, mail & Social Networks	14	44

The outlook for technology - indicators that give positive signs for the use of technology and its integration in school is the fact that all the directors in question "Will the use of technology to help management" responded positively. This gives with the understanding that they are aware of the role that the use of technology to facilitate the performance and management duties in their schools. In relation to the degree of knowledge and experience in their results that only an opinion declared not a necessity in which you should invest continuously in this direction. Directors have the opportunity to invest in knowledge for technology to do without can be large, since all possess computer, are all the time in school, have teaching technology from whose experience can benefit, provided various trainings can cooperate with each - other.

Table. 2. Coverage of exploitation technologies of communication directors expressed in numbers and percentages

Blogs	Description

Blogging is a great way to share what is happening in the classroom to the wider world and to engage students in authentic communication. With good use of the tags and categories, it is also a great way to organize web-based resources. The graph below gives the countries that use edublogs education, this survey has been conducted in the period 2014/2015 (Mazrek, 2015), in which it is clear that the US dominates in popularity and use of blogs in education for treatment of topics various educational.

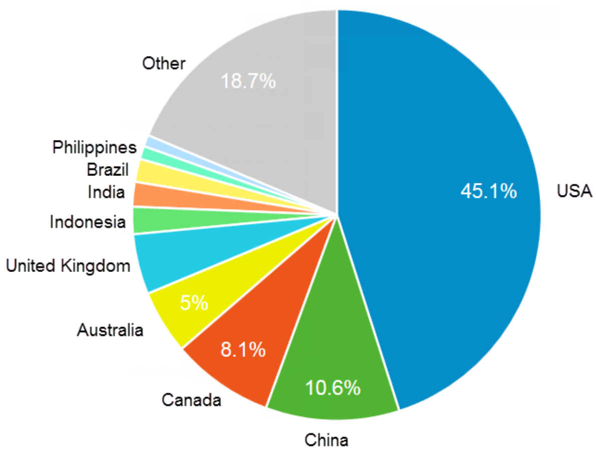

Figure 1. Analyses use of blogs in the world level

CONCLUSIONS & RECOMMENDATIONS

Information and communication technology knows no tradition but innovation and innovation. Therefore, the use of the benefits offered by technology in teaching, will affect students will learn and achieve more objectives of the course and quickly through attractive examples that teacher will be presented on various subjects, compared with traditional methods and tools.

With the use of technology which is understood as the implementation of equipment and various tools in the learning processes not only students will benefit more and prepare better for the future but it is welcome and makes it easier for themselves teachers in communication, critical thinking and problem solving as well as organizing various working groups that are essential nowadays, this will achieve more than just reading or writing.

The necessity of the use of technology in all aspects and levels of education starting from the fact of the generations before preparing to become familiar with the technology and to achieve success in all walks of life day by day which is being led by the information.

The need and reason of the application of ICT in education starting from the fact of preparing young people to become leaders and be successful in this society led by information. Communication skills, processing, critical thinking and problem solving and group work are essential to society and socio-economic technology of the 21st Century Education in this sophisticated environment will do more than just reading, writing or acquisition of skills arithmetic. It should also provide job skills that will help young people achieve their human potential.

Therefore, information and communication technology in education will address the changes and effects in primary education are: emphasis on the need, in the way of more effective integration of ICT in teaching methods change from traditional to interactive, hours with the evolution of the ICT application, electronic data processing and data interpretation. ICT integration is not only an opportunity but also a necessity to make the educational process more attractive. (Mazrek, 2015).

The main goal is to use the benefits offered by technology to optimize their use by various categories of potential participants as teachers, students, etc., Which represents a step very challenging, especially in the cycle low in primary where learning content must have elements that students will be reasonable and enforceable. Each school precedes development using technology and communication in all areas and communities. Using the opportunities offered by communication technology are multi-dimensional and more efficient. The possibility of cooperation between schools, whether urban or rural, regional, or global by using the technology would bring more good schools and various processes to advance in school. Using the opportunities that technology will help give the report parental school-community, business community, etc. Using the opportunities that technology offers, the school division will bring experience, professional development through online courses, video conferences, project management school, school timetables efficient management, monitoring and effective supervision, various development activities educational, creativity and innovation, problem solving, communication and mutual cooperation teachers - students, etc.

Relying on technology developments downturn, education should be a vital aspect in the learning process. Technology can affect learning in education in different ways:
• Changing the orientation of the education system, teachers as a source of knowledge for students,
• The choice of many valuable resources and usable by students,
• The possibility of distance learning (e-learning / e-learning)
• The standardization of quality in education,
• The need to better understand and implement lifelong education, etc.

ABSTRACT: The research focus is into proposing a new IT learning pedagogy Multilevel Assisted Instructions- (MAI) to be used in Distance Education. The aim of the new devised pedagogy MAI model is to transform today's outmoded education system, teaching and learning, to a vibrant learning ecosystem that puts learners at the center, especially in the distance education. The research study will investigate and integrate all of the following research questions: What triggers in the new pedagogy? What are the new demands of a Knowledge-Based Society? What are the new student expectations? What new technologies impose into teaching and learning? What are the advantages and pitfalls of new technologies? Can combinations of learning resources, experiences, and supports to help each learner succeed? Insights and recommendations are stated, augmented and discussed.

Key words: instructional technologies, new pedagogical model, distance education

INTRODUCTION

New technologies are constantly arising and they influence the way how people interact and learn. Recent developments in digital technologies, especially web 2.0 tools such as blogs, wikis and social media, and mobile devices such as smartphones and tablets, have given the end user, the learner, much more control over access to and the creation and sharing of knowledge. This empowers learners, and innovative instructors are finding ways to leverage this learner control to increase motivation and relevance for learners.

How nw pedagogies are transforming teaching and learning

These new developments are not emerging as neatly as the above analysis suggests, with many initiatives combining the methods listed above. Professors and teaching and learning specialists in post-secondary institutions, have been re-thinking pedagogy and designing resources, courses, and programs that benefit from new approaches to teaching and learning.

What triggers in new pedadogy

What drives the development of this new pedagogy? Changes in society, student expectations, and technology are motivating innovative university and college faculty and instructors to re-think pedagogy and teaching methods.

Three emerging Pedagogical trends

Underlying these developments are some common factors or trends:
1.A move to opening up learning, making it more accessible and flexible. The classroom is no longer the unique centre of learning, based on information delivery through a lecture.
2. An increased sharing of power between the professor and the learner. This is manifest as a changing professorial role, towards more support and negotiation over content and methods, and a focus on developing and supporting learner autonomy. On the student side, this can mean an emphasis on learners supporting each other through new social media, peer assessment, discussion groups, even online study groups but with guidance, support and feedback from content experts.

3. An increased use of technology not only to deliver teaching, but also to support and assist students and to provide new forms of student assessment.
It is important to emphasize that these are emerging pedagogical trends. More experimentation, evaluation, and research are needed to identify those that will have lasting value and a permanent effect on the system.

New Demands of a Knowledge-Based Society

There are several separate factors at work here. The first is the continuing development of new knowledge, making it difficult to compress all that learners need to know within the limited time span of a post-secondary course or program. This means helping learners to manage knowledge - how to find, analyze, evaluate, and apply knowledge as it constantly shifts and grows.
The second factor is the increased emphasis on skills or applying knowledge to meet the demands of 21st century society, skills such as critical thinking, independent learning, knowing how to use relevant information technology, software, and data within a field of discipline, and entrepreneurialism. The development of such skills requires active learning in rich and complex environments, with plenty of opportunities to develop, apply and practice such skills.
Lastly, it means developing students with the skills to manage their own learning throughout life, so they can continue to learn after graduation.

New Student Expectations

Even the most idealistic students expect to find a good job after several years of study, a job where they can apply their learning and which will also provide a reasonable income. This is especially true as tuition increases. Students expect to be actively engaged and see the relevance of their learning to the real world.
Today's students have grown up in a world where technology is a natural part of their environment. Their expectation is that technology will be used where appropriate to help them learn, develop essential information and technology literacy skills, and master the technology fluency necessary in their specific subject domain.

SURVEY ANALYSES OF LEARNING MODELLING APPROACHES

In Software Engineering mobile learning software there is evidently a lack of support for instructional techniques and pedagogical learning models, as well as procedures or guidelines how, when and for what particular situation each pedagogical learning model should be supported in the software development process and its conjunction and correlation with the instructional strategies (Fetaji et al, 2008). Instructional strategy is a very important concept that needs to be addressed because the main purpose of any learning activity should be clear to the learner (Fetaji et al, 2008). Instructional design models typically specify a method in using the technology that if followed will facilitation of the transfer of knowledge, skills and learning process (Fetaji et al, 2008). This learning dimension should provide the context of instruction and desirable outcome. The learning environments require high level of self-organization and metacognitive abilities from the learners engaged in the process of learning that should be captured by the instructional techniques. There are several instructional strategies that are currently considered: Problem Based, Project based, Inquiry-based Learning, Task based and Game based learning and (Marjanovic, 2005).

Problem based learning represents the learning that results from working with problems that needs solving. The entire learning process is set around a problem introduced and the knowledge is developed as a consequence of trying to solve the problem. Official description offered by (Lin & Tallman, 2006) generally describe it as "an instructional strategy in which learners confront contextualized, ill structured problems and strive to find meaningful solutions and learn in the process of doing it". Problem-based learning is a general approach of learning focusing primarily on solving a problem and acquiring knowledge; with project based learning students creating an end-product (Roschelle, et al 2003). Many research studies have focused on aspects of problem-posing and problem-solving as a way to motivate and teach students about science and math. Problem-based learning (PBL) is collaborative where students work in small groups learning through solving problems and reflecting on their experience.

The approach is also inquiry-based when learners are active in creating the problem. The learners are elevated to the position of analyst and problem-solver and have specific objectives and deadlines to meet. According to (Lin & Tallman, 2006) there are two critical issues involved in presenting the problem. First, if the learners are to engage in authentic problem solving, then they must own the problem. A second critical issue in presenting the problem is to be certain that the data presented does not highlight critical factors in the case. Either the problem must be richly presented or presented only as a basic question. Learning should be synthesized and organized in the context of the problem.

Project-based learning (PBL) is a model that organizes learning around projects. Definitions of "project-based instruction" include features relating to the use of an authentic ("driving") question, a community of inquiry, and the use of cognitive (technology-based) tools (Powe et al, 2009). Project-based learning is a student-centered approach to instruction in which students work in teams to complete an open-ended project. It is ideally suited to the teaching of analysis, design and implementation, especially when using object-oriented analysis and design methods (Fernandez & Williamson, 2003), but not to e-learning that provides instructional material for multiple diverse courses of a University study program which needs to be conducted via small pocket mobile devices. It is a student-centered approach of instruction in which students work in teams to complete an open-ended project. It is closely related to problem-based learning (Fernandez & Williamson, 2003). It promotes higher-order thinking skills which is not appropriate for classes of students with different knowledge and skill levels that is common for university environments. Project-based instruction is an authentic instructional model or strategy in which learners plan, implement, and evaluate projects that have real-world applications beyond the classroom (Helic et al, 2005). Projects sometimes go off track, with teachers and students pursuing questions that are peripheral to the subject matter of interest. The solution, according to (Helic et al, 2005) is to find ways for projects to centre on "learning appropriate goals."

In University environment, with class groups of vast variability and diversity of cognitive abilities, literacy level, skills and educational background of students, in order to complete the project the active students will work versus passive once will just stay without engaging themselves in the project and wait for the active once to do it. In Problem based learning, the same will occur. Passive students will just passively wait to end class without doing anything and loosing the time.

Project Based learning is instructional method that motivates learning and provides learning experiences; but, it is not appropriate for learning system accessed from a mobile device with many physical constraints to support University education.

Inquiry-based Learning according to (Lin & Tallman, 2006) represents an instructional strategy were involvement in learning implies processing skills and metacognitive abilities in order to seek answers to questions and issues while at the same time constructing new knowledge. "Inquiry" is defined as seeking information by questioning. According to (Lin & Tallman, 2006) it usually begins with posing a problem or question, followed by generating and pursuing strategies for investigating, collaborating, reflecting, and justifying the solutions of the problem or answers to the question, and communicating the conclusions.

Task-based learning is an educationally sound, effective and efficient instructional strategy for learning focusing the learning activities around tasks (Harden et al, 1996). The term "task-based learning" originated primarily from the work done in language education. The traditional way that teachers have used tasks is as a follow-up to a series of structure/function or vocabulary based lessons (Harden et al, 1996). Tasks have been 'extension' activities as part of a graded and structured course [13-what is task base]. Tasks are defined as activities that are meaning-focused and outcome-evaluated and have some real-world relationship (Venkatesh et al, 2005). Tasks can be considerate as a curricula unit so TBL perfectly suits to a university study program learning method. TBL facilitates vertical integration of the curriculum (Marjanovic et al, 2005). Tasks can be used to model activities in a subsequent work. As (Venkatesh et al, 2005) states that 'task' has generally been used not as the organizing principle of courses but as a methodological device for implementing the final step of a well-established methodological sequence. In TB learning, the learning activity is task-centered. Originally developed by (Venkatesh et al, 2005) in Bangladore, southern India (cited in Knight,), it is based on the belief that students may learn more effectively when their minds are focused on the task. TBL is learner centered where learners can work through their needs and interests and selecting materials, activities and tasks accordingly.

According to (Helic et al, 2005) the learning tasks play a fundamental role in determining the learning outcomes. According to (Venkatesh et al, 2005) it has three advantages:

1. TBL is learning built round tasks is more *effective* than traditional didactic memory-based or purely apprenticeship-type learning;
2. TBL is learning structured round the tasks is an *efficient* approach to learning;
3. TBL is likely to lead to more *relevant* and appropriate education;
4. TBL links theory with practice. The practical task becomes the starting point for the theory: in turn, theory informs and leads to a better understanding of the task (suits to curricula study program);

5. TBL provides an appropriate framework for planned education (curricula driven) where it makes explicit what is to be achieved and how the learner should do this (efficient learning);
6. A TBL approach is likely to result in greater relevance of curriculum content (appropriate for curricula learning).

TBL offers a focused and structured approach to learning and increases the learners' satisfaction and motivation, and at the other side is consonant with current theories of education (Helic et al, 2005). This is the reason we decided to implement a task-based model for the prototype.

Task-based learning offers action and reflection, while in contrast, rote learning is low in action and in reflection. According to (Helic et al, 2005) incidental learning, such as occurs in on-the-job learning, is rich in action but may be low in reflection. Classroom, or formal, learning is frequently high in reflection but low in action.

Game based learning or also lately referred to as digital game-based learning (Marjanovic, 2005) goal based scenarios and instructional games and simulations are alternatively used to describe the instructional strategy were learning activities are organized around a game or simulation. The academic community regarded game based learning as part of problem based learning using simulations and did not give much of attention in its research, and still today there are a lot of opinions in this regard (Marjanovic, 2005). Educational games and simulations are defined as activities that have rules and constraints, a goal, and an emphasis on competition and also has the additional feature of having a primary objective of enabling a student to learn either facts, skills, attitudes, or all three. (Marjanovic, 2005) suggests that transfer of knowledge is aided when students actively construct explanations for events. Perhaps the biggest benefit for game -based learning is the fact that it involves students who need to learn complex skills and need to transfer these skills to real life.

The design and development of m-learning cannot be based only in the existing practice of technology, it is necessary to understand the relation between theory and practice to ensure that the design of practice is founded on the learning theory. This concept is given in the figure below:

It describes that the different learning activities that are driven in the learning environment are supported by the m-learning instructional technologies stated above. The learning principles are formed by the learning activities to be done to produce the learning outcome. The learning activities are crucial to define the features and abilities the learning environment has to support and are supported by the technology.

Proposed Model Multilevel Assisted Instructions- (MAI)

The proposed Multilevel assisted Instructions (MAI) Model should incorporate the following attributes and is provided as Template to incorporate within the online courses.

Teaching /Learning Activity	**Instructions**
Engaging Opening / Writing	Has that something that compels attention.
The Task	Clear Question and Task. These naturally flow from the introduction and signal a direction for sophisticated learning.
Background	Clearly calls attention to the need for a common foundation of knowledge and provides needed (Web?) resources.
Roles / Expertise	Roles match the issues and resources. The roles provide multiple perspectives from which to view the topic.
Use of the Web	Uses the Web to access at least some of the following: interactivity, multiple perspectives, multimedia, current information, etc.
Transformative Thinking	Higher level thinking is required to construct new meaning. Scaffolding is provided to support student achievement.
Real World Feedback	A feedback loop connecting learners to the Real world is included in the Web page and an evaluation rubric is probably provided (early on!).
Conclusion	Clear tie-in to the intro. Makes the students' cognitive tasks overt and suggests how this learning could transfer to other domains/issues. Probably calls attention to the assumptions

CONCLUSION

In this study, the research focus was into proposing a new IT learning pedagogy Multilevel Assisted Instructions- (MAI) to be used in Distance Education. The aim of the new devised pedagogy MAI model is to transform today's outmoded education system, teaching and learning, to a vibrant learning ecosystem that puts learners at the center, especially in the distance education. The research study investigated and integrated all of the following research questions: What triggers in the new pedagogy? What are the new demands of a Knowledge-Based Society? What are the new student expectations? What new technologies impose into teaching and learning? What are the advantages and pitfalls of new technologies? Can combinations of learning resources, experiences, and supports to help each learner succeed? It is known that motivation has an important role in learning and science instruction. And also Personal beliefs affect from various fact. Research shows that designed systems used in science laboratories don't influence students' motivation toward science learning. New research design should be considered to thoroughly investigate the time of MAI multilevel assisted instructions in classroom, and teachers' strategies using the system, and students' preferences. Additionally, a well-designed instrument should be implemented to precisely measure even the minuscule effects.

UNIVERSITY STUDENTS' UNDERSTANDING OF DENSITY AND CONCENTRATION: A CROSS-LEVEL INVESTIGATION

Nuri NAKİBOĞLU
Balıkesir University, Science and Art Faculty, Chemistry Department

Canan NAKİBOĞLU
Balıkesir University, Necatibey Education Faculty, Chemistry Education Division

ABSTRACT: In this study, it was aimed to explore all level university chemistry students, from freshmen to the students who graduated from the university chemistry departments, how students define the concepts of density, concentration, and solvation which are the fundamental and basic concepts of chemistry. Qualitative data were gathered in a test composed of 3 open-ended questions distributed to 135 university students comprising two different academic institutions: Education faculty and science and art faculty. Students were asked to provide a written description of three concepts. The data were analyzed by using both content analysis method and a concept-evaluation scheme. It was found that students had different understanding levels concerning three concepts and problems to the description of them. To add, students had the problem concerning the concept of mass which is a pre-requisite concept for density. The reason for the students' difficulties with density and concentration can be related to nature of these concepts that involve proportional reasoning.

Keywords: University students, understanding, density, concentration, solvation

INTRODUCTION

The chemistry education literature contains a large number of studies about students' conceptions about chemical phenomena and concepts. The students' understanding of the density has been thoroughly investigated at all level (Kohn and Landau 1987; Yeend, Loverude, and Gonzales 2001; Hashweh, 2016). Although density is seen a simple concept, Hashweh (2016) has indicated that it is a difficult concept to understand by middle school children and efforts to foster students' understanding are not very successful. He has investigated the reasons for the difficulties and the specific difficulties that students encounter when learning about density at the middle school level. In his study, firstly he has presented a historical account of the development of the density concept in order to show the difficulties in its development within the scientific community. Hashweh (2016) has concluded three points from this brief historical summary of the development of the scientific concept of density. One of them was that the concept itself was part of the conceptual system included many interconnected concepts. These interconnected concepts were the concepts of mass, weight, volume, and the relations between mass and motion. Yeend, Loverude and Gonzalez (2001) also found that middle school, high school, and college students harboured numerous alternate conceptions, particularly a tendency to associate mass, volume, and density with size.

The concepts of density and concentration are the fundamental concepts that occur at all levels of chemistry education from middle school to university levels. On the other hand, both concepts and difference between them are not easily grasped by the students. Density is a characteristic property of a pure substance and directly related to mass. Concentration is defined as the amount of one component in a matter which contains more than one component. There are several types of concentrations defined. However, density is often confused with concentration. When university students are asked to define the density, it can be seen that they can define the concentration instead of density. In this study, it was aimed to explore all level university chemistry students, from freshmen to the students who graduated from the university chemistry departments, how students define the concepts of density, concentration, and solvation.

METHODS

Participants

Qualitative data were gathered in a test composed of 3 open-ended questions distributed to 135 university students comprising two different academic institutions: Education faculty and science and art faculty. Students were asked to provide a written description of three concepts that is density, concentration, and solvation.

Analysis of Data

In analyzing the three questions of the test, a concept-evaluation scheme developed in previous research was used (Abraham et al., 1994; Haidar, 1997; Nakiboğlu, 2003). This scheme enables the researcher to look into the data from two points. The students' responses can be separated into different levels of understanding and misconceptions can analyze into different patterns (Haidar, 1997; Nakiboğlu, 2003). The concept-evaluation scheme used in this study is comprised of five categories listed and defined in Table 1. During these analyses misconception statements were identified using a coding system.

Table 1. The Scheme with Five Categories Used in this Study and Description of Each Category

Degree of understanding	Criteria for scoring
Sound understanding (SU)	Responses that include all components of the validated response
Partial understanding (PU)	Responses that include at least one of the components of the validated response, but not all the components
No understanding (NU)	Irrelevant responses
Misconception (MC)	Responses about concept which do not correspond to currently held scientific theory
No answer (NA)	Blank

RESULTS AND FINDINGS

Students' Understanding about Solvation

The first question was about the description of solvation concept. The solvation concept is one of the important pre-requisite concepts for learning both density and concentration. For this reason to find out the patterns of students' understandings and misconceptions of the solvation concept is important. The complete list of students' thoughts for their first question was coded and presented below in Table 2 according to the degree of students' understanding levels about solvation.

Table 2. Degree of Students' Understanding about Solvation

Degree of understanding	1st Grade (N=19) f (%)	2nd Grade (N=19) f (%)	3rd Grade (N=34) f (%)	4th -5th Grade (N=43) f (%)	Graduated (N=20) f (%)	Total (N=135) f (%)
SU	1 (5,3)	1 (5,3)	2 (5,9)	3 (7,0)	4 (20,0)	11 (8,1)
PU	13 (68,4)	11 (57,9)	20 (58,8)	33 (76,7)	12 (60,0)	89 (65,9)
NU	4 (21,0)	1 (5,3)	8 (23,5)	5 (11,6)	2 (10,0)	20 (14,8)
MC	1 (5,3)	0	1 (2,9)	1 (2,3)	1 (5,0)	4 (3,0)
NA	0	6 (31,5)	3 (8,8)	1 (2,3)	1 (5,0)	11 (8,1)

According to Table 2, 8.1 % of all students showed a SU for the solvation concept that the solvation describes as solvation is the process that a substance dissociates to ion or molecules in solvent/liquid by surrounding with solvent molecules. 65.9% of the students suggested that the solvation is changing / disintegration / dissolution / separation/ the separation of particles/ of a substance until disappearing in another substance / in a solvent/ which was considered as PU. About 3% of the students showed misconception and only one misconception statement was identified through analysis of this question. This misconception is "solvation is an amount of matter which solves in a liquid solution" and it can be said that students confuse solvation with concentration.

Students' Understanding about Density

The second question was about a description of density concept. The main goal of this question is to find out the patterns of students' understandings and misconceptions about density. The complete list of students' thoughts for the second question was coded and presented below in Table 3 according to the degree of students' understanding levels about density.

Table 3. Degree of Students' Understanding about Density

Degree of understanding	1st Grade (N=19) f (%)	2nd Grade (N=19) f (%)	3rd Grade (N=34) f (%)	4th -5th Grade (N=43) f (%)	Graduated (N=20) f (%)	Total (N=135) f (%)
SU	11 (57,9)	3 (15,8)	4 (11,8)	6 (14,0)	0	24 (17,8)
PU	1 (5,3)	4 (21,0)	13 (38,2)	8 (18,6)	7(,0)	33 (24,4)
NU	1 (5,3)	8	5 (14,7)	4 (9,3)	4 (20,0)	22 (16,3)
MS	6 (31,6)	4 (21)	7 (20,6)	25 (58,1)	9 (45,0)	51 (37,8)
NA	0	0	5 (14,7)	0	0	5 (3,7)

According to Table 3, only 17,8 % of all students showed sound understanding for this question that they described density as "density is a mass of a substance per its unit volume". While none of the graduated students described the density correctly, 57,9 % of the first-grade students showed sound understanding. In partial understanding, the students have given mathematical expression instead of definition for density such as mass to volume ratio or the mass divided by volume or d=m/V.

It can be seen from Table3, all levels students had a misconception about density. It was found that those students presented the definition of concentration instead of density. They described density with the expression of concentration such as "density is the amount of substance in per unit volume or the amount of substance in per liter".

Students' Understanding about Concentration

The third question was about the description of concentration concept. The main goal of this question is to find out the patterns of students' understandings and misconceptions about concentration. The complete list of students' thoughts for the second question was coded and presented below in Table 4 according to the degree of students' understanding levels of concentration.

Table 4. Degree of Students' Understanding about Concentration

Degree of understanding	1st Grade (N=19) f (%)	2nd Grade (N=19) f (%)	3rd Grade (N=34) f (%)	4th -5th Grade (N=43) f (%)	Graduated (N=20) f (%)	Total (N=135) f (%)
SU	12 (15,8)	10 **(52,6)**	9 (26,5)	13 (30,2)	3 (15,0)	47 (34,8)
PU	1 (5,3)	3 (15,8)	9 (26,5)	24 (55,8)	12 (60,0)	49 (36,3)
NU	2 (10,5)	3 (15,8)	5 (14,7)	5 (11,6)	2 (10,0)	17 (12,6)
MS	3 (15,8)	1 (5,3)	4 (11,8)	1 (2,3)	0	9 (6,7)
NA	1 (5,3)	2 (10,5)	7 (20,6)	0	3 (15,0)	13 (9,6)

According to Table 3, 34,8 % of all students showed sound understanding for this question. 9% of students had the misconception that one of them was "concentration is the case that the components of a substance are dense".

Comparison of Students' Understanding about Density and Concentration

The results of comparison of the students' understanding level about density and concentration are presented in Table 5.

Table 5. Frequencies of Students' Understanding about Density (D) and Concentration (C)

Degree of understanding	1st Grade D/C	2nd Grade D/C	3rd Grade D/C	4th -5th Grade D/C	Graduated D/C	Total D/C (%)
SU	11/12	3/10	4/9	6/13	0/3	24/47 (17,8/34,8)
PU	1/1	4/3	13/9	8/24	7/12	33/49 (24,4/36,3)
NU	1/2	8/3	5/5	4/5	4/2	22/17 (16,3/12,6)
MS	6 /3	4/1	7/4	25/1	9/0	51/9 (37,8/6,7)
NA	0/1	0/2	5/7	0/0	0/3	5/13 (3,7/9,6)

According to Table 5, both SU and PU levels of concentration concept were higher than density concepts'.
Most of the students confused density with concentration.

CONCLUSION

It was concluded that all level of students' understanding about concentration were higher than the degree of understanding about density. When the students asked to define the density it was determined that most of the students defined the concentration instead of density. Smith, Carey, and Wiser (1985) indicated that the difficulty with density arises mainly from undifferentiated conceptions that become differentiated within a new conceptual system. It was also found that all students had the misconception about density. Most common misconception identified in this study was that "density was the amount of a matter in the unit volume". Besides, most of the students' responses about density indicated NU contains irrelevant answers.

RECOMMENDATIONS

Before teaching density and concentration to students, students' pre-requisite knowledge about these concepts (solvation, mass, volume and mole, mole number) was examined and corrected. Density and concentration concepts which are used together in some calculations should be kept on the agenda and repeated in all level. Differences between concentration and density should be clarified.

ABSTRACT: Much of subjects being taught in a first course on control theory in Electrical and Electronics Engineering appears to have changed little. Although the basic theories, methods and applications on classical control in textbooks remain unchanged, there have been many new developments in the field of control theory in recent years. One of such topic is fractional order control systems which is based on fractional order calculus and can be used to model physical system more exactly than integer order systems. The purpose of this paper is to show how fractional order control methods can be introduced into a first course on classical control using interactive tools such as Matlab and LabView.

Key words: Education, Control Theory, Fractional Order System, Iteractivity, LabVIEW

INTRODUCTION

The subjects being taught to undergraduate students on automatic control, despite advances in the field of control theory, seem to have changed little over last many years. However, developments in computer technology now allow us to use new and high-quality educational methods such as interactive tools, virtual and remote laboratories to make use of World Wide Web etc. (Dormido, 2002). Today's computer software programs such as Matlab and LabVIEW can be used effectively to teach some advanced subjects to the students without going into details of mathematical derivations. Although the fundamental control theory concepts known as classical control theory are necessary for control theory education and because of its many advantages we think this must continue in the future, it will be important that any developments in control theory which can be linked to classical control are good candidates for consideration in basic feedback control education by using interactive tools. The interactive tools are extremely useful and they enable students to explore changes in system performance as parameters are varied, and to do so looking at several diagrams simultaneously. This can be done without any programming by just using a mouse to adjust any parameters and the effects can be immediately seen. Matlab, LabVIEW and Simulink provide an excellent environment for such studies to teach additional topics besides subjects of classical control theory.

One such topic is the recent development in methods to analyse systems using fractional order calculus (Das, 2008; Podlubny, 1999a). This is an important topic since most real physical system can be modeled more adequately by fractional order differential equations. The applications of fractional order differential equations to the problems in the control theory have been increased in recent years and promising results have been obtained (Xue et al., 2007; Monje et al., 2010). It has been shown that there is a strong link between classical control methods and fractional order approaches. Therefore, from educational point of view, it is important to teach developed results based on fractional order calculus to see the effects of fractional order integrator and derivative on control system performance. The purpose of this paper is to show how the results based on fractional order concepts can be introduced into a basic classical feedback control theory course given for undergraduate students and the teaching can be supported by software tools.

The layout of the paper is as follows. In the next section the concept of fractional order system is introduced and examples are given. Section 3 discusses the teaching of fractional order control systems using Matlab and LabVIEW with application examples. Finally some conclusions are given in Section 4.

FRACTIONAL ORDER CONTROL SYSTEMS

Fractional order derivative and integrator can be considered as an extension of integer order derivative and integrator operators to the case of non-integer orders and it is defined in general form as the following (Chen et al., 2009),

$$ {}_aD_t^\alpha = \begin{cases} \dfrac{d^\alpha}{dt^\alpha} & \alpha > 0 \\ 1 & \alpha = 0 \\ \int_a^t (d\tau)^{(-\alpha)} & \alpha < 0 \end{cases} $$
(1)

where, ${}_aD_t^\alpha$ represents fundamental non-integer order operator of fractional calculus. Parameters a and t are the lower and upper bounds of integration, and $\alpha \in R$ denotes the fractional-order (Oustaloup et al., 2000). Two definitions used for the general fractional derivative and integrator are the Riemann-Liouville definition and the Caputo definition (Chen et al., 2009). The Riemann–Liouville definition for the fractional-order derivative of order $\alpha \in R$ has the following form

$$ {}_aD_t^\alpha f(t) = \frac{1}{\Gamma(n-\alpha)} \frac{d^n}{dt^n} \int_a^t \frac{f(\tau)d\tau}{(t-\tau)^{\alpha-n+1}} \tag{2} $$

where $\Gamma(.)$ is Euler's gamma function and $n-1<\alpha<n,\ n \in \mathbb{N}$. An alternative definition for the fractional-order derivative was given by Caputo as

$$ {}_aD_t^\alpha = \frac{1}{\Gamma(n-\alpha)} \int_a^t \frac{f^n(\tau)}{(t-\tau)^{\alpha-n+1}} d\tau \tag{3} $$

where $n-1<\alpha<n,\ n \in \mathbb{N}$. The Laplace transform of the Caputo fractional order derivative has the following result that is particularly significant for fractional order system modeling (Monje et al, 2010):

$$ \int_0^\infty e^{-st}\, {}_0D_t^\alpha f(t)dt = s^\alpha F(s) - \sum_{k=0}^{n-1} s^{\alpha-k-1} f^{(k)}(0) $$
(4)

When $f(0) = f^{(1)}(0) = f^{(2)}(0) = f^{(3)}(0) =,.., f^{(n-1)}(0) = 0$ is considered, a basic property facilitating for design and analysis of fractional order systems is expressed for Laplace transform of fractional order derivative as $L\left\{D^\alpha f(t)\right\} = s^\alpha F(s)$.

In general, fractional order LTI systems were described by the following fractional order differential equation form as (Monje et al, 2010):

$$ v_n D^{\alpha_q} y(t) + v_{n-1} D^{\alpha_{q-1}} y(t) + ... + v_1 D^{\alpha_1} y(t) + v_0 y(t) = u_p D^{\beta_p} r(t) + u_{p-1} D^{\beta_{p-1}} r(t) + ... + u_1 D^{\beta_1} r(t) + u_0 r(t) \tag{5} $$

By applying $L\left\{D^\alpha f(t)\right\} = s^\alpha F(s)$, a general form of transfer function of fractional order LTI systems were expressed as,

$$ G(s) = \frac{Y(s)}{R(s)} = \frac{\sum_{j=0}^{p} u_j s^{\beta_j}}{\sum_{i=0}^{q} v_i s^{\alpha_i}} \tag{6} $$

where, denominator polynomial coefficients v_i and numerator polynomial coefficients u_j are polynomial coefficients and fractional orders of the LTI system are denoted by $\alpha_i \in R$ ($i = 0,1,2,3...,q$) and $\beta_j \in R$ ($j = 0,1,2,3...,p$).

Fractional Order PID Controller

Fractional order PID controller ($PI^\lambda D^\mu$) which has five tuning controller parameters including an integrator of order λ and an differentiator of order μ provides a better response than the integer order PID controller when used both for the integer-order systems and fractional-order systems (Chen et al., 2009). $PI^\lambda D^\mu$ is described in time domain in (Podlubny, 1999b) as follows;

$$ u(t) = k_p e(t) + T_i D^{-\lambda} e(t) + T_d D^{\mu} e(t) \tag{7} $$

where k_p is the proportional gain, T_i the integration constant, T_d the differentiation constant; λ and μ are positive real numbers. The frequency domain formula is given in (Petras, 1999).

$$ C(s) = \frac{U(s)}{E(s)} = k_p + \frac{k_i}{s^\lambda} + k_d s^\mu \tag{8} $$

In Equation (8), classical PID controller can be obtained for $\lambda = 1$ and $\mu = 1$.

Integer Order Approximation Methods for Fractional Order Systems

Fractional order functions are infinite dimensional functions and hence it is very difficult to implement them practically or simulate them numerically (Vinagre et al. ,2000). Therefore, several integer order approximation methods were proposed for realization of fractional order systems by replacing them with integer order approximations. Oustaloup presented an approximation method based on recursive distribution of poles and zeros in a limited frequency (Oustaloup et al, 2000). Another approximation method using the gain of the fractional order transfer functions at certain frequencies was suggested by Matsuda, (Matsuda et al., 1993). Recently, SBL fitting approximation method has been presented for fractional order derivative and integrator operators (Deniz et al., 2016). The integer order approximations model obtained by SBL fitting method is given in Table 1 (Deniz et al., 2016).

Table 1. Lists of fractional order derivative operator approximations determined using proposed method for $\omega \in [0.01, 1.2]$.

s^{α}	Fractional Order Derivative Approximations by SBL fitting
$s^{0.1}$	$\dfrac{5532s^4 + 1.338\times10^4 s^3 + 4147s^2 + 191.5s + 1}{4392s^4 + 1.353\times10^4 s^3 + 5063s^2 + 284.5s + 1.894}$
$s^{0.2}$	$\dfrac{7718s^4 + 1.714\times10^4 s^3 + 4974s^2 + 214.2s + 1}{4810s^4 + 1.743\times10^4 s^3 + 7372s^2 + 470.2s + 3.587}$
$s^{0.3}$	$\dfrac{1.087\times10^4 s^4 + 2.227\times10^4 s^3 + 6052s^2 + 242.6s + 1}{5224s^4 + 2.263\times10^4 s^3 + 1.083\times10^4 s^2 + 783.7s + 6.829}$
$s^{0.4}$	$\dfrac{1.553\times10^4 s^4 + 2.949\times10^4 s^3 + 7507s^2 + 279.8s + 1}{5622s^4 + 2.972\times10^4 s^3 + 1.615\times10^4 s^2 + 1324s + 13.16}$
$s^{0.5}$	$\dfrac{2.271\times10^4 s^4 + 4.012\times10^4 s^3 + 9566s^2 + 330.7s + 1}{5987s^4 + 3.978\times10^4 s^3 + 2.46\times10^4 s^2 + 2283s + 25.87}$
$s^{0.6}$	$\dfrac{3.447\times10^4 s^4 + 5.677\times10^4 s^3 + 1.268\times10^4 s^2 + 405.6s + 1}{6300s^4 + 5.493\times10^4 s^3 + 3.88\times10^4 s^2 + 4074s + 52.66}$
$s^{0.7}$	$\dfrac{5.564\times10^4 s^4 + 8.562\times10^4 s^3 + 1.791\times10^4 s^2 + 528.2s + 1}{6537s^4 + 8.007\times10^4 s^3 + 6.487\times10^4 s^2 + 7704s + 113.8}$
$s^{0.8}$	$\dfrac{1.008\times10^5 s^4 + 1.452\times10^5 s^3 + 2.844\times10^4 s^2 + 770.1s + 1}{6666s^4 + 1.298\times10^5 s^3 + 1.213\times10^5 s^2 + 1.628\times10^4 s + 275.5}$
$s^{0.9}$	$\dfrac{2.428\times10^5 s^4 + 3.28\times10^5 s^3 + 6.012\times10^4 s^2 + 1488s + 1}{6648s^4 + 2.773\times10^5 s^3 + 3.006\times10^5 s^2 + 4.561\times10^4 s + 887.3}$

An example is provided below relating to SBL fitting method. For this case, the values in Table 1 are used to obtain integer order approximation model of fractional order derivative operator. Also, these values can be used as $1/s^{\alpha}$ for integer order approximation model of fractional order integrator operator.

Example 1: Consider the fractional order transfer function

$$G(s) = \frac{1}{s^{1.2} + 1} \tag{9}$$

For the fractional order derivative $s^{0.2}$, SBL fitting method, Matsuda's method and Oustaloup's method provide the integer order approximation model in Table 2. Also, equivalent integer order transfer function $G_T(s)$ of fractional order transfer function $G(s)$ can be seen in Table 2.

Table 2. Equivalent integer order transfer function $G_T(s)$ of fractional order transfer function $G(s)$

Method	Integer order approximation models for $G(s)=\dfrac{1}{s^{1.2}+1}$
SBL	$s^{0.2}=\dfrac{7718s^4+1.714\times10^4s^3+4974s^2+214.2s+1}{4810s^4+1.743\times10^4s^3+7372s^2+470.2s+3.587}$ $G_T(s)=\dfrac{4810s^4+1.743\times10^4s^3+7372s^2+470.2s+3.587}{7718s^5+2.195\times10^4s^4+2.241\times10^4s^3+7586s^2+471.2s+3.587}$
Matsuda	$s^{0.2}=\dfrac{3.357s^4+161s^3+453.9s^2+95s+1}{s^4+95s^3+453.9s^2+161s+3.357}$ $G_T(s)=\dfrac{s^4+95s^3+453.9s^2+161s+3.357}{3.357s^5+162s^4+548.9s^3+548.9s^2+162s+3.357}$
Oustaloup	$s^{0.2}=\dfrac{2.512s^5+98.83s^4+531.7s^3+442.3s^2+56.87s+1}{s^5+56.87s^4+442.3s^3+531.7s^2+98.83s+2.512}$ $G_T(s)=\dfrac{s^5+56.87s^4+442.3s^3+531.7s^2+98.83s+2.512}{2.512s^6+99.83s^5+588.6s^4+884.5s^3+588.6s^2+99.83s+2.512}$

Figure 5 shows a comparison of the amplitude and phase responses. Here, the exact solution for $G(s)=\dfrac{1}{s^{1.2}+1}$ was obtained by calculating phase and amplitude of $\dfrac{1}{(j\omega)^{1.2}+1}$ considering $(j\omega)^{\alpha}=\omega^{\alpha}(\cos(\frac{\pi}{2}\alpha)+j\sin(\frac{\pi}{2}\alpha))$.

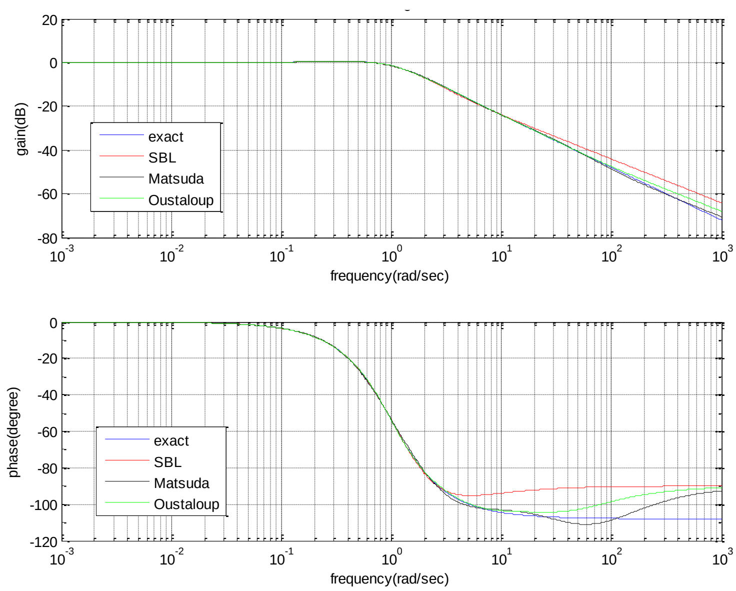

Figure 1. Amplitude and phase responses of $G(s)$ and approximate integer order models, SBL fitting method, Matsuda's method and Oustaloup's method

Example 2: In this example, SBL fitting method is used to simulate the closed loop control system with PI$^{\lambda}$ controller as shown in Figure 2 in MATLAB. Consider the fractional order PI controller

$$C(s)=k_p+\frac{k_i}{s^{\lambda}}$$

(10)

To use fractional order controller $C(s)$ for simulation of the closed loop control system in MATLAB, an integer order approximation method has to be applied for fractional operator s^{λ}. When an equivalent integer order approximation model of $C(s)$ is determined using an integer order approximation method, the closed loop control system as shown in Figure 2 can be simulated to obtain the closed loop response. For this, fractional order operator is replaced with its equivalent integer order model in closed loop control system.

An illustrative example which contains SBL fitting approximation method is given to clarify this strategy. Assuming that the plant transfer function is given by $G(s)=\dfrac{1}{s^2+3s+1}$ and PI^{λ} controller is formed as $C(s)=k_p+\dfrac{k_i}{s^{0.9}}$ in Figure 2, one can found stability region of the closed loop control system using SBL analysis (Hamamci, 2008). Then, the controller parameters k_p and k_i can be selected in stability region to obtain the step response of configuration in Figure 2.

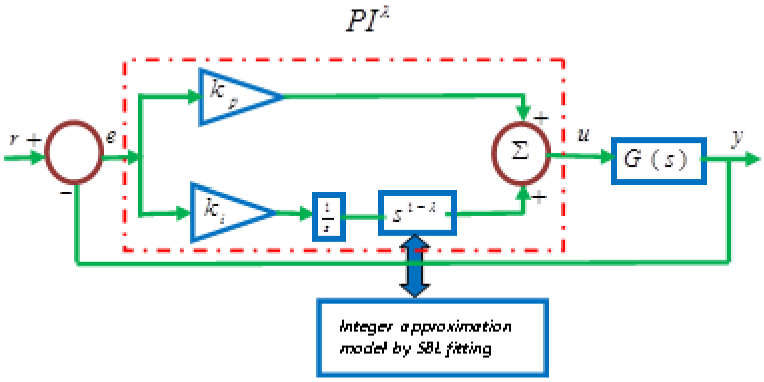

Figure 2. The closed loop control system with PI$^{\lambda}$ simulated in MATLAB

Figure 3 shows different step responses obtained for different controller parameters (k_p,k_i) with $\lambda=0.9$ selected from stability region as (0.2604, 2.2281), (0.6843, 4.7544) and (0.1129, 1.2807). Better closed loop step responses can be obtained for different controller parameters (k_p,k_i,λ) selected from stability region.

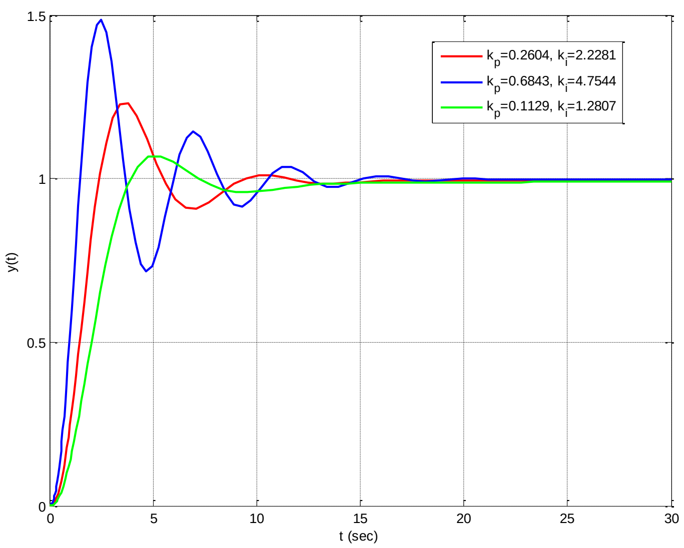

Figure 3. Step responses of the closed loop control system with PI$^{\lambda}$ for different values k_p and k_i

Teaching Fractional Order Control Systems Using Matlab And Labview

MATLAB is a high-performance language for technical computing. It integrates computation, visualization, and programming in an easy-to-use environment where problems and solutions are expressed in familiar mathematical notation. Simulink can easy analyze model and simulate control systems (MathWorks, http://www.mathworks.com/). Simulink can work with the MathWorks Real-Time Workshop. Real-Time Workshop generates and executes stand-alone C code for developing and testing algorithms modeled in

Simulink. The resulting code can be used for many real-time and non-real-time applications, including simulation acceleration, rapid prototyping, and hardware-in-the-loop testing (Rodriguez, et al. 2005). So Simulink is also widely used in simulation of all kind of systems. However, Simulink lack the imitation of physical instruments or equipment in appearance and operation. That's why, it is a good idea to combine LabVIEW and MATLAB in simulation of control system (Xuejun et al, 2007).

The LabVIEW (Laboratory Virtual Instrument Engineering Workbench) software is a graphical programming language and used to develop a virtual instrument (vi) that includes a front panel and a functional block diagram. User enters input from the front panel of the vi. LabVIEW has become a vital tool for engineers and scientists in research throughout academia, industry, and government labs. LabVIEW is taught at many universities in Europe and USA. LabVIEW has been used in the classroom for teaching of difficult subjects. For example, the graphical programming approach of LabVIEW has been used to teach computer science concepts. The graphics make the concepts more intuitive and easier to understand.

LabVIEW is used to teach control systems. The graphical programming approach is based on dataflow theory which is an ideal platform for learning how signals flow from one function to another such as from an acquisition function through a filter to a spectrum analysis and finally to a graph. Each function is an icon that is wired to other icons as in the example given in Figure 4. The wires are the signals flowing from one icon to the next. Research and industry use LabVIEW for automated test (ATE), medicine, chemistry, process control, simulation, calibration, and general-purpose data acquisition and analysis (Vento, 1988).

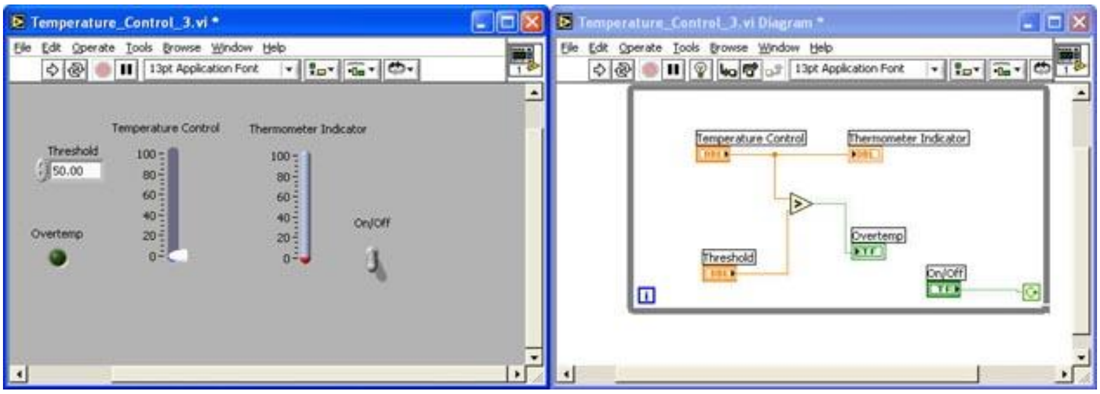

Figure 4. The Front and Block Diagram Panel Image of LabVIEW

The temperature control system given in Figure 4 performs on LabVIEW environment. The application includes two windows. The first window is front panel and second is block diagram panel of the program. The front panel is developed as a graphical interface and it is performed interactively. The block diagram panel is that provided wire connection and data flow.

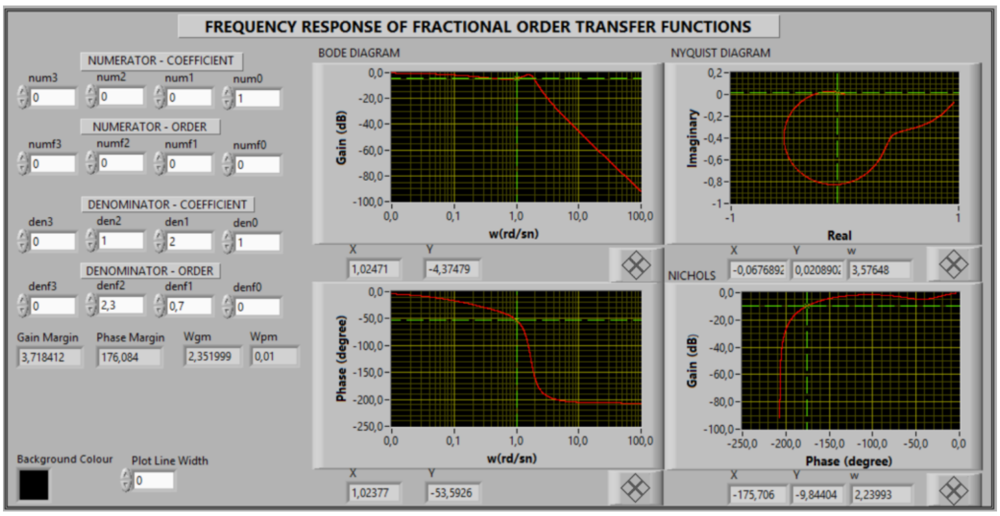

Figure 5. The Front Panel Image of Frequency Response Application of FOTF using LabVIEW

The application given in Figure 5 has been developed in the LabVIEW environment for the frequency domain analysis of fractional order control systems. The Bode, Nyquist and Nichols diagrams for any fractional order transfer function can be plotted by using the program. The program with this properties helps to design suitable controller for a given control system. The program is especially suitable for use in the field of education since it has interactive features.

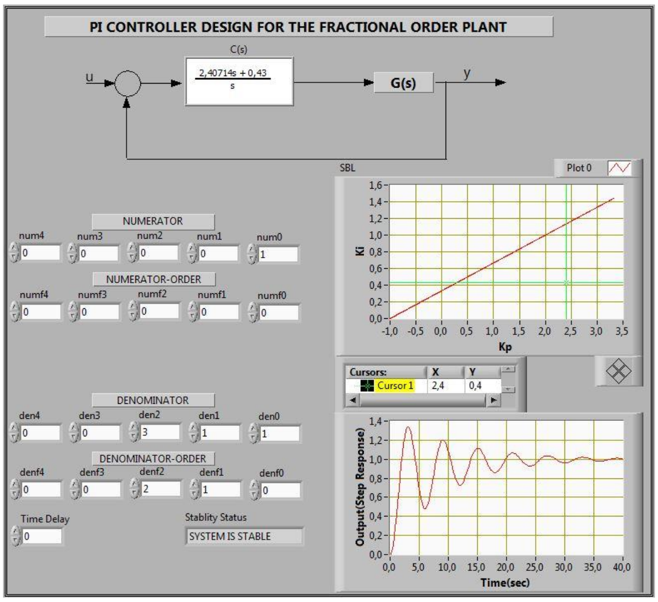

Figure 6. The Front Panel Image of PI Controller Design Application for the Fractional Order Plant using LabVIEW

The application given in Figure 6 runs the stability boundary locus (SBL) method to find all stabilizing PI controllers in a stability region for closed loop control systems with fractional order plant transfer function using LabVIEW application. Effect of the parameters of controllers selected from the stability region can be immediately observed and step response of the system can be immediately plotted. Thus, the controller which gives the best results can be designed based on proposed interactive approach.

Example 3: Consider the transfer function as below,

$$G(s) = \frac{5}{s^{2.2} + 7s^{0.9} + 2} \tag{11}$$

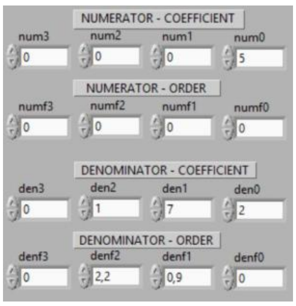

Figure 7. Transfer Function Input Panel for Frequency Response Application

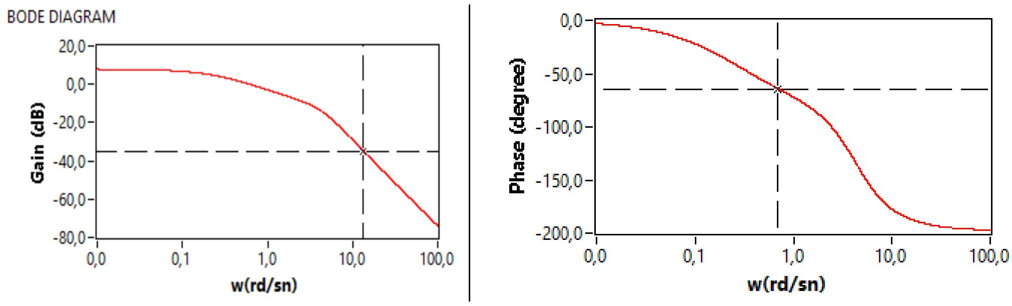

Figure 8. Bode Diagram

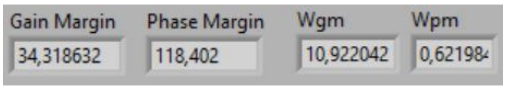

Figure 9. Gain and Phase Margin Panel

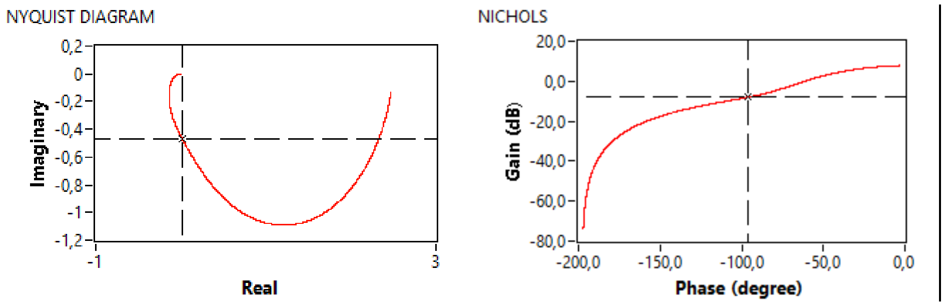
In this example, frequency response application of fractional order transfer functions is examined. Transfer function given in Eq. (11) is entered to panel as shown in Figure 7. Bode, Nyquist Nichols diagrams are simultaneously plotted as shown in Figure 8 and 9. Also, the application computes gain and phase margin values which are shown in Figure 9. The application has interactive features, thus user can try different values, while the application is performing.



a) **b)**

Figure 10. a) Nyquist Diagram b) Nichols Diagram

Example 4: Consider the transfer function with time delay as below,

$$G(s) = \frac{2}{s^{2.4} + 2.5s^{1.2} + s^{0.4}} e^{-2s} \tag{12}$$

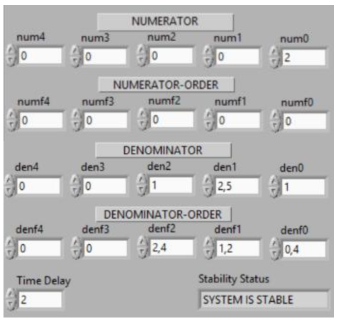


Figure 11. Transfer Function Input Panel for PI Controller Design Application

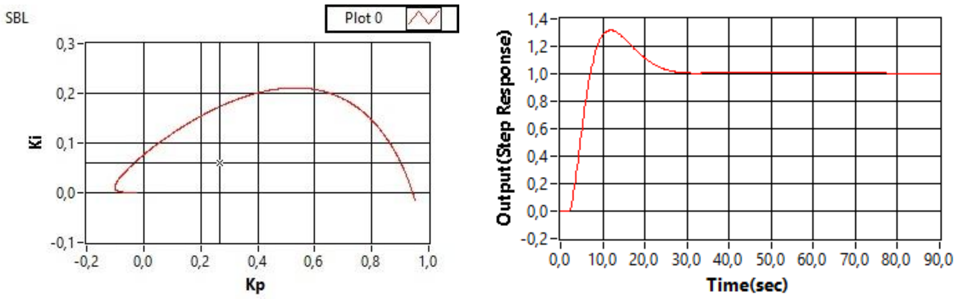

a) b)

Figure 12. a) Selected Point in Stability Region b) Stable Step Response for Closed Loop System

In this example, PI controller design for fractional order transfer functions is examined. Transfer function given in Eq. (12) is entered to panel as shown in Figure 11. SBL graph is first plotted when the program is run. Then, user can select any points in the controller parameter plane which is shown in Figure 12 (a) by moving mouse on the opened SBL plot window. As seen in Figure 12 (a), selected point is $K_p = 0.262545$, $K_i = 0.06$ and this point is in stability region. Thus, the closed loop system is stable and step response of the system is plotted for the selected point and the result is given in Figure 12 (b). According to selected point, the PI controller is designed as shown in Figure 13.

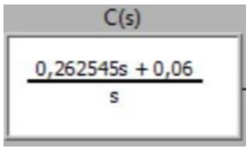

Figure 13. Designed PI Controller According to Selected Point

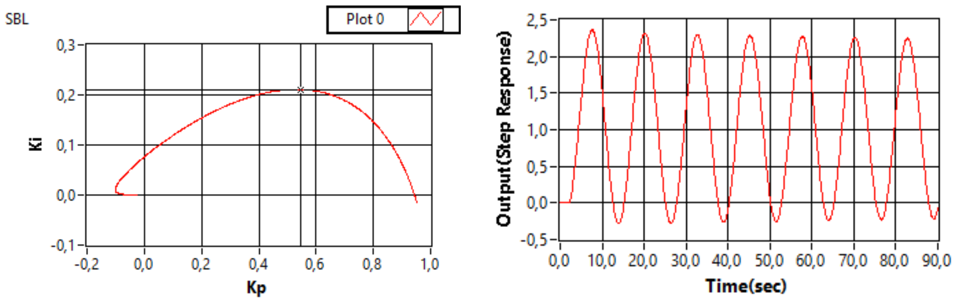

a) b)

Figure 14. a) Selected Point on Stability Curve b) Critical Step Response for Closed Loop System

Now, consider another point as seen in Figure 14 (a), where selected point is $K_p = 0.546182$, $K_i = 0.21$ and this point is exactly on SBL curve. Thus, the closed loop system is critically stable and step response of the system is plotted for the selected point and the result is given in Figure 12 (b). According to selected point, the PI controller is designed as shown in Figure 15.

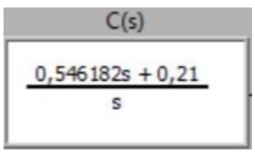

Figure 15. Designed PI Controller According to Selected Point

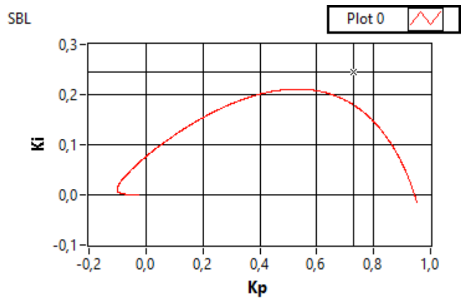

Figure 16. Selected Point Outside Stability Region

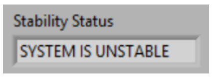

Figure 17. Stability Status Panel

Consider another point as seen in Figure 16, where selected point is outside the SBL curve. Thus, the closed loop system is unstable and step response is not plotted, because the apllication uses Inverse Fourier Transform Method (IFTM) for plotting the time response and IFTM method is defined in stable condition (Atherton et al, 2015). Thus, the application writes ‘SYSTEM IS UNSTABLE’ on stability status panel.

CONCLUSION

The objective of this paper has been to draw attention to the new developments in the field of control systems with fractional order derivative and integrator and to show how these ideas can be introduced into a first course on classical control theory. The methods are based on fractional order calculus and allow students to think more practically in terms of representation of real systems with fractional order differential equations. It has also been shown that with suitable software, the theoretical results obtained in the field of fractional order control can be used for the analysis and design of systems.

AN INVESTIGATION OF UNIVERSTY CHEMISTRY STUDENTS' UNDERSTANDING OF PRECIPITATION TITRATIONS AND RELATED CONCEPTS THOROUGH VEE-DIAGRAMS

Nuri NAKİBOĞLU

Canan NAKĞİBOĞLU

ABSTRACT: In this study, second-year chemistry students' understanding of essential concepts related to precipitation titration was investigated by using Vee-diagrams which are completed during the analytical laboratory course. Three Vee-diagrams concerning three argentometric titration methods were constructed prior to the laboratory study by taking into laboratory manual by the researchers. Vee- diagrams delivered to the students after completing each experiment one by one in the laboratory. Sixteen analytic chemistry students from two faculties participated in the study. It was found that the students were insufficient to define some concepts such as argentometry, precipitation, back titration and indicator. It was also concluded that the students had the calculation difficulties, especially for the back titration.

Keywords: Precipitation titrations, Vee-diagram, analytical chemistry laboratory, university students

INTRODUCTION

Laboratory work is one of the fundamental components of undergraduate chemistry courses. If the experiments are conducted in a meaningful way, the laboratory study can provide students with opportunities to engage in a process of constructing knowledge. The Vee-diagram was developed by Gowin to enable students to understand the structure of knowledge and the process of knowledge construction (Novak & Gowin, 1984). The conceptual side of Vee diagram includes philosophy, theory, principles/conceptual systems, and concepts all of which are related to each other and to the topic which is studied in the experiment. Thus, it can provide to explore students' knowledge structure and be used as an assessment tool at the same time. V-diagrams were also used an easement tool by several researchers to gain information about students' understanding of a special topic (Ault, Novak ve Gowin, 1984; Passmore, 1998; Nakiboğlu, Benlikaya ve Kalın, 2002; Nakiboğlu ve Arık, 2005; Nakiboğlu ve Erdem, 2009).

Titrations are the one of the essential topics in all level chemistry classes from high school to general chemistry courses. It was also taught in analytical courses again. Application of volumetric titrimetry contains acid-base titrations, which an acidic or basic titrant reacts with a titrand that is a base or an acid; complexometric titrations based on metal–ligand complexation; redox titrations, in which the titrant is an oxidizing or reducing agent; and precipitation titrations, in which the titrand and titrant form a precipitate (Harvey, 2000). Precipitation titrations are an important part of analytical chemistry classes and common experiments carried out by students in analytical chemistry laboratories. The fundamentals of precipitation titrations are generally explained by selecting argentometry which is a volumetric titrimetry technique used known amount of silver nitrate solution as a titrant or reagent. Mohr, Fajans and Volhard methods are three common argentometric methods.

Although there are limited number studies about students' understanding of acid-base titrations in the literature, it has not been encountered with a detailed study about students' understanding level of precipitation titrations. Therefore, it was aimed to investigate the second-year chemistry students' understanding of essential concepts related to precipitation titration by using Vee-diagrams in this study.

METHODS

In this qualitative study, students' understanding of essential concepts related to precipitation titration was investigated by using Vee-diagrams which are completed during the analytical laboratory course.

Participants

Participants in the present study were drawn from two faculties of Balikesir University in Turkey: the Science and Art Faculty, which has 4 year chemistry program, and the Education Faculty, which has pre-service chemistry teacher training program. A total of 16 analytic chemistry students from two faculties participated in the study. While 7 of students (5 female and 2 male, and assigned as C) come from the Science and Art Faculty, 9 of students (6 female and 3 male, and assigned as CE) attend to the Education Faculty. Subjects ranged in ages between 19-22 years. All of the participants studied General chemistry courses1 and 2 in their first year at university.

Instruments

In order to determine students' understanding levels about concepts of precipitation titration, three V-diagrams were used. The Vee-diagrams concerning three argentometric titration methods were constructed prior to the laboratory study by taking into laboratory manual by the researchers. Vee- diagrams delivered to the students after completing each experiment one by one in the laboratory.

Analysis of Data

In analyzing the V-diagrams, a concept-evaluation scheme developed in previous research was used (Abraham et al., 1994; Nakiboğlu, 2003). The students' responses can be separated into different levels of understanding and misconceptions can analyze into different patterns (Nakiboğlu, 2003). The concept-evaluation scheme used in this study is comprised of five categories: Sound understanding (SU), Partial understanding (PU), No understanding (NU), Misconception (MC), No answer (NA).

RESULTS AND FINDINGS

Students' Understanding Levels about fundamental concepts of precipitation titration

The primary goal of the conceptual side of vee diagrams was to find out the patterns of students' understandings and misconceptions of the the fundamental concepts concerning precipitation titration such as *precipitation, precipitation titration, argentometry, back titration and adsorption*. These concepts are the most important concepts to comprehend the precipitation titrations meaningfully. The data about students' understanding levels about the fundamental concepts of precipitation titration are presented in Table 1 according to the degree of understanding.

Table 1. Degree of Students' Understanding about fundamental concepts of precipitation titration

Degree of understanding	Precipitation	Precipitation Titration	Argentometry	Back Titration	Adsorption
SU			CE3,CE10, CE11, C1,C4,C7 (f=6) %35,3	CE7,CE12, C1,C2 (f=5) %31,3	CE3,CE12, C2, C7 (f=5) %31,3
PU	CE3,CE5,CE6,CE7, CE9,CE10,CE11, C1,C3, C4,C7 (f=11) %68,8	CE2,CE3,CE6, CE7,CE10, CE11, CE12, C1, C3, C4, C6, C7 (f=12) %75	CE2,CE6,CE7, CE12, C2,C6 (f=6) %35.3	CE2,CE3,CE5CE6 (f=4) %25	CE2,CE6, CE11,C1 (f=4) %25
NU		CE1, CE5, CE9, C2, C5 (f=5) %31,3	CE1, CE5, CE9, C3 (f=4) %25	CE1, CE9, CE10,CE11, C3, C6, C7 (f=7) %43,8	CE1,CE5, CE9,CE10,C3 (f=5) %31,3
MC	CE1, CE2, CE12, C5, C6 (f=5) %31,3	-	-	-	C4,C5,C6 (f=3) %18,8

According to Table 1, none of students showed a SU for the *precipitation* and the *precipitation titration* concepts. 11 of students showed a PU. 5 of students had misconceptions about precipitation and two misconception statements were identified. One of them is concerning "thinking the precipitation as saturated/excess saturated solution" and one example expression about this thought is:

"Precipitation is addition excess amount of substance to a solvent that it can be solve (CE2)"

Secondly it was found that students associated the precipitation with concentration and one example expression about this thought is:

"Precipitation occurs when the concentrations of two liquids increase in to one another (C5)"

Although there were not identified any misconception concerning the *precipitation titration*, 5 of students showed the NU. One of the students (C5) suggested that *the precipitation titration was general name of the substances which are determined.* While none of students had misconception about concepts of *back titration* and *argentometry*, it was seen that 3 of the students had misconceptions about the concept of *adsorption* that these misconceptions based on students' confusion adsorption with absorption.

Students' Understanding Levels about procedural knowledge of precipitation titration

Another goal of the conceptual side of vee diagrams was to explore the students' understandings and misconceptions of the procedural knowledge concerning precipitation titration. For this purpose three questions were asked to students. They were a) Which specifications are needed to use a precipitation reaction in volumetric analysis? b) Are there any pH limitations in Mohr method? If there are, please explain. c) What are the general working principles of indicators used in volumetric analysis? The data about students' understanding concerning the procedural knowledge about precipitation titration that obtained from anaysis of three questions were given in Table 2.

Table 2. Degree of Students' Understanding about Procedural Knowledge of Precipitation Titration

Degree of Understanding	Specifications used for precipitation reaction in volumetric analysis	pH limitations in Mohr method	Working principles of indicators
SU	-	CE2, CE6, CE7 (f=3) %18,8	CE9, CE10 (f=2) %12,5
PU	CE2, CE3, CE6, CE7, C7 (f=5) %31,3	CE10, CE11 (f=2) %12,5	CE2, CE3, CE6, CE11, CE12, C1, C2, C4, C6, C7 (f=10) %62,5
NU	CE1, CE5, CE9, CE10, CE11, CE12, C5 (f=7) %43,8	CE1, CE3, CE5, CE9, CE12, C2, C3, C6 (f=8) %50	CE1, CE5, C3, C5 (f=4) %25
MC	-	-	
NA	CE4, C1, C2, C3, C4, C6 (f=6) %37,5	C1, C4, C5, C7 (f=4) %25	-

According to Table 2, none of students showed a SU about specifications used for precipitation reaction in volumetric analysis**,** but degree of students' understanding about pH limitations in Mohr method and working principles of indicators are very low. %62.5 of the students showed a PU about working principles of indicators.

Any misconception about procedural knowledge of precipitation titration was not determined for all of the students, while a NA in 6 of the students about specifications used for precipitation reaction in volumetric analysis for and in 4 of the students about pH limitations in Mohr method was observed.

Students' Understanding Levels about calculation skills concerning precipitation titration

The experimental side of Vee diagram includes *data recording* part that the students record data during the experiment and transform them to a table, graph or make calculation by using chemical equation in the *data transforming* part. It can be obtained students' understanding levels about calculation skills from the analysis of the *data transforming* part of Vee diagram. The development of students' calculation skills is the fundamental for participation titrations. In this study, since three V-diagrams for each argentometric methods that is Mohr, Fajans and Volhard methods were used, the data obtained from the *data transforming* parts of Vee diagrams. The findings about these analyses were presented in Table 3.

Table 3. Degree of Students' Understanding about Calculation Skills Concerning Precipitation Titration

Degree of Understanding	Mohr Method	Fajans Method	Volhard Method
SU	CE1, CE2, CE5, CE6, CE7,CE12 **f=6 %35,3**	CE6, C7 **f=2 %11.8**	-
PU	CE11, C1, C2, C6, C7 **f=5 %29.43**	CE1, CE2, CE3, CE5, CE12, C2, C4, C5, C6 **f=9 %52.9**	C1, C2, C6, C7 **f=4 %23.55**
NU	CE3, C4, C5 **f=3 %17.6**	CE9, CE10, CE11, C1 **f=4 %23.5**	CE1, CE2, CE3, CE5, CE6, CE7, CE9, CE11, CE12, C4, C5 **f=11 %64.7**
MC	CE9, CE10, C3 **f=3 %17.6**	CE7, C3 **f=2 %11.8**	CE10, C3 **f=2 %11.8**

According to Table 3, while none of students showed a SU about calculation skills in Volhard method, 6 of students had SU level of calculation skills in Mohr Method and also 2 of the students showed a SU about calculation skills in Fajans Method.

CONCLUSION

In this study, the students' understanding levels about participation reactions, fundamental concepts and procedural knowledge about participation reaction, and calculation skills of students were investigated by using Vee-diagrams. It was concluded that the degree of the students' understandings of precipitation and precipitation titration concepts were on a level with partial understanding and students had the misconception about precipitation. Another conclusion is about students' calculation skills. Some of the students have gained skills about calculation in SU and PU levels, while none of the students have understood the calculations about back titration in Volhard method.

RECOMMENDATIONS

Recommendations can be divided into two groups. One of them is about learning and teaching precipitation and precipitation titrations and the calculation skills. The teachers should gain information about their students' prior knowledge and pre-requisite knowledge about precipitation and precipitation titration and related concepts concerning them before the laboratory instruction. Besides students' calculation skills and if they construct stoichiometric relationships should be reconsidered before instruction. If they have deficiency about them, these deficiencies should be eliminated. The second recommendation is about usage Vee diagrams in analytical chemistry laboratory as an assessment tool. In this study, the Vee diagrams were applied successfully in assessing both students' conceptual and procedural understandings, and also calculation skills. So, it can be suggested that Vee diagrams are used in analytical chemistry laboratories as an assessment tool and for different purposes.

THE DESIGN OF A SECURE QUIZ EXTENSION FOR MOODBILE

Mustafa Kaiiali
Mevlana University

Armagan Ozkaya
Mevlana University

Halis Altun
KTO Karatay University

Marc Alier
Polytechnic University of Catalonia

ABSTRACT: E-learning has been adopted broadly by various institutions all over the world. However, the expansion of mobile devices creates a new form of E-learning, called m-learning. M-learning encompasses all learning delivered via mobile devices. It helps to make the learning process learner-centered by promoting "Bring Your Own Device" (BYOD) model of learning technology. Despite ever increasing demand for it among students, m-learning lacks teachers and/or institutions confidence who are accustomed to use e-learning systems such as LMSs. Moodbile project was the first attempt to find a moderate solution between the two parties by the integration of m-learning initiatives with LMSs. On the other hand, M-learning has unique security requirements especially for conducting exams. For that, we have designed a Secure Exam Management System (SEMS) as a service extension to Moodbile. SEMS enables mobile exams to be conducted securely (as cheat-free as possible). This paper discusses the design principles of SEMS. It also presents the results of a survey about students/teachers acceptance and confidence to adopt such exam systems.

Key words: Learning Management System (LMS), M-Learning, E-Learning, Exam Engine, Access Control

INTRODUCTION

The LMS has become a centerpiece of the digital strategy of most educational institutions. In addition to offering a virtual space for the classroom and the usual set of tools (noticeboards, forums, assignments, wikis, quizzes, SCORM, PDF and other contents), the LMS has articulated the digitalization management of studies and curriculums. With support for advanced gradebooks, groups within courses, meta-courses, competences, roles and integration via web services, the LMS has a lot of information about what is going on in the educational institution, and is often a key part of the business processes that take place inside it. With the transition to new ways of using technology for learning, such as mobile devices and MOOCS, one could suppose that the established LMSs (Blackboard, Moodle, Sakai and the one: Canvas) have long been ripe to be replaced by new ones that are more tuned to the new trends in the field.

However, in the last 15 years the educational institutions have invested heavily in technology, information systems integration, training and reorganization around the LMS. And, it is hard, if not impossible, to find a big organization considering replacing a large LMS system for a new one [1, 2]. Thus the established LMS is the starting point towards the new trends of technology in education. Particularly in the field of mobile-learning, we can see how all platforms are moving towards it. There are two main approaches. One is to enable mobile friendly web interfaces. In the Polytechnic University of Catalonia, the Moodle installation experienced an increase in usage from mobile devices from 7% to 28% of the total accesses, just by changing the CSS templates. The other one is to develop mobile apps. The Moodle community published a mobile Moodle connected to the web services, as proposed by the Moodbile project back in 2010 [3].

Nevertheless, as Moodle founder Martin Dougiamas admitted, when receiving his Honoris Causa doctorate in Catalonia in Spring 2016, going mobile means to rethink deeply the workflows of the LMS tools, and it will mean a heavy redesign and recoding. Quizzes are not an exception. Moodbile project never addresses the security and privacy issues related to conducting exams in m-learning environment, and neither does the Moodle Quiz Engine which emphasizes only on the learning process not on securing the examination process. Other e-exam systems developed based on mobile platforms with wireless access [4], [5] lack proper security considerations and exam management functions as well.

This paper aims to briefly discuss the design principles of SEMS [6]. SEMS is designed to meet the distinct security requirements of m-learning environments and to be integratable with Moodbile. The paper is organized as follows: Section 2 presents SEMS Exam Engine. Section 3 discusses how SEMS enforces exam security and controls network communication during an exam. Finally, Section 4 presents a survey conducted about SEMS.

Sems Exam Engine

The Quiz Engine in Moodle can only be accessed through standard web browsers that are slow on mobile devices and that cannot address m-learning exam security issues. Thus, we need to develop a new Quiz Engine integratable with Moodle/Moodbile in order to have a complete LMS whose services can be consumed by mobile applications, to cater m-learning specific security requirements. The core features of the proposed Exam Engine are discussed below.

Secure and Random Distribution of Exam Questions

The following functionalities are provided in this context:

- Enabling the teacher to define a bank of exam questions and linking them to his/her subject.
- Enabling the teacher to specify subjects' exam properties such as: Date and Time, Duration, Percentage of questions at various difficulty levels, etc.
- Securely authenticating and enrolling students, using any of the well-known secure and multifactor authentication mechanisms, into the exam at the predefined date and time.
- Creating exam instances by random distribution of exam questions and multi-choices of answers to the enrolled students' mobile devices according to the predefined exam properties such as percentage of each question level.
- Allowing students to answer the exam questions through the Exam Client and then submitting the answers to the Exam Server.
- Allowing students to request interaction with the teacher during an exam. If a student has a doubt about one of the questions, he/she can click a button that causes the teacher version of the software to raise an alert about the question, the student who is asking, and the room that he/she is attending the exam from. The teacher will be further able to edit the question in case he/she finds a mistake or an ambiguity in it. Students who have got the same question will be alerted with the change.
- Processing students' answers to determine their grades.
- Generating a set of reports to enrich the assessment process, by providing statistical information about a particular exam, a student, or a teacher.

The Quiz Engine proposed herein also includes a Turbo-mode Assessment Service for conducting arbitrary quizzes during class time rapidly. According to the student's answers it increases or decreases the difficulty level of the questions in a reactive manner. As a result, student's level can be determined using fewer questions and in a shorter time. Also the software has to be supported with a special theme for students with special needs (for example, a theme with a big font for students with short vision).

Following the Widely Accepted Industrial Standards

SEMS Exam Engine must conform to a well-known and widely-adopted set of standards and specifications developed by IMS Global Learning Consortium (IMS-GLC) [7]. IMS-GLC is a specification authoring organization comprised of distributed computer learning system vendors, publishers, digital content vendors, government agencies, universities, training organizations, and other interested parties. It is a global and non-profit member organization supported by over 190 of the world's leaders in educational and learning technology. It has approved and published some 20 standards that are the most widely used learning technology standards in higher education around the globe. These include meta-data, content packaging, enterprise services, question & test, competencies, tools interoperability, sharable state persistence, vocabulary definition, and learning design. All IMS-GLC standards are available free of charge via the IMS GLC web site and can be used without royalty. The IMS Question & Test Interoperability (QTI) specification enables the exchange of item, test and results data between authoring tools, item banks, test constructional tools, learning systems and assessment delivery systems. QTI specification is defined in XML to promote the widest possible adoption.

Enforcing Exam Security

In m-learning environments, students' tablet/mobile devices are connected to a Wi-Fi network through which they can exchange information during an exam. Applying simple policies, such as turning the network down, does not work out as students from different classes do not have their exams simultaneously. We have to introduce an appropriate mechanism to address this point in a practical manner.

In such an environment, a dynamic network access policy has to be generated and applied on each student's tablet according to predefined conditions. For example, if the student has no exam, then all the intranet communication, including the Bluetooth communications, are allowed. However, during exam time, Bluetooth and all other network communications have to be blocked except the main connection to the Exam Server through which the student is going to download the questions and submit their answers.

To enforce such policies, we introduce SEMS **Security Agent**. It is an agent software installed on students' mobile devices and is responsible for downloading the dynamic network access policies from the Exam Server and enforcing them on each student device respectively. This agent is connected to the Exam Server via a predefined secure channel through which it is going to download the dynamic access policy. To ensure that students are not going to shut this agent down in order to break the access control policy, the Security Agent will keep sending a periodic heart-beat signal through the same secure channel to the Exam Server as illustrated in Figure 1. In case the Exam Server stops receiving this signal for a predefined period, it has to log this event and send an immediate alert to the proctor's device who is associated with the running exam to investigate the issue.

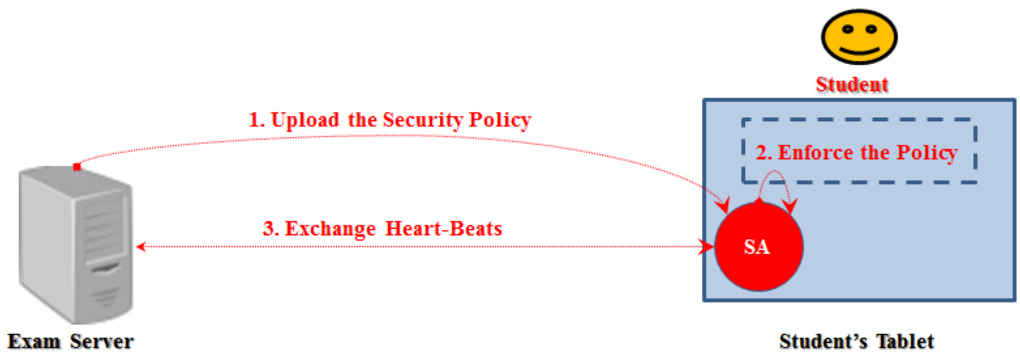

Figure 1: Student Monitor Agent

In case of an open-book exam, teacher has to upload a set of exam eBooks to the Server. The dynamic access policy allows students to browse the eBooks associated with their open exam. This mechanism controls the access to materials rather than opening the entire network resources which can be misused by the students. SEMS design also adopts a mechanism for anti-impersonation. Students' mobile devices' cameras can be used for a biometric-based login to the Exam Server by implementing any well-known face-recognition algorithm. In a Wi-Fi based connection, we cannot guarantee that each student is going to attend the exam from the dedicated class room. A student can simply sit in a nearby room, log in to the Exam Server through the Wi-Fi network, illegally open a textbook, and use it to answer the questions. To encounter this issue, SEMS design offers three strategies: the Proctor Approval based Strategy, the QR-Code based Strategy, and the NFC based Strategy. Each strategy suits a particular scenario.

Students might still attempt to cheat by simply exchanging their mobile/tablet devices after they get authenticated by the Exam Server. To prevent this issue, SA may re-authenticate the students biometrically by asking them to represent their faces in front of the mobile camera on a random basis. Moreover, SEMS design handles various network issues such as: network overload and occasional failures, the use of alternative mobile devices to exchange information during an exam, and the use of a Wi-Fi jammer to bring the Wi-Fi network down. On the other hand, the Security Agent has an optional auditing service that helps to monitor students' activities on their tablet/mobile devices such as: Internet browsing, playing games, reading course electronic materials, etc. This can help to analyze the efforts being done by the students and give suggestions to their parents in order to encourage them to improve their efforts so they can accomplish better results.

RESULTS

The proposed Secure Exam Management System design principles were validated by conducting a survey at three different universities. The number of students participated in the survey was 322. The opinions of a total of 72 lecturers were also taken. Two of the institutions are private universities, the other is a state university, and the success levels of students at the entrance exam are almost the same. The lecturers were presented 7 questions related to adaptation of SEMS system in their exam evaluation process (Table 1). On the other hand, the students were asked to answer 5 question to expose their attitudes towards SEMS system (Table 2). Both of the surveys were prepared using a 5 point Likert-type scale i.e. (1) strongly disagree – (5) strongly agree.

The feedback from the both surveys shows that the attitudes of the students and the teachers towards adopting SEMS in conducting exam process are positive. The response from students shows that they 51.6% either “strongly agree” or “agree” on this statement. On the other hand, responses of the lecturers show positive and neutral tendencies. Out of 72 lecturers, 38.9% of them either “strongly agree” or “agree” on this statement, 36.1% are neutral while the minority of 25% disagree with the statement. The results show that the stake-holders’ attitude towards SEMS is acceptable. The exposure of the students to new high-tech devices is the main reason why the students’ feedback is more positive compared to the lecturers’.

In general, the confidence level among the lecturers of using the system and getting benefit out of it is extremely high as seen in Figure 2; for Q2, 66.7% of the lecturers and for Q3, 58.3% of lecturers either “strongly agree” or “agree” on this statement, respectively. A similar tendency among students is evident on being comfortable with using SEMS (Figure 3). 64.6% of the students either “strongly agree” or “agree” on this statement regarding Q2 in the students’ survey. They also believe that SEMS would be fairer in grading. The opinion for the respective question is 49.1% being either “strongly agree” or “agree” on this statement. Although 22.9% of students either “strongly disagree” or “disagree” on this statement, the general attitude is comparably positive. Only %18.7 of the students did not think that SEMS would help to improve the teaching process via instant quizzes. The results are indicative of highly positive general view of the stake-holders on using SEMS in m-learning environments.

Table 1. Questions to Teachers

Q1 SEMS is more preferable over a paper-based exam.
Q2. Exams would be conducted easily and effectively using SEMS.
Q3. An enhanced evaluation process would be obtained using SEMS.
Q4. The user-friendly interfaces of SEMS design would help adaptation of new technologies in classrooms.
Q5. I don’t expect to have any difficulties in conducting exam using SEMS once it is implemented.
Q6. Students’ attitudes towards SEMS system would be definitely positive.
Q7. Face recognition as an extra security-check would increase the confidence.

Table 2. Questions to Students

Q1. SEMS is more preferable over classic type paper-based exam.
Q2. As a generation acquainted with high-tech devices we would be more comfortable with using SEMS.
Q3. SEMS would be more fair and unbiased in grading my knowledge.
Q4. As a system with latest technology SEMS would prevent cheating more efficiently.
Q5. Instant quizzes help to increase our success and to identify our levels quickly and regularly.

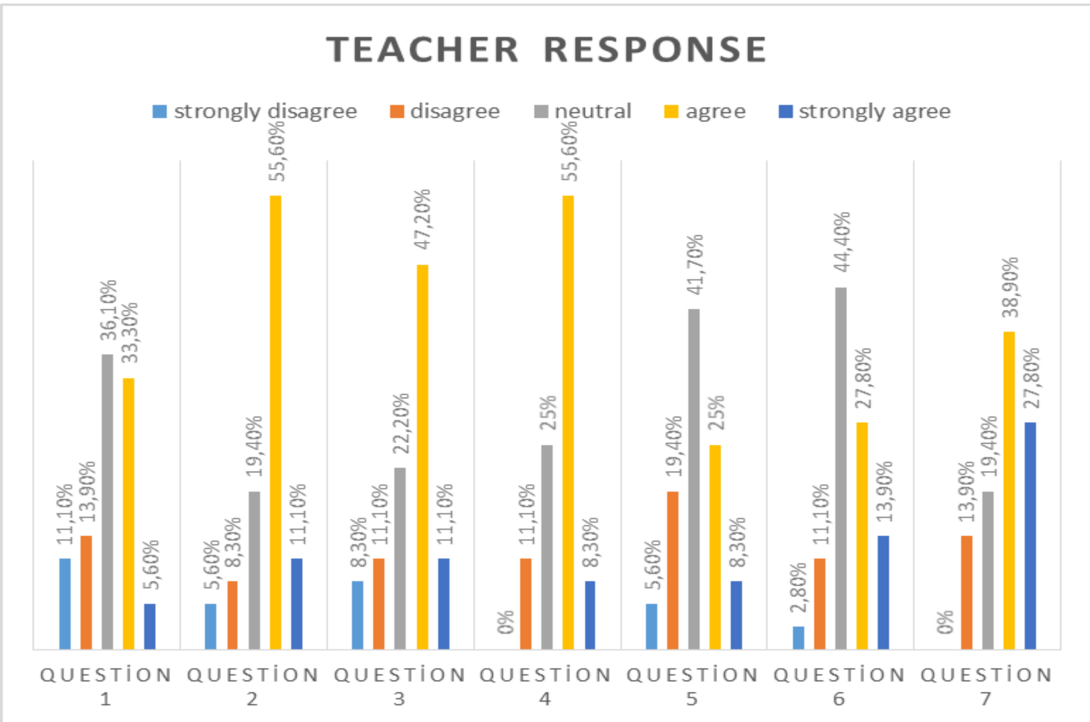

Figure 2: Teachers’ Responses

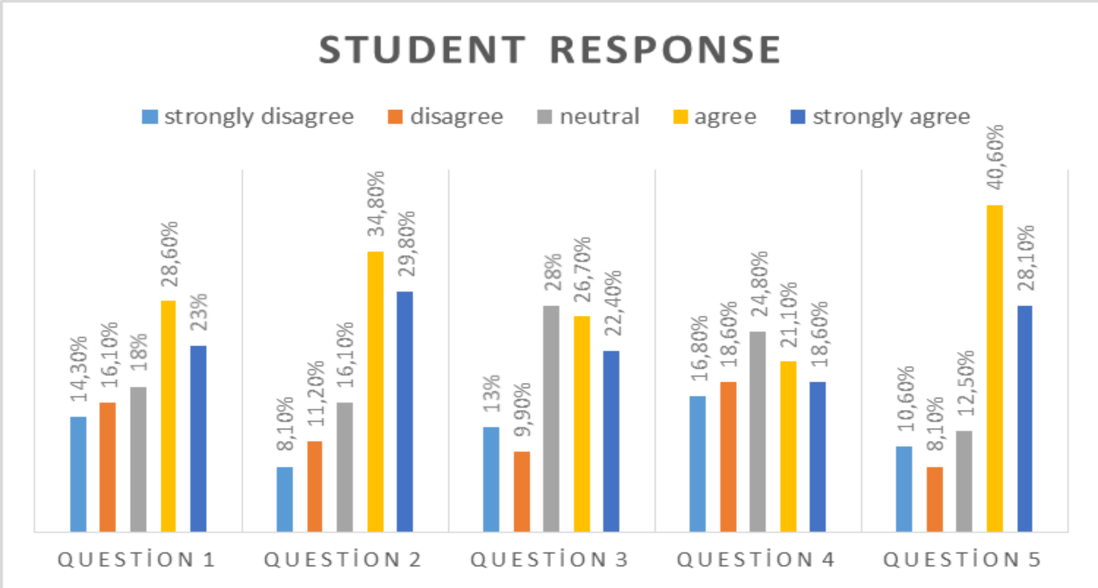

Figure 3: Students' Responses

CONCLUSION

This paper proposes the design of Secure Exam Management System (SEMS) to mitigate exam security threats that exist in m-learning environments. SEMS offers many efficient exam services such as: secure and random distribution of exam questions, biometric based authentication mechanism for anti-impersonation, conducting exams securely, and auditing services. SEMS is integratable with Moodle and its service extension Moodbile. The resulted design is a complete LMS with secure exam services that can be consumed by legacy systems through web browsers and by m-learning systems.

PRESERVICE CLASSROOM TEACHERS' BIOETHICAL PERCEPTIONS

Gülbin ÖZKAN
Yildiz Technical University

Ünsal UMDU TOPSAKAL
Yildiz Technical University

ABSTRACT: Recent developments in biology and biotechnology have raised ethical issues. In order to live in more ethical world, it is most important to improve preservice teachers' capacity to make ethical decisions. The purpose of this research was to determine preservice classroom teachers' perceptions about bioethical issues. The research was conducted with 40 preservice class teachers (35 females, 5 males) from Yildiz Technical University, Faculty of Education, Department of Classroom Education in 2015-2016 academic year. In this study qualitative research method was used. For this purpose four bioethics scenarios was developed by the researchers and applied. The participants wrote their decisions about each scenario that included bioethical issues. The data was treated by qualitative data analysis - open coding. As a consequence of this research, it has been revealed that classroom teachers have decided mostly by their beliefs such as religious rather than bioethical perspective. At the end of the research, some suggestions were made concerning to have bioethics subjects in lessons, and to arrange preservice education for classroom teachers.

Key words: bioethics, bioethical issues, biotechnology, preservice teachers

INTRODUCTION

Bioethics is the double sided relationship between biology and ethics. It includes everything from well-known debates such as the use of stem cells in medicine, to the impact of terrorism and war on Earth's environment, to how human populations alter the landscapes around them, to how research into these questions is conducted and results are shared (Dybas, 2003).

Advances in medical technology and biotechnology have caused the emergence of comprehensive new bioethical issues globally. Nowadays the ethical topics in science and biology have become increasingly important in education as a bridge for improving students' perspective. That's why ethics training has gained importance.

Ethics education has a positive effect on students' ability to make decisions about ethical issues (Hosmer, 1998). Bioethics education enables students' awareness of ethical disagreements and dilemmas and fosters good ethical decision making (Choe, Park & Yoo, 2014).

When examining the literature there is not much work in science education about bioethic issues (e.g. Keskin-Samanci, Özer-Keskin & Arslan, 2013; Dawson, 2007; Sadler et al., 2006; Larazowitz & Bloch, 2005; Sadler & Zeidler, 2004; Bryant & Baggott la Velle, 2003; Dawson & Taylor, 2000; Tsuzuki et al., 1998; Asada et al., 1996). In these studies with respect to bioethical issues deal with use of animals in experiments, prenatal genetic diagnosis and abortion, determining the gender or physical appearance of unborn babies, genetically modified organisms, genetic screening tests and therapeutic cloning, gene therapy and cloning, sociological, philosophical and ethical background; interactions of humans with the 'natural' world; biomedical topics; aspects of biotechnology, ethical concerns about animal experiments, environmental issues. In this study we will discuss donors, organ transplant, euthanasia, human milk bank topics with dilemmas.

Incorporating ethical dilemmas into the classroom is one strategy for increasing student motivation and engagement with science content in bioethics education. Students notice the greatest changes in their own awareness of ethical issues and in understanding the connection between science and society (Chowning et al., 2012).

In order to help teachers appropriately manage and resolve ethical dilemmas and conflicts, it is of greatest importance to improve the bioethics education they receive while they are still pre-service teachers. If preservice teachers provide the awareness in bioethics, they will also enable effective education.

The purpose of this research was to determine preservice classroom teachers' perceptions about bioethical issues. Considering these issues, our future teachers have responsibilities as citizens and as teachers to prepare the next generation to be component in the consideration of bioethical issues and help their students discuss ethical implications of these issues.

This study was designed to answer the following research question: What are the preservice classroom teachers' perceptions about bioethics?

METHODS

Design of the Research

A qualitative approach was adopted. This approach helps the researchers to better understand the process of constructing meaning and describe them (Bogdan & Biklen, 1998). In this study, four bioethics scenarios was developed by the researchers and applied. The participants wrote their decisions about each scenario that included bioethical issues. In the analysis of the open-ended questions in the scenarios, the students' responses were first defined thematically. Decriptive content analysis of the data was performed by two researchers.

Sampling

The research was conducted with 40 preservice class teachers (35 females, 5 males) from Yildiz Technical University, Faculty of Education, Department of Classroom Education in 2015-2016 academic year.

In all students (40 preservice classroom teachers), scenarios were administered. The entire questions of response time was 45 minutes.

Data Collection

Scenarios that were prepared on the subjects of bioethics were developed to define the students' perceptions. In developing these scenarios, questions were prepared by researchers at the basis of the common issues among people. The scenarios were reviewed by two faculty members specialized in science instruction. After they examined questions, the questionnaire was given final form which contains 4 questions. Also, before before being presented to students, a pilot run was implemented with 5 students to see whether there was anything the students could not understand.

As part of the reliability study for the scenarios, two researchers analyzed students' answers. There was 95% agreement between the two analyses.

Four scenarios were prepared about bioethical issues as donors, organ transplant, euthanasia, human milk bank. The question below is an example from the scenarios (Figure 1).

Scenario 3. Esra has cancer disease which is too late to treat. Now she has unbeareble pain. Esra has not decision making ability lost yet. She says to doctors that she is going to die and wants to end the her pain. She know to die, thus she wants to doctors end her life. What do you think about the decision of Esra who wants to end to life of her own accord?

Figure 1. Example of the Bioethics Scenario

Data Analysis Procedure

In a study conducted with Keskin-Samanci, Özer-Keskin and Arslan (2013), in determining suprathemes, they benefited from Principles of Biomedical Ethics (i.e. usefulness, harmlessness, respect for autonomy, and justice) (Beauchamp & Childress, 1994) and the Basic Ethical Approaches (i.e. utilitarian, rights, justice, goodness of all, virtue) used in ethical decision-making processes and in ethical standard-setting (Velasquez et al., 2009). The classification of categories set forth by Keskin-Samanci, Özer-Keskin and Arslan (2013), given below were used to analyze the data obtained from scenarios.

- *The Utilitarian Approach* is concerned with doing the most good and causing the least harm for all those concerned–customers, employees, shareholders, the community, and the environment. It tries both to increase the good done and to reduce the harm caused.
- *The Rights Approach* is concerned with the duty to respect others' rights.
- *The Justice Approach* is concerned with the idea that all equals should be treated equally.
- *The Virtue Approach:* Honesty, courage, compassion, generosity, tolerance, love, fidelity, self-control, and prudence are all examples of virtue. The virtue approach asks of any action "What kind of person will I become if I do this?" or "Is this action consistent with my acting at my best?"
- *The Normative Approach* sets forth specific conditions that label actions as ethical or unethical.
- *The Theological Approach* deals with actions motivated by religious rules.
- *Preference for the Natural:* In this approach, people prefer natural things. The important issue is not to pose a risk for the environment or the order of the nature.
- *The Science and Technology Based Approach* deals with scientific developments. According to this approach, science and technology contribute to human life.
- *Belief in Humans' Superiority to Other Living Beings:* This anthropocentric approach assumes that human beings are superior to other living beings which are merely at the service of humans.

The classification of the responses to all scenarios in according to these nine subthemes was made by two researchers. The thematic classification of the reponses for the scenarios is given Results and Findings Section.

RESULTS AND FINDINGS

To find out students' views about donor, we asked to this scenario. Scenario 1 is included a dilemma about a girl in need of donor and her sister does not want to be donor. The percentages of preservice classroom teachers' responding to this dilemma are presented in Table 1.

Table 1. Participants' Approaches about Donors

Bioethics Approach	f
The Utilitarian Approach	7
The Rights Approach	4
The Justice Approach	4
The Virtue Approach	5
The Normative Approach	8
The Theological Approach	7
Preference for the Natural	3
The Science and Technology Based Approach	-
Belief in Humans' Superiority to Other Living Beings	-

Majority of preservice classroom teachers have the utilitarian approach, normative approach and theological approach. Two students have no response this scenario. Some of the participants' statements given below (Numbers in the paranthesis used instead of students' name):

- *We should not be angry to a sister who do not want to be donor. We also shoulld respect her decision. (12)*
- *I think sister who do not want to be a donor should be discarded. It is a disrespectful behavior to her sister. (25)*
- *If she don't want be a donor, she can commit a great sin. According to our religion it is not acceptable. (32)*

The students were asked to opinion of giving organ if the brain death has occurred. Participants' approaches are given in Table 2.

Table 2. Participants' Approaches about Organ Transplant

Bioethics Approach	f
The Utilitarian Approach	8
The Rights Approach	7
The Justice Approach	4
The Virtue Approach	5
The Normative Approach	5
The Theological Approach	7
Preference for the Natural	3
The Science and Technology Based Approach	1
Belief in Humans' Superiority to Other Living Beings	-

Table 2 shows that in the participants generally have utilitarian approach, rights approach and theological approach. Some of the participants' statements given below:

- *According to our religion organ donate acquires merit. (3)*
- *Even if brain dead is occured, I can not donate my relatives' and my friends' organs. Because it is very sad to think falling to pieces of him/her. Something will always missing. (16)*
- *I can allow. Because organ donate save the life. Maybe in this way someone can survive. (21)*

The preservice classroom teachers were asked to opinion of euthanasia. Scenario 3 is given as an example in a Methods Section. Participants' approaches are presented in Table 3.

Table 3. Participants' Approaches about Euthanasia

Bioethics Approach	f
The Utilitarian Approach	5
The Rights Approach	9
The Justice Approach	1
The Virtue Approach	-
The Normative Approach	7
The Theological Approach	13
Preference for the Natural	5
The Science and Technology Based Approach	-
Belief in Humans' Superiority to Other Living Beings	-

As seen in Table 3, most of the participants have theological approach about euthanasia. Some of the teacher candidates' responses given below:

- *I can say that as a religious, I do not make a decision about birth and I can not make a decision about death. Suffering will return to us as prize in other world. (8)*
- *Individuals can make a decision about death by themself. He/she should also be consulted to close friends and relatives. (18)*
- *If there is no possibility about living and he/she will die, we should be respected he/she decision. (19)*

A human milk bank, or breast milk bank is a service which collects, screens, processes, and dispenses by prescription human milk donated by nursing mothers who are not biologically related to the recipient infant. Scenario 4 is asked to participants: Would you prefer milk bank? Table 4 reveals that preservice classroom teachers' approaches about human milk bank.

Table 4. Participants' Approaches about Human Milk Bank

Bioethics Approach	f
The Utilitarian Approach	8
The Rights Approach	-
The Justice Approach	-
The Virtue Approach	1
The Normative Approach	5
The Theological Approach	16
Preference for the Natural	2
The Science and Technology Based Approach	8
Belief in Humans' Superiority to Other Living Beings	-

As seen in Table 4, most of the participants have theological approach about human milk bank. The utilitarian approach and the science and technology based approach are also prefered mostly. Some of the participants' answers given below:

- *I think that this situation have the useful effect more that the risk, thus the milk ban can be preferred. (6)*
- *I think science will solve the disadvantage sides of this milk banks. Because science and technology so advanced it will be positive for our future. (29)*
- *I do not want to give someone's milk to my child though one of my family members. That's why I can not give milk of someone who I have never met before. (39)*

CONCLUSION

This study aims to show preservice classroom teachers' values in their decision-making on ethical problems resulting from biological sciences within the perspective of 'bioethics' and 'bioethics education'.

In looking at the percentages of the preservice classroom teachers' responses it can be said that most of the participants are prefered the theological approach about bioethical issues. In that, their decisions deals with religious rules. Many teachers also have responded as The Utilitarian Approach. They can be tried both to increase the good done and to reduce the harm caused. It can be said that cultural and religious values affected their decisions.

A few teachers are adopting a scientific approach. Perhaps this frequency could be higher if they were science teachers. In the future bioethical scenarios may be attempted at various academic levels and on in science/biology education.

In a study conducted by Dawson and Taylor (2000), science students in two schools in Australia were taught biotechnology courses that introduced them to bioethics. At the end of the course, students completed a survey in which they made a decision about three bioethical dilemmas. The students' answers and reasons were compared with those of three experts. Researchers found that the majority of students tended to resolve and justify their decisions in a way that was naive, idealistic, and rights based.

Another study investigated Sadler and Zeidler's (2004) study examined the extent to which college students construe genetic engineering issues with dilemmas. The study specifically addressed gene therapy and cloning. It was found that students' responses were influenced by affective features such as emotion and intuition. In addition to moral considerations, a series of other factors emerged as important dimensions of socio-scientific decision-making. These factors consisted personal experiences, family biases, background knowledge, and the impact of popular culture.

As a consequence, it can be said that the character of individuals is the most important factor in improving the quality of bioethics thinking (Pauly et al., 2009). Bioethics education primarily aims to enable individuals to discover their own values regarding existing ethical problems, to question and evaluate with universal ethical values, and to gain decision-making skills in problem-solving processes (Keskin-Samanci, Özer-Keskin & Arslan, 2013). It is important that to improve awareness of individuals priorities and values.

RECOMMENDATIONS

The results of this study provide some perspective in terms of preservice science teachers' perceptions of bioethical issues. In the light of this study, the following recommendations can be given.

1. It can be recommended that teachers can do the 'bioethics education' through the scenarios.
2. The study were that the sample was very small. New studies can be made large number of participants.
3. In this study, no quantitative comparison had been made between the group in which students had the bioethical education and the group in which they did not. In the future experimental researches can be designed.
4. It is recommended that further studies comparing the two groups or more groups (different departments) can be designed.
5. Bioethical scenarios may be attempted at various academic levels and on in science/biology education.

The main limitation of the study were that the number of scenarios which were prepared was very small. For this reason, this study can only be regarded as restricted. For the future research, it can be arranged that new scenarios about another common bioethical issues.

BIOETHICS IN SCIENCE EDUCATION

Gülbin ÖZKAN
Yildiz Technical University

Ünsal UMDU TOPSAKAL
Yildiz Technical University

ABSTRACT: Recent developments in science will impact the practice of teachers who teach bioethics in schools. There is a growing awareness of bioethical issues amongst the public and in the media, and an increasing level of debate about them. It is important that teachers and those who teach biology are aware of the ethical and social implications of their work. This paper reviews and critiques the existing research on a bioethics, which deals with ethics in the context of science instruction. First, bioethics and bioethical issues are described. This is followed by an importance of bioethics education. Then the existing studies (on bioethics) are reviewed and evaluated. Because of the gaps with the existing research in the literature, recommendations are made describing the need for more and better designed research.

Key words: bioethics, bioethical issues, biology, biotechnology, science education

INTRODUCTION

In the last decades technological developments have accelerated studies in biology and have enabled great improvements in genetics. It is important that biologists and those who teach science are aware of the bioethical and social implications of their work.

Today science curricula involve science and technology together with social, cultural, environmental, political, and ethical elements. It shows that importance of individual awareness of his/her own values and to explain them in a conscious way. Thus, today science education curricula highlight on the elements conducive to society-wide science literacy rather than conveying pure scientific knowledge to students. (Keskin-Samanci, Özer-Keskin & Arslan, 2013).

Bioethical education among students and people is crucial that a necessity of contemporary moral education because of responsible for the future of humanity. In this article, we will describe the results of published literature on importance of bioethical education. The main aim of this study to review and critique the existing research on a bioethics, which deals with ethics in the context of science instruction.

What is bioethics?

Ethics has long been an integral component of medical and nursing degree programmes (Downie & Clarkeburn, 2005). It is clear that moral laws should embedded with biological, medical, agronomical laws and this is how bioethical education contributes to educating students. Ethics education has been espoused by a number of professions in an effort to raise awareness of social and ethical issues and to enable the ethical decisionmaking skills required of people (Lysaght, Rosenberger III & Kerridge, 2006).

Although the term bioethics has multiple origins, it has generally been taken to mean medical ethics (Bryant & Baggott la Velle, 2003). Bioethics, which can be classified as a branch of the ethics plays a key role in the development and implementation of the respective means (Urker, Yildiz & Cobanoglu, 2012). Bioethics combines biological knowledge and knowledge about life with knowledge on the human, moral and ethical values.

Why bioethics education is important?

Bioethics education enables lots of benefits to humanity. Bioethics education makes it possible for individuals to accept the value conflicts caused by biological sciences and to develop decision-making skills based on ethical theories and principles (Reich, 1995).

Bioethical education enables to students to make the ‘right’ decision in a given situation, beside this bioethics education concerns itself with allowing them to have the scientific background necessary for ethical discussions and to improve their reasoning and decision-making skills (Sadler & Donnelly, 2006). Individuals can use these skills while interpreting scientific knowledge thus bioethics is important science education.

Review of the Research on Bioethics Education

We searched Web of Science using the search term bioethics education. This search resulted in the retrieval of over 750 studies. Later we marked education and educational research area, article document types and English language. This search resulted in a total of 48 research articles that met our criteria. We went through each of these studies, selecting those that relevant to our review. Specifically, our criteria for inclusion included any study that had implemented bioethics education in science. In the literature there were many studies that described bioethics education (e.g. Bradbury-Jones & Alcock, 2010; Howard, McKneally & Levin, 2010; Pinch & Graves, 2000; Mills, 2015). These studies were in many fields such as medicine, biochemical, law, nurse education. However, the goal of this research was to determine studies in science education disciplines. Our review of the research includes nine research articles.

Critique of the Research on Bioethics Education

According to findings of articles reported here do indicate that it can be difficult to appropriately assess students' socio–scientific discourse. Bioethics arguments can be useful for improvement of students' cognitive ability, and topics such as genetic engineering provide useful ways to stimulate this (Lucassen, 1995). Larazowitz and Bloch (2005) highlighted the need for the implementation of discussions on societal issues related to science, technology, and environment.

Studies were performed in many counties (e.g., Turkey, US States, UK, Australia, Japan, New Zealand). It was generally found that individuals' responses were influenced by affective features such as emotion, attitude and intuition (e.g. Dawson & Taylor, 2000, Sadler & Zeidler, 2004). Although individuals' opinions also differ according to their country, generally the explanations of them supplied to support their decisions suggested that they did not consider long term consequences. Thus, it can be said that teachers need more teaching materials to discuss the bioethics values and ideas on further ways to teach biology and use animals in school (Tsuzuki et al., 1998). In this way they can put into practice a more effective ethic teaching.

The sample of studies was examined during the review. Keskin-Samanci, Özer-Keskin and Arslan (2013) study with secondary school students. Dawson's (2007) sample is 12-13 years old and older children. Bryant and Baggott la Velle (2003) emphasize the importance of awareness among biology science and biology education students of the ethical and social implications of their work. Dawson and Taylor (2000) worked with also science students. In Sadler and Zeidler's (2004) study college students were used as a sample. Sadler (2006), Larazowitz and Bloch (2005), Asada et al (1996) and Tsuzuki et al. (1998) worked with teachers. When the literature examined, It has not been found to study at primary level. Therefore, it can be said that, studying with students at this level should be increased.

In these studies data collection method generally was interviews (e.g. Dawson, 2007; Sadler et al, 2006; Sadler & Zeidler, 2004) and some of the studies used the surveys (e.g. Dawson & Taylor, 2000; Tsuzuki et al., 1998). The bioethics education is also important as well as determining indivuduals' views on bioethics.

RECOMMENDATIONS

The results of this study provide some perspective in terms of bioethical issues. Students should be given more opportunities to discuss bioethical issues. That is, bioethics should be a subject for study in science education. Science curricula at all levels of education should incorporate ethical issues of science.

ROLE OF EXCURSIONS AND EVENTS ON ECO-FRIENDLY BEHAVIOR FORMATION AND EFFECTS ON STUDENT INFORMATION AND ATTITUDES

Sinan Erten

INTRODUCTION

The environmental problem is global rather than local. Environmental issues affect everyone without looking to ethnicity, language, gender or other discriminations. Especially, during last years it threats the globe by "Global warming" that reported in the 5th report of IPCC. Environmental issues threat human beings existence and they make the world a hard place to live. Besides technological developments individual responsibilities are also important to overcome these issues. That might be possible with environmental education. The purpose of environmental education is to prepare responsible individuals that are environmentally friend. People can overcome environmental problems by being aware of the problems and by being responsible individuals for environmental issues. This study has been taken into consideration with those ideas. The aim of the current research is search for the effect of environmental activities and trips during the environmental course and to check if attitudes toward environment have changed or not.

METHODOLOGY

This study is qualitative and quantitative. In qualitative part of the study an attitude and knowledge survey was given to students before and after instruction. The survey has been applied in many researches before and it has been adapted by the researcher. The cronbachs alpha of the survey is 0.84 Students were given a cardboard in the first lecture and asked to draw picture that describes environmental issues of the world in 2050. Students were requested to write a nickname on the cardboard and they also wanted to write down pessimistic or optimistic on the cardboard. The same procedure followed in the last lecture of the semester. The pessimist and optimist ratios have been determined. The first and last pictures were analyzed based on the content. Seven students participated in the qualitative part of the study. Students were interviewed and recorded. After that the data were transcribed.

RESULTS

The results showed that the attitude of students' environmental views and their environmental knowledge has statistically increased. Moreover, qualitative analysis of the data supported that the students' eco-friendly behavior seemed to be also increased indicating that the environmental activities and eco-tours had positively increased students' environmental views. At the end of the course period students had drawn 460 pictures. According to the results, 267 of them (59%) gave up on pessimistic views and started thinking positively. 193 (41%) students had drawn pictures indicating that in the next 30 years, environment will get worse.

Interviews conducted with randomly selected 7 students. These meetings have provided more information about students' pictures and their responses were recorded. Then the data categorized and analyzed in detail to obtain detailed results. The finding indicated that environmental education and eco-friendly views supported and developed mostly by eco-tours and activities. Hence these type of activities should be designed and can influence students' behavioral changes positively.

COMMENTS

Here, it seems that the effect of outdoor activities should be integrated and supported more often to develop and increase students' eco-friendly behaviors. Environmental education courses should be designed accordingly to support and gain positive environmental views among students.

ICT APPLICATIONS IN ENGLISH TEACHING: A LITERATURE REVIEW

Gökhan ORHAN
The Ministry of Education

İsmail ŞAHİN
Necmettin Erbakan University, Ahmet Keleşoğlu Faculty of Education

ABSTRACT: Language teaching and learning are becoming more sophisticated day by day thanks to application of technological innovations in classroom practice. In recent past, the number of applications of ICT in English teaching and learning have been increased. The researches over English teaching with information and communication technology (ICT) suggest some evidence as to positive effects of the use of information and communication technology (ICT) on students' learning (Mumtaz, 2000).English language teachers have a tendency to use ICT as a tool to practice structural purposes, teaching unknown words, speaking and pronunciation, reading comprehension ,writing, listening. The aim of the review is to provide an insight on which ICT applications are used in English teaching in practice and categorize ICT applications in relation to language skills and knowledge such as speaking, writing, listening, pronunciation and vocabulary and to examine effects of ICT applications on student achievement by investigating the literature involving ICT applications in other countries. It was determined that 12 doctoral dissertations and 25 papers, 7 master theses related to ICT applications and English skills and impact on students' achievements in ICT applications of English were included. In this research, the researchers assessed theses and papers including ICT applications in English teaching, impact of ICT on achievement in English lesson and technologies which applied in ICT. To investigate doctoral dissertations, master theses and papers from 2004 to 2016, document review was used. The findings suggested that ICT applications for vocabulary teaching was the most widespread English teachers and researchers used "Mobile Learning" based applications mostly; as to impact of ICT on students' achievement in English teaching, it was found that engagement and facilitiate English learning statements were frequently stated between 2004 and 2016.

Key words: English teaching, ICT applications, Language skills, Educational technology

INTRODUCTION

Educational technology dates back to early sixties. Until the present, new technological innovations have triggered and assisted teaching and learning. The development of educational technologies recently has tended to be mobilized, portable, and personalized. These trends have led to learning forms changing from traditional classroom learning to electronic learning (e-learning),mobile learning (m-learning) or ubiquitous learning (U-learning) (Chen &Chung, 2008, s. 6259).ICT in English teaching decrease teacher-centered instruction, conversely increases student centered instruction. The main purpose of the education is to enable students take part in meaningful learning. To achieve the aim, the students should construct the knowledge by the help of the teachers or the technology.

The technology has a critical role as a partner to enhance students' learning process. That's the teachers get help from information and computer technology to support students by forming meaningful learning environment. In language teaching (ET) with the integration of ICT, language games, text reconstruction, cloze texts, puzzles and reading and writing practice were included in the computer programs (Chen, 2006, p. 20).

To improve four language skills, the integration of ICT in English teaching has been concern for years. With integration of the computer technologies, the way of English teaching has been differentiated recently. English teacher has been using ICT applications to improve English level of students and facilitate English learning by providing opportunities with retention and removing time and place problem because students practice everywhere and whenever. For successful English teaching, English teacher (EFL) should be eclectic and not strict. To overcome learning problems thanks to ICT which enables students study at their own pace via different activities. Karaca (2007, s. 8) reported Ahmad and others' opinions about English teaching as like this:" Language teaching tends in practice to be eclectic: there are languages not only exceptionally many paths and educational means for arriving at a given educational goal, but there are also very many types of educational materials which can be used to achieve that goal". To be eclectic and richen learning environment, and draw attention of the students, the numerousness ICT applications have been utilized by the EFL teachers to richen students' English skills reading, writing, speaking and listening.

These applications affected English instruction. To illustrate; Dinçer (2014) used social media site" Facebook" to investigate its effect on vocabulary learning. The result of the study suggested the social media had a favorable impact on vocabulary acquisition. The result of the study suggested the social media had a favorable impact on vocabulary acquisition. Dalton (2016) conducted a study for investigating three dimension virtual environment which based on practice for meaningful and authentic language use. Chen and Chang (2011) utilized augmented reality (AR) technology to apply an AR-learning system for English vocabulary learning. The researchers stated that AR-learning system was a potential learning tool for learners. The 3D virtual object had a critical role to draw attraction of the students and for enhancing learning effectiveness. On reviewing literature, M-learning, computer-based technologies, Web, AR (Augmented Reality), Video based technologies and Social media like facebook, twitter and e-mail have been used mostly for ICT applications in English teaching.

In literature review, it is notable that ICT in English teaching improves collaborative learning and student-centered learning and increases students' self-regulation and help teachers make students' learning easier. In literature review, it is notable that ICT in English teaching improve collaborative learning and student-centered learning and increase students' self-regulation and help teachers make students' learning easier.

The study aims at reviewing the literature on ICT applications and form a framework into applications used for English language skills, applied technologies and their common findings, in other words, keywords researchers offered in the end of their studies about the impact of ICT on English teaching. The research questions to guide the study were developed from an initial review of the literature. The review of related literature focuses on three major topics:

1. What is the distribution of types of technologies used in the teaching of specific language skills and areas?
2. What is the distribution of English language skills (writing, speaking, listening...etc.) used in ICT applications?
3. Which keywords are stated commonly in studies impact of applications of ICT on students' achievement?

METHODS

To investigate theses and papers from 2004 to 2016, document review was implemented. Papers and theses were researched from 'ProQuest" and "Some journals on language and technology' by using key words "ICT", "ICT and English teaching", "EFL and Technology", ICT and English teachers".

Table 1. The Distribution of Sources

	f	%
Doctoral dissertation	12	% 27
Master Theses	7	%16
Papers	25	%57

All the sources searched and reached were filtered then some of them were eliminated, in conclusion, 25 papers and 12 doctoral dissertations and 7 master theses published between 2004 and 2016 were determined for the review.

Data Analysis

To analyze the data, SPSS 18 was used for frequency and mean of the items revealed in questions of the study. For the data analysis, descriptive statistical analysis was applied for frequency and mean of collected sources.

RESULTS AND FINDINGS

The results include "Language Skills", "Kind of ICT" and "Common effects of ICT applications on students' achievement and attitudes in English teaching. For distribution of types of technologies used in the teaching of specific language skills and areas, When the frequency was viewed, it was seen that m-learning % 31,25 (f=8), wap site %6,25 (f=1), AR 18,75 (f=5), Web %12,5 (f=3), Cmc Technologies %12,5 (f=2) and Call %6,25 (f= 1), video based %6,25 (f=1) and VR %6,25 (f=1). For the last decade, Mobile learning and AR was utilized in design of ICT applications mostly, conversely; Wap, Video based and VR was used at least. For the distribution of English language skills (writing, speaking, listening...etc.) used in ICT applications, Listening % 20, Speaking % 15, Writing % 15, Reading % 5 and Pronunciation % 5 is the distribution of ICT applications for over 10 years. Of the most widespread is vocabulary "Word teaching process" with % 40. Pronunciation and Reading skills were performed just once (*f*=1) in the literature reviewed by researchers. The frequency of writing and speaking is 3 (*f*=3). Listening (*f* = 4) and vocabulary (*f*= 8). As to keywords stated commonly in studies impact of applications of ICT on students' achievement, the findings indicate that the most influential outcome is make English learning easier with % 26. The frequency of "Facilitate learning" is 8. "Interaction" is %10 (*f* =3); "Motivation %20 (*f*=5), "Thinking skills" %13 (*f* = 4), "Engagement" %20, (*f* =6), "Attention" % 10 (*f* =3).

CONCLUSION

In the study, the aim was to review ICT applications used in English teaching by examining theses and papers from 2005 to 2016.A number of sources were reviewed and technologies applied in English teaching were categorized and distribution of technologies was shown with percentage. The other aim was to investigate distribution of English skills in ICT applications. It was understood that vocabulary teaching in ICT applications was the most widespread. Karaca (2007, p. 35) stated vocabulary knowledge is an indispensable part of language learning, vocabulary can be a useful supplementary aid for language learning. For the first question, the findings show that m-learning is the most significant technological applications performed by EFL teachers for the last decade. When tle literature was viewed for getting information on impact of ICT on students' achievement in English teaching, it was found that engagement and facilitiate English learning statements were frequently stated.It is clear that the use of ICT by EFL teachers in English teaching is increasing year by year.

RECOMMENDATIONS

The number of the studies can be expanded by including more theses and papers to review the literature. The studies can be categorized according to different variables such as level of students' level and their grades.

EXAMINATION OF ADOLESCENTS' COPING WAYS WITH CYBERBULLYING

Omer GOKDEMIR
Necmettin Erbakan University, Eregli Faculty of Education / Turkey

Ahmet Oguz AKTURK
Necmettin Erbakan University, Eregli Faculty of Education / Turkey

ABSTRACT: With the rapid development in information and communication technologies, increase in quality and quantity of various tools that are compatible with Internet also augments interpersonal communication and interaction opportunities on the Internet. This increase in interpersonal communication and interaction on virtual platforms, however, brings a set of problems along, too. One of these problems is the use of the virtual platform technologies by the young to bully (cyberbullying) their peers. Considering 12 to 20 years of adolescents, being the most engaged people with virtual platforms, and who are called the digital natives; ascertaining adolescents' coping ways with cyberbullying is thought to be important. The purpose of this study is to examine 9th, 10th, 11th and 12th grades high-school adolescents' coping ways with cyberbullying on the basis of gender, high-school type and Facebook membership variables. Survey model was used as the research method. The study was conducted with 301 adolescents from two different high-schools in a city in the centre of Turkey. "Coping with Cyberbullying Scale towards Adolescents" consisting of 17 items and 4 subscales was used to obtain research data. Findings obtained from the research show that adolescents' coping ways with cyberbullying are generally elevated. Additionally, while there is a significant difference in favour of female adolescents in coping ways with cyberbullying in terms of gender; there is, on the other hand, a significant difference in favour of adolescents studying from public high-schools in terms of school type. Finally, coping ways with cyberbullying according to whether the adolescents are members of Facebook, differentiated on a significant level in favour of the ones that are not members of Facebook.

Key Words: Coping with cyberbullying, Adolescents, Gender, Facebook membership.

INTRODUCTION

Nowadays information and communication technologies rapidly develop and therefore gradually increasing occurred in the quantities and qualities of different tools which are compatible with Internet causes to an increase in interpersonal communication and interaction possibilities in Internet environment as well. Based on the results of the research conducted by Turkish Statistical Institute (TUIK) in April 2015, it is determined that while 54.8% of individuals in the 16-74 age range in Turkey uses computer, 55.9% of them uses Internet (TUIK, 2015). However, the use of social media with a rate of 80.9% takes place on the top among intended uses of Internet in the first three months of same year (TUIK, 2015). The Internet usage rate in the world has reached 46.1% for the first five months of 2016 (Internet Live Stats, 2016). Such an increase and acceleration occurred in use of communication tools nearly turns the world into a small city and even if there are distances among people and people don't know each other, they take the opportunity to establish communicate each other. The most popular technological tools of this era in which we live are mobile tools and these tools have an important place in the life of the young ones (Saran, Seferoglu & Cagiltay, 2009). The mobile tools rapidly become widespread in our country and accordingly they are no doubt used by adolescents in the best way.

Adolescence period covers 12-24 age range and adolescence term refers to the individuals whose childhood period ends upon their attainment to puberty and it continues to young adulthood period (between aged 25-30) and differs from childhood period in terms of biological and psychological and society expects them to take responsibility and they win their economic freedoms at the end of this period (Kulaksızoğlu, 2004). Adolescents consist of individuals who can more closely follow technological advances compared to their parents and learn faster the changes in their environment than their parents and act more flexible in the interpretation of the information learned. As each learning will cause to behavioral changes and also as adolescents have more advantage in learning the innovations and in turning them into behavior, they exhibit more different behaviors than their parents. These behavior differences can lead adolescents to experience conflicts and problems with their parents (Kulaksızoğlu, 1989). As adolescents use more and better the technological means and their parents don't know to benefit from the technological means as required, Prensky (2001) defines the adolescents as "digital natives" and their parents as "digital immigrants".

Today, group who are more willing to use the Internet considered as the most basic component of information and communication technologies are digital natives (Tonta, 2009). Digital natives means individuals who are born inside modern technology and communication world and place online media and new technologies in the center of their lives and have natural skills to use them (Prensky, 2001). Digital natives adapt newly emerging technological innovations in a short time and naturally turn them into a part of their lives. Speed and accessibility has become the passion of digital natives and as a sequence they get used to it and consume it quickly. Digital immigrants are such a generation that they were not born with the tools engendered by the rapidly evolving information and communication technologies and tools such as mobile phones, computers and so on have entered in their lives later. This generation can be forced in using technological tools, resist them and even refuse them; but they are obliged to benefit from these tools in order to keep up with the times. There are some differences between digital natives and digital immigrants in terms of using of technology as well as there are some differences in their general behaviors. Generally digital natives have an extremely nervous person; they anger easily and tend to exaggerate their some behaviors. But digital immigrants, contrary to digital natives, get pleasure out of a quite life and generally exhibit a calmer attitude than digital natives (Prensky, 2001). Some negative features of digital natives bring alone some problems in the digital age. Due to especially using of Internet in many types of devices, the number of communication channels in cyber environments has increased and as a consequence cyberbullying named as a new type of bullying has become popular among adolescents.

Belsey (2007) defines the cyberbullying that has many definitions in literature as behaviors aiming to harm to other people by means of using of information and communication technologies by an individual or a group and repeating intentionally and made hostilely. However, Hinduja and Patchin (2008) has stated that adolescents have harassed each other by using technological tools such as mobile telephones and computers together with modern technology with the impact of the interest in technology and accordingly that they have exhibited bullying behavior against each other. There are similarities between cyberbullying and bullying in terms of bad faith, violence, repetition and remarkable power difference (Patchin & Hinduja, 2006). Willard (2006) expresses that there are seven cyberbullying activities such as anger (angry, to send rude and abusive messages), harassment (to transmit continuous offensive messages), cyber harassment (to forward repeatedly harmful and extremely frightening threat messages), defamation (to send untrue or cruel expressions), imitation (to act like someone which is under bad and difficult conditions), navigation and deception (to send the sensitive and proprietary information belonging to someone else to other people and to deal with spreading of this information to more people) and removal from membership (to remove a member intentionally from a online group). He has stated that these activities consist of text, picture, graphic, video and audio files.

According to the data of research performed by TUIK in Turkey in concern with individuals taking place among aged 16-74, the age group where computer use is at the highest level is composed of individuals taking place among aged 16-24 with a ratio of 70% (TUIK, 2015). It has been determined that group where Internet use is at the highest level is composed of individuals taking place among aged 16-24 with a ratio of 77% (TUIK, 2015). In light of these data and when it is taken into consideration that most interested group on the Internet are adolescents, it may be said that exposing of adolescents to cyberbullying is potentially a higher probability. For example, in Turkey it has been determined in the scope of a research conducted together with high school students that 30.2% of adolescents have shared their passwords in the Internet and it has been revealed that 13.4% of boys and 10.4% of girls have been exposed to cyberbullying (Aricak, Siyahhan, Uzunhasanoglu, Saribeyoglu, Ciplak, Yilmaz, & Memmedov, 2008). Some negative emotions have occurred in individuals exposed to bullying and their daily activities have been adversely affected from this situation (Willard, 2007).

In a study conducted by Anderson (2012) about what individuals exposed to cyberbullying feel, it has been observed that individuals in question face with emotions such as sadness, self-accusation, lack of self-confidence, insecurity, anger, discomfort, depression, isolated from environment and shame. It is possible to see many studies carried out abroad that what kind of strategies is required to cope with cyberbullying. Parris, Varjas, Meyers and Cutts (2012) have divided into three sections activities aiming to cope with cyberbullying in their studies. In other words they are composed of sections such as reactive coping, preventive coping and not to use any method to prevent. The methods used in reactive coping consist of avoidance, acceptance, defense and social support seeking behaviors. The methods used in preventive coping are to tell someone, to raise safety and awareness. Similarly, Baştürk-Akca, Sayımer, Balaban-Salı and Başak (2014) state that it is essential to take the preventive measures and to provide the correct use of technological means by creating the awareness of cyberbullying in order to protect individuals from cyberbullying. Sezer, Sahin and Akturk (2013) conducted a study on middle school students for the ways they use to prevent themselves from cyberbullying. The results of their study show that students; complain cyberbullying to the site administrator, contact to the experts, inactivated their own accounts, answering back or counterattack to cyberbullying. As a consequence, importance of determination of levels of coping with cyberbullying is emphasized in studies fulfilled in order to minimize the effects of cyberbullying on individuals and to take preventive measures. With this study, we have aimed to examine the levels of coping with cyberbullying of adolescents dealing with exceedingly technological tools and therefore exposed to cyberbullying.

Purpose of this Research

The purpose of this study is to examine the levels of coping with cyberbullying of students studying at 9^{th}, 10^{th}, 11^{th} and 12^{th} grades of high schools. In accordance with this general purpose, we have tried to find answers for questions indicated below in the scope of this research:

1. What are the levels of coping with cyberbullying of adolescents?
2. Do the levels of coping with cyberbullying of adolescents show differentiation according to the variables specified below?
    a. Gender,
    b. High school type,
    c. Facebook membership

METHOD

Research Model

Survey model has been used as research design in this study. Survey model is a kind of research that describes an ongoing situation in the past or at the present time without changing (Karasar, 2014).

Study Group

301 high school students studying in a province in the central part of Turkey have participated in this research on a voluntarily. Descriptive statistics regarding the study group is provided in Table 1.

Table 3. Demographic Characteristics of Adolescents

Variable	Option	n	f (%)
Gender	Female	115	38.2
	Male	186	61.8
High school type	Vocational and Technical High School	112	37.2
	Public High School	189	62.8
Facebook Membership	Yes	217	72.1
	No	84	27.9
Grade Level	9^{th} Grade	79	26.3
	10^{th} Grade	110	36.5
	11^{th} Grade	71	23.6
	12^{th} Grade	41	13.6

As shown in Table 1; while 115 of adolescents participated in the study is composed of girls, 186 of adolescents participated in the study is composed of boys. 112 of adolescents were studying at Vocational and Technical High School while 189 of them were studying at Public High School. When looking at the Facebook membership of adolescents in Table 1, it shows 72.1% of adolescents are a member of Facebook, while 27.9% of them are not a member of Facebook. In addition, information related to grade levels of the participants is as follow: 79, 110, 71 and 41 of participants consist of 9^{th}, 10^{th}, 11^{th} and 12^{th} grades students respectively.

Data Collection Tools

"Coping with Cyberbullying Scale towards Adolescents" and "Personal Information Form" is used to collect data from adolescents in the scope of the research.

Coping with Cyberbullying Scale towards Adolescents

In this research, "Coping with Cyberbullying Scale towards Adolescents" is used developed by Peker, Özhan and Eroğlu (2015) and carried out a validity and reliability study together with 318 secondary school students in order to determine the levels of coping with cyberbullying of adolescents. The scale consists of 4 subscales. There are 3 items in subscale called as "Social Support Seeking", 5 items in subscale called as "Help Seeking", 4 items in subscale called as “Struggling” and finally 4 items in subscale called as “Online Security", in other words 17 items in total take place in the scale. In the coping with cyberbullying scale towards adolescents, a 4-point Likert type scale, participant is requested to mark one of “Never”, “Sometimes”, “Often” or “Always” options. These options are given 1, 2, 3 and 4 scores respectively. There is no item for which reverse point is given in the scale. Instead of achieving a total score in the scale, achieving a total score for each subscale and evaluating the levels of coping with cyberbullying in the subscales is recommended. When total score increases in each subscale, it is highlighted that the levels of coping with cyberbullying will be in a high level. In the scale, Cronbach α internal consistency coefficient is .80 for social support seeking subscale; .86 for help seeking; .70 for struggling and .77 for online security.

Personal Information Form

In this research, personal information form prepared by researchers is used in order to determine the gender, high school type, class levels of adolescents and whether they are Facebook membership or not. In the Personal Information Form, closed-ended questions related to variables specified above have been asked and adolescents participated in the research have been requested to mark the most appropriate option for them.

Analysis and Interpretation of Data

The reliability of the scale used in the research has been calculated again in the scope of this study. As a result of the calculation, Cronbach α internal consistency coefficient as .76 for social support seeking subscale, as .83 for help seeking, as .70 for struggling and as .70 for online security has been found in the scale. Calculation of Cronbach α internal consistency coefficient as .70 and above indicates that measuring tool used is reliable (Büyüköztürk, 2016). The kurtosis and skewness coefficients of subscales have been calculated with purpose of determining the appropriate statistical techniques to reach the results being the scientific validity through data obtained from the scale. The values obtained according to results of the calculation are given in Table 2.

Table 4. Skewness and Kurtosis Coefficients of the Subscales

	Social Support Seeking	Help Seeking	Struggling	Online Security
Kurtosis	-.240	.146	-.103	.904
Skewness	-.598	-.881	-.677	.573

When the values given in Table 2 are considered, the skewness and kurtosis coefficients calculated for each subscale take place within the limits of -1 and +1 and this shows that scores obtained from subscales exhibit a normal distribution (Huck, 2012). As a consequence, it has been decided to use the parametric tests on the data obtained from the scale. Based on this, descriptive statistics was used in the analytical procedures and independent sample t-test was used in the comparison of the pairs (gender, high school type, Facebook membership).

Scale items are in 4-point Likert type and adolescents have been requested to give scores between 1 and 4 to items taking place in the scale. The scale intervals were calculated by interval = range width / group number formula and is given in Table 3.

Table 5. Scale Intervals

Scales	Option	Intervals
1	Never	1.00 – 1.74
2	Sometimes	1.75 – 2.49
3	Generally	2.50 – 3.24
4	Always	3.25 – 4.00

FINDINGS

The Levels of Coping with Cyberbullying of Adolescents

In this research, the levels of coping with cyberbullying of adolescents have firstly been examined. When the levels of coping with cyberbullying of adolescents are determined, total scores obtained from subscales have been calculated and evaluated instead of total coping with cyberbullying score as is indicated by Peker, Özhan and Eroğlu (2015). It has been specified that the conditions of coping with cyberbullying of adolescents who totally obtain high scores in subscales are at a higher level. The analysis results obtained in accordance with this situation are given in Table 4.

Table 4. The Conditions of Coping with Cyberbullying of Adolescents

The Levels of Coping with Cyberbullying	N	Min.	Mak.	$\overline{X}$	SD
Social Support Seeking	301	3	12	8.42	2.22
Help Seeking	301	5	20	11.65	3.95
Struggling	301	4	16	11.13	2.99
Online Security	301	5	20	16.03	3.29

When average scores obtained by adolescents in subscales of the coping with cyberbullying scale are examined, it is seen that average scores obtained from Help Seeking subscale take place in “Sometimes” range, while average scores obtained from all other subscales take place in “Generally” range. Accordingly, it can be said that the levels of coping with cyberbullying of adolescents are generally high.

Examination of the Levels of Coping with Cyberbullying of Adolescents According to Gender

According to gender of adolescents, differentiation levels between scores taken by adolescents in the coping with cyberbullying scale towards adolescents is examined through independent sample t-test and analysis results are given in Table 5.

Table 5. Examination of the Levels of Coping with Cyberbullying of Adolescents According to Gender

Scale	Subscale	Gender	N	$\overline{X}$	SS	t	p
Coping with Cyberbullying towards Adolescents	Social Support Seeking	Female	115	9.01	2.046	3.679	.000
		Male	186	8.06	2.252		
	Help Seeking	Female	115	12.87	3.833	4.344	.000
		Male	186	10.89	3.839		
	Struggling	Female	115	12.06	2.826	4.383	.000
		Male	186	10.55	2.943		
	Online Security	Female	115	17.75	2.255	8.541	.000
		Male	186	14.97	3.388		

When the values given in Table 5 are considered, it is seen that there is a significant difference in favor of female adolescents among scores obtained from all subscales of coping with cyberbullying scale towards adolescents (Social support seeking [t = 3.679, p <0.01], help seeking [t = 4,344; p <0.01], struggling [t = 4,383, p <0.01] and online security [t = 8,541, p <0.01]). These results suggest that female adolescents can achieve to cope with cyberbullying in the best way in social support seeking, help seeking, struggling and online security subscales compared to male adolescents.

Examination of the Levels of Coping with Cyberbullying of Adolescents According to High School Type

According to high school types of adolescents, differentiation levels between scores taken by adolescents in the coping with cyberbullying scale towards adolescents is examined through independent sample t-test and analysis results are given in Table 6.

Table 6. Examination of the Levels of Coping with Cyberbullying of Adolescents According to High School Type

Scale	Subscale	High School Type	N	$\overline{X}$	SS	t	p
Coping with Cyberbullying towards Adolescents	Social Support Seeking	VTHS[1]	112	7.84	2.463	-3.385	.001
		Public High School	189	8.77	1.992		
	Help Seeking	VTHS [1]	112	11.34	3.871	-1.044	.297
		Public High School	189	11.83	3.994		
	Struggling	VTHS [1]	112	10.50	3.013	-2.850	.005
		Public High School	189	11.50	2.913		
	Online Security	VTHS [1]	112	14.33	3.692	-6.850	.000
		Public High School	189	17.04	2.552		

[1] VTHS: Vocational and Technical High School

When the values given in Table 6 are considered, it is seen that there is a significant difference in favor of adolescents who studying in a public high school among scores obtained from social support seeking, struggling and online security subscales of coping with cyberbullying scale towards adolescents (Social support seeking [t

= -3.385; *p* <0.01], struggling [t = -2 850; *p* <0.01] and online security [t = -6.850; *p* <0.01]). But there is not a significant difference among scores obtained from help seeking [t = -1.044; *p* <0.01] subscale in terms of high school type from where they received education. These results suggest that adolescents studying at a public high school can achieve to cope with cyberbullying in the best way in social support seeking, struggling and online security subscales compared to adolescents studying in the vocational and technical high school.

Examination of the Levels of Coping with Cyberbullying of Adolescents According to Facebook Membership

According to Facebook membership of adolescents, differentiation levels between scores taken by adolescents in the coping with cyberbullying scale towards adolescents is examined through independent sample t-test and analysis results are given in Table 7.

Table 6. Examination of the Levels of Coping with Cyberbullying of Adolescents according to Facebook Membership

Scale	Subscale	Facebook Membership	N	$\bar{X}$	SS	t	p
Coping with Cyberbullying towards Adolescents	Social Support Seeking	Yes	84	9.18	1.989	3.757	.000
		No	217	8.13	2.241		
	Help Seeking	Yes	84	12.89	4.081	3.465	.001
		No	217	11.17	3.798		
	Struggling	Yes	84	11.96	3.164	3.060	.002
		No	217	10.81	2.856		
	Online Security	Yes	84	17.06	3.205	3.435	.001
		No	217	15.63	3.246		

When the values given in Table 7 are considered, it is seen that there is a significant difference in favor of adolescents who are not a member of Facebook among scores obtained from all subscales of coping with cyberbullying scale towards adolescents (Social support seeking [t = 3.757; *p* <0.01], help seeking [t = 3.465; *p* <0.01], struggling [t = 3.060; *p* <0.01] and online security [t = 3.435; *p* <0.01]). These results suggest that adolescents who are not a member of Facebook can achieve to cope with cyberbullying in the best way in social support seeking, help seeking, struggling and online security subscales compared to adolescents who are a member of Facebook.

DISCUSSION AND CONCLUSION

Cyberbullying events increase rapidly among adolescents, it affects adversely especially the adolescents and individuals who closely follow and use all technological developments (Ayas & Horzum, 2012). In this study in which we determine the levels of coping with cyberbullying of adolescents and to examine whether the levels of coping with cyberbullying of adolescents become different according to some variables or not, we firstly have set forth that the levels of coping with cyberbullying of adolescents are high. Aricak et al. (2008), in a manner similar to our study, have determined in their studies that adolescents have optimistic opinions about coping with cyberbullying. In another study by Akturk (2015), cyberbullying sensibility levels of high school students were examined and it was reported that cyberbullying sensibility levels of the students were high.

Secondly, we have determined that female adolescents can achieve to cope with cyberbullying in the best way in social support seeking, help seeking, struggling and online security subscales compared to boy adolescents. In a study conducted by Peker (2014) together with 314 high school students receiving education in 9th, 10th, 10th and 11th classes, participants were applied an questionnaire related to coping with cyberbullying consisting of helplessness, help seeking, coping technically, struggling, aggression and prevention subscales. According to results of this research, it has seen that girls exhibit a significant difference in help seeking, struggling, prevention and coping technically subscales compared to boys, while boys exhibit a significant difference in aggression subscale compared to girls. Price and Dalgleish (2010) have determined two different the coping strategies with cyberbullying as offline and online strategies. They conducted their study with 548 adolescent aging below 25, they found a significant difference in favor of females for strategies such as confronted bully, told a friend, stayed offline, stopped looking, told parent or carer, told teacher or principal, told kids helpline and told another adult among offline strategies. They also found that a significant difference in favor of males for strategies such as did nothing, retaliated and told a sibling among offline strategies. While there is a significant difference in favor of females in strategies such as blocked bully and changed own avatar or mobile number among offline coping strategies, there is a significant difference in favor of males in strategies like removed from friend list.

Thirdly, we have determined that adolescents who studying at a public high school can achieve to cope with cyberbullying in the best way in social support seeking, struggling and online security subscales compared to adolescents studying at a vocational and technical high school. In the literature there is no study where the levels of coping with cyberbullying are examined according school type, but studies are carried out on exposing cyberbullying as well as showing cyberbullying behaviors are examined according to school type. In a study where exposing cyberbullying are examined, it is seen that students studying at a public high school are exposed to further sexual bullying behaviors in the virtual environment compared to students studying at a vocational high school (Horzum & Ayas, 2011). In another study, it is seen that students studying at public schools are exposed to further cyberbullying compared to students studying at private schools (Topçu, Erdur-Baker, & Çapa-Aydin, 2008). In another study where conditions of cyberbullying behavior showing by students are examined according to school type, it is found that students studying at public high schools show further cyberbullying behavior compared to students studying at science high schools (Şahin, Aydın, & Sarı, 2012).

Fourth and finally, we have determined that adolescents who are not a member of Facebook can achieve to cope with cyberbullying in the best way in social support seeking, help seeking, struggling and online security subscales compared to adolescents who are a member of Facebook. When it is considered that students are frequently exposed to cyberbullying in chat rooms and social networks (Ayas & Horzum, 2012), it can be interpreted that adolescents who are not a member of Facebook can achieve to cope with cyberbullying compared to adolescents who are a member of Facebook. Özdemir and Akar (2011) have determined in a study conducted by them that the participants are further exposed to cyberbullying in the Facebook. Baştürk-Akca, Sayımer and Ergül (2015) have determined in a study conducted by them that more than half of students (60%) meet with someone through social media, especially on Facebook, also they have determined in same study that 44% of students makes positive return when they find acceptable the message of someone they don't recognize. It can be said that social media, especially Facebook make people to trust strangers, so it can increase the likelihood of exposuring to cyberbullying.

RECOMMENDATIONS

In this study where the levels of coping with cyberbullying of adolescents are examined, it is seen that the levels of coping with cyberbullying of adolescents are generally high and they become different according to the gender, school type and Facebook membership. At the end of this research, the following suggestions may bring forward in concern with practice: Informing meetings and awareness education may be made about cyberbullying in schools in order to ensure that adolescents can achieve to cope with cyberbullying. Awareness of adolescents related to online security that will cause adolescents to expose to cyberbullying, that will enfeeble the adolescents in coping with cyberbullying can be increased. Adolescents' families who are ready to help to adolescents as their relatives in coping with cyberbullying should be informed about cyberbullying and the ways of coping with cyberbullying and social supports to be provided for them should be increased. Necessary information about institutions, organizations and individuals may be given to adolescents so that they can receive the help when they are exposed to cyberbullying. In addition, researching of conditions of coping with cyberbullying may be suggested for studies to be carried in the future through different variables on different samples.

ABSTRACT: In this study, a learning style inference system which is based on fuzzy logic technique and McCarthy learning style is developed to improve student success and learning in education field. McCarthy learning style classifies learners as Innovative, Analytic,Common Sense and Dynamic. In this study, a software system is developed and an interface which includes some questions in relation with McCarthy learning style is designed. Answers of the students are rated and given as an input to the proposed fuzzy logic engine which has four inputs namely Innovative, Analytic,Commen Sense, Dynamic and an output namely EducationStyle. The proposed software system inferences Education Style, Learning Status and the Level of Learning Style of the student. By this way, the instructor will be able to match his teaching style with student's learning style which contributes to student's success in education field.

Key words: McCarthy Learning Style, Fuzzy Logic, Inference System

INTRODUCTION

Learning is the act of acquiring new or transforming and reinforcing, existing knowledge, behaviors, abilities,or preferences and may involve synthesizing different types of information. Each person prefers different learning styles and techniques. By noticing and understanding learning types and abilities, people can use techniques better suited to them. Thus they improve the speed and quality of their learning. For these reasons experts develop different types of learning styles. Education is very important to produce well qualified studies and to contribute to daily life and work. If people know their dominant styles, they can focus on using their abilities. On the other side, if people know their less styles, they can develop some learning strategies too. In this study, fuzzy logic technique is used to inference which learning style is more suitable to the student's learning skils. [1-5] are some of the studies that use Fuzzy logic technique in education field. McCarthy's Learning Style is chosen for implementing and analyzing the developed system. In the following sections, background that includes fuzzy logic technique and McCarthy learning style are described briefly. After that, the proposed system which is composed of interface and fuzzy logic parts is explained in detail. Lastly, simulation results are given and evaluated.

BACKGROUND

In this section, background subjects of the system such as McCarthy learning style and Fuzzy Logic Technique are described briefly.

McCarthy Learning Style

This learning style is based on cerebral hemispheres and takes into other learning styles. Bernice McCarthy classifies learners into four groups:

Type 1: Innovative Learners are interested in personal meaning and need to have reasons for learning. Abilities of this learner types are mostly on cooperative learning, brainstorming, and integration of content areas [6].

Type 2: Analytic Learners are interested in acquiring facts in order to deepen their understanding of concepts and processes. They are capable of learning effectively from lectures, and enjoy independent research, analysis of data [6].

Type 3: Common Sense Learners are interested in how things work. They want to get in work and try it. Concrete, experiential learning activities work best for them [6].

Type 4: Dynamic Learners are interested in self-directed discovery. They rely heavily on their own intuition, and seek to teach both themselves and others. Any type of independent study is effective for these learners [6].

Fuzzy Logic Technique

Fuzzy logic deals with reasoning that is approximate rather than fixed and exact. Compared to traditional logic, fuzzy logic variables may have a truth value that ranges in degree between 0 and 1. Fuzzy logic has been extended to handle the concept of partial truth, where the truth value may range between completely true and completely false [7]. Fuzzification, Fuzzy Rules, Membership Functions, Inference and Defuzzification are basic concepts of the fuzzy logic technique. The aim of fuzzification step is to determine the mapping degree of crisp inputs to fuzzy sets by using membership functions. Fuzzy rules are applied to the fuzzified inputs. Outputs of all rules are aggregated to obtain unificated output. From the fuzzy rules, probability fuzzy output variable can be obtained. The higher probability means that the node has more chance to be selected. Defuzzification is the process of transforming probability fuzzy output variable into a single crisp output [8].

The Proposed System

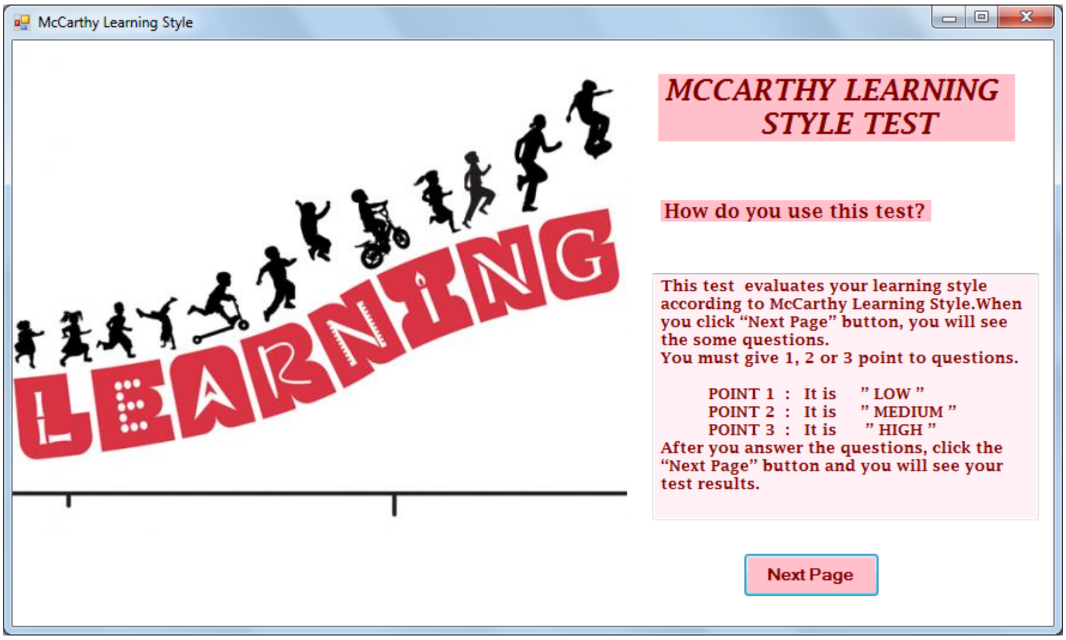
In this study a learning style inference system which is based on fuzzy logic technique and McCarthy Learning Style is proposed to increase the success of students in education. In order to achieve this, a software which provides an interface including 20 questions in accordance with the McCarthy Learning model is developed. Fuzzy logic technique is used to preference which learning style is suitable for the student's education based on the answer's of the students to the questions. We prepared the questionnaire using questions at [9].

Interface

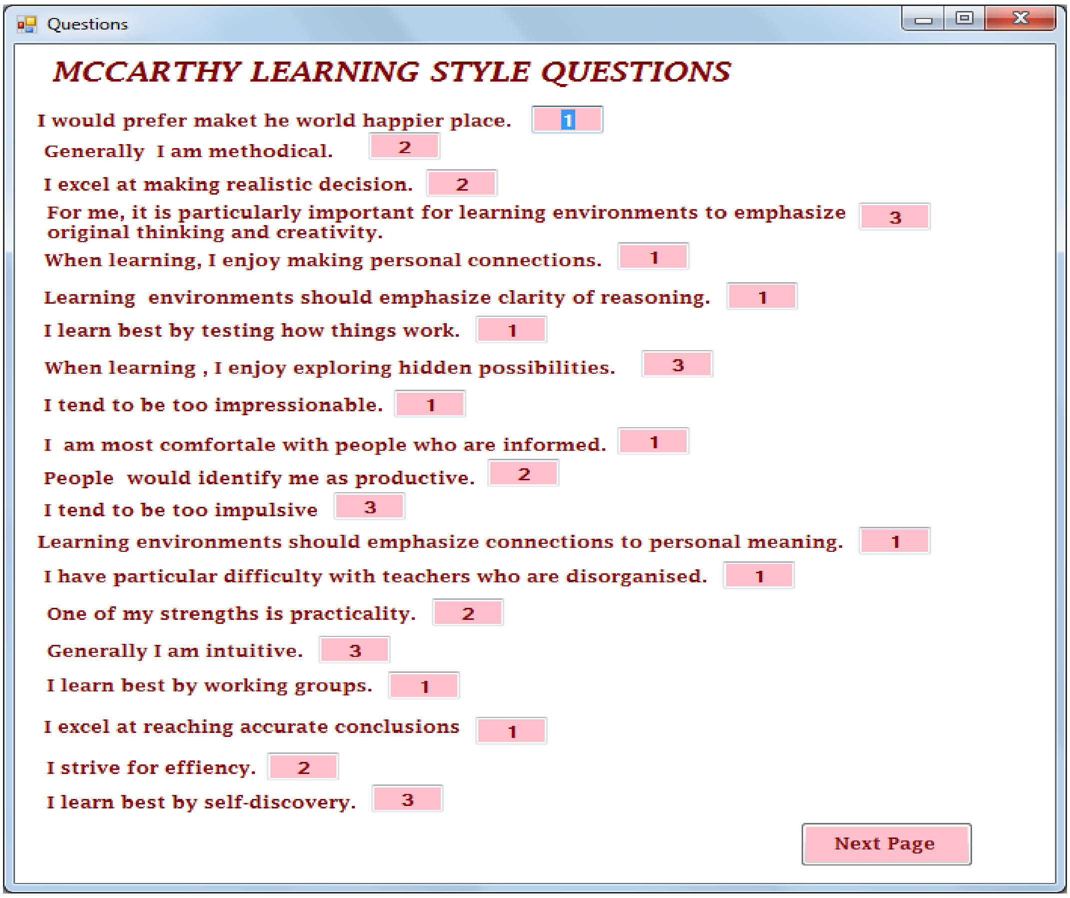
Interface shown in Figure 1 is developed by using C# programming language and includes 20 questions. A student who participates this survey gives 1, 2 or 3 point to each question. Point 1 corresponds to LOW, Point 2 corresponds to MEDIUM and Point 3 corresponds to HIGH.
1-5-9-13-17 questions' total points are for I**NNOVATIVE**,
2-6-10-14-18 questions' total points are for **ANALYTIC**
3-7-11-15-19 questions' total points are for **COMMON SENSE**,
4-8-12-16-20 questions'total points are for **DYNAMIC**,

Table 1. Linguistic variables and their fuzzy value range

Question System Value	Linguistic variables	Fuzzy value
5-6-7	LOW	0.00<= x < 0.3
8-9-10-11-12	MEDIUM	0.03<= x < 0.7
13-14-15	HIGH	0.7 <= x <= 0.1



(a)



(b)

Figure 1. Interface of McCarthy Learning Style

Education style is inferenced via Fuzzy Logic Technicque in accordance with the total points which are obtained from the answers of questions. Figure 2 shows the interface of McCarthy Learning Style Test Result.

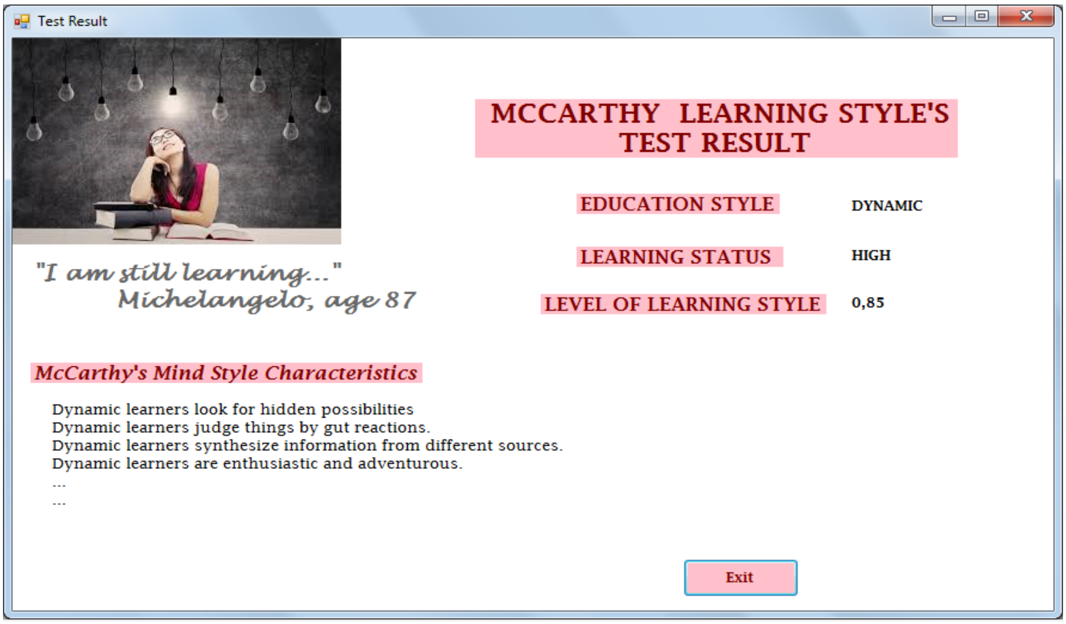


Figure 2. Interface of McCarthy Learning Style Test Result

Fuzzy Logic Based Inference System

Four input parameters namely INNOVATIVE, ANALYTIC, COMMENSENSE, DYNAMIC and one output namely Education Style (EDUSTYLE) are determined in the proposed fuzzy logic based system which is shown in Figure 3.

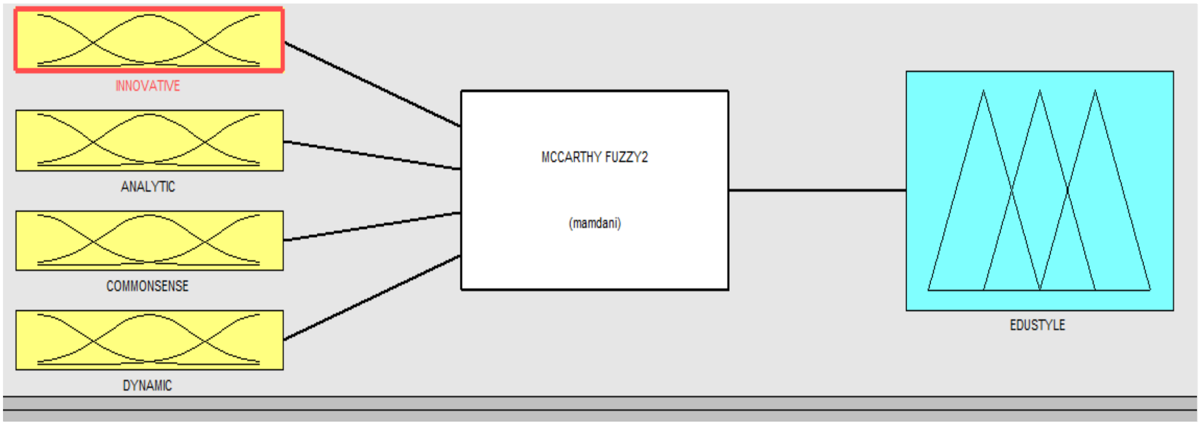

Figure 3. The Proposed Fuzzy Logic Based Inferency System

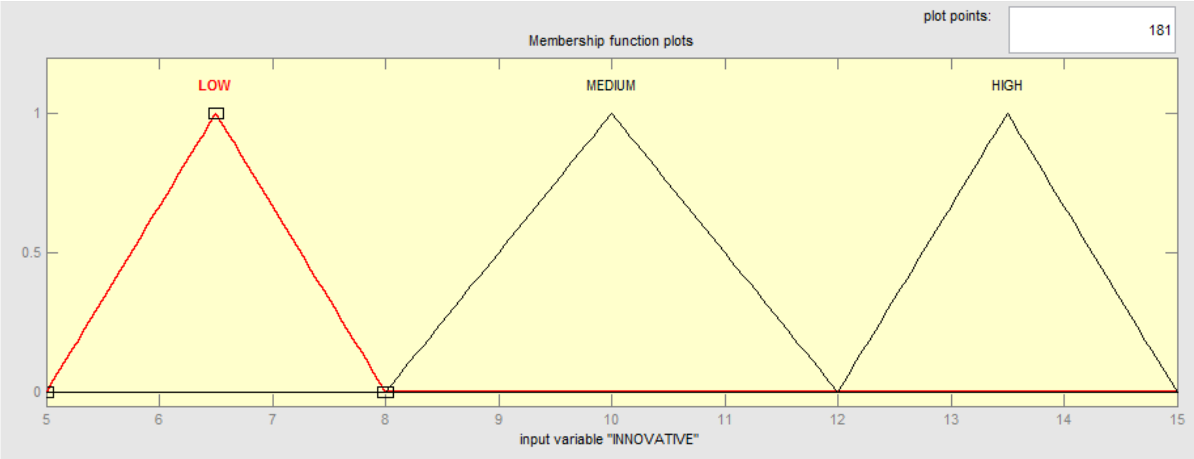
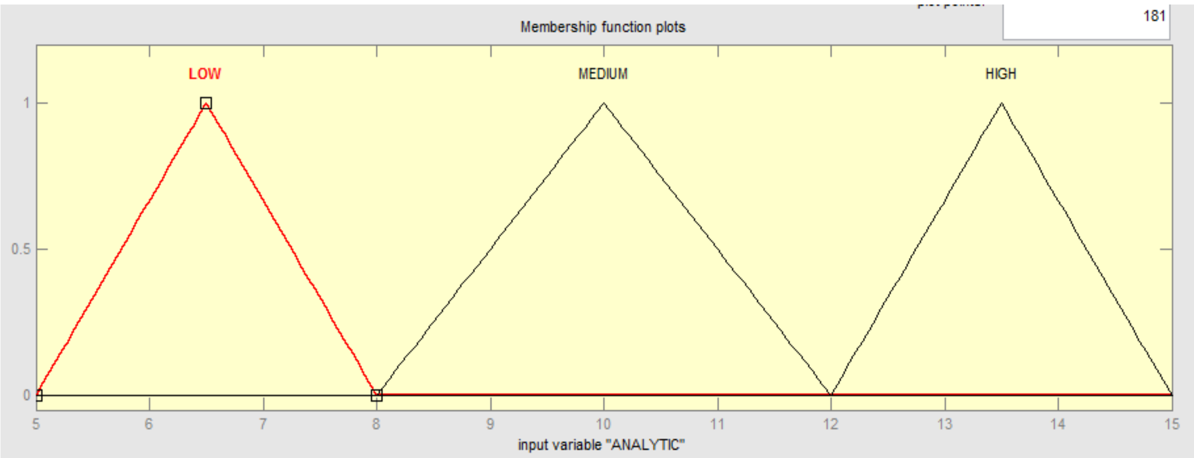
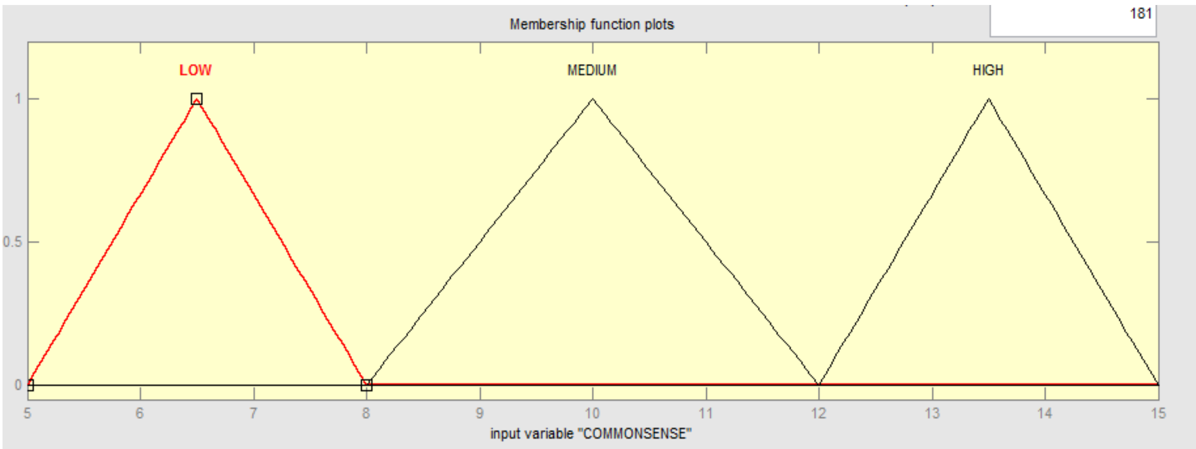
The fuzzification method involves the transformation of raw input variables and evaluation of the linguistic variables by using the triangular Membership Functions as shown in Figure 4.



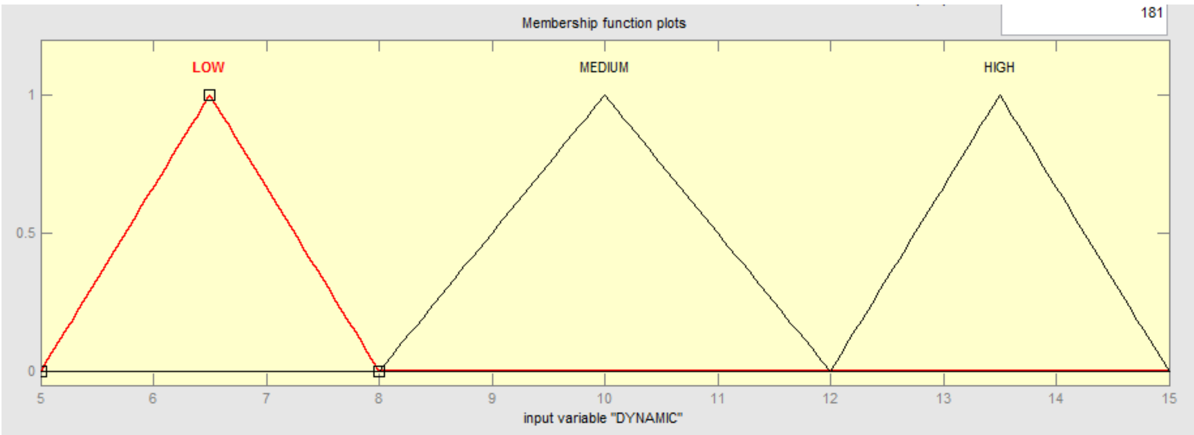
(a) Input for INNOVATIVE



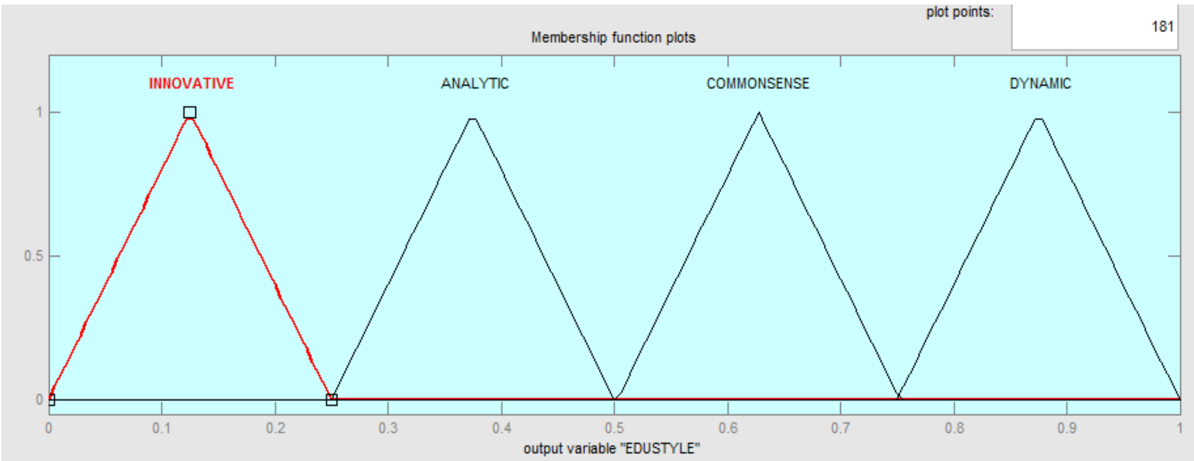
(b)Input for ANALYTIC



(c)Input for COMMEN SENSE



(d)Input for DYNAMIC



(e)Output

Figure 4. Membership Functions of The Proposed System

The rule base of McCarthy Learning styles testing is characterized by a set of IF THEN rules in which the antecedents (IF parts) and the consequents(THEN parts) involve linguistic variables. An example of rule determined in the system is shown in Figure 5. Lastly Centroid of Area (CoA) method is used for the defuzzification step.

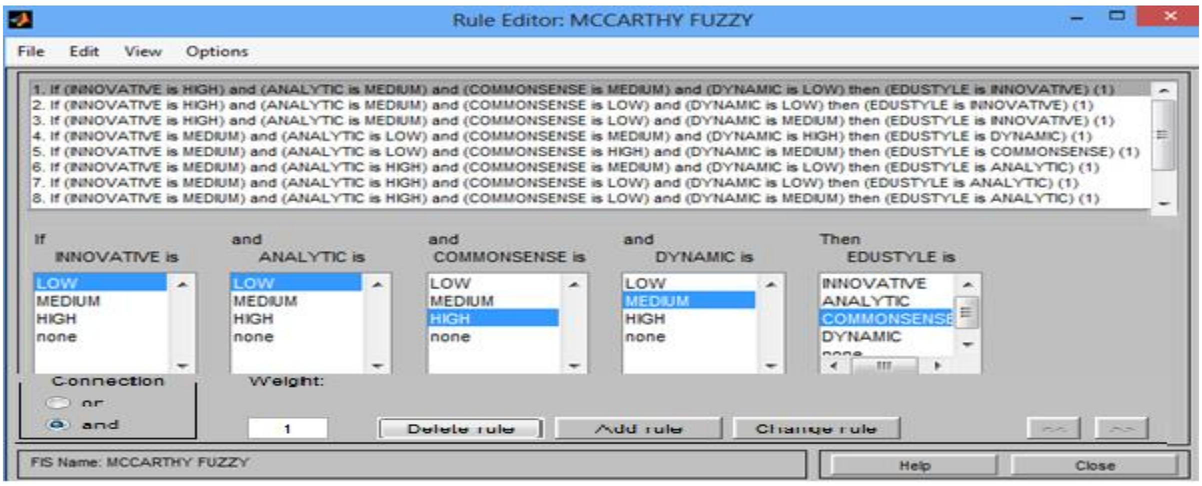


Figure 5. An Example Rule of The Proposed System

RESULTS AND FINDINGS

Figure 6 shows an example operation of our system for the input parameters of values: INNOVATIVE: 6.44, ANALYTIC: 6.92, COMMENSENSE: 10.5 DYNAMIC: 13.5 correspond to LOW, LOW, MEDIUM and HIGH fuzzy degrees respectively. According to the fuzzy rule *"If (INNOVATIVE is LOW) and (* ANALYTIC *is LOW) (COMMENSENSE is MEDIUM) and (* DYNAMIC *is HIGH) then (LEARNING STYLE is DYNAMIC)*". The proposed system inferences that, these input values correspond to the value of 0.875 for the learning style crisp output. The Surface Screen Interface of the Proposed Fuzzy Logic Model is shown in Figure 7.

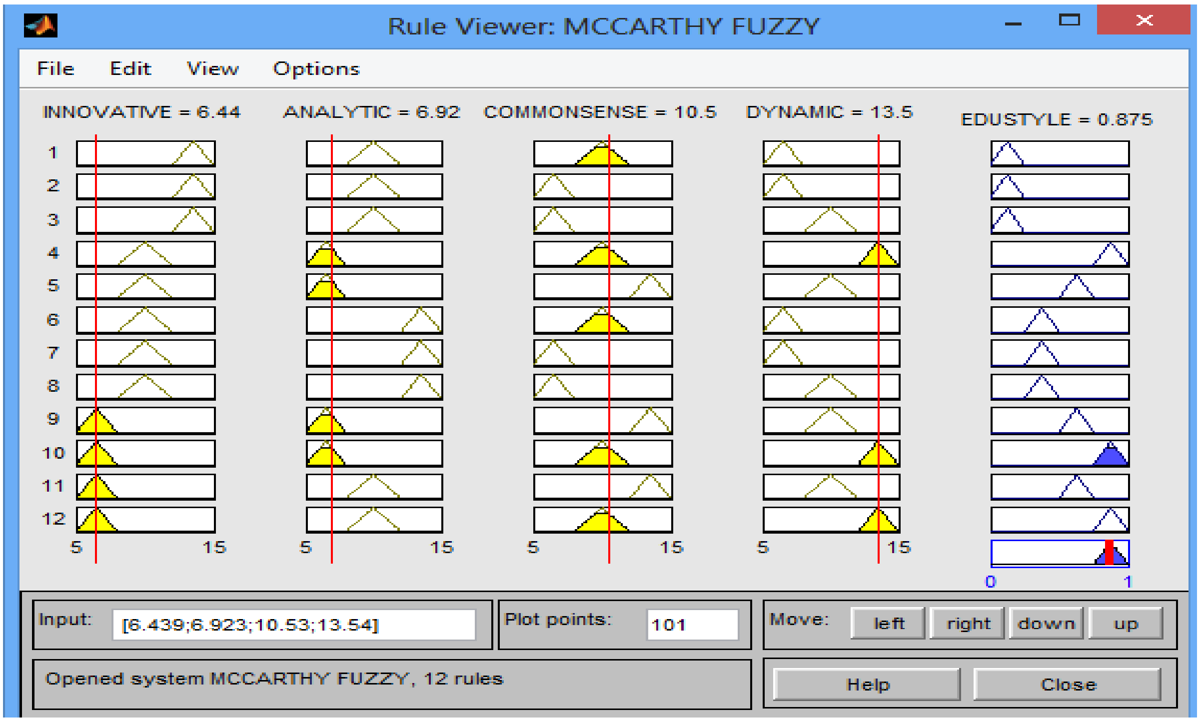

Figure6. An Example Output of the Proposed System

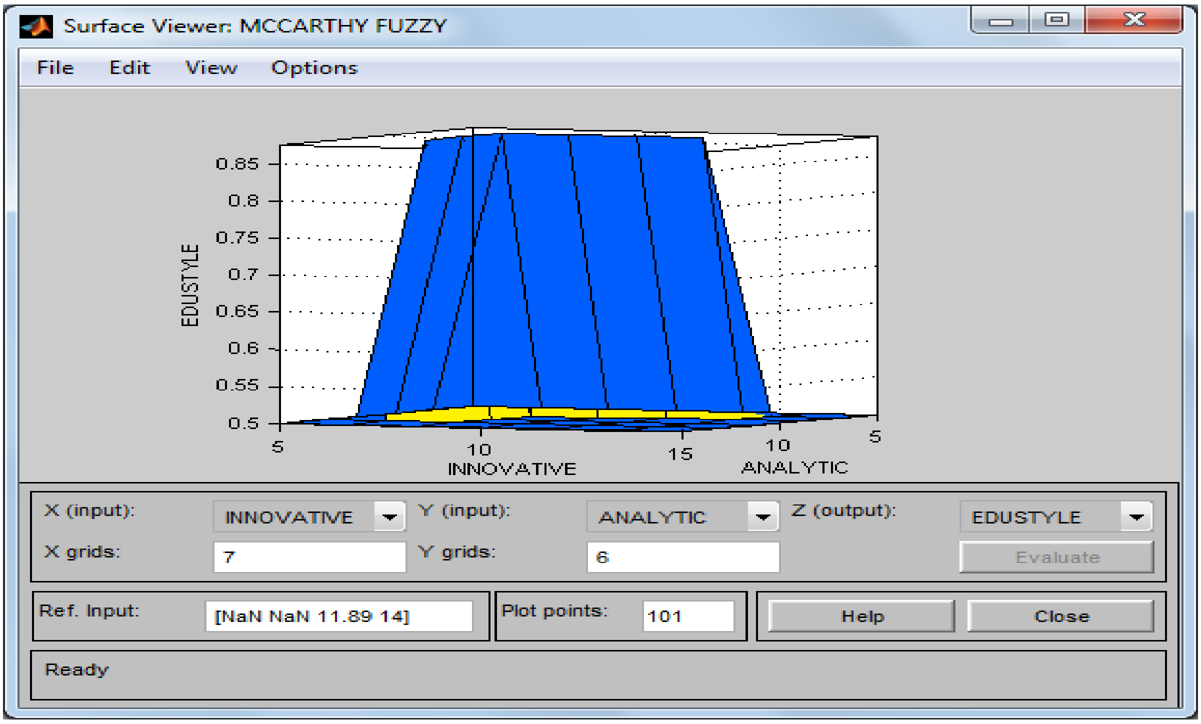

Figure7. The Surface Screen Interface of the Proposed System

CONCLUSION

In this study, fuzzy logic based McCarthy learning system is proposed to characterize learning styles of the students who have various own learning skills, intelligence levels and learning styles. In order to achieve this, a software which provides an interface including 20 questions in accordance with the McCarthy model is developed. Fuzzy logic technique is used to preference which learning style is suitable for the student’s education based on the answer’s of the students to the questions. By categorizing students learning style, instructor will be able to match his teaching style with student's learning style. By this way, it is aimed to increase students success in education considerably.

ABSTRACT:
There are many reasons why education is very important in daily life and business. Such that learning will continue every time parallel to the rapid developments and changes in innovation and the technology. In this study, fuzzy logic based dunn learning style inference system is developed to measure student's success in learning. Dunn learning style identifies five important factors on which student learning style differs; namely environmental, emotional, sociological, physiological, and psychological. In this study, a software system is developed and an interface which includes some questions in relation with Dunn learning style is designed. Answers of the students are rated and given as an input to the proposed fuzzy logic engine. The proposed software system inferences Education Style, Learning Status and the Level of Learning Style of the student. By this way, the instructor will be able to match his teaching style with student's learning style which contributes to student's success in education field.

Key words: Dunn Learning Style, Fuzzy Logic, Inference System

INTRODUCTION

Because of the differences in abilities, personalities, identities and characteristic features of the people, each person prefers different learning styles and techniques. In order to learn easily ve rapidly, people use the most convenient learning style. Recognizing learning style is very useful to students because it allows students to have a better chance of overcoming any difficult situation, to be successful on their education programme, to effectively target areas where an improvement is required and to enjoy their learning process[1].
In this study, fuzzy logic technique is used to inference which learning style is more suitable to the student's learning skils. [2-6] are some of the studies that use Fuzzy logic technique in education field. Dunn Learning Style is chosen for implementing and analyzing the developed system. In the following sections, background that includes fuzzy logic technique and Dunn learning style are described briefly. After that, the proposed system which is composed of interface and fuzzy logic parts is explained in detail. Lastly, simulation results are given and evaluated.

BACKGROUND

In this section, Dunn learning style and Fuzzy Logic Technique are described briefly.

Dunn Learning Style

According to Dunn, environmental, emotional sociological, physiological, and psychological are the five key factors that effect the efficiency of student learning style [7].

Environmental: Ideal place to learn can differ in accordance with the students characteristic features. While some of the students can learn better i a warm, bright place with many people, some of them can prefer cooler and quite places [7].

Emotional: While some students can achive a long-term project and monitor and pace themselves until completing the job, the others may need considerable support [7].

Sociological: Reaction to peer interaction can also differ student to student. While some students prefer to learn by themselves, the others can prefer to work with a group [7].

Physiological: Learning modality, mobility and time are important elements related to individual differences in terms of physiological preferences [7]

Psychological: While students attack to learn problems, some of them can approach globally and look at big Picture, some of them prefer to address individual elements of a problem separately [7].

Fuzzy Logic Technique

Fuzzy logic deals with reasoning that is approximate rather than fixed and exact. Fuzzification, Fuzzy Rules, Membership Functions, Inference and Defuzzification are basic concepts of the fuzzy logic technique. The aim of fuzzification step is to determine the mapping degree of crisp inputs to fuzzy sets by using membership functions. Fuzzy rules are applied to the fuzzified inputs. Outputs of all rules are aggregated to obtain unificated output. From the fuzzy rules, probability fuzzy output variable can be obtained. The higher probability means that the node has more chance to be selected. Defuzzification is the process of transforming probability fuzzy output variable into a single crisp output [8].

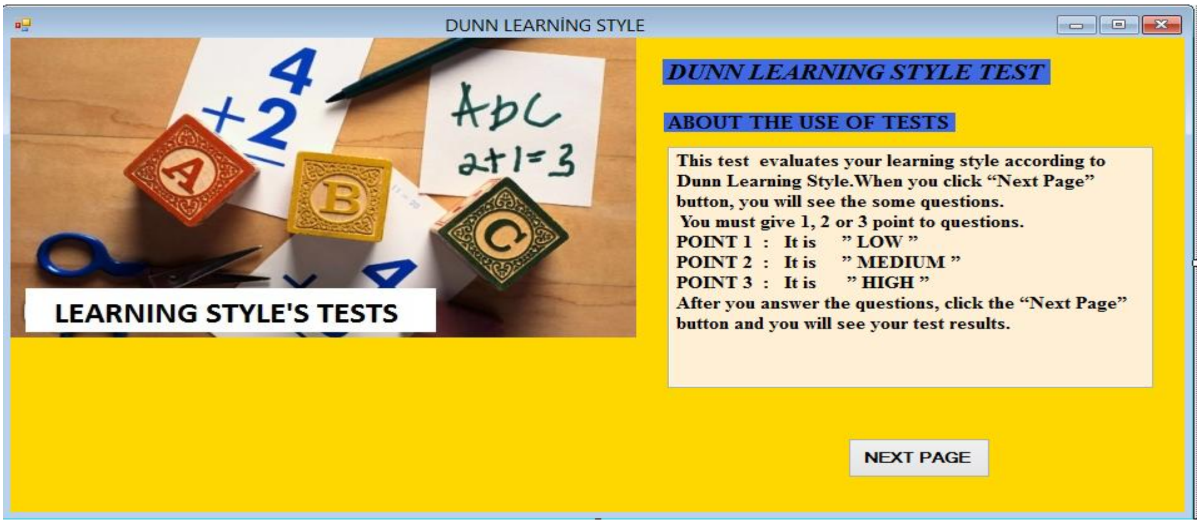
The Proposed System

In this study a learning style inference system which is based on fuzzy logic technique and Dunn Learning Style is proposed to increase the success of students in education. In order to achieve this, a software which provides an interface including 20 questions in accordance with the Dunn Learning model is developed. Fuzzy logic technique is used to preference which learning style is suitable for the student's education based on the answer's of the students to the questions. A student who participates this survey gives 1, 2 or 3 point to each question. Point 1 corresponds to LOW, Point 2 corresponds to MEDIUM and Point 3 corresponds to HIGH.

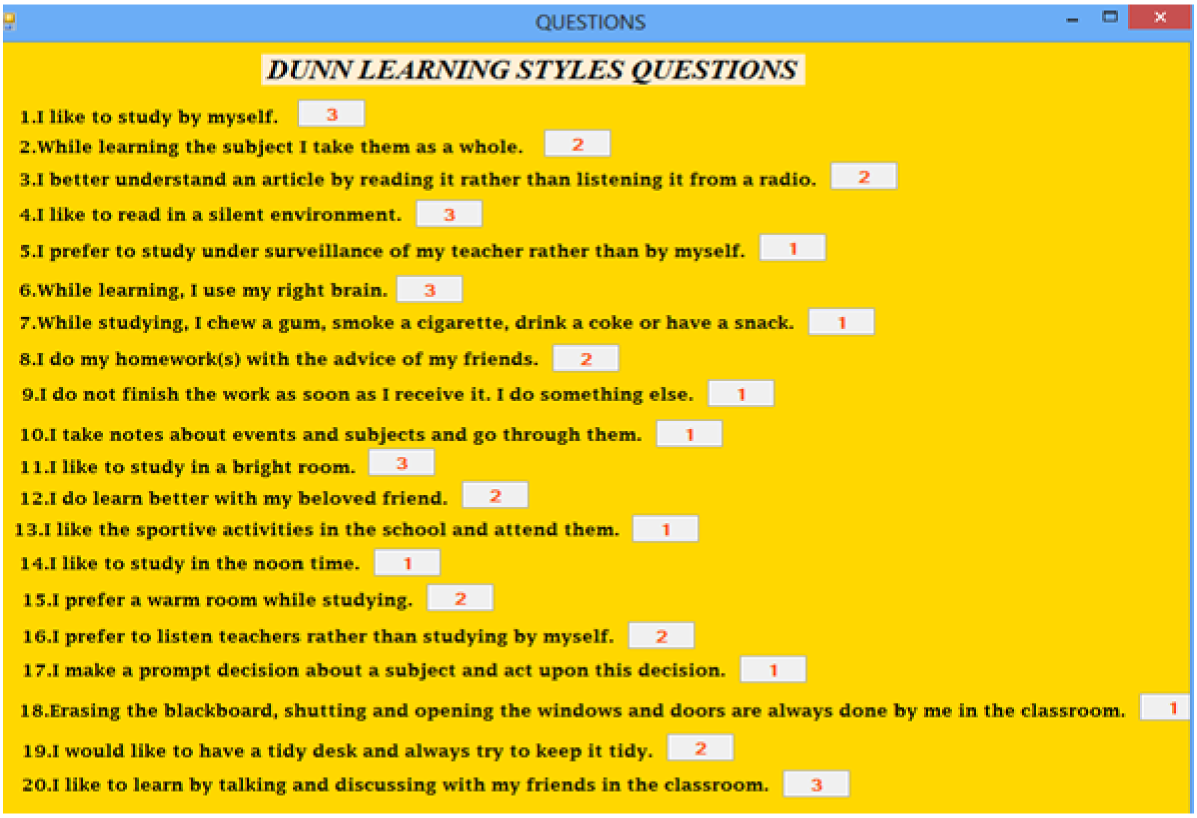
1-5-9-13 questions' total points are for **ENVIRONMENTAL**
2-6-10-17 questions' total points are for **EMOTIONAL**,
3-7-14-18 questions' total points are for **PHYSIOLOGICAL**,
4-11-15-19 questions' total points are for **ENVIRONMENTAL**,
8-12-16-20 questions' total points are for **SOCIOLOGICAL**

Table 1. Linguistic variables and their fuzzy value range

Question System Value	Linguistic variables	Fuzzy value
4-5-6	LOW	0.00<= x < 0.3
7-8-9-10	MEDIUM	0.03<= x < 0.7
11-12	HIGH	0.7 <= x <= 0.1



(a)



(b)

Figure 1. Interface of McCarthy Learning Style

Education style is inferenced via Fuzzy Logic Technique in accordance with the total points which are obtained from the answers of questions. Figure 2 shows the interface of Dunn Learning Style Test Result.

Figure 2. Interface of McCarthy Learning Style Test Result

Fuzzy Logic Based Inference System

Four input parameters namely ENVIRONMENTAL, EMOTIONAL, PHYSIOLOGICAL, SOCIOLOGICAL and one output namely Learning Style are determined in the proposed fuzzy logic based system which is shown in Figure 3.

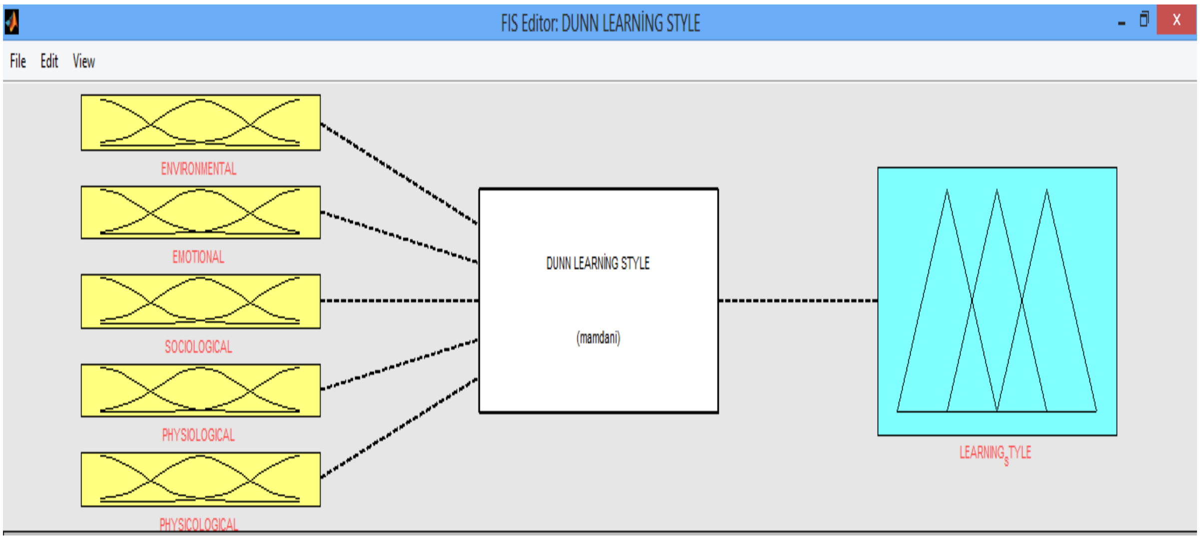


Figure 3. The Proposed Fuzzy Logic Based Inference System

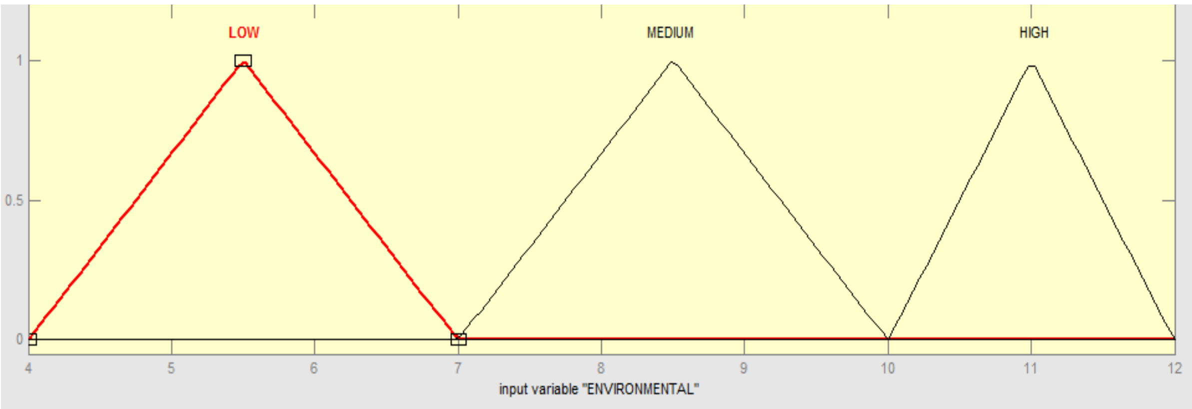
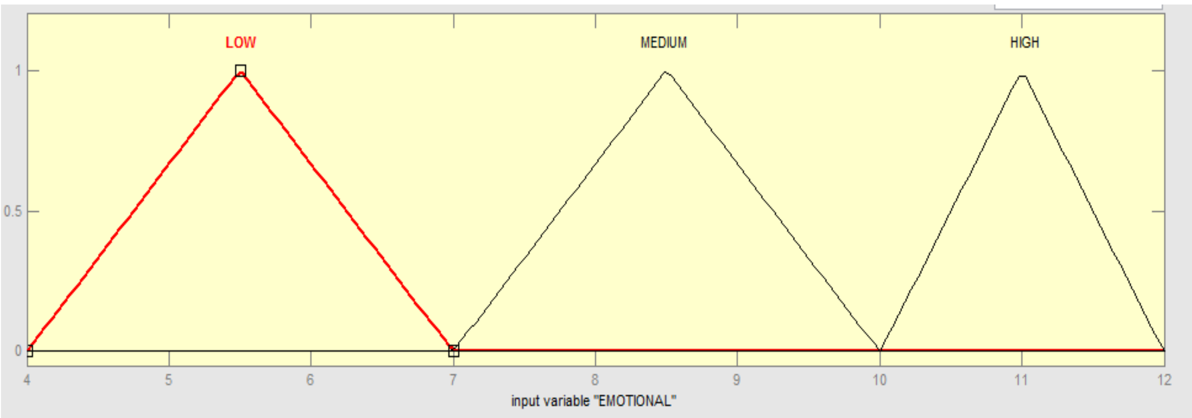
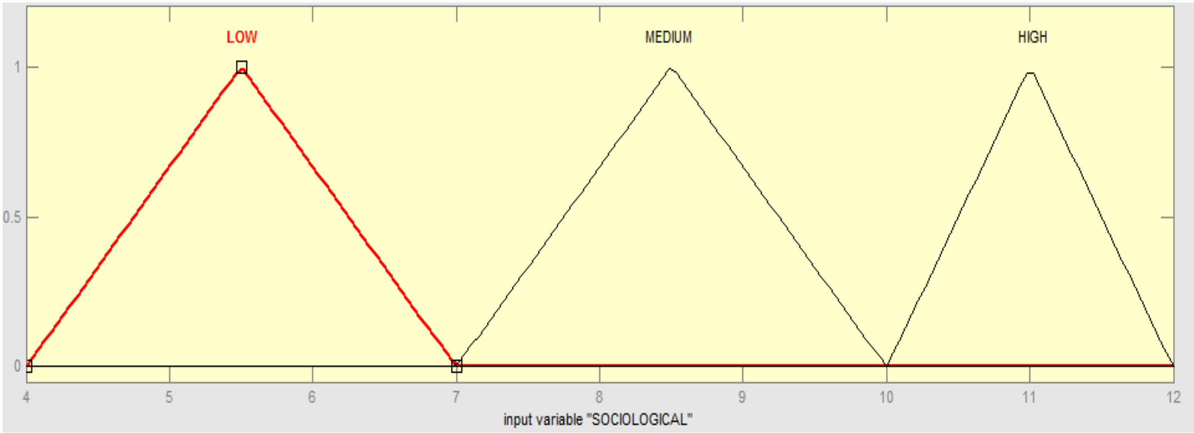
The fuzzification method involves the transformation of raw input variables and evaluation of the linguistic variables by using the triangular Membership Functions as shown in Figure 4.



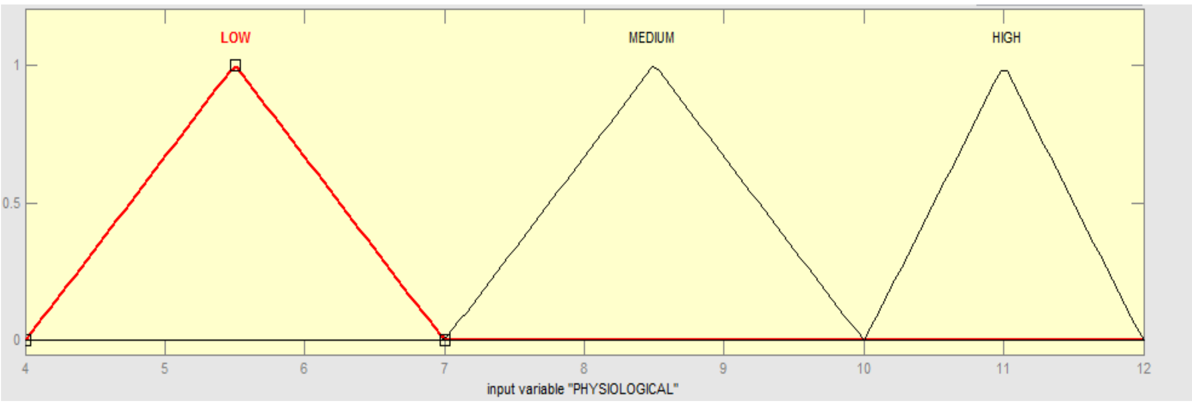
(a)Input for ENVIRONMENTAL



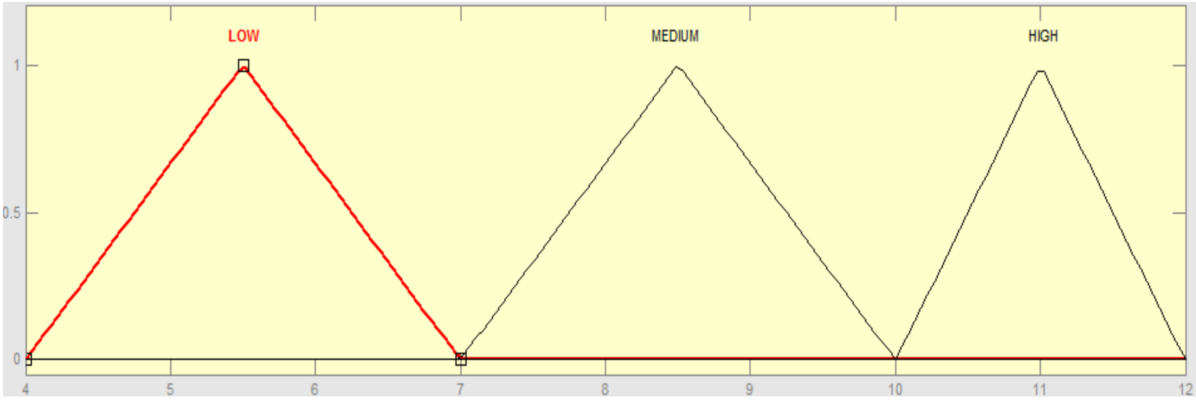
(b)Input for EMOTIONAL



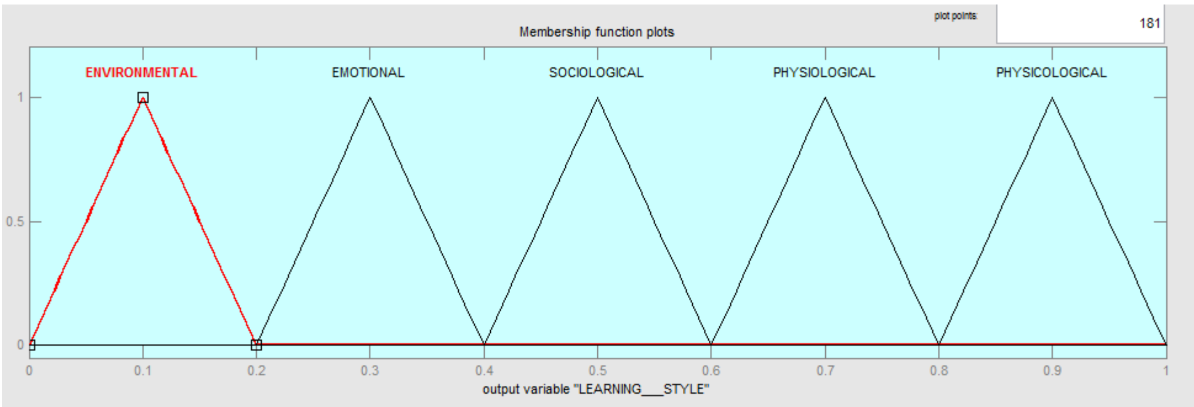
(c)Input for SOCIOLOGICAL



(d)Input for PHYSIOLOGICAL



(e) Input for PSYCHOLOGICAL



(f) Output for LEARNING STYLE

Figure 4. Membership Functions of The Proposed System

The rule base of McCarthy Learning style testing is characterized by a set of IF THEN rules in which the antecedents (IF parts) and the consequents(THEN parts) involve linguistic variables. An example of rule determined in the system is given below.

IF ENVIRONMENTAL is LOW **AND** EMOTIONAL is HIGH **AND** SOCIOLOGICAL is LOW **AND** PHYSIOLOGICAL is MED AND PSYCHOLOGICAL is MED **THEN** LEARNING STYLES is EMOTIONAL.

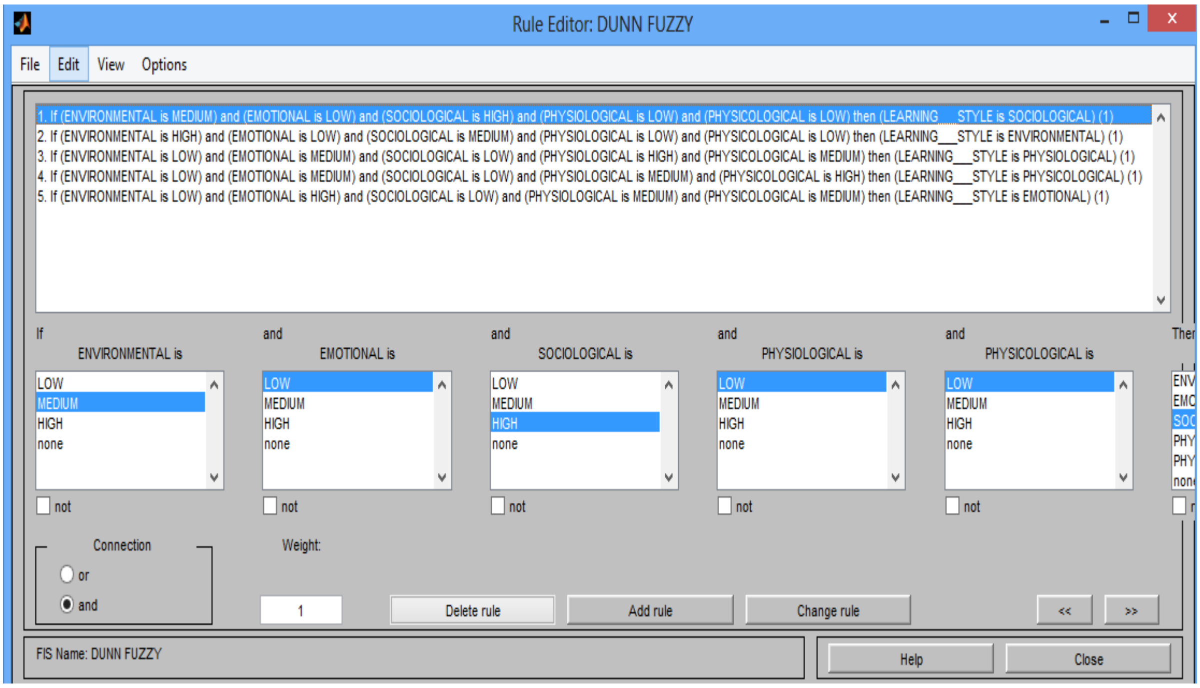


Figure 5. An Example Rule of The Proposed System

Lastly Centroid of Area (CoA) method is used for the defuzzification step.

RESULTS AND FINDINGS

Figure 6 shows an example operation of our system for the input parameters of values: ENVIRONMENTAL: 5 EMOTIONAL: 11, SOCIOLOGICAL: 6 PHYSIOLOGICAL: 9 PSYCHOLOGICAL: 8 correspond to LOW, HIGH, LOW, MED and MED fuzzy degrees respectively. According to the fuzzy rule "***IF*** *ENVIRONMENTAL is LOW* ***AND*** *EMOTIONAL is HIGH* ***AND*** *SOCIOLOGICAL is LOW* ***AND*** *PHYSIOLOGICAL is MED AND PSYCHOLOGICAL is MED* ***THEN*** *LEARNING STYLES is EMOTIONAL".* The proposed system inferences that, these input values correspond to the value of 0.875 for the learning style crisp output. The Surface Screen Interface of the Proposed Fuzzy Logic Model is shown in Figure 7.

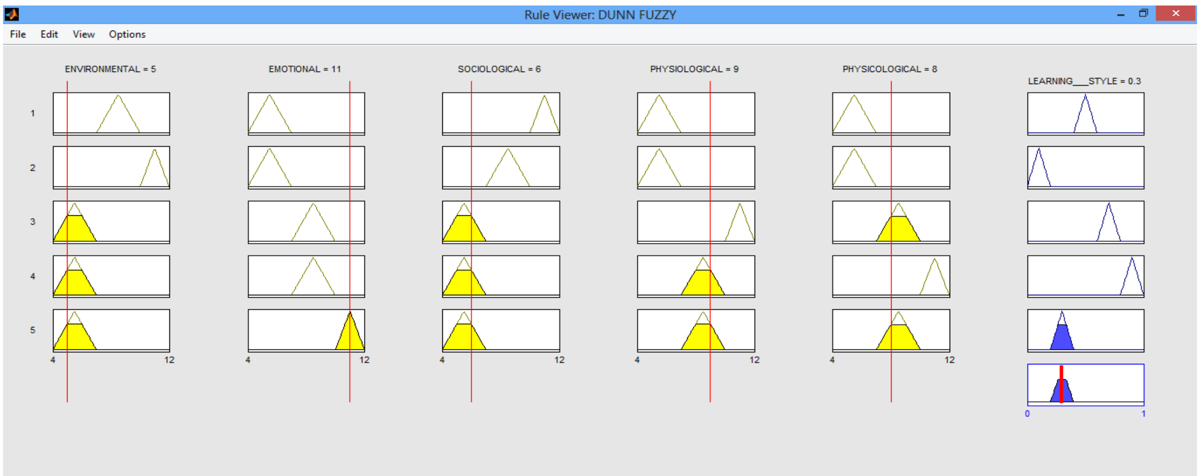

Figure6. An Example Output of the Proposed System

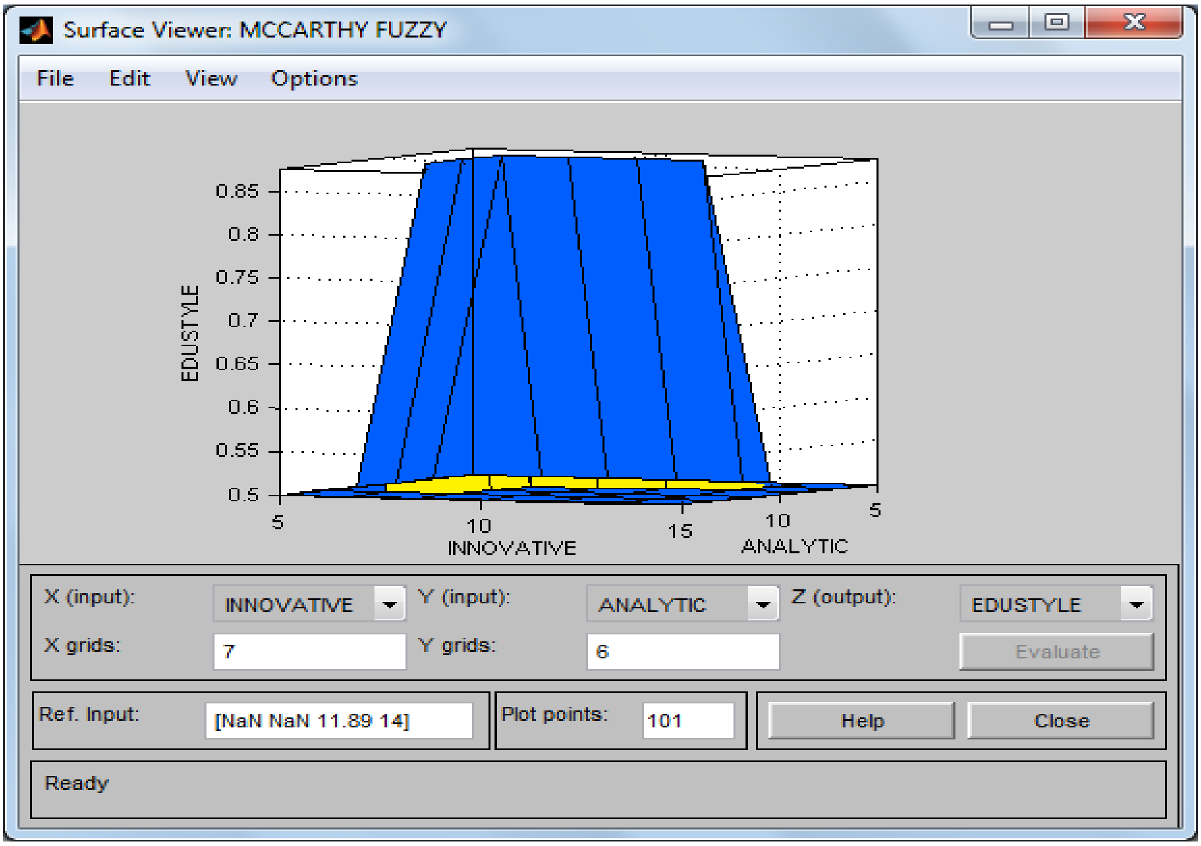

Figure7. The Surface Screen Interface of the Proposed System

CONCLUSION

In this study, fuzzy logic based dunn learning style inference system is developed to measure student's success in learning. The proposed system inferences Education Style, Learning Status and the Level of Learning Style of the student in accordance with the student's answers to the questions which are presented via software interface. In this study, it is aimed to increase students success in education by deciding most convenient Education style.

ABSTRACT: Civil engineers deal with planning, designing and construction steps of all structures such as building, highway, railway, dam, retaining wall and etc. Therefore, civil engineering education in bachelor degree includes geotechnics, hydraulics, material science, mechanics, structure, construction management and transportation engineering educations. Geotechnical engineering is interested in design, analyze and application of soil structures such as foundations, retaining walls, slopes and deep excavations as well as determination of soil properties. Students have to prepare a bachelor degree thesis for graduation in Anadolu University, Department of Civil Engineering. Students are asked to develop a prototype model about their subjects in geotechnical division. In this study, effects of developing prototype models in the geotechnical engineering education are researched. End of the study; observed improvements on the learning behavior are presented.

Key words: civil engineering, geotechnical engineering, improving the learning

GEOTEKNİK MÜHENDİSLİĞİ EĞİTİMİNDE PROTOTİP TASARIMI METODU İLE ÖĞRENME DAVRANIŞININ GELİŞTİRİLMESİ

ÖZET: İnşaat mühendisleri bina, karayolu, demiryolu, baraj, istinat duvarı, vb. tüm yapıların planlama, tasarım ve inşa adımları ile uğraşırlar. Bu sebeple lisans seviyesinde inşaat mühendisliği eğitimi geoteknik, hidrolik, malzeme bilimi, mekanik, yapı, yapı yönetimi ve ulaştırma mühendisliği eğitimini kapsamaktadır. Geoteknik mühendisliği ise; temeller, istinat duvarları, şevler, derin kazılar gibi zemin yapılarının tasarım, analiz ve uygulamalarının yanı sıra zemin özelliklerinin belirlenmesi ile ilgilenmektedir. Anadolu Üniversitesi İnşaat Mühendisliği Bölümünde öğrenciler mezuniyet için bir lisans bitirme tezi hazırlamak zorundadır. Geoteknik anabilim dalında bitirme tezi hazırlayan öğrencilerden konuları ile ilgili bir prototip model geliştirmeleri istenmiştir. Bu çalışmada, prototip model geliştirmenin geoteknik mühendisliği eğitimi üzerindeki etkileri araştırılmıştır. Çalışma sonucunda öğrenme davranışında gözlemlenen iyileşmeler sunulmuştur.

Anahtar sözcükler: inşaat mühendisliği, geoteknik mühendisliği, öğrenmenin geliştirilmesi

GİRİŞ

İnşaat mühendisleri barajlar, yollar, köprüler, tüneller ve gökdelenler gibi yeryüzündeki tüm yapıları planlar, tasarlar ve inşa ederler. Dolayısıyla inşaat mühendisleri medeniyetin gelişimine katkıda bulunurken, birden fazla alanda faaliyet gösterirler. Bu faaliyet alanlarına bağlı olarak inşaat mühendisliği 7 anabilim dalına ayrılmıştır. Bunlar yapı, yapı malzemeleri, yapı yönetimi, mekanik, ulaştırma, hidrolik ve geoteknik anabilim dalıdır. İnşaat mühendisliği eğitimi ise lisans seviyesinde bu anabilim dallarına uygun olarak tasarlanmaktadır (Gündüz ve Dağdeviren, 2009). Yapı anabilim dalında; tüm yapıların statik ve betonarme hesapları ile yapısal elamanlara etkiyen kuvvetler ve kesit hesaplarını içeren teorilerin anlatıldığı dersler verilmektedir. Çelik, beton ve ahşap gibi yapı elemanlarının özellikleri ve davranışları yapı malzemeleri anabilim dalında anlatılırken yapının maliyet analizi, iş planı ve yönetimi yapı yönetimi anabilim dalı derslerinde işlenmektedir. Mekanik anabilim dalı ise yük altındaki cisim davranışını incelemektedir. Karayolları ve demiryollarının tasarım aşamaları ulaştırma anabilim dalı, baraj hidroelektrik santrali vb su yapıları su ve kanalizasyon sistemlerinin tasarımını hidrolik anabilim dalı derslerinde anlatılmaktadır. Geoteknik anabilim dalı tarafından verilen dersler ise her türlü yapının üzerine inşa edildiği zeminlerin özellikleri ile zemin yapılarının tasarımı ile ilgili konuları içermektedir.

İnşaat mühendisliği eğitiminin geliştirilmesi amacıyla literatürde eğitim stratejileri ve iyileştirme yöntemleri ile ilgili birçok çalışma bulunmaktadır. Gunhan (2015) teknik gezi ve saha ziyaretlerinin inşaat mühendisliği öğrencileri üzerindeki etkilerini araştırmıştır. Lopez-Ouerol vd. (2015) geoteknik ve ulaştırma anabilim dalı eğitimi için yeni bir metodoloji önermiştir. Fenner vd. (2014) inşaat mühendisliği eğitiminde sürdürülebilirlik için neler yapılabileceğini incelemişlerdir. Perdoma ve Pando (2014) inşaat mühendisliği eğitimi için bilgi teknolojilerinin kullanımını önermiştir. Castro vd. (2013) ise proje tabanlı eğitimin faydalarından bahsetmişlerdir. Moussai (2012) geoteknik mühendisliği eğitimi ile gerçek dünya uygulamaları arasındaki farklılıkları belirtmiştir. Wang vd. (2012) geoteknik anabilim dalı eğitimi için teknoloji kullanımının yollarını araştırmışlardır. Slizyte vd. (2008) Vilnus Teknik Üniversitesinde yapı ve geoteknik anabilim dalları eğitimlerinde ki yöntem farklılıklarını rapor etmişlerdir. Dundulis vd (2008) ise geoteknik anabilim dalı eğitiminde yenilikçi stratejileri araştırmışlardır. Çokça (2008) Ortadoğu Teknik Üniversitende geoteknik anabilim dalı derslerine bilgisayar kullanımının etkilerini değerlendirmiştir. Qui (2008) Çin'de inşaat mühendisliği eğitiminin geçmişten günümüze tarihsel gelişimini incelemiştir. Arslan ve Huber (2008) geoteknik mühendisliği eğitimini Almanya örneği ile anlatmışlardır. Pantazidou vd (2008) Yunanistan için geoteknik mühendisliği eğitimini diğer ülkeler ile karşılaştırmışlardır. Caprez vd. (2008) İsviçre' de geoteknik mühendisliği eğitimi için yeni yöntemler önermişlerdir.

Günümüz inşaat sektörü ve geçmiş bilimsel çalışmalar detaylı olarak incelendiğinde inşaat mühendisleri için en büyük problemlerden birinin teorilerin pratiğe dönüştürülmesi olduğu anlaşılmaktadır. Problemin çözümü için öğrenilen teorilerin pratiğe dönüştürebilme ve üç boyutlu düşünebilme yeteneğinin kazandırılması olduğu açıktır. Dolayısıyla eğitim stratejilerinin de bu yönde iyileştirilmesi gerekmektedir. Bu çalışmada inşaat mühendisliği öğrencilerine geoteknik anabilim dalı bitirme tez çalışmaları kapsamında prototip hazırlamaları istenmiş ve bu yöntemin öğrencilerin öğrenme davranışları üzerindeki etkileri incelenmiştir.

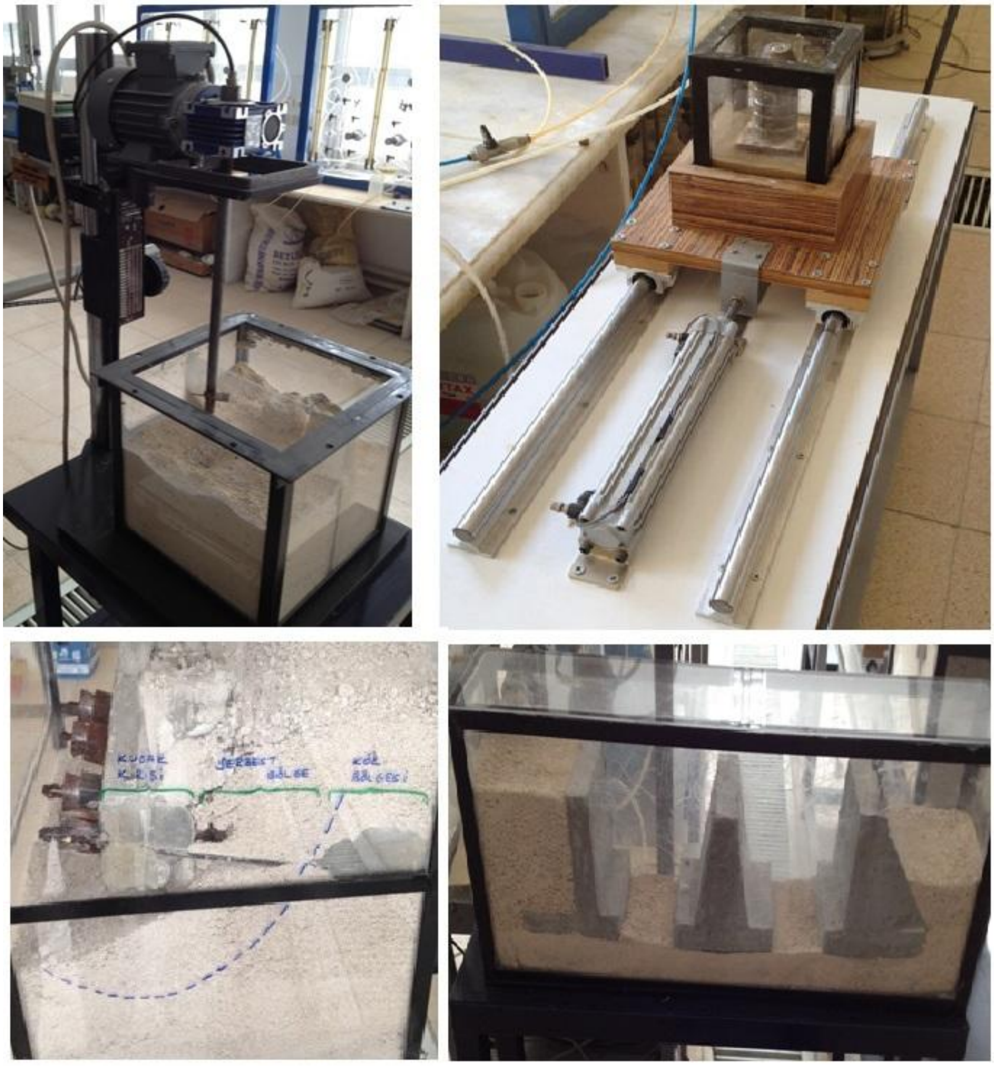
YÖNTEM

Anadolu Üniversitesi İnşaat Mühendisliği Bölümü 1998 yılında kurulmuştur. 2 Eylül kampüsünde dört yıllık inşaat mühendisliği eğitim programı sürdürülmektedir. Eğitim programında ilk yılında matematik, fizik kimya gibi mühendislik temel dersler, ikinci yıldan itibaren de branş dersleri verilmektedir. Özellikle son sınıfta öğrenciler inşaat mühendisliğinin alt disiplinleri olan geoteknik, hidrolik, mekanik, ulaştırma, yapı, yapı malzemesi ve yapı yönetimi anabilim dallarından birisinden bitirme tezi hazırlamaktadır. Ayrıca birçok ders laboratuvar çalışması ile desteklenmektedir.

Geoteknik Anabilim dalı ders programı temeller, istinad duvarları, kazı destek sistemleri gibi zemin yapılarının tasarım analiz ve uygulama detaylarını gösteren teorik bilgiler ile zeminlerin tanımlanmalarında kullanılan laboratuvar ve arazi deneylerini içermektedir. Ayrıca zemin iyileştirme yöntemleri, çöp depolama alanı tasarımı ve dinamik etkiler altında zemin davranışı konularını içeren mesleki seçmeli dersler bulunmaktadır. Laboratuvar çalışmalarının yanında birçok paket program ile analiz yapabilme becerisi de kazandırılmaktadır. İlave olarak bölüm alt yapısında bulunan sondaj makinesi, jet-grout makinesi ve kazık temel makinesi ile uygulamalı eğitimde yapılmaktadır.

Modelleme Çalışması

Bölümde geoteknik anabilim dalı tarafından verilen zorunlu dersler zemin mekaniği I, temel inşaat I, inşaat mühendisliği dizaynı ve inşaat mühendisliğinde tasarım uygulamalarıdır. Ayrıca mesleki seçmeli dersler ise geteknik tasarım, zemin mekaniği II, temel inşaat II, zemin iyileştirme, zemin dinamiğine giriş, temel mühendisliği ve bilgisayar uygulamalarıdır. İnşaat mühendisliğinde tasarım uygulamaları dersi öğrencilerin son sınıfta bitirme tezlerini hazırlamak için kayıt oldukları derstir. Öğrenciler ders kapsamında verilen konu ile ilgili yaptıkları akademik araştırma, analiz ve tasarımların yanı sıra 2012-2013 eğitim döneminden bu yana prototip hazırlamaktadırlar. Onur vd. (2015) prototip hazırlanması ve bu prototiplerin sergilenmesinin öğrencilerin öğrenme istekleri ve motivasyonları üzerinde olumlu etkisi olduğunu rapor etmiştir. Özellikle 2013-2014 öğretim yılında öğrenciler tarafından hazırlanan ankrajlı derin kazı destek sistemi prototipi, derin zemin karıştırma prototipi ve sarsma tablası prototipi hem çeşitli sergi yarışmalarında derece kazınmış hem de alt sınıflar üzerinde olumlu etki yapmıştır. Prototiplerin genel görüntüsü Şekil 1'de verilmiştir.



Şekil 1. 2013-2014 Öğretim Yılında Hazırlanan Prototipler

Olumlu dönütler nedeniyle 2014-2015 öğretim yılında geoteknik anabilim dalında bitirme tezi hazırlayan öğrencilerden konuları ile ilgili prototip geliştirmeleri istenmiştir. Öğrencilere bitirme tezi olarak kazıklı temel ve donatılı zemin konuları verilmiştir. Kazık temeller; üstyapı yükleri karşısında zemin taşıma gücünün yetersiz kaldığı durumlarda uygulanan derin temel sistemidir. Üst yapı yükleri zemin içerisinde oluşturulan betonarme kazık elemanlar ile derinlerdeki sağlam zeminlere aktarılır. Donatılı zemin ise özellikle yanal toprak basınçlarını karşılamak amacıyla istinat yapılarının metal vb. yapıdaki şeritler ile güçlendirilmesini içermektedir. Donatılı zemin yapıları yol kenarlarında, şevlerde sıkça tercih edilmektedir.

Geoteknik Anabilim dalında bitirme tezi hazırlayan öğrencilerden Yusuf Nazlıoğlu öncelikle bir kazık temel projesi hazırlamış, gerekli teorik hesaplamaları tamamladıktan sonra yaptığı çalışmanın prototipini hazırlamıştır. Hazırlanan prototipin görüntüsü Şekil 2' de verilmiştir (Nazlıoglu, 2015). Diğer öğrencilerden Bertan Özdemir isimli öğrenci ise donatılı zemin projesi olarak bitirme tezini tamamlamıştır. Gerekli hesaplamalar sonrasında çalışmasının örnek protoripini hazırlamıştır. Donatılı zemin prototipi Şekil 3' de verilmiştir (Ozdemir, 2015).

Şekil 2. Kazıklı Temel Prototipi

Şekil 3. Donatılı Zemin Prototipi

BULGULAR

Hazırlanan tüm prototipler temel inşaat I ve II ile zemin mekaniği II derslerinde teorik derslerin anlatımı sırasında görsel objeler olarak kullanılmaya başlanmıştır. Öğrenciler bu derslerde gerekli teorik hesaplama yöntemlerini öğrenirken, aynı zamanda prototipleri incele imkânı bulmuştur. Bu durumun öğrenme davranışları üzerinde olumlu etki gösterdiği ve derslere olan ilginin arttığı gözlemlenmiştir. Derslerde yapılan sınavlarda ise sınav ortalamaları geçmiş yıllarda 35,0 civarında iken prototiplerin kullanılmaya başlanmadı ile arttığı ve 45,0 değerinin üzerine çıktığı tespit edilmiştir.

Ayrıca öğrencilerin Geoteknik Anabilim dalına olan ilgileri artmıştır, özellikle son üç yıldır prototiplerin sergilenmesiyle bitirme tezi yapmak isteyen öğrenci sayılarında büyük artış gözlemlenmiştir. Geçmiş yıllarda bu sayı dört civarında iken son yılda on beş sayısına ulaşmıştır.

Diğer yandan Anadolu Üniversitesi Mühendislik Fakültesi tarafından her yıl geleneksel olarak düzenlenen Proje Fuarı ve yarışmasında prototipler sergilenmiştir. Yarışmaya katılan 53 farklı tez çalışması uzman mühendislerin oluşturduğu jüri tarafından incelenmiştir. Donatılı zemin tezi ve prototipi 2015 yılı birincisi seçilmiştir. Yarışma birincisi ayrıca 1000 TL ödüle layık görülmüştür.

SONUÇ

İnşaat mühendisleri gerekli teorileri kullanmalarının yanı sıra pratik uygulamada da başarı göstermelidirler. Bu amaçla öğrencilerin pratik uygulama becerilerini artırmaya yönelik çeşitli prototipler geliştirmeleri istenilmiştir. Bu çalışmada geliştirilen prototiplerin öğrencilerin öğrenme davranışları üzerine etkileri araştırılmıştır. Görselliğin öğrenciler üzerinde olumlu etkileri olduğu tespit edilmiş ve derslere karşı ilginin ve öğrenme isteğinin arttığı gözlemlenmiştir.

APPLICATION OF ACTIVITIES INTENDED TO PERCEIVE NATURE OF SCIENCE FOR 5TH AND 6TH GRADE STUDENTS

Sema KÜÇÜKMERT ERTEKİN
Ataşehir Amerikan Kültür Koleji

Burcu AYGEN
Ataşehir Amerikan Kültür Koleji

ABSTRACT: The purpose of this study is to introduce two different activities in which students can understand nature of science fundamentally and to discuss the results of applied activities. The study is applied with the 5th and 6th grade students. 32 students in the 5th grade, 27 students in the 6th grade, 59 students in total have been participated in the study. There are 14 female students and 18 male students in the 5th grade, 14 female students and 13 male students in the 6th grade. In this study, there are two activities called "Scientific Knowledge" and "Direct and Indirect Observation" which are intended to perceive nature of science and to comprehend the importance of observation with the difference of objectives in science curriculum. While the students are thinking about nature of science with the activity called Scientific Knowledge, they realize that science has a dynamic structure based on application and science may change as knowledge changes. Students have taken an opportunity to improve observation and scientific inquiry abilities and also defend their own arguments with the activity of Direct and Indirect Observation. This study has been the first step for our students to study scientifically enabling to think scientifically, to reach scientific knowledge and realize its importance.

Key words: nature of science, scientific knowledge, direct observation, indirect observation

BİLİMİN DOĞASINI ALGILAMAYA YÖNELİK ETKİNLİKLERİN 5 VE 6. SINIF ÖĞRENCİLERİ ÜZERİNDEKİ UYGULAMASI

ÖZET: Bu çalışmanın amacı, öğrencilerin bilimin doğasını temel olarak anlayabilecekleri iki farklı etkinliği tanıtmak ve uygulanan etkinliklerin sonuçlarını tartışmaktır. Çalışma ortaokul 5 ve 6. Sınıf öğrencileri ile gerçekleştirilmiştir. Çalışmaya 32'si 5. sınıf, 27'si 6. sınıf toplam 59 öğrenci katılmıştır. 5. Sınıf öğrencilerinin 14'ü kız, 18'i erkek; 6. Sınıf öğrencilerinin 14'ü kız, 13'ü erkek öğrencilerdir. Çalışmada fen bilimleri müfredatında yer alan kazanımlardan farklı olarak, bilimin doğasını algılamaya ve gözlem yapmanın önemini kavramaya yönelik "Bilimsel Bilgi" ve "Doğrudan-Dolaylı Gözlem" başlıklı etkinliklere yer verilmiştir. Bilimsel Bilgi adlı etkinlik ile öğrenciler bilimin doğası hakkında düşünerek bilimin uygulamaya dayalı dinamik bir yapıya sahip olduğunu ve değişen bilgi ile bilimin değişebileceğini fark ettiler. Doğrudan-Dolaylı Gözlem etkinliği ile de öğrenciler gözlem yapma, bilimsel sorgulamayı geliştirme ve ortaya atılan iddiaları savunabilme konusunda kendilerini geliştirme fırsatı bulmuşlardır. Bu çalışma, öğrencilerimizin bilimsel düşünmelerini, bilimsel bilgiye ulaşmalarını ve bunun önemini kavramalarını sağlayarak, onların bilimsel çalışma yapmaları için ilk adım olmuştur.

Anahtar sözcükler: bilimin doğası, bilimsel bilgi, doğrudan gözlem, dolaylı gözlem

INTRODUCTION

Starting from the idea 'No matter how different students are, each of them should be scientifically literate.' the curriculum of 2004 Science and Technology was prepared. When the subject scopes, contents and target behaviour of the curriculum were studied, not only was it the understanding based on observation but it was also expected from students to carry out studies in which they effectively participated.

Nature of Science

According to the widely accepted description, the nature of science reflects epistemological and social structure of science and it also expresses scientific knowledge, values and beliefs of the formation of scientific knowledge. (Lederman,1992). In the recent years, researches introducing nature of science with different practices have been done. For instance, Wong and others (2008) gathered nine scientists who studied on SARS virus and prospective teachers in order to ask them to share the period of fighting off the virus they suffered and the characteristics of science were discussed in this context. Schwartz, Lederman & Crawford (2004) designed an application which thirteen prospective teachers could interact with scientists five hours in a week for ten weeks and identify the different characteristics of science in this way. Here are the main characteristics of the nature of science that are the research subjects about teacher and students. (Akerson&Abd-El-Khalick,2005);

- Scientific knowledge is reliable however it changes over time.
- There is not only one scientific method. There are several versions of the scientific method.
- Imagination and creativity play an important role in constructing scientific knowledge.
- Although there is a relation between theories and laws, two of them are different from each other.
- Although there is a relation between observations and inferences, both of them are different from each other.
- Scientific knowledge is subjective and based on theories.
- Scientific knowledge is affected by the socio-cultural environment where it is constructed

In this study, the activities named 'Scientific Knowledge' and 'Direct-Indirect Observation' related with the main characters of the nature of science were conducted.

Scientific Knowledge

From primary education, it is necessary for students to pay attention to the following points to develop the understanding of scientific knowledge (Akerson and others,2006):

- Scientific knowledge is reliable.
- Scientific knowledge is not fixed.
- There is no one single method to attain scientific knowledge.
- Creativity plays an important role in developing scientific knowledge.
- There is a relation between scientific theories and laws.
- Socio-cultural environments play an important role in developing scientific knowledge.
- Even though science deals with objective knowledge, it has a subjective factor in the development of scientific knowledge.

Çüçen (2001) specified the main characteristics of scientific knowledge as;

- people research it by using their mind
- it handles a subject area
- it uses a method (experiment and observation)
- it is systematic and regular
- it is consistent and regular
- it is verifiable and controllable
- scientific knowledge is objective

While students are thinking about nature of science with the activity called 'Scientific Knowledge' that finds out the main characteristics mentioned above, students are expected to realize that science has a dynamic structure and science may change as knowledge changes.

Direct and Indirect Observation

We typically think of observations as having been seen 'with our own eyes,' but an observation can be made directly by seeing, feeling, hearing, and smelling. We can also extend and refine our basic senses with tools during direct observation. There are many phenomena that humans cannot sense by direct observation (such as inside of the atom and objects that seen by X-ray devices). Through these tools, we can make observations much more precisely than those our basic senses are equipped to handle. Students have taken an opportunity to improve observation and scientific inquiry abilities and also defend their own arguments with the activity of Direct and Indirect Observation.

METHOD

In this study, in addition to objectives of the science curriculum, there are two activities that form a basis of science to perceive nature of science and understand the importance of observation.

Participants

The participants of the study are a total of 59 fifth and sixth grade students - 14 female students, 18 male students from 5th grade, 14 female students, 13 male students from 6th grade -

Data Collection

The data of the study were collected by carrying out activities called 'Scientific Knowledge' and 'Direct and Indirect Observation' and evaluating worksheets given to students.

Data Analysis

The items of the study are formed by using responses of students about

- Similarities between science and the activity of scientific knowledge
- Changeability of science and scientific knowledge
- Needs of students for qualified direct observation
- Relation of not showing objects in the box with science during the activity of indirect observation.

The percentage distributions of these items were calculated according to grade levels and genders of the participants.

Students were asked to guess which objects there are in the box through indirectly observation. When students were asked how they came to the conclusion, **'the sounds coming from the box', 'the weight of the box'** and **'the movements in the box'** items were formed according to students' responses.

FINDINGS

As a result of the study done by using the scale developed by Özmusul (2012), Çoban and Ergin(2008), the views of students towards the understanding of scientific knowledge in the dimension 'scientific knowledge may change' are at medium level. On the other hand, according to the activities carried out, 72,88% of the participants indicated that scientific knowledge may change. 71,88% of 5th grade students and 74,04% of 6th grade students believed that scientific knowledge may change.

It is provided that students correlate technology and technological advancements with the changeability of scientific knowledge. According to the examples given by students, it is understood that students correlate 52,54% of the improvement of telephone technology and 44,07% of treatments of illnesses with the activity applied in the study. The rates of the examples for the development of telephone technology, which is in the first place, from 5th and 6th grade students proving the changeability of science and scientific knowledge are near to each other. While fifth grade students give 12,06% more examples for treatments of illnesses, which is in the second place, sixth grade students give 12,84% more examples for transportation technology, which is in the third place.

35,59% of all participants and 46,88% of the 5th grade students indicated that it is necessary to use other sense organs in addition eye for qualified direct observation in the first place. Moreover, 25,93% of the 6th grade students indicated that it is necessary to look in to the box from a different perspective in the first place. 34,38% of 5th grade students and 22,22% of 6th grade students respectively needed more observation time and using other sense organs in the second place.

During the activity named direct observation, 46,43% of female students paid attention to cosmetics and 45,16% of male students interested in toy car in the first place.

28,13% of 5th grade students answered as 'Science needs effort' and 40,74% of 6th grade students answered as 'Intuitions are used with sense organs in science' to correlate not showing objects in the box with science during the activity of indirect observation.

CONCLUSION AND RECOMMENDATION

'Scientific knowledge is reliable however it changes over time' item which is one of the main characteristics of nature of science determined by Akerson&Abd-El-Khalick(2005) and **'Scientific knowledge is not fixed'** item which is necessary to improve an understanding about scientific knowledge in primary school years determined by Akerson and others,(2006) emphasized on changeability of science. In this study, it is also determined that students reached the changeability of science dimension by giving related examples in the activities. Students gave examples especially about technological developments. According to Prensky (2001), the reason is that this generation is living in an environment surrounded with technological equipments.

Participants of the study noticed that all sense organs and supportive devices are needed for qualified direct observation.

Two years old children relate certain tasks and stuffs with male or female such as they consider cooking and vacuum cleaner with female and automobile and repair kit with male. (Ruble & Martin,1998;Signorella,Bigler & Liben,1993; Bee, H., Boyd, D., (2009).). During direct observation activity, students interested in materials related to their gender. At the end of the activity, the idea was explained that social-cultural environment and experience can determine the scientific study subject but cannot influence scientific method.

Students have taken an opportunity to improve observation and scientific inquiry abilities and also defend their own arguments

In case of carrying out this study with students from different social cultural environment, it would be possible to reach 'Socio-cultural environments play an important role in developing scientific knowledge' item mentioned as nature of science dimensions by Akerson&Abd-El-Khalick, (2005).

This study has been the first step for our students to study scientifically enabling to think scientifically, to reach scientific knowledge and realize its importance.

ABSTRACT: The purpose of this study is to investigate the effect of conceptual change text on remedying the misconceptions of 8th grade students about the concepts of evaporation and boiling. 25 students who were studying in a public middle school located at a town in the central Anatolia participated in the study. The experimental model of the study is a pretest-posttest single group design. Before the treatment, an open ended questionnaire was administered to the students to determine their misconceptions about the concepts of evaporation and boiling. In the treatment, prepared conceptual change texts developed by the researchers were used in a 5E learning cycle to remove students' misconceptions. After the treatment, the same open ended questionnaire was administered to the students as post assessment. The results of the study indicated that most of the misconceptions of the students about the concept of evaporation and boiling disappeared. Implications for classroom practices were discussed.

Key words: misconception, conceptual change text, evaporation, boiling.

8.SINIF ÖĞRENCİLERİNİN BUHARLAŞMA VE KAYNAMA KAVRAMLARINA YÖNELİK YANILGILARININ KAVRAMSAL DEĞİŞİM METİNLERİ KULLANILARAK GİDERİLMESİ

ÖZET: Bu çalışmanın amacı, sekizinci sınıf öğrencilerinin, buharlaşma ve kaynama konularındaki kavram yanılgılarının giderilmesinde kavramsal değişim metinlerinin etkisini araştırmaktır. Çalışmaya orta Anadolu'daki bir ilçenin devlet ortaokulunda öğrenim gören 25 öğrenci katılmıştır. Araştırma deseni olarak tek gruplu ön-test son-test modeli kullanılmıştır. Uygulamadan önce, öğrencilerin buharlaşma ve kaynama kavramlarına ilişkin kavram yanılgılarını tespit etmek işin açık uçlu sorulardan oluşan bir anket kullanılmıştır. Uygulama sırasında öğrencilerin kavram yanılgılarını ortadan kaldırmak için araştırmacılar tarafından hazırlanmış kavram değişim metinleri 5E öğrenme döngüsü içinde öğrencilere uygulanmıştır. Uygulama sonrasında ön değerlendirme ile aynı sorulardan oluşan son değerlendirme yapılmıştır. Araştırma sonuçları, öğrencilerdeki buharlaşma ve kaynama kavramlarına ilişkin yanılgılarının büyük kısmının ortadan kalktığını göstermiştir. Sınıf içi uygulamalarına yönelik çıkarımlar tartışılmıştır.

Anahtar kelimeler: kavram yanılgısı, kavramsal değişim metni, buharlaşma, kaynama.

GİRİŞ

Öğrenciler sınıf seviyesinden bağımsız olarak fen konularına ilişkin yaygın kavram yanılgılarına sahiptir (Özdemir & Clark, 2007; Özgür, 2013; Westbrook & Marek, 1992). Kavram yanılgıları formal ve informal öğrenmelerle oluşan, öğrencilerin farkında olmadığı perçinlenmiş ontolojik ve epistemolojik inançların bir sonucu olduğundan, kavram yanılgılarını gidermek genelde oldukça zor ve zaman alan bir süreçtir (Ioannides & Vosniadou, 2002; Özdemir & Clark, 2007). Kavram yanılgıları sonraki öğrenmeleri oldukça olumsuz yönde etkilediğinden, anlamlı öğrenmelerin önünde büyük bir engel teşkil etmektedir (Özdemir & Clark, 2007). Bu farkındalıklarla alan yazınındaki araştırmalar sadece öğrencilerin çeşitli fen kavramlarına ilişkin kavram yanılgılarını tespit etmekle yetinmeyip, bu kavram yanılgılarının giderilmesine odaklanmıştır. Bu amaçla, kavram haritaları (Kaptan, 1998; Kaya, 2003; Kılıç & Sağlam, 2004); kavram karikatürleri (Kete, Avcu, & Aydın, 2009; Köse, 2008; Taş, 2013); analoji (Akyürek & Afacan 2013; Duit, Roth, Komorek, & Wilbers, 2001); anlam çözümleme tabloları (Çetinkaya & Taş, 2011); kavramsal değişim metinleri (Akyürek & Afacan 2013; Çetingül & Geban, 2011; Köse, Kaya, Gezer, & Kara, 2011; Pabuçcu & Geban, 2006; Pınarbaşı & Canpolat, 2002; Şen & Yılmaz, 2012;) gibi yöntem ve teknikler araştırmalarda öğrencilerin fen kavramlarına ilişkin kavram yanılgılarını gidermek için kullanılmıştır. Kullanılan bu yöntem ve tekniklerin hemen hepsinin kuramsal temeli Piaget'in şema teorisine ve bu teoriden etkilenerek Posner, Strike, Hewson ve Gertzog'un geliştirdiği kavramsal değişim yaklaşımına dayanmaktadır.

Bu araştırmada, geleneksel kavramsal değişim yaklaşımına sadık kalınarak, kavramsal değişim metinlerinin 5E öğrenme döngüsü içinde kullanıldığı bir ders planıyla, 8. Sınıf öğrencilerinin buharlaşma ve kaynama kavramlarına ilişkin yanılgılarının giderilmesi amaçlanmıştır. Aşağıdaki bölümlerde araştırmaya öncülük eden kuramsal temellere ve ayrıca araştırmada kavram yanılgılarını gidermek için kullanılan kavramsal değişim metinleri hakkındaki bilgilere yer verilecektir.

Geleneksel Kavramsal Değişim Yaklaşımı

Kavramsal değişim yaklaşımı Piaget'in şema teorisine dayanmaktadır. Bu teoriye göre öğrenciler her bir kavrama ilişkin, formal ve informal öğrenmelere bağlı olarak gelişmiş, kavramla ilgili birçok olayı açıklama yeteneğine sahip şemalara sahiptir. Fakat bu kökleşmiş şemalar çoğunlukla hatalı, yanlış veya eksik bilgi yapılarıdır. Bu hatalı bilgi yapılarını düzeltmek işin şemanın tekrar organize edilmesine, daha köklü hatalar için ise radikal bir şekilde şemanın tamamen ortadan kaldırılıp, bilimsel olarak doğru şemanın konumlandırılmasına ihtiyaç vardır. Bu yüzden Posner ve ark. (1982) tarafından geliştirilen kavramsal değişim yaklaşımı, öğrencilerin ön bilgilerinin tespit edilmesini ve öğrencilerin kendi kavram yangıları ile yüzleştirilmelerini önemser. Bu yaklaşımda yeni öğrenmelerin daha önce bilinenlerden bağımsız olarak gerçekleşmesi mümkün olmadığından, öğrenciye eski bilgilerini kontrol etmesi, bu bilgileri düzenlemesi ve eski bilgiler ile yeni bilgiler arasında gerekli bağlantıları kurması için fırsat tanınmalıdır. Bazen yüzeysel bazense radikal kavram değişimine gidecek olan bu sürecin her basamağı ancak iyi planlanmış öğrenme etkinlikleriyle gerçekleşebilir. Posner ve ark. (1982) planlanan öğretimde kavramsal değişimin gerçekleşmesini dört ön koşula bağlamaktadır;

Hoşnutsuzluk: Öğrenciler bazı olayları açıklamada mevcut bilgilerinin yetersiz olduğunun farkına varmalıdır. Örneğin öğrenciler mevcut bilgileri ile yeni gözlemlerinin çeliştiğini görmelidir.

Açıklık ve Anlaşılırlık: Yeni gelen bilgi öğrenciler için açık ve net olmalıdır. Bu yüzden öğrencilerin yeni öğrenmeleri sırasında birinci elden deneyimlere sahip olması önem taşımaktadır.

Mantıklılık: Öğrenciler için yeni gelen bilgi makul ve mantıklı olmalıdır. Yani öğrenciler birinci elden edindikleri deneyimler ile mevcut bilgileri arasında doğru bağlantıları kurabilmeli ve bilimsel olarak doğru açıklamalara ulaşabilmelidir.

Verimlilik: Öğrenciler öğrendikleri kavramları yeni durumlara uygulayabilmeli, bu konuya ilişkin benzer problemleri çözebilmeli ve farklı durumları açıklamada kullanabilmelidirler. Diğer bir ifadeyle öğrenilen bilgi öğrenciler için işlevsel olmalıdır. Öğrendikleri bilgileri çözüme muhtaç durumlara transfer edebilmelidir.

Kavramsal Değişim Metinleri

Kavram değiştirme metinleri bilimsel olarak doğru kabul edilen bilgiler ile kavram yanılgıları arasındaki çelişkileri açık bir şekilde ortaya koyan metinlerdir (Hynd & Alvermann, 1986). Bu metinlerde öğrencilerin sahip olduğu yetersiz veya yanlış bilgiler ifade edilir, bilimsel kanıtlar ışığında geçerli olan bilgiler vurgulanır ve böylece öğrencilerde kavramsal değişim meydana getirilmeye çalışılır (Berber & Sarı, 2009; Dilber, 2006; Vatansever, 2006).

Kavramsal değişim metinlerinde öncelikle öğrencilerin kavram yanılgılarını ortaya çıkarmak için bir soru sorulur. Daha sonra o konuyla ilgili yaygın kavram yanılgılarını çürütmeye yönelik hazırlanmış metinler öğrencilere okutulur. Bu metinlerin her birinde öncelikle söz konusu yanılgı açık bir şekilde ifade edilir. Böylece öğrencilerin kendilerinde mevcut olan kavram yanılgılarını sorgulamaları ve kendi bilgilerinin yetersiz olduğunu görmeleri sağlanmış olur. Daha sonra bilimsel doğrular yine açık ve anlaşılır olarak, kanıtlar ve örneklerle metinler içinde sunulur (Pınarbaşı & Canpolat, 2002).

Kavramsal değişim metinlerinin kullanıldığı pek çok çalışma bulunmaktadır. (Berber & Sarı, 2009; Dilber, 2006; Önder & Geban, 2006; Pabuçcu, & Geban, 2006; Şendur & Toprak & Pekmez, 2008; Yılmaz, 2010). Fakat yapılan ulusal çalışmalar incelendiğinde buharlaşma ve kaynama kavramları konusundaki kavram yanılgılarının giderilmesine yönelik araştırmalara ihtiyaç olduğu tespit edilmiştir. Kavram değişimini destekleyen, 5E öğrenme döngüsü içinde kavramsal değişim metinlerinin kullanıldığı, buharlaşma ve kaynama kavramlarına ilişkin yanılgıların giderilmesine yönelik herhangi bir çalışmaya rastlanmamıştır.

Amaç ve Araştırma Soruları

Bu çalışmanın amacı Maddenin Halleri ve Isı ünitesi içerisinde yer alan "buharlaşma" ve "kaynama" kavramlarına ilişkin, 8.sınıf öğrencilerinin yanılgılarını kavramsal değişim metinleri kullanarak 5E öğrenme döngüsü içinde gidermektir. Araştırma soruları aşağıdaki gibidir.

1. 8. Sınıf öğrencilerinin buharlaşma ve kaynama kavramlarına ilişkin kavram yanılgıları nelerdir?
2. Kavramsal değişim metinleri 8. Sınıf öğrencilerinin buharlaşma ve kaynama kavramlarına ilişkin yanılgılarını gidermede ne derece etkilidir?

YÖNTEM

Çalışma Grubu

Çalışma grubunu 2014-2015 eğitim öğretim yılı bahar döneminde Orta Anadolu'daki bir ilçenin devlet ortaokulunun 8. sınıfında öğrenim gören 25 öğrenci oluşturmuştur. Uygulamanın yapılmasında ve verilerin toplanmasında kolaylık sağlaması için araştırmaya liderlik eden birinci yazarın Fen Bilimleri dersine girdiği sınıf amaçlı olarak seçilmiştir.

Veri Toplama Aracı

Veri toplama aracı olarak EK-1' de verilmiş olan sekiz açık uçlu soru hazırlanmıştır. 3., 6. ve 8. sorular Kırıkkaya ve Güllü' nün (2008) 5.sınıf öğrencilerinin ısı-sıcaklık ve buharlaşma-kaynama konularındaki kavram yanılgılarını tespit etmek için yaptıkları çalışmadan alınmıştır. Diğer sorular ise Fen Bilimleri öğretmeni olan birinci yazar tarafından geliştirilmiştir. Bütün sorular iki uzman tarafından kontrol edilmiş, ihtiyaç duyulan değişiklikler yapılmıştır. Bu sorular hem ön değerlendirme hem de son değerlendirme olarak uygulanmıştır.

Araştırma Modeli ve Uygulama

Deneme öncesi modellerden, tek grup ön-test son-test modeli kullanılmıştır (Karasar, 2013). Yapılan çalışma 1+2+1 olmak üzere üç ayrı oturumdaki toplam dört ders saatini kapsamıştır. İlk saatte, 5E öğrenme döngüsünün giriş aşaması için öğrencilere ön değerlendirme için hazırlanan sekiz açık uçlu sorudan oluşan bir anket uygulanmıştır(EK-1). Öğrencilere anket sorularını cevaplamaları için 40 dakikalık zaman verilmiştir. Öğrencilerin cevapları, yoğunlukla sahip oldukları kavram yanılgılarını tespit etmek için betimsel olarak analiz edilmiştir. Tespit edilen öğrenci yanılgılarını gidermeye yönelik dört ayrı kavramsal değişim metni hazırlanmıştır (EK-2). Kavramsal değişim metinleri hazırlanırken öğrenci yanılgıları metnin girişine yazılmıştır. Daha sonra öğrencilerin düşüncelerinin neden yanlış olduğu açık ve net bir dille ifade edilmiştir. Öğrencileri ikna edebilmek için bilimsel kanıtlar kullanılmış, günlük hayattan örnekler verilmiştir. İkinci ders saatinde, 5E öğrenme döngüsünün keşfetme aşamasında buharlaşma ve kaynama kavramlarına odaklanarak öğrencilere sorular yöneltilmiş kendilerinin bu kavramları ayırt etmeleri sağlanmıştır. Daha sonra öğrencilere Ek-2'de yer alan kavramsal değişim metinlerinin birinci ve ikincisi okutulmuştur. 5E öğrenme döngüsünün açıklama aşamasında öğrencilerin mevcut bilgileri ile buharlaşma ve kaynamayı tanımlamaları istenmiştir. Bilimsel gerçeği savunan öğrencilerle yanılgıya sahip öğrenciler tartıştırılmıştır. Üçüncü ders saatinde, 5E öğrenme döngüsünün derinleştirme aşamasında kalan iki kavramsal değişim metni öğrencilere okutulup tartıştırılmıştır. Burada amaç, öğrencilerin öğrendiklerini günlük hayata uygulayıp konuyu daha iyi kavramalarını sağlamaktır. Bu uygulama sonunda, konudaki kavramlara yönelik bir anlam çözümleme tablosu öğrencilerle birlikte yapılmıştır. Dördüncü ders saati içinde yani 5E öğrenme döngüsünün değerlendirme aşamasında ise öğrencilere son değerlendirme yapmak için ön değerlendirmede kullanılan sekiz açık uçlu soru tekrar sorulmuş, cevap vermeleri için yine 40 dakika verilmiştir. Uygulama sonunda öğrencilerin cevapları yine betimsel olarak analiz edilmiştir. Böylece buharlaşma ve kaynama kavramlarına yönelik öğrencilerin sahip oldukları yanılgıların giderilmesinde kavramsal değişim metinlerinin etkili olup olmadığı tespit edilmiştir.

BULGULAR

Tablo 1. "Kaynama Nedir?" Sorusuna Verilen Yanıtlar

	Ön Değerlendirme(f)	Son Değerlendirme(f)
Sıvı sıcaklığının belirli bir noktaya geldiği anda taneciklerin maksimum hıza ulaşmasıdır	3	15
Sıvının ısı alarak fokurdamasıdır	6	-
Sıcaklığın belli bir noktaya geldiği andır	4	-
Sıvıyı çok ısıtmaktır	4	2
Suyun yumuşatılmasıdır	2	-
Kaynama ısıdır.	2	2
Sıvıyı buharlaştırmak için yapılan işlemdir	4	1
Sıvının buhar basıncının dış basınca eşit olduğunda sıvının her yerinden gaz kabarcıkları çıkmasıdır	-	5

Ön değerlendirmede 25 öğrenciden sadece 3'ü bilimsel olarak doğru cevap vermiştir (Tablo 1). Altı öğrenci "sıvının ısı alarak fokurdamasıdır" ve 4 öğrenci "sıcaklığın belli bir noktaya geldiği andır" cevabını vererek kaynamayı kısmen doğru tanımlamışlardır. Dört öğrenci "sıvıyı buharlaştırmak için yapılan işlemdir" şeklinde cevap vermiş dolayısıyla kaynama olmadan buharlaşma olamayacağını iddia etmiştir. Öğrencilere uygulanan kavramsal değişim metinleri hazırlanırken bu yanılgıya değinilmiştir. Son değerlendirme sonuçlarına bakıldığında "sıvı sıcaklığının belirli bir noktaya geldiği anda taneciklerin maksimum hıza ulaşmasıdır" cevabını veren 15 öğrenci ve "sıvının buhar basıncının dış basınca eşit olduğunda sıvının her yerinden gaz kabarcıkları çıkmasıdır" cevabını veren 5 öğrencinin doğru cevap verdiği görülmektedir. Ön değerlendirmede kavram yanılgısına sahip olan öğrenci sayısı 4 iken son değerlendirmede bu sayının 1'e düştüğü görülmektedir.

Tablo 2. "Buharlaşma Nedir?" Sorusuna Verilen Yanıtlar

	Ön Değerlendirme(f)	Son Değerlendirme(f)
Sıvının ısı alarak gaz haline geçmesidir	9	21
Sıvıyı çok kaynatarak buhara dönüştürmektir	9	-
Sıvıyı yok etmektir	4	2
Su döngüsünü anlatanlar	3	-
Sıvının azalmasıdır	-	3

Ön değerlendirmede 25 öğrenciden 9'u "sıvının ısı alarak gaz haline geçmesidir" cevabını vererek bilimsel olarak doğru açıklamada bulunmuşlardır (Tablo 2). Üç öğrencinin açıklamaları su döngüsü ile ilgili olup herhangi bir kavram yanılgısı içermemektedir. Fakat söz konusu açıklamalar buharlaşma kavramını tanımlamamaktadır. Öğrencilerin 9'u "sıvıyı çok kaynatarak buhara dönüştürmektir" yorumunu yaparak kavram yanılgısına sahip olduklarını göstermişlerdir. Burada katılımcılar kaynama gerçekleşmeden buharlaşma olamayacağını düşünerek yanılgı içerisine girmişlerdir. Diğer bir yanılgı ise 4 katılımcının verdiği "sıvıyı yok etmektir" yanıtında görülmektedir. Öğrenciler buharlaştırma olayı sonrasında gaz haline geçen sıvıyı göremedikleri için yok olduğunu iddia etmektedir. Öğrencilerin sahip oldukları bu yanılgılar doğrultusunda hazırlanan kavramsal değişim metni kendilerine uygulandıktan sonra, 21 öğrenci soruyu doğru cevaplarken, ön değerlendirmede kavram yanılgısına sahip 13 öğrenciden 11'inin yanılgılarının giderildiği görülmektedir.

Tablo 3. "Elinize Kolonya Sürdüğünüzde Serinlemenizin Nedeni Nedir?" Sorusuna Verilen Yanıtlar

	Ön Değerlendirme(f)	Son Değerlendirme(f)
Buharlaşma olduğu için serinleriz	4	20
Isı alışverişi olduğu için serinleriz	5	3
İçerisinde asit olduğu için serinleriz	9	2
İçerisinde alkol olduğu için serinleriz	3	-
Diğer sebepler(yanıcı olması vb.)	4	-

Ön değerlendirmede 25 öğrenciden 9'u "buharlaşma olduğu için serinleriz" ve "ısı alışverişi olduğu için serinleriz" cevaplarını vermiş ve soruyu doğru yanıtlamışlardır (Tablo 3). 16 öğrenci ise serinleme sebebini kolonyanın içerisindeki maddelere dayandırmaktadır. Son değerlendirme sonuçlarına göre 25 öğrenciden 23'ü doğru cevap vermiştir. Büyük oranda kavram yanılgılarının giderildiği görülmüştür. Kavram yanılgısına sahip 16 öğrenciden 14'ünün yanılgısı giderilmiştir.

Tablo 4. "Buharlaşma Her Sıcaklıkta Gerçekleşir mi? Neden?" Sorusuna Verilen Yanıtlar

	Ön Değerlendirme(f)	Son Değerlendirme(f)
Evet		
Isı alması yeterli olduğu için	5	18
Buharlaşma yok etmek olduğu için	1	-
Kaynayınca buharlaşma olduğu için	-	1
Neden belirtmeyen	-	1
Hayır		
Kaynaması gerekir.	7	-
Buharlaşma noktasına gelmesi gerekir.	6	2
Buharlaşma olması için güneşin olması gerekir.	2	-
Neden belirtmeyen	4	1

Ön değerlendirmede 25 öğrenciden 6'sı "evet, buharlaşma her sıcaklıkta gerçekleşir" yanıtını vererek soruyu doğru cevaplamıştır (Tablo 4). Öğrencilerin "evet" yanıtlarının hangi nedenlere dayandırıldığına bakıldığında 5'i "evet, ısı alması yeterli olduğu için" cevabını vererek doğru açıklamada bulunmuştur. Bir öğrenci soruyu yanlış bir gerekçeyle doğru olarak cevaplamıştır. Açıklamasında, "buharlaşma yok etmek olduğu için her sıcaklıkta gerçekleşir" ifadesini kullanmıştır. Ona göre sıvı fazdaki maddeler buharlaştığında yok olmaktadır. Ön değerlendirmede 25 öğrenciden 19'u "hayır, buharlaşma her sıcaklıkta gerçekleşmez" yanıtını vererek soruyu yanlış cevaplamıştır. Öğrencilerin cevaplarının nedenselliğine bakıldığında; kaynama olmadan buharlaşma olamayacağı yanılgısına 7 öğrencinin sahip olduğu, buharlaşma olması için sıvının belirli bir buharlaşma noktasına gelmesi gerekir yanılgısına ise 6 öğrencinin sahip olduğu görülmüştür. Son değerlendirme sonuçları incelendiğinde 18 öğrenci "evet, ısı alması yeterli olduğu için buharlaşma her sıcaklıkta gerçekleşir" yanıtını vererek bilimsel olarak doğru açıklamada bulunmuşlardır. Kaynama olmadan buharlaşma olamayacağı yanılgısına sahip öğrencilerden 6'sının yanılgısı giderilirken 1'inin yanılgısı devam etmiştir. Buharlaşma olması için sıvının belirli bir buharlaşma noktasına gelmesi gerekir yanılgısına sahip öğrencilerden 4'ünün yanılgısı giderilirken 2'sinin yanılgısı devam etmiştir.

Tablo 5. "Kaynama Her Sıcaklıkta Gerçekleşir mi? Neden?" Sorusuna Verilen Yanıtlar

	Ön Değerlendirme(f)	Son Değerlendirme(f)
Evet		
Isı alması yeterli olduğu için	6	-
Kaynama maksimum güçtür	-	1
Neden belirtmeyenler	5	1
Hayır		
Belirli sıcaklığı vardır	11	22
Buharlaşma olduğu için	1	-
Sıcaklığı fazla olduğu için	1	-
Neden belirtmeyenler	1	1

Ön değerlendirmede 25 öğrenciden 14'ü "hayır. Kaynamanın belirli bir sıcaklığı vardır" yanıtını vererek soruyu doğru cevaplamıştır (Tablo 5). Katılımcıların "hayır" yanıtlarının hangi nedenlere dayandırıldığına bakıldığında 11'i "belirli sıcaklığı vardır" yanıtını vererek bilimsel olarak doğru açıklamada bulunmuşlardır. Bu soruda öğrencilerin kaynama ve buharlaşma kavramlarını karıştırdıkları görülmüştür. Öğrencilerin 6'sı "kaynama her sıcaklıkta gerçekleşir bunun için sadece sıvının ısı alması yeterlidir" cevabını vermiştir. Fakat son değerlendirmede katılımcıların 22'si aynı soruya "hayır. Belirli sıcaklığı vardır" cevabını vererek doğru açıklamada bulunmuşlarıdır. Kaynamanın her sıcaklıkta gerçekleşeceğini bunun için sadece sıvının ısı almasının yeterli olduğu düşünen öğrencilerin tamamı, bu kavram yanılgılarını uygulamadan sonra terk etmiştir.

Tablo 6. "Çamaşırlar Sıcak Yerde mi Yoksa Soğuk Yerde mi Daha Çabuk Kurur? Neden?" Sorusuna Verilen Yanıtlar

	Ön Değerlendirme(f)	Son Değerlendirme(f)
Sıcakta kurur		
Buharlaşma daha hızlı olduğu için	8	24
Isı alışverişi olduğu için	9	-
Güneş etki ettiği için	3	-
Soğukta donar	1	-
Neden belirtmeyen	4	1
Soğukta kurur.	-	-

Ön değerlendirmede 25 öğrencinin tamamı çamaşırların sıcakta kuruyacağı cevabını vererek soruyu doğru yanıtlamıştır (Tablo 6). Nedenleri incelendiğinde "buharlaşma daha hızlı olduğu için çamaşırlar sıcakta kurur" yanıtını veren 8 katılımcı doğru açıklamada bulunurken, "ısı alışverişi olduğu için çamaşırlar sıcakta kurur" yanıtını veren 9 katılımcının açıklaması kısmen doğru olarak değerlendirilmiştir. Günlük hayattan örneklerle sorulan sorulara katılımcıların verdiği cevapların doğruluk oranının daha yüksek olduğu gözlenmiştir. Son değerlendirmeye bakıldığında bu oran daha da artmıştır.

Tablo 7. "Kaynama Sıvının Her Yerinde Gerçekleşir mi? Neden?" Sorusuna Verilen Yanıtlar

	Ön Değerlendirme(f)	Son Değerlendirme(f)
Gerçekleşir		
Isı sıvının her yerine etki ettiği için	8	-
Isı aldığı için	1	-
Tanecikler her yerde olduğu için	1	-
Tanecikler ısı aldığı için sıvının her yerinde hareketlenme olur	-	22
Neden belirtmeyen	4	2
Gerçekleşmez		
Sıvının önce altı kaynadığı için	4	-
Isı sıvının her yerine etki etmediği için	3	-
Neden belirtmeyen	4	1

Ön değerlendirmede öğrencilerin 14'ü "kaynama sıvının her yerinde gerçekleşir" yanıtını vererek doğru cevaplamıştır (Tablo 7). Nedenler incelendiğinde "ısı sıvının her yerine etki ettiği için" yanıtını veren 8 katılımcı kısmen doğru cevap vermiştir. Öğrencilerden 4'ü "sıvının önce altı kaynadığı için kaynama sıvının her yerinde gerçekleşmez" cevabını verirken, 3 katılımcı "ısı sıvının her yerine etki etmediği için kaynama sıvının her yerinde gerçekleşmez" cevabını vermiştir. Son değerlendirme sonuçları incelendiğinde 22 öğrenci "tanecikler ısı aldığı için sıvının her yerinde hareketlenme olur bu yüzden kaynama sıvının her yerinde gerçekleşir" cevabını vererek bilimsel olarak doğru açıklamada bulunmuşlardır. "Sıvının önce altı kaynadığı için kaynama sıvının her yerinde gerçekleşmez" yanılgısına sahip öğrencilerin tamamı, bu yanılgılarını uygulama sonunda terk etmiştir.

Tablo 8. "Kaynayan Suda Kabarcıklar Çıkmasının Nedeni Nedir?" Sorusuna Verilen Yanıtlar

	Ön Değerlendirme(f)	Son Değerlendirme(f)
Kaynayan sıvının her taraftan buharlaşması	3	16
Sıvının çok kaynaması	14	-
Isının alttan etki etmesi	4	-
Sıvı taneciklerinin hızının artması	-	5
Sıvının sıcaklığı ile hava çıkması	-	4
Diğer	4	-

Ön değerlendirmede 25 öğrenciden sadece 3'ü "kaynayan sıvı her taraftan buharlaştığı için kaynayan suda kabarcıklar çıkar" yanıtını vererek doğru açıklamada bulunmuşlardır (Tablo 8). 14 öğrenci "sıvı çok kaynadığı için kaynayan sudan kabarcıklar çıkar" cevabını vererek tam olarak doğru yanıt verememişlerdir. Bu öğrenciler buharlaşma olayını göz ardı etmiştir. Dört öğrenci "ısı alttan etki ettiği için kaynayan suda kabarcıklar çıkar" cevabını vererek yanlış bir açıklamada bulunmuşlardır. Dört öğrenci birbirinden farklı cevap verdiği için diğer başlığı altında toplanmıştır. Diğer olarak belirttiğimiz kısmın içinde "yoğuştuğu için", "yoğunluğu arttığı için", "tanecikler suda dağıldığı için" ve "tanecikler gevşediği için" nedenleri yer almaktadır. Ön değerlendirmede 22 öğrenci buharlaşma olayının her sıcaklıkta gerçekleştiğini ve kaynama olayı esnasında suyun her taraftan buharlaştığını düşünememiştir. Son değerlendirmede 16 öğrenci "sıvı her taraftan buharlaştığı için kaynayan suda kabarcıklar çıkar" yanıtını vererek bilimsel olarak doğru açıklamada bulunmuşlardır. Beş katılımcı ise "sıvı taneciklerinin hızı arttığı için kaynayan suda kabarcıklar çıkar" cevabıyla kısmen doğru açıklamada bulunmuşlardır. Dört katılımcı "sıvının sıcaklığı ile hava çıkar" cevabını vererek buharlaşma olayının her sıcaklıkta gerçekleştiğini göz ardı etmişlerdir. Son değerlendirmede soruya verilen doğru cevap sayısı artmıştır.

TARTIŞMA VE SONUÇ

Yapılan çalışmada elde edilen veriler değerlendirildiğinde 8. Sınıf öğrencilerinin buharlaşma ve kaynama kavramlarına ilişkin kavram yanılgılarının 5E öğrenme döngüsü içinde uygulanan kavramsal değişim metinleriyle önemli ölçüde giderildiği gözlenmiştir. Kavram yanılgısı en çok "kaynama nedir?" ve "buharlaşma nedir?" sorularına verilen yanıtlarda gözlenmiştir. "Kaynama olmadan buharlaşma olmaz" ve "buharlaşma sıvıyı yok etmektir" cevapları bu sorulardaki en kuvvetli kavram yanılgılarıdır. Fakat günlük hayatta, öğrencilerin aşina olduğu bir bağlam içinde sorulan sorularda öğrencilerin kavram yanılgılarının daha az olduğu tespit edilmiştir. Örneğin, "çamaşırları sıcak yerde mi yoksa soğuk yerde mi daha çabuk kuruturuz?" sorusuna daha yüksek oranda doğru yanıt vermeleri, katılımcıların günlük hayatta sıkça karşılaştıkları olayları daha kolay özümsediklerini göstermektedir. Bu sebeple kavram öğretiminin günlük hayatla ilişkilendirilerek yapılmasına özen gösterilmelidir.

Bu çalışmaya benzer olarak, Kırıkkaya ve Güllü (2008) çalışmasında buharlaşma ve kaynama kavramları ile ilgili 5.sınıf öğrencilerinin sahip oldukları kavram yanılgılarını tespit etmişlerdir. Yaptığımız çalışma ile bu çalışma tarafından tespit edilen birçok kavram yanılgısı birbiri ile örtüşmektedir. Her iki çalışmada da tespit edilen yanılgılar şu şekildedir; "kaynama olmadan buharlaşma olmaz", "her sıcaklıkta buharlaşma olmaz", "elimize kolonya sürdüğümüzde serinlememizin nedeni içerisindeki asit ve alkoldür", "kaynama her sıcaklıkta gerçekleşir". İki çalışmanın örneklemini oluşturan öğrenciler arasında gelişim düzeyi farklılığı olmasına rağmen tespit edilen yanılgılar aynıdır. Bu da yerleşmiş kavram yanılgılarının farklı sınıf seviyelerinde kalıcılığını koruduğunu göstermektedir.

Öğrencilerin sahip oldukları yanılgılar büyük oranda giderilmiştir. Fakat bazı kavram yanılgılarının kalıcılığı düşünüldüğünde, kavramsal değişim metinleri yanında kavram yanılgılarını giderecek ek yöntemler de kullanılabilir. Bu çalışma sonunda anlam çözümleme tablosu yapılmış buharlaşma ve kaynama kavramlarının özellikleri daha da somutlaştırılmıştır. Anlam çözümleme tablolarına her konunun bitiminde yer verilmesi öğrencilerin kavramları daha iyi anlamlandırmalarını sağlayacaktır. Öğretimin başında, işlenecek konu ile ilgili öğrencilerin kavram yanılgıları tespit edilmeli ve öğretim aşamaları tespit edilen kavram yanılgılarına odaklanılarak hazırlanmalıdır. Öğretmen kılavuz kitapları öğretim öncesi öğrencilerde var olabilecek kavram yanılgıları hakkında öğretmenleri bilgilendirecek şekilde hazırlanmalıdır. Muhtemel yanılgılar dikkate alınarak öğrenme süreci planlanmalıdır.

EK-1

Açık Uçlu Sorular
1. Kaynama nedir?
2. Buharlaşma nedir?
3. Elinize kolonya sürdüğünüzde serinlemenizin nedeni nedir?
4. Buharlaşma her sıcaklıkta gerçekleşir mi? Neden?
5. Kaynama her sıcaklıkta gerçekleşir mi? Neden?
6. Çamaşırlar sıcak yerde mi yoksa soğuk yerde mi daha çabuk kurur? Neden?
7. Kaynama sıvının her yerinde gerçekleşir mi? Neden?
8. Kaynayan suda kabarcıklar çıkmasının nedeni nedir?

EK-2

Kavramsal Değişim Metni-1

Bazı öğrenciler buharlaşma ve kaynama kavramları ile ilgili aşağıdaki yanlış düşüncelere sahip olabilir.
*Kaynama sıvıyı buharlaştırmak için yapılan işlemdir.
*Buharlaşma sıvıyı yok etmektir.
*Buharlaşma olması için sıvının kaynaması gerekir.

Üzgünüm…
Eğer sizde buharlaşma ve kaynama kavramları ile ilgili bu şekilde düşünüyorsanız bu soruya doğru cevap veremediniz demektir…

Çünkü
Bu düşünceleriniz yanlıştır. Bu yanlış düşüncelerinizin sebebi buharlaşma ve kaynama kavramlarını ayırt edemiyor oluşunuz olabilir. Ya da buharlaşma olması için sıvının kaynaması gerektiğini düşünmenizin sebebi kaynayan sıvının buharlaşmasını daha net gözlemlediğinizden olabilir. Gaz halindeki maddenin havaya karışma anını tam göremediğiniz için sıvıyı yok oluyormuş gibi algılayıp bir yanılgıya düşebilirsiniz. Buharlaşan sıvıyı gözünüzle göremediğiniz için yok olduğunu düşünebilirsiniz.

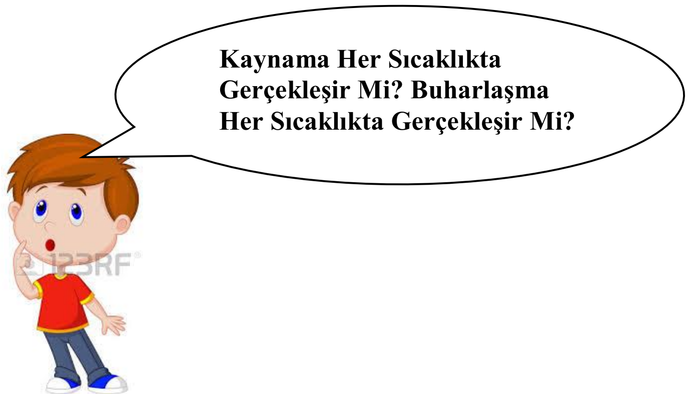
Şunu bilmelisiniz ki kaynama ile buharlaşma kavramları aynı kavramlar değildir. Kaynamanın basit tanımı ısı alan sıvının fokurdamasıdır diyebiliriz. Kaynamanın genel tanımı ise sıvının buhar basıncının dış basınca eşit olduğunda sıvının her yerinden gaz kabarcıkları çıkmasıdır. Diğer bir kaynama tanımı ise şöyledir: ısıtılan sıvının sıcaklığı belli bir noktaya geldiğinde sıvı taneciklerinin maksimum hıza ulaşmasıdır.

Buharlaşma sıvı haldeki maddenin ısı alarak gaz haline geçmesidir. Sıvı haldeki madde gaz haline geçer ve havaya karışır. Bildiğimiz gibi bazı gazlar renksiz maddelerdir. Eğer buharlaşma yok olmak olsa idi su döngüsü diye bir şey olmazdı. Yeryüzündeki sular ısının etkisi ile buharlaşarak atmosfere karışır. Bu sular yok olmaz.

Buharlaşma olması için sıvının ısı alması yeterlidir. Sıvının kaynamasına gerek yoktur. Isı alan her sıvı buharlaşır.

Tebrikler!!!
Artık buharlaşma ve kaynama kavramlarını doğru bir şekilde ifade edebilirsiniz.

Kavramsal Değişim Metni-2



Bazı öğrenciler buharlaşma, kaynama kavramları ve sıcaklıkla ilgili aşağıdaki yanlış düşüncelere sahip olabilir.

*Buharlaşma olması için sıvının buharlaşma noktasına gelmesi gerekir.

*Kaynama olması için sıvının ısı alması yeterlidir.

Üzgünüm…
Eğer sizde buharlaşma ve kaynama kavramları ile ilgili bu şekilde düşünüyorsanız bu soruya doğru cevap veremediniz demektir…

Çünkü
Bu düşünceleriniz yanlıştır. Bu yanlış düşüncelerinizin sebebi kaynama ve buharlaşma kavramlarını karıştırıyor olmanız olabilir.

Şunu bilmelisiniz ki buharlaşma ve kaynama kavramları farklı özelliklere sahip kavramlardır. Her sıvının kendine ait kaynama noktası vardır. Örneğin; suyu kaynatmak için ateş üzerine yerleştirdiğiniz kap içerisindeki suyun 100C sıcaklığa gelmesini beklemeniz gerekir. 100C sıcaklığa ulaşmayan suyu için kaynama olayı gerçekleşmez. Sıcaklık 100C de ise kaynama gerçekleşir. Başka bir sıvı olan alkolü kaynatmak isterseniz alkolün kaynama sıcaklığı olan 78C'ye ulaşmasını beklemeniz gerekir. Bu sıcaklığa ulaşmayan alkol kaynamaz. Bu iki örnekten her sıvının belli bir kaynama sıcaklığı olduğunu kaynama olayının her sıcaklıkta gerçekleşmediğini öğrenmiş oldunuz. Bilimsel olarak kaynama sıcaklığına kaynama noktası da denilmektedir.

Buharlaşma ise her sıcaklıkta gerçekleşen bir olaydır. Buharlaşma olması için sıvının ısı alması yeterlidir. Örneğin; eriyen karın buharlaşmasını düşününüz. Güneşin birazcık bile etrafı ısıtması eriyen karların buharlaşmasına neden olmaktadır. Makarna yaparken önce ocağa su koyup kaynamasını beklersiniz. Bu esnada ısı alan suyun yavaşça yüzeyden buhara dönüştüğünü fark etmişsinizdir. Suyu ısıtırken suyun sıcaklığı 30C, 40C, 53C, 76C de olsa buharlaşma olayının gerçekleştiğini gözlemleyebilirsiniz. Örnekten de anlaşılacağı gibi sıvıların belli bir buharlaşma sıcaklığı yoktur. Sıvılar her sıcaklıkta buharlaşırlar. Kaynama sıcaklığına ulaşan sıvının buharlaşma hızı maksimum düzeydedir.

Tebrikler!!!
Artık sıvıların belli bir sıcaklıkta kaynadığını fakat her sıcaklıkta buharlaştığını biliyorsunuz.

Kavramsal Değişim Metni-3

Bazı öğrenciler günlük hayattaki örneklerde buharlaşma ile ilgili aşağıdaki yanlış düşüncelere sahip olabilir.
*Kolonyanın içerisindeki alkol serinleme sebebimizdir.
*Kolonyanın içerisindeki asit serinleme sebebimizdir.

Üzgünüm…
Eğer sizde günlük hayattaki örneklerde buharlaşma ile ilgili bu şekilde düşünüyorsanız bu soruya doğru cevap veremediniz demektir…

Çünkü
Bu düşünceleriniz yanlıştır. Bu yanlış düşüncenizin sebebi kolonyayı buharlaşma ile ilişkilendirememiş olmanız olabilir.

Kolonyanın içerisinde alkol, su ve limon, tütün gibi maddelerin esansları bulunur. Kolonya sürdüğümüzde serinlememizin nedeni kolonya içerisindeki alkol ve asit değildir. Alkol kolonyayı oluşturan bileşenlerden bir tanesidir. Alkolün mikrop kırıcı özelliği vardır. Kolonya içerisindeki asit miktarı azdır. Asitler tahriş edici maddelerdir. Asitler serinleme nedeniniz değildir.

Kolonya bilindiği gibi sıvı bir maddedir. Sıvı olan her madde buharlaşırken ısı alır. Tıpkı banyo sonrasında saçlarınızı kurutmak için sıcak hava üfleyen saç kurutma makinelerini kullanıyor olmanız gibi. Saç kurutma işlemi saçınızdaki fazla suyu buharlaştırmaktır. Saçlarımızdaki fazla su makinenin üflediği havadan ısı alarak buharlaşır. Kolonya da buharlaşırken elimizden ısı alır ve bu bizim serinlememizi sağlar.

Tebrikler!!!
Artık her sıvının buharlaşırken ısı aldığını biliyorsunuz.

Kavramsal Değişim Metni-4

Bazı öğrenciler kaynamanın sıvının neresinde gerçekleştiği ile ilgili aşağıdaki yanlış düşüncelere sahip olabilir.

*Kaynama sıvının sadece alt kısmında gerçekleşir.
*Kaynama sıvının her yerinde olmaz.
*Isı alttan etki ettiği için kaynayan suda kabarcıklar oluşur.

Üzgünüm…
Eğer sizde kaynamanın sıvının neresinde gerçekleştiği ile ilgili bu şekilde düşünüyorsanız bu soruya doğru cevap veremediniz demektir…

Çünkü
Bu düşünceleriniz yanlıştır. Bu yanlış düşüncenizin sebebi kaynama olayını gözlemlerken sıvının alt kısmında oluşan kabarcıkları önce görmeniz olabilir. Bu size kaynamanın sadece sıvının alt kısmında gerçekleştiği yanılgısına düşürebilir.

Kaynama sıvının her yerinde gerçekleşen bir olaydır. Sıvı tanecikleri ısı aldığı için hareketleri hızlanır. Hızlanan sıvı tanecikleri yukarı doğru hareket eder. Sıcaklığı azalan tanecik aşağı iner. Aşağıdan ısı alan taneciklerin sıcaklığı artar ve yukarı doğru çıkar. Bu döngü devam eder. Böylece sıvının her yerinde hareketlenme olur. Bu hareketlenme kaynama olayıdır. Yani kaynama sıvının her yerinde gerçekleşir.

Kaynayan su her taraftan buharlaştığı için kaynayan suda kabarcıklar çıkar. Buharlaşma bildiğiniz gibi sıvının gaz hale dönüşmesidir. Sıvının alt kısmı ya da orta kısımlarında gerçekleşen buharlaşma olayı sonucunda o bölgelerdeki sıvı taneciklerinin bir kısmı gaza dönüşür. Gaza dönüşen tanecikler baloncuk oluşturur ve yüzeye çıkma eğilimi gösterirler. Bu şekilde kaynayan suda kabarcıklar çıkar.

Tebrikler!!!
Artık kaynamanın sıvının her yerinde gerçekleştiğini ve kaynayan su her taraftan buharlaştığı için kaynayan sudan kabarcıklar çıktığını biliyorsunuz.

TEACHING METHODS OF SCIENCE TEACHERS ACCORDING TO STUDENTS' VIEWS

Aslı KAYGIN

ABSTRACT: The purpose of this study is to determine teaching methods employed by the science teachers in their instructions and students' views about these methods in practice. Data was gathered from 5th grade 75 students who study in a middle school located at south east part of the Turkey. A likert type instrument was used to assess students' views evaluated via a descriptive analyses method. The results of the study indicate that science teachers most frequently use verbal lecture, demonstration in class, whole class discussion, and question-answer teaching methods in their instructions. Students most frequently want to be used verbal lecture, doing experiment in laboratory, demonstration in class, observation on events in nature, and out-of- class or out-of-school trips as methods of teaching. Implications for classroom practices were discussed.

Key words: science teaching, teaching methods, science education

ÖĞRENCİ GÖRÜŞLERİNE GÖRE FEN BİLİMLERİ ÖĞRETMENLERİNİN ÖĞRETİM YÖNTEMLERİ

ÖZET: Bu çalışmada, Fen Bilimleri öğretmenlerinin kullandığı öğretim yöntemleri ve bu yöntemlerin uygulanmasına ilişkin öğrenci görüşlerini tespit etmek amaçlanmıştır. Veriler Türkiye'nin güney doğu bölgesinde yer alan bir ortaokulun 5. sınıfında öğrenim gören 75 öğrenciden toplanmıştır. Veri toplama aracı olarak likert tipi anket kullanılmıştır. Betimsel yöntemle öğrencilerin görüşleri analiz edilmiştir. Araştırmadan elde edilen bulgulara göre; Fen Bilimleri öğretmenlerinin en sık kullandığı yöntemler; anlatım yöntemi, öğretmenin sınıfta deney yapması, sınıf tartışması ve soru cevap tekniği ile konunun işlenmesidir. Öğrencilerin fen öğretiminde en sık kullanılmasını istedikleri yöntemler ise anlatım yöntemi, laboratuvarda deney yapma, öğretmenin sınıfta deney yapması, doğa olayları hakkında gözlem yapma, sınıf veya okul dışına gezi düzenlenmesi yöntemleridir. Sınıf içi uygulamalara yönelik çıkarımlar tartışılmıştır.

Anahtar kelimeler: fen öğretimi, öğretim yöntemleri, fen eğitimi

GİRİŞ

Öğrencilere bilgileri direkt olarak aktarmak yerine, bilgilere ulaşmak için onlara rehberlik edip beceri kazandırmak günümüzdeki eğitim sisteminin temel amacı olmalıdır (Doğru ve Aydoğdu, 2003). Yani öğrenci ezberlemek yerine, kavrayarak öğrenmelidir. Karşılaştığı problemi bilimsel süreç becerilerini kullanarak çözebilmelidir. Bu becerilerin kazanıldığı dersin başında ise Fen Bilimleri dersi gelmektedir (Doğdu ve Aydoğdu, 2003).

Fen Bilimleri dersinin amacı, öğrencilerin fen kavramları kalıcı bir şekilde öğrenmelerini sağlamak, onlara bilimsel düşünme, araştırma ve sorgulama kabiliyeti kazandırmaktır (Birbir, 1999). Aktepe ve Aktepe (2009)' ye göre ise fen eğitiminde amaç, yaşadığı çevreyi doğru anlaması için fayda sağlamak ve bilimsel düşünme yeteneği kazandırmak olmalıdır. Fen Bilimleri eğitiminde, günümüzdeki yenilikler takip edilebilirse istenilen amaca ulaşılabilir (Akdeniz, Yiğit ve Kurt, 2002). 2006 yılında MEB tarafından, yapılandırmacı öğrenme yaklaşımına dayalı yeni bir program uygulamaya konulmuştur. Yenilenen bu program, öğretmen merkezli yöntemler yerine öğrenciyi merkeze alan yöntemlerin kullanılmasını önermektedir (MEBTTKB, 2013). Fakat öğretmenler programları uygulamadığı sürece programların yenilenmesi hiçbir şey ifade etmez (Tekbıyık & Akdeniz, 2008). Öğretmen, öğretime yön veren, öğrencide davranış değişikliğine yol açan en önemli öğedir (Sönmez, 2002). Öğretmenin öğrenciyle ve öğrenciye uyguladığı yöntemler arasında bir etkileşim olmalıdır. Çünkü öğrenciler farklı farklı yöntemlerle öğrenerek başarıya ulaşabilirler. Bu nedenle öğretmen sayıca fazla yöntemler geliştirmeli, bunlardan uygun olanlarını seçip kullanmalıdır (Şahin, 1998).

Ülkemizde Sıklıkla Kullanılan Öğretim Yöntemleri

Anlatım yöntemi, öğretmen merkezli bir yöntem olup, pasif bir şekilde dinleyen öğrencilere bilgilerin direkt olarak aktarıldığı geleneksel yöntemdir (Küçükahmet, 1997). Modern öğretimde anlatım yöntemine pek fazla yer verilmemesine rağmen öğretmenler bu yöntemi bazı durumlarda tercih etmektedirler. Fakat anlatım yönteminde öğretmen, bir plan dahilinde hareket eder bu nedenle bazı sınırlılıkları vardır. Bu sınırlılıklar: konular sürekli tekrar edildiği için dersin sıkıcı hale gelmesi, öğrenci ile yeterli iletişim kurulamadığı için ilgi ve ihtiyaçlarının belirlenememesi, öğrenciler derste pasif oldukları için geri bildirimlerin verilememesidir (Küçükahmet, 1997).

Soru Cevap Yöntemi; öğrenciye bilgilerin hatırlatılması, konuların analiz edilmesi ve tekrar edilmesi amacıyla kullanılan etkin bir yöntemdir (Demircioğlu, 2003). Bu yöntem ile öğrencinin utangaçlığı gider ve grup içerisinde kendini gerçekleştirme fırsatı bulur (Duruhan, 2001). Bu yöntemi uygulayan öğretmen soruları dikkatli bir şekilde seçmeli, öğrenciyi düşündüren ve öğrencinin yaratıcılığını geliştirecek sorular sormalıdır (Doğanay, 2002).

Problem Çözme Yöntemi; bu yöntem bilimsel araştırma yöntemini temel alır. Öğrenci bir problem durumuyla karşılaştığında, problemi tanıma, hipotez kurma, veri toplama, değerlendirme, açıklama basamaklarını kullanarak sonuca ulaşır ve test eder (Aktepe ve Aktepe, 2009). Öğrenci o problemi çözdüğü zaman cesaretlenir ve her zaman problemi çözecek gücü kendinde bulur (Küçükahmet, 1997).

Gösteri (Demonstrasyon) Yöntemi; öğretmenin sınıf ortamında yapacağı şeyi öğrencilere göstererek yapmasına veya bir ilkeyi doğrulamak için yapacağı faaliyete denir (Doğanay, 2002). Bu yöntemin amacı, konuyu göstererek açıklamak ve ispat etmektir (Doğanay, 2002). Gösteri yönteminin bazı sınırlılıkları vardır. Bu sınırlılıklar: yöntem uygulanırken fazla malzeme gerektirmesi ve uzun süreli planlama gerektirmesidir. Gösteri yönteminde öğretmen planı yapıp materyali önceden hazırlamalı ve öğrencilerin görebileceği şekilde yapmalıdır (Küçükahmet, 1997).

Gezi-Gözlem Yöntemi; önceden hazırlanmış bir planla olayları veya durumları incelemektir (Büyükkaragöz ve Çivi, 1994). Bu yöntem öğrenciye bakmayı değil, görmeyi öğretir (Duruhan, 2002). Gezi gözlem yönteminin fazla zaman alması ve maddiyat gibi bazı sınırlılıkları vardır. Fakat bunlara rağmen, öğretmenler bu yöntemden vazgeçmemeli ve mesafesi kısa da olsa geziler düzenlemelidir (Doğanay, 1993). Bu yöntem öğrenciler için oldukça yararlı bir yöntemdir. Çünkü öğrencide okul çevre ilişkisinin gelişmesi, gözlem yapma yeteneği kazanması, merak duygusunun uyandırılması gibi durumlar bakımından etkisi oldukça büyüktür (Gardner & Demirtaş & Doğanay, 1997; Gök & Girgin, 2001).

Rol Oynama Yöntemi; bir durumun veya olayın sınıf içerisindeki bir grubun önünde seçilen üyelerce dramatize edilmesidir. Rol oynama yönteminde öğrenciler yalnızca dinlemek yerine konunun ayrıntısına inerler (Çebi, 1985).

Tartışma Yöntemi; bu yöntemde öğrenciler sorunlara çözüm yolları ararlar. Yöntemin esas amacı ise tüm grubun tartışmaya katılmasını sağlamaktır (Aktepe ve Aktepe, 2009).

Laboratuar Yöntemi**;** öğrencilerin anlatılan konuları öğrenmek için laboratuar ortamında bireysel olarak ya da gruplar halinde deneyler, gözlemler ve araştırmalar yapmasıdır. Öğrenciler bu yöntem sayesinde yaparak yaşayarak öğrenirler. (Hesapçıoğlu, 1994). Sorunların ortaya çıkış nedenleri bulmak için deney yönteminin uygulanması gereklidir. Bir varsayımı ispatlamak, bilimsel bir gerçeği gözlemleyip göstermek laboratuar yönteminin amaçlarındandır (Doğanay,1993; Gök & Girgin, 2001).

Proje yöntemi; bir konu ile ilgili derinlemesine araştırma yapmak için kullanılan yöntemdir. Proje yönteminde öğrenciler yaparak yaşayarak öğrenirler ve bu yöntemin sonucunda bir ürün ortaya çıkar (Kaptan ve Korkmaz, 2002). Proje Yönteminde öğrenci pasif bir konumda olmak yerine, araştıran, inceleyen, bilgileri kullanabilen bir konumda olmalıdır (Uzun, 2007). Bu yöntem de öğrenciler aktiftir ve öğrencilerin yaratıcı düşünme becerileri gelişir (Aktepe ve Aktepe, 2009).

Buna göre, Fen eğitiminde öğretmenler, bilgiyi direkt aktarmak yerine öğrencilere, araştırma yapmayı, düşünerek sonuçlara ulaşmayı, sonuçları yorumlamayı ve problemleri çözebilmeyi öğretmelidirler. Aynı zamanda öğretmenler, öğrencilere model olan, iletişimi güçlü, bireysel farklılıklara özen gösteren, alanında yeterli, kendine güvenen, yeniliklere açık insanlardır (Aktepe ve Aktepe, 2009).

Bu çalışma da, Fen Bilimleri öğretmenlerinin derste kullandıkları yöntemlerin sıklıklarına ilişkin öğrenci görüşlerini ortaya koymaktadır. Ayrıca kullanılan öğretim yöntemlerinin hangi sıklıkla kullanılmasının daha iyi olacağına dair öğrencilerin düşünceleri de alınmıştır. Çünkü öğretim yapılırken öğrencilerin bireysel farklılıkları dikkate alınmalıdır ki öğrenmenin başlatılması ve yönlendirilmesi anlamlı hale gelebilsin. Öğretmen öğrenciyi ne kadar iyi tanırsa yönlendirmesi ve güdülemesi de o kadar kolay olur.

Araştırmanın Amacı ve Araştırma Soruları

Bu araştırmanın amacı; 5. sınıflarda Fen Bilimleri öğretmenlerinin kullandığı yöntemlerini ve bu yöntemlerin öğrenci görüşlerine göre hangi sıklıkla uygulandığını tespit etmektir. Bu amaca göre; aşağıdaki iki soruya cevap aranmıştır:

1. Fen Bilimleri öğretmenlerinin kullandığı öğretim yöntemleri nelerdir? Söz konusu öğretim yöntemlerinin sıklığı nedir?
2. Öğrencilerin Fen Bilimleri dersinde kullanılmasını istedikleri öğretim yöntemlerinin sıklığı nedir?

YÖNTEM

Çalışma Grubu

Çalışma grubunu, Gaziantep ilindeki bir ortaokulda 2014-2015 eğitim-öğretim yılı 5. sınıfa devam eden 75 öğrenci oluşturmuştur. Seçilen öğrencilerin cinsiyete göre dağılımları Tablo 1'de verilmiştir.

Tablo 1. Araştırma Grubundaki Öğrencilerin Cinsiyete Göre Dağılımları

Cinsiyet	(f)	(%)
Kız	44	59
Erkek	31	41
TOPLAM	75	100

Çalışmadaki öğrencilerin 44'ü kız, 31'i erkek olmak üzere toplam 75 öğrenciye anket uygulanmıştır. Bunun yüzdelik dağılımına bakıldığında % 59'sini kızlar, % 41'ini erkekler oluşturmaktadır.

Veri Toplama Aracı ve Süreci

Bu araştırma da Genel Tarama Modeli kullanılmıştır. Genel Tarama Modeli, Karasar'a göre, çok sayıda elemandan oluşur. Grup hakkında genel bir yargıya varmak için çalışma grubunun tümü ile ya da ondan alınacak bir grup üzerinde yapılan tarama düzenlemeleridir (Karasar, 1994). Bu çalışmada, Doğru'nun (2000) benzer bir araştırmada kullandığı anketten yararlanılmıştır. Anket iki bölümden oluşmaktadır. İki bölümde de on soru bulunmaktadır. Ankette "üçlü likert tipi" ölçek kullanılmıştır. Öğrenciler anketteki sorulara "hiç", "ara sıra" ve "her fırsatta" kategorilerinden işaretleyerek cevap vermişlerdir. Oluşturulan ölçekte; nitelik grupları, bunların sınırları ve verilen puanları aşağıda gösterilmiştir.

Tablo 2. Nitelik Gruplarının Sınırları Ve Verilen Puan Ölçeği

Verilen Puan	Nitelik Grupları	Sınırı
3	Çok Yeterli	2.34-3.00
2	Yeterli	1.67-2.33
1	Kısmen Yeterli	1.00-1.66

Verilerin Analizi

Bu araştırma da Fen Bilimleri öğretmenlerinin kullandıkları öğretim yöntemleri, öğrenci görüşlerine göre betimsel olarak analiz edilmiştir. Fen Bilimleri öğretmenlerinin kullandığı öğretim yöntemlerini ve yöntemlerin uygulanmasına ilişkin öğrenci görüşlerinin frekans (f) ve yüzdeleri (%) kullanılmıştır. Öğrenci görüşlerinin düzeyini belirlemek amacı ile aritmetik ortalama değerleri de kullanılmıştır.

BULGULAR VE YORUM

Bu kısımda, Fen Bilimleri öğretmenlerinin kullandığı öğretim yöntemlerinin ve bu yöntemlerin uygulanmasına ilişkin öğrenci görüşleri Tablo 3'de verilmiştir.

Tablo 3. Fen Bilimleri Öğretmenlerinin Kullandığı Öğretim Yöntemlerinin Ve Yöntemlerin Uygulanmasına İlişkin Öğrenci Görüşleri

Anket Maddeleri	Hiç		Ara Sıra		Her Fırsatta		
A.Fen Bilimleri dersini işlerken, öğretim yöntemlerinden hangileri sıklıkla kullanılmaktadır	f	%	f	%	f	%	$\bar{X}$
1. Öğretmenin ders anlatması	0	0	1	1	74	99	2,99
2. Laboratuarda deney yapma	7	9	55	74	13	17	2,08
3. Soru cevap şeklinde konunun işlenmesi	4	5	37	49	34	46	2,40
4. Öğretmenin sınıf ortamında deney yapması ve göstermesi	2	3	36	48	37	49	2,47
5. Sınıfça ders konusu hakkındaki düşünceleri tartışma	7	9	28	37	40	54	2,44
6. Problem çözme	8	11	39	52	28	37	2,27
7. Sınıf veya okul dışı gezi düzenleme	62	83	10	13	3	4	1,21
8. Doğa olayları hakkında gözlem yapma	12	16	36	48	27	36	2,20
9. Proje yapma	2	3	50	67	23	30	2,28
10. Canlandırma (rol yapma) yaparak ders işleme	13	17	32	43	30	40	2,23

Öğrencilerin Fen Bilimleri öğretiminde en yüksek seviyede görüş bildirdiği ifade, “Öğretmenin ders anlatması” ifadesi olmuştur. Bu ifadenin aritmetik ortalaması tabloda gösterildiği gibi 2,99 bulunmuştur. Öğrencilerin % 99’u “her fırsatta”, % 1’i “ara sıra” seçeneğini işaretlemişlerdir. Aritmetik ortalama değeri 2,47 olan “Öğretmenin deney yapması ve göstermesi” ifadesi en yüksek düzeyde ikinci görüş bildiren ifade olmuştur. Öğrencilerin Fen Bilimleri öğretiminde en düşük seviyede görüş bildirdiği ifade 1,21 aritmetik ortalamayla “Sınıf veya okul dışı gezi düzenleme” ifadesi olmuştur. Aritmetik ortalama değeri 2,08 olan “Laboratuarda deney yapma” ifadesi en az düzeyde ikinci görüş bildiren ifade olmuştur. Sonuç olarak; öğrencilere göre Fen Bilimleri öğretiminde en sık kullanılan öğretim yöntemlerinden en az kullanılana doğru sıralama şu şekildedir:

1. Öğretmenin dersi anlatması. (Aritmetik Ortalama = 2,99) “her fırsatta”
2. Öğretmenin sınıf ortamında deney yapması ve göstermesi. (Aritmetik Ortalama =2,47) “her fırsatta”
3. Sınıfça ders konusu hakkındaki düşünceleri tartışma. (Aritmetik Ortalama = 2,44) “her fırsatta”
4. Soru cevap şeklinde konunun işlenmesi. (Aritmetik Ortalama = 2,40) “ara sıra”
5. Proje yapma. (Aritmetik Ortalama = 2,28) “ara sıra”
6. Problem çözme. (Aritmetik Ortalama = 2,27) “ara sıra”
7. Canlandırma (rol yapma) yaparak ders işleme. (Aritmetik Ortalama = 2,23) “ara sıra”
8. Doğa olayları hakkında gözlem yapma. (Aritmetik Ortalama = 2,20) “ara sıra”
9. Laboratuarda deney yapma. (Aritmetik Ortalama = 2,08) “ara sıra”
10. Sınıf veya okul dışı gezi düzenleme. (Aritmetik Ortalama = 1,21) “hiç”

Öğrencilerin Fen Bilimleri öğretmenlerinin kullandıkları yöntemlerin hangi sıklıkla kullanmasının daha iyi olacağına yönelik görüşleri ise Tablo 4’de verilmiştir.

Tablo 4. Fen Bilimleri Öğretmenlerinin Kullandığı Öğretim Yöntemlerinin Öğrencilere Göre Hangi Sıklıkla Kullanılmasının İyi Olacağına Yönelik Öğrenci Görüşleri

Anket Maddeleri	Hiç		Ara Sıra		Her Fırsatta		
B.Fen ve Teknoloji dersini işlerken öğretim yöntemlerinden size göre, bu yöntemlerden hangilerinin daha sıklıkla kullanılması iyi olur.	f	%	f	%	f	%	$\bar{X}$
1. Öğretmenin ders anlatması	3	4	10	14	62	82	2,79
2. Laboratuarda deney yapma	0	0	13	18	62	82	2,83
3. Soru cevap şeklinde konunun işlenmesi	5	7	33	44	37	49	2,43
4. Öğretmenin sınıf ortamında deney yapması ve göstermesi	2	3	21	28	52	69	2,67
5. Sınıfça ders konusu hakkındaki düşünceleri tartışma	5	7	32	43	38	50	2,44

6. Problem çözme	16	21	30	40	29	39	2,17
7. Sınıf veya okul dışı gezi düzenleme	11	15	13	17	51	68	2,53
8. Doğa olayları hakkında gözlem yapma	3	4	26	35	46	61	2,57
9. Proje yapma	4	5	31	41	40	54	2,48
10. Canlandırma (rol yapma) yaparak ders işleme	8	11	22	29	45	60	2,49

Öğrencilerin 2,83 aritmetik ortalamayla en fazla görüş bildirdiği ifade "Laboratuarda deney yapması" ifadesi olmuştur. Öğrencilerin % 82'si "her fırsatta", % 18'i "ara sıra" seçeneğini işaretlemişlerdir. Öğrencilerin 2,79 aritmetik ortalamayla en yüksek seviyede ikinci görüş bildirdiği ifade "Öğretmenin ders anlatması" ifadesi olmuştur. Öğrencilerin en düşük seviyede görüş bildirdiği ifade ise 2,17 aritmetik ortalama ile "Problem çözme" olmuştur. Öğrencilerin % 39'u "her fırsatta", % 40'ı "ara sıra", % 21'i "hiç" seçeneğini işaretlemişlerdir. 2,43 aritmetik ortalama ile en az seviyede ikinci görüş bildirilen ifade ise "Soru cevap şeklinde konunun işlenmesi" olmuştur. Sonuç olarak; Çalışma grubundaki öğrencilerin Fen Bilimleri öğretiminde en sık kullanılmasını istediği öğretim yönteminden en az kullanılmasını istediği öğretim yöntemine doğru sıralaması şöyledir:

1. Laboratuarda deney yapması (Aritmetik Ortalama = 2,83) "her fırsatta"
2. Öğretmenin ders anlatması. (Aritmetik Ortalama = 2,79) "her fırsatta"
3. Öğretmenin sınıf ortamında deney yapması ve göstermesi. (Aritmetik Ortalama = 2,67) "her fırsatta"
4. Doğa olayları hakkında gözlem yapma. (Aritmetik Ortalama = 2,57) "her fırsatta"
5. Sınıf veya okul dışı gezi düzenleme. (Aritmetik Ortalama = 2,53) "her fırsatta"
6. Canlandırma (rol yapma) yaparak ders işleme. (Aritmetik Ortalama = 2,49) "her fırsatta"
7. Proje yapma. (Aritmetik Ortalama = 2,48) "her fırsatta"
8. Sınıfça ders konusu hakkındaki düşünceleri tartışma. (Aritmetik Ortalama = 2,44) "her fırsatta"
9. Soru cevap şeklinde konunun işlenmesi. (Aritmetik Ortalama =2,43) "her fırsatta"
10. Problem çözme. (Aritmetik Ortalama = 2,17) "ara sıra"

TARTIŞMA

Yapılan bu çalışmada anlatım yönteminin en sık kullanılan yöntem olduğu tespit edilmiştir. Anlatım yöntemini uygulamak diğer derslerde olduğu gibi Fen Bilimleri öğretiminde de kolay ve ekonomiktir. Anket sonuçlarına göre öğrenciler anlatım yönteminin her fırsatta kullanılmasını istemektedir. Bu sonuç anlatım yönteminin önemini ortaya koymaktadır. Öğrenciler bu yolla öğrenmeye alıştıkları için her şeyi öğretmenden dinlemeyi tercih etmektedirler. Öğretmenin deney yaparak göstermesi Fen Bilimleri öğretiminde en sık kullanılan ikinci yöntem, sınıfça tartışma ise Fen Bilimleri öğretiminde en sık kullanılan üçüncü yöntemdir. Öğrencilerin deney yapması onları derse karşı isteklendirir ve dersin eğlenceli geçmesini sağlar. Öğrenci deney yaparak konuyu somutlaştırdığı için ulaştıkları bilginin kalıcılığı da artar. Sınıf ortamında tartışma yönteminin kullanılması ise ortamın demokratik olmasını sağlar, öğrencideki empati yeteneğini geliştirir (Aktepe ve Aktepe, 2009). Öğrencilerin "laboratuarda deney yapma" yöntemini ilk sırada en sık kullanılmasını istemelerinin sebebi Fen Bilimleri dersini deney yaparak işleme bu dersi eğlenceli hale getirme isteklerindendir. Fakat öğrencilerin bu yöntemi ilk sıralarda kullanılmasını istemelerine rağmen laboratuarda deney yapma yöntemi derste sık kullanılmamaktadır. Bu da derste öğrencinin yeterince aktif olmadığını gösterir durumdadır.

Soru cevap yöntemi Fen Bilimleri öğretiminde "ara sıra" kullanılmaktadır. Soru cevap yöntemi öğrenciyi cesaretlendirir, güdüler, derse odaklar ve dikkatini toplamasına yardımcı olur. Böylece konu daha iyi pekişir (Aktepe ve Aktepe, 2009). Fakat anket sonuçlarına göre öğrencilerin soru cevap şeklinde konu işlenmesini son sıralarda istemektedirler. Bunun sebebi yanlış soru sormaktan çekinmeleri ve korkmaları olabilir.

Problem çözme yöntemi Fen Bilimleri öğretiminde anket sonuçlarına göre, "ara sıra" kullanılmaktadır. Öğrenciler bu yöntemin azda olsa ara sıra kullanılmasını istemektedirler. Çünkü bu yöntemde öğrenciler aktiftirler. Fakat öğrenciler problem çözme yönteminin ne anlama geldiğini veya nasıl uygulandığını bilmiyor olabilirler çünkü anket sonuçlarına göre ders öğretmeni bu yöntemi son sıralarda ara sıra kullanmaktadır. Eğer dersinde sık sık kullanmış olsaydı öğrencilerin istekleri de bu doğrultuda değişebilirdi.

Proje yöntemi Fen Bilimleri öğretiminde anket sonuçlarına göre, "ara sıra" kullanılmaktadır. Bu yöntemin uygulanması öğrencide öğrenme becerilerini geliştirip zenginleştireceği için pozitif katkı sağlar (Çepni, 2007). Öğrenciler ise bu yöntemi son sıralarda her fırsatta kullanılmasını istemektedirler.

Gezi gözlem yöntemleri, öğrencilerin çevrelerini öğrenmesi ve okul çevre ilişkilerinin geliştirilmesi açısından faydalıdır. Fen Bilimleri öğretiminde anket sonuçlarına göre, sınıf dışı gezi gözlem yöntemleri "hiç" kullanılmaktadır. Öğrenciler bu yöntemlerin ilk sırada kullanılmasını istemektedirler. Bu sonuçlar Öğrencilerin çevrelerini gezerek görerek öğrenmek istediklerini ancak yasal sorumluluğunun fazla olması ve disiplin sorunlarına yol açmasından dolayı kullanılmayan bir yöntem olduğunu göstermektedir. Canlandırma yöntemi yapılan çalışmaya göre Fen Bilimleri öğretiminde "ara sıra" kullanılmaktadır. Canlandırma yöntemi özel yetenek gerektiren bir yöntemdir. Öğrencilerin yaratıcılık ve empati yeteneğini geliştirir, onları cesaretlendirir ve dersi eğlenceli hale getirir (Aktepe ve Aktepe, 2009). Öğrenciler de anket sonuçlarına göre, canlandırma yöntemini orta sıralarda kullanılmasını istemektedirler.

SONUÇ VE ÖNERİLER

Bu araştırmanın ilk bölümünde, öğrenci görüşlerine göre Fen Bilimleri öğretmenlerinin öğretim yöntemlerini hangi sıklıkla kullandığı, ikinci bölümünde ise öğrencilere göre hangi yöntemlerin uygulanmasının daha iyi olacağı incelenmiştir. İnceleme sonrası bulgulardan yola çıkılarak ulaşılan sonuçlar şunlardır:

Öğrencilere göre Fen Bilimleri dersinde en çok kullanılan yöntemlerin, anlatım yöntemi, tartışma, soru-cevap yöntemi, öğretmenin sınıfta deney yaparak göstermesi, proje yapma gibi yöntemlerdir. En az kullanılan yöntemleri ise; Problem çözme yöntemi, Canlandırma yaparak ders işleme, Laboratuarda deney yapma, gezi düzenleme, gözlem yapma yöntemleri olduğu görülmektedir.

Fen Bilimleri öğretim yöntemlerinden hangisinin uygulanmasının daha iyi olacağına yönelik sonuçlar ise:
Öğretmenin dersi anlatması, deney yaparak ders işleme, gözlem yapma, gezi düzenleme gibi yöntemler öğrencilerin Fen Bilimleri dersinde daha sık kullanılmasını istedikleri yöntemlerdir. Öğrencilerin Fen Bilimleri öğretiminde daha az kullanılmasını istedikleri yöntemler ise, problem çözme, soru-cevap şeklinde konunun işlenmesi, proje yöntemi, tartışma yöntemi ve canlandırma gibi yöntemlerdir. Araştırma sonuçlarına göre, fen öğretiminde öğretmenlere şu önerilerde bulunulabilir:

Fen bilimleri dersi aktif öğrenme ilkesine göre işlenmelidir. Öğrenciler için geziler planlanmalı doğa olayları ile ilgili beraber gözlem yapılmalıdır. Fen dersleri mümkün olduğu kadar laboratuar ortamında yapılmalı öğrencilerin yaparak yaşayarak öğrenmesine imkan tanınmalıdır. Çünkü laboratuar dersleri ve laboratuarda deney yapılması öğrencilerin ilgisini çeker, dersi eğlenceli hale getirir ve dolayısıyla öğrencilerin öğrenmeye isteklerini arttırır. Böylelikle konu öğrenciler için daha kalıcı hale gelmiş olur. Aynı zamanda Projeleri öğrenciler günlük hayatla ilişkilendirdikleri ve topluma yararlı projelerin üretilmesini sağladıkları için öğretmenlerin bu yöntemi kullanmaları da faydalı olacaktır.

INVESTIGATION OF THE INFLUENCE OF THE PRE-SCHOOL EDUCATION ON THE SUCCES LEVELS OF UNDERGRADUATE STUDENTS IN ENGINEERING FACULTY

Emel DOKUR MERMERDAŞ
Yeditepe Primary School, Gaziantep, Turkey

Kasım MERMERDAŞ
Harran University, Civil Engineering Department, Şanlıurfa, Turkey

ABSTRACT: The facilities in Pre-school education (PSE) program covers science, math, arts, game, music, preparation for read-write etc. In this study, the influence of pre-school education on the students of engineering faculty where there is science based education was investigated. For this purpose, a comprehensive questionnaire was applied to 203 senior students studying in Engineering Faculty of Gaziantep University. The purpose of the questionnaire is to determine the level of different aspects of success between the students who received and not received PSE. The data obtained from questionnaire were statistically analyzed to find out the difference in the level of success. Based on the findings, it was observed that the students receiving PSE had been more successful in winning the university entrance exam and generally were more successful during studying in engineering faculty than the others. Knowing that although the level of preschool education is very low in Turkey (about 10%), there is an impressive finding that 41% of the students investigated in this study had received PSE.

Key words: Preschool education, higher education, science/math studies

OKULÖNCESİ EĞİTİMİNİN MÜHENDİSLİK FAKÜLTESİ ÖĞRENCİLERİNİN BAŞARI DÜZEYLERİ ÜZERİNDEKİ ETKİSİNİN ARAŞTIRILMASI

ÖZET: Okul öncesi eğitim programı fen, matematik, sanat, oyun, müzik, okuma-yazmaya hazırlık ve benzeri etkinlikleri içerir. Bu çalışmada okulöncesi eğitiminin fen tabanlı eğitim veren mühendislik fakültesindeki öğrencilerin başarıları üzerindeki yansımaları araştırılmıştır. Bu amaca yönelik olarak Gaziantep Üniversitesi Mühendislik fakültesinde öğrenim görmekte olan son sınıf öğrencilerine (203 kişi) anket uygulanmıştır. Anketin amacı okul öncesi eğitimi alan ve almayan öğrencilerin başarı düzeylerinin tespit edilmesidir. Bu çalışma kapsamında yapılan istatistiksel analiz ile okulöncesi eğitimi almış ve almamış öğrencilerin başarı düzeyleri arasında anlamlı farklılıklar olup olmadığı irdelenmiştir. Elde edilen bulgulara göre, okulöncesi eğitimi almış öğrencilerin üniversiteye girişte ve sonrasında lisans eğitimleri sürecinde okulöncesi eğitimi almamış olanlara göre nispeten daha başarılı oldukları görülmüştür. Ayrıca, Türkiye'de okulöncesi okullaşma oranının oldukça düşük seviyelerde olduğu düşünülürse, araştırmaya katılan öğrencilerin %41'nin okulöncesi eğitimi almış olmasının bu çalışmanın diğer önemli bir bulgusu olduğu söylenebilir.

Anahtar sözcükler: Okulöncesi eğitim, yükseköğrenim, fen/matematik uygulamaları

GİRİŞ

Okulöncesi eğitimi verilirken çocuklar çevrelerindeki dünyayı araştırırlar. Onlar dokunarak, bakarak, işiterek, tadarak evren hakkında bilgi kazanmaya çalışırlar. Okulöncesi eğitim programlarında yer alan fen ve matematik çalışmaları, çocukların doğal araştırma ve inceleme meraklarından yararlanılarak, onların çevrelerini ve doğayı tanımalarına, düşüncelerini açığa çıkarmalarına, sorular sormalarına vardım eden etkinliklerden oluşmaktadır (Ünal ve Akman, 2006). Olayları gözlemleyip, çeşitli aletlerin nasıl çalıştığını araştırarak, eğitici oyuncaklarla oynayarak, deneyler yaparak kısaca fen bilim süreçlerini kullanarak öğrenirler. Okulöncesi eğitiminin çocukların akademik başarılarını etkilediği bilinen bir gerçektir. Avrupa'da okulöncesi eğitimi çok yüksek bir orana sahipken Türkiye'de bu oran oldukça düşük düzeydedir (Yıldırım 2008). Türkiye'de okulöncesi eğitimde okullaşma oranı, 2000–2001 öğretim yılı verilerine göre yüzde 10,1'dir (MEB, 2002). Eğitim Sen tarafından 2011-2012 eğitim-öğretim yılına ait yapılan araştırmalar, ülkemizde okulöncesi okullaşma seviyesinin çok düşük oranlarda olduğunu göstermiştir. Araştırmada, 3 ile 5 yaş grubunda okullaşma oranının toplamda yüzde 29.85'dir. 3 ile 5 yaş arasındaki kız çocukları için yüzde 29.43; erkek çocukları için ise yüzde 30.3 seviyesinde olduğu, 4 ile 5 yaş grubuna bakıldığında ise toplamda yüzde 43.1, kız çocukları için yüzde 42.47; erkek çocukları için ise yüzde 43.7 seviyesinde olduğu görülmüştür. Tüm yaşlar bazında ise bu oran % 37 olarak açıklanmıştır (http://www.doktorsitesi.com). Bu oranın oldukça düşük olduğu söylenebilir. Belçika'da okulöncesi okullaşma oranı üç yaş için %92, dört yaş için 97'dir. Beş yaş ve üstü için ise % 100'dür (Gülcan, 2005). Amerika'daki Minnesota Üniversitesinde yapılan bir araştırma anaokuluna giden çocukların hayatta daha başarılı olduğunu ortaya koymaktadır. Bu araştırma basında da aşağıdaki gibi yer almıştır:

"Saygın bilim dergisi Science, ABD'de yer alan Minnesota Üniversitesinin okul öncesi eğitim alan çocukların hayattaki başarı grafiğini irdeleyen araştırma raporunu internet sitesinde yayınladı. 1980'lerde anaokuluna gönderilen 900 ve gönderilmeyen 500 çocuğun yetişkinlik dönemleri karşılaştırıldı. Araştırmanın ilginç sonuçları şöyle:
- Anaokuluna gidenlerin yüzde 80'i liseyi bitiriyor. Gitmeyenler de bu oran yüzde 75.
- Anaokuluna gidenlerin üniversiteye girme olasılıkları yüzde 4 daha fazla.
- Bağımlılık yapan madde kullanımı oranları da anaokuluna gidenler arasında yüzde 5 daha az." (Milliyet Gazetesi, 12.06.2011)

Yukarıdaki bilgilere dayanarak, ülkemizdeki üniversitelerin dünya sıralamalarında oldukça geride kalmalarının (http://www.timeshighereducation.co.uk) nedenlerinden birinin de yetersiz okul öncesi eğitim olduğu düşünülebilir. Fen ve matematik çalışmaları da çocukları yaşama hazırlamada etkili araçlar arasında yer almaktadır(Aktaş 2002; Ayvacı ve diğ. 2002; Wilson 2002). Günlük yaşamda birçok şekilde karşılaşılan fen ve matematik konularını okul öncesi dönemde ele alıp çocukları geleceğe daha donanımlı biçimde hazırlamak okul öncesi eğitimin önemli fonksiyonlarından biridir. Ayrıca, bu bilgilerin günlük yaşantıda ne şekillerde kullanılabileceğini öğretmenin yanı sıra fen ve matematiği çocuklara sevdirmek onların ileri dönemlerde alacakları eğitimi de destekleyebilecek etkili bir davranıştır(Öncü ve Arı 2005).

Çocuğun gelişimlerinin en hızlı olduğu,psikomotor gelişimi, Türkçe dil gelişimi, bilişsel gelişimi özbakım gelişimlerinin en kritik olduğu dönem 0-6 yaş dönemidir. Okulöncesi eğitim bu dönemleri kapsadığı için önemlidir. Çocukların bu kadar değerli ve önemli yıllarının eğitim ve öğretimle desteklenmesi gelişimlerini olumlu yönde etkileyecektir. Okul öncesi eğitim alan öğrencilerin bazı önemli kazanımları aşağıdakiler gibidir (Adıbelli, 2011):

•Kendini daha kolay ifade edebilir.
•Okul ortamına uyumlu olur.
•El becerileri gelişmiş olur.
•Akranları ile iyi iletişim kurabilir.
•Özgür ve kendine güveni olur.
•Aile bağımlılığı azalır.
•Yönergeleri rahat algılayıp, uygulayabilir.
•İşbirliği yapmaya daha eğilimli olur.
•Sözcük dağarcığı daha zengin olur.
•Paylaşıma daha açık olur.
•Hayal güçleri gelişmiş olur.
•Öz bakım becerileri konusunda daha bilinçli olur.
•Sosyal yönleri daha gelişmiş olur.

Yukarıda da bahsedildiği gibi ülkemizde çocukların büyük bir çoğunluğu okulöncesi eğitiminden yoksundur. Bu durum çocukların gelişimlerinin kritik bir dönemini uygun bir eğitim almadan, onların geliştirilmeye müsait potansiyellerinin bastırılmasına sebep olabilecek bir olgudur. Okul öncesi eğitim almamış öğrenciler bazı özellikleri şöyle sıralanabilir:

•Kendini ifade etmekte zorlanma
•Okula gitme konusunda olumsuz tavır sergileme
•Yetenekleri konusunda farkındalık sağlayamama,
•Sosyalleşme problemi
•Özgüven problemi
•Ailelerine aşırı bağımlılık ve çekingenlik
•Yeni bilgileri kabullenmede zorluk çekme
•Öz bakım becerileri konusunda sorun yaşama

Bu çalışmada okul öncesi eğitimin önemli bir bileşeni olan fen/ matematik uygulamalarının yükseköğrenimdeki yansımalarının tespit edilmesi hedeflenmiştir. Bu bağlamda Gaziantep Üniversitesi Mühendislik Fakültesi son sınıf öğrencelerine anket uygulanarak okul öncesi eğitim almış olanların oranı belirlenecektir. Ayrıca anket çalışması kapsamında bu öğrencilerin yükseköğrenim süresince performanslarını değerlendiren sorular da mevcut olacaktır. Böylece okul öncesi eğitimin, fen-matematik tabanlı eğitim alan mühendislik fakültesi öğrencilerinin başarı düzeyleri üzerinde anlamlı bir etkiye sahip olup olmadığı istatistiksel olarak irdelenmiş olacaktır.

ARAŞTIRMANIN AMACI

Mühendislik fakültesi son sınıf öğrencileri arasında okulöncesi eğitimi (OÖE) almış ve almamış öğrencilerin başarı düzeylerinin araştırılması amaçlanmıştır. Ayrıca OÖE almış ve almamış öğrencilerin gelir seviyelerinin, cinsiyetlerinin, bölümlerinden memnun olup olmama durumları vb. faktörlerin de başarı düzeyi üzerindeki etkileri irdelenmiştir.

Problem Cümlesi

Araştırmanın problem cümlesi; "Okulöncesi eğitimi almış ve almamış mühendislik fakültesi son sınıf öğrencilerinin başarı düzeylerinde anlamlı bir farklılık var mıdır?"

ALT PROBLEMLER

1. OÖE almış ve almamış mühendislik fakültesi son sınıf öğrencilerinin üniversiteye giriş başarı düzeyleri arasında anlamlı bir fark var mıdır?
2. OÖE alma ile öğrencilerin lisans eğitimi başarı düzeyleri arasında anlamlı faklılık var mıdır?
3. OÖE almış öğrencilerin lisans eğitimi başarı düzeyleri ile gittikleri okul öncesi kurumunun türü arasında anlamlı faklılık var mıdır?
4. OÖE almış ve almamış öğrencilerin ailelerinin gelir durumları lisans eğitimi ile başarı düzeyleri arasında anlamlı faklılık var mıdır?
5. OÖE almış ve almamış öğrencilerin başarı düzeyleri ile cinsiyetleri arasında anlamlı faklılık var mıdır?
6. OÖE almış ve almamış öğrencilerin başarı düzeyleri ile bölümlerinden memnuniyetleri arasında anlamlı faklılık var mıdır?

YÖNTEM

Araştırma Modeli

Bu araştırmada ilişkisel araştırma modeli kullanılmıştır. "İlişkisel tarama modelleri, iki veya daha çok sayıdaki değişken arasında birlikte değişim varlığını ve/veya derecesini belirlemeyi amaçlayan araştırma modelleridir." Karasar (1991, s. 81). Bu araştırma da, Okulöncesi eğitimi almış ve almamış öğrenciler arasında mühendislik fakültesindeki son sınıf öğrencilerinin başarı düzeyleri ve okulöncesi eğitimi almış öğrencilerin fen- matematik alanlarına ilgisi ve bu öğrencilerin üniversiteye girişteki zaman ve başarı dilimleri vurgulanmıştır. Okulöncesi eğitimi almamış öğrencilerle bu bilgiler karşılaştırılarak başarı düzeylerinin ne oranda olduğu amaçladığından, "ilişkisel araştırma modeli "ne uygun olarak düzenlenmiştir.

Çalışma Grubu

Gaziantep üniversitesi mühendislik fakültesi son sınıf öğrencilerinden 203 öğrenci seçilmiştir. Mühendislik fakültesinde farklı bölümlerden 35 kız ve 168 erkek öğrenci ile çalışılmıştır.

Veri Toplama Araçları

Araştırma veri toplama araçlarından yapılandırılmış anket tekniği kullanılarak yapılmıştır. Anket, belirli bir amaca yönelik bilgi toplamak üzere, ilgili ve belli kişilere yöneltilecek soru listesini kapsayan veri toplama aracıdır (Taymaz, 1997). Yapılandırılmış anket ise soruların verilip cevapların şıklar halinde verilmesiyle oluşturulan veri toplama aracıdır. Bu çalışmada kullanılan anket soruları Ek 1'de yer almaktadır.

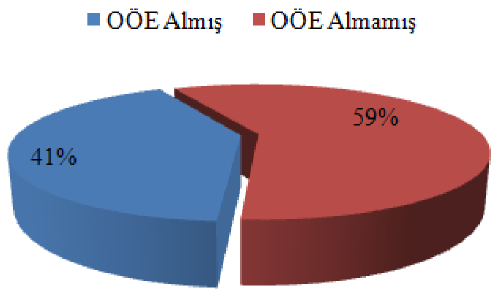
Verilerin Analizi

Okulöncesi eğitimi almış ve almamış mühendislik fakültesi son sınıf öğrencilerinin başarı düzeylerinde anlamlı bir farklılığın ne oranda olduğunu ilişkisel araştırma modeli kullanılarak yapılmıştır. Verilerin değerlendirilmesinde MİNİTAB versiyon 15 istatistiksel yazılım kullanılarak ONE WAY-ANOVA (tek yönlü varyans analizi) yapılmıştır.

Araştırmada okulöncesi eğitimi (OÖE) olarak kodlanmıştır.

BULGULAR VE YORUM

Anket çalışması Gaziantep Üniversitesi Mühendislik Fakültesi son sınıfta okuyan 203 öğrenciye uygulanmıştır. Bu öğrencilerin OÖE alma oranları aşağıdaki grafikte gösterilmiştir (Şekil 1). Buna göre, değerlendirilen öğrencilerin %41'i okul öncesi eğitimi almışken almamış alanların oranı %59 düzeyindedir. Söz konusu öğrencilerin okulöncesi eğitimlerini yaklaşık olarak 90'lı yılların başlarında aldıkları ve o yıllarda OÖE okullaşma oranının oldukça düşük seviyelerde olduğu düşünülürse OÖE'nin üniversiteye girişte önemli bir rol aldığı kanaatine varılabilir.



Şekil 1. Mühendislik Fakültesi Son Sınıf Öğrencilerin OÖE Alma Oranları

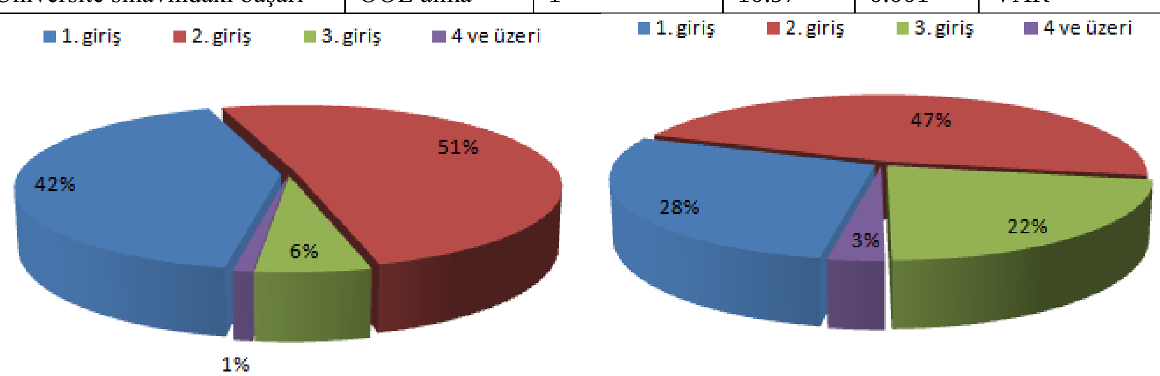
OÖE almış ve almamış öğrencilerin başarı düzeyleri ve bunları etkileyen faktörlerin istatistiksel analizi aşağıda verilmiştir.

1. OÖE almış ve almamış mühendislik fakültesi son sınıf öğrencilerinin üniversiteye giriş başarı düzeyleri arasında anlamlı bir fark var mıdır?

Tablo 1'de verilen istatistiksel analize göre %5'lik istatistiksel anlamlılık düzeyi göz önünde bulundurulduğunda OÖE almış ve almamış öğrencilerin üniversiteye giriş performansları arasında fark görülmüştür. Bu çalışmada üniversite sınavı başarı değerlendirme kriteri; sınavı "1. girişte kazanma", "2. girişte kazanma", "3. girişte kazanma" "4 ve üzeri girişte kazanma" olarak değerlendirilmiştir. Şekil 2'de gösterilen yüzdelik dilimler dikkate alındığında OÖE almış öğrencilerin 1. ve 2. girişte kazanma oranları diğerlerine göre daha yüksektir. OÖE almamış öğrencilerin 3 ve daha fazla girişte üniversite sınavını kazanma oranları %25 iken OÖE almış öğrencilerde bu oran %7'dir. Öğrencilerin erken çocukluk eğitiminin bireylerin akademik başarıları üzerinde, bu eğitimden faydalanmayanlara göre daha etili olduğu ve ayrıca akademik başarının ise hayat başarısını olumlu yönde etkilediği vurgulanmaktadır (Taiwo ve Tyolob, 2002).

Tablo 1. OÖE Almış ve Almamış Öğrencilerin Üniversite Sınavındaki Başarılarının Tek Yönlü Varyans Analizi

Bağımlı değişken	Bağımsız değişken	Serbestlik derecesi	F değeri	P değeri	İstatistiksel fark
Üniversite sınavındaki başarı	OÖE alma	1	10.97	0.001	VAR



a) b)

Şekil 2. a) OÖE almış b) OÖE almamış öğrencilerin üniversite sınavındaki başarı durumları

2. OÖE alma ile öğrencilerin lisans eğitimi başarı düzeyleri arasında anlamlı faklılık var mıdır?

OÖE almış öğrenciler ile almamış öğrencilerin başarı düzeyleri arasında istatistiksel olarak anlamlı bir farklılık vardır (Tablo 2). Bu bağlamda yapılan anket çalışmasının sonuçlarına göre OÖE almış öğrencilerin not ortalamalarının 4.0 tam not üzerinden 2.19 olduğu, almamış olanların ise 2.04 olduğu tespit edilmiştir. Bu durum OÖE almış mühendislik fakültesi son sınıf öğrencilerinin nispeten daha başarılı olduğunu işaret etmektedir. Yani OÖE almış öğrencilerin analitik düşünce yeteneklerinin genellikle daha gelişkin olduğu söylenebilir. Okulöncesi eğitim kurumlarında uygulanan fen ve doğa etkinliklerinin çocukların problem çözme becerilerine etkisinin araştırıldığı bir çalışmada aşağıdaki sonuç verilmiştir (Akkaya, 2006).

"Öğretmenler fen ve doğa etkinliklerinin çocuklarda problem çözme becerilerine etkisi ile ilgili olarak inceleme ve düzenleme becerilerini ***yeterli,*** *yaratıcılık, hayal gücü, gözlem, sayısal, uygulama, iletişim ve sosyal becerileri* ***çok yeterli*** *düzeyde kazandırdığı görüsündedirler."* (Akkaya, 2006).

Tablo 2. OÖE Alma ile Öğrencilerin Lisans Eğitimindeki Başarı Düzeyleri Arasındaki İlişkinin Tek Yönlü Varyans Analizi

Bağımlı değişken	Bağımsız değişken	Serbestlik derecesi	F değeri	P değeri	İstatistiksel fark
Lisans eğitimindeki başarı	OÖE alma	1	5.95	0.016	VAR

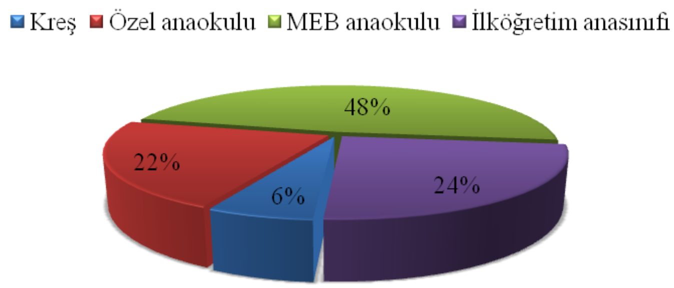
3. OÖE almış öğrencilerin lisans eğitimi başarı düzeyleri ile gittikleri okul öncesi kurumunun türü arasında anlamlı faklılık var mıdır?

Tablo 3'den görüleceği üzere OÖE kurumunun türünün bu eğitimi almış öğrencilerin başarı düzeyi üzerinde anlamlı bir farklılık teşkil etmediği anlaşılmaktadır. Şekil 3'den gözlenen bulgulara göre ise ülkemizde okulöncesi eğitim büyük oranda MEB'e bağlı anaokulları ve ilköğretim anasınıfları aracılığıyla gerçekleşmektedir.

Türkiye'de eğitim hizmeti önemli ölçüde devlet tarafından verilmekte, finanse edilmekte ve denetlenmektedir (Çokgezen ve Terzi, 2008). Bu bağlamda özel ve devlete bağlı eğitim kurumlarının kaliteleri arasında çok büyük farklılıklar olmaması olağan bir durumdur. Nitekim bu çalışmadan elde edilen bulgular dikkate alındığında özel veya devlet okullarının sundukları OÖE2nin lisans başarı düzeyine etkisi olmadığı anlaşılmıştır.

Tablo 3. OÖE Almış Öğrencilerin Bu Eğitimi Aldıkları OÖE kurumunun Türü ile Öğrencilerin Lisans Eğitimindeki Başarı Düzeyleri Arasındaki İlişkinin Tek Yönlü Varyans Analizi

Bağımlı değişken	Bağımsız değişken	Serbestlik derecesi	F değeri	P değeri	İstatistiksel fark
Lisans eğitimindeki başarı	OÖE kurumu	3	0.42	0.740	YOK



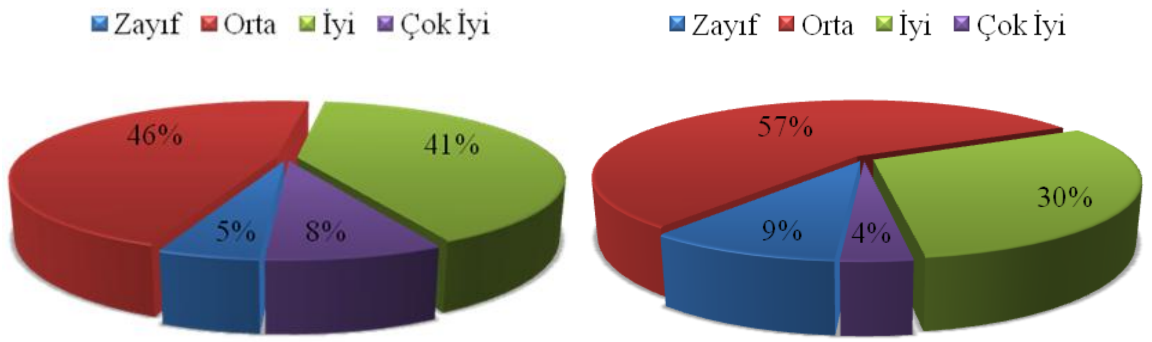
Şekil 3. OÖE Almış Öğrencilerin Bu Eğitimi Aldıkları Kurumların Yüzdelik Dağılımları

4. **OÖE almış ve almamış öğrencilerin ailelerinin gelir durumları ile lisans eğitimi başarı düzeyleri arasında anlamlı farklılık var mıdır?**

Tablo 4'den görüleceği üzere gelir durumları ile lisans başarı düzeyi arasında istatistiksel olarak anlamlı bir fark görülmemiştir. Bunun yanı sıra, OÖE almış ve almamış öğrencilerin ailelerinn gelir düzeyleri incelendiğinde göze çarpan bir fark görülmemiştir (Şekil 4). Öğrencilerin gelir durumlarına bağlı psikolojik durumları akademik başarılarını etkileyen önemli faktördür. Özdel ve ark. (2002) çalışmalarında *"üniversite öğrencilerinin gelir durumları sorgulandığında ekonomik durumla depresif belirtiler arasında bir ilişki yok gibi görülmektedir"* şeklinde bir yargıya varmışlardır.

Tablo 4. OÖE almış ve almamış öğrencilerin ailelerinin gelir durumları ile lisans eğitimindeki başarı düzeyleri arasındaki ilişkinin tek yönlü varyans analizi

Bağımlı değişken	Bağımsız değişken		Serbestlik derecesi	F değeri	P değeri	İstatistiksel fark
Lisans eğitimindeki başarı	Gelir durumu	OÖE almış	3	0.87	0.461	YOK
		OÖE almamış	3	0.22	0.882	YOK



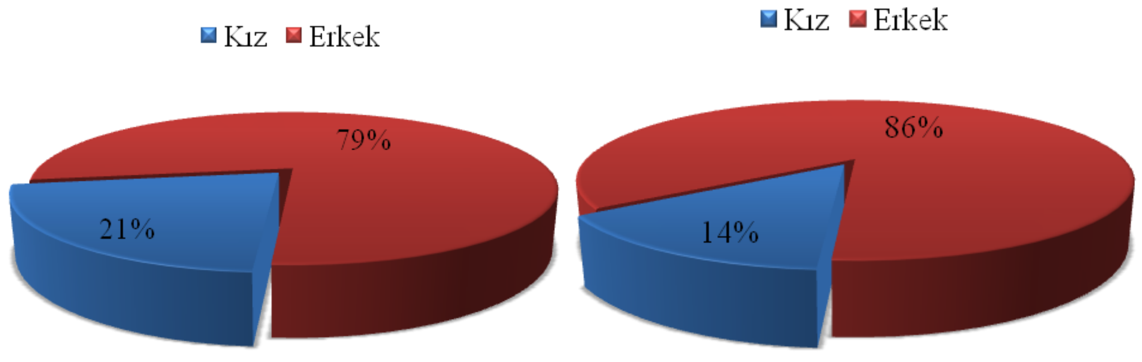
a) b)
Şekil 4. a) OÖE almış b) OÖE almamış öğrencilerin ailelerinin gelir düzeyleri

5. ***OÖE almış ve almamış öğrencilerin başarı düzeyleri ile cinsiyetleri arasında anlamlı faklılık var mıdır?***

Tablo 5'den elde edilen sonuçlara göre, cinsiyet OÖE almış öğrencilerin lisans başarı düzeylerinde etkili bir parametre iken, OÖE almamış öğrencilerde herhangi bir etkileyicilik faktörü bulunmadığı görülmüştür. Şekil 5'deki yüzdelik dağılımlar incelendiğinde OÖE almış öğrenciler arasında kız öğrenci oranının almamışlara göre nispeten daha yüksek olduğu görülmüştür. Korkut (1996) tarafından yapılan araştırmanın bulgularına göre cinsiyet, okul türü, yas, babanın isi vb. faktörlerin araştırmada incelenen lise öğrencilerinin (394 adet) problem çözme becerilerini algılamada fark yarattığı görülmüştür.

Tablo 5. OÖE Almış ve Almamış Öğrencilerin Cinsiyetleri ile Lisans Eğitimindeki Başarı Düzeyleri Arasındaki İlişkinin Tek Yönlü Varyans Analizi

Bağımlı değişken	Bağımsız değişken		Serbestlik derecesi	F değeri	P değeri	İstatistiksel fark
Lisans eğitimindeki başarı	Cinsiyet	OÖE almış	1	13.40	0.000	VAR
		OÖE almamış	1	1.81	0.182	YOK



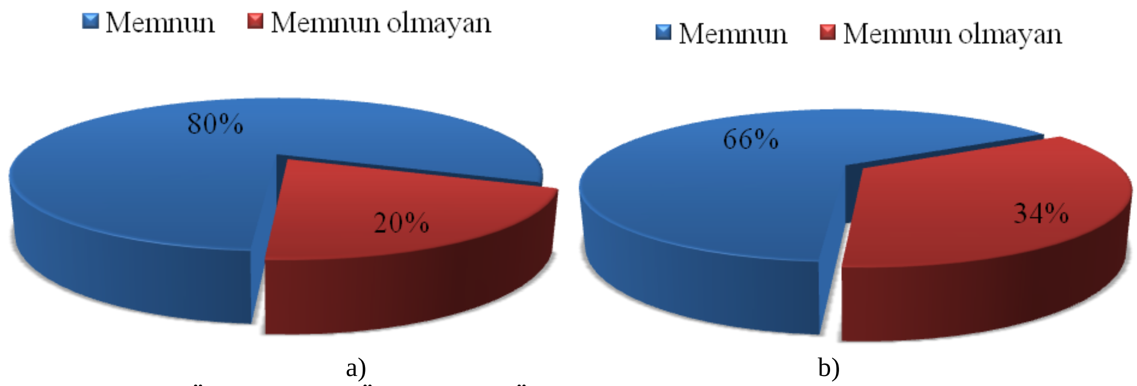
a) b)
Şekil 5. a) OÖE almış b) OÖE almamış öğrencilerin cinsiyetleri

6. ***OÖE almış ve almamış öğrencilerin bölümlerinden memnuniyetleri arasında anlamlı faklılık var mıdır?***

OÖE almış öğrencilerin memnuniyet durumlarının lisans başarı düzeyi üzerinde etkisi olmadığı gözlenmiştir. Ancak OÖE almamış olanlarda memnuiyet ile başarının istatistiksel olarak ilişkili olduğu belirlenmiştir (Tablo 6). Ayrıca Şekil 6'da sunulan bulgulara göre OÖE almamış öğrencilerin bölümlerine karşı duydukları memnuniyetsizlik OÖE almışlara kıyasla daha fazladır.

Tablo 6. OÖE almış ve almamış öğrencilerin bölümlerinden memnuniyetleri ile lisans eğitimindeki başarı düzeyleri arasındaki ilişkinin tek yönlü varyans analizi

Bağımlı değişken	Bağımsız değişken		Serbestlik derecesi	F değeri	P değeri	İstatistiksel fark
Lisans eğitimindeki başarı	Memnuniyet	OÖE almış	1	3.76	0.056	YOK
		OÖE almamış	1	12.06	0.001	VAR



Şekil 6. a) OÖE Almış b) OÖE Almamış Öğrencilerin Bölümlerinden Memnuniyet Oranları

SONUÇ

Yukarıda sunulan bulgulara dayanarak aşağıdaki sonuçlar sunulabilir.

- Türkiye'de OÖE oranı oldukça düşük düzeyde olmasına rağmen değerlendirilen öğrencilerin yarıya yakın bir kısmının bu eğitimden faydalanmış olmasından ve bu öğrencilerin üniversite sınavına girişte daha başarılı olmasından dolayı, OÖE'nin ilk ve ortaöğretimde de akademik başarı üzerinde önemli bir etkiye sahip olduğu söylenebilir.
- OÖE almış öğrencilerin not ortalamalarının 2.19 almamış olanların ise 2.04 olması ve yapılan istatistiksel analiz sonucuna dayanarak, OÖE mühendislik fakültesi son sınıf öğrencilerin lisans başarılarını oldukça olumlu yönden etkilediği söylenebilir
- Ailelerin gelir durumunun OÖE almış ve almamış öğrencilerin başarı düzeyleri üzerinde önemli bir etkiye sahip olmadığı görülmüştür.
- Cinsiyetin OÖE almış öğrencilerin başarı düzeyleri üzerinde etkili bir faktör olduğu görülürken, bu eğitimden faydalanmamış öğrencilerin başarıları arasında istatistiksel bir fark olmadığı tespit edilmiştir.
- OÖE almış öğrencilerin okudukları bölümden memnun olma düzeyleri diğerlerinkine göre daha yüksektir. Bununla birlikte, memnuniyet durumunun OÖE almış öğrencilerin başarı düzeylerine etkisi olmadığı ancak almamış olanlarınkinin bu durumdan etkilendiği anlaşılmıştır.

ÖNERİLER

Bu çalışma kapsamında mühendislik fakültesi son sınıf öğrencilerinin sadece bir kısmı üzerinde araştırma yapılmıştır. Bu çalışmanın kapsamını genişletmeye yönelik olarak yapılabilecekler şöyle sıralanabilir.

- Çalışma grubunda incelenen öğrencilerin sayısı arttırılarak daha gerçekçi sonuçlar elde edilebilir.
- Veri kaynaklarının örneklem açısından sadece mühendislik fakültesi öğrencilerini içermesi bu araştırmanın sınırlılıklarını oluşturur. Araştırma veri toplama araçlarından anket tekniği kullanılarak yapıldığı için sınırlıdır. Bu bağlamda diğer fakülte öğrencilerinin de araştırmaya dahil edilmeleri ve ilişkilendirilmeleri, OÖE'nin lisans eğitimi başarı düzeyi üzerindeki etkisi genelleştirilerek irdelenmiş olacaktır.
- Ayrıca çalışmada diğer veri toplama araçlarından da faydalanılarak bulgular daha da derinleştirilebilir.

Bu araştırmanın bulgularından aşağıda belirtilen şekillerde faydalanılabilir:

- OÖE yaygınlaştırılması yönünde çalışmalar gerçekleştiren ilgili MEB birimleri yapacakları bilgilendirme ve teşvik çalışmalarında bu araştırmada sunulan bulguları vurgulayabilirler.
- Bunun yanı sıra bu araştırmanın bulguları OÖE önemine dikkat çekmek üzere yapılan aile eğitim çalışmalarında kullanılabilir.

WHAT DO 6TH GRADE STUDENTS THINK ABOUT THEIR LEARNING ENVIRONMENT IN SCIENCE CLASSES?

Esra ÇAĞINDA
Niğde Ünv., Eğitim Bilimleri Enst., İlköğretim Ana Bilim Dalı, Fen Bilgisi Eğitimi Bilim Dalı, Niğde

Gökhan ÖZDEMİR
Niğde Üniversitesi, Eğitim Fakültesi, İlköğretim Bölümü, Fen Bilgisi Eğitimi Ana Bilim Dalı, Niğde

ABSTRACT: The purpose of the study is to evaluate students' views on their science learning environment with regard to the properties of constructivist approach. The sample of the study consisted of 48 sixth grade students who were studying in a middle school located in a developed city at the central Anatolia region. Constructivist Learning Environment Survey (CLES) developed by Taylor, Fraser, and Fisher (1997) and adopted by Küçüközer, Kırtak, Ayverdi, and Eğdir (2012) into Turkish was used as the data collection tool. The data were analyzed descriptively. The results of the study indicated that even students' learning environment had several characteristics in common with the elements of constructivism, students' learning environment was weak in terms of students' questioning and the collaboration between students and teacher in lesson planning, instruction, and assessment. The results imply that democratic learning atmosphere was missing in the science classes.

Key words: constructivism, learning environment, science education, science learning

ALTINCI SINIF ÖĞRENCİLERİ FEN BİLİMLERİ DERSLERİNDEKİ ÖĞRENME ORTAMI HAKKINDA NE DÜŞÜNÜYOR?

ÖZET: Bu çalışmanın amacı öğrencilerin fen öğrenme ortamları hakkındaki görüşlerini yapılandırmacı yaklaşımın unsurları açısından değerlendirmektir. Araştırmanın örneklemini iç Anadolu bölgesindeki gelişmiş bir şehrin ortaokulunda öğrenim gören 48 altıncı sınıf öğrencisi oluşturmuştur. Taylor, Fraser ve Fisher (1997) tarafından geliştirilmiş ve Küçüközer, Kırtak, Ayverdi ve Eğdir (2012) tarafından Türkçe'ye uyarlanmış Yapılandırmacı Öğrenme Ortamı Ölçeği (YÖOÖ) veri toplama aracı olarak kullanılmıştır. Veriler betimsel olarak analiz edilmiştir. Araştırma sonuçları öğrencilerin öğrenme ortamlarının yapılandırmacılığın birçok unsuruyla ortak özelliklere sahip olduğunu gösterse de, öğrencilerin sorgulama yapması ve öğretmenin derste öğrencilerle işbirliği yaparak dersi planlaması, işlemesi ve değerlendirme yapması açısından öğrenme ortamının zayıf olduğunu göstermiştir. Sonuçlar demokratik öğrenme ortamının fen bilimleri derslerinde eksik olduğuna işaret etmektedir.

Anahtar sözcükler: yapılandırmacılık, öğrenme ortamı, fen eğitimi, fen öğrenme

GİRİŞ

Yapılandırmacı öğrenme teorisi sosyal etkileşime izin veren fiziksel şartlar ile gerekli bilişsel faktörlerin bir araya gelmesiyle hayat bulur (Yeşilyurt, 2013). Yapılandırmacı öğrenme ortamında öğrenciler işbirlikli öğrenme ile dayanışma içinde problem çözer, etkinlikler yoluyla birinci elden deneyim kazanır, sorgular ve öğrenmeyi öğrenir (Şaşan, 2002). Ayrıca, böyle bir ortamda öğrenciler öğrenmelerinde inisiyatif alır, çeşitli sorumluluklar üstlenir, öz değerlendirme yapar ve üst düzey bilişsel yetenekleri gelişir (Bay, Kaya ve Gündoğdu, 2010). Yapılandırmacı öğrenme kuramının etkin şekilde uygulandığı sınıflarda öğrencilerin etkinliklere etkin bir şekilde katılması, bilişsel olarak aktif olmaları teşvik edilirken, onların görüş ve düşünceleri saygı ile karşılanır. Bu tür öğrenme ortamlarının, öğrencilerin başarısını arttırdığı gözlenmektedir (Akyol & Fer, 2010; Demirci, 2009; Özerbaş, 2007).

Yakın geçmişte yapılan bir araştırma öğrenme ve öğretme sürecine ilişkin güç ve kontrolün öğrencilerle yeterince paylaşılmadığını ve öğrencilerin daha iyi öğrenmeleri konusunda onların görüşlerinden yeterince faydalanılmadığını ortaya koymaktadır (Özel, Yılmaz, Beyaz, Özer ve Şenocak, 2009). Bu sonuç sınıflarda yapılandırmacı öğrenme ortamlarının tam olarak uygulanmadığına işarettir.

Öğrenme ortamları genellikle öğretmenlerle yapılan görüşmelerle değerlendirilirken; öğrenme ortamının esas muhatabı olan öğrencilerle yapılan çalışmalar çok azdır. Bu nedenle sınıflarda yapılandırmacı öğrenme ortamının uygulanma düzeyinin öğrencilerin görüşleri alınarak değerlendirilmesi de gerekmektedir. Bu tür araştırmalar, bu konudaki aksaklıkların giderilmesine katkıda bulunacak ve öğretmenlerin yapılandırmacı öğrenme ortamı oluşturma bilgi ve becerilerinin düzeyi hakkında bilgi verecektir.

Dolayısıyla bu çalışmada; öğrencilerin gözünden fen bilimleri dersi öğretmeninin derslerinde yapılandırmacı öğrenme ortamını uygulama düzeyinin incelenmesi amaçlanmıştır. Fen öğretmeni sınıfta yapılandırmacı öğrenme ortamını ne ölçüde uyguladığını ve uygulama da hangi boyutlarda yetersiz kaldığını belirlemek amacıyla bu çalışma yapılmıştır.

Araştırma Soruları

Çalışmanın genel amacına uygun olarak aşağıdaki sorulara odaklanılmıştır.
1. Öğrenciler açısından yapılandırmacı öğrenme ortamı hangi düzeydedir?
2. Bu değerlendirmelere göre "Yapılandırmacı Öğrenme Ortamı Ölçeği"nin hangi alt boyutlarında yetersizlik söz konusudur?

YÖNTEM

Bu araştırma da yapılandırmacı öğrenme ortamının sınıfta uygulanma düzeyine ilişkin durum betimsel yolla ortaya konulmaya çalışılmıştır.

Çalışma Grubu

Çalışma grubunu Kayseri ili 'ne bağlı bir devlet ilköğretim okulu altıncı sınıfta öğrenim görmekte olan toplam 42 öğrenci oluşturmaktadır. Aşağıdaki bölümde detaylandırılacak olan ölçme aracı 2014–2015 eğitim yılında fen bilimleri dersinde uygulanmış ve öğrencilerden fen bilimleri dersi ile ilgili deneyimlerini göz önünde bulundurmaları istenmiştir. Çalışma grubundaki öğrencilerin cinsiyet dağılımı Tablo 1 de gösterilmiştir.

Tablo 7. Çalışma Grubunun Cinsiyet Dağılımı

Cinsiyet	Frekans (*f*)	Yüzde (%)
Kız	18	%42,9
Erkek	24	%57,1

Veri Toplama Aracı ve Analizi

Bu çalışmada uygulanan *Yapılandırmacı Öğrenme Ortamı Ölçeğ'i* Taylor, Fraser ve Fisher (1993) tarafından geliştirilmiş ve Küçüközer, Kırtak-Ad, Ayverdi ve Eğdir (2012) tarafından ise Türkçe'ye uyarlanmıştır. Ölçeğin Cronbach-alpha güvenirlik katsayısı .847 olarak tespitedilmiştir (Küçüközer vd., 2012). Bu sonuçlara göre uyarlanan ölçeğin geçerli ve güvenilir bir ölçme aracı olduğu söylenebilmektedir. Beş boyuttan oluşan ölçeğin içeriği aşağıda verilmiştir.

1. Dünyayı Öğrenme Boyutu: Öğrenilenlerin günlük hayatla ilişkilendirilmesi ve günlük deneyimlerin bilgiyi yapılandırmak için işe koşulması.
2.Bilimin Doğasını Öğrenme Boyutu: Bilimin ve bilimsel bilginin doğasını deneyimleme.
3.Düşüncelerini İfade Etmeyi Öğrenme Boyutu: Öğrencilerin, örenme ortamı ile ilgili rahatsızlıklarını çekinmeden ifade edebilmeleri.
4.Öğrenmeyi Öğrenme Boyutu: Hedeflerin, etkinlikleri tasarım ve uygulanmasının ve değerlendirme ölçütlerinin öğrenciyle paylaşılması.
5.İletişim Kurmayı Öğrenme Boyutu: Öğrencilerin fikirlerini açıkça paylaşması ve diğerlerinin bakış açılarını dikkate alarak kendi değerlendirmesini yapması.
Beşli likert tipindeki ölçekte öğrencilerin maddelere katılma dereceleri; "hemen hemen her zaman", "sık sık", "bazen", "nadiren" ve "hemen hemen hiç" biçiminde sınıflandırılmıştır. Sonuçların maddelere verilen cevaplardaki frekans ve aritmetik ortalamalar dikkate alınarak değerlendirilmiştir.

BULGULAR VE YORUM

Dünyayı Öğrenme Boyutu

Öğrencilerin yapılandırmacı öğrenme ortamının dünyayı öğrenme boyutuna yönelik görüşlerinin aritmetik ortalama değerinin 3,21 olduğu görülmektedir. Dünyayı öğrenme boyutuna ilişkin bulgular Tablo.3 de gösterilmiştir. Bu durum öğrencilerin dünyayı öğrenme boyuta ilişkin görüşlerinin ortalama bir değerde olduğunu göstermektedir. Fen öğretmeni öğrencilerin okul dışındaki hayatı öğrenmeleri ve fen dersiyle bunu bağdaştırmaları konusunda bir yeterliliğe sahip olduğunu göstermektedir.

Tablo 8. Dünyayı Öğrenme Boyutuna İlişkin Frekans Dağılımı

		Hemen hemen hiç	Nadiren	Bazen	Sık sık	Her zaman	X̄
Dünyayı Öğrenme	1. Okul dışındaki dünyayı öğreniyorum.	2	9	16	7	8	3,61
	2. Yeni öğrenmelerim okul dışındaki problemlerle başlar.	4	9	16	5	5	2,74
	3. Bilimin nasıl okul dışındaki hayatımın bir parçası olabileceğini öğreniyorum.	3	13	10	12	4	3,02

Bilimi Öğrenme Boyutu

Öğrencilerin yapılandırmacı öğrenme ortamının bilimi öğrenme boyutuna yönelik görüşlerinin aritmetik ortalama değerinin 3,52 olduğu görülmektedir. Bilimi öğrenme boyutuna ilişkin bulgular Tablo.4 de gösterilmiştir. Bu durum öğrencilerin bilimi öğrenme boyuta ilişkin görüşlerinin ortalama bir değerde olduğunu göstermektedir. Fen öğretmeni öğrencilerin bilimin doğası ile ilgili bilgi edinmelerini sağlamada bir yeterliliğe sahip olduklarını göstermektedir.

Düşünceleri İfade Etmeyi Öğrenme Boyutu

Öğrencilerin yapılandırmacı öğrenme ortamının düşünceleri ifade etmeyi öğrenme boyutuna yönelik görüşlerinin aritmetik ortalama değerinin 2,75 olduğu görülmektedir. Düşünceleri ifade etmeyi öğrenme boyutuna ilişkin bulgular Tablo.5 de gösterilmiştir. Bu durum öğrencilerin bilimi öğrenme boyuta ilişkin görüşlerinin ortalamanın altında bir değerde olduğunu göstermektedir. Fen öğretmenlerinin öğrencilerin özgürce düşüncelerini ve kendilerini ifade edebilecekleri bir ortam sağlamada ortalamanın altında olduklarını ve öğrencilere demokratik ve özgür bir ortam hazırlamada yetersiz olduklarını göstermektedir.

İletişim Kurmayı Öğrenme Boyutu

Öğrencilerin yapılandırmacı öğrenme ortamının iletişim kurmayı öğrenme boyutuna yönelik görüşlerinin aritmetik ortalama değerinin 3,48 olduğu görülmektedir. İletişim kurmayı öğrenme boyutuna ilişkin bulgular Tablo.7 da gösterilmektedir. Bu durum öğretmenlerin öğrencilerin sınıf içerisinde, öğretim sırasında birbirleriyle ne ölçüde iletişim kurmalarına izin verdikleri ve öğrencilerin işbirlikçi öğrenmelerine ne ölçüde sağladıkları konusuna ilişkin görüşlerinin ortalama bir değerde olduğunu göstermektedir. Bu sonuçlarda fen öğretmenlerinin; öğrencilerinin birbirleriyle iletişimine ve işbirlikçi öğrenmelerine yeterli düzeyde bir fırsat tanıdığını göstermektedir.

Tablo 12. İletişim Kurmayı Öğrenme Boyutuna İlişkin Frekans Dağılımı

TARTIŞMA VE SONUÇ

Genel olarak ölçeğin alt boyut puan ortalamalarına bakıldığında sınıf ortamının yapılandırmacı bir anlayışa sahip olduğu anlaşılmaktadır. Bununla birlikte araştırmaya katılan öğrencilerin bilimin nasıl oluştuğunu ve günlük yaşamın bir parçası olduğunu, öğrendikleri bilgileri günlük hayatta kullandıkları sonucuna ulaşılmış, böylelikle bilimin doğasını daha iyi kavradıkları sonucuna ulaşılmıştır. Fakat bu bilgiyi sınıfta öğrenirken öğretmene çeşitli konularda eleştiri getiremedikleri görülmüş, sorgulama-itiraz etme eylemlerinde bulunmadıkları ve şikayetçi bir tarzı benimsemedikleri sonucuna ulaşılmıştır. Ayrıca dersi planlama, işleme ve değerlendirme aşamalarında öğretmenlerin öğrencilerle işbirliği yapmadıkları görülmektedir. Bu durum eğitim ve öğretimin demokratik yollarla yapılmadığını göstermektedir. Öğrencilerin öğretmene eğitim konusunda sınıfta rahat davranamamalarının sebebi öğretmenin, okul yöneticilerinin veya başka hesaba katılmayan değişkenlerin yüzünden olabilir. Ancak öğrencilerin kendi aralarında paylaşımcı ruhu taşıdıkları ve iletişime önem verdikleri de görülmektedir.

Sonuç olarak, öğrencilerin görüşleri doğrultusunda, öğrenim gördükleri öğrenme ortamlarının, yapılandırmacı öğrenme ortamlarının özelliklerini taşıma veya bu özelliklere sahip olma noktasında bazı önemli eksikliklerinin var olduğu tespit edilmiştir. Ancak çalışmanın alt boyutlarının genel ortalamasına bakıldığında; yapılandırmacı öğrenme ortamının uygulanması konusunda genel olarak bir yeterliliğe sahip oldukları sonucuna ulaşılmıştır. Yapılan diğer araştırmalarda sınıf ortamını yapılandırmacı öğrenme ortamı özelliklerini taşıdığı sonucuna ulaşılmıştır (Acat, Karadağ ve Kaplan, 2012; Mengi ve Schreglman, 2013). Ancak yapılan bazı araştırmalarda uygulayıcı olarak üzerine büyük görev düşen öğretmenlerin sınıflarında yapılandırmacı öğrenme ortamını uygulama da yetersiz olduğu ortaya koymaktadır (Gömleksiz, 2005; Gömleksiz, 2007; Özel vd., 2009; Arı, 2010).

ÖNERİLER

Öğretmenlerin yapılandırmacı öğrenme ortamını oluşturmada yetersiz oldukları yapılan diğer araştırmalarında ortak sonucudur (Gömleksiz, 2005; Gömleksiz, 2007; Özel vd., 2009). Buradan yola çıkarak öğretmenlere yeterli bir eğitimin verileceği projelerin yapılması gerekmektedir. Öğretmenler yapılandırmacı öğrenme modelinin ne olduğunu bilmelerine rağmen yapılandırmacı öğrenme ortamının özelliklerine hakim değillerdir. Bu nedenle buna yönelik çalışmalar yapılmalıdır. Araştırmacılar sadece likert tipi anketler ve görüşmeler kullanarak değil de daha detaylı inceleme ve gözlem yapabilecekler araçlar kullanarak, daha büyük örneklem üzerinde bu konuda araştırma yapabilirler.

ANALYSIS OF 10TH GRADE TEXTBOOK FUNCTIONS UNIT CONTENT WITH ANTHROPOLOGICAL THEORY OF DIDACTICS

Mustafa GÖK
Yüzüncü Yıl Üniversitesi

Abdulkadir ERDOĞAN
Anadolu Üniversitesi

ABSTRACT: The aim of the present study is to examine "operations with function and applications of functions" unit in tenth grade mathematics textbook within the framework of Anthropological Theory of Didactics (ATD). The mathematics textbook, which was distributed free to students by Ministry of National Education in 2014 – 2015 academic year, was examined within the context of the main analysis method of ATD, namely praxeological analysis (task, technique, technology, theory). Analysis results demonstrated that most of the tasks identified in the textbook were solved with algebraic and graphical techniques. In addition, on certain techniques, technological explanations on the validity of the technique used were also provided. However, tasks were generally solved with one technique and alternative techniques were not utilized. It was considered that solutions of the tasks using more than one technique would have positive contributions on instruction.

Key words: Anthropological Theory of Didactics, praxeological analysis, textbook, functions, 10th grade

10. SINIF MATEMATİK DERS KİTABI FONKSİYON KONUSUNUNUN DİDAKTİĞİN ANTROPOLOJİK TEORİSİ IŞIĞINDA İNCELENMESİ

ÖZET: Bu çalışmanın amacı onuncu sınıf matematik ders kitaplarındaki ünitelerden Fonksiyonlarla İşlemler ve Uygulamaları ünitesini Didaktiğin Antropolojik Teorisi (DAT) çerçevesinde incelemektir. Bu doğrultuda 2014-2015 öğretim yılında Milli Eğitim Bakanlığı'nın öğrencilere ücretsiz dağıttığı matematik ders kitabı DAT'nin temel analiz yöntemi prakseolojik analiz (görev, teknik, teknoloji, teori) çerçevesinde incelenmiştir. Analiz sonuçlarına göre ders kitabında belirlenen görevlerin çoğunlukla cebirsel ve grafiksel tekniklerle çözüldüğü belirlenmiştir. Ayrıca bazı tekniklerde tekniğin niçin geçerli olduğuna ilişkin teknolojik açıklamalara da yer verildiği görülmüştür. Bununla birlikte, görevlerin genellikle bir teknikle çözüldüğü ve alternatif tekniklere yer verilmediği tespit edilmiştir. Görevlerin birden fazla teknikle çözümünün ders kitaplarında yer almasının öğretime pozitif bir katkı sağlayacağı düşünülmektedir.

Anahtar sözcükler: Didaktiğin Antropolojik Teorisi, prakseolojik analiz, ders kitabı, fonksiyon konusu, 10.sınıf

GİRİŞ

Ders kitapları lise matematik konularının öğretiminde büyük bir öneme sahiptir. Ders kitapları okulda bilginin öğrenciler tarafından kazanımı için önemli araçlar olarak hizmet etmektedir (Garner, 1992). Matematik ders kitabı matematiksel bilgiyi korumanın tipik bir yolunu ifade etmektedir (Kang & Kilpatrick, 1992). Özgeldi ve Esen (2010) tarafından yapılan çalışmada ders kitaplarının görevlerle (tasklarla) şekillendirilen sınıf aktivitelerinin bir kaynağı olarak düşünülebileceği ve matematik kitaplarındaki görevlerin incelenmesi yoluyla matematiksel görevlerin doğasının belirlenebileceği ifade edilmiştir. Erdoğan (2014) Fransız lise ikinci sınıf matematik ders kitaplarında fonksiyon konuları bağlamında yer alan görevler için kullanılan çözüm teknikleriyle bu tekniklerin kullanımına yönelik verilen açıklamalar arasında nedensellik bağlamında kopukluklar olduğunu belirtmiştir. Erdoğan, ayrıca, söz konusu kitaplarda kavramsal boyutta kalan ve çözüm tekniğine dönüşmeyen açıklamalara da yer verildiğini tespit etmiştir.

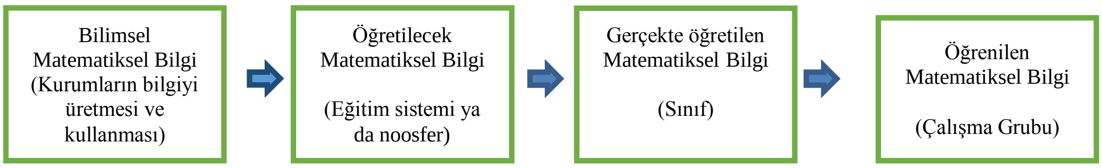
Ders kitaplarında ne tür görevlere yer verildiği, bu görevlerin nasıl çözüldüğü ve yapılan çözümlerin nasıl açıklanıp desteklendiği gibi bilgiler, ders programının hedeflerinin nasıl anlaşıldığının belirlenmesi ve hedeflenen kazanımların ne derece gerçekleşebileceğinin tartışılabilmesi açısından önem arz etmektedir. Bu çalışmada 2013 yılında uygulamaya giren, değişen lise matematik dersi öğretim programında 10. sınıf konularından "Fonksiyonlarda İşlemler ve Uygulamaları" (MEB, 2013) ünitesinin ders kitaplarında nasıl yer aldığının yukarıdaki sorular bağlamında incelenmesi amaçlanmıştır. Daha net bir ifadeyle bu çalışmada aşağıdaki sorulara cevap aranmıştır:

1. Fonksiyonlarda işlemler ve uygulamaları ünitesiyle ilgili olarak ders kitaplarında ne tür görevlere yer verilmiştir?
2. Bu görevlerin çözümü için ne tür teknikler (cebirsel, grafik, tablo, sayısal, vb.) tercih edilmiştir?
3. Bu teknikler hangi açıklamalarla desteklenmiştir?

Bu inceleme için Didaktiğin Antropolojik Teorisi (DAT) teorik çerçeve olarak kullanılmış ve teorinin temel analiz yöntemlerinden prakseolojik analiz yöntemine başvurulmuştur.

Didaktiğin Antropolojik Teorisi

Chevallard'ın önderliğinde geliştirilen Didaktiğin Antropolojik Teorisi (DAT) (Bosch & Gascon, 2006; Chevallard, 1997; 1999) farklı kurumlarda matematiksel pratiklerin analizi için kullanılabilen teorik bir çerçeve sunmaktadır (Jablonka & Bergsten, 2010). Teorinin hareket noktası matematiksel bilginin öğretilen bilgi oluncaya kadar bir dizi didaktik dönüşüm sürecinden geçtiği düşüncesidir (Bosch & Gascon, 2006). Didaktik dönüşümden kastedilen, bilimsel bilginin öğretilecek bilgi olabilmesi için eğitim sisteminin bazı zorunlulukları altında gerçekleştirilen veya gerçekleşen dönüşümlerdir. Daha ayrıntılı olarak didaktik dönüşüm, üniversitelerde bilim adamları tarafından üretilen bilgilerin programlara ve ders kitaplarına geçiş sürecinde ve bunların sınıflarda uygulanması sürecinde geçirdiği dönüşümler şeklinde açıklanabilir (Chevallard, 1985). Bu dönüşümlerin birincisi, bilimsel matematiksel bilgiden öğretilecek matematiksel bilgiye geçişi, ikincisi öğretilecek matematiksel bilgiden gerçekte öğretilen matematiksel bilgiye geçişi ve sonuncusu ise gerçekte öğretilen matematiksel bilgiden öğrenilen matematiksel bilgiye geçişi ifade etmektedir (Bosch & Gascon, 2006). Bu dönüşüm süreçleri şekil 1'de görülmektedir.



Şekil 1. Didaktik dönüşüm süreci[8]

Şekil 1'de ifade edilen dönüşümlerden bilimsel matematiksel bilgiden öğretilen matematiksel bilgiye geçiş noosfer[9] tarafından ve öğretilecek matematiksel bilgiden gerçekte öğretilen matematiksel bilgiye geçiş öğretmenler tarafından gerçekleştirilmektedir (Østergaard, 2013).

Bu teoride, en basit insanoğlu eylemlerinde olduğu gibi (örneğin dikiş dikmek) matematik de, bir sorun veya problem ile başlayan, bu sorun veya probleme bulunan bir çözüm ve bu çözümün neden mantıklı ve doğru bir çözüm olduğunun belirlenip kurumsallaştırılması ile topluma mal olan bir insan eylemi olarak görülmektedir. Teoride bu eylemler prakseoloji terimiyle açıklanmaktadır (Chevallard, 1999; 2006). Prakseolojiler 4 temel elemandan oluşmaktadır. Bunlar tablo 1'de verilmiştir.

Tablo 1. Prakseolojik Analizin Temel Bileşenleri

Pratik Bloğu	**Bilgi Bloğu**
Görev Tipi(T)	Teknoloji (θ)
Teknik(**τ**)	Teori(Θ)

Prakseolojik analiz, görev tipleri ve onları çözmek için kullanılan teknikler olarak ifade edilebilecek pratik bloğu ve pratik bloğunu matematiksel anlamda meşru kılan bilgi bloğundan oluşmaktadır (Barbé, Bosch, Espinoza, & Gascón, 2005).

Niçin Fonksiyonlar Konusu?

Matematiğin temel kavramlarından biri olan fonksiyon kavramı (Sajka, 2003; Even, 1993) lise matematiğinde limit, süreklilik, türev ve integral gibi birçok konunun ön öğrenmesini oluştururken aynı zamanda konular arasında birleştirici ve merkezi bir rol oynamaktadır (Selden & Selden, 1992; NCTM, 1989). Yenilenen lise

[8] Bosch & Gascon'den (2006) uyarlanmıştır.
[9] Noosfer, eğitimsel süreçler hakkında kararlar alan ve düşünen insanların oluşturduğu topluluk olarak tanımlanmaktadır (Bosch, 2012).

matematik öğretim programında (MEB, 2013) fonksiyon konusunun öğretiminin tablo 2'de açıklandığı şekliyle yapılması istenmektedir.

Tablo 2. Türkiye'de Lise Matematik Öğretim Programında Fonksiyon Konusuna İlişkin Üniteler

Üniteler	Sınıf Düzeyi	İlgili Kazanım
Fonksiyonlar	9.sınıf	1. Fonksiyon kavramını açıklar. 2. Fonksiyonların grafik gösterimini yapar 3. $f(x)=x^n$ ($n \in Z$) biçimindeki fonksiyonların grafiklerini çizer. 4. Bire bir ve örten fonksiyonları açıklar.
Fonksiyonlarla İşlemler ve Uygulamaları	10.sınıf	1. Bir fonksiyonun grafiğinden, simetri dönüşümleri yardımı ile yeni fonksiyon grafikleri çizer. 2. Gerçek sayılar kümesinde tanımlı f ve g fonksiyonlarını kullanarak f+g, f-g, f·g ve f/g fonksiyonlarını elde eder. 3. Fonksiyonlarda bileşke işlemini açıklar. 4. Bir fonksiyonun bileşke işlemine göre tersinin olması için gerekli ve yeterli şartları belirleyerek, verilen bir fonksiyonun tersini bulur. 5. İki miktar (nicelik) arasındaki ilişkiyi fonksiyon kavramıyla açıklar; problem çözümünde fonksiyonun grafik ve tablo temsilini kullanır.
İkinci Dereceden Denklem ve Fonksiyonlar	10. sınıf	1. İkinci dereceden bir değişkenli fonksiyonu açıklar ve grafiğini çizer. 2. İkinci derece denklem ve fonksiyonlarla modellenebilen problemleri çözer.
Trigonometri	11. sınıf	1. Trigonometrik fonksiyonları birim çember yardımıyla oluşturur ve grafiklerini çizer. 2. Tanjant, sinüs ve kosinüs fonksiyonlarının ters fonksiyonlarını oluşturur.
Üstel ve Logaritmik Fonksiyonlar	11. sınıf	1. Üstel fonksiyonu açıklar. 2. Üstel fonksiyonların bire bir ve örten olduğunu gösterir. 3. Logaritma fonksiyonunu üstel fonksiyonun tersi olarak oluşturur. 4. On tabanında logaritma fonksiyonunu ve doğal logaritma fonksiyonunu açıklar 5. Logaritma fonksiyonunun özelliklerini gösterir ve uygulamalar yapar.
Türev (Limit ve Süreklilik, Türev, Türev Uygulamaları)	12.sınıf	1. Bir fonksiyonun bir noktadaki limiti, soldan limiti ve sağdan limiti kavramlarını tablo ve grafik kullanarak örneklerle açıklar. 2. Bir fonksiyonun bir noktadaki sürekliliği kavramını açıklar. 3. Bir fonksiyonun bir noktadaki sürekliliği kavramını açıklar. 4. Türevlenebilen iki fonksiyonun toplamının, farkının, çarpımının ve bölümünün türevine ait kuralları açıklar ve bunlarla ilgili uygulamalar yapar. 5. İki fonksiyonun bileşkesinin türevine ait kuralı (zincir kuralı) oluşturur ve bunu kullanarak türev hesabı yapar. 6. Bir fonksiyonun yüksek mertebeden türevlerini açıklar ve bulur. 7. Verilen bir fonksiyonun bir noktadaki teğet ve normalinin denklemlerini bulur. 8. Bir fonksiyonun artan ve azalan olduğu aralıkları türevinin işaretine göre belirler. 9. Bir fonksiyonun ekstremum noktalarını türev yardımıyla belirler. 10. Bir fonksiyonun grafiği üzerinde bükeylik ve dönüm noktası kavramlarını açıklar. 11. Fonksiyonların grafiğini çizerken türevi kullanır.
İntegral (Belirli ve Belirsiz integral, Belirli İntegralin Uygulamaları)	12.sınıf	1. Bir fonksiyonun grafiği ile x-ekseni arasında kalan sınırlı bölgenin alanını Riemann toplamı yardımıyla tahmin eder. 2. Bir fonksiyonun grafiği altında kalan alanı veren fonksiyonun türevi ile grafiğin temsil ettiği fonksiyon arasındaki ilişkiyi açıklar. 3. Bir fonksiyonun belirli ve belirsiz integralleri arasındaki ilişkiyi açıklar. 4. Bir fonksiyonun bir sabitle çarpımının, iki fonksiyonun toplamının ve farkının belirli integraline ait kuralları oluşturur. 5. Bir fonksiyonun bir sabitle çarpımının, iki fonksiyonun toplamının ve farkının belirsiz integraline ait kuralları bulur ve bunları kullanarak integral hesabı yapar.

Tablo 2 de görüleceği üzere lise matematik öğretim programında 9. sınıfta fonksiyon kavramının tanıtılması ve 10. sınıfta fonksiyon grafiklerinin yeni fonksiyonlar türetmek için kullanılması, fonksiyonlardaki temel işlemlerin öğretilmesi ve problem çözümlerinde fonksiyonların bir araç olarak kullanılmaya başlanılması hedeflenmektedir. 11. sınıfta okul matematiği için önemli bazı fonksiyonlar (trigonometrik, üstel, logaritma gibi) ve bunların özellikleri verildiği görülmektedir. 12. sınıfta ise artık analizin temeli olarak ifade edilebilecek fonksiyonların limitleri, süreklilik, türev ve integral gibi konuların öğretildiği anlaşılmaktadır. Bu bağlamda fonksiyon kavramı ile ilgili 10. sınıf konuları lise ve üniversite matematiğinin en temel konularından biri olan analizin (limit, türev ve integral) temelini oluşturmaktadır. Bu nedenle bu araştırmada 10. sınıf matematik ders kitabındaki ünitelerden "Fonksiyonlarla İşlemler ve Uygulamaları" ünitesi DAT çerçevesinde incelenmiştir.

YÖNTEM

Bu çalışma nitel araştırma yöntemlerine göre gerçekleştirilmiştir. Çalışmada özel bir içerik analiz yöntemi olan prakseolojik analiz yöntemine başvurulmuştur (Erdoğan vd., 2015). 2014-2015 öğretim yılında Talim ve Terbiye Kurulu tarafından onaylanmış tek bir 10. sınıf matematik kitabı bulunmaktadır. Dolayısıyla MEB tarafından 10. sınıf öğrencilerine ücretsiz olarak bu ders kitabı dağıtılmıştır. Çalışma bu ders kitabındaki fonksiyonlarla işlemler ve uygulamaları ünitesiyle sınırlandırılmıştır. Tek bir ders kitabı söz konusu olduğundan kitap ismi ile ilgili bulgularda herhangi bir kodlama yapılmamıştır. Bahsi geçen kaynak ders kitabı olarak ifade edilmiştir.

Analiz Aşaması

Ders kitabının analizi DAT'ın temel analiz yöntemi olan prakseolojik analizin bileşenleri doğrultusunda gerçekleştirilmiştir. Bunun için öncelikle Fonksiyonlarla İşlemler ve Uygulamaları ünitesiyle ilgili görevler çıkarılmıştır. Bu görevlerden aynı teknikle çözülebilenler bir araya getirilerek görev tipleri oluşturulmuştur. Tekniklerin uygulanmasındaki, eğer varsa, teknolojik açıklamalar belirlenmiştir. Ayrıca bu teknolojilerin arka planındaki teori veya teoriler de araştırmada tespit edilmeye çalışılmıştır. Ayrıca her bir görevin hangi teknikle çözüldüğü belirlenerek ders kitabındaki görevlerin çözümünde yoğun olarak kullanılan teknikler hakkında fikir sahibi olunmaya çalışılmıştır. Burada cebirsel teknik, grafiksel teknik, cebirsel ve grafiksel teknik birlikte, şema tekniği, teknolojik teknik ve liste tekniği gibi çözüm yaklaşımları altında teknikler toplanmıştır. Ders kitabının analizi aşağıda verilen tablo ile yapılmıştır.

Tablo 3. Ders Kitabındaki Görevlerin Prakseolojik Analizin Bileşenleri Doğrultusunda İncelenmesi

Ünite	Alt Başlık	Sayfa	No	Alıntı	Görev	Teknik	Teknoloji	Teori	Prg Uyum	No	Görev tipi
Fonksiyonlarla İşlemler ve Uygulamaları	Fonksiyonların Simetrileri ve Cebirsel Özellikleri 1.Fonksiyonların Grafikleri ve Dönüşümler	42	1		$y=f(x)=x^2$ fonksiyonu ile $y=f(x)+2$ fonksiyonunun grafiklerini çizerek, aralarındaki ilişkiyi bulma	Grafik	Fonksiyonlarda dört işlem, Grafik çizme, Parabol, Afin dönüşüm Öteleme	izometri	U	1	Cebirsel temsille verilen y=f(x) fonksiyonunun grafiğinden yararlanarak y=f(x)+k fonksiyonunun grafiğini bulma (1, 25, 26,32)

Ders kitabının prakseolojik analizi tablo 3'te görüldüğü üzere, en sol sütundan sağa doğru ünite (ünite başlığı), alt başlık (ünite içindeki yer alan alt başlıklar), sayfa (görevin ders kitabındaki yeri), no (görevin prakseolojik analizdeki sırası), alıntı (görev ve ders kitabında görevin çözümünün nasıl yapıldığı), görev (görevin ifadesi), teknik (görevin çözümünde ağırlıklı olarak kullanılan çözüm yaklaşımı), teknoloji (görevde kullanılan matematiksel nesneler, kavramlar,..vs ile birlikte, eğer varsa, verilen açıklamalar), teori (teknolojinin ardındaki daha genel bilgi), prg uyum (görevin yürürlükteki öğretim programı açısından değerlendirilmesi U: Uygun ya da UD: Uygun Değil), no (görevin ait olduğu görev tipinin numarası), görev tipi (görevlerin sınıflandırıldığı görev tiplerinin ifadesi ve hangi görevlerin ilgili görev tipine ait olduğu) şeklindedir.
Bu analizlerin nasıl yapıldığının görülebilmesi için aşağıda bir görevin detaylı analizleri sunulmuştur.

Bir Görevin Analizi Örneği

Ders kitabı, Fonksiyonlarla İşlemler ve Uygulamaları ünitesi, Alt başlık: Fonksiyonlarda dört işlem, sayfa 47, görev no: 19

Görev (Kitapta verildiği şekliyle) : $f\colon R\rightarrow R$, $f(x)=x+1$ ve $g\colon R\rightarrow R$, $g(x)=2x$ fonksiyonları verilsin. $f+g$ fonksiyonunu bulunuz?

Çözüm (Kitapta verildiği şekliyle): $f+g\colon R\rightarrow R$, $(f+g)(x)=f(x)+g(x)=(x+1)+2x=3x+1$

Prakseolojik bileşenler

- T_1 (Görev tipi): Birinci dereceden iki polinom fonksiyonun toplamını bulma
- τ_1 (Teknik 1): (Cebirsel Teknik): İki polinom fonksiyon toplanırken aynı dereceli terimlerin katsayıları toplanır ya da çıkarılır.
- θ (Teknoloji): P(x)=$a_n x^n$+$a_{n-1}x^{n-1}$+…+$a_1 x^1$+a_0 ve Q(x)= $b_n x^n$+$b_{n-1}x^{n-1}$+…+$b_1 x^1$+b_0 şeklinde verilsin. O halde, (P+Q)(x)=P(x)+Q(x)=$(a_n + b_n)x^n$+$(a_{n-1} + b_{n-1})x^{n-1}$+…+$(a_1 + b_1)x^1$+$(a_0 + b_0)$
  olarak elde edilir.
- Θ (Teori): Polinom Halkaları

Bu görev matematik dersi öğretim programı açısından incelendiğinde, 10. sınıf öğrencilerinin "değişkenin aynı dereceli katsayıların toplanması" ile ilgili teknolojik bilgiye, önceki sınıflardaki kazanımlarından sahip olduğu söylenebilir. Öğrenciler formal anlamda polinom halkalarıyla ilgili teoriyi bilmeseler dahi teknolojik açıklamayı bildiklerinden dolayı bu görevin matematik dersi öğretim programı açısından uygun olduğu söylenebilir.

BULGULAR

İlk olarak tablo 4'te 10. sınıf matematik ders kitabında Fonksiyonlarla İşlemler ve Uygulamaları ünitesi içinde yer alan görevlerin görev tiplerine dağılımı görülmektedir. Bu görev tiplerinin ilgili olduğu çözüm teknikleri yanlarında verilmiştir.

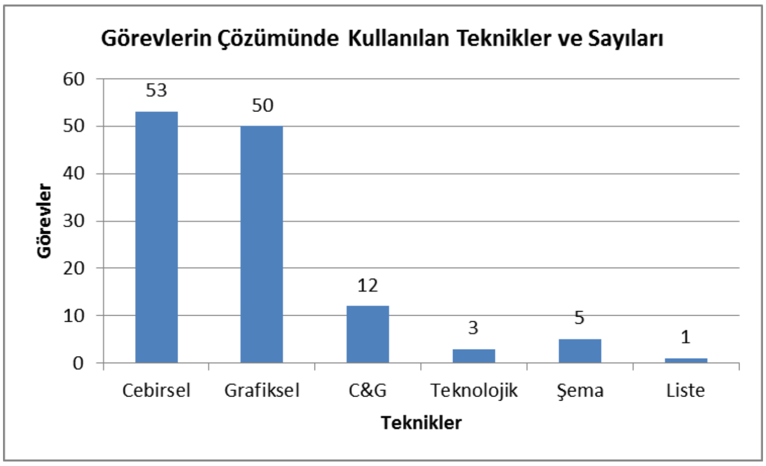
Tablo 4. Ders Kitabındaki Görevlerin Görev Tiplerine Dağılımı

Alt Başlık	Görev Tipi	Görevler	Teknik
Fonksiyonların Simetri Dönüşümleri	T_1: Fonksiyon grafiğinin y ekseninde ötelenmesiyle ilgili görevler	1-25-26-32	Grafiksel
	T_2: Fonksiyon grafiğinin x ekseninde ötelenmesiyle ilgili görevler	2-31	Grafiksel
	T_3: Fonksiyonun grafiğinin y ekseninde ölçeklenmesiyle (genişleme ya da daralma) ilgili görevler	3	Grafiksel
	T_4: Fonksiyon grafiğinin x ekseninde ölçeklenmesiyle (genişleme ya da daralma) ilgili görevler	4-27	Grafiksel
	T_5: Fonksiyon grafiğinin x eksenine göre simetrisiyle ilgili görevler	5-8-13-29-34	Grafiksel (Teknolojik-13)
	T_6: Fonksiyon grafiğinin y eksenine göre simetrisiyle ilgili görevler	6-9-12-28-33	Grafiksel (Teknolojik-12)
	T_7: Fonksiyon grafiğinin x ve y ekseninde ötelenmesiyle ilgili görevler	7	Cebirsel
	T_9: Fonksiyon grafiğinin x ve y eksenine göre simetrisiyle ilgili görevler	14-30-107	Grafiksel (Teknolojik-14)
	T_{28}: Fonksiyon grafiğinin x ekseninde simetrisi ve y ekseninde ötelenmesiyle ilgili görevler	102	Cebirsel
Tek ve Çift Fonksiyon	T_8: Tek ya da çift fonksiyon için cebirsel tekniklerle çözülebilen görevler	10-11-15-16	Cebirsel (Grafiksel-10 ve 11)
	T_{29}: Tek ya da çift fonksiyon için grafiksel tekniklerle çözülebilen görevler	103-104	Grafiksel
Fonksiyonlarda Dört İşlem	T_{10}: Cebirsel tekniklerle çözülebilen dört işlem içeren görevler	17-19-20-21-22-23-35-37-38-39	Cebirsel
	T_{11}:Grafik çizme yoluyla dört işlem içeren görevler	18-36	Grafiksel
	T_{30}: Grafik yorumu ile dört işlem içeren görevler	24-108	Grafiksel
Bileşke İşlemi ve Bir Fonksiyonun Tersi	T_{12}: Cebirsel teknikle yapılan bileşke işlemiyle ilgili görevler	40-41-43	Cebirsel
	T_{13}: Şema tekniğiyle çözülen bileşke işlemi içeren görevler	42	Şema
	T_{14}: Cebirsel teknikle çözülen bileşke işleminde görüntü bulmayla ilgili görevler	44-45	Cebirsel
	T_{15}: Grafiksel yorumla bileşke işleminde görüntü-ters görüntü bulma ile ilgili görevler	46-56-66-67-68-69-75-105-106-115	Grafiksel (C&G-105)
	T_{16}: Şema tekniğinde verilen fonksiyonun ters fonksiyonunu belirtmeye ilişkin görevler	47-48-49	Şema
	T_{17}: Cebirsel tekniklerle ters bulmaya ilişkin görevler	50-51-53-54-65	Cebirsel (Liste-50) (Şema-50)

	T_{18}: Grafiksel tekniklerle grafiği verilen bir fonksiyonun tersinin grafiğini çizmeye ilişkin görevler	52-76-77	Grafiksel
	T_{19}: Cebirsel tekniklerle yapılan iki fonksiyonun bileşkenin tersiyle ilgili görevler	55	Cebirsel
	T_{20}:Cebirsel tekniklerle yapılan bileşke ve fonksiyonlardan biri belli iken diğerini bulmaya ilişkin görevler	57-58-59-60-61-62-63-71-72-73-109-114	Cebirsel (Cebirsel-63)
	T_{21}: Cebirsel tekniklerle yapılan bileşke ve ters fonksiyonla ilgili karmaşık görevler	64-70-74-111-112-113	Cebirsel
	T_{31}: Cebirsel tekniklerle yapılan iki değişkenli fonksiyonlarda belli bir değerin ters görüntüsüyle ilgili görevler	110	Cebirsel
Fonksiyonlarda Uygulamalar	T_{22}: Sözel temsilden cebirsele geçiş ile ilgili görevler	78-79-84-91-92-118	Cebirsel
	T_{23}: Grafik temsilinde grafiğin pozitif-negatif aralıkların bulunmasına ilişkin görevler	80-81-96	Grafiksel
	T_{24}: Grafik temsilinde grafiğin artan-azalan aralıklara ilişkin görevler	82-95-119	Grafiksel
	T_{25}: Grafik temsilinde maksimum minimum noktalarla ilgili görevler	83-97	Grafiksel
	T_{26}: Grafik temsilinde ortalama değişim hızına ilişkin görevler	85-86-87-88-89-90-98-99-100-101-117	G&C
	T_{27}: Fonksiyon grafiği ile y=a doğrusunun kesim noktalarına ilişkin görevler	93-94-116	Grafiksel

Tablo 4 incelendiğinde onuncu sınıf matematik ders kitabında Fonksiyonlarla İşlemler ve Uygulamaları ünitesiyle ilgili 119 görevin olduğu görülmektedir. Bu görevler 31 adet görev tipi altında sınıflandırılmıştır. Fonksiyonların simetri dönüşümleri alt başlığında 9 görev tipi, tek ve çift fonksiyon alt başlığında 2 görev tipi, fonksiyonlarda dört işlem alt başlığında 3 görev tipi, bileşke işlemi ve bir fonksiyonun tersi alt başlığında 11 görev tipi, fonksiyonlarla uygulamalar alt başlığında 6 görev tipi ortaya çıkmıştır. Örneğin fonksiyonların simetri dönüşümleri alt başlığında T_1 görev tipi "grafiği verilen bir fonksiyonun y ekseninde ötelenmesi yoluyla başka fonksiyonların grafiklerini bulma" şeklinde ifade edilmiştir. Bu görev tipine ilişkin ders kitabındaki görevler analizlerde yer alan 1, 25, 26 ve 32 nolu görevlerdir.

Görevlerin hangi görev tiplerine ait oldukları kadar nasıl çözüldükleri de prakseolojik analizde önemli görülmektedir. Şekil 2'de görevlerde kullanılan teknik sayıları verilmiştir. Ancak buradaki görevlerden 4 tanesinin ders kitabında birden fazla teknikle çözümlendiği belirlenmiştir. Bunlardan 10 ve 11 nolu görevler hem cebirsel hem grafiksel olmak üzere 2 farklı teknikle, 50 nolu görev cebirsel, şema ve liste şeklinde 3 farklı teknikle ve 63 nolu görev farklı 2 cebirsel teknikle çözümlenmiştir. Diğer görevler sadece 1 teknikle ders kitabında çözülmüştür. Şekil 2'de görevlerde kullanılan teknikler verilmiştir.



Şekil 2. Görevlerin Çözümünde Kullanılan Teknikler

Şekil 2'de görüleceği üzere, 10.sınıf matematik ders kitabında Fonksiyonlarla İşlemler ve Uygulamalar ünitesiyle ilgili görevlerin %43'ünde cebirsel teknik, %40'ında grafiksel teknik, %10'unda cebirsel ve grafiksel teknik birlikte ve %7'sinde diğer tekniklerin kullanıldığı görülmektedir. Fonksiyon konusunun öğretiminde cebirsel ve grafiksel tekniklerin en fazla kullanıldığı ve bu tekniklerin kullanım oranlarının birbirine yakın olduğu görülmektedir. Bu sonuçlardan görevlerin %93'ünde ağırlıklı olarak cebirsel ya da grafiksel teknikler kullanıldığı söylenebilir.

Burada ayrıca ders kitabında geçen görevlerin 115'inin tek bir teknikle, 3 görevin 2 teknikle ve 1 görevin 3 teknikle çözüldüğü belirlenmiştir. Dolayısıyla görevlerin çözümünde alternatif tekniklere neredeyse hiç yer verilmediği anlaşılmaktadır.

Ders kitabında yer alan görevler prakseolojik olarak nasıl yapılandırılmıştır? Teknolojik açıklamalara ne ölçüde yer verilmiştir? Bu tür soruların yanıtları tablo 5'teki bazı görevlerin prakseolojik analizinde görülmektedir.

Tablo 5. Ders Kitabında Geçen Bazı Prakseojiler

Görev	No	Teknik	Teknoloji	Teori
$y=f(x)=x^2$ fonksiyonu ile $y=f(x)+2$ fonksiyonunun grafiklerini çizerek, aralarındaki ilişkiyi bulma	1	Grafiksel	Sonuçta "f(x) + b" fonksiyonunun grafiği, f(x) fonksiyonunun grafiğinin y ekseni boyunca |b| birim ötelenmesi ile elde edilir. ($b > 0$ ise pozitif yönde, $b < 0$ ise negatif yönde öteleme yapılır).	-
f ve g Reel sayılardan Reel sayılarda iki fonksiyon olsun. $f(x)=x+1$ ve $g(x)=2x$ ise $(f+g)(x)$ nedir?	19	Cebirsel	-	-
 Analitik düzlemde f fonksiyonunun grafiği verilmiştir. Buna göre f^{-1} grafiğini çiziniz?	52	Grafiksel	f ile f^{-1} birbirinin tersi iki fonksiyon ise $\forall(x, y) \in f$ için $(y, x) \in f^{-1}$ ve (x, y) noktasının $y = x$ doğrusuna göre simetriği de (y, x) olduğundan f^{-1} fonksiyonunun grafiği şekilde görüldüğü gibi f fonksiyonunun grafiğinin $y = x$ doğrusuna göre simetriği alınarak çizilir.	-

Tablo 5'de görüldüğü üzere, bazı görevlere ilişkin teknolojik açıklamalara ders kitabında yer verildiği anlaşılmaktadır. Ancak teori türünden açıklamalar yer almamaktadır. Burada 1 ve 52 nolu görevin teorisi düzlem geometri içerisinde yer alan ve uzaklığı koruyan dönüşümler olarak tanımlanan izometriler olarak ifade edilebilir. 19 nolu görevin teorisi ise polinom halkası olarak belirlenmiştir.

SONUÇ

Bu çalışmada 10.sınıf matematik ders kitabındaki fonksiyonlarla işlemler ve uygulamaları ünitesi DAT'ın temel analiz yöntemi olan prakseolojik analiz yaklaşımıyla incelenmiştir.

Analiz sonuçlarına göre ders kitabında belirlenen görevlerin çoğunlukla cebirsel ve grafiksel tekniklerle çözüldüğü tespit edilmiştir. Ders kitabında grafiksel tekniklere neredeyse cebirsel teknikler kadar yer verilmesinin, matematik dersi öğretim programının fonksiyon konusunun öğretimi ile ilgili benimsediği yaklaşımla uyumlu olduğu söylenebilir. Zira programda, fonksiyonların öğretiminde kullanılan bağıntı temelli yaklaşım terkedilmiş, reel fonksiyon temelli, analiz konuları ile daha uyumlu olan bir yaklaşım benimsenmiştir. Bu yeni yaklaşımda fonksiyonların grafik temsili ve grafik temsili ile cebirsel temsil arasında ilişki ön plana çıkmaktadır. Ayrıca bazı tekniklerde tekniğin niçin geçerli olduğuna ilişkin teknolojik açıklamalara da yer verildiği görülmüştür. Bununla birlikte, görevlerin genellikle bir teknikle çözüldüğü ve alternatif tekniklere yer verilmediği tespit edilmiştir. Bir görevin farklı tekniklerle çözülmesi öğrencilere daha fazla bir otonomi verebilir, muhtemel teknikleri değerlendirerek, probleme en uygun tekniği seçmelerini sağlayabilir ve böylelikle öğrendikleri konu ve kavramları daha iyi anlamlandırmalarına katkı sağlayabilir. Bu nedenle ders kitaplarında daha fazla görevin farklı tekniklerle çözümüne yer verilmesinin öğretime pozitif bir katkı sağlayacağı düşünülmektedir.

NOT

Bu çalışma Anadolu Üniversitesi Bilimsel Araştırma Projeleri Komisyonu tarafından kabul edilen 1408E364 numaralı proje kapsamında desteklenmiştir.

SEVENTH GRADE STUDENTS' IDEAS ABOUT THE HYDROELECTRIC PLANT TRIP

Ümmü Gülsüm DURUKAN
Giresun University

Fethiye KARSLI
Giresun University

ABSTRACT: Learning occurs not only in the formal learning environment, but also in the informal learning environment which is outside of the school/class. In recent years, informal learning activities are organized and used as the learning environments such as museums, zoos, botanical gardens, and planetarium. Within the scope of this activities, learning can be performed the trips being drawn up within a plan and taking into account of students' interests and desires outside the school boundaries. Considering this context, this study is intended to reflect the information and the impressions gained from the hydroelectric power plant (HEPP) trip designed for 7th grade students in a TUBITAK project. In accordance with the nature of the study process, this study has been designed by qualitative research methods on the purpose of capturing and making sense of "lived experience" with their perspectives. The sample of the study consists of 30 students. Data are collected by the form of Know-Want-Learn (KWL). On the eve of the trip, experiments and explanations related transformers were discussed and the HEPP was mentioned. Before the trip, "What do I know?" - "What I want to know?" sections and after the trip "What have I learned?" section in the KWL form are filled by the students. The data are analyzed descriptively and the examples of students' expressions are presented. The findings show that the students mostly know the electric energy generating from water/potential energy, want to know how to work the HEPP and have learned the generation process of electricity. It is seen that the students who think HEPP damage to the environment before the trip change their opinions after the trip. With the informal learning activities, the students have received information not only on the subject and also on the subject in the context of different disciplines. Therefore, as an important element to gain knowledge for students the field trips must be a part of the learning environment.

Key words: hydroelectric power plant, 7th grade student, informal learning environment, field trip.

YEDİNCİ SINIF ÖĞRENCİLERİNİN HİDROELEKTRİK SANTRAL GEZİSİ HAKKINDAKİ DÜŞÜNCELERİ

ÖZET: Öğrenme sadece formal öğrenme ortamlarında değil, okul/sınıf dışında oluşan informal öğrenme ortamlarında da gerçekleşmektedir. Son yıllarda informal öğrenme faaliyetleri düzenlenmekte ve müzeler, hayvanat-botanik bahçeleri, gözlemevleri gibi ortamlar bir öğrenme ortamı olarak kullanılmaktadır. Bu faaliyetler kapsamında, öğrenme bir plan dâhilinde hazırlanacak olan gezilerle okul sınırları dışında öğrencilerin ilgi ve isteklerini de dikkate alarak gerçekleştirilebilir. Bu bağlam dikkate alınarak, bu çalışmada 7. sınıf öğrencileri için düzenlenmiş olan bir TÜBİTAK projesinde öğrencilerin hidroelektrik santral (HES) gezisinden edindikleri izlenimlerini ve HES hakkındaki bilgilerini yansıtmak amaçlanmaktadır. Çalışma "Yaşanmış deneyimleri" onları yaşayanların bakış açısı ile yakalamak ve anlamlandırmak amacıyla çalışma sürecinin doğasına uygun olarak nitel araştırma yöntemine göre desenlenmiştir. Çalışmaya 30 öğrenci katılmıştır. Veriler Know-Want-Learn (KWL) formu ile toplanmıştır. Gezi öncesinde transformatörler ile ilgili deney ve açıklamalar yapılmış ve gezinin yapılacağı HES'ten bahsedilmiştir. Geziden önce KWL formunun "Ne biliyorum?" ve "Ne öğrenmek istiyorum?" kısımları ile gezi tamamlandıktan sonra formun "Ne öğrendim?" kısmı öğrenciler tarafından doldurulmuştur. Veriler betimsel olarak analiz edilerek, öğrencilerin ifadelerinden alıntı örnekleri sunulmuştur. Elde edilen bulgular, öğrencilerin en çok su/potansiyel enerjiden elektrik enerjisi üretildiğini bildiklerini, HES'in nasıl çalıştığını öğrenmek istediklerini ve elektrik üretim sürecini öğrendiklerini göstermektedir. Geziden önce HES'in doğaya zarar verdiğini düşünen öğrencilerin, gezi sonrasında fikirlerinin değiştiği görülmektedir. Hazırlanan informal öğrenme faaliyetleri ile öğrencilerin sadece konuyu değil, konu bağlamında farklı disiplinlerde de bilgiler edindiklerini göstermektedir. Bu sebeple, öğrencilerin bilgi kazanımı açısından önemli bir unsur olarak alan gezilerinin öğrenme ortamlarının bir parçası olması gerektiği düşünülmektedir.

Anahtar sözcükler: hidroelektrik santrali, 7. sınıf öğrencileri, informal öğrenme ortamları, alan gezisi.

GİRİŞ

Son yıllarda müzeler, akvaryumlar, hayvanat-botanik bahçeleri, gözlemevleri gibi yerler informal öğrenme ortamları olarak düzenlenmekte ve öğrenmenin gerçekleştirilmesi için kullanılmaktadır. İnformal öğrenme "sınıf dışında keşif yoluyla gerçekleşen, yaparak deneyimsel öğrenme süreci" (Priest, 1986) olarak tanımlanmaktadır. İnformal öğrenmenin karakteristik özelliği, öğrenenin neyi, niçin, nasıl ve ne zaman öğrendiğini kontrol edebilmesidir (Lakin, 2006). İnformal öğrenme ortamlarında süreçte öğrenciler fen, matematik, çevre bilinci ve okulla ilgili diğer alanlarda çeşitli bilgi ve beceriler kazanma olanağı elde ederler (Anderson, Kisiel & Storksdieck, 2006; Çavuş, Topsakal & Kaplan, 2013). Öğrencilerin sınıf içi etkinliklerle kazanmaları neredeyse çok zor olan bilgileri ve becerileri iyi yapılandırılmış informal öğrenme ortamları sırasında daha kolay edinebilmekte ve pekişebilmekte buna ek olarak kalıcı ve anlamlı öğrenmeye yardımcı olmaktadırlar (Altıntaş, 2014; Laçin-Şimşek, Balkan Kıyıcı & Atabek Yiğit, 2013; Lakin, 2006). Bozdoğan (2007) bilim müzelerinde gerçekleştirdiği çalışmasında, çalışmaya katılan öğrencilerin akademik başarısının arttığını ortaya çıkarmıştır. Balkan-Kıyıcı ve Atabek-Yiğit (2010) rüzgâr enerjisi konusu paralelinde Bandırma Rüzgar Enerjisi Santrali"ne yaptıkları teknik gezi sonrasında Fen Bilgisi öğretmen adaylarının birinci elden bilgi edinmeye fırsat vermesi, gözlem yapma olanağı sağlaması, öğrenilenlerin somut olarak gözlenmesi neticesinde kalıcı ve anlamlı öğrenmeye yardımcı olması ve aynı zamanda öğrenmenin yanında eğlence faktörünü de içinde barındıran sosyal etkileşime fırsat tanıması şeklinde olumlu fikirlere sahip olduklarını tespit etmişlerdir. Nitekim soyut olan konuların somut bir şekilde öğrencilerin zihinlerinde yapılandırılmasına katkı sağlayan yöntem ve aktivitelerin öğrenmeyi kolaylaştırdığı da bilinmektedir (Dönmez-Usta, Karslı & Durukan, 2016). Yine informal bir öğrenme ortamında gerçekleştirilen ve Ertaş, Şen ve Parmasızoğlu (2011) tarafından yürütülen çalışmada, Enerji Parkı'na gezi öncesinde HES'teki elektrik üretimi ile ilgili hareket enerjisinin elektrik enerjisine dönüşmesi doğru yanıtını veren öğrenci sayısı, gezi sonrasında artmıştır. Bu durum, öğrencilerin bilim müzesine yönelik gezisi sonrasında konu ile ilgili bilgilerinin arttığını gösterebilir. Ayrıca informal fen öğrenme ortamları ve deneyimleri farklı özellikteki öğrencilere uygun öğrenme fırsatları sunmada ve öğrencileri her alanda feni öğrenmeye motive etmede (Hofstein & Rosenfeld, 1996) ve fene yönelik tutumlarında (Wulf, Mayhew, Finkelstein, Singh, Sabella & Rebello vd., 2010) önemli katkılara sahiptir. Bu nedenlerle fenin öneminin ve gerekliliğinin öğrencilere kazandırılması için formal eğitimin yanında informal öğrenme olanaklarının da kullanılarak öğretimin desteklenmesi öğrencilere önemli katkılar sağlayacaktır.

2013 yılı Fen bilimleri dersi öğretim programında da derslerin planlanması ve uygulanması sırasında, öğrencilerin anlamlı ve kalıcı öğrenmelerinin sağlanması için informal öğrenme ortamlarının tasarlanmasına yer verildiği görülmektedir (MEB, 2013). Çünkü okul dışı öğrenme ortamları dikkatleri çabuk dağılan öğrencilerde uyarıcı etki yaratarak, öğrenilenlerin hatırlanabilirliğini arttırmakta, öğrencilerin bilişsel becerilerinin yanı sıra duyuşsal ve psikomotor becerilerinin de gelişimine katkı sağlamaktadır (Lakin, 2006). Buna ek olarak okul dışı ortamlar öğrencilerin gündelik yaşamlarındaki olaylar ile fen konularının ilişkilendirilmesinde etkin rol oynamaktadırlar (Ertaş, Şen & Parmasızoğlu, 2011). Bu özelliklerinden dolayı öğretim programlarında yer verilen informal öğrenme ortamlarında öğretimin uygulamada da yapılması oldukça önemlidir. Öğretim programına uygun informal öğrenme ortamlarına arazi gezileri, Hidroelektrik Santrali (HES) gezileri, zeytinyağı, iplik-dokuma, un, fındık vb. gibi bitkisel kaynaklı üretim yapan işletmelere yapılan geziler, doğal anıt örnekleri gezileri, gökyüzü gözlem evi gezisi ve su arıtma tesisleri gezisi örnek olarak verilebilir (Bozdoğan, 2007).

Enerji ve HES

Günümüzde enerji ihtiyacı her geçen gün artmaktadır. Fosil yakıtlar ve yenilenemeyen enerji kaynaklarının kullanımı ile enerji ihtiyacının önemli bir kısmı karşılanmasına rağmen bu kaynakların rezervlerinin tükenebilir olması yenilenebilir enerji kaynaklarına doğru bir yönelime sebep olmuştur. Bir çok ülke yenilenebilir enerji kaynağı olarak hidrolik, güneş, rüzgar gibi yenilenebilir enerji kaynaklarından yararlanmaktadır. Ülkemiz hidrolik enerji açısından büyük bir potansiyele sahiptir (Gençoğlu, 2002; Kumbur, Özer, Özsoy & Avcı, 2005). Bu sebeple akarsularımızda birçok HES kurulmuş ve kurulmaya devam edilmektedir. HES basitçe suyun belli bir kottan düşürülüp türbinleri döndürmesi yolu ile elektrik üreten merkezlerdir (Ürker & Çobanoğlu, 2012).

Son yıllarda artan HES yapımı ile kamuoyunun dikkati bu konuya çekilmiştir. Bu durum aynı zamanda, eğitim araştırmacılarının da dikkatini çekmiş, özellikle öğretmen adaylarının HES'e yönelik görüşlerini ortaya çıkaran çalışmalar yapılmıştır (Kılıçaslan, Aymen-Peker & Gün, 2011; Yangın, Geçit & Delihasan, 2012; Geçit & Yangın, 2012; Bodur & Şenyuva, 2013). Buna benzer olarak Sever ve Ulu-Kalın (2010) da Deriner ve Yusufeli Barajları çevresinde yaşayan halkın HES ile ilgili görüşlerini ortaya çıkarmışlardır. Bu araştırmalarda katılımcıların HES ile ilgili yeterli bilgiye sahip olmadıklarını ortaya çıkaran açıklamalar yaptıkları görülmektedir (Kılıçaslan, Aymen-Peker & Gün, 2011; Yangın, Geçit & Delihasan, 2012; Geçit & Yangın, 2012; Bodur & Şenyuva, 2013; Sever & Ulu-Kalın, 2010). Öztürk ve Leblebicioğlu (2012) ise, HES'ler ile ilgili değişik gruplardan katılımcıların görüşlerini almışlardır. Konu ile ilgili gruplardan, sorumluların ülkenin kalkınması için HES'lerin yapımının devam etmesini buna karşın çevre örgüt üyelerinin HES'lerin doğaya vereceği zararları gerekçe göstererek yapımının durdurulmasını ve halk grubunun çoğu HES'lerin neden olacağı ekolojik tahribatı sosyo-ekonomik zararları gerekçe göstererek yapımının durdurulmasını savunmuşlardır. Ancak yapılan çalışmalardan küçük yaşlardaki öğrencilerin HES ile ilgili düşüncelerini, HES gezisi sonrası edindikleri deneyimlerini ve bilgilerini ortaya çıkarmaya yönelik bir çalışmaya rastlanılamamıştır. Küçük yaştaki öğrencilerin HES ile ilgili görüşlerinin neler olduğunun belirlenmesinin ve onların informal öğrenme ortamı sonrasındaki görüşlerinin değişimi üzerine olan katkılarının araştırılması önemli ve gerekli görülmektedir. Böylece öğretmenin kontrolü altındaki ortaokul öğrencileri santraller ile küçük yaşlarda tanışarak kalıcı öğrenmeler sağlayabilirler.

Bu bağlamda yapılan çalışmanın amacı 7. sınıf öğrencileri için düzenlenmiş olan bir projede öğrencilerin HES gezisinden edindikleri izlenimlerini ve HES hakkındaki bilgilerini ortaya çıkarmaktır.

YÖNTEM

Araştırmanın amacına, sürecin işlenişine ve doğasına en uygun yöntem olarak araştırma nitel araştırma yöntemine göre desenlemiştir. Nitel araştırmanın temel özelliklerinden birisi ele alınan olguyu katılımcıların bakış açısıyla anlamaya odaklanmasıdır. Araştırmada "yaşanmış deneyimleri" onları yaşayanların bakış açısı ile yakalamak ve anlamlandırmak istiyorsanız nitel çalışma yapmak uygundur (Şimşek & Yıldırım, 2013).

Çalışma grubu

Araştırmanın örneklemini ortaokul 7. Sınıfı tamamlamış 30 (yaşları 13 ile 14 arası değişen, 16 kız-14 erkek) öğrenci oluşturmaktadır. Örneklemi belirlemek için; Giresun ili ve çevre ilçeleri kapsamındaki tüm ortaokullara TUBİTAK doğa eğitimi projesine katılım çağrısı yapılmış, başvurular sonrası 7. sınıf karne başarısı yüksek olan gönüllü ilk 30 öğrenci araştırmaya alınmıştır. Katılımcılar Ö1, Ö2, Ö3,………, Ö30 şeklinde kodlanmıştır.

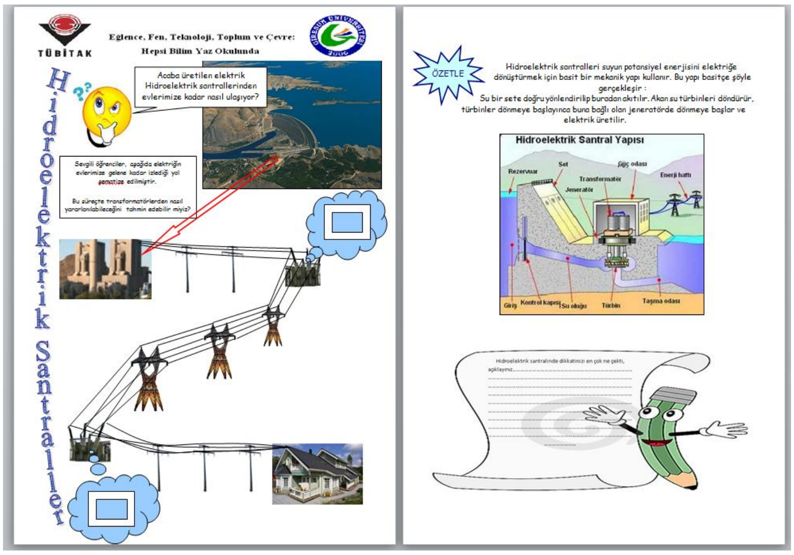
Veri toplama aracı ve verilerin analizi

Bildiklerim-Öğrenmek istediklerim-Öğrendiklerim (Know-Want-Learn / KWL) tüm konular için kullanılabilecek şema teorisine dayanan basit ama güçlü bir stratejidir (Tok, 2013). Bu sorulardan oluşan form, öğrencilerin konu ile ilgili bilgilerine, ne öğrenmek istediklerine ve sürecin sonunda ne öğrendiklerine dayanan grafiksel bir düzenleme yaklaşımıdır (Camp, 2000). Bu strateji ile öğrenci süreçten edindiği bilgi ile önceki bilgileri arasında bir bağ kurar, bilgiyi organize eder, birleştirir ve özetler (Headley & Dunston, 2000). Çalışmaya ait veriler "Ne biliyorum?", "Ne öğrenmek istiyorum?" ve "Ne öğrendim?" şeklindeki üç açık uçlu sorudan oluşan bu form aracılığıyla toplanmıştır.

Veriler betimsel olarak analiz edilmiştir. Öğrencilerin yanıtları, benzer özelliklerine göre kodlara ayrılarak, bu kodlara ait ifade sıklığı (frekanslar) belirlenmiştir. Öğrencilerin birden fazla kodda yer alan yanıtları da bulunmaktadır. Bu nedenle, bazı sorularda verilen yanıtlara göre oluşturulan koda ait ifade sayısı, öğrenci sayısından fazladır. Verilen yanıtlar, birbirinden bağımsız iki uzman tarafından kodlanarak, uzmanlar arasında fikir birliğine varılan kodlarda karar kılınmıştır. Bununla birlikte, düzenlenen verilerin geçerliğini sağlamak amacıyla öğrencilerin ifadelerinden doğrudan alıntılara yer verilmiş ve tablolar eşliğinde sunulmuştur.

Uygulama süreci

Gezi gerçekleştirilmeden önce bir fen laboratuvarında "elektrik akımının manyetik alan oluşturması" ve "manyetik alanın elektrik akımı oluşturması" ile ilgili iki deney gerçekleştirilmiştir. Bu deneylerden yola çıkılarak transformatörler tanıtılmış, transformatörlerle ilgili bir deney yapılmış ve kullanım alanları tartışılmıştır. Kullanıldığı alanlardan birinin de HES olduğundan bahsedilmiştir. Gezi öncesinde HES'in ürettiği elektriğin evlerimize nasıl ulaştığı ve bu sırada transformatörlerden nasıl yararlanıldığı tartışılmıştır. Sonrasında da gezi yapılacak olan HES kısaca tanıtılmıştır. Gezi süresince öğrencilerin not alabileceği bir çalışma yaprağı hazırlanmış (Şekil 1) ve gezi öncesinde onlara dağıtılmıştır.



Şekil 1. Çalışma yaprağı

Geziden önce öğrencilere KWL formu dağıtılmış ve HES ile ilgili “ne biliyorum?” ve “ne öğrenmek istiyorum?” sorularını cevaplamaları istenmiştir. Öğrenciler HES’i 10 kişilik gruplar halinde yaklaşık yarım saat süreyle gezmişlerdir. Bu sırada santraldeki elektrik, elektronik ve makine mühendislerine merak ettikleri soruları yöneltmişlerdir. Öğrencilere, 6 rehber, 3 mühendis ve 6 eğitmen eşlik etmiştir. Gezi sonrasında konu ile ilgili bilgilerini toparlamak amacıyla 10 dakika süren kısa bir soru-cevap uygulaması yapılmıştır. Ardından, KWL formunda “ne öğrendim?” kısmını doldurmaları istenmiştir.

BULGULAR

KWL formundan elde edilen veriler sorular bazında özetlenerek sunulmuştur. Öğrencilerin formdaki HES ile ilgili “ne biliyorum?” sorusuna verdikleri yanıtlar Tablo 1’de yer almaktadır.

Tablo 1. Öğrencilerin HES ile ilgili “ne biliyorum?” sorusuna verdikleri yanıtlar

Kodlar	Öğrenci kodu	f
Su enerjisini elektrik enerjisine çevirdiğini	Ö1, Ö5, Ö7, Ö10, Ö12, Ö22, Ö23, Ö28, Ö29	9
Potansiyel enerjiden elektrik enerjisi üretildiğini	Ö6, Ö8, Ö11, Ö15, Ö27, Ö30	6
Potansiyel enerjinin kinetik enerjiye dönüştüğü	Ö17, Ö23	2
Yerçekimi potansiyel enerjisini elektrik enerjisine dönüştüğü	Ö19	1
Suyun kinetik enerjisini elektrik enerjisine dönüştüğünü	Ö20	1
Elektrik enerjisi ürettiğini	Ö14, Ö16, Ö21, Ö22, Ö23, Ö24, Ö25, Ö26	8
Yenilenebilir enerji kaynağı olduğunu	Ö8, Ö9, Ö30	3
Elektrik santrali olduğunu	Ö3, Ö18	2
Enerji kaynağı olduğunu	Ö2	1
Barajlarda bulunduğu	Ö8, Ö15, Ö21, Ö30	4
Transformatörleri içerdiği	Ö2, Ö9, Ö13, Ö20	4
Maliyeti fazla olduğunu	Ö8, Ö30	2
Doğaya zarar verdiğini	Ö19, Ö29	2
Patlama olasılığı olduğunu	Ö14	1
Toplumun tepkili olduğunu	Ö18	1
Akarsu üzerine kurulduğunu	Ö25	1
Açıklama yok	Ö4, Ö20	2

f: ifade sıklığı

Tablo 1’den öğrencilerin HES ile ilgili genel olarak HES’te enerji dönüşümlerinin meydana geldiğini ve HES’in enerji ürettiğini bildikleri görülmektedir. Bununla birlikte, öğrencilerin HES’lerin barajlarda bulunduğunu ve transformatörleri içerdiğini belirttikleri görülmektedir. Ayrıca, öğrenciler HES’in maliyetinin fazla olduğunu ve doğaya zarar verdiğini de ifade etmişlerdir. Öğrencilerin formdaki ilk soruya verdikleri yanıtlardan birkaç alıntı aşağıda yer almaktadır:

> "*Barajlarda elektrik üretildiğini ve potansiyel enerjiden elektrik enerjisi elde edildiğini biliyorum (Ö15)*"
> *"HES Karadenizli tarımcılar tarafından pek hoş karşılanmayan ama topluma çok büyük katkısı olan santrallerdir (Ö18)"*
> *"… Akarsuların yolunu kestiği için doğaya zarar verdiğini biliyorum (Ö19)"*.

Öğrencilerin formdaki HES ile ilgili "ne öğrenmek istiyorum?" sorusuna verdikleri yanıtlar Tablo 2'de sunulmuştur.

Tablo 2. Öğrencilerin HES ile ilgili "ne öğrenmek istiyorum?" sorusuna verdikleri yanıtlar

Kodlar	Öğrenci kodu	f
HES'in/içerisindeki aletlerin nasıl çalıştığını	Ö2, Ö4, Ö9, Ö12, Ö13, Ö15, Ö20, Ö21, Ö25, Ö26, Ö27, Ö28, Ö29, Ö30	14
Mekanizmasını incelemeyi ve isimlerini öğrenmeyi	Ö17, Ö25	2
HES'teki transformatörlerin görevini	Ö2, Ö13	2
Nasıl bir enerji kaynağı olduğunu	Ö8	1
Elektrik enerjisinin nasıl ürettiğini	Ö14, Ö21, Ö22, Ö24	4
Ne kadar elektrik ürettiğini	Ö21	1
Enerji türleri arasındaki dönüşümü	Ö22, Ö27	2
Üretilen elektriğin evimize nasıl ulaştığını	Ö10	1

Santraldeki riskleri	Ö14	1

Öğrencilerin önemli bir çoğunluğu gezi sonrası HES'teki elektrik enerjisi üretim sürecini öğrendiklerini belirtmişlerdir (Tablo 3). Bunun yanı sıra, HES mekanizmasının içerisindeki çarkların ve transformatörlerin nasıl çalıştığını öğrendiklerini ifade etmişlerdir. HES'te üretilen enerji miktarı ve üretilen bu enerjinin evlerimize kadar nasıl ulaştığı hakkında da bilgi sahibi olduklarını açıklamışlardır. HES'in çevreye ve canlılara etkilerini öğrendiklerini belirten öğrenciler az sayıdadır. Bununla birlikte, öğrenciler santral, santral çalışanları, çalışanların eğitimi ve güvenliği hakkında bilgi aldıklarını ifade etmişlerdir. Öğrencilerin 'ne öğrendim?' sorusu için verdikleri yanıtlardan örnek alıntı ifadeler aşağıda sunulmaktadır:

> *"Suyun çarka çarpınca çarkı döndürdüğünü ve bu olay üzerine bir enerji ortaya çıktığını ve hidroelektrik santrallerinde evimize gelen elektrik geriliminin 150000 V'tan 220 V'a kadar düştüğünü öğrendim (Ö1)"*
>
> *"Su çarkı döndürür ve jeneratörü çalıştırır. Bu sayede elektrik üretilir (Ö6)"*
>
> *"…Suyun hızıyla araya canlıların girebildiğini ve çarkın araya giren canlıları öldürdüğünü öğrendim. Ama çok az oluyormuş… (Ö7)"*
>
> *"Su bir sete doğru yönlendirilip buradan akıtılır. Gelen su türbinleri döndürür ve elektrik üretilir… (Ö8)"*
>
> *"…HES projesi doğaya o kadar zarar vermiyormuş… (Ö16)"*
>
> *"Vatandaşın tepkilerinin boş yere olduğunu, aslında abartıldığı kadar kötü olmadığını öğrendim… (Ö18)"*
>
> *"Transformatörler ile elektrik Volt'unun arttırılıp azaltılabileceğini, derelerin boyutlarına göre HES yapılabileceğini, … olası kazaları ve alınacak önlemleri öğrendim (Ö20)".*

TARTIŞMA ve SONUÇ

Bu çalışma, 7. sınıf öğrencilerinin HES gezisinden edindikleri izlenimlerini ve HES hakkındaki bilgilerini ortaya çıkarmak için yapılmıştır. Ulaşılan sonuçlar, öğrencilerin HES'in su/potansiyel enerjiden elektrik enerjisi ürettiğini ve transformatörleri içerdiğini bildiklerini; HES'in nasıl çalıştığını, nasıl elektrik enerjisi ürettiğini ve özelliklerini öğrenmek istediklerini göstermektedir. Buna ek olarak öğrenciler HES'te elektrik üretim sürecini, çarkların ve transformatörlerin süreç içerisindeki görevlerini, üretilen enerji miktarını, üretilen elektriğin evlerimize nasıl ulaştığını, çalışanların güvenliği ile aldıkları ücretlerini ve HES'in çevreye zarar vermediğini öğrendiklerini göstermektedir.

Öğrencilerin ne biliyorum kısmında ifade ettikleri HES'lerin yapım maliyetlerinin yüksek olması ifadesi literatürdeki farklı çalışmalarda da yer almaktadır (Yangın, Geçit & Delihasan, 2012). Bunun aksine farklı çalışmalarda HES'in maliyetinin düşük olduğunu ifade eden katılımcılarda bulunmaktadır (Sever & Ulu-Kalın, 2011). HES'lerin maliyetin düşük, ekonomik ömrünün yüksek olması gibi nedenlerden dolayı kullanımı/yapımı ülkemizde gün geçtikçe arttığı da bilinmektedir (Sever & Ulu-Kalın, 2011; TMMOB HES Raporu, 2011).

Öğrencilerin gezi öncesinde HES'in elektrik enerjisi ürettiğini ve elektrik enerjisi üretirken enerji dönüşümlerinin gerçekleştiğini bildikleri görülmektedir. Kılıçarslan, Aymen-Peker ve Gün (2011) ise yaptıkları çalışmada öğrencilerin önemli bir kısmını HES ve hidroelektrik enerji kaynakları hakkında bilgi sahibi olmadıklarını göstermektedir. Gezi sonrasında ise, elektrik enerjisi üretim sürecini açıklayabildikleri görülmektedir. Bu noktada, öğrencilerin var olan bilgilerini arttırabildiği yorumu öğrencilerin üretim sürecini açıklayabilmeleri ile yapılabilir. Öğrencilerin gezi öncesindeki bilgileri ile gezi sonrasındaki bilgileri karşılaştırıldığında, gezinin öğrenciler adına faydalı geçtiği ve HES ile ilgili birçok bilgiye sahip oldukları söylenebilir. Gezi öncesinde öğrenciler HES'in elektrik enerjisi ürettiğini ifade ederken; gezi sonrasında elektrik enerjisi üretim sürecini açıklamaları, HES'in çalışma prensiplerinden (mekanizmasından) haberdar olmaları ve üretilen elektriğin evimize kadar ulaşması sürecini ifade etmeleri gezinin öğrenciler adına faydalı olduğunun bir örneğidir. Araştırma sonuçlarına benzer olarak; Balkan-Kıyıcı ve Atabek-Yiğit (2010) yaptıkları araştırmada konuyla ilgili informal öğrenme ortamlarını ziyaret eden kişilerin çoğunluğunun gezi deneyimlerinden birçok şey öğrendiğini belirtmiştir. Bu durum öğrencilerin öğrenme sürecine aktif olarak katılımının, süreci yerinde gözlemlemelerinin ve merak ettikleri her duruma birinci elden bilgi edinmeye fırsat bulabilmelerinin bir yansıması olabilir.

Öğrencilerin "ne öğrenmek istiyorum" sorusuna verdiği cevaplar öğrencilerin HES ile ilgili merak ettikleri durumları ve bilgileri ortaya çıkarmaktadır. Özellikle HES'in nasıl çalıştığını merak etmeleri ve çalışma prensiplerini öğrenmeyi istedikleri görülmektedir. Öğrencilerin ne öğrendim sorusuna verdikleri cevapların, merak ettikleri durumlar ile uyumlu olduğu görülmektedir. Bu durum HES gezisinde öğrencilerin sürece aktif olarak katılarak HES'teki görevlilere ve eğitmenlerine soru sormaları için teşvik edilmelerinin ve yerinde gözlem yapmaların bir sonucu olabilir. Merak ettikleri bilgilerin yanı sıra, öğrencilerin HES ve çalışanları hakkında da bilgi edindikleri tespit edilmiştir. Yapılan çalışmalarda öğrencilere informal öğrenme ortamlarının öğrencilere uygun öğrenme fırsatları sunmada, öğrenmede uyarıcı etki yaratmada ve öğrencilerin ilgi, istek ve meraklarını arttırmada önemli rol oynadığı tespit edilmiştir (Lakin, 2006; Tatar & Bağrıyanık, 2012). Bununla birlikte, HES'in çevreye ve canlılara etkisi ile ilgili bilgi edindikleri de ortaya çıkmıştır. Öğrencilerin alınan önlemler dahilinde HES'in çevreye ve canlılara bahsedildiği kadar zararlı olmadığını ifade ettikleri görülmektedir. Bununla birlikte, enerji üretimi sırasında HES'in su kanallarına girebilen bazı canlıların ölmesine rağmen bu sayının oldukça az olduğunu belirtmişlerdir. Bu durum HES'te öğrencilere bilgi veren mühendislerin elde edilen yüksek miktardaki enerjiye karşın yaşanan zayiatın çok az olduğunu açıklamış olmasının bir sonucu olabilir. Yangın, Geçit ve Delihasan (2012) çalışmalarında az sayıdaki öğretmen adayının HES ile ilgili "Hidroelektrik santraller, işletmeleri esnasında doğaya en az etkisi olan çevre dostu santrallerdir" şeklinde düşündüklerini belirlemiştir. Ancak yapılan bazı çalışmalar katılımcılarının HES'te enerjinin üretimi, iletimi ve kullanımı sırasında ekolojik dengenin bozulması, tarım alanlarına zarar vermesi gibi çevre sorunlarını ortaya çıkardığını belirttiklerini göstermektedir (Sever & Ulu-Kalın, 2011; Öztürk & Leblebicioğlu, 2012; Bilgili & Kocalar, 2014). Benzer şekilde, Bodur ve Şenyuva (2013) öğretmen adaylarının HES'in çevreye zarar verdiğini düşündüklerini ortaya çıkarmıştır. Bu zararları, "Bölgedeki doğal alanlara zarar verir.", "Santralin kurulduğu akarsunun/derenin kurumasına sebep olur.", "Su kaynaklarının kirlenmesi gıda güvenliğini tehdit eder." şeklinde ifade etmektedirler.

ÖNERİLER

HES gibi çevre ile ilgili boyutlara sahip konularda bireylerin bilinçlendirilmesi ve bilgilendirilmesi ile bireylerin çevreye yönelik tutumlarının olumlu yönde geliştirilebileceği düşünülmektedir. Örneğin, Bodur ve Şenyuva (2013), HES hakkında bilgi sahibi olma durumu ile çevreye yönelik tutumları arasında HES hakkında bilgiye sahip olmayan öğrenciler aleyhine anlamlı fark olduğu belirlemişlerdir. Bu bulgu göz önüne alındığında, HES hakkında bilgi sahibi olmayan öğrencilerin çevre ile daha az ilgilendikleri ve çevreye yönelik tutumlarının daha olumsuz olduğunu ifade etmişlerdir. Bu örnek, bu tür etkinliklerin çevreye yönelik tutumu da etkilediğini göstermektedir. Bununla birlikte, HES'in çevreye verdiği zarar konusunda öğrencilerin öğrendikleri ile literatürde var olan çalışmalar arasında farklılık olduğu görülmektedir. Bu durum, yapılan HES gezisi sırasında yalnızca HES'te çalışan mühendislerden bilgi almanın yeterli olmadığını gösterebilir. HES ile ilgili bilgi edinirken yalnızca HES'te çalışan mühendislerden değil coğrafya, biyoloji gibi farklı disiplinlerde uzmanlaşmış kişilerinde desteğinin alınması gerekli olduğu ortaya çıkmaktadır.

Hazırlanan informal öğrenme faaliyetleri ile öğrencilerin sadece konuyu değil, konu bağlamında farklı disiplinlerde de bilgiler edindiklerini de göstermektedir. Bu sebeple, öğrencilerin bilgi kazanımı açısından önemli bir unsur olarak alan gezilerinin öğrenme ortamlarının bir parçası olması gerektiği düşünülmektedir. Bu noktada, informal (okul dışı) öğrenme ortamlarına yönelik bu tür etkinlikleri geliştirmek için öğretmenlerin konu ile ilgili bilgi düzeyleri de önemlidir. Yapılan çalışmalar, öğretmen adaylarının Örneğin HES konusu ile ilgili genel olarak öğretmen adaylarının yeterli bilgi birikimine sahip olmadıklarını göstermektedir (Geçit & Yangın, 2012). Bu sebeple, öğretmen adaylarının da kendilerini geliştirmeleri teşvik edilmeli ki meslek hayatlarında bu tür etkinlikleri rahatlıkla planlayıp yürütebilmeleri sağlanmalıdır. Bilim müzelerine yapılan gezilerinde öğrencilerin konu ile ilgili öğrenmelerine etkisi olduğu tespit edilmiştir (Bozdoğan, 2007). Örnek olarak, Ertaş, Şen ve Parmasızoğlu (2011) tarafından yürütülen çalışmada HES ile ilgili Enerji Parkı'nda yapılan gezi sonrasında konu ile ilgili bilgilerinin arttığını gösterebilir. Bu çalışma ortaokul 7. Sınıf öğrencileriyle sınırlandırılmıştır. Daha geniş kitlelerin (öğrenci, veli, öğretmen adayı ve öğretmenler) okul dışı öğrenme ortamlarında öğrenmenin gerçekleştirilmesine yönelik projelere katılmaları için gerekli destekler verilmeli ve projeler tüm Türkiye geneline yaygınlaştırılmalıdır.

NOT

Bu çalışmanın verileri 2014 yılında gerçekleştirilen 213B650 kodlu "Eğlence, Fen, Teknoloji, Toplum ve Çevre: Hepsi Bilim Yaz Okulunda" adlı TÜBİTAK projesinde yer alan bir etkinlik sırasında toplanmıştır.

THE IMPACT OF ROTATING CLASS SYSTEM ON THE SUCCESS LEVELS AND ATTITUDES OF THE STUDENTS IN THE LIGHT UNIT

Yunus PINARKAYA
MEB, 60.Yıl Ortaokulu

Cengiz ÖZYÜREK
Ordu Üniversitesi Eğitim Fakültesi

ABSTRACT: The purpose of this study is to examine whether 7th grade "light topic" taught in rotating class has an impact on students' attitudes towards science and technology. This study, which was designed as an experimental design in the form of pre-test post-test control group, was carried out with 46 7th grade students in the 60th Year Secondary School in Altınordu district of Ordu province in the second semester of 2014-2015 academic year. The sample group of the study was chosen via convenience sampling and the experimental and control groups were randomly selected among the sample. The classes of the experimental group of the study (n=23) were taught in rotating classrooms whilst the classes of students in the control group (n=23) were taught in classical classroom for 4 class hours in a week for 4 weeks as stated in the annual plan. The quantitative data used in the study have been abtained from the achievement test and The Attitude survey for Science and Technology. The data collection tools were administered as a pre-test before the experimental process and a post-test after the experimental process. The collected quantitative data in the study were analyzed using SPSS 16.0 package programme. And since the data in the study showed a normal distribution, parametric tests were used. The courses carried out in the rotating classrooms were photographed and were used in appropriate places in the study. The results of the analyses revealed that the success levels and attitudes of the students who were taught in rotating classrooms were higher. In this sense, it is believed that wider use of rotating classroom system will have positive effects on success levels.

Key words: rotating class system, science education, light

IŞIK ÜNİTESİNDE ÖĞRENCİLERİN BAŞARILARI VE TUTUMLARI ÜZERİNDE BRANŞ DERSLİK SİSTEMİNİN ETKİSİ

ÖZET: Bu çalışmanın amacı, branş derslik sisteminde işlenen 7.sınıf ışık ünitesinin öğrencilerin akademik başarıları ile fen ve teknolojiye yönelik tutumlarına bir etkisinin olup olmadığını belirlemektir. Ön test-son test kontrol gruplu deneysel tasarımın kullanıldığı bu çalışma 2014-2015 eğitim ve öğretim yılının ikinci döneminde Ordu ili Altınordu ilçesinde 60. Yıl ortaokulunda 7.sınıfta eğitimlerine devam eden 46 öğrenci ile gerçekleştirilmiştir. Araştırma örneklemi kolay ulaşılabilir örneklem metoduyla seçilmiş ve deney ve kontrol grubu seçilen örneklemden rastgele belirlenmiştir. Araştırmanın deney grubunda bulunan öğrencilerin (n=23) dersleri branş derslik sınıfında, kontrol grubunda bulunan öğrencilerin (n=23) dersleri ise aynı süreçte klasik sınıfta yıllık plandaki gibi haftada 4 ders saati olmak üzere toplam 4 hafta süreyle işlenmiştir. Araştırmada kullanılan nicel veriler, başarı testi ve fen ve teknolojiye yönelik tutum anketinden elde edilmiştir. Veri toplama araçları deneysel işlem öncesinde ön test, deneysel işlem sonrasında son test olarak uygulanmıştır. Çalışma sonucunda elde edilen nicel verilerin değerlendirilmesi SPSS16.0 programı kullanılarak yapılmıştır. Çalışmada veriler normal dağılım gösterdiğinden parametrik testler kullanılmıştır. Branş derslik sisteminde yapılan uygulama fotoğrafları çekilerek, çalışma içerisinde uygun yerlerde kullanılmıştır. Analiz sonuçlarında branş derslik sistemi ile eğitim gören öğrencilerin akademik başarıları ve tutumlarının daha yüksek olduğu görülmüştür. Bu bağlamda okullarda branş derslik sisteminin daha yaygın bir şekilde uygulanmasının istenilen başarı düzeyine ulaşmada olumlu etkilerinin olacağı düşünülmektedir.

Anahtar sözcükler: branş derslik sistemi, fen eğitimi, ışık

GİRİŞ

İlk ve orta öğretim kurumlarımızda günümüzde geçerli olan ortam düzenlemesinde, öğrenciler sınıf ve şubelere ayrılmakta ve her dersin öğretmeni bu sınıf ve şubelerde ders dağıtım çizelgesine uygun olarak eğitim ve öğretimi sürdürmektedir. Yani her dersin öğretmeni ders sırası kendine geldiğinde sınıfta yerini almaktadır. Bu durumda sınıflarda (yönetmeliklere göre) masa, sıra, dolap, askı, harita, tahta vb. araç-gereç standart olarak bulunmakta bunların dışında derslerin işlenişinde kullanılacak ders araç gereçleri, donatım malzemeleri sınıflarımızda yer almamaktadır (İbret ve diğerleri, 2011). Niemeyer'e (2003) göre; hem öğrencilerin, hem öğretmenlerin verimini artırmak için, sınıfların hem görsel, hem donanımsal ortam düzenlemeleri dikkatlice düşünülmelidir. Çünkü eğitim ortamlarının düzenleniş şekilleri, öğrenme oranını artırabileceği gibi öğrenmeyi engelleyici de olabilir. Zengin öğrenme ortamlarını, bireylerin öğrenmesi için gerekli araç ve gereçlerin yer aldığı ve bireyin daha aktif olarak öğrenmeye katıldığı ortamlar olarak tanımlanabilir. Uyarıcıların yoğun olduğu çoklu ortamlarda, öğrenme daha iyi gerçekleşebilmektedir. Bu tanımın dışında kalan sınıf çevreleri geleneksel sınıflar olarak adlandırılmaktadır (Keser ve Akdeniz, 2002).

Sorunun ülke gerçeklerine uygun ve kalıcı bir çözüme kavuşturulabilmesi için; ilgili girişimlerin "yeni bina yapımı" yanında, " mevcut binaların etkili kullanımı" boyutunu da göz ardı etmemesi gereksinimi vardır. Bunun çözümü için alınması önerilen önlemlerden birisi de şudur: "Her şubeye bir derslik" tahsis etmek yerine, yükseköğretimde olduğu gibi "her ders için bir derslik" ayrılması yoluna gidilerek, dersliklerin zamansal kullanım oranları artırılmaya çalışılmalıdır (Şimşek, 1995). Her dersin kendine özel konusu ve içeriği olduğu gibi bu konu ve içerikle ilgili hedef ve amaçların (kazanımların) belli bir eğitim düzeyindeki öğrencilere kazandırılabilmesi için de o yöntemlerin uygulanabileceği özel ortamlara ihtiyaç olacağı doğaldır. Yani hangi düzeyde olursa olsun fen bilgisi ile ilgili kazanımları öğrencilerin yapılandırabilmesi için gerekli olanakların sağlanabileceği, özel bir şekilde donatılmış yerlere, özel araç ve gereçlere gereksinim vardır. Öğrenciler, fen bilimlerini gerçek yaşamla ilişkili bir biçimde kullanırlarsa, bu ilişkilendirme öğrenmelerini kolaylaştırabilir (Akgün, 2005).

Öğretim etkinliklerinin planlanmasında öğrencilere kazandırılmak istenen hedef davranışları kazandırmaya, öğrenmelerin daha kalıcı olmasını sağlamaya yönelik daha çok duyu organına hitap eden bir öğrenme ortamının düzenlenmesi, bu ortamın görsel ve işitsel çeşitli araçlarla zenginleştirilmesi oldukça önemlidir. Çünkü öğrenmede kullanılan duyu organının sayısı artıkça öğrenilenlerin kalıcılığı da artmaktadır (Yiğit, Alev, Özmen, Altun, Akyıldız, 2007). Araç-gereçlerle yapılan öğretimin etkililiği ve verimliliğine yönelik alan yazın incelendiğinde pek çok çalışmanın yapıldığı görülmektedir. Bu çalışmalara göre araç-gereçlerle yapılan eğitim; öğrenciler için çoklu öğrenme ortamı sağlamakta, öğrencilerin farklı öğrenme ihtiyaçlarını karşılayarak dersi daha iyi anlamalarını sağlamakta, öğrendiklerinin kalıcı olmasını ve hatırlamalarını kolaylaştırmakta, öğretimi çeşitlendirmekte, öğretimin öğrenciler için ilginç ve eğlenceli olmasını sağlamakta, soyut konuları somutlaştırmakta, içeriği basitleştirmekte, öğrenme kaynaklarını çoğaltmakta, zaman tasarrufu sağlamakta, güvenli gözlem imkânı sağlamakta, eğitimin niteliğini artırıp öğretmenin görevlerini kolaylaştırmaktadır (Çilenti, 1984; Alkan, 1984; Kaya, 2006; Uşun, 2006; Yanpar, 2006; Demirel, 2008; İşman, 2008; Yalın, 2008; Kuzu ve Yeşilyurt, 2008; Yiğit ve diğerleri, 2007).

Eğitim sürecinde bu araçlardan faydalanma da en büyük sorumluluk öğretmene düşmektedir. Çünkü sürecin planlayıcısı, uygulayıcısı ve değerlendiricisi öğretmendir. Bununla birlikte okullarında bulunan pek çok öğretim araç-gerecinin öğretmenler tarafından yeterli sıklıkta kullanılmadığı (Öztürk ve Oltuoğlu, 2003), bazı öğretmenlerin ellerindeki basit bir aracı bile kullanmaktan çekindiği gözlenmektedir (Küçükahmet, 1995). Ülkemizde de öğretim sürecinde ders araç gereçlerinin kullanılması istenilen düzeyde değildir. Uluslararası testlerde (PIRLS) Türkiye'nin aldığı sonuçlar, ders araç-gereç ve eğitim teknolojilerinin etkin bir şekilde kullanılamadığı gerçeğini göstermektedir (Yazıcı, 2006).

Dersin türüne göre, konusuna göre sınıfın yerleşim düzeninin farklı olması gerekebilir (Cangelosi ve Lemoine, 1988). Dolayısıyla sınıf, ustaca düzenlenmiş bir çevre olmalıdır. Çünkü davranışı değiştirmenin en etkili yollarından bir tanesi çevreyi değiştirmektir (Başar, 1998). Günümüzde uygulanan eğitim sistemlerinde öğrenci başarı düzeyini arttırmak için gerekli olan laboratuvar, işlik, branş dersliği gibi eğitim mekânlarının dersin yapısına, konusuna ve çeşidine göre fiziksel ve teknolojik donanımlar ile donatılmış olması önemli görülmektedir (Gültekin ve diğerleri, 2014).

Eğitim ortamını meydana getiren unsurlardan, öğretmen, öğrenci ve öğretilecek konunun içeriği bir araya geldiğinde, etkili ve verimli bir eğitim sağlanabilmesi için, içerisinde çeşitli araç ve gereçlerin de bulunduğu fiziksel bir ortam önem kazanmaktadır. Zira bu ortamın kalitesi, eğitimin de kalitesinin belirlenmesinde etkin rol oynayacaktır (Uçar, 1999). Ersöz'e (2012) göre branş derslik sisteminde öğrencilerde görsel öğrenme artabilir, her dersteki ortam değişikliği monotonluğu azaltabilir. Derslerde daha zengin araç-gereç kullanımı mümkün olabilmektedir. Alan yazın incelendiğinde; branş derslik sistemiyle ilgili yapılan çalışmaların anket ölçme aracı ile öğrenci, öğretmen ve idarecilerin görüşlerinin belirlenmesi ile sınırlı kaldığı görülmektedir. Yapılan bu çalışma ile deneysel olarak branş derslik sisteminin öğrencilerin akademik başarıları ve tutumları üzerindeki etkileri incelenmiştir.

Araştırmanın Amacı

Işık ünitesinde öğrencilerin başarıları ve tutumları üzerinde branş derslik sisteminin etkisinin belirlenmesi bu çalışmanın amacını oluşturmaktadır.

Araştırmanın Problemi

Çalışmanın problem cümlesi "Işık ünitesinde öğrencilerin başarıları ve tutumları üzerinde branş derslik sisteminin etkisi nedir?" olarak belirlenmiştir. Sonrasında da şu alt problemlere cevap aranmıştır.

1. Işık ünitesinin öğretiminde derslik sisteminde öğrenim gören deney grubu ile kendi şubelerinde öğrenim gören kontrol grubunun başarı testi ön-test puanları arasında anlamlı bir farklılık var mıdır?
2. Işık ünitesinin öğretiminde derslik sisteminde öğrenim gören deney grubunun başarı testi ön test ve son test puanları arasında anlamlı bir farklılık var mıdır?
3. Işık ünitesinin öğretiminde kendi şubelerinde öğrenim gören kontrol grubunun başarı testi ön test ve son test puanları arasında anlamlı bir farklılık var mıdır?
4. Işık ünitesinin öğretiminde derslik sisteminde öğrenim gören deney grubu ile kendi şubelerinde öğrenim gören kontrol grubunun başarı testi son-test puanları arasında anlamlı bir farklılık var mıdır?
5. Işık ünitesinin öğretilmesinde deney ve kontrol grubunun fen ve teknolojiye karşı tutum anketi ön test puanları arasında anlamlı bir fark var mıdır?
6. Işık ünitesinin öğretilmesinde deney grubunun fen ve teknolojiye karşı tutum anketi ön test ve son test puanları arasında anlamlı bir fark var mıdır?
7. Işık ünitesinin öğretilmesinde kontrol grubunun fen ve teknolojiye karşı tutum anketi ön test ve son test puanları arasında anlamlı bir fark var mıdır?
8. Işık ünitesinin öğretilmesinde deney ve kontrol grubunun fen ve teknolojiye karşı tutum anketi son test puanları arasında anlamlı bir fark var mıdır?

YÖNTEM

Araştırma Modeli

Araştırmada ön test-son test kontrol gruplu yarı deneysel desen kullanılmıştır. Özellikle eğitim ile ilgili araştırmalarda deney ve kontrol gruplarının oluşturulmasında uyulması gereken yansızlık (Random) kuralını gerçekleştirmek kimi zaman olanaksız, gereksiz veya pahalı olabilir. Bu durumda kullanılmaya en uygun olan model ön test- son test kontrol gruplu modeldir (Kaptan, 1991; Karasar, 2002; Schumacher & McMillan, 1993). Ön test son test kontrol gruplu yarı deneysel desende, bağımsız değişkene maruz kalan bir deney grubu ve bağımsız değişken etkisinde kalmayan ilave bir grup bulunur. Grupların ön test puanları arasında anlamlı bir farklılık yoksa göreceli olarak grupların birbirine denk olduğu söylenebilir. Denencelerin test edilmesinde, her iki grubun ön testten son teste değişim gösteren puanları, anlamlı bir farkın olup olmadığını belirlemek için karşılaştırılır (Bulduk, 2003; Büyüköztürk, Kılıç Çakmak, Akgün, Karadeniz ve Demirel, 2012; Christensen. 2004).

Çalışma Grubu

Bu çalışma 2014-2015 eğitim ve öğretim yılının ikinci döneminde Ordu ili Altınordu ilçesinde 60.yıl ortaokulunda 7.sınıfta eğitimlerine devam eden 46 öğrenci ile gerçekleştirilmiştir. Araştırma örneklemi kolay ulaşılabilir örneklem metoduyla seçilmiş ve deney ve kontrol grubu seçilen örneklemden rastgele belirlenmiştir.

Veri Toplama Araçları

Araştırmada kullanılan ışık ünitesi başarı testi 27 maddeden oluşmakta ve Cronbach Alpha değeri 0,73'tür. Çil (2010) tarafından geliştirilen bu test kendisinden izin alınarak kullanılmıştır. Ayrıca öğrencilerin tutumlarını ölçmek için Aydın (2011) tarafından geliştirilen Cronbach Alpha değeri 0,94 olan fen ve teknolojiye yönelik tutum anketi kendisinden izin alınarak kullanılmıştır. Veri toplama araçları deneysel işlem öncesinde ön test, deneysel işlem sonrasında son test olarak uygulanmıştır.

Deneysel Uygulama

Araştırmanın uygulandığı okulda müsait bir sınıf branş dersliği olarak düzenlendi. Araştırmanın deney grubunda bulunan öğrencilerin (n=23) dersleri branş derslik sınıfında, kontrol grubunda bulunan öğrencilerin (n=23) dersleri ise aynı süreçte klasik sınıfta yıllık plandaki gibi haftada 4 ders saati olmak üzere toplam 4 hafta süreyle işlendi.

Verilerin Analizi

Çalışma sonucunda elde edilen nicel verilerin değerlendirilmesi SPSS16.0 programı kullanılarak yapılmıştır. Analize başlamadan önce elde edilen verilerin normal dağılıma uygun olup olmadığını tespit edebilmek amacıyla, 50'den küçük grup büyüklükleri için uygun görülen (Büyüköztürk, 2012) Shapiro-Wilks testleri uygulanmıştır. Bu teste göre $p>.05$ ise veriler normal dağılım sergiler. Bu doğrultuda veriler normal dağılım gösterdiğinden verilerin analizinden parametrik testler kullanılmıştır.

BULGULAR

Araştırmanın Birinci Alt Problemine İlişkin Bulgular ve Yorumlar

Araştırmanın birinci alt problemi olan "Işık ünitesinin öğretiminde derslik sisteminde öğrenim gören deney grubu ile kendi şubelerinde öğrenim gören kontrol grubunun başarı testi ön-test puanları arasında anlamlı bir farklılık var mıdır?" sorusuna cevap bulmak amacı ile t-testi yapılmıştır.

Tablo 1: Deney Grubu ile Kontrol Grubunun Ön Test Puanları Arasında Bir Farklılık Olup Olmadığını Belirlemek Üzere Yapılan Bağımsız Grup t Testi Sonuçları

Puan	Gruplar	N	$\bar{x}$	ss	$Sh_{\bar{x}}$	*t* Testi		
						t	Sd	p
Başarı Testi Puanı (Ön Test)	Kontrol	23	24,00	8,090	1,687	-0,640	44	0,525
	Deney	23	25,70	9,791	2,042			

Tablo 1 incelendiğinde, kontrol grubunun ön test başarı puan ortalamasının 24,00; deney grubunun ön test başarı puan ortalamasının 25,70 olduğu görülmektedir. Tablodan deney ve kontrol gruplarının ön test başarı puan ortalamaları arasında istatistiksel olarak anlamlı bir fark olmadığı görülmektedir ($p>0,05$).

Araştırmanın İkinci Alt Problemine İlişkin Bulgular ve Yorumlar

Araştırmanın ikinci alt problemi olan "Işık ünitesinin öğretiminde derslik sisteminde öğrenim gören deney grubunun başarı testi ön test ve son test puanları arasında anlamlı bir farklılık var mıdır?" sorusuna cevap bulmak amacı ile t-testi yapılmıştır.

Tablo 2: Deney Grubunun Öntest-Sontest Puanları Ortalamaları Arasında Bir Farklılık Olup Olmadığını Belirlemek Üzere Yapılan Bağımlı Grup t Testi Sonuçları

Puan	Gruplar	N	$\bar{x}$	ss	$Sh_{\bar{x}}$	*t* Testi		
						t	Sd	p
Başarı Testi Puanı	Ön test	23	25,70	9,791	2,042	-6,693	22	0,000
	Son test	23	45,30	11,315	2,359			

*****$p<0,05$ düzeyinde anlamlı

Tablo 2 incelendiğinde, deney grubunun ön test başarı puan ortalamasının 25,70; son test başarı puan ortalamasının 45,30 olduğu görülmektedir. Tablodan deney grubunun ön test ve son test başarı puan ortalamaları arasında istatistiksel olarak anlamlı bir fark olduğu görülmektedir ($p<0,05$).

Araştırmanın Üçüncü Alt Problemine İlişkin Bulgular ve Yorumlar

Araştırmanın üçüncü alt problemi olan "Işık ünitesinin öğretiminde kendi şubelerinde öğrenim gören kontrol grubunun başarı testi ön test ve son test puanları arasında anlamlı bir farklılık var mıdır?" sorusuna cevap bulmak amacı ile t-testi yapılmıştır.

Tablo 3: Kontrol Grubunun Öntest-Sontest Puanları Ortalamaları Arasında Bir Farklılık Olup Olmadığını Belirlemek Üzere Yapılan Bağımlı Grup t Testi Sonuçları

Puan	Gruplar	*N*	$\overline{X}$	*ss*	$Sh_{\overline{X}}$	*t* Testi		
						t	*Sd*	*p*
Başarı Testi Puanı	Ön test	23	24,00	8,090	1,687	-5,022	22	0,000
	Son test	23	33,83	10,478	2,185			

*****p<0,05 düzeyinde anlamlı

Tablo 3 incelendiğinde, kontrol grubunun ön test başarı puan ortalamasının 24,00; son test başarı puan ortalamasının 33,83 olduğu görülmektedir. Tablodan deney grubunun ön test ve son test başarı puan ortalamaları arasında istatistiksel olarak anlamlı bir fark olduğu görülmektedir (p<0,05).

Araştırmanın Dördüncü Alt Problemine İlişkin Bulgular ve Yorumlar

Araştırmanın dördüncü alt problemi olan "Işık ünitesinin öğretiminde derslik sisteminde öğrenim gören deney grubu ile kendi şubelerinde öğrenim gören kontrol grubunun başarı testi son-test puanları arasında anlamlı bir farklılık var mıdır?" sorusuna cevap bulmak amacı ile t-testi yapılmıştır.

Tablo 4: Deney Grubu ile Kontrol Grubunun Son Test Puanları Arasında Bir Farklılık Olup Olmadığını Belirlemek Üzere Yapılan Bağımsız Grup t Testi Sonuçları

Puan	Gruplar	*N*	$\overline{X}$	*ss*	$Sh_{\overline{X}}$	*t* Testi		
						t	*Sd*	*p*
Başarı Testi Puanı(Son Test)	Kontrol	23	33,39	10,845	2,261	-3,645	44	0,001
	Deney	23	45,30	11,315	2,359			

*****p<0,05 düzeyinde anlamlı

Tablo 4 incelendiğinde, uygulamadan sonra kontrol grubundaki öğrencilerin başarı testi puan ortalamalarının 33,39; deney grubundaki öğrencilerin başarı testi puan ortalamalarının ise 45,30 olduğu görülmektedir. Tablodan deney ve kontrol gruplarının son test başarı puan ortalamaları arasında deney grubu lehine anlamlı bir fark olduğu görülmektedir (p<0,05).Deney ve kontrol grubundaki öğrencilerin başarı testi puanları uygulamadan sonra artmıştır. Ancak bu artış deney grubunda, kontrol grubuna göre daha fazla olmuştur. Bu bağlamda branş derslik sisteminin öğrencilerin başarıları üzerinde, mevcut şube sisteminden daha etkili olduğu söylenebilir.

Araştırmanın Beşinci Alt Problemine İlişkin Bulgular ve Yorumlar

Araştırmanın beşinci alt problemi olan "Işık ünitesinin öğretilmesinde deney ve kontrol grubunun fen ve teknolojiye karşı tutum anketi ön test puanları arasında anlamlı bir fark var mıdır?" sorusuna cevap bulmak amacı ile t-testi yapılmıştır.

Tablo 5: Deney Grubu ile Kontrol Grubunun Fen ve Teknolojiye Karşı Tutum Anketi Ön Test Puanları Arasında Bir Farklılık Olup Olmadığını Belirlemek Üzere Yapılan Bağımsız Grup t Testi Sonuçları

Puan	Gruplar	*N*	$\overline{X}$	*ss*	$Sh_{\overline{X}}$	*t* Testi		
						t	*Sd*	*p*
Fen ve Teknoloji Karşı Tutum Anketi Puanı(Ön Test)	Deney	23	122,61	15,421	3,216	0,633	44	0,530
	Kontrol	23	119,35	19,286	4,021			

Tablo 5 incelendiğinde, Deney grubunun ön test tutum puan ortalamasının 122,61; kontrol grubunun ön test tutum puan ortalamasının 119,35 olduğu görülmektedir. Tablodan deney ve kontrol gruplarının ön test başarı puan ortalamaları arasında istatistiksel olarak anlamlı bir fark olmadığı görülmektedir (p>0,05).

Araştırmanın Altıncı Alt Problemine İlişkin Bulgular ve Yorumlar

Araştırmanın altıncı alt problemi olan "Işık ünitesinin öğretilmesinde deney grubunun fen ve teknolojiye karşı tutum anketi ön test ve son test puanları arasında anlamlı bir fark var mıdır?" sorusuna cevap bulmak amacı ile t-testi yapılmıştır.

Tablo 6: Deney Grubunun Fen ve Teknolojiye Karşı Tutum Anketi Öntest-Sontest Puanları Ortalamaları Arasında Bir Farklılık Olup Olmadığını Belirlemek Üzere Yapılan Bağımlı Grup t Testi Sonuçları

Puan	Gruplar	N	$\bar{x}$	ss	$Sh_{\bar{x}}$	t Testi t	Sd	p
Fen ve Teknoloji Karşı Tutum Anketi Puanı	Ön test	23	122,61	15,424	3,216	-7,015	22	0,000
	Son test	23	147,09	16,814	3,506			

*p<0,05 düzeyinde anlamlı

Tablo 6 incelendiğinde, deney grubunun ön test tutum puan ortalamasının 122,61; son test tutum puan ortalamasının 147,09 olduğu görülmektedir. Tablodan deney grubunun ön test ve son test tutum puan ortalamaları arasında istatistiksel olarak anlamlı bir fark olduğu görülmektedir ($p<0,05$).

Araştırmanın Yedinci Alt Problemine İlişkin Bulgular ve Yorumlar

Araştırmanın yedinci alt problemi olan " Işık ünitesinin öğretilmesinde kontrol grubunun fen ve teknolojiye karşı tutum anketi ön test ve son test puanları arasında anlamlı bir fark var mıdır?" sorusuna cevap bulmak amacı ile t-testi yapılmıştır.

Tablo 7: Kontrol Grubunun Fen ve Teknolojiye Karşı Tutum Anketi Öntest-Sontest Puanları Ortalamaları Arasında Bir Farklılık Olup Olmadığını Belirlemek Üzere Yapılan Bağımlı Grup t Testi Sonuçları

Puan	Gruplar	N	$\bar{x}$	ss	$Sh_{\bar{x}}$	t Testi t	Sd	p
Fen ve Teknoloji Karşı Tutum Anketi Puanı	Ön test	23	119,35	19,286	4,021	-2,229	22	0,036
	Son test	23	132,65	21,027	4,384			

*p<0,05 düzeyinde anlamlı

Tablo 7 incelendiğinde, kontrol grubunun ön test tutum puan ortalamasının 119,35; son test tutum puan ortalamasının 132,65 olduğu görülmektedir. Tablodan kontrol grubunun ön test ve son test tutum puan ortalamaları arasında istatistiksel olarak anlamlı bir fark olduğu görülmektedir ($p<0,05$).

Araştırmanın Sekizinci Alt Problemine İlişkin Bulgular ve Yorumlar

Araştırmanın sekizinci alt problemi olan "Işık ünitesinin öğretilmesinde deney ve kontrol grubunun fen ve teknolojiye karşı tutum anketi son test puanları arasında anlamlı bir fark var mıdır?" sorusuna cevap bulmak amacı ile t-testi yapılmıştır.

Tablo 8. Deney Grubu ile Kontrol Grubunun Fen ve Teknolojiye Karşı Tutum Anketi Son Test Puanları Arasında Bir Farklılık Olup Olmadığını Belirlemek Üzere Yapılan Bağımsız Grup t Testi Sonuçları

Puan	Gruplar	N	$\bar{x}$	ss	$Sh_{\bar{x}}$	t Testi t	Sd	p
Fen ve Teknoloji Karşı Tutum Anketi Puanı(Son Test)	Kontrol	23	132,65	21,027	4,384	-2,571	44	0,014
	Deney	23	147,09	16,814	3,506			

*p<0,05 düzeyinde anlamlı

Tablo 8 incelendiğinde, uygulamadan sonra kontrol grubundaki öğrencilerin Fen ve Teknolojiye yönelik tutum puan ortalamalarının 132,65; deney grubundaki öğrencilerin tutum puan ortalamalarının ise 147,09 olduğu görülmektedir. Tablodan deney ve kontrol gruplarının son test tutum puan ortalamaları arasında deney grubu lehine anlamlı bir fark olduğu görülmektedir ($p<0,05$).Deney ve kontrol grubundaki öğrencilerin Fen ve Teknolojiye yönelik tutum puanları, uygulamadan sonra artmıştır. Ancak bu artış deney grubunda, kontrol grubuna göre daha fazla olmuştur. Bu bağlamda branş derslik sisteminin öğrencilerin Fen ve Teknolojiye yönelik tutumları üzerinde, mevcut şube sisteminden daha etkili olduğu söylenebilir.

SONUÇ

Yapılan çalışmada deney grubu ön test başarı puanı ortalaması 25,70; son test başarı puanı ortalaması ise 45,70 olarak bulunmuştur. Kontrol grubu ön test başarı puanı ortalaması 24,00; son test başarı puanı ortalaması ise 33,83 olarak bulunmuştur. Bu sonuçlar doğrultusunda deney grubunun başarı testi ortalamasında 20,00 puanlık bir artış; kontrol grubunun başarı testi ortalamasında ise 9,83 puanlık bir artış meydana gelmiştir. Bu durumda yapılan uygulama sonrasında her iki grubun başarı testi puan ortalaması artmıştır. Ancak bu artış; deney grubunda, kontrol grubuna göre daha fazla olmuştur. Deney grubunda bulunan öğrencilerin derslik sınıfında bulunan araç gereçleri kullanma imkânı bulması onların daha iyi öğrenmelerini sağlamıştır. Hung' da (2011) yapmış olduğu çalışmada benzer sonuçlara ulaşmıştır.

Weinstein ve Mayer'a (1986) göre, iyi bir öğretim, öğrencilere nasıl öğreneceğini, nasıl hatırlayacağını, nasıl düşüneceğini ve kendilerini nasıl güdüleyeceklerini öğretmeyi kapsar (Akt: Açıkgöz, 2005,79). Derslik sisteminde yapılan uygulama sürecinde deney grubundaki öğrencilerin teneffüslerde sınıf panolarındaki görselleri incelediği ve konu ile ilgili kendi aralarında tartıştıkları ve bazı görselleri sorguladıkları gözlenmiştir. MEB'in (2013) fen bilimleri dersi öğretim programında sınıf içi öğrenme ortamlarının araştırma-sorgulamaya dayalı öğrenme stratejilerine göre tasarlanması gerektiğinden söz edilmektedir. Derslik sisteminde yapılan uygulamada öğrencilerin daha sorgulayıcı oldukları ve bilimsel süreç becerilerini kontrol grubundaki öğrencilerden daha iyi kullandıkları görülmüştür.

Uygulama sonunda deney grubu öğrencileri ile yapılan görüşmede öğrenciler; panolardaki görsellerin dikkatlerini çektiğini, ders araç gereçlerini daha çok kullanma imkânları olduğunu belirtmişlerdir. Ersöz'de (2012) yapmış olduğu çalışmada benzer sonuçlara ulaşmıştır. Derslik sisteminde konu ile ilgili her türlü görsel ve araç-gereç öğrencilere kolaylıkla gösterilmiştir.

Derslik sisteminde yapılan etkinliklerde kullanılan araç, gereç ve malzemelerin kolay ulaşılabilen ve maliyeti düşük malzemeler olmasına dikkat edilmiştir. Malzemelerin sınıfta malzeme dolabında hazır olarak bulundurulması uygulama süresince kolaylık sağlamıştır. Bu durum, aynı zamanda öğrencilerin zaman zaman teneffüslerde tekrar uygulama yapmalarına imkân sağlamıştır. İbret (2011) sosyal bilgiler öğretmenleri ile yapmış olduğu çalışmanın sonucunda öğretmenlerden birisinin "Öğrencilerin bu sınıflarda materyale ulaşması dersi daha etkili kılacaktır..." şeklindeki görüşü ile branş dersliğinin öğrenci açısından önemine değinmiştir.

Yapılan çalışmada deney grubu ön test tutum puanı ortalaması 122,61; son test tutum puanı ortalaması ise 147,09 olarak bulunmuştur. Kontrol grubu ön test tutum puanı ortalaması 119,35; son test tutum puanı ortalaması ise 132,65 olarak bulunmuştur. Bu sonuçlar doğrultusunda deney grubunun tutum puan ortalamasında 24,48 puanlık bir artış; kontrol grubunun tutum puan ortalamasında ise 13,3 puanlık bir artış meydana gelmiştir. Bu durumda yapılan uygulama sonrasında her iki grubun tutum puan ortalaması artmıştır. Ancak bu artış; deney grubunda, kontrol grubuna göre daha fazla olmuştur. Bu sonuç öğrencilerin başarılarına da aynı şekilde yansımıştır. Bloom (1995) yaptığı çalışmada, öğrencilerin tutumlarının fen bilimlerindeki başarıyı % 27 oranında etkilediğini ortaya koymuş; olumlu yönde duyuşsal ve bilişsel giriş özellikleri bir araya getirilen öğrencilerdeki başarının, öğretim ortamının öğrencilere uygun olmasa dahi gerçekleşebileceğini belirtmiştir (Demirbaş ve Yağbasan, 2004).

Eğitim ve öğretimi kaliteli hale getirmek, birçok etkenle birlikte eğitim teknolojisinden en etkin biçimde yararlanmakla mümkündür. Eğitim teknolojisinin en önemli araçlarından birisi de bilgisayar olduğu göz önüne alındığında; bilgisayarın verimli şekilde kullanılması, eğitim ortamlarını olumlu yönde etkileyecektir. Ancak bilgisayarın da öğrenci başarısında ve öğretim kalitesinde tek etken olduğunu düşünmek yanlış olacaktır (Geban ve diğerleri, 1994). Derslik sisteminde yapılan uygulamada sınıf imkânlar dâhilinde dersin içeriğine göre düzenlenmiştir. MEB'in (2013) fen bilimleri dersi öğretim programında belirttiği gibi teknolojinin sınıf içerisine entegrasyonu sağlanmıştır. Uygulama sırasında zaman zaman bilgisayar teknolojilerinden yararlanılmasının olumlu katkıları deney grubunun son test puanlarında görülmektedir. Yalın'da (2009) yapmış olduğu çalışmada öğrencinin bilgiyle iletişimi çok yönlü olarak arttıkça, görsel olarak uyarıldıkça, öğrenme oranının artacağı sonucuna ulaşmıştır.

ÖNERİLER

Branş derslik sistemi ile ilgili diğer dersler için de benzer çalışmalar yapılabilir.

Branş derslik sistemi ile ilgili yurt dışındaki uygulamaların ve çalışmaların incelenmesi ve mevcut okullarımızın branş derslik sistemi ile ilgili eksiklerinin genel olarak belirlenmesine yönelik çalışmalar yapılabilir.

Yapılan bu çalışmada kullanılan branş dersliği eldeki imkânlar doğrultusunda oluşturulmuştur. Bu bağlamda branş derslik sistemlerinde ortam düzeninin nasıl olması gerektiği ile ilgili çalışmalar yapılabilir. Bu konuda da alanında uzman eğitimcilerden ve iç mimarlardan görüş alınabilir.

Altyapısı uygun olan okullarda kademeli bir şekilde branş derslik sistemine geçilmesi ve sistemin artı ve eksilerinin yaparak ve yaşayarak öğrenilmesi faydalı olabilir.

Yapılan bu çalışmada deney ve kontrol gruplarında bulunan toplam kırk altı öğrenci ile gerçekleştirilmiştir. Örneklem sayısı artırılarak daha kalabalık gruplar üzerinde de branş derslik sisteminin etkileri incelenebilir.

REFLECTIONS OF MATHEMATICS TEACHING APPLICATIONS IN REAL-CLASSROOM ENVIRONMENT

Sedef ÇELİK
Artvin Coruh University

Ümit KUL
Artvin Coruh University

ABSTRACT: This study was carried out to ascertain whether and how pre-service teachers' experience gained in the "Mathematics Teaching Course" is actually reflected in the real classroom environment. The sample of the current study consisted of 10 pre-service elementary teachers who are receiving this course at the school of education. The researchers also participated in real classroom environment to closely observe how pre-service teachers teach mathematics topics and interacted with students. Data generation methods such as interviews and observational field notes were used to collect the data in comprehensive manner. Qualitative data analysis methods were employed to analyse the actual data. The findings obtained in this study were composed of two phases i.e. in the form of teachers' evaluation and researchers' evaluation. In the light of the observations of researchers, it can be said that pre-service teachers primarily faced with classroom management issue when they enter the real classroom comparing to teaching experience in the course at the university. In addition, pre-service teachers benefited from pedagogical content knowledge when students asked interesting questions on the subject-related area. The results gathered from interviews with teachers' candidates revealed that students could require more concrete mathematics teaching activities and materials. Finally, students-centred activities should be arranged in order to encourage students in real classroom environment to participate actively.

Key words: mathematics teaching, real-classroom environment, school-based practicum

MATEMATİK ÖĞRETİMİ UYGULAMALARININ GERÇEK SINIF ORTAMINA YANSIMALARI

ÖZET: Bu çalışma, öğretmen adaylarının matematik öğretimi dersinde kazandıkları deneyimlerin gerçek sınıf ortamına yansımalarını analiz etmek amacıyla yapılmıştır. Çalışmanın örneklem grubunu sınıf öğretmeni adaylarından 10 kişi oluşturmaktadır. Araştırmacılar da gerçek sınıf ortamında bulunarak öğretmen adaylarının matematik dersindeki konu anlatımlarını gözlemlemiştir. Bu nedenle çalışmada veri toplama aracı olarak gözlemlerden yola çıkarak tutulan alan notları kapsamlı bir şekilde kullanılmıştır. Çalışmanın diğer veri kaynağı ise öğretmen adayları ile yapılan görüşmelerdir. Veri analizinde nitel veri analiz yöntemleri kullanılmıştır. Çalışmada elde edilen bulgular araştırmacıların değerlendirmeleri ve öğretmen adaylarının değerlendirmeleri şeklinde iki bölümden oluşmaktadır. Araştırmacıların gözlemleri ışığında, üniversitede matematik öğretimi dersinde de konu anlatan öğretmen adaylarının, gerçek sınıf ortamına girdiklerinde en çok sınıf yönetiminde sorun yaşadıkları söylenebilir. Ayrıca matematik dersinde ilköğretim öğrencilerinin konuyla ilgili sordukları ilginç sorular karşısında, öğretmen adayları alanı öğretme bilgisinden faydalanmıştır. Öğretmen adayları ile yapılan görüşmeler sonucunda ise somutlaştırmaya yönelik matematik öğretimi yapılması gerektiği ortaya çıkmıştır. Özellikle sınıfın yaş seviyesi düştükçe somutlaştırmanın üzerinde daha çok durulması gerektiği sonucuna ulaşılmıştır. Ayrıca gerçek sınıf ortamındaki öğrencilerin, matematik dersi süresince sürekli aktif olması için etkinliklerin öğrenci merkezli olması gerektiği üzerinde durulmuştur.

Anahtar sözcükler: matematik öğretimi, gerçek sınıf ortamı, öğretmenlik uygulaması

GİRİŞ

Öğretmen eğitimi ve öğretmen yetiştirme konusu bir ülkenin kalkınması için son derece önemli bir konudur (Ayaz, Oral ve Söylemez, 2015). Öğretmen yetiştirme sisteminin tüm bileşenlerinin, sürekli bir değerlendirme süreci içinde sorgulanması, bugünün ve geleceğin gerektirdiği nicelik ve nitelikte öğretmen yetiştirmek için sürekli iyileştirilmesi gerekmektedir (Azar, 2011). Bu nedenle öğretmen adaylarının mesleğe hazırlanma süreçlerinde bu derslerle ve dolayısıyla da öğretmenlik mesleği ile ilgili kazanımlarının oluşmasında ve gelişmesinde yasayacakları deneyimlerin ve uygulamaların niteliği önem kazanmaktadır (Devecioğlu ve Akdeniz, 2016). Öğretmen adaylarının bu deneyimleri kazanmaları için okul ortamında bulunmaları gerekmektedir.

Öğretmen adayları, mesleki hayatlarını sürdürecekleri okul ortamına 'Öğretmenlik Uygulaması' dersi aracılığıyla girmektedir (Özden, Önder ve Karapınar, 2015). Bu nedenle öğretmenlik uygulaması hiç kuskusuz hizmet öncesi öğretmen yetiştirmede vazgeçilmez deneyimlerin en önemlilerinden biridir ve öğretmen olma yolunda son sınıf öğrencilerinin öğretmenliğe doğru giden süreçte bir ön çalışmasıdır (Paker,2008). Ayrıca öğretmen adaylarını öncesinde Öğretmenlik Uygulaması dersi ile uygulama okullarına ve devamında ise öğretmenlik mesleğine ve görev alacakları gerçek öğrenme ortamlarına hazırladığı bir gerçektir (Devecioğlu ve Akdeniz, 2016).Öğretmen adaylarının gerçek öğrenme ortamına hazırlanması tüm derslerde olduğu gibi matematik dersinde de oldukça önemlidir. Öğretmen adayları bu uygulamalar esnasında matematik dersinde bir takım zorluklarla karşılaşarak deneyim kazanmaktadır. Öğretmen adayları, matematik dersinde öğrenme-öğretme sürecini fakültede gördükleri öğretim yöntemlerini kullanarak şekillendirmeye çalışmaktadırlar.

Okul semineri dersinde, öğrenciler matematik derslerinin anlatımında öğretim yöntem ve tekniklerini yeni kullandıklarından dolayı acemilik yasamaktadırlar. Bundan dolayı her öğretmen adayına, kendi fakültelerinde matematik öğretim derslerinde öğretim yöntem ve teknikleri teorik anlatıldıktan sonra bu teorik bilgilerini bir defa da olsa uygulama fırsatı verilmelidir. Böylece öğretmenlik uygulaması sırasında kazanmış olduğu deneyimlerini okuldaki deneyimleri ile karşılaştırarak bu yönde kendisini geliştirebilmesi sağlanabilir (Soylu, 2009).

Literatür incelendiğinde öğretmenlik uygulaması üzerine daha özelinde matematik dersinde birçok çalışma görülmüştür. Ancak ilköğretimin temel basamağında hizmet verecek olan sınıf öğretmeni adaylarının matematik dersindeki öğretmenlik uygulamalarını yansıtan çalışmalara az rastlanmaktadır. Bu nedenle fakültede 'Matematik Öğretimi' dersini alan, Öğretmenlik Uygulaması dersi kapsamında bunun uygulamasını yapan sınıf öğretmenlerinin matematik dersindeki deneyimlerinin yansımalarının incelenmesine ihtiyaç duyulmuştur. Araştırmanın amacını da, sınıf öğretmeni adaylarının matematik öğretimi uygulamalarında öğrenim gördükleri üniversite ve gerçek sınıf ortamlarındaki deneyimlerini ortaya çıkarmak oluşturmaktadır.

YÖNTEM

Bu araştırma nitel araştırma yöntemlerinden durum çalışması deseninde tasarlanmıştır. Nitel durum çalışmasının en temel özelliği bir ya da birkaç durumun derinliğine araştırılmasıdır. Bir duruma ilişkin etkenler (ortam, bireyler, olaylar, süreçler, vb.) bütüncül bir yaklaşımla araştırılır ve ilgili durumdan nasıl etkilendikleri üzerine odaklanılır (Yıldırım ve Şimşek, 2011).
Araştırmacının katılımcılarını, Artvin Çoruh Üniversitesi'ndeki sınıf öğretmenliği bölümünde olan 10 öğretmen adayı oluşturmaktadır.

Veri Toplama

Araştırmada veriler gözlem ve yazılı görüşme formuyla toplanmış. Her öğretmen adayı bir dönem boyunca öğretmenlik uygulamasını yaptığı okulda en 2 kez gözlenmiştir. Gözlemler her öğretmen adayının matematik dersinde 2.sınıf ve 4.sınıflarda oluşturduğu öğrenme-öğretme süreçlerini kapsamaktadır. Bu sınıflarda matematik dersinin gerçek sınıf ortamında işlenişi alan notları alınarak araştırmacılar tarafından izlenmiştir. Yazılı görüşme formunda ise öğretmen adaylarına 3 soru yöneltilmiştir. İlk soru, üniversitede gördükleri matematik öğretimindeki konu anlatımları ile gerçek sınıf ortamındaki düşüncelerini ortaya çıkan bir sorudan oluşmaktadır. İkinci ve üçüncü soru ise matematik dersinde 2. ve 4.sınıf ortamına yönelik sorulardan oluşmaktadır. Bu sorularla öğretmen adaylarının gerçek sınıf ortamına yönelik matematik dersindeki düşünceleri ortaya çıkarılmak istenmiştir.

Verilerin Analizi

Verilerin analizinde ise içerik analizi yapılmıştır. Alan notları ile öğretmen adaylarının görüşme formundaki cevapları eşleştirmeli bir şekilde incelenmiştir. İçerik analizinde temel amaç, toplanan verileri açıklayabilecek kavramlara ve ilişkilere ulaşmaktır (Yıldırım ve Şimşek, 2011).

BULGULAR

Bu araştırmanın bulgular bölümü iki kısımdan oluşmaktadır. Birinci kısımda, öğretmen adaylarının matematik öğretimi uygulamalarında okul ve üniversite ortamlarında karşılaştıkları durumlar genel bir bakış açısıyla incelenmiştir. İkinci kısımda ise öğretmen adaylarının uygulama yaptıkları gerçek sınıf ortamlarından olan 2.sınıf ve 4.sınıfta karşılaştıkları durumlar daha detaylı bir şekilde incelenmiştir. Tablo 1' de öğretmen adaylarının matematik öğretimi uygulamalarının okul ve üniversiteye göre görüşlerinin değerlendirilmesi sunulmuştur.

Tablo 1: Öğretmen Adaylarının Matematik Öğretimi Uygulamalarının Okul ve Üniversiteye Göre Değerlendirilmesi

	Okul	Üniversite
Farklılıklar	• Matematiksel konuya yönelik öğrencilerden gelen ilginç sorular • Matematik dersi dışındaki öğrenmeye yönelik konuşmalar • Matematiğe öğrencilerin dikkatini çekmede zorluk • Zaman problem • Sınıf yönetiminde yaşanan zorluklar	Matematik öğrenme ortamı
Benzerlikler	• Matematiksel konunun somutlaştırılmasına yönelik etkinlik tasarlama • Kazanıma göre gerekli hazırlık yapmaEkinliklerin sonunda çalışma yapraklarıyla değerlendirme yapma	

Öğretmen adaylarının kendilerinin gerçekleştirmiş olduğu matematik öğretimi uygulamaları hakkında görüşleri Tablo1'de incelenmiştir. Tabloya göre gerçek sınıf ortamı olan okul ve öğrenim gördükleri üniversite açısından benzerlikler ve farklılıklar olduğu görülmektedir. Öğretmen adayları, matematiksel konuları öğretmek için somutlaştırmanın olması gerektiğini düşünmektedirler. Bu durum, okul ve üniversite ortamındaki matematik öğretimi uygulamalarındaki benzerlikler arasındadır. Ayrıca ilgili kazanıma yönelik etkinlik tasarlamak ve ders sonunda değerlendirme olması gerektiği de benzerlikler arasındadır. Öğretmen adaylarının bu durumlara ilişkin ifadeleri aşağıda yer almaktadır.

''*Üniversitede gördüğümüz Matematik Öğretimi I ve II dersinde ilköğretim 4.sınıfa kadar bütün kazanımları ayrıntılı olarak işliyoruz. Biz kendimiz anlatarak bilgi ve tecrübe kazanıyoruz. Bu yüzden stajda konu anlatırken matematik dersinde zorlanmadım…*'' (Ö5)

Okul ve üniversite ortamındaki gerçekleştirilen matematik öğretimi uygulamalarındaki farklılıklar arasında okul ortamındaki beklenmeyen durumlar yer almaktadır. Öğretmen adaylarının ifadelerine göre öğrenciler tarafından sorulan matematiksel konuya yönelik ilginç soruların farklılıklar arasında yer aldığı görülmektedir. Bunun yanı sıra farklılıklar arasında matematik dersi dışındaki öğrenmeye yönelik konuşmaların, da bulunduğu görülmektedir. Ayrıca matematik dersinde dikkat çekmede zorluk ve devamında gelen sınıf yönetiminde zorlukların olması, okul ortamında olmasında nedeniyle gözlenen farklılıklar arasındadır. Öğretmen adaylarının bu durumlara ilişkin ifadeleri aşağıda yer almaktadır.

''Üniversitede verilen derslerle stajda gerçekleştirilen dersler arasında farklılıklar var. Stajda öğrencilere konuyu bir kez anlatınca anlamayabiliyorlar. Bir kaç kez anlatmak gerekiyor. Bu da bizi zaman açısından matematik dersinde olumsuz etkiliyor…'(Ö2)''Üniversitede öğrendiğimiz çoğu şeyi dersteki kadar rahat bir şekilde anlatamadığımızı fark ettik. Aslında matematik dersini anlatmak zor değil sadece nasıl verebileceğini bulacak etkinlikleri bulmak gerekli…''(Ö6)

Öğretmen adaylarının matematik öğretimi uygulamalarının üniversite ortamından kaynaklanan farklıklarına bakıldığında ise matematik öğrenme ortamı açısından farklılık olduğu tespit edilmiştir. Öğretmen adaylarının bu durumlara ilişkin ifadeleri aşağıda yer almaktadır.

''Üniversitede öğrenciler biz olduğumuz için sınıf disiplinini sağlamak daha kolay…''(Ö3)

Öğretmen adaylarının, matematik öğretimi uygulamalarında okul ortamındaki 2.sınıf ve 4.sınıfa yönelik farklılıklarının karşılaştırıldığı durumlar Tablo 2'de verilmiştir.

Tablo 2: Öğretmen Adaylarının Matematik Öğretimi Uygulamalarında 2.sınıf ve 4.sınıfa Yönelik Farklılıklarının Karşılaştırılması

Olumlu		Olumsuz	
2.sınıf	**4.sınıf**	**2. sınıf**	**4.sınıf**
Oyunla matematik öğretimi Eğlenceli ders ortamı Seviyeye uygun anlatmak için çaba Süreçte olumlu geri dönüt	Öğrencilerin aktif katılımını sağlama Hazır bulunuşluğun öneminin farkında olma	Daha çok somutlaştırıcı etkinlik uygulama Zaman problemi Dikkat çekmede zorluk Sınıf yönetiminde zorluk	İçerik nedeniyle daha fazla hazırlık Etkinlik bulmada zorluk Uygun problem bulmak

Tablo 2'den görüldüğü gibi 2. sınıf ve 4. sınıflarda matematik öğretimi uygulamalarında öğretmen adaylarının sınıflara göre olumlu ve olumsuz düşüncelere sahip olduğu görülmektedir. Öğretmen adaylarının ifade ettiği deneyimlerden 2.sınıfta matematik dersinde oyunla matematik öğretiminin daha çok kullanılması gerektiği anlaşılmaktadır. Bu yaş grubu sınıflarda oyunla matematik öğretiminin dersi daha eğlenceli hale getirdiği görülmektedir. Ayrıca öğretmen adaylarının matematiği seviyeye uygun anlatmak için 2.sınıfta 4.sınıfa göre daha çok çaba harcadıkları ve süreçte olumlu geri bildirim almaları 2.sınıfa yönelik olumlu düşünceler arasındadır. Matematik öğretimi uygulamalarında 2.sınıfa yönelik olumlu düşünceleri destekleyen ifadeler aşağıda sunulmuştur.

'' İkinci sınıflarda staja başladığımda ise biraz ön yargım vardı. Yaşları çok küçük, bunlara anlatmak, bir şeyler öğretmek hiç de kolay değil diye düşünüyordum. Daha sonra matematik dersini bu çocuklara oyun oynatarak ve ya oyun tarzı etkinliklerle anlatmayı düşündüm. Bu öğrencilere, matematik dersini anlattıktan sonra bu sınıftaki hoca gelip beni tebrik etti..''(Ö1)

''Öğrencilere somut ve görsel materyallerle ders anlatmak dersi ilgi çekici ve dersin daha iyi anlaşılmasını sağlıyordu. Anlattığım konun anlaşıldığını bilmek, öğrencilerin bir şeyleri başarmasına yardımcı olmak beni mutlu ediyordu…'' (Ö4)
''Kavramlarla yeni karşılaştıkları için bunları onların seviyesinde anlatmanın zor olacağını tahmin ediyordum. O yüzden ders anlatmadan önce tedirgin olarak başladım dersi anlatmaya…''

Öğretmen adaylarının matematik öğretimi uygulamalarında 4.sınıfta yönelik olumlu düşünceleri arasında öğrencilerin derse daha aktif katıldığı söylenebilir. Ayrıca öğretmen adaylarının matematik öğrenmek ve öğretmek için öğrencilerin hazırbuluşluğun yeterli olması gerektiğini düşündüğü görülmektedir. 4.sınıfa yönelik matematik öğretimi uygulamalarında olumsuz düşünceler arasında içerik nedeniyle matematik dersine daha çok hazırlık yapmak, içeriğe uygun etkinlik bulmakta zorluk yaşamak olduğu görülmektedir. Ayrıca problem çözmek için uygun problem bulmanın da olumsuz düşüncelerden olduğu tabloya göre söylenebilir. Matematik öğretimi uygulamalarında 4.sınıfa yönelik olumlu ve olumsuz düşünceleri destekleyen ifadeler aşağıda sunulmuştur.

'' Dördüncü sınıf öğrencileriyle matematik dersini işlerken hiç zorlanmadım açıkçası. Alt yapıları çok iyiydi ve hepsi bu derse karşı çok ilgiliydi…'' (Ö3)

'' 4.sınıf konuları daha fazla hazırlık yapmayı gerektiriyor. Özellikle matematik dersinde materyal bulma konusunda sıkıntılar yaşadık. Konular diğer sınıf düzeylerine göre daha zor...'' (Ö1)

SONUÇ ve ÖNERİLER

Öğretmen adayları, Öğretmenlik Uygulaması dersi kapsamında gittikleri okullarda diğer derslerde olduğu gibi matematik derslerinde de matematik öğretimi için uygulamalar yapmaktadırlar. Öğretmen adaylarının matematik öğretimi uygulamalarında gerçek sınıf ortamında bulunmaları onlara bu konuda farklı deneyimler kazandırabilir. Bu araştırmada da, öğretmen adaylarının böyle bir ortamda matematik öğretimi uygulamalarından yansımalar incelenmek istenmiştir. Öğretmen adaylarına göre matematik öğretimi uygulamaları, okul ve üniversite ortamında farklılıklar ve benzerlikler göstermektedir. Bu durum, araştırmacıların alan notlarıyla da desteklenmektedir. İki ortama göre benzerlik ve farklıkların olması, gerçek sınıf ortamındaki öğrencilerin matematiği öğrenirken düşünme süreçlerinden kaynaklanabilir. Araştırma sonuçlarına göre matematiğin somutlaştırılması gerektiği iki ortamda da tespit edilen benzerlikler arasındadır. Bu anlamda matematiğin doğası gereği anlamlı öğrenme için somutlaştırıcı etkinlikler yapılmalıdır. Farklılıklar arasında ise, gerçek sınıf ortamında matematik öğretimi uygulamalarında karşılaşılan zorluklar gelmektedir.

Öğretmen adaylarının, gerçek sınıf ortamı olan 2.sınıf ve 4.sınıfta gerçekleştirdikleri matematik öğretimi uygulamalarında olumlu ve olumsuz düşüncelere sahip olduğu araştırmanın sonuçları arasındadır. 2. sınıflarda öğrencilerin yaş olarak daha küçük olmasından dolayı matematik öğrenimi için daha çok somutlaştırma yapılması gerektiği tespit edilmiştir. Ancak daha çok somutlaştırıcı etkinlik tasarlamak ve uygulamak gerçek sınıf ortamında zaman kaybına neden olduğunu düşünülmektedir. Bu durum ilköğretim matematik öğretmen adaylarının 'öğretmenlik uygulaması' üzerine görüşlerinin incelendiği çalışmayla benzerlik göstermektedir. Bu çalışmada fakülte-okul işbirliği programı çerçevesinde, ilköğretim matematik öğretmen adaylarının okullarda öğretmenlik uygulaması sırasında elde ettikleri deneyim ve değerlendirmeler ortaya konmaya çalışılmıştır. Araştırma, katılan öğretmen adaylarının üçte ikisinden fazlasının bu ders için istenilenleri tam olarak yerine getirme noktasında yeteri kadar fırsat bulamadığını ortaya koymuştur (Erslan, 2009).

4. sınıfta matematik öğretimi uygulamalarında öğretmen adaylarının içerikten kaynaklanan olumsuz düşüncelere sahip olduğu görülmektedir. Bu durum, ilköğretim matematik programının sarmal yapısı nedeniyle konuların bir sonraki sınıfa göre giderek derinleşmesinden kaynaklanabilir. Bu sınıfa yönelik olumlu düşünceler arasında, öğrencilerin daha çok derse katıldığı tespit edilmiştir. Bunun nedeni olarak 2.sınıf öğrencilerinin matematik dersine yönelik dikkatlerini çekmenin daha zor olduğu söylenebilir.

Araştırmadan elde edilen bulgular ışığında, öğretmen adaylarına matematik dersine yönelik öğretim uygulamalarını gerçekleştirebileceği fırsatların daha çok sunulması gerektiği önerilebilir. Ayrıca üniversitede gördükleri matematik eğitimin hemen ardından öğretmen adaylarına gerçek sınıf ortamlarında da uygulama imkanı verilmelidir. Böylece öğretmen adayları, matematik öğretiminde ders planlarının dışında gerçekleşecek durumların az da olsa bilincinde olabilir.

6TH GRADES STUDENTS' ALGEBRAIC THINKING SKILLS

Alattin URAL
Mehmet Akif Ersoy University

ABSTRACT: The purpose of this research is to explore sixth grades students' algebraic thinking levels. As known, The students' process of transition from arithmetic to algebra start in sixth grade. To know the students' level of algeabric thinking and algebraic thoughts they are able to handle in this level will be useful in terms of planning the process of algebra teaching. With this aim, 31 sixth grade students of a middle school which was selected randomly in Burdur were included in the research. In order to gather data, an algebraic thinking levels test (CDSBT-twenty seven items and four levels) were used. This test developed by Hart et. al. (1998). The current research is a qualitative research and the model applied in the study is descriptive method. The current research reveals that 48% of the participants were at the level-1, 26% of them were at the level-2, 23% of them were at the level-3 and also only one student was at the level-4. Also, it was determined that "calculation the values of an algebraic expression", "adding algebraic expressions", "Multiplying a whole number and an algebraic expression" were the main difficulties that do not lead the students to pass the next level.

Key words: Algeabric thinking skill, sixth grade students

6. SINIF ÖĞRENCILERININ CEBIRSEL DÜŞÜNME BECERILERI

ÖZET: Bu araştırma, 6. sınıf öğrencilerinin cebirsel düşünme beceri seviyelerini ve her seviyeye ait cebirsel düşünme eksiklerini belirlemek amacıyla yapılmıştır. Bu amaçla, araştırmaya Burdur İl merkezinden rastgele seçilen bir ortaokulun rastgele seçilen bir altıncı sınıfında bulunan 31 öğrencisi alınmıştır. Veri toplama aracı olarak; Hart ve diğ. (1998) tarafından geliştirilen ve Altun (2005) tarafından Türkçe' ye uyarlanan, 27 maddelik ve 4 seviyeli cebirsel düşünme seviyesi belirleme testi kullanılmıştır. Yapılan araştırma nitel bir çalışma olup, öğrencilerin test sorularına verdiği yanıtlar, betimsel analiz metoduyla incelenerek, hangi oranda öğrencinin hangi seviyede olduğu belirlenmiştir. Ayrıca, öğrencilerin bir üst seviyeye geçememelerine neden olan soruların içeriği incelenmiştir. Araştırmanın sonucunda; öğrencilerin %48'inin 1. düzeyde, %26'sının 2. düzeyde, %23'ünün 3. düzeyde ve 4. düzeyde ise sadece bir öğrencinin bulunduğu belirlenmiştir. Ayrıca öğrencilerin, "bir cebirsel ifadenin değerlerini değişkenin alacağı farklı doğal sayı değerleri için hesaplama", "cebirsel ifadelerle toplama" ve **"**bir doğal sayı ile bir cebirsel ifadeyi çarpma" konularını yeterince kavramamış oldukları ve bu durumun, öğrencilerin cebirsel düşünme seviyelerini geri çeken temel faktörler olduğu tespit edilmiştir.

Anahtar sözcükler: Cebirsel düşünme becerisi, 6. Sınıf öğrencileri.

GİRİŞ

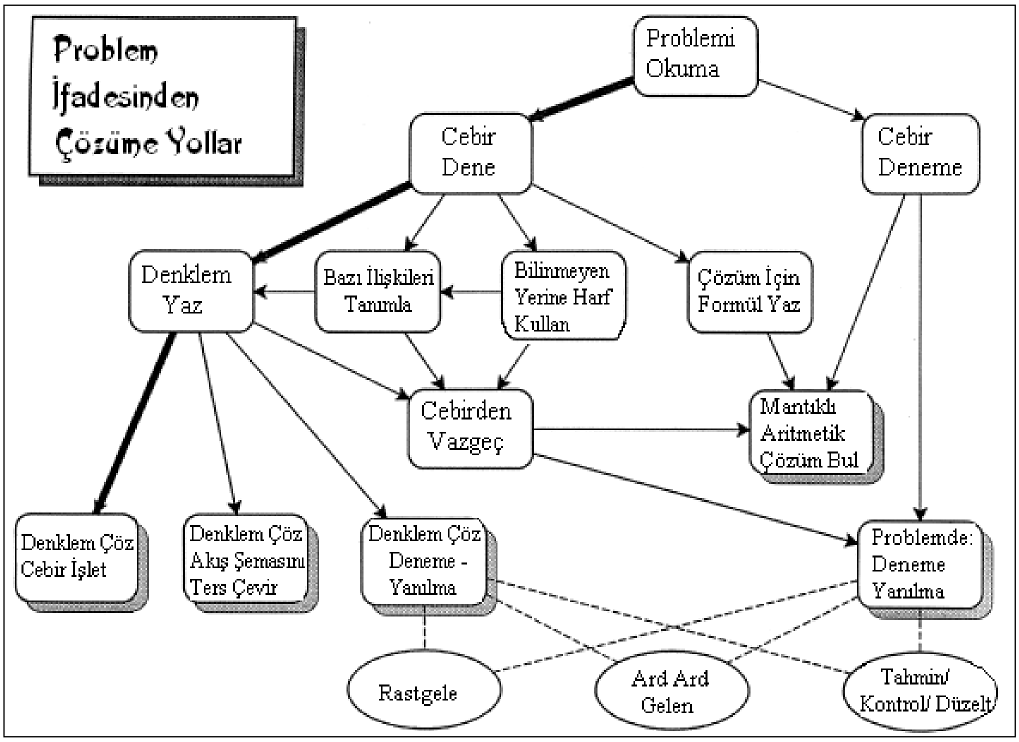
Usiskin (1988) cebiri, genelleştirilmiş aritmetik; problem çözme yöntemi; nicelikler arasında ilişki ve yapıların çalışması olarak sınıflandırmıştır. Bednarz, Kieran & Lee (1996) ise okul cebirini dört ana yaklaşıma ayırmıştır: genelleştirme, problem çözme, modelleştirme ve fonksiyonlar. Cebirsel düşünme; fonksiyonları anlamayı, cebirsel sembolleri kullanarak matematiksel yapı ve durumları farklı şekillerde temsil ve analiz etmeyi, nicel ilişkileri temsil etmek ve anlamak için matematiksel modeller kullanmayı, gerçek yaşamla ilgili çeşitli durumlardaki değişimi analiz etmeyi gerektirir (NCTM, 2000). Cebirsel niceliklerle durumları ifade etme yeteneği, birçok matematik alanını anlamada bir önkoşul olarak merkezî bir yere sahiptir (NCTM, 2000). Cebirsel düşünme sadece matematik derslerinde değil, diğer bilim dallarının ve gerçek yaşam problemlerinin çözümünde de kritik bir öneme sahiptir. İngiltere'de "Concepts in Secondary Mathematics and Science" (CSMS) tarafından 13-15 yaş öğrencileri için yapılan cebir projesinin bulgularına göre öğrencilerin cebirsel düşünme seviyeleri dört gelişim safhasına ayrılmıştır (Hart ve diğ. 1998):

Düzey 1: Bu safhada tümüyle aritmetik işlemlerin sonucunda bir harfin değerini bulma, harfleri birer nesne adı olarak almak suretiyle sonuçlandırma veya içerdiği harflere rağmen bu harflere değer vermeden bir işlemi sonuçlandırma şeklindeki soruların çözülebildiği safhadır.
Düzey 2: Bu düzey, 1. düzeyle soyutluk bakımından aynı olup, farklılık soruların daha karmaşık olmasıdır.
Düzey 3: Bu safha harflerin bir bilinmeyen olarak algılandığı ve kullanılabildiği safhalardır.
Düzey 4: Bu safhada çocuklar 3. safhadakilere benzer fakat daha karmaşık ifadelere anlam yükleyebilir ve işlemleri sonuçlandırabilir.

Bilindiği gibi, öğrenciler aritmetikten cebire geçiş sürecinde zorlanmakta (Herscovics & Linchevski, 1994; Lee, 1996; Moseley & Brenner, 2009) ve sonrasında cebir kavramlarını (eşitlik, denklem, cebirsel ifade, değişken, bilinmeyen) anlama ile ilgili güçlükleri ve kavram yanılgıları oluşmaktadır (Baroudi, 2006; English & Halford, 1995; Kieran, 1992; Perso, 1992; Beaton, Mullis, Martin, Gonzalez, Kelly ve Smith, 1996; Haspekian, 2003; MacGregor & Stacey, 1993; Greenes & Findell, 1999). Bu sorunlara neden olan temel faktörler şunlardır:

- Cebirsel problem çözme yöntemlerinin altında yatan düşüncenin kavranılmamış olması (Stacey & MacGregor, 2000)
- Cebire yeni başlayan öğrencilerin problem çözme yöntem ve deneyimlerinin aritmetiğe dayalı olması sonucunda öğrencilerin problemleri cebir yerine aritmetik kullanarak çözmeye çalışması (Stacey & MacGregor, 2000)
- Öğrencilerin "bilinmeyen", "değişken", "harflerin cebirde kullanımı", "cebirsel ifadeler", "eşitlik", "denklem", "eşitsizlik", "toplama ve çıkarma sembollerinin kullanımı" konularını yeterince kavrayamamış olması (Yenilmez & Avcu, 2009; Swafford & Langrall, 2000; Stacey & MacGregor, 2000; Schoenfeld, 1988; Perso, 1992)
- Verilen sözel problemlerin, cebirsel olarak yazılamaması (Bednarz & Janvier, 1996; Clement, 1982; Makanong, 1993)
- Öğrencilerden, ele alınan konunun bağlamını dikkate almadan değişkenlerle bir takım işlemleri yapılabilmelerinin beklenmesi (Macgregor & Stacey, 1997).
- Örüntü ve genellemeler konusunda, öğrencilerin "genelleme yaparken yanlış akıl yürütmesi", "yaptıkları genellemelerin doğru olup olmadığını kontrol etmemesi" (Stacey, 1989), "dizinin genel teriminin cebirsel olarak ifade edememeleri" (English ve Warren, 1999; Zaskis ve Liljdahl, 2001).
- Sembolleri ve cebirsel ilişkileri kullanamama (Bağdat ve Saban, 2014)

Stacey ve McGrager (2000) tarafından yapılan çalışmada, öğrencilerin cebirsel problem çözme süreci Şekil 1' de özetlenmiştir. Bu şekilden de görüldüğü gibi ortaokul öğrencileri cebirsel problemi çözerken çözüme bir cebirsel yolla başlamış olsa bile çözüm sürecinin ileriki aşamalarında aritmetik yollara da başvurabilmektedir (Akt. Kaş, 2010).



Şekil 1. Cebirsel Problem Çözme Sürecinde Ortaokul Öğrencilerinin Kullandığı Yollar

Cebir öğreniminde karşılaşılan bu problemlerin giderilmesi noktasında, NCTM (2000) orta okul öğrencilerinin cebir yeterliğini artırmak amacıyla şu dört tip çalışmanın yapılmasını önermiştir:

- Örüntüleri, ilişkileri ve fonksiyonları anlama çalışmaları,
- Cebir sembolleri kullanarak matematiksel durumları ve yapıları gösterme ve analiz etme çalışmaları,
- Niceliksel ilişkileri göstermek ve anlamak için matematiksel modeller kullanma çalışmaları,

- Çeşitli bağlamlardaki değişiklikleri grafik çizerek, teknoloji destekli programlar veya çalışma yaprakları kullanarak analiz etme çalışmaları.

Öğrencilerin cebirsel düşünme becerilerinin artırılması amacıyla, Mathews (1997) öğrencilerin cebir problemlerini çözme deneyimlerinin artırılması gerektiğini belirtmiştir. Greenes ve Findell (1999)'e göre bu deneyimi kazanmanın bir yolu; gösterim, eşitlik, değişken, oran, fonksiyon, tümevarım ve tümdengelimli düşünme odaklı, alternatif birçok çözüm yolu olan cebirsel düşünme problemleri kullanmaktır. Diğer taraftan, Ekenstam ve Nilsson (1979), Barnard (1989), cebir öğretimine geçilmeden önce öğrencilerin hazır bulunuşluklarının tam olarak sağlanması ve bu konulardaki kavram yanılgılarının tespit edilerek giderilmesi gerektiğini belirtmiştir.

Kaş (2010), sekizinci sınıflarda çalışma yaprakları ile öğretimin cebirsel düşünme ve problem çözme becerisine olumlu etkisi olduğunu ortaya koymuştur. Benzer şekilde, Akkaya ve Durmuş (2015), 6. sınıf öğrencilerinin cebirde, harflerin kullanımı anlamada, değişkenlerle ve eşitlik kavramı ile ilgili bir takım kavram yanılgılarının olduğunu ve çalışma yaprakları ile yapılan öğretimin belirlenen kavram yanılgılarını azaltmada geleneksel öğretime göre daha etkili olduğunu göstermiştir.

Palabıyık ve Akkuş-İspir (2011), örüntü temelli cebir öğretiminin yedinci sınıf öğrencilerinin cebirsel düşünme becerilerini artırdığını belirtmiştir. Palabıyık (2010) tarafından yapılan çalışmada da örüntü temelli etkinliklerin; öğrencilerin kavramsal cebir başarılarını arttırdığı ortaya konulmuştur.

Çağdaşer (2008) tarafından yapılan çalışmada, yapılandırmacı yaklaşımla cebir öğretiminin 6. sınıf öğrencilerinin cebirsel düşünme düzeylerinin yükselmesi yönünde değişmesinde önemli bir etkiye sahip olduğu belirlenmiştir. Yine yapılandırmacı öğrenmenin etkisi üzerine Hiçcan (2008) tarafından yapılan araştırmada, 5E öğrenme döngüsü modeline dayalı olarak hazırlanan ders etkinlikleri ile işlenen derslerin, hem kavramsal hem de işlemsel düzeyde, birinci dereceden bir bilinmeyenli denklemler konusunun öğretiminde anlamlı düzeyde etkili olduğu sonucuna varılmıştır.

YÖNTEM

Bu araştırma, 6. sınıf öğrencilerinin cebirsel düşünme beceri seviyelerini ve her seviyeye ait cebirsel düşünme eksiklerini belirlemek amacıyla yapılmıştır. Bu amaçla, araştırmaya Burdur İl merkezinden rastgele seçilen bir ortaokulun rastgele seçilen bir altıncı sınıfında bulunan 31 öğrencisi alınmıştır. Yapılan araştırma nitel bir çalışma olup, öğrencilerin cebirsel düşünme seviyesi belirleme testi sorularına verdiği yanıtlar, betimsel analiz metoduyla incelenerek, hangi oranda öğrencinin hangi seviyede olduğu belirlenmiştir. Ayrıca, öğrencilerin bir üst seviyeye geçememelerine neden olan soruların içeriği incelenmiştir.

Veri toplama aracı olarak; Hart ve diğ. (1998) tarafından geliştirilen ve Altun (2005) tarafından Türkçe' ye uyarlanan, 27 maddelik ve 4 seviyeli cebirsel düşünme seviyesi belirleme testi kullanılmıştır. Düzey–1, aritmetik işlemlerin sonucunda bir harfin değerini bulma, harfleri birer nesne adı olarak almak suretiyle bir problemi sonuçlandırma veya içerdiği harflere rağmen bu harflere değer vermeden bir işlemi sonuçlandırma şeklindeki soruları içermektedir. Düzey-2, birinci düzeydeki sorularla soyutluluk bakımından aynı olan ama onlara göre daha karmaşık sorular içermektedir. Düzey-3'te harflerin bilinmeyen olarak algılanması ve kullanılmasına ilişkin sorular bulunmaktadır. Düzey-4'te ise düzey-3'teki sorularda kullanılan ifadelere benzer ama daha karmaşık yapıdaki genellemeleri içeren sorular yer almaktadır. Bu sorularda öğrencilerin, harfleri birer bilinmeyen olarak algılaması, bilinmeyeni bir bağıntı veya denklemde kullanması, bir harfi birden fazla sayının bir temsilcisi olarak görmesi gerekmektedir. Cebirsel Düşünme Seviyeleri Belirleme Testi soruları Ek 1'de verilmiştir. Testi alan öğrencilerin cebirsel düşünme düzeylerini belirlemek için, Düzey–1 sorularından en az dört tanesini, Düzey–2 sorularından en az beş tanesini, Düzey–3 sorularından en az beş tanesini ve Düzey–4 sorularından en az altı tanesini doğru cevaplamaları gerekmektedir. Hart ve diğ. (1998) ayrıca cebirsel düşüme düzeylerinde bir ardışıklığın söz konusu olduğunu belirtmişlerdir. Bu nedenle, örneğin bir öğrencinin Düzey–3'te olduğuna karar vermek için Düzey–1 ve Düzey–2 için gerekli başarı yüzdelerine ulaşması istenmiştir.

BULGULAR

Öğrencilerin cebirsel düşünme seviyelerine ait bulgular Tablo 1' de verilmiştir.

Tablo 1. Öğrencilerin Cebirsel Düşünme Becerisi Seviyelerine Ait Frekans ve Yüzdelikler

Düzey	Frekans	Yüzdelik
D1	15	%48
D2	8	%26
D3	7	%23
D4	1	%3
Toplam	31	%100

Tablo 1' e bakıldığında; öğrencilerin %48'inin 1. düzeyde, %26'sının 2. düzeyde, %23'ünün 3. düzeyde ve 4. düzeyde ise sadece bir öğrencinin bulunduğu görülmektedir.

Öğrencilerin bulundukları düzeyden bir üst düzeye geçememelerine neden olan sorulardan yaygın olanları Tablo 2'de sunulmuştur.

Tablo 2. Öğrencilerin Bir Üst Düzeye Geçememesine Neden Olan Yaygın Sorular

Düzey	Soru	Frekans	Yüzdelik
1	5	12	%80
	13	12	%80
	9	11	%73
	10	11	%73
	19	11	%73
2	11	8	%100
	15	7	%88
	21	7	%88
3	7	7	%100
	24	6	%86
	25	6	%86
	20	5	%71

Tablo 2' de belirtilen soruların içeriği incelendiğinde; "bir cebirsel ifadenin değerlerini değişkenin alacağı farklı doğal sayı değerleri için hesaplama", "cebirsel ifadelerle toplama" ve "bir doğal sayı ile bir cebirsel ifadeyi çarpma" konularını içerdiği görülmüştür.

TARTIŞMA VE SONUÇ

Milli Eğitim Bakanlığı, Ortaokul Matematik Dersi Öğretim Programı (2013)'nda cebir öğrenme alanına ilişkin kazanımlar ilk olarak 6. sınıfta yer almaktadır. Bu sınıf seviyesinde öğrencilerden aritmetik dizilerde istenilen terimi bulmaları, cebirsel ifadeleri anlamlandırmaları ve cebirsel ifadelerde toplama ve çıkarma işlemlerini yapmaları hedeflenmektedir. Bu sınıf seviyesinde yer alan kazanımlar şunlardır (MEB, 2013):

- K1 Aritmetik dizilerin kuralını harfle ifade eder; kuralı harfle ifade edilen dizinin istenilen terimini bulur.
- K2 Sözel olarak verilen bir duruma uygun cebirsel ifade ve verilen bir cebirsel ifadeye uygun sözel bir durum yazar.
- K3 Cebirsel ifadenin değerlerini değişkenin alacağı farklı doğal sayı değerleri için hesaplar.
- K4 Basit cebirsel ifadelerin anlamını açıklar.
- K5 Cebirsel ifadelerle toplama ve çıkarma işlemleri yapar.
- K6 Bir doğal sayı ile bir cebirsel ifadeyi çarpar.

Öğrencilerin %48'inin 1. düzeyde, %26'sının 2. düzeyde, %23'ünün 3. düzeyde ve 4. düzeyde ise sadece bir öğrencinin bulunduğu görülmektedir. 7. ve 24. sorular için 6. sınıf kazanımlarının yeterli olup olmadığı tartışılabilir ancak öğrencilerin testteki soruların çoğuna doğru yanıt verebilecek bilgilerinin olması gerektiği söylenebilir. Oral, İlhan ve Kınay (2013) tarafından yapılan araştırmada da, 8.sınıf öğrencilerinin cebirsel düşünme düzeylerinin düzey-0 seviyesinde yığıldıkları tespit edilmiştir.

Diğer taraftan, düzey 1'deki öğrencilerin 3, 5 ve 6 no'lu kazanımları, düzey 2'deki öğrencilerin 5 ve 6 no'lu kazanımları, düzey 3'deki öğrencilerin 25. soru için 3 no'lu kazanımı kazanamadıklarından dolayı bir üst düzeye geçemedikleri söylenebilir. Diğer taraftan; düzey 3'deki öğrencilerin 20. soruya bir anlam yükleyemediklerinden; 7. soruda bir çokgenin köşegen sayısı formülünü bilmemelerinden veya bulamamalarından; 24. soruda ise yukarıdaki kazanımların herhangi birinden farklı bir beceriye sahip olmamalarından dolayı bir üst düzeye geçemedikleri düşünülmektedir. Genel olarak söylemek gerekirse; öğrencilerin cebir alanına ilişkin olarak "bir cebirsel ifadenin değerlerini değişkenin alacağı farklı doğal sayı değerleri için hesaplama", "cebirsel ifadelerle toplama" ve **"**bir doğal sayı ile bir cebirsel ifadeyi çarpma" konularını yeterince kavramamış oldukları ve bu durumun, öğrencilerin cebirsel düşünme seviyelerini geri çeken temel faktörler olduğu görülmektedir. Soylu (2008), Dede & Argün (2003), Ersoy & Erbaş (2003), Vurt (2011) tarafından yapılan çalışmalarda, öğrencilerin " Değişkene sayısal değer verme", "İşlem yaparken değişkenleri (harfleri) dikkate almama" ve "Değişkenleri belli harflerle sınırlandırma" konularındaki yetersizlikten dolayı cebir başarılarının düşük olduğu ifade edilmiştir.

Ayten Pınar BAL
Çukurova Üniversitesi

M. Sencer BULUT ÖZSEZER
Çukurova Üniversitesi

ABSTRACT: The aim of this study is to reveal the views of sixth grade students about the computer assisted mathematical teaching. Among the qualitative research methods a phenomenological design. In order to increase the reliability of data semi structured interviews with students who are studying in Aşçıbekirli Primary School and observations were carried out. Data were processed by content analysis. According to the findings it is concluded that computer assisted mathematical teaching contributes the students cognitive and affective dimensions positively. However; some problems still exist especially resulting from computer laboratory and students personal insufficient knowledge about computer.

Key words: computer based mathematic education, primary school, mathematic

ALTINCI SINIF ÖĞRENCİLERİNİN BİLGİSAYAR DESTEKLİ MATEMATİK ÖĞRETİMİNE YÖNELİK GÖRÜŞLERİ

ÖZET: Bu araştırmanın amacı altıncı sınıf öğrencilerinin bilgisayar destekli matematik öğretimine yönelik görüşlerini tespit etmektir. Araştırmada nitel araştırma yöntemlerinden biri olan olgu bilim deseni kullanılmıştır. Araştırmanın örneklemi ise ölçüt örnekleme yöntemi ile belirlenmiştir. Çalışmada, altıncı sınıf öğrencilerinden oluşan toplam 21 öğrenci ile sekiz saatlik gözlem gerçekleştirilmiş ardından bu öğrenciler arasında yansız bir şekilde seçilen dokuz öğrenci ile yarı yapılandırılmış görüşme gerçekleştirilmiştir. Veriler içerik analizi yapılarak çözümlenmiştir. Araştırmanın sonucuna göre altıncı sınıf öğrencilerinin bilgisayar destekli matematik öğretimi sürecinde bilişsel ve duyuşsal boyutta olumlu görüşlere sahip oldukları bulgusuna ulaşılmıştır. Diğer taraftan bilgisayar destekli öğretim sürecinde öğrencilerin temel bilgi eksikleri olduğu ve bu nedenle süreç içerisinde bazı eksikliklerin yaşandığı gözlemlenmiştir.

Anahtar sözcükler: bilgisayar destekli matematik öğretimi, ortaokul, matematik

GİRİŞ

Günümüzde bilim ve teknoloji alanında yaşanan gelişmeler eğitim alanında da birçok yenilenmeyi zorunlu hale getirmektedir. Özellikle, son on yılda gelişen bilgisayar ve iletişim ortamları eğitim ve öğretim ortamlarına da doğrudan yansımıştır. Bu bağlamda, özellikle öğretim sürecinde bilgisayarların çok farklı amaçlara hizmet ettiği görülmektedir. Örneğin; bilgisayarların, dersliklerde, kütüphanelerde, yönetimde, bilgilendirmede, rehberlik hizmetlerinde ve etkin iletişimde geniş ve yaygın bir kullanım perspektifine sahip olduğu görülmektedir. Bu doğrultuda, bilgisayarların eğitimde etkin bir şekilde kullanılmasıyla, bilgisayar destekli öğretim uygulamaları büyük bir önem kazanmıştır (Alakoç, 2003; Hangül & Üzel, 2010). Pek çok araştırmacı, bilgisayar destekli öğretimin öğrenenlerin özellikle görsel ve duyuşsal boyuttaki öğrenme becerilerinin geliştirilmesinde etkili bir faktör olduğunu vurgulamaktadır (Arslan, 2003; Baki, 1996; Kaplan & Öztürk, 2014). Ayrıca, eğitimde araç gereçlerin yeterli olmaması, bilginin çoğalması, öğrenci sayısının beklenenden çok fazla olması, bireysel farklılıkların ve yeteneklerin ön planda olmasından dolayı bilgisayarlar destekli öğretim büyük önem taşımaktadır. Yine, öğretmenler açısından, bilgisayarlar yoluyla yapılan uygulamalar, yeni materyallerin sunumunda, konuların tanıtımında, içeriğin sunulmasında, kazanımların test edilmesinde, öğrencilerin yeni beceriler kazanmalarında ve öğrenilen konuların pekiştirilmesinde büyük kolaylıklar sunmaktadır. (Çavuş, 2006).

Bilgisayar destekli matematik öğretimi konusunda yapılan araştırmalar incelendiğinde öğretmen ve öğretmen adaylarıyla (Aktümen, Yıldız, Horzum & Ceylan, 2011; Baki, Yalçıkkaya, Özpınar & Uzun, 2009; Gürol, Donmuş & Arslan, 2012; İlhan, Demir & Arslan, 2013; Kağızmanlı & Tatar, 2012; Kaplan, Öztürk, Altaylı & Ertör, 2013; Karataş, Alcı & Çeri, 2015; Keşan & Kaya, 2007; Kutluca & Birgin, 2007; Özgen, Obay & Bindak, 2009; Yenilmez, 2009; Yenilmez & Karakuş, 2007; Zengin, Kağızmanlı, Tatar & İşleyen, 2013) ilgili birçok çalışmaya rastlanırken öğrencilerle ilgili (Kaplan & Öztürk, 2014; Kutluca & Baki, 2013) sınırlı sayıda çalışma göze çarpmaktadır. Bu kapsamda, örneğin Kutluca & Baki, (2013) yaptıkları çalışmanın sonucunda bilgisayar destekli öğretim ortamının öğrencileri monotonluktan kurtardığı ve öğrencilerin ilgisini çekerek derse daha iyi motive olmalarını sağladığı bulgusuna ulaşmışlardır. Yine, Kaplan ve Öztürk (2014) de çemberde açılar konusunun öğretiminde Cabri yazılımının kullanılmasının geleneksel öğretimden daha etkili olduğu sonucuna ulaşmışlardır.

Yukarıda da ifade edildiği gibi, bilgisayarların bir çok eğitim ortamında öğretmenler için temel yardımcı rolü üstlendiği, yeni konuların öğretiminde, içeriğin sunulmasında öğrencilere yeni becerilerin kazandırılmasında ve kazanımların test edilmesinde önemli bir etmen olduğu açıkça görülmektedir. Bu özellikleri düşünüldüğünde öğrencilerin bilgisayar destekli öğretim yöntemini kullanmalarının kendileri için bir avantaj oluşturduğu düşünülmektedir. Ancak süreç konusunda öğrencilerin neler düşündükleri merak konusudur. Bu sebeble bu çalışmada altıncı sınıf öğrencilerinin matematik dersinde bilgisayar destekli öğretim konusundaki görüşleri araştırılacaktır. Bu genel amaç doğrultusunda araştırmanın alt amaçları şunlardır:

1. Bilgisayar destekli matematik öğretimi konusunda öğrencilerin genel görüşleri nelerdir?
2. Bilgisayar destekli matematik öğretiminin uygulanması sürecinde öğrencilerin yaşadıkları sorunlar nelerdir?

YÖNTEM

Araştırmanın Modeli

Bu araştırma, nitel araştırma yöntemlerinden olgu bilim (fenomeloji) boyutuna göre desenlenmiştir. Olgu bilim araştırmaları, derinlemesine ve ayrıntılı bir anlayışa sahip olmadığımız olgulara odaklanır. Bu araştırmalarda olguyu yaşayan ve bu olguyu dışa vurabilecek bireyler ya da grupların deneyimleri tanımlanır (Büyüköztürk, Çakmak, Akgün, Karadeniz ve Demirel, 2013; Christensen, Johnson & Turner, 2015). Bu bağlamda, araştırmanın olgusu ise bilgisayar destekli matematik öğretimi olup bu öğretim süreci hakkında deneyimli öğrencilerin görüşleri alınarak süreç içerisinde neler yaptıkları gözlemlenmiştir. Nitel araştırma desenine göre tasarlanan çalışmanın geçerliğini artırmak amacıyla hem öğrencilerle yarı yapılandırılmış görüşme yapılmış hem de süreç içerisinde neler yapıldığı sınıf içi gözlem yapılarak not alınmıştır. Ayrıca yarı yapılandırılmış görüşme formunda yer alan soruların uygunluğu hem araştırmacılara hem de alanında uzman iki öğretim üyesinin görüşlerine sunulmuştur. Gelen dönütler doğrultusunda görüşme formlarında son düzenlemeler yapılmıştır.

Çalışma Grubu

Araştırmanın çalışma grubu amaçlı örnekleme yöntemlerinden ölçüt örnekleme yöntemine göre belirlenen Adana İli Pozantı İlçesi'nde alt sosyo-ekonomik düzeyde bir devlet okulunun altıncı sınıf öğrencilerinden oluşmaktadır. Ölçüt olarak ise bilgisayar destekli matematik öğretimine katılan ve matematik dersinde başarılı olan altıncı sınıf öğrencileri seçilmiştir. Bu öğrencilerle dört haftalık matematik dersleri bilgisayar laboratuarında yapılmış ve araştırmacılardan biri aynı zamanda matematik öğretmeni olarak dersi yürütmüştür. Dersi yürüten matematik öğretmeni dersin bitiminde gözlemlerini not almıştır. Ayrıca yirmi bir kişilik sınıfta yürütülen dört haftalık dersin sonunda dokuz öğrenci ile de yarı yapılandırılmış görüşmeler yapılmıştır. Araştırmanın yapıldığı okuldaki bilgisayar dersliğinde on dört tane öğrencilere bir tane de yöneticiye ait olmak üzere toplam on beş bilgisayar bulunmaktadır. Bu bilgisayarların dördü bozuk olup öğrencilerin kullandıkları bilgisayar sayısı on dur. Ayrıca bilgisayar dersliğinde bulunan on sekiz kulaklıktan on üçü çalışmaktadır.

Veri Toplama Araçları

Veri toplama aracı olarak görüşme ve gözlem tekniklerinden faydalanılmıştır. Görüşmede kullanılmak üzere uzman görüşlerinden yaralanılarak yarı yapılandırılmış görüşme formu oluşturulmuştur. Görüşmeler öğrencilerle bireysel olarak öğretmen odasında ya da rehberlik odasında gerçekleştirilmiş ve öğrencilerden gelen yanıtlar not alınmıştır. Daha sonra elde edilen ham veriler aynı gün bilgisayar ortamına aktarılmıştır. Görüşme sırasında gerekli yerlerde ek (sonda) sorular sorularak öğrenci görüşlerinden detaylı olarak yararlanılmaya çalışılmıştır. Gözlem yapılırken ise öğrencilerin işlenilen konularla ilgili çalışmaları bilgisayarda nasıl uyguladıkları, anlamadıkları bir konu olup olmadığı, arkadaşlarıyla nasıl iletişim kurdukları, konuyu ne kadar anladıkları ve uygulayabildikleri, nerelerde daha çok zorlandıkları gözlemlenerek not alınmıştır.

Verilerin Analizi

Verilerin analizinde içerik analizi kullanılmıştır. İçerik analizinde öğrencilerle yapılan görüşme verileri ve sınıf içi etkinliklerde yapılan gözlemler tematik bir yaklaşımla incelenmiştir. Birbirine yakın olan temalar kendi içerisinde kategorize edilerek kodlara ayrılarak çözümlenmiştir.

BULGULAR

Araştırmanın ilk amacı doğrultusunda bilgisayar destekli matematik öğretimi konusunda öğrencilerle yapılan görüşmeler ve sınıf içi gözlemler sonucunda olumlu yönde görüşler ve gözlemler elde edilmiştir. Buna göre Tablo 1 incelendiğinde öğrencilerin görüşleri ve sınıf içi gözlemler bilişsel ve duyuşsal olmak üzere iki tema altında incelenmiştir.

Tablo 1. Bilgisayar Destekli Matematik Öğretimi Hakkında Öğrenci Görüşlerine İlişkin Tema, Kod ve Frekans Dağılımı

Tema	Kod	Görüşme Sıklığı (f)	Gözlem Sıklığı (f)
Bilişsel	Anlamlı Öğrenmeleri Sağlaması	7	16
	İşlem Kolaylığı Sağlaması	6	12
Duyuşsal	Dersin Görselleştirilmesine Yardımcı Olması	7	15
	Dersin İlgi Çekici Olmasını Sağlaması	5	10

Tablo 1 incelendiğinde öğrencilerin görüşleri ve gözlem sonuçları bilişsel ve duyuşsal olmak üzere iki tema altında toplanmaktadır. İlk olarak bilişsel boyut açısından öğrencilerin bilgisayar destekli matematik öğretimi sürecinde problemleri kolaylıkla çözebildikleri, konuyu daha iyi anladıkları, işlemleri kolaylıkla yapabildikleri ve üç boyutlu çizimler sayesinde konuyu daha iyi kavradıkları sonucuna ulaşılmıştır. Bu yönde görüş belirten öğrencilerden bazılarının görüşleri şu şekildedir; "*Programdaki geometri şekilleri kolaylıkla öğreniyoruz. Şekilleri görünce şeklin çizimini hatırlıyorum ve soruları çok kolaylıkla çözebiliyorum*."; "*Resimleri görünce her türlü geometrik şekli çizebilirim."; "… geometri artık çocuk oyuncağı gibi geliyor…".; Bilgisayar laboratuarında sınav yaparsak 5 bile alırım. "matematik sınav korkusu kalmadı gelsin 5'ler gitsin 2'ler 3'ler…".*

Diğer taraftan duyuşsal olarak öğrenciler daha zevkle dersi öğrendiklerini, eğlendiklerini, bu süreçte hiç sıkılmadıklarını, görsel materyallerin konuya olan ilgilerini artırdığını belirtmişlerdir. Bu yönde görüş belirten öğrencilerden bazıları görüşlerini "*Hocam bilgisayardan işlem yapmak çok güzel oluyor, eğlenerek dersi öğreniyorum"; "Bilgisayar çok zeki bütün işlemleri bir saniyede yapıyor. Çok eğleniyoruz…"; "Dersindeki işlemleri hızlı ve kolay bir şekilde yapmak beni çok mutlu etti"* biçiminde ifade etmişlerdir. Yapılan görüşmeler doğrultusunda yine, gözlem verileri de bu bulguyu desteklemektedir. Sınıf içerisinde yapılan gözlemlerde öğrencilerin bilgisayar ekranına bakarken çoğu zaman gülümseme içinde oldukları, aynı zamanda hemen doğru ya da yanlış yaptıklarında yanıt almalarının onları sevindirdiği, boş derslerde bilgisayar laboratuarına gidip matematik dersi çalışmak istedikleri gözlemlenmiştir.

Araştırmanın ikinci alt amacı olarak öğrencilere bilgisayar destekli matematik öğretimi dersinde herhangi bir sorunla karşılaşıp karşılaşmadıkları sorulduğunda öğrencilerden gelen yanıtlar ve yapılan gözlem sonuçları Tablo 2'de yer almaktadır.

Tablo 2. Bilgisayar Destekli Matematik Öğretimi Hakkında Yaşanan Sorunlarla İlgili Öğrenci Görüşleri ve Gözlem Verilerine İlişkin Tema, Kod ve Frekans Dağılımı

Tema	Kod	Görüşme Sıklığı (f)	Gözlem Sıklığı (f)
Yaşanan Sorunlar	Donanım Yetersizliği	2	8
	Temel Bilgi Eksikliği	1	5

Tablo 2 incelendiğinde yapılan gözlem sonuçları ve öğrencilerle yapılan görüşme verilerine göre bilgisayar destekli matematik öğretimi sürecinde öğrencilerin genelde okuldaki alt yapı eksikliğinden ve temel bilgi eksikliğinden kaynaklı sorunlarla karşılaştıkları görülmektedir. Bu yönde görüş belirten öğrencilerden bir kaçı *"..Mouse bozuk hocam çalışmıyor bilgisayar.."; "Bilgisayar çok yavaş hocam"; "Öğretmenim benim bilgisayar internete bağlanmıyor."; "Evimde bilgisayar olmayınca evde çalışamıyorum. Tekrar yapamıyorum. Öğle arasında ve ders çıkışlarında da sistemi kullanmaya nöbetçi öğretmen izin vermiyor."; "Öğretmenim n harfini bulamıyorum."* biçiminde görüşlerini ifade etmişlerdir. Ayrıca, görüşme verilerini destekler nitelikte gözlemlerden elde edilen verilere göre de bilgisayarların 2006 yılı üretimi olduğu o yüzden programı yürütmekte zorlandığı görülmüştür. Bilgisayarların üretim yıllarının eski olduğu gibi yine bilgisayarlara internet sağlayan kabloların eski olduğu görülmüştür. Öğretmenin ve öğrencilerin derse girdikten yaklaşık beş dakika sonra ancak bilgisayarların açılabildiği ve öğrencilerin de ancak sekiz dakikada giriş yapabildiği gözlemlenmiştir. Diğer taraftan bilgisayar klavyelerinin F klavye olması öğrencilerin harf bulmada çok zaman kaybetmelerine ve zorlanmalarına neden olmuştur. Yine, bazı öğrencilerin genel bilgisayar bilgisinin zayıf olmasından dolayı bilgisayarı açma, programları çalıştırma, dosyayı açma gibi temel teknik konularda bilgilerinin yetersiz olmasından ötürü dersin başında bu konuda öğrencilere yoğun bir eğitim verilmiştir.

SONUÇ VE ÖNERİLER

Bu çalışma altıncı sınıf öğrencilerinin bilgisayar destekli matematik öğretimi sürecinde yaşadıkları süreçleri gözlemlemek ve bu konuda görüşlerini incelemek amacıyla yapılmıştır. Bu kapsamda yapılan sınıf içi gözlem ve yarı yapılandırılmış görüşmeler sonucunda elde edilen veriler; bilişsel ve duyuşsal olmak üzere iki kategoriye ayrılmıştır. Öncelikle öğrenciler bilgisayar destekli matematik öğretiminin dersin anlaşılmasını kolaylaştırdığını, sınıf içerisinde çözülen problemleri daha rahat kavrayabildiklerini, konuya daha iyi hakim olabildiklerini belirtmişlerdir. Bu bağlamda, görsel materyaller yardımıyla konunun daha iyi kavrandığı söylenebilir. Duyuşsal boyut açısından ise öğrencilerin dersin daha zevkli işlendiğini düşündükleri, derste çok eğlendikleri, hiç sıkılmadıkları ve üç boyutlu görseller sayesinde konuya olan ilgilerinin arttığı araştırma sonuçlarından açıkça görülmektedir.

Öte yandan, bilgisayar destekli öğretim sürecinde öğrencilerin temel bilgi eksiklerinden ve okuldaki bilgisayarlara yönelik donanım ve teknoloji yetersizliklerinden dolayı bazı sorunlar yaşadıkları araştırmadan elde edilen diğer önemli bir sonuçtur. Bu nedenle öğrencilerin bu tür sorunlarla karşılaşmamaları için okuldaki var olan bilgisayarlardaki eksikliklerin ve donanımsal yetersizliklerin giderilmesi ve öğrencilere gerekli temel bilgilerin verilmesi için gerekli tedbirlerin alınması önerilebilir. Bu çalışma sadece altıncı sınıf öğrencileriyle ve matematik dersiyle sınırlıdır. Diğer sınıf düzeylerinde ve diğer derslerde de bu tür çalışmalar yapılması önerilebilir.

THE REPRESENTATIONS OF PRE-SERVICE ELEMENTARY TEACHERS APPLIED IN SOLVING NON-ROUTINE MATHEMATICAL PROBLEMS

Ayten Pınar BAL
Çukurova Üniversitesi

ABSTRACT: The study is a mixed research which aims to find out the solution strategies applied by pre-service elementary in solving non routine problem types. The population of this study is 107 pre-service teachers who are educated in an elementary school department. As data collection tool, "Non-Routine Problem Set", which was developed by related literature and expert reviews, was prepared. This problem set consists of 10 non-routine problems. At the end of the study, it was found out that pre-service elementary teachers can apply verbal, algebraic, graphical and tabular in terms of non-routine problem types. In addition, another important finding that obtained from the study is that while the pre-service teachers applied the verbal and algebraic representation most, they applied the numerical representation least.

Key words: pre-service teacher, multiple representations, non-routine problems.

SINIF ÖĞRETMENİ ADAYLARININ RUTİN OLMAYAN PROBLEMLERDE UYGULADIKLARI TEMSİL TÜRLERİ

ÖZET: Bu çalışma, sınıf öğretmeni adaylarının rutin olmayan problemlerin çözümünde kullandıkları temsilleri ve bu temsillerin seçilmesine etki eden faktörleri ortaya çıkarmak amacıyla yapılmıştır. Araştırma, nicel ve nitel araştırma yöntemlerinin bir arada kullanıldığı karma araştırma yöntemine göre desenlenmiştir. Araştırmanın çalışma grubunu sınıf öğretmenliği bölümünde öğrenim gören 107 öğrenci oluşturmaktadır. Veri toplama aracı olarak ilgili literatürden ve uzman görüşünden yararlanılarak on soruluk rutin olmayan problem seti ve yarı yapılandırılmış görüşme formu hazırlanmıştır. Araştırmanın sonucunda öğretmen adaylarının rutin olmayan problemlerde, sözel, cebirsel ve grafiksel temsil türlerini kullanabildikleri sonucuna ulaşılmıştır. Ayrıca, öğretmen adaylarının en çok sözel ve cebirsel temsili; en az düzeyde ise sayısal temsili uyguladıkları araştırmadan elde edilen diğer önemli bir sonuçtur.

Anahtar sözcükler: öğretmen adayı, çoklu temsiller, rutin olmayan problemler

GİRİŞ

Genel bir tanım olarak temsil, olguların farklı perspektiflerden sunulması olarak tanımlanabilir (Even, 1998; Goldin & Kaput, 1996). Matematik öğretimi bağlamında ise temsil ve temsil türleri, matematik öğretim programlarında problem çözme becerilerinin öğrencilere kazandırılması açısından büyük önem taşımaktadır. Bu kapsamda, problem çözme süreçlerinde kullanılan temsil türleri sözel, yazılı, durağan şekil ya da resimler, somut modeller ve gerçek yaşam durumlarını kapsar (Goldin, 1998; Lesh, Post & Behr, 1987). Pek çok araştırmacı iyi bir problem çözücünün bu temsil türlerini kolayca çözdüğü probleme uygulayabilmesi ve gerektiğinde bir temsil türünü diğer bir temsil türüne kolayca dönüştürebilmesi gerektiğini vurgulamaktadır. Öte yandan, literatürde problem türleri rutin problemler ve rutin olmayan problemler olarak iki farklı boyutta ele alınmaktadır (Verschaffel, De Corte & Lasure, 1994). Rutin olan problemler bilinen bir kuralın ya da formülün yeni bir duruma uyarlanmasını gerektiren türdeki problemlerdir. (Polya, 1990). Diğer taraftan rutin olmayan problemler ise gerçek yaşamla ilgili ve öğrencilerin kendi çözüm yöntemlerini üretmelerini ve düşünme becerilerini kullanmalarını gerektiren nitelikteki sorulardır (Elia, Van den Heuvel-Panhuizen & Kolovou, 2009).
Literatürde, problem çözme aşamalarında kullanılan temsil türleri üzerine odaklanan çalışmalar genellikle ilköğretim (Ahmad, Tarmizi, & Nawawi 2010; Akkuş & Çakıroğlu, 2006; Cai, 2000; Cai, 2004; Cai & Hwang, 2002; Gagatsis & Elia, 2004; Hwang, Chen, Dung, Yang, 2007) ve sınırlı sayıda da olsa lisans düzeyindeki çalışmaları kapsamaktadır (Villegas, Castro & Gutierrez, 2009; Delice & Sevimli, 2010; İpek & Okumuş, 2012). Bu bağlamda, Villegas, Castro ve Gutierrez (2009) öğretmen adaylarının kullandıkları temsiller ve bu temsiller arasındaki dönüşümlerin sıklığını inceledikleri araştırmanın sonucunda öğretmen adaylarının problem çözme başarıları ile temsil kullanma ve dönüştürme becerileri arasında anlamlı ve pozitif bir ilişki olduğu sonucuna ulaşmışlardır. Yine Delice ve Sevimli (2010) öğretmen adaylarının belirli integral problemleri çözme sürecinde kullandıkları temsil türlerini inceledikleri çalışmalarında, öğretmen adaylarının en çok cebirsel temsil türünü her türlü problemin çözümünde kullanmak istediklerini ve öğretmen adaylarının bu temsili kullanma alışkanlıklarının oldukları sonucuna ulaşmışlardır.

Bu bulgulardan yola çıkarak özetle, ilköğretim düzeyinde (Ahmad, Tarmizi, & Nawawi, 2010; Akkuş & Çakıroğlu, 2006; Cai, 2000; Cai, 2004; Cai & Hwang, 2002; Gagatsis & Elia, 2004;) ve sınırlı sayıda lisans düzeyinde (İpek & Okumuş, 2012) yapılan araştırmalardan da görüldüğü gibi, matematiksel problemlerin çözüm süreçlerinde kullanılan temsil türleri, öğrencilerin problem çözme becerileri üzerinde olumlu bir etki yaratmaktadır. Ancak alanla ilgili literatür incelendiğinde yukarıdaki çalışmalar haricinde sınıf öğretmeni adaylarının çoklu temsil uygulamalarını doğrudan irdeleyen herhangi bir çalışma göze çarpmamaktadır. Bu olgudan yola çıkarak, bu çalışmanın amacı, sınıf öğretmeni adaylarının rutin olmayan problemlerin çözümünde uyguladıkları temsil türlerini belirlemektir. Bu amaç doğrultusunda aşağıda belirtilen alt amaçlara ulaşılmaya çalışılmıştır.

1) Rutin olmayan problemlerde sınıf öğretmeni adaylarının kullandıkları temsil türleri nelerdir?
2) Rutin olmayan problemlerde seçilen temsil türlerinin belirlenmesine etki eden faktörler nelerdir?

YÖNTEM

Bu araştırma, sınıf öğretmeni adaylarının rutin olmayan problemlerde kullandıkları temsilleri ve bu temsilerin seçilmesine etki eden faktörlerin belirlenmesi yönelik olarak nicel ve nitel araştırma yöntemlerinin bir arada kullanıldığı karma araştırma yöntemine göre desenlenmiş bir çalışmadır.

Çalışma Grubu

Araştırma kapsamında Türkiye'nin güneyinde bir devlet üniversitesinin sınıf öğretmenliği ana bilim dalı birinci sınıfına devam eden 107 öğrenciyle çalışılmıştır. Çalışma grubunu oluşturan birinci sınıf öğrencileri matematik dersiyle ilgili Temel Matematik I dersini tamamlamışlardır. Temel Matematik I dersinin içeriğinde matematiksel kavramlar ve işlemler, sayılar, oran-orantı, denklem ve eşitsizlikler, cebirsel ifadeler ve sözel problemler yer almaktadır. Görüşme yapılacak grubunun belirlenmesinde ise amaçlı örneklem yöntemlerinden ölçüt örnekleme yöntemi kullanılmıştır. Bu çalışmada araştırmaya katılmaya gönüllü olan, Temel Matematik I dersini başarıyla tamamlayan ve rutin olmayan problemlere yönelik çoklu temsil kullanma testinde farklı başarılar gösteren öğretmen adayları seçilerek yarı yapılandırılmış görüşmeler yapılmıştır. Görüşmeye katılan on beş öğretmen adayının onu kız ve beşi erkektir. Problem çözmede çoklu temsil kullanma testinin sonuçları değerlendirildiğinde öğretmen adaylarının dördü düşük, yedisi orta diğer dördü de yüksek başarı düzeyindedir.

Veri Toplama Araçları

Bu çalışmada veri toplama aracı olarak on sorudan oluşan rutin olmayan problem seti ve yarı yapılandırılmış görüşme formu kullanılmıştır. Rutin olmayan problemlerin hazırlanması sürecinde ilgili literatürden yararlanılmıştır (Inoue, 2005; Verschaffel, De Corte & Lasure, 1994; Xin, Lin, Zhang & Yan, 2007). Bu sette yer alan problemlerin hepsi farklı gösterimlerden yararlanılarak çözülebilmektedir. Bu ölçme aracının geçerliğini sınamak üzere, matematik eğitimi alanında iki uzman tarafından testin ölçmeyi hedeflediği davranışlar yönüyle, kapsam ve görünüş geçerliğine sahip olduğu belirlenmiştir. Görüşme formunda ise öğretmen adaylarına rutin olmayan problemlerin çözümünde seçtikleri temsilleri nasıl belirledikleri konusundaki görüşleri yer almaktadır. Ses kayıt cihazıyla kaydedilen görüşmeler bilgisayar ortamına aktarılmış ve 15 sayfalık ham veri elde edilmiştir. Bu aşamada öğretmen adaylarına görüşme sırasına göre ilk görüşülen öğretmen adayına $GÖ_1$, ikinci görüşülen öğretmen adayına $GÖ_2$ biçiminde kodlar verilmiştir.
Veri toplama aracı, Temel Matematik II dersinin son haftasında yaklaşık elli dakikalık bir sürede öğretmen adaylarına uygulanmıştır. Öğretmen adaylarının rutin olmayan problemlerin çözümünde kullandıkları temsil türleri ilgili literatürden yararlanılarak kodlanmıştır. (Lesh, Behr & Post, 1987; İpek & Okumuş, 2012). Buna göre;
1. Sözel Temsil; problemlerin çözüm sürecinin sözel olarak anlatması ve problemlerle ilgili akıl yürütmeleri.
2. *Cebirsel Temsil;* problemlerin çözümünde matematiksel işlemlerin yapılması ya da sembollerin kullanılması.
3. Grafiksel Temsil; problemlerin çözümünde resim, şema, şekil veya sayı doğrusu kullanılması.
4. Sayısal Temsil; problemlerin çözümümde tablo ya da matris kullanılması
Yarı yapılandırılmış görüşme formunun çözümlenmesinde içerik analizi kullanılmıştır. Veri toplama aracı olarak kullanılan problemlerin çözümünde uygulanan kodların güvenirliğinin kontrol edilmesi için rastgele seçilen 15 öğretmen adayının çözümleri matematik eğitimi konusunda bir uzman tarafından analiz edilmiş ve iki kodlayıcı arasındaki uyuşma oranının .94 olduğu görülmüştür.

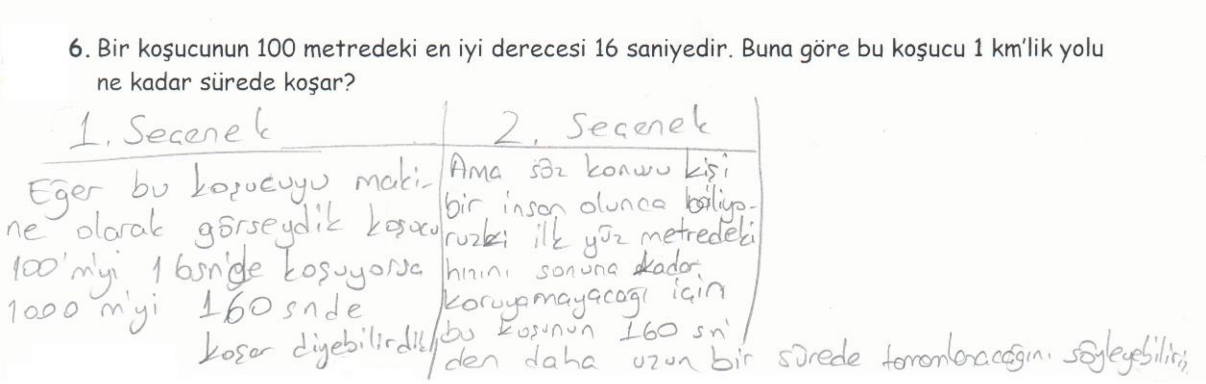
BULGULAR

İlk araştırma sorusu olarak, sınıf öğretmeni adaylarının rutin olmayan problemlerin çözümünde kullandıkları temsil türleri irdelenmiştir. Buna göre sınıf öğretmeni adaylarının rutin olmayan problem türlerinde kullandıkları temsil türleri Tablo 1'de yer almaktadır.

Tablo 1. Sınıf Öğretmeni Adaylarının Rutin Olmayan Problemlerde Kullandıkları Temsil Türlerine Göre Dağılımları

Problem	Sözel Temsil		Cebirsel Temsil		Grafiksel Temsil		Sayısal Temsil	
	f	%	f	%	f	%	f	%
1. Soru	83	73.5	24	21.2	51	45.1	3	2.7
2. Soru	83	73.5	81	71.7	16	14.2	43	38.1
3. Soru	64	56.6	68	60.2	62	54.9	-	-
4. Soru	45	39.8	96	85.0	65	57.5	-	-
5. Soru	64	56.6	103	91.2	16	14.2	-	-
6. Soru	64	56.6	77	68.1	13	11.5	18	15.9
7. Soru	73	64.6	69	61.1	14	12.4	6	5.3
8. Soru	41	36.3	68	60.2	79	69.9	-	-
9. Soru	60	53.1	74	65.5	53	46.9	24	21.2
10. Soru	56	49.6	84	74.3	19	16.8	8	7.1

Tablo 1 incelendiğinde rutin olmayan problemlerin çözümünde, öğretmen adaylarının en çok sözel ve cebirsel temsili kullanırken en az ise sayısal temsili kullandıkları görülmektedir. İlk olarak sözel temsillerin kullanım sıklığı incelendiğinde öğretmen adaylarının en çok birinci ve ikinci soruda (%73.5) bu temsili uyguladıkları en az ise sekizinci (%36.3) soruda kullandıkları görülmektedir. Örneğin ikinci sorunun çözümü aşamasında $Ö_9$ kodlu öğretmen adayının kullandığı sözel temsil Şekil 1'de yer almaktadır.



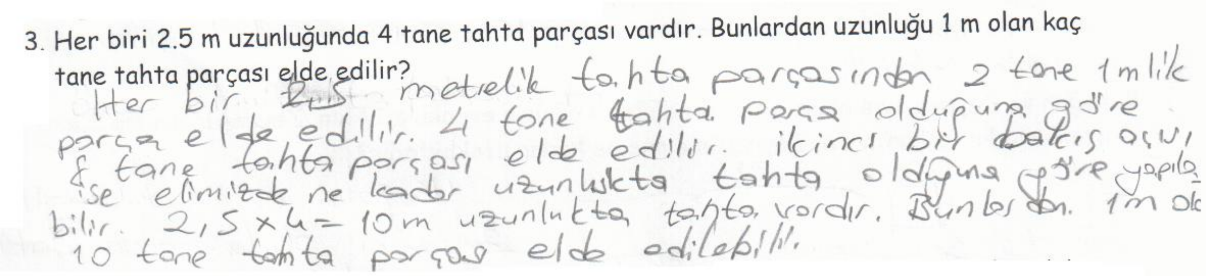
6. Bir koşucunun 100 metredeki en iyi derecesi 16 saniyedir. Buna göre bu koşucu 1 km'lik yolu ne kadar sürede koşar?

1. Secenek
Eğer bu koşucuyu makine olarak görseydik koşucu 100'm'yi 16sn'de koşuyorsa 1000 m'yi 160 snde koşar diyebilirdik

2. Secenek
Ama söz konusu kişi bir insan olunca biliyoruz ki ilk yüz metredeki hızını sonuna kadar koruyamayacağı için bu koşunun 160 sn'den daha uzun bir sürede tamamlanacağını söyleyebiliriz

Şekil 1. $Ö_9$ Kodlu Adayın İkinci Sorunun Çözüm Aşamasında Kullandığı Sözel Temsil

Şekil 1 incelendiğinde $Ö_9$ kodlu öğretmen adayı altıncı sorunun çözümünde sözel temsili kullanarak rutin olmayan problemin çözümünü iki durumda açıklamıştır. Buna göre ilk olarak koşucunun makine olarak düşünülmesi halinde 100 metreyi 16 saniyede koşması durumunda, bu sürenin 10 katı olan mesafeyi 160 saniyede koşabileceğini belirtmiştir. Ancak ikinci durumda ise koşucunun bir insan olduğu ve bu sürede yorulacağının düşünülmesi gerektiğini ve bu nedenle daha uzun sürede bu mesafeyi tamamlayacağını ifade etmiştir. Benzer şekilde üçüncü sorunun çözümünde ise $Ö_{31}$ kodlu öğretmen adayının çözümü Şekil 2'deki gibidir.



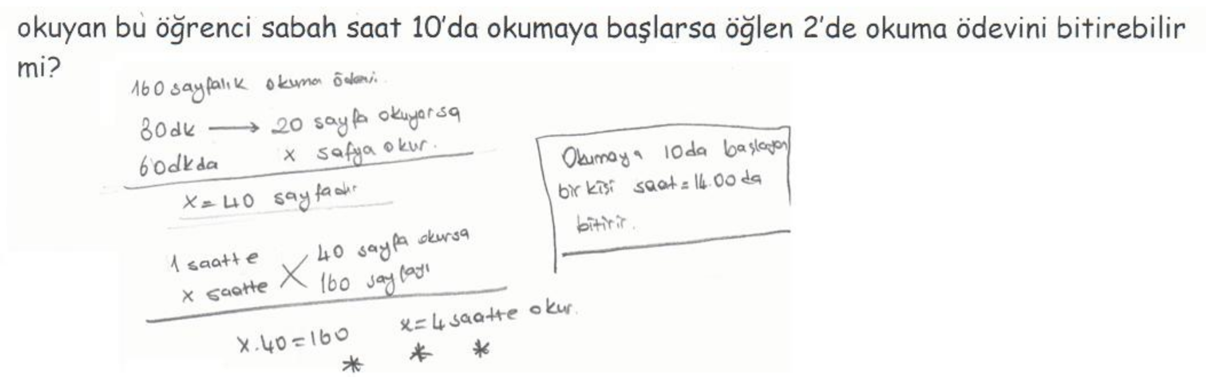
3. Her biri 2.5 m uzunluğunda 4 tane tahta parçası vardır. Bunlardan uzunluğu 1 m olan kaç tane tahta parçası elde edilir?

Her bir 2,5 metrelik tahta parçasından 2 tane 1 m'lik parça elde edilir. 4 tane tahta parça olduğuna göre 8 tane tahta parçası elde edilir. İkinci bir bakış açısı ise elimizde ne kadar uzunlukta tahta olduğuna göre yapılabilir. 2,5 x 4 = 10 m uzunlukta tahta vardır. Bunlardan 1 m ok 10 tane tahta parçası elde edilebilir.

Şekil 2. $Ö_{31}$ Kodlu Adayın Üçüncü Sorunun Çözüm Aşamasında Kullandığı Sözel Temsil

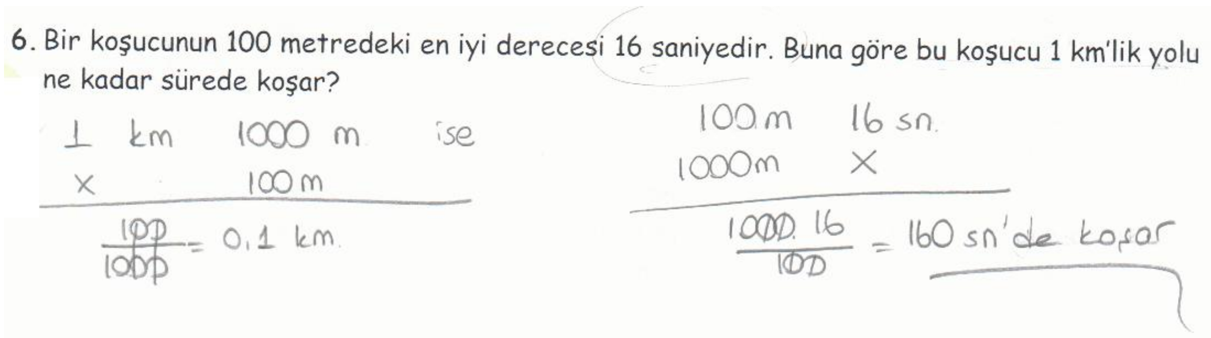
Şekil 2'de görüldüğü gibi $Ö_{31}$ kodlu öğretmen adayı üçüncü sorunun çözümünde sözel temsili kullanarak rutin olmayan problemin çözümünü iki durumda açıklamıştır. Buna göre ilk durumumda her biri 2,5 metrelik tahta parçalarından iki tane birer metrelik tahta elde edileceğini ve bu durumda dört tane tahta parçası olduğuna göre toplamda sekiz tane tahta parçası elde edilebileceğini anlatmıştır. İkinci bir bakış açısı olarak da bu tahta parçalarının birleştirilmesiyle 10 metre uzunluğunda olan tahtalardan birer metrelik on adet tahta parçası elde edilebileceğini vurgulamıştır.

Cebirsel temsilin kullanımına ilişkin olarak öğretmen adaylarının çözümleri Tablo 1 bağlamında incelendiğinde en çok beşinci sorunun (%91.2) sonra dördüncü sorunun çözümünde (%85) bu temsil türünün tercih edildiği görülmektedir. Diğer taraftan ise cebirsel temsilin en az olarak birinci sorunun (%21.2) çözümünde tercih edildiği sonucuna ulaşılmıştır. Bu temsil türünün çözümüne ilişkin olarak $Ö_{45}$ kodlu öğretmen adayının cebirsel temsil ile ilgili yaptığı çözüm Şekil 3'dedir.



Şekil 3. $Ö_{45}$ Kodlu Adayın İkinci Sorunun Çözüm Aşamasında Kullandığı Cebirsel Temsil

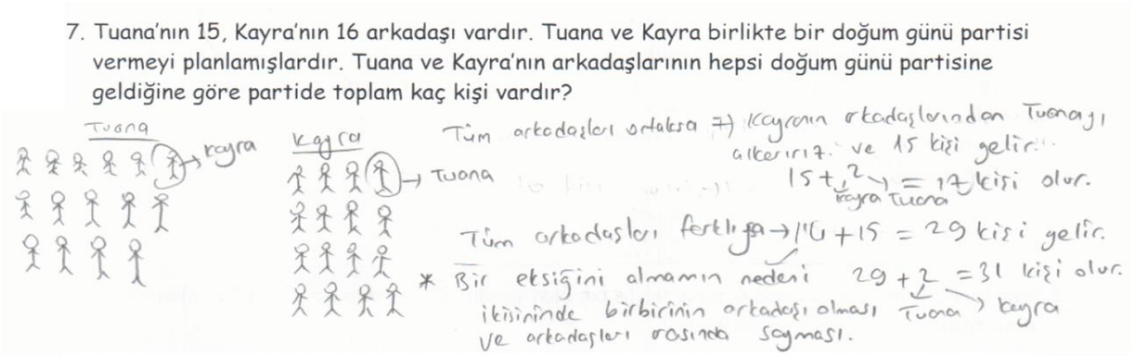
Şekil 3'de görüldüğü gibi $Ö_{45}$ kodlu öğretmen adayı ikinci sorunun çözümünde oran orantı yöntemini kullanarak önce bir saatte kaç sayfa okuyabileceğini hesaplamış. Sonra da bir saatte 40 sayfa okunursa kaç saatte 160 sayfa okunacağını bulmuştur. Benzer şekilde $Ö_{78}$ kodlu öğretmen adayının altıncı sorunun çözümünde uyguladığı cebirsel temsilde Şekil 4'de yer almaktadır.



Şekil 4. $Ö_{78}$ Kodlu Adayın Altıncı Sorunun Çözüm Aşamasında Kullandığı Cebirsel Temsil

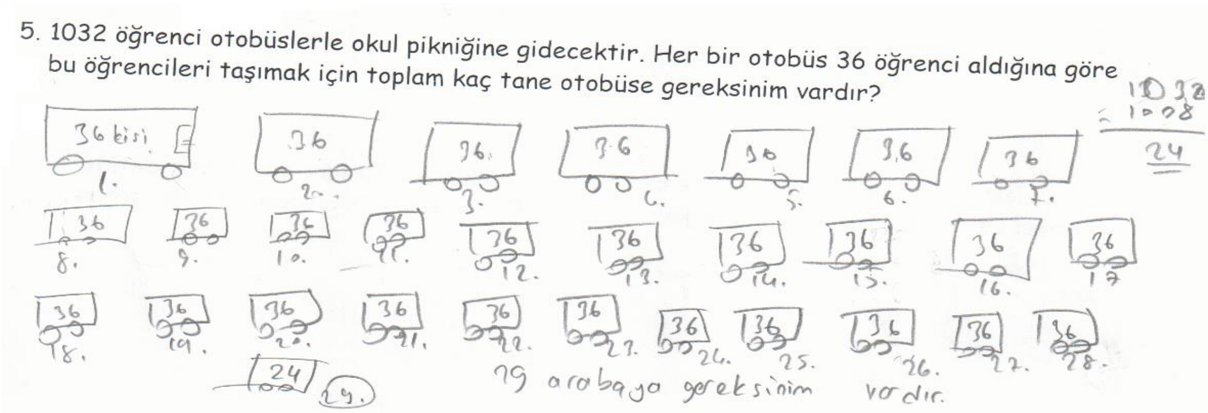
Şekil 4'de görüldüğü gibi $Ö_{78}$ kodlu öğretmen adayı altıncı sorunun çözümünde oran orantı yöntemini kullanarak önce bir kilometrenin 1000 metre ise 100 metrenin kaç kilometre olacağını hesaplamış. Daha sonrada koşucunun 100 metreyi 16 saniyede koşması durumunda 1000 metrenin kaç saniyede koşulacağını oran orantı yöntemiyle hesaplamıştır.

Diğer taraftan grafiksel temsilin kullanımına ilişkin olarak Tablo 1 incelendiğinde bu temsil türünün en çok sekizinci (%69.9) ve dördüncü sorunun (57.5) çözümünde kullanıldığı en az ise ikinci sorunun (%14.2) çözümünde bu temsilin kullanıldığı görülmektedir. Bu bağlamda yedinci sorunun çözümünde $Ö_{29}$ kodlu öğretmen adayının çözümü Şekil 5'deki gibidir.



Şekil 5. Ö$_{29}$ Kodlu Adayın Yedinci Sorunun Çözüm Aşamasında Kullandığı Grafiksel Temsil

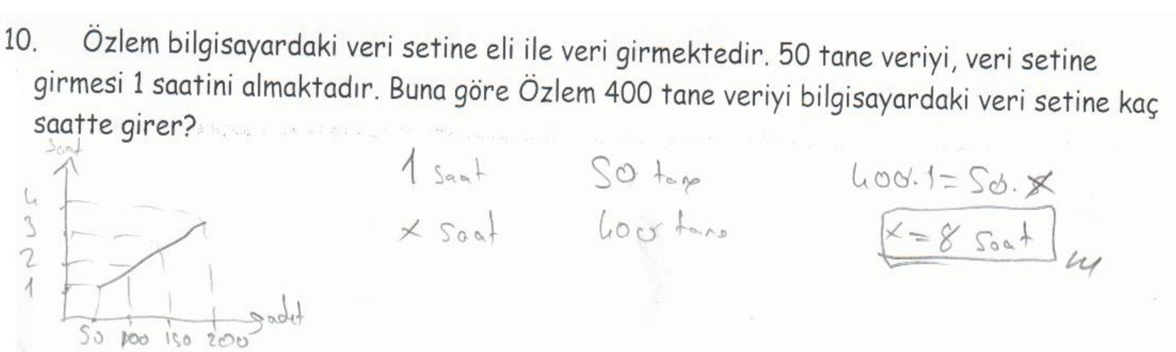
Şekil 5'de görüldüğü gibi Ö$_{29}$ kodlu öğretmen adayı yedinci sorunun çözümünde Tuana'nın 15 arkadaşı ve Kayra'nın da 16 arkadaşı olması durumunu şekil çizerek anlatmaya çalışmıştır. Buna göre öğretmen adayı tüm arkadaşlarının ortak olması durumunda 15+Kayra+Tuana olarak 17 kişinin gelebileceği sonucuna ulaşmıştır. Diğer taraftan ise aynı öğretmen adayı tüm arkadaşlarının farklı olması durumunda 14+15+Kayra+Tuana olarak 31 kişi gelebileceğini düşünmüştür. Buna benzer olarak yine Ö$_{12}$ kodlu öğretmen adayı beşinci sorunun çözümünü Şekil 6'daki gibi ifade etmiştir.



Şekil 6. Ö$_{12}$ Kodlu Adayın Beşinci Sorunun Çözüm Aşamasında Kullandığı Grafiksel Temsil

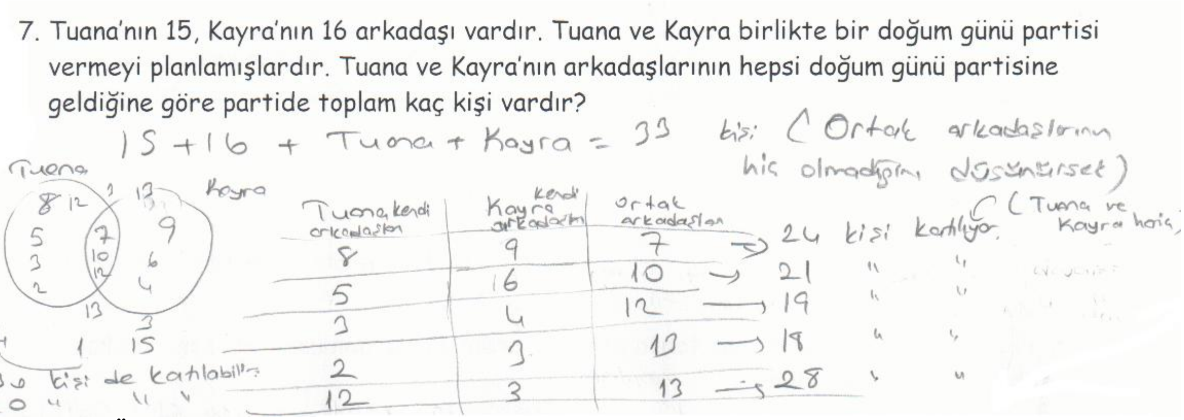
Şekil 6'da görüldüğü gibi Ö$_{12}$ kodlu öğretmen adayı beşinci sorunun çözümünde her bir otobüste 36 kişi olması gerektiğini şekil çizerek belirtmiştir. Buna göre her otobüste 36 kişi olacağından 28 otobüs gerektiğini ve artan 24 öğrenci için de bir otobüse ihtiyaç olacağını ve toplamda 29 otobüse gerek olduğunu belirtmiştir.

Son temsil türü olarak öğretmen adaylarının rutin olamayan problemlerin çözümünde en az sayısal temsil türünü kullandıkları görülmektedir. Bu temsil türünün kullanımına ilişkin veriler Tablo 1 kapsamında incelendiğinde en çok ikinci sorunun (%38.1) çözümünde bu temsil türüne başvurulduğunu ancak, bazı sorularda (3.,4., 5., 8.) ise bu temsil türüne hiç başvurulmadığı görülmektedir. Örneğin onuncu sorunun çözümü aşamasında Ö$_{36}$ kodlu öğretmen adayının kullandığı sayısal temsil Şekil 7'de yer almaktadır.



Şekil 7. Ö$_{36}$ Kodlu Adayın Onuncu Sorunun Çözüm Aşamasında Kullandığı Sayısal Temsil

Şekil 7 incelendiğinde $Ö_{36}$ kodlu öğretmen adayının onuncu sorunun çözümünde tablo çizerek bir saatte 50 veri girilirse iki saatte 100, üç saatte 150 ve dört saatte ise 200 adet veri girileceğini vurgulamıştır. Diğer taraftan yedinci sorunun çözümünde ise $Ö_{35}$ kodlu öğretmen adayı tablo çizerek ve kümelerin kesişiminden yararlanarak Tuana ve Kayra isimli iki arkadaşın birlikte verecekleri doğum günü partisine kaç kişinin gelebileceğini hesaplamıştır. Buna göre, öğretmen adayının yaptığı çözüm yolu Şekil 8'de yer almaktadır.



Şekil 8. $Ö_{35}$ Kodlu Adayın Yedinci Sorunun Çözüm Aşamasında Kullandığı Sayısal Temsil Biçimi

Şekil 8 incelendiğinde söz konusu öğretmen adayının Tuana ve Kayra isimli iki arkadaşın hiç arkadaşları olmaması durumunda sayının 15+16+Tuana+Kayra=33 kişi olacağı; Tuana'nın ve Kayranın 7 ortak arkadaşı olması durumunda sayının 8+9+7=24 kişi olacağı; Tuana'nın ve Kayranın 10 ortak arkadaşı olması durumunda sayının 5+6+10=21 kişi olacağı; Tuana'nın ve Kayranın 12 ortak arkadaşı olması durumunda sayının 3+4+12=19 kişi olacağı; Tuana'nın ve Kayranın 13 ortak arkadaşı olması durumunda sayının 2+3+13=18 kişi olacağı; Tuana'nın ve Kayranın 13 ortak arkadaşı olması durumunda ise sayının 12+3+13=28 kişi olabileceği biçiminde soruyu çözdüğü Şekil 8'den de açıkça anlaşılmaktadır.

Araştırmanın ikinci sorusunda ise öğretmen adayların bu temsilleri seçme nedenlerinin ne olduğu irdelenmiştir. Bu konuda yapılan görüşme sonuçları Tablo 2'de yer almaktadır.

Tablo 2. Rutin Olmayan Problemlerde Öğretmen Adaylarının Kullandıkları Temsilleri Seçme Nedenlerine İlişkin Tema, Kod ve Frekans Dağılımı

Tema	Kodlar	f
Bireysel Özelliklerden Kaynaklı Nedenler	Alışkanlık Olması	10
	Daha Anlaşılabilir Olması	6
	Kolay Hatırlanması	5
	Zihinde Canlandırıması	2
Sorunun Yapısından Kaynaklı Nedenler	İçeriğe Göre	7
	Çözüme Göre	5
	Somutlaştırılabilmesi (Görselleştirilebilmesi)	3

Tablo 2 bağlamında rutin olmayan problemlerde öğretmen adaylarının kullandıkları temsil türleri ve bunların kullanım nedenlerine ilişkin elde edilen veriler bireysel özelliklerden ve sorunun yapısından kaynaklı olarak iki temada değerlendirilmiştir. İlk tema olarak bireysel özelliklerden kaynaklı nedenler incelendiğinde öğretmen adaylarının alışkanlık olması (10 öğretmen adayı), daha anlaşılır olması (6 öğretmen adayı), kolay hatırlanması (5 öğretmen adayı) ve zihinde canlandırılması (2 öğretmen adayı) olmak üzere dört kod altında görüşler toplanmıştır. Örneğin alışkanlık olduğunu belirten $GÖ_{13}$ kodlu öğretmen adayı görüşlerini *"öğrencilik hayatımızda problem çözmeye alıştığımız için ne yapacağımızı biliyoruz. Küçüklükten beri öğretmenimiz kesir denildiğinde bir pasta düşün diyordu, hemen aklımıza daire şekli geliyordu. O zamandan edindiğimiz bir alışkanlık…"* biçiminde ifade ederken, $GÖ_2$ kodlu öğretmen adayı da *"Bazı insanlar görsellerle daha kolay hatırlar, bazıları da sözelle daha iyi anlar. Eğer bir soruyla ilk defa karşılaşıyorsanız kafamızda canlandırabilmemiz için şekille anlatılması gerekiyor."* şeklinde görüş bildirmiştir.

İkinci tema olarak rutin olmayan problemlerin çözümünde öğretmen adayları, sorunun yapısından kaynaklı nedenlere bağlı olarak hangi temsil türünü seçeceklerine karar verdiklerini belirtmişlerdir. Bu tema kapsamında içeriğe göre (7 öğretmen adayı), çözüme göre (5 öğretmen adayı) ve soruların somutlaştırılmasına göre (3 öğretmen adayı) karar verdiklerini belirtmişlerdir. Bu yönde $GÖ_{14}$ kodlu öğretmen adayı "*Soruda şekil çizilmesi* *gerekiyorsa çiziyordum. Bazen hız problemlerinde ya da karışım problemlerinde mutlaka şekil çizilmesi gerekiyor. Bazen de denklemle ilgili mesela bir kesme sorusu ise şekil çiziyorum. Ama bazı sorularda da gerek yok. Örneğin 160 sayfalık okuma kitabı ise burada kitap çizmeye gerek yok diye çizmedim. Sözel olarak açıkladım."* biçiminde görüşünü dile getirmiştir. Aynı kapsamda $GÖ_3$ kodlu öğretmen adayı da *"Sorunun içeriğine göre hangi temsille çözebileceğime karar verdim. Bazı soruları sözel, bazı soruları da cebirsel çözebilirsin bu soruya göre değişiyor..."* biçimde görüşünü ifade etmiştir.

SONUÇ VE ÖNERİLER

Bu çalışma, sınıf öğretmeni adaylarının rutin olmayan problemlerde kullandıkları temsil türlerini ve bu temsil türlerinin seçilmesine etki eden faktörlerin belirlenmesi amacıyla yapılmıştır. Araştırmanın sonucunda rutin olmayan problemlerin çözümünde, öğretmen adaylarının en çok sözel ve cebirsel temsil türlerini kullanırken en az ise sayısal temsil türüne başvurdukları sonucuna ulaşılmıştır. Diğer taraftan öğretmen adaylarına bu temsilleri seçme nedenlerinin neler olduğu sorulduğunda elde edilen sonuçlar bireysel özelliklerden ve sorunun yapısından kaynaklı seçimler yapıldığı sonucunu göstermektedir. Bu araştırma kapsamında sadece rutin olamayan problemler ele alınmıştır. Daha sonra yapılacak araştırmalarda rutin problemlerde öğretmen adaylarının başvurdukları temsiller türlerinin belirlenmesi önerilebilir.

NOT: Bu araştırma Çukurova Üniversitesi Bilimsel Araştırma Projeleri Koordinasyon Birimince Desteklenmiştir. Proje Numarası: EF2013BAP1

ASCERTAIN MISCONCEPTIONS OF TEACHER CANDIDATES OF PRIMARY SCHOOL TEACHING DEPARTMENT IN THE "FORCE AND MOTION" ISSUE AND CATEGORIZED THESE MISCONCEPTIONS IN AN ONTOLOGICAL SENSE

Hale BAYRAM
Marmara Üniversitesi

Ayşegül KINIK TOPALSAN
İstanbul Aydın Üniversitesi

ABSTRACT: In this study, it is aimed to ascertain misconceptions of students about basic physical concepts such as force, friction, work, conservation of energy, mechanical energy, kinetic energy, potential energy, energy stored by springs in the "Force and Motion" issue of secondary school seventh class curriculum and categorized these misconceptions in an ontological sense. This research is a descriptive study. The study group of this research is formed of students studying in a foundation university in Istanbul in 2013-2014 academic year. The working group consists of 35 teacher candidates of 30 female and 5 male students studying in the 2nd class of primary school teaching department. Before and after applications after physical concepts about Force and Motion issue were examined and categorized ontologically examined 301 misconception due to placement to upper category and 150 misconceptions due to placement to lateral category

Key words: ontological categories, force and motion, misconceptions

SINIF ÖĞRETMENLİĞİ ÖĞRETMEN ADAYLARININ KUVVET VE HAREKET KONUSUNDAKİ KAVRAM YANILGILARININ ONTOLOJİK AÇIDAN İNCELENMESİ

ÖZET: Bu araştırmada, ortaokul yedinci sınıf öğretim programında yer alan “Kuvvet ve Hareket” konusunda yer alan kuvvet, sürtünme kuvveti, iş, enerjinin korunumu, mekanik enerji, kinetik enerji, potansiyel enerji, yayların depoladığı enerji gibi temel Fizik kavramları ile ilgili, sınıf öğretmenliği öğretmen adaylarında bulunan kavram yanılgılarını ortaya çıkarmak ve bulunan yanılgıların ontolojik açıdan değerlendirilmesi amaçlanmıştır. Yapılan bu araştırma betimsel bir çalışma niteliği taşımaktadır. Araştırmanın çalışma grubunu, İstanbul İlinde bir vakıf üniversitesinde 2013-2014 eğitim-öğretim yılında öğrenim gören öğrenciler oluşturmuştur. Çalışma grubu 30 kız, 5 erkek olmak üzere, 2. Sınıf, Sınıf Öğretmenliği 35 öğretmen adayından oluşmaktadır. Kuvvet ve Hareket konusu ile ilgili belirlenmiş temel Fizik kavramları ontolojik olarak incelenip kategorileştirdikten sonra, öğretmen adaylarının üst kategoriye yerleştirmeden kaynaklanan 301 kavram yanılgısı, yanal kategoriye yerleştirmeden kaynaklanan 150 kavram yanılgısı tespit edilmiştir.

Anahtar sözcükler: ontoloji, kuvvet ve hareket, kavram yanılgısı

GİRİŞ

Yeni Fen ve Teknoloji öğretim programının temelini yapılandırmacı öğrenme kuramı oluşturmaktadır (MEB, 2006). Yapılandırmacı öğrenme kuramında öğrencilerin sahip oldukları ön kavramlar önemli bir yere sahiptir (Bodner 1986; Gilbert, Watts ve Osborne, 1982; Lawson, 1995; Novak 2002; O’shaughnessy, 2006; Sweeney, 2007). Öğrencilerin sahip oldukları ön kavramlar (preconceptions) her zaman bilimsel anlamda doğru olarak kabul edilmeyebilir. Farklı nedenlerden dolayı bazen öğrenciler, bilimsel anlamda doğru kabul edilmeyen kavramlar oluşturarak öğrenme ortamına gelir.

Yirminci yüzyılın son çeyreğinden itibaren fizik öğretimi konusunda yapılan birçok araştırmada, öğrencilerin, genellikle çevrelerinden edindikleri bazı ön bilgilere sahip oldukları ve bu durumun da öğretimi çoğunlukla olumsuz yönde etkilediği görülmüştür (Thornton ve Sokoloff, 1990; Van Heuvelen, 1991; Hestenes ve diğerleri, 1992; Palmer ve Flanagan, 1997; Mazur, 1997; Redish ve diğerleri, 1997; Duit ve diğerleri, 1997). Literatürdeki araştırmalar, öğrencilerin fen bilimlerindeki çok sayıda kavram hakkında bilimsel olarak kabul edilmeyen fikirlere sahip olduklarını ve bu fikirlerin temelini çoğunlukla tutarsız sezgi, önyargı ve günlük hayattan edindikleri deneyimlerin oluşturduğunu ortaya koymaktadır (Griffiths ve Preston, 1992; Osborn ve Cosgrove, 1983; Osborne ve Freyberg, 1985; Yağbasan ve Gülçiçek, 2003). Örneğin, temel fizik konularından olan "kuvvet ve hareket" konusunda ilkokuldan üniversiteye kadar birçok öğrenci tarafından anlaşılması zor ve soyut kavramlar olarak nitelendirilmektedir (Osborne ve Wittrock, 1983; Legendre, 1997; Bektaş, 1999; Bahar, Öztürk ve Ateş, 2002; Aycan ve Yumuşak, 2003; Yağbasan ve diğerleri, 2005; Kurt ve Akdeniz, 2004). Bu nedenle öğrencilerin sahip oldukları ön bilgi veya kavram yanılgılarını belirlemek amacıyla, birçok konuda kavram testleri hazırlanıp uygulanmıştır. Özellikle 1980'li yıllarda, kavram, kavram öğretimi, kavram yanılgıları, kavram yanılgılarının nedenleri ve giderilmesi gibi yeni araştırma alanları ortaya çıkarmıştır (Comber, 1983; Briggs ve Holding, 1986). Yapılan bu araştırmalarda, kavram yanılgıları kavram yanılgısı (misconception), yanlış anlama (misunderstanding), ön kavramlar (preconception), alternatif çatı (alternative framework), çocuk bilimi (children science), kendiliğinden oluşan bilgiler (spontaneus knowledge), saf-deneyimsiz teori (naive theory) gibi farklı şekillerde tanımlanmıştır (Champagne ve diğerleri, 1983; Mintzes, 1984; Kalman ve diğerleri, 1999; Köse, Ayas ve Taş, 2003). Bu terimler temelde aynı anlama gelmektedir. Fakat bu değişik isimlerin kullanılması, öğrencilerin fikirlerinin ve kanılarının karakteristiğini vurgulamasından ileri gelmektedir Genel olarak, kavram yanılgıları, bilimsel olarak doğru kabul edilen ve öğretim süreci sonunda öğrenciler tarafından anlamlı bir şekilde öğrenilmesi amaçlanan kavramların dışında öğrenciler tarafından eksik veya hatalı bir şekilde yapılandırılan kavramlar olarak tanımlanmıştır (Nakhleh, 1992). 2000'li yıllara gelindiğinde ise, kavram yanılgılarına felsefi açıdan da yaklaşılmış ve felsefi temelli bazı tanımlar da yapılmıştır. Chi ve Roscoe (2002), kavram yanılgılarını ontoloji temeline dayandırarak bütün kavramların ve fikirlerin ait olduğu bir ontolojik kategori bulunduğunu, kavramların üyesi oldukları bu ontolojik kategorilerin tüm özelliklerine sahip olduğunu ve kavram yanılgılarının bireylerin yanlış yaptıkları kategorileştirmeler sonucu oluştuğunu belirtmişlerdir. Diğer bir deyişle, bireylerin kavramların özelliklerini tam olarak bilememeleri, kavramları ait olmadıkları ontolojik kategorilere yerleştirmelerine neden olmaktadır.

Ontoloji, sözlük anlamı olarak "varolma bilimi" diye tanımlanmaktadır. Gruber, günümüzde çoğunlukla kabul gördüğü üzere, ontolojiyi "kavramlaştırmanın kesin tanımı" olarak tarif etmiştir (Gruber, 1993). Olası bir ontolojinin en basit tanımlarından birisi de "kontrol edilebilir bir sözlük" olabilir. Ontoloji, varlıklar ve varlıkların ait olduğu temel kategorilerle ilgilenir (Chi, 2001). Ontolojiler, bilgiyi, iyi tanımlanmış anlamsal yapılarla birlikte açık ve anlamlı bir şekilde sunmamızı sağlayan bilgi betimleme araçlarıdır. Ontolojik özellik ise, bir varlığın yer aldığı ontolojik kategori sonucu sahip olma potansiyelini taşıdığı özelliktir (Chi, 1997). Örneğin, madde kategorisi; hacim, kütle, renk gibi ontolojik özelliklere; olay kategorisi ise başlangıcı ve sonu olma gibi ontolojik özelliklere sahiptir. Kavramlar, sahip oldukları ontolojik özelliklere göre, ontolojik kategorilere yerleştirilirler. Ontolojik kategoriler de, temelde üç tanedir: Madde, süreç ve zihinsel durumlar. Öğrenciler, süreç kategorisine yerleştirmeleri gereken bir kavramı, madde kategorisine yerleştirdiklerinde, kavram yanılgısı oluşturmuş olurlar. Dolayısıyla, kavramların ontolojik açıdan hangi kategorilere yerleştirildiğinin belirlenmesi, eğer yanlış kategorilere yerleştirildiyse, çeşitli öğretim yöntem ve teknikleri kullanılarak bu kavramların doğru kategorilere yerleştirilmesinin sağlanması, kavram yanılgılarının kaynağına inilmesi ve böylece giderilmesi açısından oldukça önemlidir.

Fen Bilimlerinde yer alan çok sayıda soyut kavramın doğru şekilde yapılandırılması, kavramların doğru ontolojik kategorilere yerleştirilmesi ile gerçekleşir. Bilgilerin bireyin zihninde kategorileştirme sürecinde birçok faktör etki eder. Bireyin geçmiş yaşantıları bu süreçte belirleyici bir role sahiptir (Duit ve Treagust, 1995). Bu yönüyle kavramlar bazen bireyin zihninde bilimsel durumların dışında farklı olarak algılanabilir ve farklı kategorilere yerleştirilebilir. Bu şekilde kategorileştirilen kavramsal oluşumlar, bireyin kavramlar arası ilişkileri kurabilmesini ve yeni durumlara anlam vermesini güçleştirir. Soyut olgu ve kavramsal ilişkilerden oluşan fizik konularının kavranmasındaki güçlükler de öğrencilerin bu "anlam verme ve kategorileştirme" sürecine örnek olarak verilebilir (Legendre, 1997). Öğrenciler genellikle temel bir fizik kavramına anlam veremeyip zihnide yer alan kategorilerin içlerine yerleştirdiğinde üst düzey ve daha karmaşık kavramları anlamada ve kalıcı öğrenme gerçekleştirmede güçlük çekmektedirler. Bu nedenle, öğrencilerin yaşamlarında karşılaştıkları olaylara ilişkin sezgisel düşünceleri ile fizik konu ve kavramları arasındaki köprüyü anlamlı bir şekilde kurabilmeleri gerekir (Ayvacı ve Devecioğlu, 2002; Devecioğlu ve Akdeniz, 2006). Bu köprülerin de anlamlı bir biçimde kurulması için ilk olarak öğrencilerin kavram yanılgılarının tespit edilmesi ve daha sonra da bu kavram yanılgılarının giderilmesi esas alınmalıdır. (Ayvacı ve Devecioğlu, 2002; Yağbasan ve Gülçiçek, 2003; Turgut ve diğerleri, 2011).

Kavram yanılgılarının giderilmesi sürecinde, öğretim sürecinin planlanması sırasında, hangi kategorilere yanlış yerleştirmeden kaynaklanan kavram yanılgılarının oluştuğunun belirlenmesi, öğrencilerin kendi kavramsallaştırmalarını sınaması, kavramlarla ilgili yanılgılarının olabileceğine ilişkin farkındalığa ulaşması ve bu yanılgıları giderebilmek için gerekli üst düzey düşünme becerilerini edinilmesi kavramların doğru kategorilere yerleştirilmesinde ilk basamak olmaktadır. İkinci basamak ise, öğretim sürecinde, doğru ontolojik kategorilere yerleştirmeyi sağlayacak yöntem ve tekniklerin kullanılmasıdır. Bu bağlamda, düşünme dolayısıyla sebeplendirme aktivitelerinden biri olan argümanın sınıf ortamına entegre edilmesinin öğrencilerin kavramsal

değişime yönelmesinde etkili stratejilerden biri olabileceği belirtilmektedir (Niaz, Aguilera, Maza ve Liendo, 2002; Nussbaum ve Sinatra, 2003). Örneğin, Vygotsky'e göre (1978) farklılıkları ortaya çıkaran ve tartışma ortamı yaratan sosyal etkileşimler olmaksızın, bilimsel kavramların kavranması imkânsızdır. Billig (1996) bu durumu, "tartışmayı öğrenmek düşünmeyi öğrenmenin temel sürecidir" diyerek daha ileri bir noktaya taşımıştır.
Yapılan araştırmalar, kavram yanılgılarının tespiti ya da çeşitli yöntemlerin kavram yanılgılarını gidermedeki etkisi ile sınırlıdır. Kavram yanılgılarını ontolojik açıdan değerlendiren sadece birkaç çalışmaya rastlanmaktadır (Soman, 2000; Özalp, 2008; Özalp ve Kahveci, 2011). Bu araştırma, "Kuvvet ve Hareket" konusu ile ilgili kavramların, ontolojik açıdan değerlendirilmesi açısından oldukça önemlidir. Yapılan çalışmada, 7. Sınıf "Kuvvet ve Hareket" konusunda yer alan kuvvet, sürtünme kuvveti, iş, enerjinin korunumu, mekanik enerji, kinetik enerji, potansiyel enerji, yayların depoladığı enerji gibi temel Fizik kavramlarında, öğrencilerde var olan kavram yanılgılarına ontolojik açıdan bakılmaya çalışılmıştır. Öğrencilerin belirlenen konularda sahip oldukları kavram yanılgıları ontolojik açıdan değerlendirilip, kategorileştirilmeye çalışılmış ve bu kategorilerin karakteristik özelliklerine göre yanılgıların nedenleri ortaya konulmaya çalışılmıştır. Bu durum, bu çalışmanın temel amacını ve problemini oluşturmaktadır.

Ontoloji ve Ontolojik Özellik

Tarihte varlıkları kategorilere ayırma konusunda pek çok filozof çalışma yapmış olmakla birlikte, ilk sistematik çalışma Aristoteles tarafından yapılmıştır. Aristoteles yaptığı çalışmada varlıkların kategorileri arasında hiyerarşik bir düzenleme kurmamış ve varlıkların özünden bahsetmemiştir. Ancak, kategorilerin birbiri ile ilişkili olduğunu ve tüm kategorilerin cisim (substance) kategorisine bağlı olduğunu savunmuştur. Aristoteles bu durumu şu şekilde açıklamaktadır, "Bir şeyin yeşil olduğu söylendiğinde o niteliğin taşıyıcısı olan bir cismin olması gerekir. Cisimler niteliklerden daha önce, nitelikler de ilişkilerden daha önce var olmuşlardır. Bir şeyin ne olduğunu (kedi) bilmek, niteliğini (kahverengi) bilmekten daha çok şey anlatır, niteliğini bilmek de diğer nesnelerle olan ilişkisini (benim kedim) bilmekten daha çok şey anlatır" (Westerhoff, 2005).

Ontoloji, varlık bilimidir. Varlıklar ve varlıkların ait olduğu temel kategorilerle ilgilenir (Wikipedia, 2015). Diğer bir ifadeyle ontoloji gerçeğin kategorik yapısına tekabül eder. Aristoteles zamanlarından beri her şeyin temel olarak farklı kategorilere ait olduğu farz edilmiştir (Chi, 2005; Chi ve Slotta, 1993). Bu kategorilere ontolojik kategoriler denir. Bu görüşe göre dünyadaki tüm varlıklar üç temel ontolojik kategori içine alınabilir. Bu kategoriler "madde (matter)", "süreç (process)" ve "zihinsel durumlar (mental states)" kategorileridir (Chi, Slotta ve Leeuw, 1994; Johnston ve Southerland, 2000). Ontolojik kategorilerin gerçekliği onların ontolojik özellikleri ile tanımlanabilir (Chi ve Hausmann, 2003).

Ontolojik özellik, bir varlığın yer aldığı ontolojik kategori sonucu sahip olma potansiyelini taşıdığı özelliktir (Chi, 1997; Chi ve ve diğerleri, 1994). Diğer bir ifadeyle bir ontolojik kategoriye ait üyelerin sahip oldukları özelliktir (Chi ve Slotta, 1993; Chi ve Hausmann, 2003; Chi, 1997). (yani üye denilen şey bir ontolojik kategoriye örnek olarak verilebilecek kavramlardır. Örneğin masa, sandalye madde kategorisinin ya da elektrik, ısı, kimyasal bağ kavramları süreç kategorisinin üyeleridir). Ontolojik özellikler o kategorinin en temel özellikleridir (Chi ve Slotta, 1993). Örneğin 'madde (matter)' kategorisi hacim, kütle, renk gibi bazı ontolojik özelliklere sahiptir (Chi ve Hausmann, 2003; Chi, 1992; Chi ve diğerleri, 1994). Hacim, kütle, renk gibi özellikler "madde (matter)" kategorisinin üyelerin sahip olabilecekleri temel özellik çeşitleridir (Chi ve Hausmann, 2003). Örneğin renk özelliğini ele alırsak bir sincap renk özelliğine sahiptir yani renkli olabilir. Ancak 'olay' alt kategorisine ait bir üye olan savaş kavramı renk özelliğine sahip değildir. Bu kategori de kendi üyelerinin sahip oldukları bir zaman diliminde meydana gelme, başlangıcı ve sonu olma gibi başka ontolojik özelliklere sahiptir (Chi, 1992; Chi ve diğerleri, 1994). Madde (matter) ve olay kategorileri birbirlerinden farklı ontolojik kategorilerdir çünkü bu iki kategorinin ontolojik özellikleri de birbirlerinden farklıdır (Chi, 1992).

Ontolojik özellik tanımlayıcı ve karakteristik özelliklerden farklıdır. Ontolojik özellik bir kavramın sahip olma potansiyeli gösterdiği özelliktir. Ancak tanımlayıcı özellik sahip olunması gereken özelliktir, karakteristik özellik ise o kavramın genellikle sahip olduğu özelliktir. Örneğin sürahi kavramı ele alınırsa sürahinin bir uca sahip olması onun tanımlayıcı özelliğidir. Bu sürahinin genellikle camdan yapılmış olması onun karakteristik özelliğidir. Ancak kırılabilir olması onun ontolojik bir özelliğidir. Bu nedenle ontolojik özellikler diğer özelliklerden farklıdırlar (Chi, Slotta ve Leeuw, 1994). Ontolojik özellik, bir kategori üyesinin kesin olarak sahip olduğu bir özellik olmamasına rağmen o kategori üyesini kapsayan özelliktir. Bu şöyle de ifade edilebilir: Bir sincap renk özelliğine sahiptir yani renkli olabilir, ancak bir sincap mavi renkli olmaz ama başka bir renkte olma potansiyelini göstermektedir (Chi ve Hausmann, 2003).

Ontolojik bilgi dünyada var olan şeylerin türleri ve bu şeylerin birbirleri ile nasıl alakalı olduğu hakkında sahip olduğumuz günlük bilgilerimizdir (Sera, Gathje ve Del Castillo Pintado, 1999). Psikoloji literatüründe ontolojik bilgi ilk olarak Keil (1979) tarafından incelenmiştir. Keil yaptığı çalışmada ontolojik kategoriler arasında sağlam bir hiyerarşi olduğunu ileri sürmüştür. Keil' in çalışmalarından yola çıkan Chi (1992) ontolojinin bilgilerimizi farklı kavramsal kategorilere böldüğünü söyler. Chi, 1992' de yaptığı bu çalışmasında üç temel ontolojik kategoriden bahsetmiştir; madde, olay ve soyut kavramlar. Bununla birlikte başka kategorilerin de mümkün olabileceğini belirtmiştir. Chi ve Slotta, 1993' te yaptıkları çalışmalarında ontolojik kategorileri madde, süreç, zihinsel durumlar olarak adlandırmışlardır.

Ontolojik Kategorilerin Gerçekliğini Kavramaya İlişkin Yollar

İç Gerçeklik

Belirli bir grup sınırlamalar her bir ontolojik kategorideki varlıkların davranış ve özelliklerini kontrol eder (Chi, 1992). Ontolojik kategoriler, o ontolojik kategorinin üyelerinin davranışlarını kontrol eden bir grup sınırlama veya özelliklerden oluşan ontolojik vasıflar ile ayırt edilirler. Örneğin madde kategorisindeki nesneler, davranışlarını ve sahip olabileceği özellik türlerini belirleyen kesin sınırlamalara sahip olmalıdır (Chi ve Hausmann, 2003). Madde kategorisindeki varlıkların tutulabilmesi, depolanabilmesi, hacmi, kütlesi, rengi olması; süreç kategorisindekilerin belirli bir zaman periyoduna yayılmış olması, zaman içinde devam etmesi gibi. Ontolojik özellikler bir varlığın potansiyel olarak sahip olabileceği nitelikler olarak tanımlanmıştır (Chi, 1992; Chi, 1997). Bir cismin şu anda renkli olmamasına karşın, renkli de olabileceği gibi.

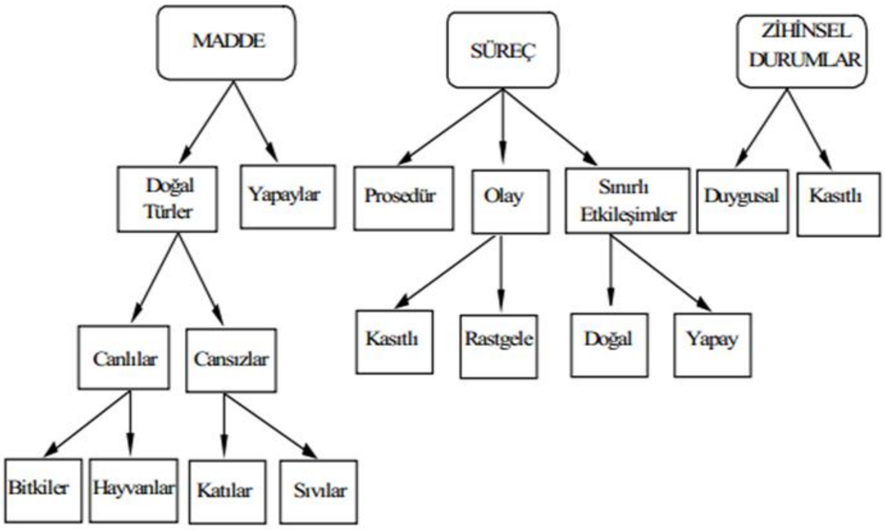
Bakır telin renginin mor olmamasına karşın 'mor renkli bakır tel' ifadesi kullanım itibariyle uygundur fakat 'mor renkli elektrik alan' kullanım olarak uygun değildir. Renk, madde kategorisindeki varlıkların ontolojik özelliklerinden biridir, bundan dolayı süreç kategorisindeki elektrik alan kavramı için kullanımı uygun olmamıştır. Hiçbir fiziksel işlem (örneğin ameliyat, koşma…) bir ontolojik kategorideki varlığı diğer bir ontolojik kategorideki varlığa dönüştürmez. Örneğin bir tahtanın parçalara ayrıldığını düşünelim. Parçalara ayrılmış olmasına karşın tahta özelliğini korur.

Psikolojik Gerçeklik

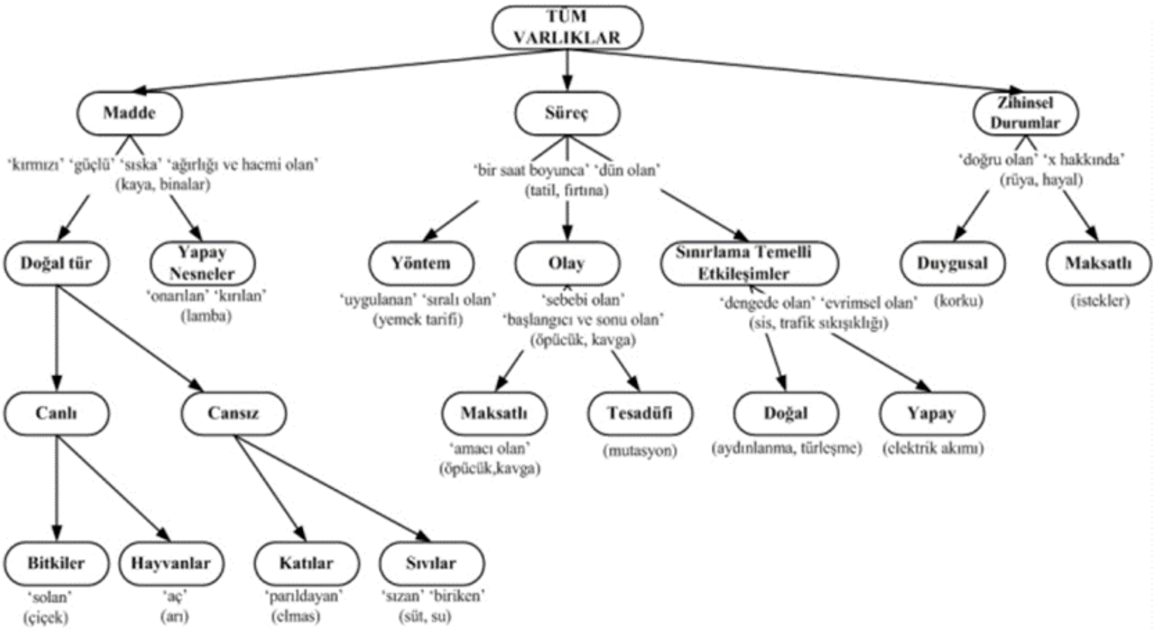
Belirli bir grup yüklemlere bakılarak yapılan yargılamalar ile varlıkların ontolojik kategorileri ayırt edilebilir. Yani bir varlıkla birlikte kullanılan yükleme bakılarak varlığın hangi kategoride olduğu tespit edilebilir. "Bu kaynaktan elektromanyetik dalgaları çıkar." cümlesinde elektromanyetik dalga madde kategorisindedir. "Yüklü cisimlerin ivmeli hareketi elektromanyetik dalga oluşmasına neden olur." cümlesinde elektromanyetik dalga süreç kategorisinde sınıflandırılmıştır. "Yüklü cisimlerin ivmeli hareketi ile elektromanyetik dalga oluşmak ister." cümlesinde ise elektromanyetik dalga kavramı zihinsel durumlar kategorisindedir.
Örneğin; bir kişinin rüzgâr kavramının ontolojik sınıflandırmasının madde ya da süreç kategorisinden hangisinde olduğunu merak ettiğimizi varsayalım. Bu durumda o kişinin rüzgâr için kullandığı ifadeleri incelemeli ve kodlamalıyız. Eğer cümlesi "Duyduğun ses kanyonun içinde hareket eden rüzgârın sesi" ise rüzgârın hareket ettiğini düşündüğü için hareket etme fiilinden dolayı rüzgâr madde kategorisindedir. Ancak "Kanyondaki rüzgâr yalnızca hava hareketidir" şeklindeki bir ifade hareket etme sürecini tanımladığı için kişinin rüzgârı hava hareketi olarak düşündüğünü göstermektedir ve süreç kategorisindedir. Her iki cümlede de hareket etme yüklemi kullanılmasına rağmen her birinde farklı kategoriye dâhil olmuştur. Kavramsal içerik analizlerinde kullanılan yüklemle birlikte, cümle içinde ifade ettiği anlama da hassasiyet gösterilmelidir (Slotta ve diğerleri, 1995). Hiçbir psikolojik mekanizma (özellik eklenip çıkarılması, benzetme model, genelleme, özelleştirme) bir ontolojik kategorideki varlığı diğer bir ontolojik kategorideki varlığa dönüştürmez (Chi, 1992) Elektrik akımını suyun akışına benzeterek anlatmak elektrik akımı kavramının madde kategorisinde sınıflandırılması gereken bir kavram olduğunu göstermez.

Ontolojik Kategoriler

Dünyadaki tüm varlıklar üç temel ontolojik kategori içine alınabilir. Bunlar "madde", "süreç" ve "zihinsel durumlar" kategorileridir (Şekil 1) (Chi ve diğerleri, 1994; Johnston ve Southerland, 2000). Her ontolojik kategorinin alt kategorileri vardır. Bütün ontolojik kategoriler birbirlerinden farklı olduğu gibi alt kategoriler de birbirlerinden farklıdır çünkü her kategori ontolojik olarak birbirinden farklılık göstermektedir. Örneğin "madde" kategorisinin alt kategorileri "süreç" kategorisinin alt kategorilerinden ontolojik olarak farklılık göstermektedir (Chi ve diğerleri, 1994). Şekil 2'de olası bir ontolojik kategori sınıflandırması detaylı olarak verilmektedir.



Şekil 1. Dünyadaki Varlıkların Bulunabileceği Üç Ontolojik Kategori ve Alt Kategorileri



Şekil 2. Olası Bir Ontolojik Kategori Sınıflandırması (Chi ve Slotta, 1993)

Madde (Matter) Kategorisi

Madde fiziksel olarak etkileşime girilen, görme, dokunma gibi duyularla hissedilen şeylerin bileşimidir. Bu kategori somut kavramları içerir. Madde kategorisi içinde yer alan madde özelliği gösteren varlıkları tanımlayan bazı ontolojik özellikler vardır. Madde kategorisinde bulunan kavramlar kütle, hacim, depolanabilme, biriktirilebilme gibi ontolojik özelliklere sahiptir. Öğrenciler de bu özelliklerle daha kolay etkileşime girdikleri için bu kategori onların en kolay kavramsallaştırdıkları kategoridir (Johnston ve Southerland, 2000).

Doğal türler (kedi, papatya, su, krom…), yapay nesneler (lamba, masa…) bu kategoriye dâhildir. Fakat lamba ve su, ikisi de madde kategorisinde olmasına rağmen farklı özelliklere sahiptir. Örneğin "lamba kırıldı" cümlesi anlamlı bir durum ifade ederken "su kırıldı" kulağa yabancı gelmektedir. Bundan dolayı madde kategorisi de alt kategorilere ayrılmıştır (Chi, 1997). Bunlar "doğal türler (natural kind)" ve "yapaylar (artifacts)" dır.

Süreç (Process) Kategorisi

Süreç kategorisindeki kavramlar bir şeylerin ne olduğundan ziyade ne yapıldığını ifade eden kavramlardır. Bir sürecin fiziksel özelliği tanımlanamaz. Örneğin okuma, yazma, düşünme gibi kavramlar süreç kategorisi içinde yer alır (Johnston ve Southerland, 2000). Farklı bir şekilde ifade etmemiz gerekirse belirli bir zaman periyoduna yayılmış durumlarda kullanılan kavramları (elektrik akımı, sağanak yağış...) içerir. Örneğin "on dakika süren fırtına" denildiğinde fırtınanın bir zaman periyoduna yayıldığını anlıyoruz fakat "on dakika süren süt" denildiğinde anlamsız oluyor. Süreç kategorisindeki kavramların (okuma, yazma) rengi, kütlesi, hacmi yoktur. Bu örnekle madde ile süreç kategorisi arasındaki fark görülebilir.

Süreç kategorisi üçe ayrılır. Bunlar "prosedür", "olay" ve "sınırlı etkileşimler (Constraint-Based Interactions)" kategorileridir. Bunlardan en önemlisi sınırlı etkileşimler kategorisidir. Birçok bilimsel kavram sınırlı etkileşimler kategorisinde bulunmaktadır. (Chi ve diğerleri, 1994). Bu tür kavramlara fizik ve biyolojide sıkça karşılaşılmaktadır. (Chi, 1997). Isı, ışık, kuvvet, akım, elektrik, doğal seleksiyon (seçim), difüzyon gibi kavramlar sınırlı etkileşimler kategorisinde bulunan kavramlara örnek olarak verilebilir. Verilen örnekleri, kütle çekimi örneği ile daha da detaylandırabiliriz. Kütle çekim kuvveti iki kütlesel parçacığın arasındaki etkileşimdir. Bu kuvvetin oluşması için iki kütlenin varlığı dışında başka bir sebebin vasıta olmasına gerek yoktur. Elektrik akımı ise, elektriksel olarak yüklü olan parçacıkların elektrik alan etkisi altında hareketi sonucu oluşur. Burada da elektrik alan (uzaydaki iki nokta arasındaki potansiyel fark olması) ile yüklü parçacık arasındaki etkileşim söz konusudur. Aynı örnekler ısı ve ışık gibi kavramlar için de verilebilir (Reiner, Slotta, Chi ve Resnick, 2000). Ayrıca öğrencilerin kavram yanılgılarının en fazla olduğu kategori de bu kategoridir. Sınırlı etkileşimler kategorisinin özelliklerini anlamanın en iyi yolu onu diğer kategorilerle karşılaştırmaktır.

Zihinsel Durumlar Kategorisi

Zihinsel durumlar, zihinsel olarak dış dünyaya ilişkin algılarımızla oluşturduğumuz soyut kavramları içerir (aşk, nefret, istek). Örneğin "sabit kütle üzerine etki eden kuvvet arttıkça ivme de artmak ister" cümlesinde ivme zihinsel temelli bir kavramdır. Ancak "sabit kütle üzerine etki eden kuvvet arttıkça ivme de artar" cümlesinde ivme süreç temelli bir kavram olarak ifade edilmiştir.

Ontolojik Kategorilerin Birbiriyle Karşılaştırılması

Bir kategorinin bir özelliği diğer bir kategorinin elemanlarını kapsayamaz. Bundan dolayı iki kategori ontolojik olarak farklıdır. Bu tip kategorilere paralel kategoriler de denilebilir. Örneğin kırılma özelliği 'yapaylar' kategorisine aittir. Ancak onun paralel kategorisi olan "hayvanlar" kategorisinin üyeleri için kullanılamaz. Örneğin köpekler ve "yapaylar" kategorileri doğrudan bir hiyerarşik ilişki içermemektedir.

Hiyerarşik Kategoriler

Hiyerarşik kategoriler birbirleriyle aşamalı bir sıra içinde bulunan kategorilerdir. Örneğin kobra kavramı "zehirli yılanlar" kategorisinde yer alır. Ayrıca bu kavram "yılanlar" kategorisinde de incelenebilir. Bunun yanında 'sürüngenler' kategorisi içinde de bulunmaktadır. Bahsedilen bu üç kategori daha üst bir kategori (zehirli yılanlar, yılanlar, sürüngenler) olan "canlılar" kategorisinde bulunmaktadır. Bundan dolayı bu kategoriler arasında aşamalı bir sıra vardır; yani birbirleriyle hiyerarşik ilişkilidirler. Birbirine göre hiyerarşik kategorilerdir. Bir kavramın farklı bir hiyerarşik kategoriye yerleştirilmesi bir kavram yanılgısına yol açmaz (Chi ve Roscoe, 2002).

Yanal Kategoriler

Hiyerarşik kategori ilişkileri dışında kategoriler arasında yanal ilişkiler de vardır. Yanal ilişkili kategorilere yanal kategoriler denir. Bu kategoriler arasında bir hiyerarşi bulunmaz. Örneğin kobra ve çıngıraklı yılan kategorileri yanal kategorilerdir. Bunlar ayrıca "kardeş kategoriler" diye de adlandırılabilirler çünkü kobra ve çıngıraklı yılan kategorilerinin her ikisi zehirli yılanlar kategorisinin alt kategorileridir. Ayrıca bu kategoriler hem yılanlar hem de canlılar kategorisinin alt kategorileridir. Yani birden fazla ortak oldukları üst hiyerarşik kategorileri vardır (Chi ve Roscoe, 2002). Yanal kategorilere bir başka örnek de yılanlar ve sandalyeler kategorileri verilebilir (biri doğal diğeri yapay ontolojik kategorilerine aittir). Her iki kategorinin ortak oldukları "somutlar (concrete things)" adında bir üst hiyerarşik kategori bulunmaktadır. Ancak bu kategoriler kardeş kategoriler değil de "kuzen kategoriler" olarak da isimlendirilebilir. Kuzen kategorilerle kardeş kategoriler arasındaki fark kardeş kategorilerin ortak olarak paylaştıkları birden fazla ontolojik kategori varken kuzen kategorilerinin paylaştıkları sadece bir ontolojik kategorinin olmasıdır (Chi ve Roscoe, 2002).

Kategorize Etme

Kategorize etme bir kavramı ait olduğu düşünülen bir kategoriye atama ya da tanımlama sürecidir. Kategorize etme öğrenme sürecindeki önemli bir mekanizmadır çünkü bir kavram hangi ontolojik kategoriye atandı ise o kategorinin ontolojik özelliklerini alır (Chi, 2007). Örneğin kimyasal bağ kavramı süreç kategorisi yerine madde kategorisine atanırsa kavrama hemen madde kategorisinin özelliklerinden biri olan kütleye sahip olma özelliği yüklenir. Eğer kimyasal bağ kavramı doğru olarak süreç kategorisine atandı ise süreç kategorisinin ontolojik özelliklerinden biri olan başlangıcı ve sonu olmama gibi bir özelliğe sahip olacaktır. Bu nedenle kavramların doğru bir şekilde öğrenilebilmesi için doğru kategorilere atanmaları çok önemlidir. Öğrenciler yeni bir kavramla karşılaştıklarında onu kendilerine uygun gelen bir ontolojik kategoriye alırlar; yani o kavramı kategorize ederler. Bir kavram ancak diğer kavramlarla ilişkilendirilerek kategorize edilir ve anlam kazanır. Bu nedenle öğrencilerde bulunan kavramın anlamı ontolojik özelliklerinden önemli ölçüde etkilenir (Johnston ve Southerland, 2000). Kavramlar bulundukları kategorinin ontolojik özeliklerine sahiptirler. Örneğin eğer bize önceden kızılgerdanların kuş oldukları ve kuşların yumurtladıkları söylenmezse biz kızılgerdanların yumurtlayabileceklerini bilemeyiz. Bu nedenle kategorize etme ya da bir kavramı doğru bir kategoriye atama öğretimde önemli bir yer alır (Chi, 2007). Kimyadan bir örnek olarak helyum gazı verilebilir. Helyum soygazdır ve soygazlar (ksenon hariç) reaksiyona girmezler. Eğer öğrencilere helyumun soygaz olduğu söylenmez ise kimyasal reaksiyona girmeme eğilimini düşünemezler. Kategorize etme işlemi karşılaşılan yeni kavramlara kategorik özelliklerin verilmesi ile başlar. Kategorize etmenin öğrenmedeki rolü ile ilgili bir çıkarım şudur: Öğrencide, yeni karşılaştığı kavramı ataması gereken ontolojik kategori yoksa öğrenci o kavramı uygun olan en üst düzeydeki kategoriye atar. Örneğin bir müzede kendisi için farklı olan bir hayvan heykeli gören kişi o hayvanın sürüngen olduğunu bilmiyorsa onun hareket edebilme, yemek yeme gibi özellikleri olduğunu düşündüğü için onu 'hayvanlar kategorisi'ne atar, hemen sürüngenler kategorisine atayamaz (Chi, 2007). Buna göre, öğrenciler yeni kavramları yanlış kategorize ederlerse kavram yanılgıları ortaya çıkabilmektedir (Johnston ve Southerland, 2000).

Kavram ve Kavram Yanılgılarının Ontolojik Nedenleri

Chi (1992)' ye göre bütün kavramlar ve fikirler bir ontolojik kategoriye aittir. Kavram terimi bir kategori örneğini ifade eder. Örneğin "kedi" kavramının "hayvanlar" kategorisine ait olması, "fırtına" kavramının "süreç" kategorisine ait olması ya da "düşünce" kavramının "zihinsel durumlar" kategorisinin bir örneği olması gibi. Bir kavramın birçok algısal ve kavramsal özelliği vardır; ayrıca bir kavram belli kategorilere aittir. Örneğin bir kızılgerdan kırmızı bir göğse sahiptir ve bu onun algısal özelliğidir. Sıcak iklimlerde yaşaması onun kavramsal özelliğidir ve "kuşlar" kategorisine aittir (Chi, 2007). Yani kavramlar bulundukları kategorilerin içeriğiyle yorumlanır ve anlaşılır. Bir kavram bir kategoriye atandığı zaman bu kavram o kategorinin tüm özelliklerini alır. Bu perspektiften bakıldığında kavram yanılgıları kavramların yanlış kategorize edilmesi sonucunda oluşur çıkarımı yapılabilir. Diğer bir ifadeyle kavram yanılgısı bir kavramı yanlış ontolojik kategoriye atama sonucu oluşur (Chi ve Roscoe, 2002; Johnston ve Southerland, 2000). Bu yanlış kategorize etme hiyerarşik değil yanaldır (Chi ve Roscoe, 2002).

Örneğin bir öğrencinin elektrik kavramını süreç kategorisi yerine madde kategorisine aldığını düşünelim. Bu öğrencinin madde kategorisindeki kavramların depolanabilme özelliği taşımasından dolayı elektriğin de bataryada depolandığı düşüncesini taşıdığını söylemek mümkündür. Ayrıca bu gibi düşünen öğrenciler bir telden geçen elektrik akımını gerçek bir akım olarak düşünmektedirler. Yani sıvılar nasıl bir borudan akıyorsa elektrik akımının da bir telden o şekilde aktığını düşünmektedirler (Chi ve Roscoe, 2002). Literatür taramasında görülen yanılgılardan biri de öğrencilerin çözünme olayını erime ile karıştırmalarıdır. Burada karıştırılan her iki kavram ontolojik açıdan süreç kategorisinin alt kategorilerinden biri olan olay kategorisinde yer almaktadır. Ancak olay kategorisinin de alt kategorileri vardır.

Ontolojik olarak kimyadaki erime ve çözünme kavramları süreç kategorisinde yer alan farklı ontolojik kategorilerdir. Örneğin öğrenciler şeker çözündüğünde şekerin katı halden sıvı hale geçtiğini (eridiğini) düşünmektedirler. Yani bu olayı çözünme kategorisine almaları gerekirken erime kategorisine atamışlardır. Bu kavramın yanlış kategorize edilmesi madde çözündüğü sırada eridiği şeklinde bir kavram yanılgısı oluşturmaktadır. Çözünme ile ilgili kavram yanılgılarından bir diğeri de şeker suda çözününce su ile kimyasal bir tepkimeye girdiği düşüncesidir. Burada çözünme ve kimyasal tepkime kategorilerinin ikisi de olay kategorisinde bulunmaktadır ancak bunlar olay kategorisinin farklı alt kategorileridir. Burada da yine öğrenciler fiziksel bir olayı kimyasal bir olay kategorisine atayarak başka bir kavram yanılgısına yol açmaktadırlar. Olay kategorisi kimyaya göre fiziksel olay ve kimyasal olay şeklinde ikiye ayrılabilir. Katıların suda çözünmesi kavramı fiziksel olay kategorisinde yer alır ancak kimyasal tepkimeler kimyasal olay kategorisinde yer alır.

Öğrenciler "şekerin çözünmesi" kavramını fiziksel olay kategorisine almaları gerekirken kimyasal olay kategorisine atamışlar ve böylece kavramı yanlış kategorize ederek bir kavram yanılgısına yol açmışlardır.

Kavram yanılgılarına verilebilecek diğer bir örnek de gazlı içeceklerin kapakları açıldığında dışarıya çıkan kabarcıkların kimyasal bir tepkime sonucu olduğu düşüncesidir. Aslında gazlı içeceğin bulunduğu şişenin kapağı açıldığında suyun içinde çözünmüş olan gaz dışarı çıkar yani burada fiziksel bir olay söz konusudur. Ancak öğrenciler bu olay sırasında kimyasal bir tepkimenin olduğunu düşünerek kavramı fiziksel olay kategorisine atamak yerine kimyasal olay kategorisine atayarak yanlış kategorize etmektedirler. Yanlış kategorize etmeden dolayı da bu şekilde bir kavram yanılgısı oluşmaktadır. Buna benzer olarak bazı öğrenciler su buharlaştığında hidrojen ve oksijen üretildiğini düşünmektedirler. Burada da yine buharlaşma olayı fiziksel olay kategorisine atanması gerekirken kimyasal bir reaksiyonun gerçekleştiği düşüncesiyle kimyasal olay kategorisine atanmaktadır ve kavram yanılgısı açığa çıkmaktadır.

Fen Bilimlerindeki Bazı Kavram Yanılgılarına Ontolojik Açıdan Bakış

Kavram yanılgılarına, daha önce de bahsedildiği gibi ontolojik olarak yanlış kategorize edilmiş kavramlar yol açar. Literatür araştırıldığında en çok fizik bilimine ait ısı ve elektrik akımı kavramları ile ilgili yanılgılar ontolojik açıdan incelenmiştir. Fizik bilimi alanında öğrenciler bazı alternatif ve yanılgılı kavramlara sahiptirler. Bu yanlış kavramlara ısı, ışık, akım, kuvvet gibi kavramlar örnek olarak gösterilebilir. Öğrenciler genellikle bu kavramları süreç kategorisindeki sınırlı etkileşimler kategorisine almak yerine madde kategorisine almaktadırlar. Örneğin kuvvet kavramını vücuda güç veren bir çeşit güç olarak düşünmekte ve bu gücün vücut tarafından kullanılabileceğini kabul ettiklerinden dolayı bu kavramı madde kategorisine ait özelliklerle (kullanılma, bitme, vb.) ifade etmektedirler. Bu nedenle de kavram madde kategorisine yerleştirilmektedir. Benzer olarak yer çekimi kavramını da dünya ile cisimler arasındaki etkileşim olmasından ziyade dünyanın içinde yer alan bir şey olarak görmektedirler (Chi ve Slotta, 1993). Fizikte ısı kavramı öğrenciler için öğrenilmesi zor olan kavramlardan biridir. Çünkü bu kavram süreç kategorisine ait olan sınırlı etkileşimler kategorisinde yer almaktadır. Sınıfta ısı kavramı öğretilirken öğretmenler ısının bir yerden başka bir yere aktığını ifade ederler. Bir fizikçi açısından bu bir enerji değişimidir ve süreç kategorisi içerisindedir. Ancak sınıfta ısının akması ifadesinin kullanılması öğrenciler tarafından farklı olarak anlaşılabilir. Akma özelliği su gibi sıvı halde bulunan maddelere ait bir özelliktir. Bu nedenle öğrenciler süreç kategorisinde yer alan ısı kavramını madde kategorisine yerleştirebilirler. Bu yanlış kategorize etme sonucunda da ısının madde özellikleri taşıdığı ile ilgili kavram yanılgıları ortaya çıkar (Johnston ve Southerland, 2000). Aynı şekilde yine fizik kavramlarından biri olan elektrik akımı kavramı öğrenciler tarafından madde kategorisine alınabilir. Eğer elektrik akımıyla ilgili öğretim yapılırken kullanılan dil öğrenciler tarafından suyun akışı gibi algılanırsa bu kavramı madde kategorisine yerleştireceklerdir. Eğer öğrenciler elektrik akımıyla ilgili yeni bilgileri sıvılar alt kategorisine yerleştirirlerse bu kavram hacim gibi bir özelliğe sahip olacak ve madde kategorisine ait olan diğer ontolojik özellikleri de içerecektir. Bu da öğrencilerde var olan elektrik akımıyla ilgili kavram yanılgılarının nedenini açıklamaktadır (Chi ve Slotta, 1993; Chi ve diğerleri, 1994). Fizikte olduğu kadar biyoloji biliminde de sınırlı etkileşimler kategorisine ait olan bazı kavramlar vardır. Örneğin gelişim konusu içinde mutasyon, genetik gibi kavramlar bu kategoriye aittir (Chi ve Slotta, 1993). Öğrencilerin biyoloji ile ilgili kavram yanılgıları madde tabanlıdır (yani sınırlı etkileşimler kategorisine ait olan bir kavramı madde kategorisine alma durumu söz konusudur). Örneğin biyoloji ile ilgili ilkokul ders kitaplarında insan vücudu sistemleri anlatılırken madde kategorisine girecek birçok kavram kullanılmaktadır. Bunun da, konuyla ilgili kavram yanılgılarını oluşturması doğaldır. Bu gibi kavram yanılgıları madde tabanlı olmasına rağmen bazı yanılgılar zihinsel tabanlı da olabilir. Yani öğrenciler bir kavramı açıklarken kendi düşünceleri üzerine kurdukları görüşleri kullanıyor olabilirler (Chi ve diğerleri, 1994). Fizikteki elektrik akımı kavramındaki duruma kimyadan benzer bir örnek olarak kimyasal bağ kavramı verilebilir. Kimyasal bağ kavramı tanecikler arasında oluşan bir çekim kuvvetidir. Bir tür kuvvet olduğu için "süreç" kategorisinde yer almalıdır. Ancak bazı öğrenciler bu kavramın "madde" kategorisinde bulunduğunu düşünmektedir. Öğrencilerin bir kısmı "bağ" kelimesinden yola çıkıp onu maddeselleştirirken, bir kısmı da "bağların kırılacağı" ifadesinden yola çıkarak kimyasal bağ kavramına maddesel özellikler atamaktadırlar. Böylece öğrenciler süreç kategorisinde bulunana kimyasal bağ kavramını madde kategorisine atayarak böyle bir yanılgıya düşmektedirler. Kimyasal bağ kavramıyla ilgili yanılgının tam tersi bir örnek olarak maddenin üç fazından biri olan "gaz" kavramı verilebilir.

Yapılan bazı araştırmalarda öğrencilerin gazların kütlelerinin olmadığını düşündükleri görülmüştür (Stepans, 2003). Gaz kavramı madde ontolojik kategorisine aittir. Eğer öğrenciler gazların kütlesinin olmadığını düşünüyorlarsa gaz kavramını madde olarak da düşünmüyorlar denilebilir. Bu da gaz kavramıyla ilgili başka bir yanılgı olarak gösterilebilir. Öğrencilerde maddenin tanecikleriyle ilgili en sık görülen kavram yanılgıları ise taneciklere makroskopik özelliklerin atanmasıyla ilgili olan yanılgılardır. Örneğin bazı öğrenciler madde erirken taneciklerinin de eriyeceğini düşünmektedir (Boz, 2006). Bu yanılgının ontolojik açıklaması şu şekilde yapılabilir: Madde kategorisinin alt kategorilerinden olan cansızlar kategorisinin alt kategorileri arasında makroskopik madde ve mikroskopik tanecik kategorileri bulunduğu söylenebilir.

Mikroskopik tanecik grubunda atom, molekül veya iyonlar bulunurken makroskopik madde kategorisinde gözle görülebilen maddeler yer alır. Erime ya da bunun gibi hal değiştirme olayları (donma, yoğunlaşma, buharlaşma, vb.) makroskopik maddelerin sahip oldukları ontolojik özelliklerdir. Temelde, makroskopik madde ile mikroskopik tanecik birbirinden bağımsız özelliklere sahip sistemler olarak düşünülebilirler. Makroskopik madde mikroskopik taneciklerden oluşmaktadır ancak burada toplamın ayrı ayrı öğelerin biraraya gelmesinden daha fazla ve farklı bir nicelik olduğu söylenebilir. Örneğin maddenin rengi basitçe, onu oluşturan taneciklerin renginden kaynaklanmaz. Buna benzer olarak, eğer öğrenciler buz eritildiğinde onun taneciklerinin eriyeceğini düşünüyorlarsa tanecikleri makroskopik madde kategorisine atamakta ve dolayısıyla böyle bir kavram yanılgısını oluşturmaktadırlar. Yine benzer olarak bir madde ısıtılınca taneciklerinin ısınacağı (Boz, 2006; Lee ve diğerleri, 1993) ya da buharlaşacağı (Griffths ve Preston, 1992; Kokotas ve diğerleri, 1998), soğutulunca taneciklerinin donacağı ya da sıcaklığının daha düşük olacağı yanılgıları (Lee ve diğerleri, 1993) mikroskopik tanecik kategorisinde olan taneciklerin makroskopik madde kategorisine atanmış olmalarından kaynaklanmaktadır. Öğrencilerin atom ve molekülleri mikroskopik tanecik kategorisine değil de makroskopik madde kategorisine atadıklarına kanıt olarak taneciklerin mikroskop altında görülebileceği düşüncesi ya da tanecik olarak bir maddenin gözle görülebilen küçük parçaları olduğu düşüncesi gösterilebilir. Altın atomlarının altın gibi sert ve parlak (Stepans, 2003) ya da kükürt atomlarının kükürdün fiziksel özelliklerini paylaştığı (Othman ve diğerleri, 2007) yanılgıları yine bu nedenden kaynaklanmaktadır. Yani parlak olma mikroskopik tanecik olan atomların değil makroskopik madde olan altının ontolojik özelliğidir. Altın atomları bu ontolojik özelliğe sahip değildir.

Öğrenciler atomları makroskopik madde olarak düşündüklerinden dolayı bu yanılgılar açığa çıkmaktadır. Bazı öğrenciler ise suyun taneciklerinin su damlaları olduğunu düşünmektedirler (Nakhleh ve diğerleri, 2005). Suyun taneciklerini (moleküllerini) mikroskopik tanecik olarak düşünmek yerine su damlası olarak düşünerek bu kavramı makroskopik madde kategorisine atadıkları için kavram yanılgısına neden olmaktadırlar. Öğrencilerin bazıları ise su moleküllerinin bakteri, hücre kadar olduğunu düşünmektedirler (Lee ve diğerleri, 1993). Bu kavram yanılgısı da yine aynı nedenden kaynaklanmaktadır. Öğrenciler molekül denince küçük bir şey olduğunu düşünmektedirler. Ancak bunların mikroskopik yapıda olduklarını bilmedikleri için bu kavramlara makroskopik madde özelliklerini yüklemektedirler.

Dolayısıyla mikroskopik tanecik kategorisinde bulunan su molekülünü makroskopik madde kategorisine atamaktadırlar. Bazı öğrenciler “Sıvılar bulundukları kabın şeklini alır” ifadesinden yola çıkarak sıvı molekülerinin şeklinin de bulundukları kaba göre değişeceğini düşünmektedirler (Griffihts ve Preston, 1992). Burada da yine öğrenciler atom ve moleküller gibi mikroskopik tanecik kategorisinde bulunan maddelere makroskopik özellikleri atayarak onları makroskopik madde kategorisine almaktadırlar. Bundan dolayı da bu şekilde bir kavram yanılgısı açığa çıkmaktadır. Öğrencilerin atomları canlı olarak düşünmeleri de başka bir kavram yanılgısına örnek olarak verilebilir (Griffihts ve Preston, 1992; Pideci, 2002; Tezcan ve Salmaz, 2005). Öğrenciler okulda atomların hareketli olduklarını öğrenmektedirler. Atomların hareket etmelerinden dolayı da atom kavramını “canlılar” kategorisine almaktadırlar. Böylece o kavramı aslında “cansızlar” ontolojik kategorisine almaları gerekirken “canlılar” kategorisine alarak bir kavram yanılgısına yol açmaktadırlar. Ne şeklide olursa olsun öğrenciler bu bilimlerle ilgili kavram yanılgılarına sahiptirler. Bu kavram yanılgıları da onların bu bilimlere ait kavramları önceden ait olmadıkları bir kategoriye yerleştirmelerinden kaynaklanmaktadır (Chi ve Roscoe, 2002).

Ontolojik kategorilere göre değerlendirmenin yapıldığı araştırmalar sınırlı sayıdadır. Özellikle Fizik alanında yapılmış çalışmalara neredeyse rastlanmamaktadır. Lee ve Law (2001), yaptığı araştırmada, “elektrik” kavramları ile ilgili bir test uygulamışlar ve belirledikleri yanılgıları daha da derinleştirmek adına yarı yapılandırılmış görüşme formları kullanmışlar ve ortaya çıkan sonuçları sadece ontolojik açıdan değerlendirmişlerdir. Slotta ve Chi (2006) yaptıkları araştırmada, göreve yeni başlayan fizik eğitimcilerinin, ontoloji eğitimi yoluyla kalıcı hale gelmiş bir kavram yanılgısının nasıl üstesinden gelebileceğine dair öneriler vermektedir. Görüldüğü gibi yapılan çalışmalarda Fizik alanında, ontolojik kategorilerin kuramsal çerçeve olarak kullanıldığı, iki aşamalı sorular geliştirildiği ve böylece öğrencilerin bu konu ile ilgili sahip oldukları kavram yanılgılarının ontolojik temelinin tanımlandığı çalışmalara rastlanmamaktadır. Bu araştırmada ise 7. Sınıf “Kuvvet ve Hareket” konusunda yer alan kuvvet, sürtünme kuvveti, iş, enerjinin korunumu, mekanik enerji, kinetik enerji, potansiyel enerji, yayların depoladığı enerji gibi temel Fizik kavramlarında, öğrencilerde var olan kavram yanılgılarına ontolojik açıdan bakılmaya çalışılmıştır. Öğrencilerin belirlenen konularda sahip oldukları kavram yanılgıları ontolojik açıdan değerlendirilip, kategorileştirilmiştir. Fen ve Teknoloji dersi kapsamında yedinci sınıf “Kuvvet ve Hareket” konusunda var olan kuvvet, sürtünme kuvveti, iş, enerjinin korunumu, mekanik enerji, kinetik enerji, potansiyel enerji, yayların depoladığı enerji gibi kavram yanılgılarının ontolojik açıdan incelenmesine yönelik araştırmalar yok denecek kadar azdır. Yapılan taramalarda bu konuda detaylı herhangi bir araştırma bulunmamıştır. Bu nedenle alanda yapılabilecek ilk çalışma olabilmesi nedeniyle uluslararası alınyazında önemli bir yer alacağı düşünülmektedir.

YÖNTEM

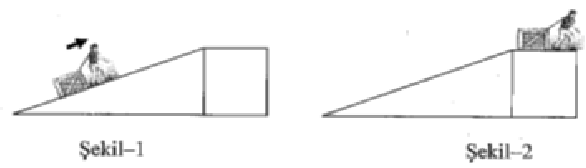
Yapılan çalışma var olan durumu ortaya koymaya çalışan betimsel düzeyde tarama çalışmasıdır. Bir grubun belirli özelliklerini belirlemek için verilerin toplanmasını amaçlayan çalışmalara tarama (survey) araştırması denilmektedir (Büyüköztürk, Kılıç Çakmak, Akgün, Karadeniz ve Demirel, 2012). Bu çalışmada da Kuvvet ve Hareket konusunda belirlenmiş kuvvet, sürtünme kuvveti, iş, enerjinin korunumu, mekanik enerji, kinetik enerji, potansiyel enerji, yayların depoladığı enerji gibi temel Fizik kavramlarının hangi ontolojik kategorilere yanlış yerleştirilmesinden kaynaklanan kavram yanılgılarının belirlenmesi amaçlanmıştır. Uygulama sürecinin bütün aşamaları araştırmacı tarafından gerçekleştirmiştir. Araştırmanın uygulanabilmesi için denekler belirlenmiş ve Kuvvet ve Hareket Konusu Kavram Testi ontolojik özelikler temel alınarak hazırlanmıştır.

Çalışma Grubu

Bu araştırmanın çalışma grubunu, İstanbul İlinde bir Vakıf Üniversitesinde 2013-2014 eğitim-öğretim yılında öğrenim gören öğrenciler oluşturmuştur. Çalışma grubu 30 kız, 5 erkek olmak üzere, 2. Sınıf, sınıf öğretmenliği 35 öğretmen adayından oluşmaktadır.

Kuvvet ve Hareket Konusu Kavram Testi

Öğretmen adaylarının "Kuvvet ve Hareket" konusunda belirlenen bazı kavramlarla ilgili kavram yanılgılarının ontolojik temellere dayandırılmasını amaçlayan Kuvvet ve Hareket Konusu Kavram Testi, iki aşamalı sorulardan oluşan bir test olarak araştırmacı tarafından hazırlanmış, geçerlik ve güvenirlik çalışmaları yapılmıştır. Kuvvet ve Hareket Konusu iki aşamalı kavram yanılgıları teşhis testi olarak geliştirilmesi sırasında, Karataş, Köse ve Coştu (2003) tarafından önerilen adımlar izlenmiştir. Kuvvet ve Hareket Konusu 17 soruluk son halinde yer alan test maddelerinin yedi tanesi Ulu (2011) tarafından geliştirilen testten alınmış, kalan on soru ise literatür taranarak araştırmacı tarafından oluşturulmuştur. Araştırmacı tarafından geliştirilen sorular için önce yurt içi ve yurt dışında yapılan araştırmalarda kuvvet, sürtünme kuvveti, iş, enerjinin korunumu, mekanik enerji, kinetik enerji, potansiyel enerji, yayların depoladığı enerji kavramlarıyla ilgili var olan kavram yanılgıları araştırılmıştır. Sorular, bu kavram yanılgıları ve bunlardan yola çıkarak oluşabilecek başka kavram yanılgılarını açığa çıkarabilecek şekilde düzenlenmiştir. Soruların geliştirilmesinde ontolojik kategoriler esas alınmıştır. Bu kategorilerin nasıl esas alındığı her soru için aşağıda verilen örnek soruda olduğu gibi tek tek özetlenmiştir.



600N ağırlığındaki bir işçi 500N ağırlığındaki bir kutuyu Şekil-1'deki gibi eğik bir düzlemin tepesine çıkarmaktadır. Şekil-2'deki durumda işçi ile kutunun enerjileri hakkında ne söylenebilir? (Sürtünmeleri ihmal ediniz)

A) Hem işçinin hem de kutunun enerjisi yoktur.

B) Sadece işçinin enerjisi vardır. Kutunun enerjisi yoktur.

C) Hem işçinin hem de kutunun enerjisi vardır ve birbirine eşittir.

D) Hem işçinin hem de kutunun enerjisi vardır ve işçinin sahip olduğu enerji kutunun sahip olduğu enerjiden büyüktür.

Bu soruda seçtiğiniz cevabın nedeni aşağıdakilerden hangisidir?

A) Enerji yalnızca hareketle ilgilidir. Hareketli olmayan cisimlerde enerji yoktur.

B) Enerji yalnızca canlılıkla ilişkilidir. Bu nedenle, cansız cisimlerde enerji yoktur.

C) Cisimler konumlarından dolayı çekim potansiyel enerjisine sahiptirler ve çekim potansiyel enerjisi, sadece cismin yüksekliğine bağlıdır.

D) Cisimler konumlarından dolayı çekim potansiyel enerjisine sahiptirler ve bu enerji cismin ağırlığına ve yüksekliğine bağlıdır.

Şekil 3.Kuvvet ve Hareket Konusu Kavram Testi Örnek Sorusu

Bu soruda Kuvvet ve Hareket konusu içerisinde yer alan potansiyel enerji kavramına dikkat çekilmeye çalışılmıştır. Cisimlerin sahip oldukları potansiyel enerjinin hesaplanabilmesi için hangi değerlere bağlı olduğu sorgulanmaktadır. Bu soruda öğrencilerin bir kısmı enerjiyi sadece canlılıkla ilişkilendirirken, bir kısmı da potansiyel enerjiyi etkileyen değişkenleri sadece yükseklik ile ilişkilendirmektedir. Bu soruda yer alan kavram yanılgılarına literatürde de sık sık rastlanmaktadır. Bu soru, süreç kategorisinin alt kategorilerinden biri olan işlem kategorilerindeki yanlış yerleştirmelerden kaynaklanan kavram yanılgılarının belirlenmesi amacıyla hazırlanmıştır.

Sorunun birinci ve ikinci bölümünün doğru cevabı “D” seçeneğidir. Birinci bölümde, “A” seçeneğinin cevap olarak, ikinci bölümde de “A” seçeneğinin birinci bölümde verilen cevabın nedeni olarak seçilmesi, potansiyel enerji kavramını sadece hareketle ilişkilendirmelerinden dolayı, kasıtlı olay kategorisine yerleştirmeden kaynaklanan kavram yanılgısının varlığını göstermektedir.

Birinci bölümde, “B” seçeneğinin cevap olarak, ikinci bölümde de “B” seçeneğinin birinci bölümde verilen cevabın nedeni olarak seçilmesi, potansiyel enerji kavramını sadece canlılıkla ilişkilendirmelerinden dolayı, madde kategorisinin doğal tür cansızlar kategorisine yerleştirmeden kaynaklanan kavram yanılgısının varlığını göstermektedir.

Son olarak birinci bölümde “C” seçeneğinin cevap olarak, ikinci bölümde de “C” seçeneğinin birinci bölümde verilen cevabın nedeni olarak seçilmesi, potansiyel enerjiyi etkileyen değişkenlerin sadece yükseklik ile ilişkilendirilmesi yüzünden, işlem kategorisinin yanal kategorisine yerleştirmeden kaynaklanan kavram yanılgısının varlığını göstermektedir.

İki aşamalı Kuvvet ve Hareket Konusu Kavram Testi Analizi

İki aşamalı çoktan seçmeli teşhis testlerinin analizleri, genellikle öğrencilerin her bir sorunun ilk aşamasına verdikleri cevaplar ile bu cevaplar için seçtikleri gerekçelerin yüzdelerinin tablolaştırılmasıyla sağlanmaktadır. İki aşamalı teşhis testlerinin türleri ve içerikleri Tablo 1’de görülmektedir.

Tablo 1. İki aşamalı Testlerin Türleri ve İçerikleri

İki aşamalı testlerin türleri	I. Aşama	II. Aşama
1. Çoktan seçmeli iki aşamalı testler	Çoktan seçmeli	Çoktan seçmeli+açık uçlu
2. Sınıflama gerektiren iki aşamalı testler	Doğru-yanlış	Çoktan seçmeli+açık uçlu
3. Açık uçlu iki aşamalı testler	Çoktan seçmeli	Açık uçlu

Bu şekilde tablolaştırılan öğrenci cevaplarının, içerik şıklarının bulunduğu ilk aşama ile gerekçe şıklarının bulunduğu ikinci aşamanın kombinasyonuna bakılır. Böylece öğrencilerin içerik aşamasında verdikleri doğru cevaplar ve her iki aşamaya verilen doğru cevapların kombinasyonundan oluşan ikinci bir tablo elde edilebilir. Testin her iki aşamasında da doğru şık işaretlenmişse 1(bir) puan, iki aşamasının herhangi birinde veya her iki aşamasında yanlış şık işaretlenmişse öğrenciye 0 (sıfır) puan verilir (Karataş, Köse ve Coştu, 2003).

Bu durumda onyedi sorudan oluşan testten alınabilecek en yüksek puan onyedi, en düşük puan sıfırdır. Buradan hareketle, öğrencinin aldığı düşük puan, öğrencinin daha yüksek düzeyde kavram yanılgısına sahip olduğunu göstermektedir. Alınan yüksek puan ise, kavram yanılgısının düşük düzeyde olduğunu göstermektedir. 2012-2013 eğitim-öğretim yılında seksen, ikinci sınıf öğretmen adayına ön test ve son test olarak uygulanarak yapılan pilot çalışmada, Kuvvet ve Hareket Konusu Kavram Testi sorularının güçlük indeksleri ile ayırt edicilik indeksleri belirlenmiş ayrıca KR-20 ve Cronbach’s Alpha katsayıları hesaplanmıştır.

Soruların güçlük indeksleri ile ayırt edicilik indeksleri belirlenirken öncelikle üst grup ve alt grup tayinine gidilmiştir. Soruların güçlük indeksleri ile ayırt edicilik indeksleri belirlenirken öncelikle üst grup ve alt grup tayinine gidilmiştir. Bunun için ilk olarak öğrencilerin 17 sorudan oluşan Kuvvet ve Hareket Konusu Kavram Testi sorularına verdikleri yanıtlar incelenmiştir. Öğrenciler kendi aralarında en çok doğru yanıt veren öğrenciden başlayarak en az doğru yanıt veren öğrenciye doğru sıralanmışlardır. Daha sonra uygulamaya katılan öğrenci sayısının %27’si hesaplanmış ve bu sayı 22 olarak bulunmuştur. Test için en yüksek puandan en düşük puana doğru sıralanan öğrencilerden en üstteki 22 ve en alttaki 22 öğrenci tespit edilmiş böylelikle üst grup ile alt grup belirlenmiştir. İlgili test maddesini üst grupta doğru yanıtlayan öğrencilerin yüzdesi (PÜ) ve ilgili test maddesini alt grupta doğru yanıtlayan öğrencilerin yüzdesi

(PA) olmak üzere;
Soruların güçlük indeksi (PG),

$$\frac{(P_{Ü} + P_{A})}{2}$$

PG=

Soruların ayırt edicilik indeksleri (R),
R=PÜ-PA
formülleri kullanılarak hesaplanmıştır. Testteki her bir maddenin güçlük indeksleri ile ayırt edicilik indeksleri Tablo 2'de verilmiştir.

Tablo 2. Kuvvet ve Hareket Konusu Kavram Testi Sorularının Güçlük İndeksleri ile Ayırt Edicilik İndeksleri

Soru Numarası	Güçlük İndeksi	Ayırt Edicilik İndeksi
1	0,62	0,59
2	0,55	0,69
3	0,58	0,45
4	0,48	0,59
5	0,44	0,64
6	0,60	0,55
7	0,42	0,52
8	0,45	0,67
9	0,67	0,55
10	0,55	0,64
11	0,56	0,70
12	0,48	0,55
13	0,67	0,59
14	0,47	0,52
15	0,56	0,45
16	0,68	0,52
17	0,49	0,47

Madde seçiminde, ayırt edicilik için kesin bir sınır belirtilmemekle birlikte, ayırt edicilik indeksi 0,20'ye kadar olanların kullanılmaz, 0,20-0,40 arasındakilerin kabul edilebilir ve 0,40'tan yüksek olanların kullanılabilir nitelikte olduğu genel olarak kabul görmekte olan bir görüştür (Tekin, 1996).

Tablo 2'de görüldüğü üzere soruların güçlük indeksleri 0,44 ile 0.67 arasında, ayırt edicilik indeksleri 0,45 ile 0.70 arasında değişmektedir. Bu sonuçlara göre testten çıkarılacak ya da testte düzeltilmeye ihtiyaç duyulacak nitelikte soru olmadığına karar verilmiştir.

Onyedi sorudan oluşan Kuvvet ve Hareket Konusu Kavram Testinin güvenirliğinin bu kez Kuder-Richardson 20 (KR-20) formülü ile belirlenmesi maksadıyla

Pi= Madde güçlük indeksi

K= Testteki madde sayısı

Sx2=Testin varyansı

Olmak üzere:

$$KR\text{-}20 = \frac{K}{K-1}\left[1 - \frac{\sum pi(1-pi)}{Sx^2}\right]$$

Formülü kullanılarak 0,712 olarak hesaplanmıştır.
Ardından onyedi sorudan oluşan Kuvvet ve Hareket Konusu Kavram Testinin güvenirliğinin belirlenmesi için bu kez Cronbach's Alpha katsayısı hesaplanmış ve bu değer 0,725 olarak bulunmuştur.

Tablo 3. Kuvvet ve Hareket Konusu Kavram Testi Cronbach’s Alpha Katsayısı İçin Madde Analizi

Soru Numarası	Soru Çıkarıldığında Ortalama	Soru-Test Korelasyonu	Soru Çıkarıldığında Cronbach’s Alpha Değeri
1	7,2415	,432	,702
2	7,3025	,356	,700
3	7,2584	,214	,720
4	8,2536	,445	,706
5	7,3853	,291	,709
6	7,2569	,380	,708
7	7,1546	,372	,704
8	7,2856	,413	,712
9	8,0402	,415	,730
10	7,2531	,244	,710
11	7,3670	,291	,709
12	8,0204	,430	,704
13	8,0965	,373	,708
14	7,2752	,198	,700
15	7,3021	,371	,702
16	7,3028	,432	,714
17	7,3945	,368	,730

Tablo 3’deki değerler incelendiğinde testten soru çıkarılması gerek olmadığına karar verilmiştir. Tüm bunların ardından, Kuvvet ve Hareket konusu için öğrencilerin kavram öğrenme düzeylerinde bir farklılığın olup olmadığının tespit edilmesinde kullanılabilecek onyedi soruluk geçerli ve güvenilir bir ölçüm aracının geliştirilmesi işlemi tamamlanmıştır. Bu çalışmada ise Kuvvet ve Hareket Konusu Kavram Testi için Cronbach’s Alpha değeri 0,710, KR-20 katsayısı 0,704 olarak bulunmuştur.

BULGULAR

Bu bölümde, öğrencilerin, testin her sorusuna verdikleri cevaplar tam anlama, kavram yanılgısı ve anlamama durumları olarak yüzde olarak belirlenmiş ve tablolar halinde sunulmuştur. Tablolar içerisinde yer alan kavram yanılgıları ise tek tek analiz edilerek ontolojik kategorilere ayrılarak incelenmiştir. Bulgular kısmında yer alan incelemelerin sayısı çok fazla olduğu için, kavram testi soruları içerisinden üç örnek soru seçilerek detaylı açıklamalar yapılmış, bulunan yanılgılar ontolojik olarak açıklanmış ve elde edilen bulgular toplu olarak sunulmuştur.

Kuvvet ve Hareket Konusu Kavram Testinin Birinci Sorusuna Ait Analizler

Bu soruda Kuvvet ve Hareket Konusu içerisinde yer alan yaylar, yayların esnemeleri ve yaylarda depolanan enerji miktarları ile ilgili kavramlara dikkat çekilmeye çalışılmıştır. Yayların sıkıştırılma ve gerilme durumlarında depoladıkları enerjilerin miktarları sorgulanmıştır. Öğrencilerin yaylarda depolanan enerji ile ilgili anlama seviyeleri, değerlendirme kriterlerine göre sınıflandırılmış, bu kavramla ilgili sahip oldukları kavram yanılgıları ontolojik açıdan incelenmiş ve bu kavram yanılgılarının kaynakları ontoloji temelinde belirlenmiştir.

Tablo 4. Öğrencilerin Kuvvet ve Hareket Konusu Kavram Testinin Birinci Sorusunu Anlama Seviyeleri

Anlama Seviyesi	f	%
Tam Anlama	10	28,57
Kavram yanılgısı	20	57,14
Anlamama	5	14,29

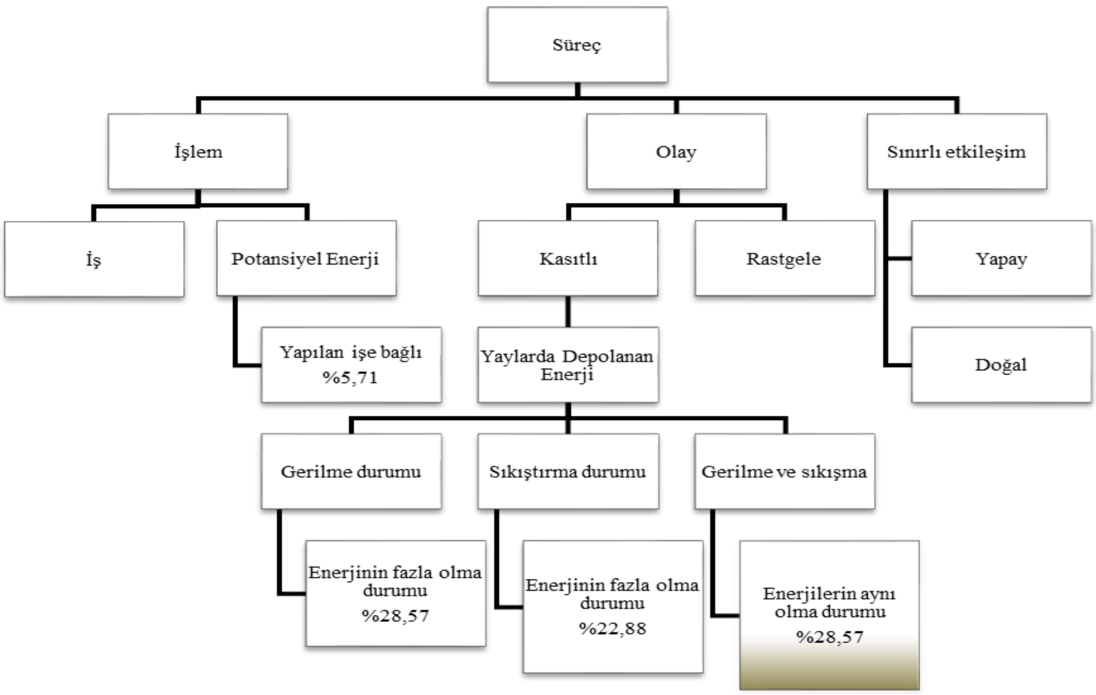
Tablo 4 incelendiğinde, öğrencilerin %28,57’si, yaylarda depolanan enerji miktarları ile ilgili verilen kavramı tam ve doğru anladığı, öğrencilerin %57,14’i, bu kavram ile ilgili kavram yanılgısına sahip olduğu ve öğrencilerin %14,29’unun, 1. soruda sorgulanan kavramı anlamadığı görülmektedir. Kuvvet ve Hareket Konusu Kavram Testinin birinci sorusunun analizi sırasında yapılan diğer işlem de, öğrencilerin sahip olduğu kavram yanılgılarının belirlenmesidir. Tablo 5’de öğrencilerin Kuvvet ve Hareket Konusu Kavram testinin birinci sorusunda sahip oldukları kavram yanılgıları gösterilmiştir.

Tablo 5. Öğrencilerin Kuvvet ve Hareket Konusu Kavram Testinin Birinci Sorusuna Verdikleri Cevaplar İçerisinde Yer Alan Kavram Yanılgıları

Kavram Yanılgısı	f	%
Sıkıştırılmış ya da gerilmiş yay aynı uzamaya sahipken, aynı miktarda enerji depolanmaz. Gerilmiş yayda daha fazla enerji depolanır.	10	28,57
Sıkıştırılmış ya da gerilmiş yay aynı uzamaya sahipken, aynı miktarda enerji depolanmaz. Sıkıştırılmış yayda daha fazla enerji depolanır.	8	22,88
Yaylarda potansiyel enerji depolanması için yaylarla iş yapılması gerekir. Bu nedenle her iki durumda da yaylarda herhangi bir enerji depolanmaz.	2	5,71

Tablo 5 incelendiğinde, öğrencilerin testte en fazla oranda sahip olduğu kavram yanılgısı, "Sıkıştırılmış ya da gerilmiş yay aynı uzamaya sahipken, aynı miktarda enerji depolanmaz. Gerilmiş yayda daha fazla enerji depolanır." şeklinde olduğu görülmektedir. Bu kavram yanılgısının oranı %28,57 olarak bulunmuştur. İkinci olarak en fazla oranda sahip olduğu kavram yanılgısı "Sıkıştırılmış ya da gerilmiş yay aynı uzamaya sahipken, aynı miktarda enerji depolanmaz. Sıkıştırılmış yayda daha fazla enerji depolanır." şeklinde olduğu görülmektedir. Belirlenen bu kavram yanılgısının oranı %22,88 olarak tespit edilmiştir. En az oranda sahip oldukları kavram yanılgısının ise, öğrencilerde "Yaylarda potansiyel enerji depolanması için yaylarla iş yapılması gerekir. Bu nedenle her iki durumda da yaylarda herhangi bir enerji depolanmaz.", şeklinde olduğu görülmektedir. Bu kavram yanılgısısın oranı %5,71 olarak tespit edilmiştir. Öğrencilerin yaptıkları bu kavram yanılgılarının en önemli sebepleri arasında, Fizik kavramlarını öğrenmeye karşı ön yargıları ve hazırbulunuşluk seviyelerinin Fizik kavramları karşısında yetersiz kalması gösterilebilir.

Kuvvet ve Hareket Konusu Kavram Testinin birinci sorusunun analizi sırasında yapılan son işlem de kavram yanılgılarının ontolojik açıdan incelenmesidir. Şekil 4'te öğrencilerin Kuvvet ve Hareket Konusu Kavram testindeki kavram yanılgılarının ontolojik incelemesi gösterilmiştir.



Şekil 4. Öğrencilerin Kuvvet ve Hareket Konusu Kavram Testi Birinci Sorusundaki Kavram Yanılgılarının Ontolojik İncelemesi

Şekil 4 incelendiğinde, Kuvvet ve Hareket Konusu Kavram Testi birinci sorusuna cevap veren öğrencilerin, yaylarda depolanan enerji miktarı ile ilgili kavramı süreç kategorisinin alt kategorisi olan kasıtlı olay kategorisi içerisine doğru yerleştirebildikleri görülmektedir. Bu öğrencilerin oranı %28,57olarak tespit edilmiştir. Bu soruda, yaylarda depolanan enerji ile ilgili kavram yanılgılarının ontoloji temelinde iki farklı kaynağına rastlanmıştır. Bunlardan biri gerilme ve sıkışma durumunda yaylarda depolanan enerji miktarları ile ilgili kavramı, onun yanal kategorilerinden olan "sıkıştırma durumu" ve "gerilme durumu" kategorilerine yerleştirmeden kaynaklanan kavram yanılgıları, diğeri de aynı kavramı süreç kategorisinin alt kategorilerinden biri olan işlem kategorisine yerleştirmeden kaynaklanan kavram yanılgılarıdır. Yanal kategorilere yerleştirilen kavram yanılgılarında, öğrencilerin bir kısmı sıkıştırma durumunda yaylarda depolanan enerji miktarının daha fazla olacağını düşünmektedir. Sıkıştırma durumunda, germe durumundan daha fazla kuvvet uygulanması gerektiği için enerji daha fazla depolanır şeklinde de geri bildirimler vermişlerdir. Bu durum testte %22,88 olarak bulunmuştur. Öğrencilerin bir kısmı da gerilme durumunda yayda daha fazla enerji depolandığını belirtmiştir. Bu durum testte %28,57 olarak tespit edilmiştir.

Süreç kategorisinin alt kategorilerinden biri olan işlem kategorisine yerleştirmelerinden kaynaklanan kavram yanılgısında, öğrenciler gerilen ve sıkışan yaylarda potansiyel enerji depolanması için yayın üzerinde sayısal olarak hesaplanabilecek bir iş yapılmasının gerekliliğini belirtmişlerdir. İşlem kategorisi içerisine yerleştirilen kavram yanılgısının %5,71 olduğu görülmektedir.

Öğrencilerin Kuvvet ve Hareket Konusu kavram testi birinci sorusundaki kavram yanılgılarının ontolojik incelemesine bakacak olursak, kavram yanılgılarının en büyük sebebi, geçmiş yaşam tecrübelerine göre zihinlerinde oluşturdukları yanlış kategorilerin yavaş bir şekilde düzelmesi olarak gösterilebilir. Bu durum, sınıf içi yapılan çalışmaların çeşitliliğini gerekli kılmaktadır. Öğrencilerin bireysel farklılıklarına göre yapılabilecek farklı çalışmaların kavram yanılgılarının düzeltilmesinde etkisi büyüktür.

Kuvvet ve Hareket Konusu Kavram Testinin Dördüncü Sorusuna Ait Analizler

Bu soruda Kuvvet ve Hareket Konusu içerisinde yer alan bilimsel anlamda yapılan iş kavramına dikkat çekilmeye çalışılmıştır. Öğrencilerin günlük hayatta yaptıkları tüm aktiviteleri iş olarak değerlendirip değerlendirmedikleri araştırılmakta ve bilimsel anlamda yapılan iş ile günlük hayatta kullandıkları iş kavramı arasındaki farkı tam olarak ayırabildikleri bu soru ile açığa çıkarılmaya çalışılmaktadır. Öğrencilerin bilimsel anlamda iş ile ilgili anlama seviyeleri, değerlendirme kriterlerine göre sınıflandırılmış, bu kavramla ilgili sahip oldukları kavram yanılgıları ontolojik açıdan incelenmiş ve bu kavram yanılgılarının kaynakları ontoloji temelinde belirlenmiştir.

Tablo 6. Öğrencilerin Kuvvet ve Hareket Konusu Kavram Testinin Dördüncü Sorusunu Anlama Seviyeleri

Anlama Seviyesi	f	%
Tam Anlama	2	5,71
Kavram yanılgısı	33	94,29
Anlamama	0	0

Tablo 6 incelendiğinde, öğrencilerin %5,71'i, bilimsel anlamda yapılan iş ile ilgili verilen kavramı tam ve doğru anladığı, öğrencilerin %94,29'u bu kavram ile ilgili kavram yanılgısına sahip olduğu görülmektedir. Kuvvet ve Hareket Konusu Kavram Testi dördüncü sorusunun analizi sırasında yapılan diğer işlem de, öğrencilerin sahip olduğu kavram yanılgılarının belirlenmesidir. Tablo 7'de öğrencilerin Kuvvet ve Hareket Konusu Kavram testinin dördüncü sorusunda sahip oldukları kavram yanılgıları gösterilmiştir.

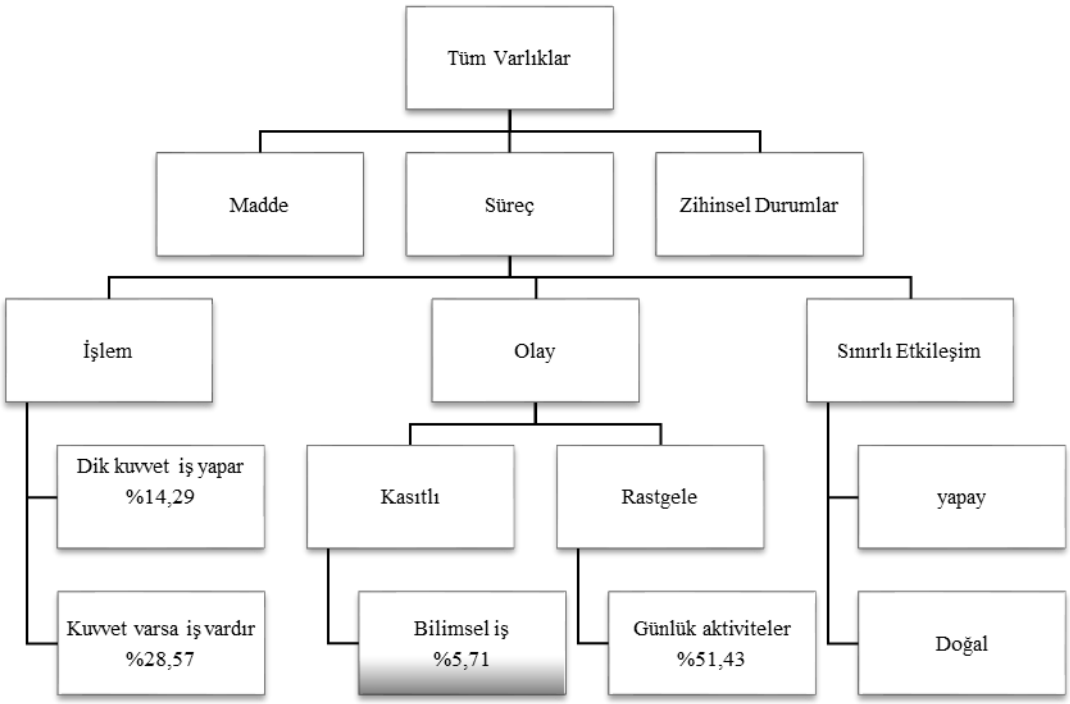
Tablo 7. Öğrencilerin Kuvvet ve Hareket Konusu Kavram Testinin Dördüncü Sorusuna Verdikleri Cevaplar İçerisinde Yer Alan Kavram Yanılgıları

Kavram Yanılgısı	f	%
Sadece hareket doğrultusuna dik olarak etki eden kuvvet, bilimsel anlamda iş yapar.	5	14,29
Bir cisme bir kuvvet etki ediyorsa iş yapılır.	10	28,57
Kişinin günlük hayatta yaptığı her türlü aktivite iştir.	18	51,43

Tablo 7 incelendiğinde, öğrencilerin testte en fazla oranda sahip olduğu kavram yanılgısı, "Kişinin günlük hayatta yaptığı her türlü aktivite iştir." şeklinde olduğu görülmektedir. Bu yanılgının oranı %51,43 olarak tespit edilmiştir.

İkinci olarak en fazla orana sahip yanılgıya bakıldığında ise öğrencilerin "Bir cisme bir kuvvet etki ediyorsa iş yapılır." ifadesi üzerinde yoğunlaştıkları görülmektedir. Bu yanılgının oranı %28,57 olarak tespit edilmiştir. En son olarak ise öğrencilerin "Sadece hareket doğrultusuna dik olarak etki eden kuvvet, bilimsel anlamda iş yapar." ifadesinde yanılgıya düştükleri görülmektedir. Belirlenen bu yanılgının oranı %14,29, kontrol grubu için olarak tespit edilmiştir.

Bu yanılgılara bakıldığında öğrencilerin bilimsel anlamda yapılan iş kavramını, günlük hayatta kullandıkları iş kavramı ile karıştırdıkları görülmektedir. Konu hakkında ön bilgileri olan öğrencilerin ise zamanında yaptığı ezber bilgiler yaptıkları yanılgılarda bir kere daha fark edilmektedir. Öğrenciler, bilimsel anlamda iş yapılabilmesi için uygulanması gereken kuvvetin farkında olmalarına rağmen, uygulanan bu kuvvetin hangi yönde ve ne şekilde uygulanması gerekliliği ile ilgili yeterliliği kazanmadıkları görülmektedir. Kuvvet ve Hareket Konusu Kavram Testinin dördüncü sorusunun analizi sırasında yapılan son işlem de, ön test ve son testlerle belirlenen kavram yanılgılarının ontolojik açıdan incelenmesidir. Şekil 5' de öğrencilerin Kuvvet ve Hareket Konusu Kavram testindeki kavram yanılgılarının ontolojik incelemesi gösterilmiştir.



Şekil 5. Öğrencilerin Kuvvet ve Hareket Konusu Kavram Testi Dördüncü Sorusundaki Kavram Yanılgılarının Ontolojik İncelemesi

Şekil 5 incelendiğinde, Kuvvet ve Hareket Konusu Kavram Testi dördüncü sorusunda bilimsel anlamda yapılan iş kavramı sorgulanmaktadır. Öğrencilerin sorgulanan kavramı süreç kategorisinin alt kategorilerinden biri olan kasıtlı olay kategorisi içerisine, bilimsel anlamda yapılan iş kavramını günlük hayatta yapılan aktivitelerden tam olarak ayırarak yerleştirebilen öğrenciler olduğu görülmektedir. Öğrencilerin oranı %5,71'dir.

Bu soruda, bilimsel anlamda yapılan iş ile ilgili kavram yanılgılarının ontoloji temelinde iki kaynağına rastlanmıştır. Bunlardan ilki, bilimsel anlamda yapılan iş kavramını süreç kategorisinin alt kategorilerinden biri olan işlem kategorisinin içerisine yerleştirmeden kaynaklanan kavram yanılgılarıdır. Öğrenciler işlem kategorisi altında iki farklı yanal kategori yaratmışlardır. İlk yanal kategoride, öğrenciler dik olarak uygulanan kuvvetin her durumda iş yaptığına inandıkları için işlem kategorisinin içerisine yerleştirmişler ve dik etki eden tüm kuvvetleri bilimsel anlamda iş yapar olarak tanımlamışlardır. Bu durum testte %14,29 olarak bulunmuştur. İkinci yanal kategoride ise, kuvvet uygulanan bütün durumlarda öğrenciler bilimsel anlamda iş yapıldığını belirtmişlerdir. Bu durum testte %28,57'dir.

Son durum ise, öğrencinin bilimsel anlamda yapılan iş kavramını süreç kategorisinin alt kategorilerinden biri olan rastgele olay kategorisi içerisine yerleştirmeden kaynaklanan kavram yanılgılarıdır. Öğrenciler günlük hayatta yapılan bütün aktiviteleri iş olarak tanımlamışlar ve verilmek istenen kavramı farklı bir kategoriye yerleştirmişlerdir. Bu durum testte %51,43 olarak tespit edilmiştir.

Kuvvet ve Hareket Konusu Kavram Testinin Onikinci Sorusuna Ait Analizler

Bu soruda Kuvvet ve Hareket Konusu içerisinde yer alan mekanik enerji kavramına dikkat çekilmeye çalışılmıştır. Cisimlerin sahip oldukları mekanik enerjinin hangi durumlarda değişeceği ve enerji korunumu yasasına göre, ortamda herhangi bir sürtünme yok ise toplam enerjinin yani mekanik enerjinin değişip değişmeyeceği soru içerisinde sorgulanmaktadır. Öğrencilerin bu kavrama hâkim olup olamadıkları ve diğer enerji türleri ile karıştırıp karıştırmadıkları ortaya çıkarılmaya çalışılmaktadır.

Öğrencilerin cisimlerin sahip oldukları mekanik enerji ile ilgili anlama seviyeleri, verilen değerlendirme kriterlerine göre sınıflandırılmış, bu kavramla ilgili sahip oldukları kavram yanılgıları ontolojik açıdan incelenmiş ve bu kavram yanılgılarının kaynakları ontoloji temelinde belirlenmiştir.

Tablo 7. Öğrencilerin Kuvvet ve Hareket Konusu Kavram Testinin Onikinci Sorusunu Anlama Seviyeleri

Anlama Seviyesi	f	%
Tam Anlama	5	14,29
Kavram yanılgısı	25	71,43
Anlamama	5	14,29

Tablo 7 incelendiğinde, öğrencilerin %14,29'u cisimlerin sahip oldukları mekanik enerji miktarları ve mekanik enerjinin değişimi ile ilgili verilen kavramları tam ve doğru anladığı, öğrencilerin %71,43'ünün bu kavramlar ile ilgili kavram yanılgısına sahip olduğu görülmektedir. Kuvvet ve Hareket Konusu Kavram Testinin onikinci sorusunun analizi sırasında yapılan diğer işlem de, öğrencilerin sahip olduğu kavram yanılgılarının belirlenmesidir. Tablo 8'de öğrencilerin Kuvvet ve Hareket Konusu Kavram testinin onikinci sorusunda sahip oldukları kavram yanılgıları gösterilmiştir.

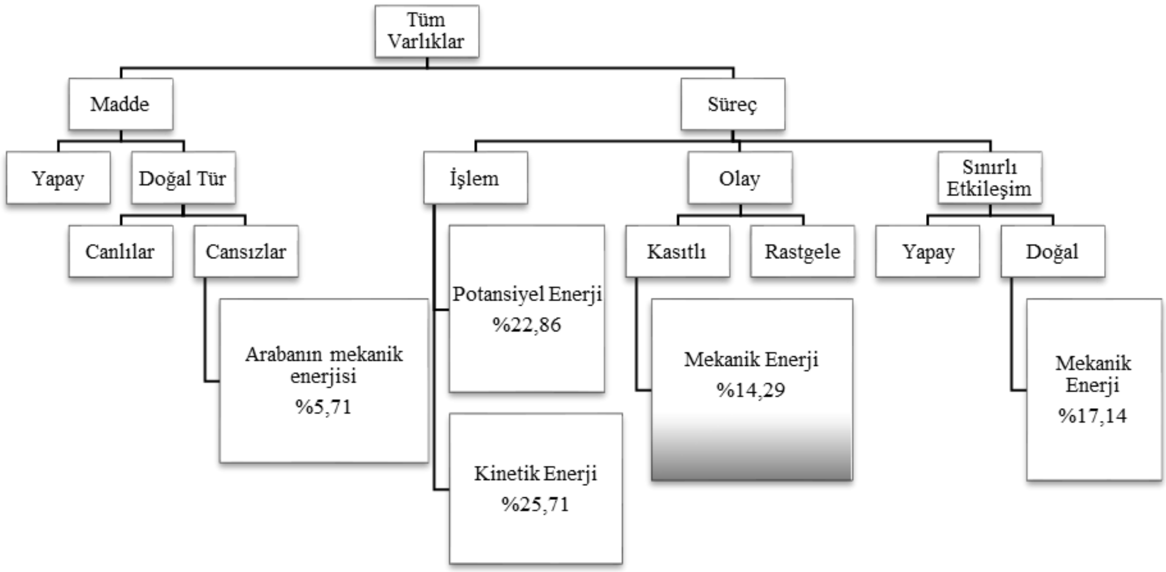
Tablo 8. Öğrencilerin Kuvvet ve Hareket Konusu Kavram Testinin Onikinci Sorusuna Verdikleri Cevaplar İçerisinde Yer Alan Kavram Yanılgıları

Kavram Yanılgısı	f	%
Kinetik enerji değişirse mekanik enerji de değişir	9	25,71
Potansiyel enerji değişirse mekanik enerji de değişir.	8	22,86
Mekanik enerji kinetik ve potansiyel enerjiye bağlı değildir. Sabit bir enerjidir.	6	17,14
Mekanik enerji sadece arabanın mekanik yapısı ile ilgilidir. Arabanın mekanik enerjisi bu nedenle azalır.	2	5,71

Tablo 8 incelendiğinde, öğrencilerin en fazla oranda sahip olduğu kavram yanılgısı, "Kinetik enerji değişirse mekanik enerji de değişir." şeklinde olduğu görülmektedir. Bu oran %25,71 olarak tespit edilmiştir. İkinci olarak en fazla orana sahip oldukları kavram yanılgısı ise "Potansiyel enerji değişirse mekanik enerji de değişir." şeklindedir. Bu oran %22,86 şeklindedir. Diğer bir kavram yanılgısının ise "Mekanik enerji kinetik ve potansiyel enerjiye bağlı değildir. Sabit bir enerjidir." şeklinde olduğu görülmektedir. Bu oran %17,14 şeklindedir. Ayrıca öğrencilerin bir kısmı da "Mekanik enerji sadece arabanın mekanik yapısı ile ilgilidir. Arabanın mekanik enerjisi bu nedenle azalır." şeklinde bir düşünce yapısına sahip oldukları için farklı bir kavram yanılgısı yaratmışlardır. Bu durum %5,71 olarak tespit edilmiştir.

Öğrencilerin yaptıkları kavram yanılgıları incelendiğinde mekanik enerji konusunda ön bilgilerinin ne kadar eksik olduğu görülmektedir. Mekanik enerjiyi, enerji türleri içerisinde sınıflayarak farklı bir anlam yüklemişler ve kavram yanılgısına düşmüşlerdir. Ayrıca bazı öğrencilerin arabanın mekanik yapısını düşünerek kavrama bambaşka bir anlam yüklemişlerdir. Ayrıca enerji konusundaki ön bilgilerinin eksiklikleri yüzünden, herhangi bir enerji değişimi sırasında mekanik enerjinin de değişeceği yönünde kavram yanılgıları bulunmaktadır.

Kuvvet ve Hareket Konusu Kavram Testinin onikinci sorusunun analizi sırasında yapılan son işlem de kavram yanılgılarının ontolojik açıdan incelenmesidir. Şekil 6'da öğrencilerin Kuvvet ve Hareket Konusu Kavram testindeki kavram yanılgılarının ontolojik incelemesi gösterilmiştir.



Şekil 6. Öğrencilerin Kuvvet ve Hareket Konusu Kavram Testi Onikinci Sorusundaki Kavram Yanılgılarının Ontolojik İncelemesi

Şekil 6 incelendiğinde, Kuvvet ve Hareket Konusu Kavram Testi onikinci sorusuna doğru cevap veren öğrencilerin, cisimlerin hareket ve konumlarından dolayı sahip oldukları toplam mekanik enerji değişimi ile ilgili kavramını, süreç kategorisinin alt kategorilerinden biri olan kasıtlı olay kategorisinin içerisine mekanik enerjinin hangi durumlardan etkilendiği ve ne olduğunu tam belirleyerek doğru yerleştirebilen öğrenciler olduğu görülmektedir. Bu öğrencilerin oranı %14,29 olarak tespit edilmiştir.

Bu soruda, cisimlerin hareket ve konumlarından dolayı sahip oldukları toplam mekanik enerji değişimi ile ilgili kavram yanılgılarının ontoloji temelinde üç farklı kaynağına rastlanmıştır. Bunlardan ilki, süreç kategorisinin alt kategorisi olan kasıtlı olay kategorisi içerisinde yer alan mekanik enerji değişiminin enerji dönüşümünden dolayı değişmemesi gerektiği kavramının yerine, mekanik enerji değişimini potansiyel ve kinetik enerjideki değişim ile ilişkilendirip, süreç kategorisinin alt kategorilerinden biri olan işlem kategorinin içerisine yanal olarak yerleştirmeden kaynaklanan kavram yanılgılarıdır. Belirlenen bu kategoride iki farklı yanal kategoriye rastlanmaktadır. Yanal kategorilerin ilki potansiyel enerji değişiminin mekanik enerjiyi değiştireceği yönünde belirlenen kavram yanılgısıdır. Bu öğrencilerin oranı %22,86 olarak bulunmuştur. Yanal kategorilerin ikincisi ise kinetik enerji değişiminin mekanik enerjiyi değiştireceği yönünde belirlenen kavram yanılgısıdır. Bu öğrencilerin oranı %25,71'dir. Belirlenen bu iki kavram yanılgısının sebebi öğrencilerin mekanik enerjideki değişimi kinetik veya potansiyel enerji olarak algılamalarıdır.

Belirlenen ikinci durumda ise öğrencilerin kasıtlı olay içerisinde yer alan mekanik enerji değişiminin, enerji dönüşümünden dolayı değişmemesi gerektiği kategorisinin yerine, mekanik enerjiyi cansız bir varlık olan arabanın yapısı ile ilişkilendirip, madde kategorisinin alt kategorisi olan doğal tür-cansızlar kategorisi içerisine yerleştirmeden kaynaklanan kavram yanılgısıdır. Bu öğrencilerin oranı %5,71 olarak tespit edilmiştir.

Son durum ise, aynı kavramı, öğrencinin süreç kategorisinin alt kategorisi olan sınırlı etkileşim kategorisinin alt kategorilerinden doğal kategorisine farklı şekilde yerleştirmesinden kaynaklanan kavram yanılgısıdır. Öğrenciler mekanik enerjiye farklı bir anlam yüklemişler ve doğada kendiliğinden olan ve diğer enerjilere bağlı olamayan bir enerji türü yaratmışlardır. Onlara göre mekanik enerji sabittir, kinetik veya potansiyel enerjiye bağlı değildir. Bu öğrencilerin oranı %17,14'dir.

Öğrencilerinin Kavram Yanılgılarının Üst ve Yanal Kategorilere Göre Dağılımı

Tablo 9'da deney grubundaki öğrencilerin uygulamadan önce sahip oldukları, uygulamadan sonra giderilen ve uygulamadan sonra yeni oluşan kavram yanılgılarının kaçının üst ontolojik kategoriye yerleştirmeden kaçının ise yanal ontolojik kategoriye yerleştirmeden kaynaklandığı görülmektedir.

Tablo 9. Öğrencilerinin Kavram Yanılgılarının Üst ve Yanal Kategorilere Göre Dağılımı

Soru	**Başlangıçta Var Olan Kavram Yanılgısı Sayısı**		
	Üst Ontolojik Kategori	**Yanal Ontolojik Kategori**	**Toplam**
Soru 1	2	18	**20**
Soru 2	8	11	**19**
Soru 3	0	20	**20**

Soru 17	13	12	**25**
Toplam	**301**	**150**	**451**

Tablo 9'da görüldüğü gibi, deney grubundaki öğrencilerin, uygulamadan önce üst kategoriye yerleştirmeden kaynaklanan 301 kavram yanılgısı, yanal kategoriye yerleştirmeden kaynaklanan 150 kavram yanılgısı belirlenmiştir. Bu yanılgıların kategori bazında değerlendirmesi ise Tablo 10'da detaylı olarak sunulmaktadır.

Tablo 10. Grubu Öğrencilerinin Kavram Yanılgılarının Belirlenen Kategorilere Göre Değişimi

Kavram yanılgısı	**Soru**	**Belirlenen Kategoriler**					
		İşlem Kategorisi	Kasıtlı olay Kategorisi	Sınırlı etkileşim Doğal Kategorisi	Rastgele Olay Kategorisi	Sınırlı Etkileşim Yapay Kategorisi	Madde-Doğal Tür-Cansızlar Kategorisi

	17	13	12	-	-	-	-
Toplam olan	**var**	179	128	53	69	13	3

Tablo 10'a göre, öğrencilerin, işlem kategorisinde 179 kavram yanılgısı bulunmaktadır. İşlem kategorisinde giderilen kavram yanılgısının oranına bakıldığında %76,30 olduğu görülmektedir. Kasıtlı olay kategorisine bakıldığında, 128 kavram yanılgısının bu kategoriye yerleştirildiğini görmekteyiz. Sınırlı etkileşim-doğal kategorisine bakıldığında 53 kavram yanılgısının bu kategori içerisine yerleştiğini görmekteyiz. Rastgele olay kategorisinde tespit edilmiş 69 kavram yanılgısı görülmektedir. Sınırlı etkileşim-yapay kategorisine bakıldığında belirlenen 13 kavram yanılgısı görülmektedir. Belirlenen son kategori Madde-doğal tür-cansızlar kategorisidir. Belirlenen bu kategoride 3 kavram yanılgısı belirlenmiştir.

Belirlenen kategorilere bakacak olursak en fazla yanılgının işlem kategorisi içerisinde oluştuğu görülmektedir. İkinci olarak en fazla kavram yanılgısının çıktığı kategorinin kasıtlı olay kategorisi olduğu görülmektedir. En az kavram yanılgısı ise madde kategorisi içerisinde oluşmuştur.

SONUÇ

Yapılan çalışmada ontolojiye göre çoğunlukla varlıkların bulunduğu iki temel kategoride (madde, süreç) yanılgılar ortaya çıkmıştır. Bu yanılgılar temel kategorilerin kendi içerisinde gerçekleşmiştir. Yani yanılgılar iki temel kategori arasındaki yanlış kategorize etmeden dolayı değil de her temel kategorinin kendi alt kategorileri arasındaki yanlış kategorize etmeden dolayı oluşmuştur. Araştırmada bulunan kavram yanılgıları ontolojik açıdan incelenerek açıklanmıştır çünkü kavram yanılgıları ontoloji yardımıyla açığa çıkarıldığında bu yanılgıların oluşma nedenleri de bulunabilmektedir. Diğer bir deyişle, bulunan kavram yanılgılarının hangi ontolojik kategoriler arasında gerçekleştiği saptandığından yanılgıların oluşma nedenlerini açıklamak da kolaylaşmaktadır. Yanılgıların nedenlerinin bulunması hem öğretmenlere hem de öğrencilere fayda sağlamaktadır. Ontolojik olarak açığa çıkarılan kavram yanılgılarının nedenlerinin ne olduğunu bilen öğretmenler öğretimlerini ona göre planlayabilmekte ve böylece öğrencilerin daha iyi öğrenmelerini sağlayabilmektedir.

Yapılan çalışmada öğrencilerin, uygulamadan önce üst kategoriye yerleştirmeden kaynaklanan 301 kavram yanılgısı, yanal kategoriye yerleştirmeden kaynaklanan 150 kavram yanılgısı belirlenmiştir. Öğrencilerde bulunan kavram yanılgıları incelendiğinde bu yanılgıların birçoğunun ontolojiye göre süreç kategorisinin alt kategorilerinden işlem, kasıtlı olay, sınırlı etkileşim doğal, sınırlı etkileşim yapay ve rastgele olay kategorisine yanlış kategorize etmeden kaynaklandığı söylenebilir. En büyük bulunma yüzdesine sahip olan kavram yanılgıları süreç kategorisinin alt kategorilerinden biri olan işlem ve kasıtlı olay kategorileri içerisine yanal olarak yerleştirmeden kaynaklanan kavram yanılgıları olduğu görülmektedir. Slotta ve Chi (1999) yaptıkları çalışmada, fizikçilerin ontoloji eğitimi ile güçlü ve değişmez kavram yanılgılarını nasıl yok edeceklerine değinmişler ve temel fizik konularının hangi kategorilerde daha yoğun olarak ortaya çıkabileceklerinden söz etmişlerdir. Elektrik konusunda yaptıkları çalışma incelendiğinde saptanan yanılgıların süreç kategorisi altında toplandığını ve öğretmenlerin verdikleri somut örnekler yüzünden, süreç kategorisinin alt kategorileri içerisine kavramın farklı şekillerde yerleştirildiğinden bahsetmişlerdir. Bu durum yapılan bu çalışma ile benzerlik göstermektedir. Deney grubunda bulunan öğrenciler öğretim öncesi sorgulanan temel fizik kavramları ile ilgili yanılgılarını genellikle süreç kategorisinin alt kategorilerine yerleştirmişlerdir. Acar (2010) yılında yaptığı yüksek lisans tezinde, yine bir fizik konusu olan elektromanyetik indüksiyon üzerinde çalışmış ve kavramsal anlamaları ontolojik olarak kategorize etmeye çalışmıştır. Yaptığı çalışmada saptanan tüm kavram yanılgılarının süreç kategorisi altında toplanmış olduğu görülmektedir.

Yapılan çalışmada saptanan kavram yanılgıları üst ve yanal ontolojik kategoriler dışında farklı bir şekilde daha incelenmiştir. Yapılan bu inceleme içerisinde tespit edilen kavram yanılgıları bu sefer de kategoriler isimlendirilerek değerlendirilmiştir. Yapılan bu incelemeye göre, öğrencilerin, işlem kategorisinde 179 kavram yanılgısı bulunmaktadır. Kasıtlı olay kategorisine bakıldığında, 128 kavram yanılgısının bu kategoriye yerleştirildiğini görmekteyiz. Sınırlı etkileşim-doğal kategorisine bakıldığında 53 kavram yanılgısının bu kategori içerisine yerleştiğini görmekteyiz. Rastgele olay kategorisinde tespit edilmiş 69 kavram yanılgısı bulunmuştur. Sınırlı etkileşim-yapay kategorisine bakıldığında belirlenen 13 kavram yanılgısı görülmektedir. Belirlenen son kategori Madde-doğal tür-cansızlar kategorisidir. Belirlenen bu kategoride 3 kavram yanılgısı belirlenmiştir. Belirlenen kategorilere bakacak olursak en fazla yanılgının işlem kategorisi içerisinde oluştuğu görülmektedir. İkinci olarak en fazla kavram yanılgısının çıktığı kategorinin kasıtlı olay kategorisi olduğu görülmektedir. En az kavram yanılgısı ise madde kategorisi içerisinde oluşmuştur.

Madde kategorisi altında oluşan kavram yanılgılarının özellikleri incelendiğinde, öğrencilerin fizik kavramlarına, kütle, hacim gibi ölçülebilir özellikler yükledikleri fark edilmektedir. Bu durum sınıf içinde, anlaşılırlığı kolaylaştırmak için verilen örneklerden kaynaklandığını söyleyebiliriz. Öğretmenler konu içerisinde aktarım yaparken, somutlaştırmaya çalışırken kavramlara farklı anlamlar öğrenciler tarafından yüklenebilmektedir. Fakat bu kategoride oluşturulmuş yanılgıları düzeltmek kolay olduğu için, öğretmenler kısa sürede ontolojik açıdan düzeltmeler yapabilmektedir. Burada dikkat edilmesi gereken nokta süreç kategorisi altında yer alan kavram yanılgılarıdır. Örneğin en çok kavram yanılgısının çıktığı işlem kategorisi altında yer alan kavram yanılgılarının ontolojik özellikleri incelendiğinde, öğrencilerin sınıf ortamında yaşadıkları bir sıkıntı ney olarak ortaya çıkmaktadır. Özellikle fizik konuları içerisinde matematiksel ve işlem becerileri üst düzeyde kullanılmaktadır. Bu nedenle bu beceriler tam olarak öğrenci tarafından kazanılmadığında, aktarılan yeni kavramlar işlemsel bir özelliği içeriyorsa, kavram yanılgısının ortaya çıkması önlenemez bir durumdur; çünkü öğrenci öğrendiklerine zihninde yer alan kategoriler çerçevesinde anlamlar yüklemektedir. Bu durumlarda, verilmesi gereken kavram kendi içerisinde hangi özellikleri taşıyorsa, farklı disiplinlerle işbirliği yapılıp veya ontolojik özelliklere uygun yöntem ve teknikler seçilerek, bu özellik önce öğrenciye kazandırılmalı sonrasında da kavram öğretilmeye çalışılmalıdır. Yapılan derslerde, verilecek kavramlarla ilgili yapılacak ontolojik çalışma, etkin yöntem ve tekniklerin seçiminde de işimize çok yarayacaktır.

ÖNERİLER

Öğrencilerin Kuvvet ve Hareket konusunda yer alan temel fizik konularında ontolojik olarak yanlış kategoride ifade ettikleri kavramlar incelendiğinde, yaşadıkları öğretim süreci içerisinde yaşanılan aksaklıklar kolayca farkedilmektedir. Öğrencilerin soyut kavramların daha iyi anlaşılabilmesi için kullanılan modelleri gerçek gibi düşünmelerinin, yapılan deneysel çalışmalarda elde ettikleri sonuçların gerçeği tamamen yansıttığı görüşünün, günlük hayata dair verilen örnek içeriklerinin benzer durumları tamamen açıklayabildiği görüşünün, dersi daha anlaşılır kılmak için gösterilen animasyonların sorgulamadan ve doğruyu ne kadar yansıttığı araştırılmadan kabul edilmesinin ve günlük hayatta kullandıkları dilin karşılaşılan durumları tam olarak açıklayabildiği görüşünün, belirlenen kavram yanılgılarının üzerinde fazlasıyla etkisi olduğu düşünülmektedir.

Öğrencilerin kavramların doğası hakkında zihinlerinde sağlam temelli bilgiler yapılandırabilmeleri için; derslerde modellerin kullanımı sırasında, ders içeriklerini anlaşılır kılmak için kullanılan deneysel çalışmalarda, geleneksel olarak yürütülen çalışmalar içerisinde, günlük hayatta karşılaşılan durumlar ile ilgili verilen örnekler ve ilgili animasyon gösterimlerinde; gerçeğin kendisi olmadığı ve durumu eksiksiz ifade edemeyeceği belirtilmelidir.

Yapılan çalışmada öğretmen adaylarının iş, bilimsel anlamda yapılan iş, sürtünme kuvveti, kinetik enerji, potansiyel enerji, mekanik enerji, sürtünme kuvveti, yaylar ve yayların depoladığı enerji gibi kavramları karıştırdığı anlaşılmaktadır. Derslerde birbirine benzeyen temel kavramlar arasındaki farkların vurgulanması bu tür karışıklıkların oluşmasına bir ölçüde engel olabilir. Bu tür kavramların öğrencilerin zihinlerinde şekillenmesi ve doğru biçimde kategorileştirilmesi için, öğrencilerin belli bir süreç geçirmeleri gerekliliği unutulmamalıdır. Yaşadıkları süreç içerisinde kavramlarla ilgili kendi başlarına yapabilecekleri her türlü uygulama, zihinlerinde yer alan kategorilerin düzenlenmesine fırsat yaratacaktır.

Derslerde, pek çoğu süreç temelli olan fizik kavramlarından bahsederken, sürecin gerçekleşme aşamaları ve süreç kategorsisi altında yer alan alt boyutların neler olduğunun vurgulanması sonucu ontolojik kategori yanlışları daha aza indirilebilir. Bu nedenle öğretmenlerin yapacakları ders öncesi, verecekleri kavramların ontolojik özelliklerini ortaya çıkarması ve yaptıkları etkinlikler içerisinde bu özelliklerin vurgulanarak kavramın verilmesi, öğrenme sürecinin daha kolay ilerlemesine katkı sağlayacaktır.

Araştırma sonuçları incelendiğinde öğrencilerde Kuvvet ve Hareket konusu ile ilgili olan pek çok kavram yanılgısının olduğu görülmüştür. Kuvvet ve Hareket konusu ilkokul ve ortaokul ders içeriklerine yayılmış bir ünite olup, fizik dersinin de temel taşlarından birini oluşturmaktadır. Öğrencilerin farklı sınıf seviyelerinde göreceği bu konu ile ilgili kavram yanılgıları düzeltilmeden diğer konuların öğretilmeye çalışılması başka sorunları ortaya çıkaracak ve daha farklı kavram yanılgılarının oluşumuna yol açacaktır. Bu nedenle öğretmenlerin öğrencilerde konu ile ilgili hangi kavram yanılgılarının bulunduğunu öğrenmeleri ve öğretim sürecini de bu yanılgıları kapsayacak ve önleyecek şekilde düzenlemesi, sınıf ortamında tam öğrenme ortamının gerçekleşmesi için fırsat yaratacaktır.

Öğretmenlerin ders programlarını düzenlemeleri müfredatla da çok yakından ilişkilidir. Bu nedenle öncelikle öğretim programlarında bazı değişikliklere gidilmelidir. Örneğin Kuvvet ve Hareket konusu ile ilgili kavram yanılgılarını önleyecek şekilde konu içerikleri düzenlenebilir. Bu yanılgıları belirlemek için çeşitli ölçme araçları kullanılabilir. Bu araştırmada kullanılan iki aşamalı soruları içeren test hem Kuvvet ve Hareket konusu ile ilgili kavram yanılgılarını belirlemede yardımcı olabilir hem de bu yanılgıların hangi nedenlere bağlı olarak ortaya çıktığını belirleyebilir.

Öğretmenler süreç içerisinde yanılgıya neden olacak ifadelerden kaçınmalıdırlar. Öğretim yapılırken öğrenciler ezbere yönlendirilmemeli, mümkün olduğunca öğrenci merkezli öğretim yapılmalıdır. Öğrenciler öğretim sırasında öğrendikleri bilgilerin neden-sonuç ilişkisini kurabilmeli ve öğretim sırasında buna yönlendirilmelidirler. Yüzeysel ve ezbere yönelmek öğrencilerin hem anlamlı öğrenmesini engellemekte hem de konuyla ilgili kavram yanılgılarının oluşmasına yol açmaktadır. Tabi ki bunun için öğretim programları incelenmeli, öğretmene yardımcı olacak ve anlamlı öğrenmeyi destekleyecek şekilde düzenlenmelidir.

Yapılan çalışmada, kavram yanılgılarının ontolojik kategorilere göre değerlendirilmesi bu yanılgıların ontolojiye göre hangi nedenlerden dolayı oluştuğunun anlaşılmasını sağlamıştır. Yanılgıların nedenlerinin bilinmesi bu ve buna benzer araştırmalar için oldukça önemlidir. Kavram yanılgılarının giderilmesi ancak nedenleri üzerine yoğunlaşılıp bunların oluşmalarını engelleyebilecek çalışmaların, öğretim yöntemlerinin, vb. hazırlanmasıyla gerçekleştirilebilir. Bu nedenle ontolojik kategoriler yanılgıların nedenlerinin açığa çıkarılmasını sağladığından dolayı çok önemlidir. Kavram yanılgılarının belirlenmesi, değerlendirilmesi ve giderilmesi gibi araştırmalar ontolojik kategorilerden yararlanılarak gerçekleştirilmelidir.

Süleyman Demirel University

ABSTRACT: Rapid developments and diffusions of information and communication technologies (ICT) support human power with machine power and thus increase living standards in numerous fields such as housing, nutrition, education and health. Therefore, the increases of elderly population in the society and their problems have also increased research interest germane to these issues. This cross-sectional study explored retired persons' levels, purposes, and perception of Internet usage and the relationships between their usage and some demographic characteristics. It was designed as a correlational survey research. The population of the study comprised those retired persons living in the Isparta city center in Turkey. Regarding the sample of the study, 109 informants (77 male and 32 female) were recruited through visiting mosques, coffee houses, vocational lodges, and residential services where retired people exist intensively. The data were collected by means of a questionnaire with two parts. The first part included questions related demographic information (e.g., gender, educational level, retired profession) and the second included questions related to Internet usage profiles (e.g., frequency, experience, purpose of usage, location of connection) and perceptions. The results showed that most (70%) had a computer and a little more than half (55%) had an Internet connection at home. Almost 40% of the participants were Internet users spending 11.5 weekly hours on average and they connect to the Internet mostly at home or through mobile devices. The dominant purposes for their usage were to get general information and to follow social networking sites. Participants indicated the complexity of Internet usage, security problems, and lack of supporting person for their usage as the most important barriers to Internet usage. They sufficiently perceived both positive impacts of the Internet as wells as negative consequences due to its unconscious consumption. As far as demographics were concerned, time spent online differed significantly in terms of educational level whereas it did not differ by gender and retired profession.

Key words: retired persons, Internet usage, perceptions, demographic characteristics, survey.

EMEKLİLERDE İNTERNET KULLANIMI: ALIŞKANLIKLAR VE ALGILAR

ÖZET: Teknolojideki hızlı gelişme neticesinde insan gücü makine gücüyle desteklenmekte ve bu da barınmadan, beslenmeye, eğitime ve sağlığa birçok alanda yaşam standardını yükseltmektedir. Teknolojik gelişmeler sayesinde yaşlı nüfus oranının artması ve buna paralel olarak bu grubun sorunlarının artması bu konuya olan bilimsel ilgiyi de artırmıştır. Bu çalışmada emekli insanların interneti ne düzeyde ve hangi amaçlara yönelik kullandıkları ve internet hakkındaki algıları araştırılmıştır. Araştırma deseni olarak ilişkisel tarama modeli benimsenmiştir. Çalışmanın evrenini Isparta il merkezinde yaşamakta olan emekli insanlar oluşturmaktadır. Bu kişilerin yoğun olarak bulunduğu il merkezindeki cami, kıraathane, öğretmenevi, polis evi ve huzurevi gibi mekânlar ziyaret edilerek 109 (77 erkek ve 32 kadın) emekli insana ulaşılmıştır. Çalışmada veriler iki adet bilgi formundan oluşan anket yoluyla toplanmıştır. Anket formunda emeklilerin demografik özellikleri (cinsiyet, eğitim durumu, emekli olunan meslek) ve internet kullanım profilleri (kaç yıldır internet kullandığı, internete nereden bağlandığı, interneti ne kadar kullandıkları, internette hangi aktiviteleri gerçekleştirdiği, vb.) hakkında açık ve kapalı uçlu sorular yer almıştır. Elde edilen bulgulara göre katılımcıların çoğunluğunun (%70) evlerinde bilgisayar bulunmakla birlikte yarısından biraz fazlasının (%55) evlerinde internet bağlantısı vardır. Internet kullanım oranı %40 olup, haftada ortalama 11,5 saat harcanmakta ve ağırlıklı olarak ev veya mobil araçlar üzerinden bağlantı gerçekleşmektedir. Başat kullanım amacının genel bilgi edinmek ve sosyal paylaşım ağlarını takip etmek olduğu görülmüştür. Emekliler internet kullanımlarının önündeki en önemli bariyerler olarak internet kullanımının karmaşıklığı, güvenlik sorunları ve internet kullanımını destekleyecek kişilerin olmamasını göstermiştir. Ayrıca, internetin olumlu katkıları ve bilinçsiz kullanıldığında oluşabilecek riskleri hakkında yeterli algı düzeyine sahip oldukları görülmüştür. Cinsiyete göre kıyaslandığında, kadın emekliler ve erkek emekliler arasında internet kullanım süresi bakımından anlamlı fark bulunamamıştır. Eğitim düzeyine göre kıyaslandığında, yükseköğretim mezunu emeklilerin ilk veya ortaöğretim mezunlarından daha fazla internette süre harcadıkları görülmüştür. İnternete bağlanma sürelerinde emekli oldukları mesleklere göre anlamlı farklılık bulunamamıştır.

Anahtar sözcükler: emekliler, internet kullanımı, algılar, demografik özellikler, tarama.

GİRİŞ

Son yüzyıla kadar yaşlılık alanındaki araştırmalara bakıldığında çalışma alanlarının edebiyat ve sanat alanlarında yoğunlaştığı görülmektedir. Günümüzde ise teknolojinin ilerlemesine paralel olarak yaşlılık, bütün yönleriyle bilimsel bir ilgi alanı haline gelmiştir ve bu konu üzerinde çalışılmaya başlanmıştır (Er, 2009). Teknolojideki bu hızlı gelişme neticesinde insan gücü yerine makine gücünün ön plana çıktığı görülmektedir ve bu da barınmadan beslenmeye, hijyenden sağlığa birçok alanda yaşam standardını yükseltmiştir. Yaşam kalitesindeki bu artış ise ortalama yaşam süresini uzatmaktadır. Teknolojik gelişmeler sayesinde yaşlı nüfus oranının artması ve buna paralel olarak bu nüfusun sorunlarının artması bu konuya olan bilimsel ilgiyi de artırmıştır.

Dünya Sağlık Örgütüne göre yaşlılığın sınırı 64 yaşının bitimi ve 65 yaşının başlamasıdır ve (a) erken yaşlılık evresi (65-75 yaşlar), (b) orta yaşlılık evresi (75-85 yaşlar) ve (c) ileri yaşlılık evresi (85 ve ötesi) şeklinde 3 evresi bulunmaktadır (Tümerdem, 2006). Türkiye'de bazı meslek grupları haricinde (Asker, Polis gibi) emeklilik yaşı 65 olarak referans alınmaktadır. Bu yaşlarda emeklilik sürekli bir sorunlar döngüsü olarak algılanmaktadır (Harte, 1972). Aylık gelirlerdeki azalmalara bağlı olarak finansal problemler, sosyal kapital ve mesleki bağlılıklardaki kayıplara bağlı olarak psiko-sosyal sorunlar ve yaşlanma il birlikte fiziksel değişimler yaşanmaktadır (Başaran, 2008; Blakeley ve Ribeiro, 2008; Fulks ve Fallon, 2001). Dolayısıyla bu kayıplar emeklilerin daha önce alıştıkları yaşam standartlarından ödün vermelerini gerektirir.

İnsan hayatının her evresinde farklı özellikleri kendisinde barındırdığı gibi emeklilik döneminde de kendine has özellikler bulundurmaktadır. Atchley'e (1989) göre bu döneme ait özellikler beş evreye ayrılmaktadır ve birey her bir evrede büyük değişimler yaşar. Birinci evre balayı evresidir ve emekliler kendilerini sağlıklı, enerji dolu, istekli ve mutlu hissettikleri ve daha önce yaptıkları planları uygulamaya koyduğu dönemdir. Bireylerin herhangi bir planı yoksa ikinci evreye geçiş daha hızlı olur. İkinci evre, düş kırıklığı evresidir ve sıkıntı ve bunalım belirtileri gözlemlendiği evredir. Üçüncü evre olan yeniden uyum evresinde, öncelikler yeniden düzenlenir ve sınırlanmalar kabul edilir. Dördüncü evre olan denge evresinde ise yeniden uyum evresindeki kabullenme ile birlikte emekliliğe olan bakış daha gerçekçidir ve bu evre emeklilik döneminin rahatlık evresi olarak ta düşünülür. Son olarak emekliliğin sonlanma evresinde, ağır kronik hastalıklar ya da ölüm beklenir.

Bilgi ve iletişim teknolojilerinin (BIT) günlük yaşamın her alanına nüfuz etmesi ve toplumsal ve ekonomik önemi göz önünde bulundurulduğunda emekli insanların da BIT kullanıcısı olmaları kaçınılmaz bir gerçektir (Jamieson ve Rogers, 2000). Esasen BIT kullanımı emekli insanlar için dış dünya ile yeniden bağ kurma ya da iletişimlerini geliştirme (White vd., 1999) ve yüksek kalitede yaşamın tadını alma (Irizarry ve Downing, 1997) anlamını taşır. BIT yaşlı insanlar için hayatı geliştirme, sağlık açısından uygun öğrenme, arkadaş ve ailelerle iletişim kurma hatta iş sınırlılığından dolayı topluma dahil olmada kaynak olabileceği tartışılmaktadır (White vd., 1999; White ve Weatherall, 2000). Emekli insanların internete katılımını artırmak küresel bir çaba haline gelmiştir. İnternet sadece devlet sistemleri ya da hizmetleri için değil ayrıca yaşlıların günlük yaşamlarına da katkıda bulunmak ve daha iyi bir şekilde toplumsal yaşama entegre olabilmek için de kullanılabilir. Ancak, yaşlı insanlar genç insanlara göre daha az internet kullanımı eğilimindedirler.

İnternet emekli insanlar için bağımsızlıklarını sürdürme fırsatları sağlayabilir (Kiel, 2005). Örneğin daha önce yapabildikleri gibi seyahat edemeyen yaşlılar için internet dünyayı onların ayaklarına getirebilir ve onlara sınırsız bilgi, elverişlilik, eğlence ve aileleriyle iletişim olanağı sağlar (Federal Interagency Forum on Aging-Related Statistics, 2000). BIT kullanımı yaşlı insanların boş zaman aktivitelerini çeşitlendirmekte ve yeterlilik ve öz saygı düzeylerini artırabilmektedir. Lansdale'e (2002) göre internet yaşlılara yaşam boyu öğrenmede yardımcı olmaktadır.

Emeklilerin internet kullanımını etkileyen bazı faktörler mevcuttur. Coğrafi ve fiziksel kısıtlamalar, hastalıklar, ulaşım eksikliği ya da uzun süreli bakıma muhtaç olma durumları yüzünden emekli insanlar çevrimiçi etkileşime uzak kalmaktadırlar. Yaşlı insanlar internette gezinirken, bilgi donanımı bakımından da engellerle karşılaşabilirler. Yaşlı bir bireyin çevrimiçi araştırma becerisi ve strateji eksikliği önemli bir engeldir (Swindell, 2002; Xie, 2008). Jaeger ve Xie (2009) web site tasarlayıcılarının ve geliştiricilerinin yaşlıların kullanmakta güçlük çekmeyeceği web siteleri oluşturmakta sorumlu olmaları gerektiğini ve onlar için çevrimiçi toplulukların kolay anlaşılabilir olmadıklarını vurgulamaktadır. İnternete karşı sosyal çevrede küçük düşme psikolojisi yaşlıları internet kullanıcısı olmaktan alıkoyabilir. Millward' a (2003) göre emekli insanlar internet hakkında bilgi karmaşalarını ya da yetersizliklerini saklamak için BIT kullanımları hakkında yalan söylemeye meyillidirler.

Alanyazında önceki yapılan çalışmalarda yaşlı nüfusun arttığı ve yaşlıların internet kullanımı için istekli olmaları gerektiği görülmektedir (Daulerio, 2001; Guynn, 2002). Yaşlı insanların internet kullanımını etkileyen belli başlı faktörler arasında referans/örnek gruplar ve sosyal çevredeki etkiler (Guynn, 2002; Trocchia ve Janda, 2000), tutum ve davranışlar (hazır bulunuşluluk, küçük düşme kaygısı) (Guynn, 2002; Modahl, 2000; Trocchia ve Janda, 2000), fiziksel ve pragmatik sorunlar (fiziksel rahatsızlıklar, kişisel bilgisayar eksikliği) (Hill, 2000; Hopkins, 2002; Polyak, 2000) yer almaktadır. İnternet kullanımının yaşlılar için zihinsel uyarıları geliştirme (Berbeo, 1999), sağlık konularında araştırma yapma ve bilgilenme (Daulerio, 2001; DeCrescenzo ve BayButt, 1999; Gervey ve Lin, 2000), sosyal hizmetlerden yararlanma (çevrimiçi devlet hizmetlerini kullanma ve bilgilenme) (Carpenter, 2000), güncel ve finansal konuları takip etme (Gervey ve Lin, 2000) gibi faydalarının olduğu ortaya konulmuştur.

Çalışmanın Amacı

İnternet son yıllarda emekli insanların yaşamlarında da vazgeçilmez bir araç haline gelmiştir. Günümüzde internette birçok işlem yapılabilmektedir. Ayrıca devlet politikaları, sağlık ve iş hizmetlerinde maliyeti düşük olduğundan internet ortamına yoğun bir talep oluşturmak istenmektedir. İnternetin yaşam içerisindeki gerekliliğinin gittikçe artması emeklilerin de internet kullanımı doğrultusundaki önemini gittikçe artırmıştır. Alanyazın incelendiğinde Türkiye'de yaşayan emekli insanların internet kullanım durumu hakkında herhangi bir çalışmaya rastlanmamıştır. Dolayısıyla bu çalışmada emekli insanların internet kullanım profillerinin tespit edilmesi ve internetin günlük yaşamlarındaki yeri ve öneminin belirlenmesi amaçlanmaktadır. Bu doğrultuda aşağıdaki araştırma sorularına cevap aranmaktadır:

1. Emekliler interneti ne düzeyde kullanmaktadır?
2. Emekliler internete en sık nerelerden bağlanaktadırlar?
3. Emeklilerin internet kullanımı için ihtiyaç duyduğu destekler nelerdir?
4. Emekliler interneti hangi amaçlara yönelik kullanmaktadırlar?
5. İnternet kullanım düzey ve amaçlarında demografik özelliklere göre farklılık var mıdır?
6. Emekliler internetin kendilerine ne tür faydalar ve zararlar sağladığını düşünmektedirler?

YÖNTEM

Araştırma Deseni

Emeklilerin internet kullanım alışkanlıklarını ve bazı değişkenlerle ilişkisini inceleyen bu araştırmanın deseni olarak ilişkisel tarama modeli kullanılmıştır. İlişkisel tarama modeli, iki ya da daha çok sayıdaki değişken arasında birlikte değişim varlığını veya derecesini belirlemeyi amaçlayan modeldir (Karasar, 2012). Çalışmada internet kullanım değişkenlerinin sosyolojik ve demografik özelliklerle ilişkileri araştırılmaktadır.

Evren ve Örneklem

Çalışmanın evrenini Isparta il merkezinde yaşamakta olan emekli insanlar oluşturmaktadır. Katılımcılar uygun (elverişli) örnekleme yöntemi ile belirlenmiştir. Araştırmacılar emeklilerin yoğun olarak bulunduğu il merkezindeki cami, kıraathane, öğretmenevi, polis evi ve huzurevi gibi mekânları ziyaret ederek buradaki emeklileri çalışmaya davet edilmiştir. Katılımcıların toplam sayısı 109 olup bunların 77'si erkek (%70,6) 32'si kadındır (%29,4). Katılımcıların emekli oldukları kurumların dağılımı 61 memur (%56), 19 işçi (%17,4), 15 esnaf (%13,8) ve 14 çiftçi (%12,8) iken çalışmaya katılan emeklilerin eğitim durumlarının dağılımı ise 40 lise (%36,7), 31 üniversite ve üstü (%26,4), 26 ilkokul (%23,9) ve 12 ortaokul (%11) şeklindedir.

Verilerin Toplanması

Veriler anket yoluyla toplanmıştır. Çalışmada emeklilerin demografik ve internet kullanımıyla ilgili özelliklerinin sorgulandığı bilgi formu kullanılmıştır. Bu form 3 ana bölümden oluşmaktadır. Birinci bölümde emeklilerin demografik özelliklerini (cinsiyet, eğitim durumu, emekli olunan meslek vb.) içeren sorular bulunmaktadır. İkinci bölümde internet kullanım profilleriyle ilgili sorular bulunmaktadır. Bu sorular kaç yıldır internet kullandığı ve interneti ne kadar kullandıkları gibi olmak üzere açık uçlu, evde bilgisayar sahipliği, evde internet bağlantısı sahipliği ve internete nereden bağlandıkları gibi olmak üzere kapalı uçlu şeklindedir. Bunun yanında internette hangi aktiviteleri gerçekleştirdikleri ile ilgili sorular da yer almaktadır. Bunlar Likert tipi bir ölçekte olup katılımcıların her bir madde için "1=Hiç" ve "5=Çok sık" aralığındaki seçeneklerinden birini işaretlemesi istenmektedir. Üçüncü bölümde ise katılımcıların internete karşı sahip oldukları düşüncelerini ve görüşlerini ortaya çıkarmak amacıyla bazı ifadeler yer almıştır. Bu ifadeler Likert tipi ölçekle "1=Kesinlikle katılmıyorum" ve "5=Kesinlikle katılıyorum" aralığındaki seçeneklerden birisi işaretlenecek şekilde yapılandırılmıştır. Bu ifadelerin oluşturulmasında ilgili litertürde bulunan internet kullanımıyla ilgili çalışmalardan yararlanılmıştır (Ewing ve Thomas, 2010; Koc, 2006). Bu form daha sonra uzman görüşü alınarak tekrar revize edilmiştir. Hazırlanan anket formu birinci yazar tarafından yukarıda bahsedilen mekânlardaki emeklilere uygulanmıştır. Anketler emekliler tarafından cevaplanmadan önce araştırmanın amacı, form ve ölçeklerin nasıl cevaplandırılacağı hakkında gereken bilgi verilmiştir. Araştırmaya katılmayı sözlü olarak kabul ettiğini belirten emeklilere anketler dağıtılmıştır. İstedikleri takdirde anketi araştırmacının dolduracağı seçeneği de sunularak anketler doldurulmuştur.

BULGULAR

Katılımcıların internet kullanım desenleri frekans ve yüzde istatistikleri ile çözümlenmiş ve Tablo1 'de verilmiştir. Buna göre katılımcıların çoğunluğunun (%70) evlerinde bilgisayar bulunmaktadır. Yarısından biraz fazlasının (%55) evlerinde internet bağlantısı vardır. İnternet kullanım sıklıkları incelendiğinde, katılımcıların %11'i günlük, %19,3'ü haftalık, %10,1'i aylık internet kullanıcısı iken yaklaşık olarak %60'ı interneti kullanmamaktadırlar. İnternet kullananların internete en çok bağlandıkları ortam ise ev (%63,6), mobil araçlar (%20,5), tanıdıkların mekânı (%11,4) ve internet kafe (%4,5) şeklinde dağılım göstermektedir.

Tablo 1. İnternet Kullanımına Ait Bulgular

Değişken	Düzey	f	%
Evde bilgisayar	Var	76	69,7
	Yok	33	30,3
Evde internet bağlantısı	Var	60	55
	Yok	49	45
İnternet kullanım sıklığı	Hiç	65	59,6
	Ayda birkaç kez	11	10,1
	Haftada birkaç kez	21	19,3
	Her gün	12	11,0
Başat internet kullanım yeri	Ev	28	63,6
	Mobil	9	20,5
	Tanıdıklar (akraba, komşu)	5	11,4
	İnternet kafe	2	4,5

Tablo 2'de emeklilerin interneti hangi amaçlara yönelik kullandıklarına ait bulgular sunulmuştur. En sık kullanım amaçları sağlık, teknoloji, hobi, hukuk vb. konularda genel bilgi edinmek, sosyal paylaşım ağlarını takip etmek ve oyun oynamak şeklindedir. Öte yandan yatırım işlemleri yapmak, alışveriş yapmak ve temel bankacılık işlemlerini yapmak gibi ticari işlemler ise en nadir kullanım amaçları arasındadır.

Tablo 2. İnternet Kullanım Amaçları

Amaç	$\overline{X}$	Ss
Genel bilgi edinmek (sağlık, hobi, teknoloji, hukuki vb.)	4,32	0,74
Sosyal paylaşım ağlarını takip etmek (Facebook, Twitter vb.)	4,20	1,05
Oyun oynamak	3,52	1,53
Vakit geçirme/eğlence amaçlı sörf yapmak	3,32	1,14
Kamu işlemlerini yapmak (e-devlet uygulamaları, belediye, SGK, vb.)	3,07	1,50
Müzik dinlemek (şarkı, türkü, ilahi vb.)	3,05	1,26
Güncel olayları ve haberleri takip etmek	2,57	1,13
Elektronik posta okumak ve göndermek	2,18	0,79
Vakit geçirme/eğlence amaçlı sörf yapmak	2,07	1,59
Temel bankacılık işlemlerini yapmak (havale, EFT, fatura işleri)	2,05	1,14
Alış veriş yapmak	1,80	0,82
Yatırım işlemlerini takip etmek (borsa, döviz, fon, gayrimenkul)	1,00	0,00

Emeklilerin internet kullanırken karşılaştıkları başlıca engeller internet kullanmanın karmaşık olması (%56,8), virüsler, kişisel bilgi hırsızlığı, dolandırıcılık vb. güvenlik sorunları (%52,3) ve etraflarında internet kullanımını destekleyecek kişilerin olmaması (%34,1) şeklindedir (Tablo 3).

Tablo 3. İnternet Kullanımı Önündeki Bariyerler

Bariyer	f	%
İnternet kullanmanın karmaşık olması	25	56,8
Güvenlik sorunları (virüsler, kişisel bilgi hırsızlığı, dolandırıcılık vb.)	23	52,3
İnternet kullanımını destekleyecek kişilerin olmaması (aile bireyleri, arkadaş vb.)	15	34,1
İnternet kullanım bilgi ve becerisinde yetersizlik	13	29,5
İnternet erişiminin pahalı olması	9	20,5
İlgimi çekecek içerik yetersizliği	6	13,6
Fiziksel engeller (el-kol hareket rahatsızlıkları, görme bozuklukları vb.)	5	11,4
Yeterli zamanın olmaması	2	4,5

Emeklilerin internet kullanma düzeyleri haftalık internette geçirdikleri süre olarak da ölçülmüştür. Buna göre haftalık internette harcadıkları toplam süre 1 saat ile 30 saat arasında değişmekte olup ortalama 11,48 saattir (Ss=6,95). Demografik özelliklere göre internette harcanan haftalık süreye ait betimsel istatistikler Tablo 4'te sunulmuştur. Bu özelliklere göre anlamlı farklılıkların olup olmadığını belirlemek için bağımsız örneklemler t-testi ve tek faktörlü varyans analizi (ANOVA) yapılmıştır. Süre değişkeninin incelenmesinde, çarpıklık (0,84) ve basıklık (-0,16) katsayılarının ±1 arasında olması ve Normal Q-Q grafiğinde noktaların bir doğru üzerinde dağılmasından dolayı değişkenin normal dağılıma sahip olduğu görülmüştür (Büyüköztürk, 2009).

Tablo 4. Demografik Özelliklere Göre İnternette Harcanan Süre

Değişken/Düzey	N	$\overline{X}$	Ss
Cinsiyet			
Kadın	15	13,70	5,56
Erkek	29	10,33	7,39
Öğrenim düzeyi			
İlk veya ortaöğretim	14	8,32	5,24
Yükseköğretim	30	12,95	7,23
Emekli olunan meslek			
Memur	34	12,03	7,06
İşçi	7	10,50	7,49
Esnaf	3	7,50	3,91

Tablo 5. İnternet Kullanımı Hakkında Düşünceler

Madde	$\overline{X}$	Ss
Uygun olmayan ve bozucu içerikler (cinsel yayınlar, terör, kumar vb) toplumu olumsuz etkiler	4,91	0,29
Bilinçsiz internet kullanımı fiziksel rahatsızlıklara (bel ağrısı, görme bozuklukları vb.) neden olur	4,82	0,45
Bilinçsiz internet kullanımı psikolojik rahatsızlıklara (bağımlılık, uyku bozukluğu vb.) neden olur	4,70	0,51
İnternet kullanmak kişinin toplumdaki sosyal statüsünü artırır	4,48	0,90
İnternette sayesinde ilgi çeken konularda bilgi edinmek zevklidir	4,36	0,49
İnternet üzerinden aranan bilgiye kolayca ulaşılır	4,32	0,67
İnternette güvenli veya doğru olmayan bilgiler kolayca yayılır	4,05	0,75
İnternet emeklilerin can sıkıntısını veya yalnızlığını giderir	3,89	1,02
İnternet farklı kültürleri tanımaya ve anlamaya yardımcı olur	3,70	0,59
İnternet dünyada neler olup bittiğini takip etmeye yardımcı olur	3,66	0,48
İnternet sayesinde bazı işler daha ekonomik yapılır (telefon görüşmesi vb.)	3,59	0,62
İnternet demokrasi ve insan haklarını güçlendirir	3,45	1,44
İnternet günlük hayatı kolaylaştırır	3,45	0,59
İnternette insan kendini daha rahat ifade eder	3,16	0,43
İnternet kişilerin daha verimli kullanacakları zaman ve gücü çalar	2,61	0,72

Cinsiyete göre kıyaslandığında, erkek ve kadın emekliler arasında internet kullanım süresi bakımından anlamlı fark bulunamamıştır [$t(42)=1{,}55$, $\eta^2=0{,}05$, $p>0{,}05$]. Eğitim düzeyine göre kıyaslandığında, yükseköğretim mezunu emeklilerin ilk veya ortaöğretim mezunlarından daha fazla internette süre harcadıkları görülmüştür [$t(42)=2{,}14$, $\eta^2=0{,}10$, $p<0{,}05$]. Katılımcıların emekli olduğu mesleğe göre yapılmış tek faktörlü gruplararası ANOVA sonuçları haftalık internete bağlanma sürelerinin emekli olunan mesleklere göre anlamlı farklılaşmadığını göstermiştir [$F(2, 41)=0{,}66$, $\eta^2=0{,}03$, $p>0{,}05$].

Tablo 5'de emeklilerin internet hakkında ne düşündüklerine ait bulgular sunulmuştur. Katılımcılar arasındaki en yaygın düşünceler uygun olmayan ve bozucu içeriklerin (cinsel yayınlar, terör, kumar vb.) toplumu olumsuz etkilediği, bilinçsiz internet kullanımının fiziksel rahatsızlıklara (bel ağrısı, görme bozuklukları, vb) ve psikolojik rahatsızlıklara (bağımlılık, uyku bozukluğu, yalnızlık vb.) neden olduğu şeklindedir.

SONUÇ

Araştırmanın bulguları genel olarak incelendiğinde araştırmaya katılan emeklilerin yaklaşık olarak %60'nın interneti kullanmadığı görülmektedir. Türkiye İstatistik Kurumunun (TÜİK) 2013 yılı hane halkı bilişim teknolojileri kullanım araştırma sonucuna göre internet kullanım oranı ise yaklaşık olarak %50 civarındadır (TUİK, 2013). Emeklilerin var olan teknolojiyi kullanma kapasiteleri ve yetenekleri yüksek değildir. Çalışmanın bulguları arasında da internet kullanımını karmaşık bulmaları ve interneti kullanırken yardım alacak bireylerin olmadığını düşünmeleri bu görüşü desteklemektedir. Diğer taraftan emeklilerin internet kullanım oranlarının düşük olmasının sebeplerinden bir tanesi de teknolojiye karşı duyulan kaygı düzeyinin yüksek olmasıdır. Literatürde bu kaygı düzeyinin yüksek olması "teknofobi" ya da "teknostress" olarak adlandırılmaktadır. Teknofobi, teknolojiyi kullanma korkusu olarak adlandırılmakla birlikte gençlere göre yaşlılarda daha fazla görülmektedir (Laguna ve Babcock, 1997; Levin ve Gardon, 1989; Rosen ve Weil, 1995). Araştırma kapsamında elde edilen bulgular incelendiğinde bunu destekleyici nitelikte olduğu görülmektedir. Bu bulgulara göre katılımcılar internete kuşkucu ve şüpheci baktıkları, interneti çekinerek kullandıkları, internetin bilinçsiz kullanıldığında toplumu olumsuz yönde etkilediğini, fiziksel ve psikolojik açıdan da sağlığa zararlı olduğu görüşüne sahiptir. Bu sebeplerden dolayı internet kullanımının yaygınlaştırılması için gerekli bilgilendirmeler kamu kuruluşları ve özel sektörün gündemine alınmalıdır. Bu kapsamda emeklilere bilinçli internet kullanımıyla ilgili ücretsiz halk eğitim kursları verilmelidir. Web site tasarlayıcılarının tasarladıkları web sitelerin emeklilerin kullanımına uygun olacak şekilde tasarlamaları konusunda yasal düzenlemeler getirilmelidir.

Bilişim teknolojilerinin hızla gelişmesi akıllı telefonların kullanımının yaygınlaşmasını da beraberinde getirmiştir. TUİK' in 2013 yılı hane halkı bilişim teknolojileri kullanımı araştırması sonuçlarına göre %65,6 ile ev internet kullanılan mekânlar arasında en çok kullanılan bağlantı türüdür. Mobil bağlantı ise tüm hanelerin %20,1'inde kullanılmaktadır (TUİK, 2013). Bu oranın araştırma bulgularına da yansıdığı görülmektedir. Başat internet kullanım yeri ev (%63,6) iken mobil (%20,5) ise ikinci sırada yer almaktadır. Mobil hizmetlerin yaygınlaşması emeklilerin internet kullanımını da artırıcı yönde etkileyebilir. Bu yaygınlaşma ile mobil teknoloji kullanımının daha da artması beklenmektedir.

Bu çalışmada emeklilerin interneti yoğun kullanma amaçları genel kültür amaçlı bilgi edinme, sosyal sitelerde vakit geçirme ve eğlence amaçlı kullanımlar olarak belirlenmiştir. Literatürde internetin çoğunlukla eğlence amaçlı kullanıldığına ilişkin bulgular vardır (Bayraktar ve Gün, 2007; Taşkın, 2002). Emeklilerin kullanım amaçlarına baktığımızda diğer yaş gruplarıyla benzer şekilde interneti kullandığı görülmektedir. Diğer taraftan araştırma bulgularında katılımcıların alışveriş yapma, temel bankacılık işlemleri gibi para ile ilgili etkinlikleri tercih etmedikleri saptanmıştır. Bu da yine araştırma bulgularından katılımcıların güvenlik unsurları yüzünden internet kullanmaya çekindikleri bulgusunu desteklemektedir. Emeklilerin bu gibi işlemleri internet üzerinden daha az enerji ve zamanda yapabilecekleri konusunda ve güvenlik açıkları hakkında bilgilendirilerek bu konu hakkında kamu spotu çalışmaları yapılmalıdır.

Emeklilerin internet kullanma süreleri cinsiyet yönünden incelendiğinde anlamlı bir fark bulunamamıştır. Literatürde erkeklerin kadınlara göre internette daha fazla süre harcadıkları ile ilgili çalışmalar mevcuttur. Fakat teknolojinin hızla gelişmesi ve yayılması ile bu iki cinsiyet arasındaki bulunan farklılığın ortadan kalktığı da iddia edilmektedir. Araştırmada emeklilerin internete bağlanma süreleri eğitim seviyesi bakımından incelendiğinde anlamlı bir fark bulunmuştur. Eğitim durumu yükseköğretim ve üstü olan emekliler diğerlerine nazaran daha fazla internete bağlanma süresinin olduğu görülmüştür. Bu durum beklenen bir sonuçtur zira eğitim seviyesi yüksek olan kişilerin yeniliklere ve teknoloji kullanımına daha çok eğilimlidirler. Diğer taraftan, emekli olunan mesleğin internet kullanma süresi üzerine bir etkisi olmadığı gözlemlenmiştir. Bu sonuç şaşırtıcıdır. Çalışmanın başlangıcında emekli olunan mesleğin internete bağlanma sürelerini etkileyeceği düşünülmekteydi. Memur emeklilerinin devlet dairelerinde çalışmalarından dolayı diğerlerine kıyasla daha fazla BİT kullanmalarından hareketle daha çok internete bağlanma sürelerinin olması bekleniyordu. Oysa elde edilen bulgulardan da anlaşılıyor ki emeklilerin emekli olduğu meslek grubu internete bağlanma sürelerini etkilememektedir.

MEASURING PERIMETER AND AREA WITH WEB-BASED TEACHING

Aytaç KURTULUŞ
Eskişehir Osmangazi University, Faculty of Education

Demet TEMİZ
Eskişehir Osmangazi University, Institute of Educational Sciences

ABSTRACT: This study is an action research which aims to determine and eliminate misconceptions of the 6th grade students in the fields of measurement units, periphery and area. Two web-assisted activity applications were prepared and applied to the students. In the first activity, a problem scripted for length measurement and area measurement was presented. Computer means through which the students will utilize internet was supplied to all the groups and the problem was presented in the computer environment. The region, the area of which was asked, was presented on a chequered ground in the computer environment and these squares were used as nonstandard area measurement unit, and approximate area measurement was requested. As a result of the first application, problems such as confusing the periphery and area concepts, incomprehensibility of length and area measurement units and use of incorrect units were encountered. With the development of the methods and techniques in the first application, the second web-assisted activity was planned and applied. In this study, in addition to the first activity, as nonstandard measurement units rectangular materials were used. In this study, use of ruler was also supplied for the length measurement. According to the results of the interview with the students, the students found the second activity more useful in terms of acquiring the area and periphery concepts. Use of rule for length measurement and use of nonstandard concretized measurement units for area measurement in the second activity made the subject more comprehensible. The student could easily focus on the subject by increasing the visual features of the scripted problems by means of the computer. However, it is concluded that use of technology alone is not adequate for understanding the concepts and it is absolutely necessary to include the activities through which active participation of the student will be provided.

Key words: area, perimeter, mathematics education, measurement, web-based teaching

WEB-DESTEKLI ÖĞRETIM ILE ÇEVRE VE ALAN ÖLÇÜMÜ

ÖZET: Bu çalışma, ortaokul 6. Sınıf öğrencilerinin; ölçme birimleri, çevre ve alan konularındaki kavram yanılgılarını belirleyip gidermeyi amaçlayan bir eylem araştırmasıdır. Öğrencilere web destekli iki etkinlik uygulaması hazırlanmış ve uygulanmıştır. İlk etkinlikte uzunluk ölçme ve alan ölçme konusuna yönelik senaryolaştırılmış bir problem sunulmuştur. Bütün gruplara internet kullanabilecekleri bilgisayar aracı sağlanmış ve problem bilgisayar ortamında sunulmuştur. Alanı istenilen bölge, kareli bir zeminde bilgisayar ortamında sunulmuş ve bu kareler standart olmayan alan ölçme birimi olarak kullanılıp tahmini alan ölçümü yapmaları istenmiştir. İlk uygulama sonucunda; çevre ve alan kavramını karıştırma, uzunluk ölçme ve alan ölçme birimlerini anlamlandıramama ve yanlış birim kullanma gibi sorunlarla karşılaşılmıştır. İlk uygulamadaki yöntem ve teknikler geliştirilerek ikinci web destekli etkinlik planlanmış ve uygulanmıştır. Bu çalışmada ilk etkinliğe ek olarak standart olmayan alan ölçme birimleri olarak dikdörtgen şeklindeki materyaller ve uzunluk ölçümü için cetvel kullanılmıştır. Öğrencilerle yapılan görüşme sonuçlarına göre öğrenciler alan ve çevre kavramının kazandırılmasında ikinci etkinliği daha faydalı bulmuştur. İkinci etkinlikte uzunluk ölçümünde cetvel kullanmaları, alan ölçümünde somutlaştırılmış standart olmayan ölçü birimlerini kullanmaları konuyu daha anlaşılır hale getirmiştir. Hazırlanan senaryolaştırılmış problemlerin bilgisayar yardımıyla görsellik özellikleri artırılarak öğrencinin konuya kolayca odaklanması sağlanmıştır. Fakat kavramları anlamada sadece teknoloji kullanımının yeterli olmadığı mutlaka öğrencinin aktif katılımının sağlanacağı etkinliklere yer verilmesi gerektiği sonucuna ulaşılmıştır.

Anahtar sözcükler: alan, çevre, matematik eğitimi, ölçme, bilgisayar destekli öğretim

GİRİŞ

Ülkemizde de 2005-2006 yılından itibaren MEB Talim ve Terbiye Kurulunun hazırladığı yapılandırmacı yaklaşıma göre hazırlanan matematik öğretim programı kullanılmaktadır. Matematik öğretim programı incelediğinde önemli bir kısmını ölçme konusunun oluşturduğu görülmektedir. Geçmişten günümüze ölçme günlük hayatta kullandığımız ve sürekli karşımıza çıkan bir kavramdır. Yapılan araştırma ve değerlendirmelere baktığımızda günlük hayatımızda bu kadar sık kullandığımız ölçme konusunun öğrencilere yeterince kazandırılamadığı görülmektedir.

Yeni matematik programına göre öğrencilerin önce sezgiye dayalı karşılaştırma ve sıralama yapmaları, sonrasında standart olmayan ve olan birimler kullanarak ölçme yapmaları hedeflenmiştir. Öğretim programında 3. sınıfa kadar uzunluk ölçme, paralarımız, zaman ölçme, tartma ve sıvı ölçme alt başlıklarına ait kazanımlar bulunurken 3. sınıfta bu alt başlıklara alan ölçme ve çevre ölçme kazanımları eklenmektedir. (MEB,2015). Öğrencilerin 3. Sınıftan itibaren çevre ve alan kavramlarıyla tanışmalarına rağmen birçok ortaokul öğrencisinin çevre ve alan kavramlarını tanımlamada zorlandığı yapılan çalışmalar sonucunda görülmektedir.

Ölçme öğrencilerin anladıkları kolay bir konu değildir. TIMMS ve NAEP gibi uluslararası çalışmaların sonuçlarından elde edilen bulgular sürekli olarak öğrencilerin öğretim programındaki konular içerisinde ölçme alanında daha zayıf olduklarını göstermektedir. (Thompson & Preston, 2004). Her ne kadar metrik ve geleneksel ölçme sistemlerinin beraber öğrenimi buna etken olabilse de bu düşük performansın sebebi, büyük ihtimalle konunun öğretimi ile ilgilidir. (Van de Walle, 2014)

Ortaokul sınıflarında ilkokuldaki gibi, kesme, yırtma, yapıştırma, ayırma, birleştirme ve modellerden yararlanma ön planda düşünülmelidir. Öğretim metodu olarak buluş ve kılavuzlanmış buluş en çok başvurulan yollar olmalıdır. Ortaokul geometri çalışmalarında geometrik şekillerin özellikleri analiz edilmeli, aralarındaki ilişkiler buldurulmalı; ispata hazırlayıcı akıl yürütme çalışmalarına ağırlık verilmelidir; bu çalışmalarda yine yırtma, kesme, yapıştırma vb. etkinliklerden yaralanılmalıdır. Sebep-sonuç ilişkileri çıkarılmaya başlanılmalıdır (Baykul, 2014).

Ölçme alanındaki literatür incelendiğinde, genel olarak öğrencilerin ölçme ile ilgili kavramları anlamada, bu kavramları ilişkilendirmede ve problem çözme sürecine dahil edebilmede sıkıntılar yaşadıkları; alan, çevre ve hacim gibi kavramların anlamlarını bilmeden ve mantığını anlamadan, ezbere öğrenilen formüller ile sonuca ulaşmaya çalıştıkları görülmektedir (Chappell & Thompson, 1999; Grant & Kline, 2003; Martin & Strutchens, 2000 Stephan & Clements, 2003: Akt. (Şişman & Aksu, 2009)).

Dağlı ve Peker'in (2012) ilköğretim 5. Sınıf öğrencilerinin geometrik şekillerin çevre uzunluğunu hesaplamaya ilişkin bilgilerini araştırdığı çalışmasında öğrencilerin çevre ve alan hesabını birbirine karıştırma, çevre uzunluğunu açılarla ilişkilendirme gibi kavram yanılgılarına sahip oldukları sonucuna ulaşmıştır. Ayrıca öğrencilerin, aynı parçalardan oluşturulan farklı şekillerin çevre uzunluklarını hesaplamada zorlandıkları görülmüştür. Bu sonuç doğrultusunda öğrencilerin farklı düşünme becerilerinin geliştirilmesi gerektiği vurgulanmıştır.

Küçük ve Demir'in (2009) ilköğretim 6-8. Sınıflarda matematik öğretiminde karşılaşılan bazı kavram yanılgılarını araştırdığı çalışmasında öğretmenlere ''Matematik derslerinde, öğrencilerin anlamada ve uygulamada güçlük çektikleri konular'' sorulmuş ve geometrik kavramlar 3. sırada yer almıştır.

Yenilmez ve Demirhan'ın (2013) altıncı sınıf öğrencilerinin bazı temel matematik kavramları anlama düzeylerini araştırdığı çalışmasında öğrencilerin kavramları tam olarak tanımadıkları halde kavramla ilgili işlemleri yaptıkları görülmüş ve bu durum öğrencilerin kavramı anlamadan formülleri ezberleyerek işlem yaptıkları şeklinde açıklanmıştır.

Şişman ve Aksu'nun (2009) yedinci sınıf öğrencilerinin alan ve çevre konularında ki başarılarını araştırdığı çalışmasında öğrencilerin çoğunun çevrenin ne anlama geldiğini yüzeysel olarak açıklayabildikleri ve aynı parçalar kullanılarak oluşturulan şekillerin çevre uzunluğunun değişebileceği konusunda kavram yanılgıları olduğu görülmüştür. Ayrıca öğrencilerin yarıya yakın bir kısmının alan ve çevre hesabını karıştırdıkları ve alan korunumu kazanılmadığı sonucuna ulaşılmıştır. Yedinci sınıf öğrencilerinin alan ve çevre konularındaki başarılarını ölçmek için uygulanan testte gösterdikleri performans değerlendirildiğinde öğrencilerin kavram bilgisi gerektiren sorularda başarılarının düştüğü fakat hesaplamaya dayanan sorularda başarılarının arttığı görülmüştür. Alan ve çevre hesaplarının formüle dayalı olarak değil öncelikle kavram olarak ne olduğu öğretilmeli, kesme-katlama yeniden düzenlemeyi içeren etkinlikler yapılarak çevre uzunluğunun değişebilirliği ve alanın korunumu geliştirilmeli, alan-çevre hesaplamalarında sonuçların uygun ölçme birimleriyle ifade etmenin önemi vurgulanmalı gibi öneriler vurgulanmıştır.

Problem Cümlesi

1) Ortaokul 6. sınıf öğrencilerinin uzunluk ve alan ölçme birimlerine yönelik kavram yanılgıları nasıl giderilir.
2) Ortaokul 6. Sınıf öğrencilerinin alan ve çevre kavramlarına yönelik kavram yanılgıları nasıl giderilir.

AMAÇ

Matematik soyut kavramlar içeren bir alan olması nedeniyle zaman zaman öğrenciler kavram yanılgıları yaşamaktadırlar. Öğrencilerin anlamada zorlandıkları alanlardan biriside ölçme konusudur.

Ölçme konusu, günlük hayatımızda oldukça önemli bir yer tutmasına rağmen derslerde yeterince günlük hayatımızın bir parçası olarak aktarılamamakta ve birçok öğrencide kavram yanılgıları oluşmaktadır. Uzunluk ölçmede olduğu gibi alan ölçmede de birimlere ihtiyaç duyulduğu bu birimlerin alanın bir parçası olması gerektiğinin öğrencilere kazandırılmasında zorluklar yaşandığı görülmektedir. Literatür incelendiğinde 8. Sınıf dâhil ortaokulun tüm kademelerinde alan ve çevre kavramlarını kazanamayan ve kavram yanılgıları olan öğrenciler olduğu görülmektedir.

Bu çalışmanın amacı ortaokul 6. Sınıf öğrencilerinde; ölçme birimleri, çevre ve alan konularında oluşan kavram yanılgılarının nasıl giderilebileceğini öğrenmektir.

YÖNTEM

Bu araştırmada nitel araştırma deseninin eylem araştırması yöntemi kullanılmıştır. Eylem araştırmaları uzman araştırmacıların yürütücülüğünde, uygulayıcıların ve probleme taraf olanların da katılmasıyla, var olan uygulamanın eleştirel bir değerlendirmesini yaparak, durumu iyileştirmek için alınması gereken önlemleri belirlemeyi amaçlayan araştırmalardır (Karasar, 1999.s.27).

Bu çalışmada 6. Sınıf öğrencilerinin uzunluk ve alan ölçme konusunda var olan bilgileri gözlemlenmiş ve sahip oldukları kavram yanılgıları nedenleriyle birlikte derinlemesine belirlenmeye çalışılmıştır. Elde edilen bulgular sonucunda yeni yöntem ve teknikler kullanılarak var olan kavram yanılgıları giderilmeye çalışılmıştır.

Çalışma Grubu

Araştırma grubu 2015-2016 eğitim-öğretim yılının güz döneminde Artvin ili, merkez Gazi Ortaokulundaki 6. sınıfta öğrenim gören 16 öğrenci oluşturmaktadır. Bu 16 öğrenci 4 kişilik gruplara ayrılmıştır. Grupların oluşturulmasında her gruba akademik başarı yönünden dengeli bir dağılımın yapılması dikkate alınmıştır. Aktif öğrencilerle pasif öğrencilerin birlikte çalışması sağlanmıştır.

Çalışma Ortamı

Yaptığımız bu çalışma seçmeli ders saatlerinde boş dersliklerden faydalanılarak yapılmıştır. Sınıf ortamı öğrencilerin işbirlikli çalışacağı şekilde düzenlenmiştir. Öğrenciler 4 kişilik gruplara ayrılmış ve sınıf oturma düzeni buna göre tasarlanmıştır. Sınıf teknolojik anlamda donatılmaya çalışılmıştır. Bilgisayar sınıfı grup çalışmasına uygun olacak şekilde düzenlenemediği için kullanılmamıştır. 3 okul bilgisayarı 3 grubun masasına kurulmuş diğer grubun da akıllı tahtayı çalışmalarında kullanmaları sağlanmıştır. Gerçek hayattan uyarlanan senaryolaştırılmış problemler öğrencilere akıllı tahta ve bilgisayarlar aracılığıyla aktarılmış ve öğrencilerin çalışmalarında okul internet bağlantısından faydalanmaları sağlanmıştır.

Veri Toplama Araçları

Öğrencilere günlük hayattan uyarlanan problemler webquest formatında uygulanmış ve sınıf ortamında video çekimi yapılmıştır. Her uygulamadan sonra öğrencilerle görüşülmüş ve uygulamanın olumlu-olumsuz tarafları öğrencilere sorulmuştur. Bu görüşmeler video kayıtlarına alınmıştır. Öğrencilerin uygulama sırasında çalıştıkları çalışma kağıtları uygulama sonrası öğretmen tarafından toplanmıştır. Uygulama sonunda grupların çözümlere nasıl ulaştıkları sorulmuş ve video çekimi yapılmıştır.

Öğrenmeyi öğretme üzerine bir çalışma

'Webquest' öğrencinin etkileşim içinde olduğu bilginin belli bir ölçüde veya tamamen internet üzerindeki kaynaklardan veya video konferans aracılığıyla sağlandığı araştırma yönelimli bir aktivitedir.'(Berni Dodge, 1997). Sorgulamaya yönelik bu öğretim tekniği, öğrencilerin anlamlı bir şekilde bilgilerin ayrımını yapabilmelerini, kendilerine ait problem çözme uygulamaları geliştirmelerini ve internet kaynaklarının etkileşimli bir şekilde kullanmalarını sağlar (Lim ve Hernandez, 2007). Webquestler temelde yapılandırmacı yaklaşıma uygun olarak hazırlanmaktadır. Ayrıca Webquest ile öğretim, sosyal yapılandırmacılığın eğitimde uygulanmasında ideal bir yoldur (Simina 2005).

Uygulama Süreci

Araştırma 16 kişiden oluşan 6. Sınıf öğrencilerine uygulanmıştır. 6. Sınıf öğrencilerinin çevre, alan ve birimlerine yönelik kavram yanılgılarını anlamak ve mevcut durumu belirlemek için 1. çalışma yapılmıştır. Birinci uygulama matematik öğretmeni tarafından hazırlanan webquest çalışması ile yapılmıştır. Uzunluk ölçme birimlerini dönüştürme ve alan hesaplama konusuyla ilgili günlük yaşamdan tasarlanan bir problem, bilgisayarlar aracılığıyla öğrencilere sunulmuştur. Öğrencilerden öncelikle webquest çalışmasında yer alan linkler yardımıyla uzunluk ölçme ve alan hesabı konusuyla ilgili bilgi toplamaları ve konuları hatırlamaları istenmiştir. Her grupta bulunan bilgisayarlar ve internet bağlantısı yardımıyla problem çözme sürecinde öğrencilere farklı kaynaklara ulaşma imkânı sağlanmıştır. Birinci uygulamaya 2 gün devam edilmiştir. 1. Gün problem tanıtılarak farklı ölçü birimlerinde verilen uzunlukların önce metre ölçü birimine dönüştürülmesi istenmiştir. Grupların çalışma kâğıtları ders bitiminde toplanarak 2. Gün probleme kalındığı yerden devam edilmiş ve alan hesabı çalışmasına geçilmiştir. Verilen şekil standart olmayan ölçü birimi kullanabilmeleri için kareli kâğıda çizilerek verilmiştir ve buradan alan tahmini yapmaları istenmiştir. Bu uygulama sonunda öğrenci çalışma kâğıtları ve video kayıtları matematik öğretmeni tarafından incelenmiştir. Öğrencilerin sahip olduğu kavram yanılgılarının iyileştirilebilmesi için bu yanılgıların kaynakları belirlenmeye çalışılmıştır. Belirlenen hatalar doğrultusunda etkisiz kalan yöntem ve teknikler belirlenip geliştirilerek 2. çalışma uygulanmıştır.

1.çalışmada, standart olmayan ölçü birimi olarak kareli kâğıttaki kareler kullanılmıştır. Öğrencilerin alan kavramını anlamada hala eksiklerinin olduğunun gözlemlenmesi bu yöntemin değiştirilerek daha dikkat çekici bir materyale yönelme gereği duyulmuştur. Elle tutulur ve istedikleri şekilleri elde edebilecekleri renkli dikdörtgenlerin standart olmayan ölçü birimi olarak kullanılması tercih edilmiştir. Uzunluk ölçmek için öğrencilerden cetvel getirmeleri istenmiştir. İkinci webquest çalışmasında her gruba 100 tane birbirine eş dikdörtgen materyalleri verilmiştir. Birinci gün, gruplardan bu dikdörtgenlerden çevresi en küçük olacak şekilde bir dikdörtgensel bölge oluşturmaları istenmiştir. Öğrencilere çeşitli denemeler yapmaları için zaman tanınmıştır. 2. Günde ellerinde ki materyallerle farklı çevrelere sahip dikdörtgensel bölgeler oluşturmaya devam etmişlerdir. Oluşturdukları her dikdörtgenin kısa kenar, uzun kenar ve çevre uzunluklarını ölçerek tablo oluşturmaları istenmiştir. Aynı parçalardan oluşan şekillerin çevre uzunluklarının değişebileceği sonucuna ulaşmaları beklenmiştir. Uygulamanın 3. gününde ise en küçük çevreye ulaşmada kenar uzunluklarıyla çevre arasın da ilişki kurmaları ve alan hesabı yapmaları istenmiştir. Öncelikle alan kavramına standart olmayan birimlerden yola çıkarak ulaşmaları istenmiştir. Aynı parçalardan oluşturulacak farklı şekillerde alanın değişmeyeceğini anlamaları beklenmiştir.

Her iki çalışmada da grup çalışması kullanılmıştır. 1.çalışmada bazı gruplardaki öğrenciler arası olumsuz ilişkilerden kaynaklanan sıkıntılar yaşanmış ve 2. çalışmada bu öğrencilerin grupları değiştirilmiştir.

BULGULAR

6. sınıf öğrencileri, müfredat incelendiğinde uzunluk ölçülerini dönüştürme kazanımını 5. Sınıfta öğrenmiştir. Alan ölçme birimlerini dönüştürmeyi ise 6. Sınıfın 2. Döneminde öğreneceklerdir. Çalışma, 6. Sınıfın 1. Döneminde yapıldığı için öğrenciler henüz alan ölçme birimlerini dönüştürmeyi bilmemektedirler. 1. Çalışmada, önce öğrencilerden farklı birimlerde verilen uzunlukların önce metreye çevrilerek daha sonra dikdörtgen şeklindeki bahçenin alanını metre cinsinden bulmaları istenmiştir. Birçok öğrenci, kenar uzunluklarını santimetre cinsine çevirip kısa kenar ve uzun kenar uzunluklarını çarptıktan sonra buldukları sonuçtan 2 sıfır silerek metrekareye çevirdiklerini söylemişlerdir. Öğrenciler, uzunluk ölçme birimlerini dönüştürme formüllerini alan ölçme birimlerine dönüştürmek için de kullanabileceklerini düşünmektedirler. Bu sonuç öğrencilerin uzunluk ve alan kavramlarını zihinlerinde yeterince oluşturamadıklarını göstermektedir.

Alan kavramının ne anlama geldiği öğrencilere sorulduğunda genelinin işlemsel olarak açıklamaya çalıştıkları görülmüştür. Alan hesaplayan öğrencilerin bir kısmının sonucu ifade ederken alan birimi kullanmadığı, bir kısmının da alan birimi yerine uzunluk birimi kullandığı rastlanılan hatalar arasındadır. Bu sonuç öğrencilerin uzunluk ve alan kavramlarını hesaplarken kullandığımız birimleri anlamlandıramadıkları yönünde fikir vermiştir. Alan kavramını tanımlamaya çalışan bazı öğrenciler alanı ‘’bir şeklin iç bölgesi’’ olarak ifade etmişlerdir.

Bazı öğrencilerde uzunluk ölçme birimlerini işlemsel olarak doğru bir şekilde metreye dönüştürmüş fakat buldukları sonucun birimini metre yerine metrekare olarak belirtmiştir. Öğrencilerin daha çok işlemlere yönelmesi birimleri önemsememeleri üzerine yapılan çalışmalarda birimlerin ne anlama geldiğini bilmedikleri veya zihinlerinde somutlaştıramadıkları sonucunu ortaya çıkarmıştır.

2. çalışmaya 3 gün devam edilmiştir. 1.gün grupların 100 dikdörtgeni nasıl dizerek bir dikdörtgensel bölge oluşturacakları gözlemlenmiştir. Hazır bulunuşluğu olan öğrencilerin kolayca dikdörtgensel bölgeleri oluşturabildikleri görülmüştür. Hazır bulunuşluğunda eksikler olan öğrencilerin, dikdörtgenleri kenarları çakışmayacak şekilde dikdörtgenin özelliklerini göz önünde bulundurmadan dizdikleri fark edilmiştir. Bazı öğrencilerde elindeki 100 dikdörtgenin tamamını kullanmadan dikdörtgensel bölge oluşturdukları görülmüştür. Dikdörtgenler dizildikten sonra her bir dikdörtgenin sayılması yerine bir sırada kaç dikdörtgen olduğunun belirlenmesinden sonra toplam sıra sayısıyla bu sayının çarpımının 100 olması gerektiği sonucuna yönlendirmeler sonucunda varmışlardır. Öğrencilere çevre kavramının anlamı sorulduğunda bazı öğrenciler ‘’iki kenarın çarpımı’’ şeklinde ifadelerde bulunmuş ve alan kavramıyla çevre kavramını karıştırdıkları gözlemlenmiştir. Bazı öğrencilerde çevre kavramını ‘’şeklin etrafı’’ olarak tanımlamışlardır.

2.günde grupların aynı parçaları kullanarak farklı dikdörtgensel bölgeler oluşturmaları sağlanmış ve çevre uzunluklarını hesaplamaları istenmiştir. Öğrencilere bu çalışmalar yaptırıldıktan sonra aynı parçalardan oluşturdukları dikdörtgenlerin çevrelerinin değişip değişmediği sorulmuş ve bütün öğrenciler değiştiği yönünde cevap vermiştir.

3. günde aynı parçaları kullanarak tasarladıkları dikdörtgensel bölgelerden hangisinin en kısa çevre uzunluğuna sahip olduğu soruldu. Tasarladıkları dikdörtgensel bölgelerin kısa, uzun kenar ve çevre uzunluklarını tablo şeklinde sunarak yorumlamaları istenmiştir. Gruplar en kısa çevreye ulaşmış fakat buna neden olan kenar ilişkisini yorumlamada zorlanmışlardır. Öğretmen rehberliğinde sonuca ulaşmaları sağlanmıştır.

Öğrenciler, en kısa çevreye ulaştıktan sonra alan hesabına geçmiştir. Öğrencilere aynı parçaları kullanarak oluşturdukları dikdörtgensel bölgelerin alanlarının değişip değişmediği sorulmuştur. Bazı öğrenciler alanın değişeceğini bazıları da değişmeyeceğini söylemiş ve tartışma ortamı yaratılmıştır. Değişeceğini söyleyen öğrencilere ellerindeki standart olmayan alan birimleri yardımıyla aynı parçalardan oluşan farklı şekillerin alanlarını ölçmeleri sağlanmıştır. Alan korunumu standart olmayan birimler yardımıyla somutlaştırılarak öğrencilerin kavram yanılgıları giderilmeye çalışılmıştır. Çalışmanın sonunda öğrencilerin işlemsel olarak doğru sonuçlara ulaştıkları görülmüştür. Görseller ve materyallerin alan ve çevre kavramlarını açıklamada ve somutlaştırmada öğrenciler üzerinde oldukça etkili olduğu gözlemlenmiştir.

SONUÇ

Birinci webquest çalışması 6. Sınıf öğrencilerinin ölçme konusundaki kavram yanılgılarını ve sebeplerini araştırma amacıyla yapılmıştır. Bu çalışmadan alınan bilgiler doğrultusunda öğrencilerin ölçme konusundaki kavram yanılgılarını iyileştirmek için yöntem ve teknikler geliştirilerek ikinci webquest çalışması uygulanmıştır. Birinci çalışma da öğrencilere senaryolaştırılmış bir problem verilmiş ve internet ortamından yararlanarak problemi çözmeleri istenmiştir. Öğrencilerin uzunluk ve alan birimlerini kullanmada kavram yanılgılarının bulunduğu gözlemlenmiştir. Birçok öğrencinin alan ve çevre kavramını daha çok işlemsel olarak açıklamaya çalıştıkları ve bazı öğrencilerinde alan ve çevre kavramını karıştırdığı görülmüştür. Öğrencilerin kavramları anlamadan ezbere işlem yaptıkları bulgusu elde edilmiştir. Bu bulgular literatürdeki çalışma sonuçlarıyla paralellik göstermektedir(Chappell & Thompson, 1999; Grant & Kline, 2003; Martin & Strutchens, 2000 Stephan & Clements, 2003) Öğrencilerin kavramları net olarak açıklayamamalarına rağmen işlem yapabilmeleri kavramsal öğrenmenin gerçekleşmediği ve formüllerle sonuca ulaşmaya çalıştıklarını göstermektedir. Bu sonuç, Yenilmez ve Demirhan’ın (2013) öğrencilerin kavramları tam olarak tanımadıkları halde kavramla ilgili işlemleri yaptıkları görülmüş ve bu durum öğrencilerin kavramı anlamadan formülleri ezberleyerek işlem yaptıkları bulgusuyla paralellik göstermektedir. Bu çalışma sonucunda kavram yanılgılarının giderilmesinde sadece internet kaynağının ve bilgisayar ortamında bulunan görsellerin kullanılmasının yeterli olmadığı görülmüştür. Ayrıca çalışma sonunda öğrencilerin görüşleri alınmıştır. Öğrenciler hazırlanan senaryolaştırılmış problemden çok etkilendiklerini ve kendilerini gerçekten bir mimar gibi hissederek problemi çözdüklerini ifade etmişlerdir. Birinci çalışma iki gün, 1 er saat uygulanmıştır. Öğrencilere evde çözmeleri için problem verilmemiştir sadece okulda çalışma yapılmıştır. Buna rağmen bazı öğrenciler evde problemi zihinlerinde canlandırıp çözmeye çalıştıklarını söylemiştir. Bu etkinin yaratılmasında bilgisayar aracının kullanılması ve hazırlanan problemdeki görsellerin katkısı çok belirgindir. Öğrencilerin gerçekten bir mimar gibi parke taşı seçmeleri ve internetten parke satış mağazalarından fiyatlara ulaşmaları problemi hiç sıkılmadan çözmelerini sağlamıştır. Öğrenciler problemi sevdiklerini ve daha önce çözümü bu kadar uzun süren bir problem çözmediklerini belirtmişlerdir. Problemin birçok adımının olmasına rağmen sıkılmadıklarını fakat verilen sürenin biraz daha uzatılması gerektiğini vurgulamışlardır.

İkinci çalışmada da tekrar görselliğe dayalı senaryolaştırılmış bir problem kullanılmıştır. Yine öğrencilerin internet kaynağını kullanmaları sağlanmıştır. Alan ve çevre kavramını zihinlerinde yapılandırabilmelerini sağlayacak renkli ve eş dikdörtgenler standart olmayan alan birimleri olarak bütün gruplara verilmiştir. Ayrıca uzunluk ölçümleri için öğrencilerin cetvel kullanmaları sağlanmıştır. İkinci çalışmada aynı parçalardan farklı dikdörtgenler oluşturmaları sağlanmıştır. Oluşturdukları dikdörtgenlerin çevre uzunluklarını hesaplanmış ve aynı parçalardan oluşan şekillerin farklı çevre uzunluklarına sahip olabilecekleri çıkarımında bulunmuşlardır. Aynı parçalarla oluşturulan farklı şekillerin alanları üzerinde düşünmeleri sağlanmış ve tahminleri alınmıştır. Alan korunumu için dikdörtgensel bölgeyi oluşturan dikdörtgenler standart olmayan alan ölçme birimi olarak kullanılmış ve alan ölçümlerinde önce dikdörtgenleri saymaları istenmiştir. Böylece oluşturdukları dikdörtgenlerin alanlarını eş bulmuş ve alan korunumu kazandırılmıştır. Öğrencilerin, çevre ölçümünde cetvel kullanmaları, alan ölçümünde ise dikdörtgenlerin sayısını dikkate almaları, çevre ve alan kavramlarını zihinlerinde kolaylıkla canlandırmalarını sağlamıştır. Ayrıca uzunluk ve alan ölçme birimlerini anlamlandırma somutlaştırılmıştır. Bu bulgular ışığında öğrencilerin çevre ve alan kavramlarını algılamada mutlaka kendilerinin oluşturabileceği şekiller için ortam sağlanması gerektiği sonucu ortaya çıkmıştır. Yaparak-yaşayarak öğrenmenin önemi ve etkisi bu çalışma sonucuna da yansımıştır. Bu bulgu, Şişman ve Aksu'nun (2009) alan ve çevre hesaplarının formüle dayalı olarak değil öncelikle kavram olarak ne olduğu öğretilmeli, kesme-katlama yeniden düzenlemeyi içeren etkinlikler yapılarak çevre uzunluğunun değişebilirliği ve alanın korunumu geliştirilmeli, alan-çevre hesaplamalarında sonuçların uygun ölçme birimleriyle ifade etmenin önemi vurgulanmalı önerileriyle paralellik göstermektedir.

Çalışma sonunda öğrencilerin birinci ve ikinci çalışmayı değerlendirmeleri istenmiştir. Bu konuda ki öğrenci görüşlerinden alıntılar şöyledir:

"Birinci çalışmaya göre ikinci çalışma daha iyiydi. Çünkü şekilleri görerek yaptık. O yüzden daha rahat oldu işimiz. İkinci çalışmayı daha iyi anladık ve kendimiz yaptık şekilleri."

"Birinci çalışmada sadece bilgisayar kullandık. İkinci çalışmada elimizde şekillerimizde vardı. Elimizde şekillerimizin olması bizim için daha iyi oldu.*"*

Öğrencilerin görüşü ikinci çalışmayı daha faydalı buldukları yönündedir. Kullandıkları şekilleri problem çözmede kolaylaştırıcı özellikte bulmuşlardır. Özellikle alan ve çevre kavramlarının kavranmasında öğrencilerin materyal kullanmaları gerektiği sonucu ortaya çıkmıştır. Hacıömeroğlu ve Apaydın'ın öğrencilerin tangram seti kullanılarak alan ve çevre hesabına alternatif bir yol sunduğu çalışmasında, öğrencilerin kendilerinin oluşturduğu şekillerin çevre ve alan hesabını yapmada fikir alışverişinde bulunma ve değerlendirme yapabilme fırsatı sağlanmış ve öğrencilerin elde ettikleri sonuçları karşılaştırarak farklı çözüm yöntemlerini paylaşabilmeleri amaçlanmıştır. Bu amaç doğrultusunda yapılan çalışma ile öğrencilerin çevre ve alan kavramını daha iyi anladıkları vurgulanmıştır.

ÖNERİLER

- Çevre ve alan kavramlarının öğretiminde öğrencilerin somut materyallerle çalışma yapacakları ortamlar düzenlenmelidir.

- Uzunluk ölçümlerinde mutlaka öğrencilerin cetvel kullanmaları sağlanmalıdır.

- Kullanılan materyaller öğrencilerin dikkatini çekecek özellikte olmalıdır.

- Alan ölçümünde öğrencilerin standart olmayan alan ölçme birimleri oluşturmaları ve kullanmaları sağlanmalıdır.

- Etkinlikleri uygulamanın klasik soru çözme yöntemine göre daha çok zaman alması öğretmenleri, kavramların öğretinden çok işlemleri öğretme yoluna itmektedir. Etkinliklerin uygulanabilirliğini artırmak için matematik müfredatı oldukça sadeleştirilmelidir.

- Öğrencilere internet ortamından çalışma yöntemleri öğretilerek kendi kendilerine öğrenmelerine olanak sağlanmalıdır.

- Grup çalışmalarıyla öğrencilerin fikir alışverişinde bulunarak farklı çözüm yolları geliştirmeleri sağlanmalıdır.

- Senaryolaştırılmış problemler öğrencilerin dikkatini konuya yoğunlaştırmakta ve uzun süre etkisini sürdürmektedir. Uzun ve sıkıcı ödevler yerine, senaryolaştırılmış, uygulama basamakları olan problemler ödev olarak öğrencilere sunulabilir.

ANALYSIS OF BIOLOGY CONTENT KNOWLEDGE TEST ACCORDING TO COGNITIVE PROCESS DIMENSION OF REVISED BLOOM TAXANOMY

Aylin KALA
Ministry of National Education

Mustafa ÇAKIR
Marmara University

ABSTRACT: The aim of this study was to analyze questions of 2013 biology content knowledge test in civil servant selection examination (KPSS) according to knowledge and cognitive processes dimensions in revised Bloom taxonomy. Following research questions were guided the study: To what extend 2013 biology content knowledge test in civil servant selection examination (KPSS) represents knowledge and cognitive processes dimensions of revised Bloom taxonomy? This is a qualitative research in which descriptive content analysis approach was employed and data was collected through document analysis. During data analysis, descriptive analysis techniques have been used to answer the research question. Biology teaching content knowledge test's questions have been classified according to the criteria presented in the book A Taxonomy for Learning, Teaching, and Assessing-A Revision of Bloom's Taxonomy of Educational Objectives'. 2013 biology content knowledge test questions were coded using performance indicators and revised Bloom taxonomy separately. According to the research findings questions in 2013 KPSS biology content knowledge test did not homogenously represent levels of knowledge and cognitive processes dimensions of revised Bloom taxonomy. In cognitive processes dimension questions were mostly in category of understanding (42%) and there was not any question in either categories evaluate or create. In knowledge dimension questions were mostly in conceptual category (75%) and there was not any question that required metacognitive knowledge. Since standardized testing has a significant importance on the appointment of teachers to the public schools and plays a crucial role for pre-service biology teachers' social and professional well-being both performance indicators and knowledge levels should be better considered in preparation of such a high stake exam.

Key words: kpss, revised bloom taxonomy, biology content test.

BİYOLOJİ ALAN BİLGİSİ TESTİNİN BİLGİ VE BİLİŞSEL SÜREÇ BOYUTLARI AÇISINDAN İNCELENMESİ

ÖZET: Bu çalışmanın amacı, Kamu Personeli Seçme Sınavı'nın bir basamağını oluşturan ve ilk defa 2013 yılında uygulanan Biyoloji Alan Bilgisi Testinde yer alan soruların Yenilenmiş Bloom Taksonomisinin bilgi ve bilişsel süreç boyutlarına göre incelemektir. Bu amaç doğrultusunda "2013 KPSS'de sorulan biyoloji öğretmenliği alan bilgisi soruları Yenilenmiş Bloom Taksonomisinin bilgi ve bilişsel süreç boyutlarını ne düzeyde temsil etmektedir?" sorusuna cevap aranmıştır. Bu araştırmada karşılaştırmalı eğitim çalışmalarında sıklıkla kullanılan betimsel analiz ve içerik analizi teknikleri kullanılmıştır. Araştırma verileri nitel araştırma yöntemlerinden biri olan doküman incelemesi ile elde edilmiştir. Araştırma sonucunda 2013 KPSS Biyoloji Öğretmenliği Alan Bilgisi Testinde sorulan alan bilgisi sorularının Yenilenmiş Bloom Taksonomisinin bilgi ve bilişsel süreç boyutlarının her evresini homojen olarak yansıtmadığı görülmüştür. Bilişsel süreç boyutunda en çok sorunun Anla basamağında olduğu; Değerlendir ve Yarat basamaklarına yönelik soru sorulmadığı; bilgi boyutunda ise en çok sorunun Kavramsal Bilgi türünden geldiği buna karşılık Üstbilişsel Bilgi türüne ait hiçbir sorunun sorulmadığı belirlenmiştir. Çalışma sonunda biyoloji alan bilgisi soru sayısının artırılması ve soruların hazırlanırken biyoloji öğretmenliği öğretim programları, biyoloji özel alan yeterlikleri ve Yenilenmiş Bloom Taksonomisinin göz önünde bulundurulması önerilmiştir.

Anahtar sözcükler: kpss, biyoloji alan bilgisi testi, yenilenmiş Bloom taksonomisi.

GİRİŞ

Dünyadaki öğretmen seçme sistemlerine bakıldığında genel olarak iki yaklaşımın kullanıldığı görülmektedir. İlk yaklaşımda, öğretmenlik programlarına ihtiyaç duyulan öğretmen sayısı göz önünde bulundurularak öğrenci alınmaktadır. Dolayısıyla bu programlardan mezun olan öğretmen adayları pek istihdam sıkıntısı çekmemektedir. İkinci yaklaşımda ise, öğretmenlik programlarına genellikle ihtiyaçtan fazla öğrenci alındığından istihdam için ikinci bir seçme yapılmaktadır. Türkiye'de hali hazırdaki öğretmen seçme süreci yukarıda belirtilen ikinci yaklaşımla benzerlik göstermektedir. (Erdem ve Soylu, 2013). Nitekim Türkiye'de eğitim fakültelerinden mezun olan öğretmen sayısı ile Milli Eğitim Bakanlığı tarafından istihdam edilen öğretmen sayısı arasındaki arz talep dengesizliği nedeniyle kamu okullarına alınacak öğretmenler için sınav yapma zorunluluğu da beraberinde gelmiştir (Baştürk, 2008). Bu bağlamda Milli Eğitim Bakanlığı (MEB) öğretmen adayları arasından seçme yapmak amacı ile 2001 yılından itibaren Ölçme, Seçme ve Yerleştirme Merkezi (ÖSYM) tarafından merkezi olarak yürütülen Kamu Personeli Seçme Sınavını (KPSS) uygulamaktadır. Bu bakımdan ihtiyaç dâhilindeki öğretmen adayının atanabilmesi için KPSS, Türkiye'de önemli bir sınav olup pek çok araştırmaya da konu edilmiştir (Can ve Can, 2011).

Öğretmen adayları için KPSS adı altında yürütülen bu sınavın içeriği genel kültür, genel yetenek, eğitim bilimleri ve bazı bölümler için öğretmenlik alan bilgisi testinden oluşmaktadır. 2013 yılından itibaren MEB kendi beklentileri doğrultusunda bazı alanlara yönelik alan bilgisi ve alan eğitiminden oluşan alan sınavı yapacağını belirtmiş ve sınavın amacının alanında iyi öğretmen yetişmesini sağlamak ve alanında yeterli bilgiye sahip olan bireyleri görevlendirmek olduğunu açıklamıştır (MEB, 2013). Yapılan bu düzenleme ile MEB yapılacak atamalarda öğretmen adaylarının üç ayrı oturumda GYT (Genel yetenek Testi), GKT (Genel Kültür Testi), EBT (Eğitim Bilimleri Testi), ÖABT (Öğretmenlik Alan Bilgisi Testi) olmak üzere dört ayrı testten elde ettikleri KPSS P121 puanını esas almaktadır. KPSS P121 puanının hesabında GYT %15, GKT %15, EBT %20 ve ÖABT %50 oranında katkı sağlamaktadır (ÖSYM, 2013).

Alan bilgisi sınavı uygulanan alanlardan bir tanesi de biyolojidir. Biyoloji alan bilgisi testi 50 sorudan oluşmaktadır. Bu sorulardan 40 tanesi biyoloji alan bilgisine, 10 tanesi ise biyoloji alan eğitimi bilgisine dayanmaktadır. Biyoloji öğretmenlik alan bilgisi testi 2013 yılında ilk defa uygulanmıştır. Yıllara göre net ortalamalarına bakıldığında; 2013 yılında 16,208 ortalama ile 15 alan arasından 11. sırada, 2014 yılında 19,44 ortalama ile 16 alan arasından 11. sırada, 2015 yılında ise 12,8 ortalama ile 16 alan arasından 16. sırada yer aldığı görülmektedir. Biyoloji alan bilgisi testi ortalamalarının diğer alan ortalamalarının oldukça gerisinde kalması ve bu testten elde edilen puanın KPSS puanına %50 oranında etki ediyor olması biyoloji ÖABT soru kapsamını incelenmeye değer bir durum haline getirmektedir.

Öğretmen adaylarını yakından ilgilendiren ve mesleğe başlama konusunda eşik görevi üstlenen bu sınavda öğretmenlerin karşısına getirilen soruların belli ölçütlere göre hazırlanması gerekir. Bu sınavın uygulanmasının bir diğer nedeni de öğretmen yeterliklerine sahip bireylerin seçiminde geçerli, güvenilir ve nitelikli ölçme araçlarının kullanılmak istenmesidir. Youngs, Odden ve Porter'a (2003) göre öğretmen olarak atanmada önkoşul olan sınavların geçerliğinin bir kanıtı, bu sınavların içeriği ile öğretmen yetiştirme programlarında öngörülen yeterliklerin ilişkili olmasıdır (Aktaran: Deryakulu, 2011). Öğretmenlerin, görevlerini etkili ve verimli bir biçimde yerine getirebilmeleri için sahip olmaları gereken bilgi, beceri ve tutumlar olarak tanımlanan, öğretmenlik mesleği genel yeterlikleri MEB tarafından tespit edilmiştir. Daha sonrasında ise değişen eğitim felsefesinin eğitim ve öğretim etkinliklerine yansıtılabilmesi amacıyla alanlara özgü özel alan yeterlikleri belirlenmiştir. Biyoloji öğretmeni özel alan yeterlilikleri 3 ana yeterlilik, 19 alt yeterlik ve 119 performans göstergesinden oluşmaktadır. Araştırmaya konu olan biyoloji alan bilgisi ana yeterlik alanında ise 6 alt yeterlik ve 34 performans göstergesi yer almaktadır. Burada incelenmesi gereken nokta KPSS'nin Milli Eğitim Bakanlığı'nın bu uzun yeterlik listesinde belirtilen niteliklere sahip öğretmen adaylarını seçmede ne derece başarılı olduğudur. İyi bir biyoloji öğretmeninde bu yeterliklerin bulunması gerektiği göz önüne alınırsa, öğretmen seçiminde kullanılan soruların yeterlikler ışığında geliştirilmesi önem taşır. Tanımlanan bu yeterliklerin biyoloji alan bilgisi testinde yoklanıyor olması yapılan ölçme-değerlendirme işleminin niteliğini artıracaktır.

Çalışmanın Amacı

Ülkemizde öğretmen istihdamında, Milli Eğitim Bakanlığı ÖSYM'nin hazırlamış olduğu çoktan seçmeli bir sınav olan Kamu Personeli Seçme Sınavı (KPSS) sonuçlarını esas almaktadır. Öğretmen seçimi için uygulanmakta olan KPSS'nin içeriğine genel kültür, genel yetenek ve eğitim bilimlerine ek olarak 2013 yılında biyoloji alanı da dâhil olmak üzere birçok öğretmenlik alanına alan bilgisi testi eklenmiştir. Ancak öğretmen seçimi işleminde kullanılacak olan ve öğretmenlerin alan bilgisini ölçecek soruların belli ölçütleri taşıması önemlidir.

Bu çalışmada 2013 KPSS' ye eklenen biyoloji alan bilgisi sorularının MEB'in belirlemiş olduğu biyoloji öğretmenliği alan bilgisi yeterlikleriyle örtüşme düzeylerine, yenilenmiş Bloom Taksonomisinin bilişsel süreç basamaklarındaki 'hatırla, anla, uygula, analiz et, değerlendir, yarat' evrelerine ve bilgi boyutundaki 'olgusal, kavramsal, işlemsel ve üst bilişsel bilgi' türlerine göre incelenmesi amaçlanmıştır.

Araştırma Soruları

2013 KPSS'de çıkan biyoloji öğretmenliği alan bilgisi soruları:

1. Yenilenmiş Bloom Taksonomisinin hangi basamağında yer almaktadır?
2. Yenilenmiş Bloom Taksonomisinin bilgi ve bilişsel süreç boyutlarının her evresini temsil etmekte midir?
3. MEB'in belirlemiş olduğu biyoloji öğretmenliği alan bilgisi yeterliği performans göstergelerini ne derece temsil etmektedir?

Çalışmanın Önemi ve İlgili Alan Yazın

Öğretmen seçimi gibi önemli bir seçme işlemi için gerçekleştirilen ölçme-değerlendirme sürecinde hazırlanan sorular üniversitelerin program içerikleri, öğretmenlerin alan bilgisi yeterlikleri ve bilişsel gelişim seviyeleri ile uyumlu olmalıdır. Bireylerin bilişsel alandaki başarılarını ölçmek amacıyla geliştirilen birçok sınıflandırma sistemi bulunmaktadır (Filiz, 2004). Fakat eğitim hedeflerinin ve soru seviyelerinin sınıflandırılmasında en fazla faydalanılan yaklaşım Bloom tarafından geliştirilen bilişsel gelişim seviyeleridir. Öğretmen seçimi işleminde kullanılan ölçme aracında yöneltilen soruların bilişsel olarak hangi seviyelerde yer aldığı ve tüm bilişsel seviyeleri temsil edip etmediği önemli bir sorundur.

KPSS'nin yapılmaya başlandığı tarihten itibaren bu uygulamayı destekleyici ve eleştirici görüşler ortaya konulmuş, bu konuda çalışmalar yapılmıştır. İlgili alan yazın incelendiğinde KPSS'ye ilişkin çeşitli açılardan ele alınmış birçok araştırma görülmektedir. Sınavın içeriğine (Başkan ve Alev, 2009; Şahin, 2007), sınav kaygısına (Baştürk, 2007; Tümkaya, Aybek ve Çelik, 2007; Ekici ve Kurt, 2012; Karaçanta, 2009; Şahin ve Arcagök, 2010, Can ve Can, 2011), öğretmen adaylarının sınava yönelik tutumlarına (Karaca, 2011; Özsarı, 2008), görüşlerine (Çimen ve Yılmaz, 2011; Çoban, Gündoğdu ve Zirek, 2009; Döş ve Sağır, 2012; Gündoğdu, Çimen ve Turan, 2008; Kablan ve Turan, 2006; Karataş ve Güleş, 2013; Kılıçkaya, 2009; Atav ve Sönmez, 2013) dair çalışmalar bulunmaktadır. Bu çalışmaların yanı sıra üniversiteye giriş puanı, üniversite mezuniyet başarı puanı ile KPSS başarı puanı arasındaki ilişkiyi farklı değişkenlerle ele alan çalışmalar da vardır (Açıl, 2010; Atasoy, 2004; Bahar, 2006; Bahar, 2011; Ercoşkun ve Nalçacı, 2009; Ergün, 2005; Kablan, 2010; Özkan ve Pektaş, 2011; Yeşil, Korkmaz ve Kaya, 2007).

Yüksel (2004), 'Öğretmen Atamalarında Merkezi Sınav Uygulamasının (KPSS) Değerlendirilmesi' adlı çalışmasında belirlenen öğretmen kontenjanlarından çok fazla sayıda mezun olması nedeniyle eleme amacıyla yapılan KPSS' de yer alan soruların niteliklerini incelemiş ve KPSS'nin adaylar arasında bir yarışma sınavı hâline geldiği savunmuştur. Alan yazında 2013 yılında ilk kez uygulanmış olan ve biyoloji öğretmen adayları için KPSS'nin son basamağını oluşturan biyoloji öğretmenlik alan bilgisi testi ile ilgili bir çalışmaya rastlanmamıştır.

Candeğer (2013), yapmış olduğu çalışmada tarih öğretmeni özel alan yeterlikleri ile tarih öğretmeni yetiştiren üniversitelerin öğretim programlarında yer alan zorunlu dersleri karşılaştırmıştır. Yapılan inceleme sonucunda tarih öğretmeni yetiştiren kurumların programlarında verilen derslerin bazı yeterlikleri karşılayamadığı fakat yeterlikte olmayan bazı içeriklerin ise programda yer aldığı görülmüştür. Bunların bir kısmının seçmeli derslerle dolduruluyor olması ancak tüm öğrencilerin aynı dersleri seçmiyor olması araştırmanın dikkat çeken bir diğer bulgusunu oluşturmaktadır.

Özkan (2014), 2013 KPSS Türkçe Öğretmenliği Alan Bilgisi Testinin Türkçe öğretmenliği özel alan yeterlikleri açısından uygunluğunu incelediği çalışmasında ölçme aracında yer alan soruların özel alan yeterliklerini yeterli düzeyde yoklamadığını, elli sorudan oluşan alan bilgisi testinde sadece on yedi sorunun özel alan yeterlikleri ile uyumlu olduğunu ortaya koymuştur. Bundan sonraki yıllarda uygulanacak olan alan bilgisi testinin hazırlanırken özel alan yeterliklerinin de göz önüne alınması gerektiği önerilmiştir.

Köse (2015), biyoloji öğretmen adaylarının görüşlerine göre biyoloji öğretmenlik alan bilgisi testini incelediği araştırmasında biyoloji ÖABT sorularının alan bilgisini orta düzeyde ölçecek nitelikte olduğu, bu testi çözen bir öğretmeninin alanında yeterli bir öğretmen olamayacağı sonucuna ulaşmıştır. Ancak ilgili alan yazında biyoloji öğretmenliği özel alan yeterlikleri ve bu yeterliklerin KPSS biyoloji alan bilgisi testinde temsil edilme düzeyi ile ilgili çalışmaya rastlanılmamıştır.

Yenilenmiş Bloom Taksonomisi

Forehand (2005) revize edilen yeni taksonominin farklılıklarını üç grupta incelemiştir. Bunlar; 1) Terimsel Değişim: Bloom' un 6 önemli kategorisi isimden fiile çevrilmiş, en düşük seviye olan bilme kategorisi hatırlamak, kavrama kategorisi anlamak olarak yeniden adlandırılmış, sentez kategorisi değerlendirmek kategorisiyle yer değiştirmiş ve yaratmak adı altında en üst basamağa alınmıştır. 2) Yapısal Değişim: Bloom' un orijinal taksonomisi tek boyutluyken geliştirilen taksonomi ise bilgi ve bilişsel süreç olarak iki boyutludur. 3) Amaçsal Değişim: Bloom taksonomisine göre, genişletilmiş yeni taksonomi daha geniş gruplara hitap etmektedir (Krathwohl, 2002, Arı, 2011).

Yenilenmiş taksonomideki en dikkat çeken değişiklik taksonominin tek boyutlu bir yapıdan iki boyutlu bir yapıya dönüştürülmesidir. Orijinal taksonomide Bilgi basamağı hem isim hem fiil hallerini bir arada bulunduruyordu. İsim ile konu alanı öğesi bilginin içinde alt basamaklarda açıklığa kavuşturulmaktaydı. Fiil öğesi ise kişinin hatırlama ve tanımasını gerektiren öğedir ve taksonomideki diğer basamaklarda böyle bir durum olmadığından bu tek boyutluluk taksonomide bir ikilik yaratmaktaydı. Bu çelişki, yenilenmiş taksonomide giderilmiş, isim ve fiil öğelerinden iki farklı boyut oluşturulmuştur. Bunlardan birincisi içeriği gösteren bilgi (knowledge) ve ikincisi de içeriğin nasıl gerçekleşeceğini gösteren bilişsel süreç (cognitive processes) boyutudur. İsim, bilgi boyutuna temel oluştururken; fiil, bilişsel süreç boyutuna temel oluşturmuştur (Krathwohl, 2002; Anderson, 2005).

Revize edilmiş taksonomide, her hedefin iki boyutta gösterilebileceği gerçeği Taksonomi Tablosu olarak adlandırılan iki boyutlu bir tablo oluşturma imkânı vermiştir. Bilgi boyutu tablonun dikey eksenini oluştururken, Bilişsel süreç boyutunu tablonun yatay eksenini oluşturmaktadır. Bilgi ve bilişsel süreç kategorilerinin kesişme noktaları hücreleri oluşturmaktadır (Amer, 2006; Anderson, 2005; Krathwohl, 2009). Tablo 1'de doldurulmamış bir taksonomi tablosu görülmektedir:

Tablo 1. Taksonomi Tablosu (Anderson ve diğerleri, 2001).

Bilişsel Süreç Boyutu / Bilgi Boyutu	1. HATIRLAMA	2. ANLAMA	3. UYGULAMA	4. ÇÖZÜMLEME	5. DEĞERLENDİRME	6. YARATMA
A. OLGUSAL BİLGİ						
B. KAVRAMSAL BİLGİ						
C. İŞLEMSEL BİLGİ						
D.ÜSTBİLİŞ BİLGİSİ						

Yenilenmiş Bloom taksonomisinin bilgi ve bilişsel süreç boyutlarına göre biyoloji öğretmenliği özel alan yeterliklerini oluşturan performans göstergeleri örnek olarak Tablo 2'de sınıflandırılmıştır.

Tablo 2. Biyoloji Öğretmenliği Özel Alan Yeterliklerini Oluşturan Performans Göstergelerinin Yenilenmiş Bloom Taksonomisine Göre Sınıflandırılması

Örnek performans göstergeleri	*Bilgi Boyutu / Bilişsel Süreç Boyutu*
Canlı, hücre, doku, organ, sistem, enerji, homeostasi, kalıtım, evrim, biyolojik çeşitlilik, fotosentez, sınıflandırma, solunum, tür, ekosistem gibi temel kavramları tanımlar. (A1.2)	Olgusal Bilgi / Hatırla
Biyolojinin alt dallarına örnekler vererek bu alt dalların çalışma alanlarını açıklar. (A2.2)	Kavramsal Bilgi / Anla
Monohibrit-dihibrit çaprazlamaya yönelik problemleri çözer. (A3.2)	İşlemsel Bilgi / Uygula

Biyoloji laboratuvar yöntem ve teknikleri arasındaki benzerlikleri ve farklılıkları teşhis eder. (A2.5)	İşlemsel Bilgi / Analiz et
Çevresindeki biyolojik olayları kuram, ilke, genelleme ve modellere göre muhakeme eder. (A5.3)	Kavramsal Bilgi / Değerlendir
Biyoloji öğretim programının uygulanması sırasında karşılaşılan sorunlara çözüm önerileri sunar. (B1.4)	Üst-biliş Bilgisi / Yarat

YÖNTEM

Bu çalışmada nitel araştırmada kullanılan yöntemlerden biri olan içerik çözümlemesiyle belli bir metnin, belgenin özelliklerini sayısallaştırarak incelenmesini sağlayan doküman incelenmesine başvurulmuştur. Madge' ye (1965) göre doküman incelenmesi, araştırılması hedeflenen olgu veya olgular hakkında bilgi içeren yazılı materyallerin analizini kapsar (Yıldırım ve Şimşek, 2005).

Araştırma problemi ve alt problemlerine cevap vermek amacı ile öncelikle MEB' in belirlemiş olduğu biyoloji öğretmenliği alan bilgisi yeterliği performans göstergeleri doğrultusunda 2013 KPSS' de çıkmış biyoloji öğretmenliği alan bilgisi sorularının bu yeterlikleri temsil etme düzeyleri belirlenmiştir. Daha sonra 2013 KPSS biyoloji öğretmenliği alan bilgisi soruları 'Yenilenmiş Bloom Taksonomisinin bilgi ve bilişsel süreç boyutlarında aldıkları yere bir matrise yerleştirilmiştir (Kratwohl, 2002; Anderson, 2005). Bu matriste 2013 KPSS biyoloji öğretmenliği alan bilgisi soruları bilgi boyutunun bulunduğu satır ile bilişsel süreç boyutunun bulunduğu sütunun kesişimi olan hücrelerde gösterilmiştir. Bu tablodan yararlanarak elde edilen veriler grafiklere aktarılmıştır. Revize edilmiş taksonomi matrisi Tablo 3'te gösterilmiştir.

Tablo 3. Yenilenmiş Bloom Taksonomi Tablosu

	BİLİŞSEL SÜREÇ BOYUTU					
BİLGİ BOYUTU	1.Hatırla	2. Anla	3.Uygula	4.Analiz et	5.Değer-lendir	6.Yarat

B.Kavramlar Bilgisi						
C.İşlemler Bilgisi						
D.Biliş Ötesi Bilgi						

(Krathwohl, 2002, 216; Anderson, 2005, 105)

Verilerin Toplanması

Bu araştırmada verilerin toplanması aşamasında belgesel tarama tekniği kullanılmıştır. Var olan kayıt ve belgeleri inceleyerek veri toplamaya belgesel tarama denir. Belgeler, nitel araştırmalarda veri kaynağı olarak sıklıkla yararlanılan önemli bilgi kaynaklarındandır. Belgesel tarama, belli bir amaca dönük olarak, kaynakları bulma, okuma, not alma ve değerlendirme işlemlerini kapsar (Karasar, 2005).

KPSS 2013 biyoloji öğretmenliği alan bilgisi sorularına ÖSYM (2013)' nin resmi internet sitesinden, biyoloji öğretmenliği özel alan yeterliklerine MEB' in web sayfasından, biyoloji öğretmeni yetiştiren üniversitelerin öğretim programlarına ise üniversitelerin dekanlıkları ve eğitim ağlarının elektronik sayfalarından ulaşılmıştır.

Verilerin Analizi

Araştırma sorusu ve alt sorularına cevap oluşturabilmek için verilerin analizi noktasında betimsel analiz tekniğinden yararlanılmıştır. Betimleme ile araştırmada toplanan verilerin probleme ilişkin olarak hangi sonuçları ortaya koyduğu ön plana çıkmaktadır. Betimsel analiz tekniğinde elde edilen veriler daha önceden belirlenmiş konulara göre özetlenmektedir. Bu tür analizde amaç verileri düzenlenmiş ve yorumlanmış bir şekilde sunmaktır (Şimşek ve Yıldırım, 2006).

Araştırmanın veri analiz sürecinde:

a. 2013 KPSS' de çıkan biyoloji öğretmenliği alan bilgisi sorularının biyoloji alan bilgisi yeterliklerini temsil etme düzeyinin belirlenmesi için her bir soru ayrı olarak ele alınmış, yeterliklerde belirtilen ilgili olduğu performans göstergeleri ile eşleştirilmesi yapılmıştır.

b. Araştırma kapsamına alınan sorular Yenilenmiş Bloom Taksonomisi' ne göre tablonun dikey eksenini oluşturan bilgi boyutunda olgusal bilgi, kavramsal bilgi, işlemsel bilgi ve biliş ötesi bilgi kategorilerinde; yatay eksenini oluşturan bilişsel süreç boyutunda hatırla, anla, uygula, analiz et, değerlendir ve yarat kategorilerinde sınıflandırılmıştır. Her soru bu iki boyutta sınıflandırıldıktan sonra tablodaki kesişim hücrelerine yerleştirilmiştir.

BULGULAR

Biyoloji Öğretmenliği Alan Bilgisi Testinde yer alan biyoloji alan bilgisini ölçmeye yönelik 40 soru Yenilenmiş Bloom Taksonomisinin her bir basamağının özellikleri göz önüne alınarak oluşturulan temel esaslar doğrultusunda analiz edilmiş, soruların bilgi ve bilişsel süreç boyutlarına göre hangi seviyelerde olduğu tespit edilmiştir. Soruların analizi aşamasında yenilenmiş taksonominin basamakları arasında esnek geçiş dikkate alınmıştır.

Soruların YBT'nin Bilgi ve Bilişsel Süreç Boyutlarına Göre Sınıflandırılması

Bu aşamada her soru bilgi boyutunun niteliklerine göre tabloda dört temel bilgi kategorisinden uygun olana, bilişsel süreç boyutunun niteliklerine göre ise tabloda altı bilişsel süreç kategorisinden uygun olana yerleştirilmiştir. Bu noktada, bilgi boyutunun alt kategorileri ve bilişsel süreç boyutunun alt basamakları sorunun doğru hücreye yerleştirilebilmesi için iyi bir ipucu niteliği taşımaktadır (Anderson ve diğerleri, 2001).

Örneğin biyoloji alan bilgisi testinde yer alan birinci soruda omurgalı hayvanlar ve bu hayvan gruplarında yer alan yapıların eşleştirilmesi istenmiştir. Bu soru sınıflama ve kategorilere yönelik bilgi gerektirdiği için bilgi boyutunun 'kavramsal bilgi' kategorisinde ve bir özelliğin veya durumun hangi sınıf içinde yer aldığının bilinmesine yönelik bir süreci içerdiği için bilişsel süreç boyutunun 'anla' kategorisine yerleştirilmiştir. Bu nedenle bu soru iki boyutlu taksonomi tablosunda 'B. Kavramsal Bilgi' satırı ile '2. Anla' sütunun kesişimi olan B2 hücresine yerleştirilir. Aynı zamanda bir soru çoklu bir bilgi ve bilişsel süreç ihtiva ediyorsa, bu soru YBT' de en karmaşık ve soyut kategoriye yerleştirilir. Örneğin bir soru hem 'anla' hem de 'analiz et' kategorisine yerleştirilebiliyorsa, bu soru 'analiz et' kategorisine yerleştirilir. Bu yolla toplam 40 sorunun YBT basamaklarına göre dağılımı Tablo 4.1' de taksonomi tablosu üzerinde gösterilmiştir.

Tablo 4 Alan Biyoloji Alan Bilgisi Sorularının Sınıflandırılması

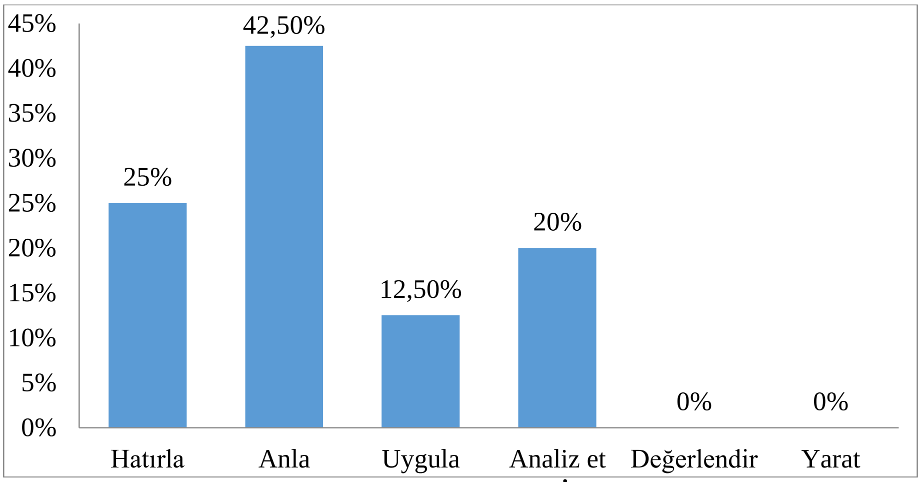
	BİLİŞSEL SÜREÇ BOYUTU					
BİLGİ BOYUTU	**1.Hatırla**	**2.Anla**	**3.Uygula**	**4.Analiz et**	**5.Değerlendir**	**6.Yarat**
A. Olgusal Bilgi	11.soru 28.soru 30.soru	14.soru				
B. Kavramsal Bilgi	6.soru 13.soru 23.soru 27.soru 31.soru 36.soru	1.soru 2.soru 3.soru 4.soru 7.soru 10.soru 12.soru 15.soru 22.soru 25.soru 26.soru 29.soru 32.soru 33.soru		8.soru 9.soru 16.soru 18.soru 21.soru 24.soru 37.soru 39.soru		

		35.soru 40.soru				
C. İşlemsel Bilgi	38.soru		5.soru 17.soru 19.soru 20.soru 34.soru			
D. Üstbilişsel Bilgi						

Olgusal Bilgiyi Hatırla basamağında 3, Olgusal Bilgiyi Anla basamağında 1, Kavramsal Bilgiyi Hatırla basamağında 6, Kavramsal Bilgiyi Anla basamağında 16, Kavramsal Bilgiyi Analiz Et basamağında 8, İşlemsel Bilgiyi Hatırla basamağında 1 ve İşlemsel Bilgiyi Uygula basamağında 5 sorunun yer aldığı görülmektedir.

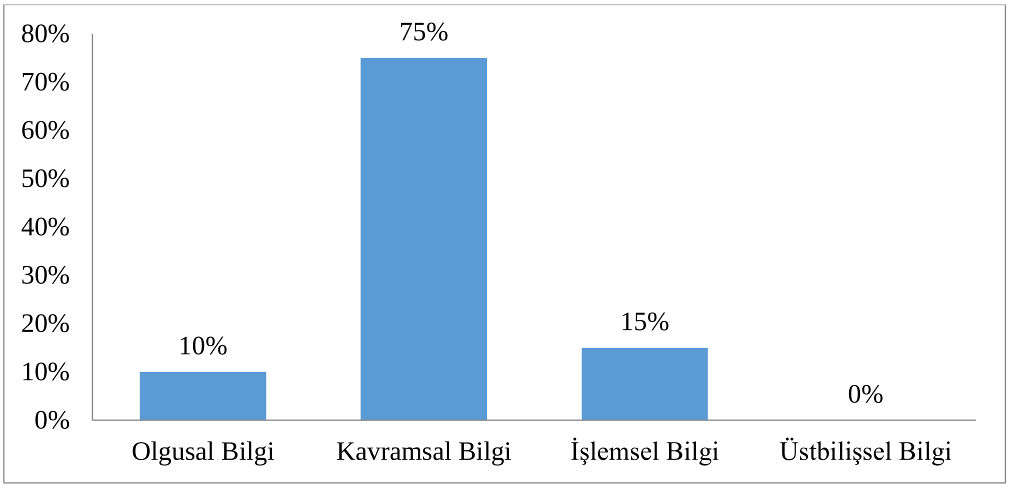
Oransal olarak bakıldığında ise, Olgusal Bilgiyi Hatırla basamağında %7,5, Olgusal Bilgiyi Anla basamağında %2,5, Kavramsal Bilgiyi Hatırla basamağında %15, Kavramsal Bilgiyi Anla basamağında %40, Kavramsal Bilgiyi Analiz Et basamağında %20, İşlemsel Bilgiyi Hatırla basamağında %15 ve İşlemsel Bilgiyi Uygula basamağında %12,5 oranında sorunun yer aldığı görülmektedir.

Bilişsel süreç boyutunda Hatırla basamağında 10, Anla basamağında 17, Uygula basamağında 5, Analiz Et basamağında 8 soru yer alırken Değerlendir ve Yarat bilişsel süreçlerine ait soru bulunmadığı görülmektedir. Oransal olarak bakıldığında ise, %25' inin Hatırla, %42,5' unun Anla, %12,5' unun Uygula, %20' sinin Analiz Et bilişsel sürecinde sınıflandırıldığı görülmektedir. Şekil 1'de biyoloji alan bilgisi testinde yer alan soruların bilişsel süreç boyutlarına göre yüzdelik dağılımları verilmiştir.



Şekil 1. Soruların Bilişsel Süreç Boyutuna İlişkin Yüzdelik Dağılımı

Bilgi boyutunda Olgusal Bilgi basamağında 4, Kavramsal Bilgi basamağında 30, İşlemsel Bilgi basamağında ise 6 soruya rastlanırken Üst bilişsel Bilgi basamağında her hangi bir soru yer almamaktadır. Oransal olarak bakıldığında ise, %10' unun Olgusal Bilgi, %75' inin Kavramsal Bilgi ve %15' inin İşlemsel Bilgi basamağında sınıflandırıldığı görülmektedir. Şekil 2'de biyoloji alan bilgisi testinde yer alan soruların bilgi boyutuna göre yüzdelik dağılımları verilmiştir.



Şekil 2. Soruların Bilgi Boyutuna İlişkin Yüzdelik Dağılımı

Biyoloji Öğretmenliği Alan Bilgisi Yeterliklerinin 2013 KPSS Biyoloji Alan Bilgisi Sınavındaki Temsil Edilme Durumu

MEB'in belirlemiş olduğu özel alan yeterliklerinden biyoloji alan bilgisi yeterlik alanında yer alan performans göstergeleri dikkate alınarak 2013 KPSS' de biyoloji alan bilgisini ölçen 40 soru analiz edilmiş, soruların performans göstergelerini temsil etme durumu incelenmiştir. Elde edilen bulgular tablolarla özetlenmiştir.
MEB'in belirlemiş olduğu biyoloji öğretmenliği özel alan yeterliklerinde yer alan biyoloji alan bilgisi yeterlik alanında 6 alt yeterlik ve 34 performans göstergesi yer almaktadır. Tablo 5'te biyoloji alan bilgisini ölçen 40 soru ve bu soruların temsil ettiği performans göstergeleri verilmiştir.

Tablo 5. Soruların Temsil Ettiği Performans Göstergeleri

Soru No	Soruların Temsil Ettiği Performans Göstergeleri
1	A1.1. ,A2.1.
2	A1.1. ,A2.1. ,A2.7. ,A4.5.
3	A1.1. ,A2.1. ,A4.5.
4	A1.1. ,A2.1. ,A4.5.

25	A1.1. ,A1.2.
26	A1.1. ,A3.1. ,A4.1. ,A4.4.
27	A1.1. ,A2.1. ,A2.8. ,A3.1. ,A4.1. ,A4.4.
28	A1.1. ,A1.2. ,A2.1. ,A2.8.
29	A1.1. ,A2.1. ,A2.7. ,A2.8. ,A3.1. ,A4.1. ,A4.2. ,A4.4. ,A4.6. ,A5.4.

30	A1.1. ,A1.2. ,A2.1. ,A2.7. ,A3.1. ,A4.1. ,A4.2. ,A4.4. ,A4.6. ,A5.7.
31	A1.1. ,A1.2. ,A2.1. ,A2.8. ,A3.1. ,A4.1. ,A4.2. ,A4.4. ,A4.5.
32	A1.1. ,A2.1. ,A2.7. ,A2.8. ,A3.1. ,A4.1. ,A4.2. ,A4.4. ,A5.4. ,A5.7.
33	A1.1. ,A1.2. ,A2.1. ,A2.7. ,A2.8. ,A3.1. ,A4.1. ,A4.2. ,A4.4. ,A4.5. ,A5.7.
34	A1.1. ,A2.1. ,A2.7. ,A3.1. ,A4.1. ,A4.2. ,A5.7.
35	A1.1. ,A1.2. ,A1.4. ,A3.1. ,A4.1. ,A4.2. ,A4.4. ,A4.5. ,A5.7.
36	A1.1. ,A1.2. ,A2.8.
37	A1.1. ,A2.1. ,A2.7. ,A2.8. ,A3.1. ,A4.1. ,A4.2. ,A4.3. ,A4.4. ,A5.4. ,A5.7.
38	A1.1. ,A1.2. ,A1.4. ,A2.1. ,A2.7. ,A3.1. ,A4.1. ,A4.4.
39	A1.1. ,A1.2. ,A1.4. ,A2.1. ,A2.7. ,A2.8. ,A3.1. ,A4.1. ,A4.2. ,A4.4. ,A4.5. ,A4.6. ,A5.4. ,A5.7.
40	A1.1. ,A1.2. ,A1.4. ,A2.1. ,A2.7. ,A3.1. ,A4.1. ,A4.4. ,A4.5.

Tablo 5'te görüldüğü üzere her soru aynı anda birden fazla performans göstergesini ölçmektedir. Bununla birlikte bazı performans göstergeleri birkaç soru içerisinde temsil edilirken bazı performans göstergeleri ise hiçbir soruda temsil edilmemektedir. 6 alt yeterlik içerisinde yer alan 34 performans göstergesinden 17 tanesi biyoloji alan bilgisi testinde ölçülürken geri kalan 17 performans göstergesini ölçen herhangi bir soruya rastlanılmamıştır. A1.3. , A1.5. ,A2.2. , A2.3. , A2.4. , A2.5. ,A2.6. ,A3.3. , A4.7. , A5.1. ,A5.2. ,A5.5. ,A5.6. , A6.1. ,A6.2. ,A6.3. ,A6.4. kodlu performans göstergelerine yönelik soruların biyoloji alan bilgisi testinde yer almadığı belirlenmiştir. Yapılan analize göre 2013 KPSS biyoloji alan bilgisi testi MEB'in belirlemiş olduğu yeterliklerde yer alan performans göstergelerinden %50'sini temsil edebilmiştir.

Aynı zamanda altı alt yeterlik içerisinde ilk beş alt yeterlik alanına ait sorular biyoloji alan bilgisi testinde yoklanırken altıncı sırada yer alan Biyolojinin Diğer Bilim Dalları ile Olan İlişkisini Kurabilme alt yeterliğine ait hiçbir sorunun bulunmadığı da tespit edilmiştir. Bununla birlikte biyoloji laboratuvarı, yöntem ve teknikleri, deney ve etkinlik tasarlama gibi laboratuvar bilgisini ifade eden performans göstergelerini temsil eden hiçbir sorunun biyoloji alan bilgisi testinde yer almaması dikkati çeken bir diğer noktadır.

TARTIŞMA VE SONUÇ

2013 KPSS biyoloji alan bilgisi sınavında çıkan soruların Yenilenmiş Bloom Taksonomisindeki dağılımı homojen olarak yapılmamıştır. Soruların taksonomi tablosuna yerleştirilmesi sonucu her hücreye eşit oranda soru düşmemektedir. Bununla birlikte bazı hücrelerde soruların yığıldığı görülürken bazı hücrelerde ise hiçbir sorunun yer almadığı tespit edilmiştir. En çok soru Kavramsal Bilgiyi Anla hücresine yerleştirilmiştir. Soruların analizinden elde edilen taksonomi tablosuna bakıldığında en yüksek oranda temsil edilen bilişsel süreç boyutunun Anla olduğu belirlenmiştir. Bununla birlikte Değerlendir ve Yarat bilişsel süreç boyutlarına ait soru bulunmamaktadır. Ölçme aracında yer alan soruların öğretmen adaylarının yaratıcı, eleştirel ve çok yönlü düşünme becerilerini gösterebileceği nitelikte olmadığı, daha çok hatırlama becerilerini ölçmeye yönelik soruların hazırlandığı tespit edilmiştir. Bu durum soruların Yenilenmiş Bloom Taksonomisinin bilişsel süreç boyutunun dikkate alınmadan hazırlandığına işaret etmektedir. Hatırla, Anla, Uygula ve Analiz et bilişsel süreç boyutlarına ait soruların biyoloji alan bilgisi sınavında temsil edilme yüzdeleri birbirine yakın değerlerden oluşmamaktadır. Alan yazında taksonominin ilk üç basamağının düşük bilişsel seviye, son üçünün ise üst düzey bilişsel seviyeye karşılık geldiği dikkate alındığında biyoloji alan bilgisi testinde yer alan biyoloji alan bilgisi sorularının alt düzey basamaklarda yığıldığı ve üst düzey düşünme becerilerini yoklayacak nitelikte olmadığı ifade edilebilir. Buna karşın Anderson vd. (2001), Analiz et, Değerlendir ve Yarat basamaklarının daha genellenebilir olduğunu, daha karmaşık bilişsel süreçlerin çok çeşitli alanlara uygulanabilir olması dolayısıyla bu basamakların daha alt basamaklarda kazanılması istenen hedeflere ulaşmada kullanılabileceğini vurgulamışlardır. Aynı zamanda Colletta ve Chiappetta (1989), ölçme ve değerlendirme faaliyetleri sonunda kişilerin gerçek başarı seviyelerinin belirlenebilmesi için sınavlarda hem düşük hem de yüksek bilişsel seviyelere karşılık gelen soru tiplerine yer verilmesi gerektiğini ifade etmektedir.

Bilgi boyutunda en yüksek oranda temsil edilen bilginin türünün Kavramsal Bilgi olduğu tespit edilmiştir. Bununla birlikte bilgi boyutunda kişinin kendisinin düşünmesine yönelik bilgi olan Üst bilişsel Bilgi'ye ait soruya yer verilmemiştir. Olgusal Bilgi, Kavramsal Bilgi ve İşlemsel Bilgi türüne ait soruların biyoloji alan bilgisi sınavında temsil edilme yüzdeleri birbirine yakın değerlerden oluşmamaktadır. Bu bulgular doğrultusunda bilgi türlerini temsil eden soruların homojen olarak dağılmadığı, ölçme aracındaki soruların bu yönüyle yetersiz kaldığı görülmektedir.

Yiğit, Alev ve Devecioğlu (2005), KPSS' de sorulan ölçme-değerlendirme konularına yönelik soruların Bloom Taksonomisinin hangi seviyelerinde olduğunu belirlemek için yaptıkları çalışmada alt düzey öğrenme seviyelerine dair sorulara rastlarken, üst düzey öğrenme seviyelerine yönelik soruların olmadığını tespit etmişlerdir. Başol ve Türkoğlu (2006), yaptıkları çalışmada 2001 yılından itibaren KPSS eğitim bilimleri sorularını incelemiş ve bu soruları Bloom Taksonomisinin bilişsel seviyelerine göre analiz etmiştir. Çalışma sonuçları, soruların yoğun olarak alt düzey bilişsel seviyelerde toplandığı ve ağırlıklı olarak 'Kavrama' düzeyindeki sorulara yer verildiği yönündedir.

Biyoloji öğretmenliği özel alan yeterliklerinden biyoloji alan bilgisi yeterliğine ait performans göstergelerinin yarısı 2013 KPSS biyoloji alan bilgisi testinde temsil edilirken yarısı ise alan bilgisi sınavında temsil edilmemektedir. Bu durum gerçekleştirilen sınavın sadece bazı biyoloji bilgilerinin ölçülmesine uygun olarak yapıldığını göstermekte, öğretmenliğe hazır olup olmamayı yeterli düzeyde ölçemediğine işaret etmektedir. Biyoloji alan bilgisi alt yeterliklerinden ilk beş alt yeterlik alanına ait sorular biyoloji alan bilgisi testinde yer alırken altıncı sırada yer alan Biyolojinin Diğer Bilim Dalları İle Olan İlişkisini Kurabilme alt yeterliğine dair hiçbir sorunun sınavda yer almadığı tespit edilmiştir. Bazı performans göstergeleri birkaç soru içerisinde temsil edilirken bazı performans göstergeleri ise hiçbir soruda temsil edilmemektedir. Diğer bir ifade ile soru sayıları performans göstergelerine eşit bir şekilde dağıtılmamıştır. Bu durum bu performans göstergelerinden soru üretmenin daha kolay olduğu şeklinde yorumlanabilir. Biyoloji laboratuvarı, yöntem ve teknikleri, deney ve etkinlik tasarlama gibi laboratuvar bilgisini ifade eden performans göstergelerini temsil eden hiçbir soru biyoloji alan bilgisi testinde yer almamaktadır.

ÖNERİLER

Biyoloji alan bilgisi sorularının hazırlanması aşamasında Yenilenmiş Bloom Taksonomisi göz önüne alınarak taksonominin bilgi ve bilişsel süreç boyutlarının tüm basamaklarını temsil eden sorulara yer verilmelidir. Hazırlanan sorular sadece alt düzey bilişsel davranışları değil aynı zamanda üst düzey bilişsel davranışları da ölçecek nitelikte olmalıdır. Öğretmen adaylarını daha üst düzey düşünmeye teşvik etmek, özgün ve orijinal örnekler ortaya koymasını sağlamak amacıyla Yarat seviyesinde yer alan sorulara biyoloji alan bilgisi sınavında yer verilmelidir. Aynı zamanda kişinin kendi düşüncesinin farkına varmasını ifade eden Üst biliş Bilgisi'ne ait sorular da ölçme aracında yer almalıdır. Biyoloji alan bilgisi soruları biyoloji öğretmenliği özel alan yeterliklerinde yer alan tüm performans göstergelerini yoklar nitelikte hazırlanmalıdır. Aynı zamanda performans göstergeleri test içerisinde homojen bir dağılım ile temsil edilmelidir. Biyoloji alan bilgisi sınavında laboratuvar bilgisi, yöntem ve tekniklerine yönelik sorulara da mutlaka yer verilmelidir. Daha kapsamlı ve nitelikli bir ölçme işlemi için biyoloji alan bilgisi sınavında yer alan soru sayısı artırılabilir.

MIDDLE SCHOOL STUDENTS' SELF-EFFICACY SOURCES IN MATHEMATICS: A QUALITATIVE STUDY

Şule AKYOL
Necmettin Erbakan Üniversitesi

İsmail ŞAHİN
Necmettin Erbakan Üniversitesi

ABSTRACT: According to Bandura's social cognitive theory, self-efficacy beliefs are being fed from four sources. These are mastery experience, vicarious experience, social persuasions and physiological states. Purpose of this research is determining the sources of middle school students' self- efficacy beliefs in mathematics, within the frame of Bandura's social cognitive theory. For this aim, semistructured interviews are going to be held with nine, 8th grade students. The students are going to be chosen from the groups classified according to situation that having low, normal and high self- efficacy beliefs in mathematics. For data analysis Nvivo 11 program is going to be used. The data is collection and analysis stage.

Keywords: self-efficacy beliefs in mathematics, interview, qualitative data analysis, middle school, sources of self-efficacy

ORTA OKUL ÖĞRENCİLERİNİN MATEMATİK ÖZ YETERLİK İNANCI KAYNAKLARI: NİTEL BİR ARAŞTIRMA

ÖZET: Bandura'nın sosyal bilişsel teorisine göre öz yeterlik inancı 4 temel kaynaktan beslenmektedir. Bunlar; doğrudan yaşantılar, dolaylı yaşantılar, sosyal iknalar ve fizyolojik durumlardır. Bu araştırmanın amacı, ortaokul öğrencilerinin matematiğe ilişkin öz yeterlik algılarını oluşturan kaynakları, Bandura'nın sosyal bilişsel teorisi çerçevesinde belirlemektir. Bu amaçla 9 ortaokul 8. sınıf öğrencisi ile yarı yapılandırılmış görüşme yapılacaktır. Öğrenciler; matematiğe ilişkin yüksek, normal ve düşük düzeyde öz yeterlik inancına sahip olma durumuna göre sınıflandırılan gruplardan seçilecektir. Görüşmelerden elde edilen veriler nitel analizle çözümlenecektir. Verilerin analizinde Nvivo 11 programı kullanılacaktır. Veriler toplanma ve analiz aşamasındadır.

GİRİŞ

Bireyin davranışlarını bireye ait inançlar (algılar veya yargılar) belirlemektedir. Öz yeterlik de bireyin bir görevi başarmasına yönelik inancı olup, Bandura'nın sosyal bilişsel öğrenme kuramında yer alan temel ve anahtar kavramlardan birisidir. Bandura'ya (1997; s.3) göre öz yeterlik; "kişinin belirlenen hedefleri gerçekleştirmek için gereken etkinlikleri planlama ve başarılı olarak yapma becerisine veya kapasitesine olan inancıdır. Bir diğer ifadeyle bir görevi yerine getirmede kişinin kendi yeterliklerine, potansiyeline ve göstereceği performansa ilişkin algısıdır.

Öz yeterlik algısı ile birlikte 'matematik öz yeterliği' kavramı da dikkat çekmektedir. Hackett ve Betz (1989) matematik öz yeterliğini, bireyin matematiksel bir durumu, görevi ya da problemi başarıyla gerçekleştirmede ya da başarmada yeteneklerine olan güvenini değerlendirmesi olarak tanımlarken; Özgen ve Bindak (2011) bireyin matematiksel yeteneklerine olan kişisel yargısı olarak tanımlamıştır.

Bir bireyin öz yeterlik düzeyi şartlar, ortam, görevin çeşidi ve zorluk derecesi vb. faktörlere göre farklılaşabilmektedir (Bandura 1997). Bandura'ya (1997) göre öz yeterlik inancı dört temel kaynaktan beslenmektedir. Bunlar; başarıya ilişkin doğrudan yaşantılar (kişisel deneyimler), gözleme dayalı dolaylı yaşantılar, sosyal ikna ve duygusal ve fizyolojik durumlardır.

Araştırma sonuçlarına göre bireylerin öz yeterlik algısını en fazla etkileyen ve yordayan bireyin başarılı veya başarısız deneyimlerini içeren doğrudan yaşantılarıdır (Arslan, 2012; Butz & Usher, 2015; Usher & Pajares, 2006). Bandura'ya (1997) göre öz yeterliğin en önemli ve en güçlü kaynağıdır. Doğrudan yaşantılar, bireyin öz yeterliğinde kalıcı ve uzun ömürlü etkiyi oluşturmaktadır (Usher & Pajares, 2006). Öğrencilerin geçmiş (önceki) başarılarından veya başarısızlıklarından oluşturdukları yorumlar, öz yeterliklerine ilişkin önemli bir bilgi kaynağı olmaktadır (Bandura, 1997). Bireyler alt becerileri tam öğrendiklerini hissettiklerinde, zorlu görevleri başarıyla tamamladıklarında ve performanslarını başarılı olarak değerlendirdiklerinde kişisel yeterliklerine ilişkin sağlam bir inanç geliştirmektedir (Bandura, 1997).

Öz yeterlik algısını etkileyen bir diğer kaynak gözleme dayalı dolaylı yaşantılardır. Bireyler çevrelerinde yer alan arkadaşları, öğretmenleri, ebeveynleri, kardeşleri vb. bireyleri gözlemlemekte ve bu gözlem sonuçları öz yeterlik inançlarını etkileyebilmektedir. Örneğin bir görevde başarılı olan arkadaşını gözlemleyen bir bireyin aynı görevde kendisinin de başarılı olacağına ilişkin inancı kuvvetlenir. Bu durumun tersi de geçerli olabilmektedir. Başarısızlık yaşayan bir bireyi gözlemleyen kişinin aynı görevi başarılı olarak gerçekleştirmeye ilişkin inancı azalabilir. Model alma ve sosyal karşılaştırmalar, bireylerin öz yeterlik inançlarının gelişiminde güçlü rol oynamaktadır.

Sosyal iknalar, öz yeterlik algısını etkileyen bir diğer kaynaktır. Bireyin çevresinin (aile, öğretmen, kardeşler, arkadaşlar vb. kişiler) vermiş olduğu dönütler, takdir etme, beğenme, onaylama vb. davranışlar sosyal ikna kapsamında olup bireylerin öz yeterlik inançlarını etkilemektedir. Bireyin yaşına ve bulunduğu ortama göre sosyal iknada bulunan kişinin etkileme düzeyi değişmektedir. Öz yeterlik algısını etkileyen kaynaklardan birisi de duygusal ve fizyolojik durumlardır. Bandura (1997)'ya göre, bir çok faktör duygusal ve fizyolojik durumu etkileyebilmektedir. Örneğin; içinde bulunulan ruh hali, beden sağlığı ve sıkıntı düzeyi. kötü ruh hali, kaygı, stres gibi duygusal durumlar bireylerin öz yeterlik inançlarını olumsuz etkilemektedir.

Bu araştırmada kritik bir dönem olan orta okul 8. sınıftaki öğrencilerin matematik öz yeterliğini oluşturan ve besleyen kaynakları ve durumları Bandura'nın sosyal bilişsel öğrenme kuramı doğrultusunda belirlemek amaçlanmıştır. Araştırmadan elde edilen bulgular doğrultusunda; eğtim ve öğretim etkinlikleri ve öğretmenlerin uygulamaları öğrencilerin matematik öz yeterliğini besleyen kaynakları güçlendirecek şekilde düzenlenebilir.

YÖNTEM

Araştırma, nitel araştırma deseni olan olgu bilim deseninde yapılmıştır. Araştırmanın çalışma grubunu 6 kız (%67), 3 erkek (%33) olmak üzere toplam 9, sekizinci sınıf öğrencisi oluşturmaktadır. Görüşme yapılacak öğrenciler matematiğe ilişkin yüksek, normal ve düşük düzeyde öz yeterlik inancına sahip olma durumuna göre sınıflandırılan üst, orta ve alt guruptan seçilmiştir. Araştırmada veri toplama yöntemi olarak görüşme kullanılmıştır. Öğrencilerin görüşleri görüşme formu ile elde edilmiştir. Görüşme formunun kapsam geçerliğini sağlamak için yedi uzmandan görüş alınarak forma nihai şekli verilmiş ve form uygulamaya hazır hale getirilmiştir. Ayrıca araştırma kapsamı dışında bırakılan bir öğrenci ile ön görüşme yapılmıştır. Görüşme esnasında elde edilen veriler gönüllülük esasına dayanarak, ses kayıt cihazıyla kaydedilmiştir. Daha sonra elde edilen veriler yazılı metin haline çevrilmiştir. Veriler betimsel analiz ile çözümlenmiştir

BULGULAR VE TARTIŞMA

Bu bölümde görüşme formunda yer alan sorular doğrultusunda başlıklar oluşturularak öğrencilerin görüşlerine yer verilmiştir. Ayrıca öğrencilerden her bir öz yeterlik kaynağına ilişkin derinlemesine bilgi edinebilmek amacıyla görüşme formunda yer alan sorular sırasıyla öğrencilere sorulmuştur. Öğrencilerin cevapları alıntı olarak verilmiş ve alan yazınla ilişkilendirilerek yorumlanmıştır.

Matematik öz yeterliği yüksek olan öğrencilerin en sevdiği ve en başarılı olduğu derslerin matematik olduğu buna karşılık matematik öz yeterliği düşük olan öğrencilerin en sevmediği ve en zayıf olduğu derslerin matematik olduğu görülmektedir. Matematikte başarılı olan öğrencilerin matematik öz yeterlik algılarının yüksek olduğu, başarı durumu düşük olan öğrencilerin ise öz yeterlik algılarının görece daha düşük olduğu görülmüştür. Bu durumun tersi de geçerlidir. Yani matematik öz yeterliği yüksek olan öğrencilerin matematik başarılarının, matematik öz yeterliği düşük olanlardan daha yüksek olduğu görülmüştür. Benzer bulguya Usher (2009)'da ulaşmıştır. Bu sonuç matematik öz yeterliği ile matematik başarısı arasında karşılıklı ilişki olduğunu göstermektedir.

Elde edilen bulgular doğrultusunda öğrencilere göre doğrudan yaşantıların en önemli öz yeterlik kaynağı olduğu, duygusal ve fizyolojik durumlar ile sosyal iknaların benzer bir şekilde ikinci en önemli öz yeterlik kaynağı olduğu, dolaylı yaşantıların ise öz yeterlik kaynakları arasında en az önemli olan olduğu görülmüştür. Bandura'ya (1997) göre öz yeterliğin en önemli ve en güçlü kaynağı bireylerin deneyimlediği doğrudan yaşantılardır. Araştırma sonuçlarına göre de bireylerin öz yeterlik algısını en fazla etkileyen ve yordayan bireyin başarılı veya başarısız deneyimlerini içeren doğrudan yaşantılarıdır (Arslan, 2012; Butz ve Usher, 2015; Usher ve Pajares, 2006). Bireyin başarılı yaşantıları, öz yeterlik inancını olumlu yönde etkileyerek sonraki benzer deneyimlerdeki başarı beklentisini artırmaktadır. Nitekim yapılan görüşmelerde öğrencilerin büyük çoğunluğu yaşadığı başarılı deneyimin öz yeterlik inancını artırdığını belirtmiştir.

Öğrencilerden elde edilen görüşlerden öz yeterliği yüksek olan öğrencilerin matematikte başarısızlıkla karşılaştıklarında öz yeterlik inançlarının bu olumsuz durumdan etkilenmediği tersine bu durumun onları çalışmak yönünde motive ettiği ve çabalarını artırdığı görülmüştür. Bu durum Bandura (1997)'nın teziyle örtüşmektedir. Bandura, (1997)'ya göre yüksek öz yeterliğe sahip bireyler bir konu üzerinde çalışırken daha fazla çaba sarf etme ve zorluklarla karşılaştıklarında daha çok sebat etme eğilimi taşımaktadır. Öz yeterlik inancının; hedef belirlemeyle, içsel motivasyonla, görev tercihiyle, görev değerleriyle ve sebat ile pozitif yönde ilişkili olduğu görülmüştür (Bong & Skaalvik, 2003).

Matematik öz yeterliği düşük olan öğrencilerin ise başarısızlık karşısında öz yeterlik inançlarının azaldığı görülmüştür. Başarısız deneyimler bireyin öz yeterlik algısını düşürerek başarı beklentisini azaltabilmektedir. Bu durumun özellikle öz yeterliği düşük olan öğrenciler için daha fazla geçerli olduğu düşünülmektedir. Çünkü bu araştırmada da görüldüğü üzere başarısız durumlar veya yaşanan aksaklıklar öz yeterlik inancı yüksek ve sabitleşmiş olan bireyleri olumsuz anlamda etkilememektedir. Alan yazında da bu araştırmadan elde edilen bulguyu destekleyen ifadeler yer almaktadır. Schunk (1989)'a göre öz yeterlik inancı yeterince güçlendikten sonra arada yaşanan başarısızlıklar kişinin öz-yeterliğinde önemli bir etkiye yol açmamaktadır. Yüksek öz yeterliğe sahip bireyler, karşılaşılan bir zorluğu tehdit değil bir mücadele süreci olarak görmektedir (zajacova, lynch & espenshade, 2005).

Bandura (1997)'ya göre bireylerin kişisel deneyimleri öz yeterlik inançlarını olumlu veya olumsuz olarak etkilemektedir. Bu gerçekten hareketle matematikte olumlu yaşantılar geçiren öğrencilerin öz yeterlik inançlarının daha yüksek olduğu düşünülebilir. Nitekim yapılan görüşmelerden elde edilen sonuçlar bu durumu desteklemektedir. Örneğin matematikte hep başarılı olduğunu söyleyen öğrencinin öz yeterlik inancı da yüksektir. Başarılı deneyimler veya olumlu yaşantılar öz yeterlik inancını artırmaktadır. Böylece bireyin artan öz yeterlik inancıyla karşılaştığı benzer yeni durumlarda başarılı olma beklentisi artmaktadır. Bu şekilde başarılı deneyimler ile öz yeterlik inancı arasında karşılıklı ilişkinin olduğu doğurgan bir döngü veya süreç oluşmaktadır.

Öz yeterliği düşük olan öğrencinin (Sema) kendisinden şüphe ettiği görülmektedir. Yaşadığı başarısızlıklardan dolayı bildiği bir konuda bile kendine güvenemediği ve derse katılmaktan kaçındığı görülmektedir. Williams ve Williams (2010), öğrencilerin matematik öz yeterliği ile matematik dersine katılımları arasında karşılıklı (çift taraflı) ilişki bulmuştur.

Görüşme sonuçlarından görüldüğü gibi öz yeterliği yüksek, orta ve düşük düzeyde olan tüm öğrenciler öğrenme ortamından özellikle arkadaşlarından olumlu veya olumsuz anlamda etkilenmektedir. Başarılı öğrencilerle aynı ortamda bulunan öz yeterliği yüksek öğrenciler onları örnek almakta, onlara benzemeye çalışmakta ve bu yönde çaba göstermektedir. Ayrıca öğrencilerin görüşlerinden sessiz bir öğrenme ortamı istedikleri anlaşılmıştır. Schunk (1990)'a göre belirtilen 4 öz yeterlik kaynağının dışında sosyal ortam özellikleri, öğretim yöntemleri ve bireysel tutumlar ve yüklemeler de bireylerin öz yeterlik inançlarını etkileyebilmektedir. Öğrencilere göre ideal sınıf ortamı, dersi öğrenmelerini sağlayacak sessizlikte olmalı, kendilerini rahat hissetmelerini sağlamalıdır. Ayrıca öğrencilere göre; aynı sınıftaki öğrencilerin seviyeleri benzer olmalı, dersler eğlenceli olmalı, öğretmen anlayışlı ve sıcak olmalı, matematiği ezbere değil mantığa uygun anlatmalıdır.

Görüşme sonuçlarından görüldüğü gibi öğrencilerin çevrelerinde yer alan matematikte başarılı olan bireyleri gözlemledikleri, onları örnek aldıkları, onlar gibi olmaya çalıştıkları ve çalışmaya yöneldikleri görülmüştür. Öz yeterliği yüksek olan öğrenciler başarılı kişileri gözlemlediklerinde motive olduklarını ve öz yeterlik inançlarının arttığını söylerken öz yeterliği düşük olan öğrenciler başarılı kişileri gözlemlemenin öz yeterlik inançlarını etkilemediğini belirtmiştir.

Öğrenciler genel olarak çevrelerinde yer alan bireylerin vermiş oldukları olumlu dönütlerin, onaylamanın, başarabilirsin yapabilirsin şeklindeki söylemlerin kendilerini mutlu ettiğini, öz güvenlerini, motivasyonlarını ve öz yeterliklerini artırdığını, çalışmaya sevk ettiğini belirtmiştir. Tam tersi durumlar, etraftan gelen olumsuz söylemler ve dönütler ise öğrenciler için moral bozucu olmaktadır. Öğrencilerin çoğunluğu bu durumda öz yeterlik inancının azaldığını söylemiştir.

Öğrencilerin ifadelerinden matematikle uğraşırken rahat olmanın, olumlu duygular ve düşünceler içerisinde olmanın öğrenciler üzerinde olumlu etkilerinin olduğu, onları her anlamda olumlu etkilediği, öğrencilerin öz yeterlik inancını beslediği ve artırdığı görülmüştür. Tam tersi durumda ise örneğin kaygılı ve endişeli olma, stres yaşama, gerginlik duyma, olumsuz duygu ve düşünceler de öğrencileri her yönden (özellikle başarı ve performanslarını) olumsuz anlamda etkilemekte; öz yeterlik inancını azaltmaktadır. Genel olarak beden sağlığının iyileştirilmesi, öznel iyi oluşların artırılması ve stres, kaygı ile olumsuz duygu ve düşüncelerin azaltılması bireylerin öz yeterlik inançlarını yükseltebilir.

SONUÇ VE ÖNERİLER

Öğrencilere göre doğrudan yaşantıların en önemli öz yeterlik kaynağı olduğu, fizyolojik, psikolojik durumlar ile sosyal iknaların benzer bir şekilde ikinci en önemli öz yeterlik kaynağı olduğu, dolaylı yaşantıların ise öğrencilerce öz yeterlik kaynakları arasında en az önemli olan olduğu görülmüştür. Öğrenciler Bandura'nın kuramında yer alan belirtilen kaynaklar dışında öz yeterlikle ilişkili olarak öğrenme ortamı ile ilgili faktörleri, matematiğe ilişkin tutumlarını ve kendi çalışma alışkanlıklarını sıralamıştır. Elde edilen bulgular Bandura'nın sosyal bilişsel öğrenme kuramını ve belirtilen öz yeterlik kaynaklarını doğrulamaktadır ve genişletmektedir.

Bu araştırma kapsamında bazı öneriler sunulabilir. Aynı konuya yönelik nicel, deneysel ve meta analiz çalışmaları yapılabilir. Bu araştırma özel okul öğrencileriyle gerçekleştirilmiştir. Benzer bir araştırma devlet okuluna giden öğrenciler ile gerçekleştirilebilir.

PRIMARY SCHOOL TEACHER EDUCATION STUDENTS' VIEWPOINTS ON VEGETATIVE STATE

Ramazan ÇEKEN
Ağrı İbrahim Çeçen Univaersity, Faculty of Education, Special Education Department

ABSTRACT: Vegetative state known as a medical event is usually confused with brain death and coma. It is widely seen among the public. Therefore, this study mainly based on the Primary School Teacher Education Students' (PSTES) Viewpoint on vegetative state. The study was applied to the 18 PSTES attending at Ağrı İbrahim Çeçen University. They are at the fourth grade of their bachelores degree. The participants wrote their opinion on a sheet. The analysis to reach valuable categories was made according to this written data using content analsis technique cited in literatüre as one of qualitative methods. With the evaluation of the data obtained from 18 PSTES, it is understood that only 4 participants explained that the brain could not perform the mental ability as the cortex could not perform the basic anatomic rule during the vegetative state. 9 of PSTES identified that it is related to movement of the human body. 10 students have the idea that it has a relation with the functions of brain. 13 of 18 PSTES explain the vegetative state using with inactive feature of plants in general. Vegetative staate is explained in Turkish dictionary as an unconscious and static state of the body as well as medical literature. PSTES use neural system instead of mevment known as a comman feature of living things as plants has not got a nervous system.

Key words: vegetative state, misconception, brain death, coma

SINIF ÖĞRETMENLİĞİ PROGRAMI ÖĞRENCİLERİNİN BİTKİSEL HAYAT İLE İLGİLİ GÖRÜŞLERİ

ÖZET: Bitkisel hayat, koma hali ve beyin ölümü durumları ile sıklıkla karıştırılan tıbbi bir olaydır. Bu karmaşa toplumun hemen her katmanında görülmektedir. Bu çalışmada Sınıf Öğretmenliği Programında öğrenim gören öğrencilerin bitkisel hayata yönelik görüşleri üzerinde durulmaktadır. Çalışma, 2015 yılında Ağrı İbrahim Çeçen Üniversitesi Eğitim Fakültesi Sınıf Öğretmenliği 4. öğrencilerine uygulanmıştır. Çalışmanın örnekleminde 18 öğrenci yer almıştır. Çalışmada, paragraf yazımı yolu ile katılımcıların düşüncelerinin analiz edildiği bir model uygulanmıştır. Nitel araştırma kurgusuna sahip bu çalışmada katılımcıların yazılı ifadelerine dayalı olarak, içerik analizi yolu ile kategoriler oluşturulmuştur. 18 katılımcıdan sadece 4'ü bitkisel hayatı, beynin kabuk bölgesi korteksin görevini yerine getirememesi nedeni ile düşünme fonksiyonunun yerine getirememesi olarak belirtebilmiştir. Temel yaşam fonksiyonlarının yerine getirildiğini 8 kişi ifade etmiştir. Bitkisel hayatı, hareket ile açıklamaya çalışan katılımcı sayısı 9'dur. Beynin fonksiyonları ile açıklamaya çalışan katılımcı sayısı ise 10'dur. Yani katılımcılar bu durumu öncelikli olarak beyin ile açıklamaya çalışırken, hareket edebilme yönünden de bitkisel hayatı zihninde yapılandıranlar da önemli bir oranı teşkil etmektedir. 18 katılımcının 13'ü bitkisel hayat ifadesinin bitkilerin genel olarak hareketsiz olma hali ile ilgili olarak açıklamıştır. TDK Genel Türkçe Sözlük, bitkisel hayatı bilinçsiz ve hareketsiz olma hali olarak ifade ederken, tıp literatürü de bu anlamı desteklemektedir. Sınıf Öğretmenliği Programı öğrencileri canlıların ortak özelliklerinden biri olarak bilinen hareket edebilme yerine sinir sistemini kullanmalıdır. Çünkü bitkiler sinir sistemine sahip değildir.
Anahtar sözcükler: bitkisel hayat, yanlış kavramlar, beyin ölümü, koma hali

GİRİŞ

Bitkisel hayat, toplumda sıklıkla kullanılan, beyin ölümü ve koma hali ile sıklıkla karıştırılan bir konudur. Dış dünya ile bağlantının kesildiği, herhangi bir ağrının veya acının hissedilmediği bitkisel hayat, bilincin minimum düzeyde seyrettiği süreklilik gösteren bir durumdur (Machado, Estêvêz, Rodriguez, Pêrez-Nellar, Gutiêrez, Carballo, Olivares, Felitas, Pando & Bletrán, 2012;). Kişinin farkındalığa sahip olamaması, etrafı ile amaçlı iletişim kuramaması olarakta ifade edilir (Giulio vd, 2008).

Bitkisel hayattaki hastaların solunum fonksiyonları devam etmektedir ve ağrılı uyarana yanıt verebilirler (Çil ve Görkey, 2013:3). Çünkü beynin kabuk ve istemli hareket eden kasları yöneten bölümleri haricinde kalan kısımlar fonksiyonlarını yerine getirmektedir. Türk Dil Kurumu'na göre ise bitkisel hayat, hastalık veya kaza sebebiyle bilinçsiz ve hareketsiz duruma gelme olarak ifade edilmektedir (TDK, 2016).

Yoğun bakımlarda özellikle yaşam destek sistemlerinin kullanılması sonucu ölümün meydana gelişi daha da geciktirilmiş, yeni klinik tablolar tanımlanmıştır. Bu tablolar bitkisel hayat, beyin ölümü, dissosiye kalp ölümüdür (Akpir, 2010). Bitkisel hayattaki hastalar koma halinin tipik özelliklerini gösterirler ve uyanık oldukları şeklinde görünürler. Fakat kendilerinin ya da çevrelerinin farkında değillerdir (Jennett & Plum, 1972).

Bahar ve Aktin'e (2001) göre bilinçli olma hali (consciousness) kişinin uyanık, kendisi ve çevresinden haberdar olduğu durum anlamına gelir. Koma durumu ise bunun tam tersidir. Hasta dış etkilerle uyandırılamaz. Hafif ve orta dereceli komada hasta ağrılı uyaranı lokalize edip eliyle uzaklaştırmak ister. Veya, yüz buruşturma gibi genel bir yanıt verir. Derin komada ise bütün uyarılara refleks düzeyde bile bir cevap alınamaz. Sadece vejetatif fonksiyonlar korunmuştur (Ünsel, 2008:2).

Koma, bilinç durumundaki ciddi bir değişikliktir. Hafif düzeyde koma halinde uyanıklık yoktur. Ağrılı uyaranlara amaçlı tepkiler verebilir. Koma halinde ise tepkiler amaçsızdır. Derin koma halinde tepki vermez (Sepit, 2005). Gözün otomatik hareketi ve bazı reflekslerde olduğu gibi, süreklilik gösteren bitkisel hayat durumu ile koma halinin bazı çeşitlerinde daha az karmaşık hareketler meydana gelir (Morsella, 2005). Bitkisel hayat durumundan koma haline ve en son aşama olarak kabul edilen beyin ölümüne ilişkin benzer ve farklı durumlar Tablo-1'de görülmektedir.

Tablo-1: Bilincin Zarar Görme Durumları (Zeman, 2003).

Durum	**Bitkisel Hayat**	Minimum Bilinç Düzeyi	Locked in Syndrome (Şuuru Yerinde Ancak Bedenen Felç Olma, Kendini Dil ve Hareket ile İfade Edememe	**Koma Hali**	Beyin Sapı Testi ile Doğrulanmış **Beyin Ölümü**
Bilinçli Olma	Yok	Var	Var	Yok	Yok
Uyku-Uyanıklık Arası	Var	Var	Var	Yok	Yok
Zararlı, Acılı Uyaranlara Cevap Verebilme	Var/Yok	Var	Var/Sadece Gözlerde	Var/Yok	Yok
Psikomotor Beceriler	Amaçlı Hareket Yok	Bazı tutarlı/tutarsız, sözlü veya maçlı motor davranışlar	Gözün dikey yönlü istemli hareketi veya gözün hızlı açılıp kapanması	Amaçlı hareket yok	Yok ya da sadece omurilik refleks hareketi
Solunum Yapabilme	Genellikle Var	Genellikle Var	Genellikle Var	Değişken	Yok

Tablo-1'de görüldüğü gibi, beyin ölümü nihai yani son aşamadır. Koma halinde, uyku-uyanıklık arası bir duruş ve amaçlı hareket yok iken, bitkisel hayatta bunlar mevcuttur. Koma hali ve bitkisel hayat durumunda zararlı uyaranlara cevap verebilme durumu benzer iken, solunum olayı koma halinde düzensizlik göstermektedir. Her ikisinde de bilinçli olma durumu yoktur.

Tıp ile ilgili bilimsel çalışmalarda bile koma ve bitkisel hayat durumları hakkında kesin bir ayrımın yapılabilmesi sorunu literatüre yansımıştır. Örneğin Zeman (2003), koma halinde amaçlı hareketin olamayacağını ifade ederken, Sepit (2005), basit düzeyde seyreden koma halinde amaçlı tepkiler verilebileceğini ifade etmektedir. Bu karmaşanın topluma yansıması da beklenen bir durumdur. Bu nedenle bu çalışmada, bitkisel hayatın nasıl algılandığı üzerinde durulmaktadır.

YÖNTEM

Bu çalışma, 2015 yılında Ağrı İbrahim Çeçen Üniversitesi Eğitim Fakültesi Sınıf Öğretmenliği Programı 4. öğrencilerine uygulanmıştır. Çalışmada 18 öğrenci yer almıştır ve kompozisyon yazımı yolu ile düşüncelerin analiz edildiği Yıldırım ve arkadaşları (2015) ile Ural, Umay ve Argün (2008) tarafından gerçekleştirilen çalışmalarda uygulanan model kullanılmıştır. Nitel araştırma kurgusuna sahip bu çalışmada katılımcı ifadelerinin içerik analizi yolu ile kategoriler oluşturulmuştur.

Öğrencilerden *bitkisel hayat* odaklı açık uçlu bir soruya cevap olmak üzere bir paragraf yazmaları istenmiştir. Bu paragrafta *bitkisel hayatın tanımına, beyin ölümü durumuna, koma haline, bunlar arasındaki farka, neden bu tabirin yaygın olarak "beyin ölümü* ya da *koma hali" gibi ifadelerle karşılandığına* yönelik olarak görüşlerini yazılı olarak ifade etmeleri istenmiştir. Paragrafın içeriğinde ilgili açık uçlu sorulara cevap olabilecek tüm kelime ya da kelime grupları kodlanmıştır. Bu kodlamalardan içerik analizine gidilmiş, kategoriler ve alt kategoriler oluşturulmuştur. Bu kategorilerin geçerliliğini artırmak için öncelikle kodlama ve kategori oluşturma süreci araştırmacı tarafından, ilk içerik analizi sürecinden üç ay sonra tekrarlanmıştır. Ayrıca iki farklı alan uzmanının da görüşlerine başvurulmuştur. Böylece kategorilere son şekli verilmiştir.

BULGULAR

18 katılımcı öğrencinin yazmış olduğu paragraflarda tespit edilen *bitkisel hayat*, *koma hali ve beyin ölümü*ne ilişkin görüşler Tablo-2'de verilmiştir.

Tablo 2: Bitkisel hayat, koma hali ve beyin ölümüne ilişkin görüşler

Kategoriler	Alt Kategoriler	Katılımcılar	Frekans
Canlılık Özellikleri	Canlılık Özelliklerinin Kaybedilmesi	1,4,16	3
	Hareketsiz ve Yardıma Muhtaç Olma	4,6,10,11,14,17	6
	Bitkilerde Hareket Gözlemlenmez	4,6,7,13,14,16	6
	Temel Hayati Fonksiyonların Devam Etmesi	1,2,3,8,11,16,17,18	8
Beyin Fonksiyonları	Çalışmıyor, Beyin Ölümü Gerçekleşmiş	2,3,4,16,17,18	6
	Düşünme Yetisini Kaybetme Durumu	5,6,7,8	4
Sosyal Bağlam	Ot Gibi Yaşamak (Dolaylı Yoldan Bitkilerin Hareketine Gönderme Yapılıyor.)	9,10,12,14,15,18	6
	Bitkilerle Beslenme	9,18	2

Tablo-2'ye göre 18 katılımcıdan sadece 4'ü bitkisel hayatı, beynin kabuk bölgesi korteksin görevini yerine getirememesi nedeni ile düşünme fonksiyonunun yerine getirememesi olarak belirtebilmiştir. Temel yaşam fonksiyonlarının yerine getirildiğini 8 kişi ifade etmiştir. Bitkisel hayatı, hareket edebilme yönü ile açıklamaya çalışan katılımcı sayısı 9'dur. Beynin fonksiyonları ile açıklamaya çalışan katılımcı sayısı ise 10'dur. Yani katılımcılar bu durumu öncelikli olarak beyin ile açıklamaya çalışırken, hareket edebilme yönünden de bitkisel hayatı zihninde yapılandıranlar da önemli bir oranı teşkil etmektedir.

Sınıf Öğretmenliği programı öğrencilerinin eğitimleri sürecinde bu ayrıntı ile karşılaşmamış olmaları beklenen bir durumdur. Ancak onların her üç ifade ile güncel yaşamdan, medyadan veya başka kanallardan tanışmış oldukları açıktır. Çünkü 18 katılımcının tamamı açıklamalarını, *bitkisel hayat*ı özellikle *beyin ölümü* ile ilişkilendirerek açıklamaya çalışırken, kendilerince canlılık özelliklerine, hareket durumuna, hayati fonksiyonlara, beynin işlevine ve sosyal içerikli ifadelere yer vererek desteklemeye çalışmaktadırlar.

Katılımcıların koma haline ayrıntılı olarak yer vermemiş olması ilginç bir durumdur. Bu durum onların bilgi birikimi ile açıklayamayacağı bir nitelik taşıyabilir. Ancak, yazdıkları paragrafta *bitkisel hayat, koma hali* ve *beyin ölümü* terimlerini bu sıra ile kullanmışlar, ve koma halini, beyin ölümü ile bitkisel hayat arasına konumlandırmışlardır. Onlara yöneltilen açık uçlu soruda bu sıralamaya dair bir ip ucu oluşturacak bir içerik yer almamaktadır. Buna rağmen onların koma halini bitkisel hayat ile beyin ölümü arasına yerleştirmeleri, bu sıralamada bir amaçlarının olabileceği ipucunu vermektedir.

SONUÇ

18 katılımcı öğrenciden 13'ü (4,6, 7, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18) bitkisel hayatı hareket edebilme durumu ile açıklama eğilimindedir. Çünkü bitkiler hayvanlar gibi özellikle insanlar kadar aktif hareket etmezler. Böcek kapan, turgor basıncı ya da irkilme hareketlerinde olduğu gibi bitkilerde genel olarak yoğun bir hareket gözlemlenmez. Özellikle bitki bağlamında halk arasında ağaçlar ve otlar gibi tek ve çok yıllık otsu ve odunsu nitelikte ve yeşil olan canlıların bitki olarak kabul edilmesi (Çeken, 2014), insandaki bu tıbbi durumun bitkilere benzetilerek açıklanmasına zemin oluşturmuştur.

Yapılan bir araştırmaya göre Amerika'da nörologların ve hasta bakıcıların yüzde 50'den fazlasının 'beyin ölümü' ile 'geri döndürülemez bitkisel hayat' arasındaki ayırımı yapamadığı ortaya çıkmıştır (Adanalı, 2007:140). Sağlıkla ilgilenenlerin sahip olduğu bu kavram karmaşası, onları dinleyen halk tarafından da doğru bilgi olarak kabul edilebilmektedir.

Bilgin (1968:28-29), Akıncı, (1996:115) ve Özsunay(1979:215)'e göre beyin ölümünde beyinsel ölüm ile bitkisel hayata girme hali birbiriyle karıştırılmamalıdır. Bitkisel hayata beyin ölümü belirtileri bulunmaz ve hastanın gözleri kendiliğinden ya da sesli bir uyaran sonucunda açılabilir ancak hastanın izleme hareketleri yoktur. Hastanın uyku-uyanıklık döngüsü ile kan basıncı ve solunumu kendiliğinden sürmektedir. Bu kişiler yıllarca yaşayabilir. Fakat beyin ölümde bu belirtiler yoktur. Bu yüzden de bitkisel hayata girmiş kişiler ölü sayılmaz (Akt. Özel, 2002:51).

TDK, bitkisel hayatı bilinçsiz ve hareketsiz olma hali olarak ifade ederken (TDK, 2016), tıp literatürü de bu anlamı desteklemektedir. Ancak bilinç durumu beynin tüm fonksiyonları, hareket hali de bitki ve hayvanlarla ilişkilendirilecek şekilde genellemeler yapılarak, ilgili kavramlar zihinde yanlış yapılandırılmış olabilir.

ÖNERİLER

Gerçekleştirilen bu çalışma ile Sınıf Öğretmenliği Programına devam eden öğrencilerin önemli bir kısmının, bitkisel hayatı, bitkilerin hareket hali ile açıklamaya çalıştıkları tespit edilmiştir. Ancak bilinç düzeyine yeteri kadar değinmemişlerdir. Bitkisel hayatın bilinç durumu ile ilişkilendirilmemiş/ilişkilendirilememiş olması, katılımcı grubun ön bilgi düzeyi ile yakından ilgili olabilir. Bu nedenle ilgili kavramların başka alanlarda eğitim alan bireylerde ya da genel halk kitlesi arasında nasıl algılandığına ilişkin farklı gruplar ile çalışılabilir. Yine de Sınıf Öğretmenliği Programı öğrencileri ve araştırmacılarının, ilgili konu ve kavramları uygun konular ile eş zamanlı olarak ele almalarında fayda olabilir. Ayrıca Sınıf Öğretmenliği Programı Öğrencileri bitkisel hayat ifadesini yapılandırırken, canlıların ortak özelliklerinden biri olarak bilinen hareket edebilme yerine, bitkilerde olmayan ve bitkisel hayata giren hastalarda da önemli oranda devre dışı kalan sinir sistemi ile bağlantı kurmalarında yarar vardır. Yine de koma hali, bitkisel hayat ve beyin ölümü konularının benzer ve farklı özellikleri ile birlikte ele alınması gerekir.

PRE-SERVICE ELEMENTARY MATHEMATICS TEACHERS' CONCEPT IMAGES FOR SEQUENCES

Fatih KARAKUŞ
Afyon Kocatepe University

Zeynep Bahar ERŞEN
Afyon Kocatepe University

Nimet AKIN
Afyon Kocatepe University

ABSTRACT: A sequence is defined as a function on the positive integers into real numbers. The concept of a sequence and its limit has significant impact on the related concepts in mathematics. In the research literature, there are also a few studies related to the students' understanding about the concept of sequences. In this context, the aim of this study is to determine preservice elementary mathematics teachers' concept images for sequences. The study was conducted with 38 freshmen preservice elementary mathematics teachers with the use of a two-part open-ended questionnaire consisting of 10 questions prepared through a literature review. Two dimensions of preservice elementary mathematics teachers' concept images are examined: determining of the sequences, finding limit of a sequence.The data were categorized in terms of descriptive analysis and analyzed qualitatively. As a result of the study, while freshmen preservice elementary mathematics teachers have not difficulty about defining and determining of the sequences; they had wrong concept images for exploring the limit of the sequences.

Key words: sequences, concept image, preservice elementary mathematics teachers

İLKÖĞRETİM MATEMATİK ÖĞRETMENİ ADAYLARININ DİZİLERE YÖNELİK KAVRAM İMAJLARI

ÖZET: Doğal sayılar kümesinden reel sayılar kümesine tanımlanmış fonksiyonlara dizi denir. Dizi kavramı ve dizilerin limiti, bu kavramlarla bağlantılı matematikteki diğer kavramlar üzerinde önemli bir yere sahiptir. Bununla birlikte literatürde, öğrencilerin diziler kavramını anlamalarına yönelik az sayıda çalışma mevcuttur. Bu bağlamda, çalışmanın amacı ilköğretim matematik öğretmeni adaylarının diziler kavramına yönelik kavram imajlarını belirlemektir. Araştırmanın örneklemini Ege bölgesindeki bir devlet üniversitesinin eğitim fakültesi ilköğretim matematik öğretmenliği bölümü birinci sınıfı 2015-2016 öğretim yılı bahar döneminde öğrenim gören 38 öğretmen adayı oluşturmaktadır. Veriler açık uçlu on sorudan oluşan bir soru seti yardımıyla toplanmıştır. Soru setinde yer alan sorular öğretmen adaylarının diziyi tanıma ve dizinin limitini bulmaya yönelik kavram imajlarını ortaya çıkarmak amacıyla hazırlanmıştır. Veriler betimsel olarak analiz edilmiştir. Araştırmanın sonucunda, Öğretmen adaylarının dizileri tanıma ve tanımlamaya yönelik bir problem yaşaadıkları görülürken; dizilerin limitini bulmada yanlış kavram imajlarına sahip oldukları tespit edilmiştir.

Anahtar sözcükler: diziler, kavram imajı, ilköğretim matematik öğretmeni adayları

GİRİŞ

Diziler ve dizilerin limiti, analiz dersinin önemli konularından biridir (Roh, 2010). Ancak ilgili literatür incelendiğinde, özel bir fonksiyon olan dizilere yönelik öğretmen adaylarının anlamalarını belirleyen sınırlı sayıda çalışma bulunmaktadır (Akgün & Duru, 2007; Alcock & Simpson, 2004; Cheng & Leung, 2015; Çiltaş & Işık, 2012). Bu bağlamda, çalışmada ilköğretim matematik öğretmeni adaylarının diziler kavramına yönelik kavram imajlarını belirlemek amaçlanmıştır.

Kavram İmajı

Bir matematiksel kavramın bireyin zihninde oluşumunda tanımlar ve kavrama ait olan ve olmayan örnekler önemli bir yere sahiptir. Matematiksel kavramların bireylerin zihinlerinde nasıl yapılandığını ortaya koymak üzere Tall ve Vinner (1981) kavram tanımı (concept definition) ve kavram imajı (concept image) yapılarını ortaya koymuştur. Kavram tanımı bir kavramı diğerinden ayırmak için kullanılan kelimeler bütünüyken; kavram imajı zihinde o kavram ile ilgili olarak uyananları içermektedir. Kavram imajı terimi "kavram ile birleşen işlemleri ve özellikleri birleştiren bütün zihinsel resimleri içeren bilişsel yapıyı" tasvir etmek için kullanılır (Tall & Vinner, 1981).

Matematiksel anlamda dizi nedir?

Matematiksel kavram olarak, f : N→R fonksiyonuna dizi denir. Diziler için f yerine n→ f(n) = a_n gösterilişi kullanılır. an, dizinin genel terimi adını alır. an genel terimli dizi (a_n), {a_n }, $\{a_n\}_{n\in N}$ biçiminde gösterilirken; (a_n) dizisinin görüntü kümesi {a_1,a_2,a_3,…,a_n,…} şeklindedir (Dernek, 2009).

Bir dizinin genel terimden hareketle dizinin istenilen terimi bulunabilir. Ancak elemanları verildiğinde bir dizinin genel teriminin elde edilmesi tahmine dayalı bir süreçtir. Yani (1,2,3,…) şeklinde verilen bir dizinin dördüncü elemanı 4 veya farklı bir sayı olabilir. (a_n) = n = (1,2,3,4,…) dizisinin 4. elemanı 4'tür; ancak, (a_n) = ($(n-2)^3+2$) = (1,2,3,10…) dizisinin 4. elemanı 10'dur (Bozkurt, 2013). Bu nedenle tanım göz önünde bulundurularak; dizinin elemanlarının belirlenmesinde genel terimden yola çıkılmalıdır.

Bir dizinin limiti

dizilerin limitinden bahsedebiliyor olabilmemiz için; fonksiyonlarda olduğu gibi, $\lim_{x\to a} f(x)$' in olabilmesi için a noktasının f(x) fonksiyonunun tanım kümesinin yığılma noktası olması gerekir. Ancak, pozitif tam sayılar kümesindeki hiçbir eleman bu kümenin bir yığılma noktası olmadığından; f(n)= a_n gibi bir dizinin a bir pozitif tam sayı olmak üzere, $\lim_{n\to a} a_n$ den bahsedemeyiz. Sadece, n → +∞ için dizilerin limitinden söz edilebilir (Bozkurt, 2013).

Türk eğitim sisteminde dizilerin öğretimi

Ülkemizde matematik dersi öğretim programı (5.-12. Sınıflar) incelendiğinde; diziler konusunun öğretimine 11. ve 12. sınıflarda yer verildiği görülmektedir. Bu sınıflar seviyesinde diziler konusuna ait kazanımlar aşağıda sunulmuştur (MEB, 2011):

Tablo 1. Diziler Konusuna Yönelik Sınıf Düzeyine Göre Kazanımlar

Sınıf Düzeyi	Kazanımlar
11. Sınıf	• Dizi, sonlu dizi ve sabit diziyi açıklar, dizilerin eşitliğini ifade eder ve verilen bir dizinin grafiğini çizer. • Verilen (a_n), (b_n) gerçek sayı dizileri ve c∈R için (a_n)+(b_n), (a_n)-(b_n), c.(a_n), (a_n).(b_n) ve ∀n ∈ N^+ için $b_n \neq 0$ olmak üzere (a_n):(b_n) dizilerini bulur. • Artan, azalan, azalmayan ve artmayan dizileri açıklar.
12. Sınıf	Bir dizinin limitini açıklar ve uygulamalar yapar.

YÖNTEM

Çalışma nitel araştırmalarda kullanılan özel durum çalışması yöntemiyle yürütülmüştür. Özel durum çalışması yöntemi kullanılmasının sebebi özel durum çalışmalarının araştırmacıya çok özel bir konunun veya durumun üzerinde yoğunlaşarak incelenen özel durumları en ince ayrıntılarıyla tanımlama ve değişkenler arasındaki sebep-sonuç ilişkilerini açıklayabilme fırsatı vermesidir (Patton, 2005; Yin, 2003).

Çalışma grubu

Araştırmanın örneklemi, seçkisiz olmayan örnekleme yöntemlerinden uygun örnekleme yöntemi (convenience sampling) ile belirlenmiştir. Araştırmada uygun örnekleme yönteminin seçilmesinin nedeni zaman, para ve işgücü açısından var olan sınırlılıklar nedeniyle incelenecek grubun ulaşılabilir ve uygulama yapılabilir olmasıdır (McMillan & Schumacher, 2014). Araştırmanın örneklemini Ege bölgesindeki bir devlet üniversitesinin eğitim fakültesi ilköğretim matematik öğretmenliği bölümü birinci sınıfı 2015-2016 öğretim yılı bahar döneminde öğrenim gören 38 öğretmen adayı oluşturmaktadır.

Veri toplama aracı

Veriler açık uçlu on sorudan oluşan bir soru seti yardımıyla toplanmıştır. Soru setinde yer alan sorular öğretmen adaylarının diziyi tanıma ve dizinin limitini bulmaya yönelik kavram imajlarını ortaya çıkarmak amacıyla hazırlanmıştır.

Verilerin analizi

Veriler betimsel olarak analiz edilmiştir. Öğretmen adaylarının vermiş oldukları cevaplar öncelikle "doğru cevaplar", "kısmen doğru cevaplar", "yanlış cevaplar" ve "boş" olmak üzere dört ana kategoride sınıflandırılmış. Daha sonra bu kategoriler alt kategorilere ayrılıp frekans ve yüzdelerle ifade edilmiştir. Elde edilen verilerin bu şekilde kodlanmasında araştırmacılar dışında başka bir matematik eğitimi uzmanından da yardım alınmıştır. Oluşturulan kategori ve alt kategorilerin uygunluğu için bu uzmandan uzman görüşü alınmıştır. Böylece elde edilen sonuçların güvenirliği sağlanmaya çalışılmıştır.

BULGULAR

Öğretmen adaylarının *"Aşağıda verilen ifadelerin hangisi/hangileri bir dizi belirtir? Nedenini açıklayınız."* sorusuna vermiş oldukları cevaplar Tablo 2'de verilmiştir.

Tablo 2. Öğretmen Adaylarının Diziyi Tanımaya Yönelik Yapıkları Açıklamalar

İfade	Kategori	Örnek İfade	f	%
$\frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \frac{1}{5}, \ldots$	Doğru	Reel sayılardan oluşan bir örüntü ama kuralı verilmemiş. Dizi olmanın şartlarından biri kuralının verilmesi. Bu nedenle dizi değil. (S12) Genel terim verilmediğinden dizi diyemeyiz. (S7) Son terimden sonra hangi reel sayının geleceği tahmin edilse de belli değil. Kuralı belli olmadığından dizi değil. (S15)	10	% 26.32
	Kısmen Doğru	$\frac{1}{n+1}$ kuralına göre dizildiğinden bir dizi belirtir (S2)	23	% 60.53
	Yanlış	Verilen reel sayılar 1'den küçük olamaz (S11) $\frac{1}{n+1}$ kuralına göre n= -1 için tanımsızdır (S29)	2	% 5.26
	Boş		3	% 7.89
1,3,5,7,9,…	Doğru	Genel kural bilinmediğinden dizi diyemeyiz. (S26) Genel terimi olmadığından dizi değil. (S38)	6	% 15.79
	Kısmen Doğru	Belli bir kurala göre artış var. Aritmetik dizidir. (S1) 2n-1 kuralını sağlayan dizidir (S3)	28	% 73.68
	Yanlış	n+2 kuralına göre oluşturulmuş dizi (S2)	4	% 10.53
	Boş		-	
$\frac{3}{1}, \frac{5}{2}, \frac{7}{3}, \ldots, \frac{2n+1}{n}, \ldots$	Doğru	a_n genel terimi verilmiş bir dizidir. (S10)	26	% 68.42
	Kısmen Doğru		-	-
	Yanlış	n=0 için tanımsız olduğundan dizi değildir.(S7) Pay ve payda arasında sabit bir oran olmadığından dizi değil. (S19)	11	% 28.95
	Boş		1	% 2.63
3,3,3,3,…	Doğru	Genel terimi kuralı bilinmediğinden dizi diyemeyiz. (S15)	2	% 5.26
	Kısmen Doğru	Sabit bir dizidir.(S31)	35	% 92.1
	Yanlış	Tüm terimler aynı sayı olduğundan dizi değildir. (S3)	1	% 2.63
	Boş		-	-
-2,-1,0,1,…,n-3,…	Doğru	Belli bir kurala göre verilmiş dizidir. (S33) n-3 kuralına uygun verilmiş bir dizidir. (S30)	28	% 73.68
	Kısmen Doğru		-	-
	Yanlış	Dizinin tanımına göre negatif sayıları dahil edemeyiz. Bu yüzden bu bir örüntü. (S8) Kural verilmiş ancak negatif sayılar bulundurduğundan dizi değildir. (S12)	10	% 26.32
	Boş		-	-

Tablo 2'ye göre, öğretmen adaylarının büyük çoğunluğu genel terimi verilen bir ifadenin dizi olduğunu kabul ederken; kuralı verilmemiş olan bir örüntünün kuralı varmış gibi düşünüp, dizi olduğunu belirtmektedir. Bununla birlikte, bir ifadenin dizi olup olmadığını belirlemede yanılgıya düşen öğretmen adaylarının dizinin tanım ve görüntü kümesini karıştırdıkları görülmektedir.

Öğretmen adaylarının *"Aşağıda verilen dizilerin limitlerini bulunuz. Limiti nasıl bulduğunuzu kısaca açıklayanız."* sorusuna vermiş oldukları cevaplar Tablo 3'de verilmiştir.

Tablo 3. Öğretmen Adaylarının Dizinin Limitine Yönelik Yapmış Oldukları Açıklamalar

İfade	Kategori	Örnek İfade	f	%
$\lim_{n\to\infty} \frac{2n+2}{n+1}$	Doğru	∞/∞ belirsizliğinde katsayılar oranına bakıldığında, limit 2'dir. (S10) Katsayılar oranı 2 olduğundan limit 2'dir. (S31)	38	% 100
	Kısmen Doğru		-	-
	Yanlış		-	-
	Boş		-	-
$\lim_{n\to 2} \frac{1}{n}$	Doğru		-	-
	Kısmen Doğru		-	-
	Yanlış	n=2 için lim değeri ½ 'dir. (S35)	36	% 94.74
	Boş		2	% 5.26
$\lim_{n\to 3} 2n+2$	Doğru		-	-
	Kısmen Doğru		-	-
	Yanlış	n yerine 3 yazılırsa 2n+2=8 olduğundan limit 8'dir. (S16)	37	% 97.37
	Boş		1	% 2.63
$\lim_{n\to\infty} 3n$	Doğru		-	-
	Kısmen Doğru	n→∞'a yaklaşırken limit sonsuza gider. (S29) 3.∞=∞ olduğundan limit sonsuzdur. (37)	32	% 86.49
	Yanlış	Limit 0'dır. (S23) n'nin katsayısı 3 olduğundan limit 3'tür. (S3)	5	% 13.16
	Boş		1	% 2.63
$\lim_{n\to 1} -4n^3 - 3n^2 + 5$	Doğru		-	-
	Kısmen Doğru		-	-
	Yanlış	n=1 yazarsak -4-3+5=2 olur. O halde lim 2'dir.(S27)	37	% 97.37
	Boş		1	% 2.63

Tablo 3'e göre öğretmen adaylarının tümü verilen ilk dizinin limitini doğru bulmuştur. Bununla birlikte dördüncü dizinin limitinin sonsuz olduğunu belirtmişlerdir. Buradan, öğretmen adaylarının limitin sonsuza eşit olması durumunun sadece bir gösterim olduğunu; aslında limitin olmadığını bilmedikleri görülmektedir. Öğretmen adaylarının neredeyse tamamı diğer diziler için n'nin herhangi bir sayıya yaklaşması durumunda limit değerini hesapladıkları görülmektedir. Bu durum, öğretmen adaylarının dizilerin limitini hesaplarken dizilerin tanım kümelerini dikkate almadıklarını göstermektedir. Nitekim dizilerin tanım kümesi doğal sayılar olduğundan bu kümede yığılma noktasından söz edilemez.

SONUÇ

Araştırmadan elde edilen sonuçlara göre, öğretmen adaylarının genel terimi verilen bir ifadenin dizi olup olmadığını tespit etmede başarılı oldukları görülmektedir. Bununla beraber; öğretmen adaylarının büyük çoğunluğu genel terimi verilmeyen bir ifadeyi genel terimini tahminde bulunup; dizi olarak kabul ettikleri görülmektedir. Bazı öğretmen adaylarının da ifadenin dizi olup olmadığını belirlerken; tanım ve görüntü kümelerini karıştırmalarından kaynaklanan hatalar yaptığı görülmektedir.

Öğretmen adayları dizinin limitini bulurken n→∞'a yaklaşması durumunda limit değeri hesaplamışlardır. Öğretmen adaylarının neredeyse tümünün limitin ∞'a eşit olmasının bir matematiksel gösterim olduğunu; bu durumda limitin var olmadığını bilmedikleri ortaya çıkmıştır. Son olarak, öğretmen adayları bir dizinin limitinin ancak n→∞ iken mümkün olduğunu; diğer durumda dizinin tanım kümesi doğal sayılar olduğundan limit durumun olmayacağını bilmedikleri görülmektedir. Bu bağlamda öğretmen adaylarının bir dizinin limitini belirlemede yanlış kavram imajlarına sahip olduğu söylenebilir. Araştırmadan elde edilen sonuçlara paralel olarak; Çiltaş ve Işık (2012), Cheng ve Leung (2015) tarafından yapılan çalışmalarda da üniversite öğrencilerinin dizilerin limitiyle ilgili yanlış kavramsal anlamalara sahip oldukları belirlenmiştir.

ÖNERİLER

Öğretmen adaylarının dizilere yönelik kavram imajlarını belirlemeyi amaçlayan bu çalışmanın sonucu; lisede matematik ve üniversitede analiz dersleri içerisinde yer alan bu konunun öğretimine kavramsal olarak ağırlık verilmesi gerektiğini göstermektedir. Bu bağlamda dizi kavramının tanımı üzerine yoğunlaşılmalıdır. Bununla birlikte, diziler ve dizilerin limiti kavramlarının görselleştirilmesi adına, bilgisayar destekli öğretim programlarından yararlanılabilir.

ABSTRACT: Nowadays, especially countries such as Turkey has huge gap of in qualified personnel for industry.Technical and science education especially in vocational school in Turkey has a curial role in view ofprovide qualified personnel for industry. To achieve this aim education in technical science and vocational school has not only be based on theories, it also has to be a practical parts that is called as laboratory applications such as electrical machine, power electronics, measurements equipment laboratory application … etc. In this paper it is proposed laboratory equipment that are used in University of Dicle Department of Electrical and Energy of Diyarbakır Technical Science and vocational school laboratories and it tries to investigated effect of laboratory training equipment on courses in departments of electrical-electronics of vocational schools.

Key words: Training Equipment, Education in Electrical & Electronics, Technical Science vocational school

MESLEK YÜKSEK OKULLARI ELEKTRİK VE ELEKTRONİK BÖLÜMLERİ İÇİN LABARATUVAR EĞİTİM SETLERİNİN KULLANIMI

ÖZET: Günümüzde, Türkiye gibi özellikle endüstriyel ülkelerin mesleki eğitimleri önemlidir. Türkiye'de meslek okulu endüstrisi için kalifiye personel eğitiminde önemlidir. Özellikle de teknik eğitiminde büyük boşluk vardır. Teknik bilim ve meslek okulunda bu amaç eğitime ulaşmak için sadece teoriler dayalı değil, aynı zamanda bu tür bu vb elektrikli makine, güç elektroniği, ölçümler laboratuvar donatımı uygulaması ... gibi laboratuar uygulamaları olarak adlandırılan bir pratik parçaları olmak zorunda elektrik ve Diyarbakır Teknik Bilim Enerji ve meslek lisesi laboratuvarlarının Dicle Üniversitesi, kullanılan ve meslek okullarının elektrik-elektronik bölümlerinde dersler laboratuar eğitim ekipmanları etkisi araştırılmıştır çalışır kağıt o önerilen laboratuvar ekipmanı.

Anahtar Kelimeler: Eğitim seti, Elektrik-elektronik eğitimi, Teknik ve mesleki okul

GİRİŞ

Laboratuar öğrencilerin tecrübe kazanacağı eğitimin önemli bir bileşenidir. Geleneksel laboratuar çalışması herhangi bir eğitim programının tamamlayıcı bölümünü oluşturur. Bu deneysel çalışmalar öğrencilere pratik beceri kazandırır ve onları gerçek yaşam durumlarına hazır hale getirmekte yardımcı olur. Bununla birlikte geleneksel deneylerin değişik kısıtlamaları nedeniyle daha uygun alternatiflerin aranma zorunluluğu ortaya çıkabilmektedir. Bilgisayarların maliyet verimliliği ve çok yönlülüğünün yanında ağlarla haberleştirilmesi ile tüm dünyada geleneksel laboratuarlara uygun bir alternatif olarak sanal laboratuarların oluşturulması yaygınlaşmıştır [1].

Sanal laboratuar, eğitimde uygulama deneyimi kazanmak için yapılması gereken deneylerde etkileşimli bir gerçek zamanlı simülasyon olanağı sağlayan bilgisayar ortamı olarak tanımlanabilir. Günümüzde tüm mühendislik dallarında matematiksel model tabanlı paket program kullanımı standartlaşmaya başlamıştır. Bu durumun göstergelerinden biri de, bu yazılımlarla ilgili basılan kitap sayılarının, geleneksel ders kitaplarının sayısından oldukça fazla olmasıdır. Böylece sanal laboratuarlar ile bilgisayar benzetimli sistemler üzerinde deneyleri gerçekleştirme olanağı büyük ilgi kazanmıştır [2,3].

Üniversite yüksekokul öğrencileri için güç elektroniği laboratuar deneyleri çok zordur. Bundan dolayı böyle deneyler için internet tabalı gerçek zamanlı gerçek laboratuar ortamları webde gerçekleştirilmiştir. Öğrenciler karmaşık kavramların anlaşılmasını ilerletmek kadar faydalı ve interaktif web tabanlı sanal laboratuar bulmuşlardır. Sanal laboratuar bu yaklaşımlar kullanılarak geliştirilmiştir [4].

Geleneksel Laboratuarlar ve Sanal Laboratuarların Karşılaştırılması

Tipik bir geleneksel laboratuar cihaz veya gereçler üzerinde direkt olarak çalışan öğrenci veya öğrencilerden ve laboratuar amaçları ve prosedürlerini içeren ana noktalardan oluşur. Laboratuarlar genellikle eğiticiler, laboratuar teknisyenleri ve/veya öğretmenlerden uzman görüşler altında yapılır.
Geleneksel laboratuarlar birçok farklı problemlerle ortaya çıkarlar.

- Maliyet: cihazların, depolamanın ve bakımın maliyeti önemli miktarda yüksektir.
- Kaynak sınırlaması: Öğrencilerin genellikle sadece laboratuar saatleri sırasında olmak üzere laboratuarlara erişimi sınırlandırılmıştır.
- Yetersiz eğitim: Bazı durumlarda görülmüştür ki laboratuarlar birçok faktörlerden dolayı öğretimde önemli bir kayıpla sonuçlanmıştır. Ölçülen veriyi el ile işlemek ve aynı tekrarlanan ölçümleri sıkıcı prosedürler ile almak öğrenciler için önemli bir zaman almaktadır ve sonuçları tartışmak için öğrencilere çok küçük bir zaman kalmaktadır.
- Güvenlik: Öğrencilerin yaygın olarak elektrik-elektronik bölümleri gibi potansiyel olarak tehlikeli cihazlarla çalışması gerekebilir.

Bir sanal laboratuar tipik olarak bir bilgisayar üzerinde direkt olarak çalışan öğrenci veya öğrencilerden oluşur. Yazılan notlar ve uzman denetimleri hala kullanılabilirdir, bununla birlikte onun bilgisayar içerisine birleştirilmesi de mümkündür. Laboratuarlara bilgisayarları birleştirmek için kullanılan iki temel gerçekleştirme modeli vardır.

1. Bilgisayar yardımcılı laboratuarlar
2. Bilgisayar benzetimli laboratuarlar

Daha verimli yürütme gösteren laboratuar sistemlerinin oluşturulmasında yardımcı olarak bilgisayarları kullanan laboratuarlar bilgisayar yardımcılı laboratuarlar olarak adlandırılır. Öğrencilerin istekleri üzerine gerçek zamanlı giriş çıkış gösteren ve geleneksel laboratuar cihazlarının tamamı veya bir kısmı direkt olarak bilgisayarları kullanır. Bilgisayarlar cihazlardan anlamlı şekillere veri formatlama, ölçme ve işleme görevlerini alır. Böyle sistemlerin donanım ve yazılımı yüksek olarak cihazların tipine bağlıdır ve bundan dolayı genellikle isteğe göre yapılır. Bununla birlikte örneğin LabView gibi elektronik cihazlar ile haberleşmek için yaygın olarak kullanılan ticari yazılımlar da vardır. Bazı durumlarda öğrencilerin bilgisayarı ve cihaz arasındaki bağlantıyı uzaktan kontrol etmek bir ağ ile yapılabilir. Bilgisayar yardımcılı laboratuarların bu değişikliği popüler olarak uzaktan laboratuar olarak bilinir. Benzetimli laboratuarlarda bilgisayarlar geleneksel laboratuarlarla tamamen yer değiştirerek laboratuar cihazlarının çalışmasını simüle eder. Simülasyonlar geleneksel laboratuar sistemlerinin eşdeğer matematiksel modelleridir. Tipik olarak dördüncü üretim diller kullanılarak daha kompleks simülasyonlar yazılabilirken Delphi veya Java gibi üçüncü üretim diller kullanılarak daha basit simülasyonlar yazılabilir.

İyi tasarlanmış sanal laboratuarlar ile sunulan değişik avantajlar vardır. Geleneksel laboratuarlara göre bu potansiyel yararlar bilgisayar temelli cihazların oluşturulmasına doğru gitmektedir. Bu pozitif görünüşlerden bazıları şunlardır.

1. Maliyet verimliliği: Sanal laboratuarlar laboratuar gereçlerinin bir kısmı veya tamamı ile yer değiştirebilirler. Bundan dolayı satın alma maliyetleri, bakım ve depolama maliyetleri yoktur.
2. Kullanılabilirlik: Bilgisayarlar ve bilgisayar ağları herhangi bir zamanda ve herhangi bir yerde laboratuar hazırlamak için yardımcıdır. Eğiticiler, denetleyiciler ve bilgisayarlar içeren tam bir laboratuar sisteminin birleşimi istendiği zaman ve yerde laboratuar oluşturulmasında yardımcıdır.
3. Etkin öğrenme: Çoğu prosedürler ölçme ve formatlama gibi öğrenciler üzerine yükümlülük getiren prosedürü azaltmak için bilgisayarlar kullanılabilir. Böylece kaliteli olarak zaman artırımı sağlanır.
4. Güvenlik: Bilgisayarlar potansiyel tehlike durumlarının engellenmesini sağlayarak öğrencileri korur. Hatta öğrencilerin laboratuar cihazı ile direkt etkileşimini azaltır veya yok eder. Böylece çoğu kazalardan korunma sağlanır.
5. İdari faydalar: Sanal laboratuarların faydaları not, kayıt tutma ve geri besleme gibi online değerlendirmelerde öğreticilere yardımcı olabilir.

Herhangi bir teknoloji gibi sanal laboratuarlar da simülasyonların gerçekçi olmayan doğallığı, ikinci derece tasarım ve öğrenci kontrolünün eksikliği gibi belirli dezavantajlara sahiptir.

Sanal Laboratuar Uygulama Örnekleri

Şu andaki eğitim yaklaşımları öğrenme süreci sırasında öğrenciye anlık grafiksel geri besleme sunan ve görsellik kavramlarında öğrencilere yardımcı olan simülasyonlardır. Sanal öğrenim sistemi eğitim teknolojisine dayanılarak geliştirilmiştir. Öğrenme aracı ardıl modüllerin birleştirilmesidir. Her modülün bilgi içeriği bilginin optimum iletimi için ayarlanmıştır. Bütün modüller benzer yapıya sahiptir ve aşağıdaki kısımlardan oluşurlar.

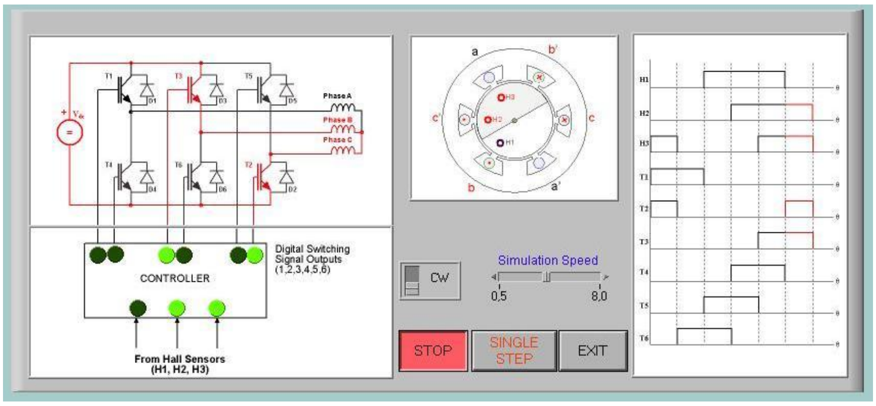
- *Açıklama katmanı*, temel gösterimlerle ilişkili bilgi ile öğrencileri tanıştırır.
- *İnceleme katmanı*, bir sınıfta gösterilen örnek problem için karşılaştırma yapar ve öğrenci pratik örnek için gereken bilgiyi uygular.
- *Eğitimsel katman*, iki amaca sahiptir. İlki hiyerarşik bir yapı ile interaktif bir öğrenme alt modülü sunmaktır. Her seviyede bir soru sorulur ve birçok cevap verilir. Öğrenci bir cevap seçecektir ve interaktif öğrenme alt modülü doğru cevabın seçilip seçilmediğini gösterecektir. Modüldeki bütün konular görülünceye kadar işlem devam edecektir. Bazı konular çok seçimli biçimden farklı olarak bir problemi şekillendirebilecektir. İkinci amaç öğrenciye zaman testi uygulamak ve öğrencinin sonraki seviyeye hazır olup olmadığını kurmaktır. Bu yaklaşım klasik öğrenim yaklaşımının sınav bölümüne karşılık gelir.

Bu eğitsel kurallara göre oluşturulan ve oluşturulabilecek sanal laboratuarlar hiç kuşku yok ki öğrenciler için yüksek performans sağlayacaklardır. Sanal Laboratuarların oluşturulmasında kullanılabilecek bazı paket programlar özellikleri ile şöyle verilebilir.

- MATLAB (MATrix LABoratory); ilk defa 1985'de C.B Moler tarafından matematik ve özellikle de matris esaslı matematik ortamında kullanılmak üzere geliştirilmiş etkileşimli bir paket programlama dilidir. MATLAB mühendislik alanında; sayısal hesaplama, veri çözümleri ve grafik işlemlerinde kullanılabilecek genel amaçlı bir program olmakla beraber birçok özel amaçlı modüler paketlere de sahiptir. Ayrıca WINDOWS ortamında çalışan SIMULINK paketi, etkileşimli benzetim programlarının hazırlanması ve çalıştırılmasında büyük kolaylıklar sağlamaktadır.
- LABVIEW (LABoratuary Virtual Instrument Engineering Workbench); yüksek performanslı bilimsel ve mühendislik uygulamalarında ölçme ve otomasyon için tasarlanan grafiksel bir geliştirme ortamıdır. Bir ön panel ve blok diyagramı yapısından oluşur.
- EWB (Electronic Work Bench); elektrik ve elektronik eleman ve entegrelerini içeren bir paket program olup grafiksel bir ortam sunan başarılı bir simülasyon aracıdır.
- CISCO Lab Activity; Bilgisayar ağları üzerine dünya çapında kalitesi standart olan CISCO tarafından yapılan yazılım uygulamaları sanal laboratuar oluşturmak için çok faydalı yazılımlardır.
- PSPICE, VLEM, Mathcad, Ansys, Mathematica ve daha onlarca paket program sanal laboratuar oluşturmak için kullanılabilecek güçlü programlardır.

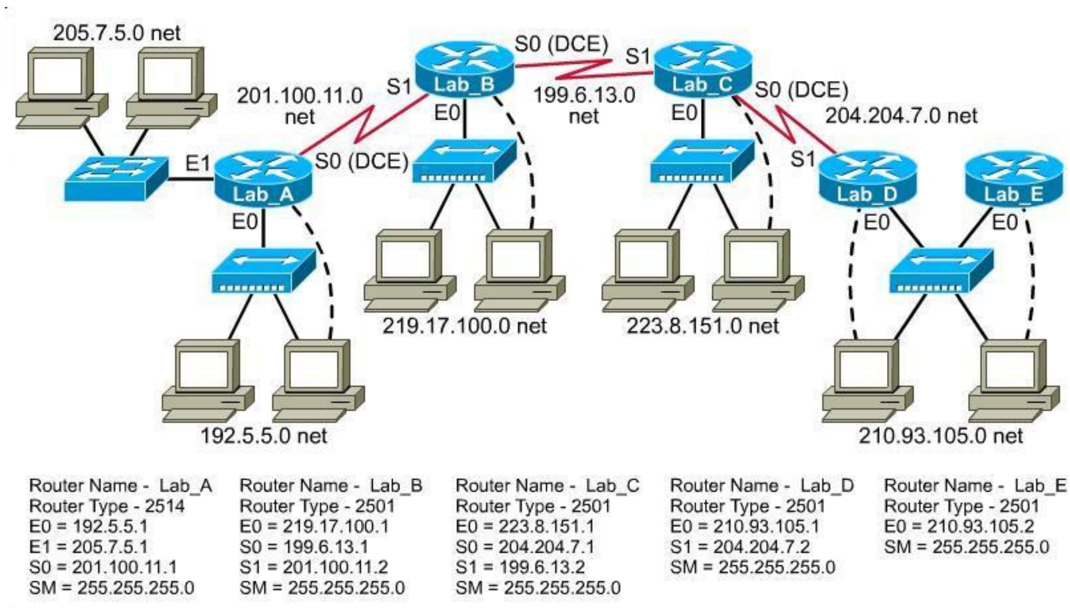
Özellikle meslek yüksekokullarında kullanılan elektrik makinelerinin uygulama laboratuarlarının sanal olarak gerçekleştirilmesi bütün yapının kavranılması açısından önemlidir. Şekil 1'de görüldüğü gibi bir makinenin sürücü ile birlikte çalışması LabView programı ile oluşturulmuş ve böylece sistemin bütün ayrıntılarının incelenebilmesi sağlanmıştır. Bu, gerçek laboratuarda kapalı bir kutu olarak kalabilen araçlar için çok daha anlaşılır bir yapıyla çalışmayı getirecektir. Böylece bir bütün elektrik makinelerinin bu tür benzetimi gerçekleştirilerek kurulacak bir sanal laboratuar özellikle maliyet açısından çok büyük fayda sağlayacağı gibi deneyin öğrenciler açısından daha anlaşılır olmasını sağlayacaktır [5,6].

Şekil 1'deki gibi bir sistemin gerçekte oluşturulması için motor, deney inverteri, osiloskop, ölçüm uçları ve cihazları, mikrodenetleyici ve ayrıca moment, hız gibi sistem büyüklüklerini ölçmek için duyargalar gerekir. Ancak böyle bir sistemin sanal laboratuardaki ihtiyacı bir PC ve paket programdır. Bunun yanında gerçekte 2 veya 4 saat zaman ile sınırlı bir laboratuar, sanal laboratuar ile sınırsız hale gelebilmektedir. Bunun dışında öğrenci transistör gibi malzemelerin üzerindeki gerilimleri ölçmek istediğinde risk alması gerekirken bilgisayarda istediği noktadaki gerilimi ölçme, görme, işleme ve değerlendirme fırsatı bulacaktır.



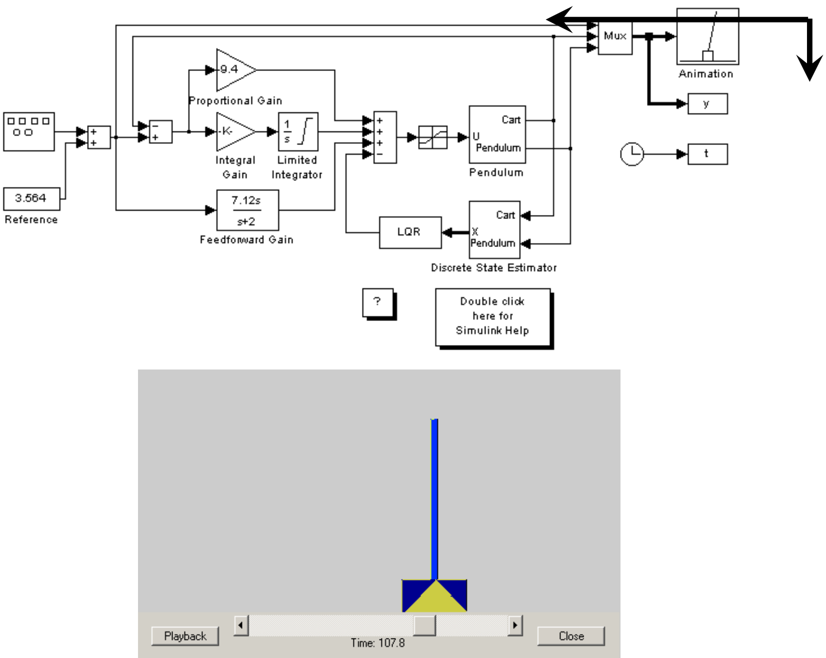
Şekil 1. Sanal elektrik makine laboratuarında bir elektrik makine deney yapısı

Elektronik bölümlerinde önemli bir yeri olan bilgisayar ağlarının sanal olarak oluşturulması ve konfigürasyonu için Şekil 2 bir örnek teşkil etmektedir [7]. Bilgisayarlar, anahtarlar ve yönlendiricilerden oluşan böyle bir ağ yapısı sanki gerçek bir ağ üzerinde çalışıyormuş gibi bilgisayar üzerinde oluşturularak her türlü konfigürasyonu yapılabilmektedir. Sadece bilgisayar üzerinden ağ üzerinde görülen herhangi bir eleman seçilerek bunun üzerinde çalışmak mümkün olacaktır. Ayrıca çok büyük mesafeler gerektiren büyük bilgisayar ağlarının sanal laboratuarda gerçekleştirilmesi de kolay olduğu gibi öğrencilerin laboratuar zamanını yararlı kullanmayı engelleyecek problemler de olmayacaktır. Böyle bir yapı özellikle maliyet bakımından yarar getireceği gibi aynı zamanda görsel olarak bütün yapıyı anlama kolaylığı sağlayacaktır. Ayrıca yapılabilecek yanlış konfigürasyonların hiçbir zararı olmaması yanında öğrenciye tecrübe ve kavrama olanağı sağlayacaktır. Elektronik bölümü için mikroişlemciler, sayısal elektronik ve kontrol gibi donanım gerektiren tüm laboratuarların sanal olarak da gerçekleştirilmesinin katkıları çok fazladır.



Şekil 2. Sanal bilgisayar ağ laboratuar yapısı

Şekil 3, Matlab/Simulink kullanılarak gerçekleştirilmiş bir doğrusal olmayan kontrol sistemini göstermektedir. Matlab, tüm mühendislik alanları ile birlikte kimya, matematik, ekonomi, fizik, biyoloji ve dünya bilimi uygulamalarını da bir bilgisayar ortamına taşıyarak laboratuar ortamı oluşturmakta yazılımlar arasında önemli bir avantaja sahiptir. Şekil 3'deki gibi bir ters sarkaç deneyi matematiksel modeliyle sanal ortama taşınarak animasyonla görsellik kazandırılmıştır. Blok diyagram yapısı oldukça kolaylık sağlayan bu programın, sanal laboratuar oluşturmak için etkinliği ön plandadır. Etkileşimli bir kullanıcı ara yüzü sunarak anlaşılırlığı kolaylaştırmaktadır [8,9].



Şekil 3. Ters sarkaç problemi için Simulink diyagramı ve animasyonu

Üniversitelerimizdeki Laboratuarlar İçin Genel Durum

Elektrik ve elektronik bölümlerinin her biri, oldukça pahalı olan birçok laboratuar oluşturmaları gereklidir. Bu laboratuarlardan bir kısmı hem elektrik hemde elektronik ortak olarak kullanılabilmektedir. Bu bölümlerin kullandığı laboratuarlar teknolojik gelişmelerin en fazla görüldüğü deney setlerine sahip olduklarından cihazların sıkça değiştirilmesi gerekmektedir ve dolayısıyla maliyetleri de orantılı olarak artmaktadır. Bu iki bölüm dalı kendi alanında tüm eğitim süresi boyunca yaklaşık 10-15 kadar laboratuara sahiptir. Bu laboratuarların bazıları Temel Elektrik Lab., Temel Elektronik Lab., Elektrik Makinaları ve Sürücüler Lab., Mantık Tasarımı Lab., Mikrobilgisayar Lab., Süreç Denetimi Lab., Elektronik ve Telekominükasyon Araştırma Lab., Anten ve Yayılım Lab., Mikrodalga Lab., Güç Sistemleri Lab., Robotik Lab., Yüksek Gerilim Lab., Biomedikal Lab., Görüntü İşleme Lab., Örüntü Tanıma Lab., Paralel Bilgisayarlar Lab., Bilgisayar Sistemleri Lab., Mikroişlemciler Lab. olarak sıralanabilir. Örneğin ileri araştırma çalışmalarının da yapılabildiği ve 100 öğrenciye hizmet edebilecek bir Elektrik Makinaları Laboratuarının yaklaşık kurulum maliyetinin 250.000-500.000 $ olduğu düşünüldüğünde her üniversitenin her laboratuarı kurmaya mali gücünün yeterli olmayacağı ve üniversiteler arası eğitim düzensizliğinin oluşacağı aşikardır. Oysa Matlab veya benzer paket program tabanlı sanal bir laboratuarın diğer gereksinimleri ile birlikte yaklaşık 15.000-25.000 $'lık maliyete sahip olacağı göz önüne alındığında her üniversitede istenilen laboratuarların oluşturulması, eğitim düzeninin sağlanması, yatırım fırsat eşitliğinin düzeltilmesi ve etkin bir laboratuar kullanımının yakalanması mümkün olabilecektir. Ülkemizde bazı üniversitelerdeki laboratuar sayıları şöyledir.

Sonuçlar

Burada bir sanal laboratuar sisteminin geliştirilmesi için temel kavramlar sunulmuş ve elektrik ve elektronik kontrol ve tasarım problemleri için sanal laboratuar kullanımı destekçi bir yaklaşımla önerilmiştir. Sanal laboratuar, sisteminin katmanları, malzeme, öğrenci performansı ölçme ve deney oluşturma amaçları için birçok avantaja sahiptir. Sistem pratisyen stajyer için bir donanım eğitici veya öğrenciler için bir laboratuar kursu için kullanışlı bir alternatif olarak görülebilir. Sanal ortamın kullanılması özellikle maliyetler bakımından çok avantajlıdır çünkü bir laboratuar için ihtiyaç duyulan donanım devresi ve cihazların maliyeti çok büyük oranlarda azalmaktadır.

Sınırlı bir ekonomiye sahip olan ülkemizde özellikle üniversitelerde her bölüme laboratuar alınması önemli ölçüde bir bütçe payı gerektirmektedir. Ancak ülke genelinde bir proje kapsamında geliştirilecek sanal laboratuar önemli ölçüde maliyet azaltacak, eğitim kalitesini artıracak ve kolayca güncellenebilecektir. Hatta bir ürün olarak başka ülkelere pazarlanabilecektir.

Şüphesiz ki gerçek ortamlar tecrübe oluşumu ve bilgi pekişimi için vazgeçilmezdir. Ancak bu çalışmada açıklanan meslek yüksek okulu eğitimi için sanal laboratuarların kullanılmalarının gerekleri ve faydaları göz önüne alındığında, sanal laboratuarlar oluşturmanın özellikle ülkemiz için çok daha yararlı olacağı düşünülmektedir.

APPLICATION OF PLC BASED LABORATORY EDUCATION SET IN TECHNICAL SCIENCE AND VOCATIONAL SCHOOL

Musa YILMAZ
Batman Universitesi Teknoloji Fakültesi Elektronik ve Haberleşme Mühendisliği

M. Emin ASKER
Dicle Universitesi Diyarbakır TBMYO Elektrik ve Enerji Bölümü

ABSTRACT: Power electronics equipment and application has important role in industry. It effects most of are in electrical-and electrical engineering such as, power generation, transmission, electrical machine, renewable energy. Therefore it is necessary in electrical and electronics education, the course are based on power electronics have to be learned well by student in vocational school of technical science or electrical and electronics engineering. The aim of his paper is to investigate the effects of power electronics laboratory and experiments on learning of power electronics course and try to give vision to faculty of electrical- electronics engineering and vocation schools.

Key words: Power electronics experiments, Education in Electrical & Electronics, Technical Science vocational school

TEKNİK BİLİMLER MESLEK YÜKSEK OKULLAR için PLC BAZLI LABORATUVAR UYGULAMALRI

ÖZET: Genel kullanımlı bilgisayarların aksine PLC birçok girişi ve çıkışı olacak şekilde düzenlenir ve elektriksel gürültülere, sıcaklık farklarına, mekanik darbe ve titreşimlere karşı daha dayanıklı tasarlanırlar. PLC'lere denetleyeceği sistemin işleyişine uygun programlar yüklenir. PLC programları, giriş bilgilerini milisaniyeler mertebesinde hızla tarayarak buna uygun çıkış bilgilerini gerçek zamanlıya yakın, cevap verecek şekilde çalışırlar.

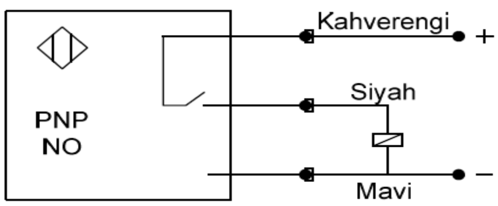
Anahtar sözcükler: PLC, Elektrik-Elektronik Eğitimi, Teknik Bilimler Meslek Yüksek Okulları.

GİRİŞ

Sistemde kullanılan PLC’nin; 10 bit sayısal çıkısı, 14 bit sayısal girisi bulunmaktadır. Sayısal çıkısları yarıiletken çıkıslıdır. Sayısal giris/çıkıs sinyalleri 0/+24V’luk gerilim seviyelerini kullanmaktadır. 4096 word kullanıcı program hafızası, kalıcı olarak saklanabilen 2560 word veri hafızası bulunmaktadır. PLC, 24 VDC gerilimle beslenmekte ve yük durumuna göre max 700 mA akım çekmektedir. PLC’nin programlanması için bir adet seri portu bulunmaktadır. Port 0’a programlama kablosu bağlanarak PLC programlanır.

PLC programlama kablosu (PPI) ile Siemens PLC‘ler programlanmakta ve PLC programı on-line izlenebilmektedir. 1 numara ile gösterilen kısım bilgisayarın USB portuna takılan konnektörüdür. 2 numara ile gösterilen konnektör PLC’nin Port 0 konnektörüne takılan kısımdır. 3 numara ile gösterilen kısım kablonun üzerinde ki elektronik devrenin bulunduğu kısımdır. Bu kısım PLC-PC haberlesmesini sağlayan bilgilerin birbirine çevrildiği kısımdır.

Endüktif sensörler Metal’e duyarlılık gösterdiğinden bu sensörlere bir metal nesne yaklastırıldığında çıkış sinyali üretecektir. Sensörün bu özelliğinden yararlanarak Asansör kabininin hangi katta olduğu anlasılmaktadır. Asansör Kabinine yerlestirilen metal nesne katlarda bulunan sensörlerin önünden geçerken sensörlerin sinyal üretmesine neden olur. Böylece kabinin konum bilgisi anlaşılmaktadır.

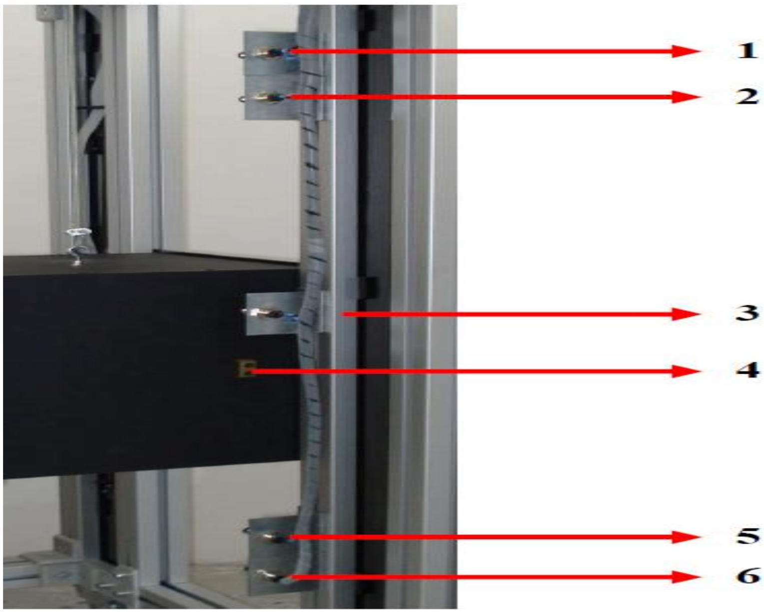


Şekil 1. Asansör Eğitim Setinde Kullanılan Sensörün Bağlantısı

YÖNTEM

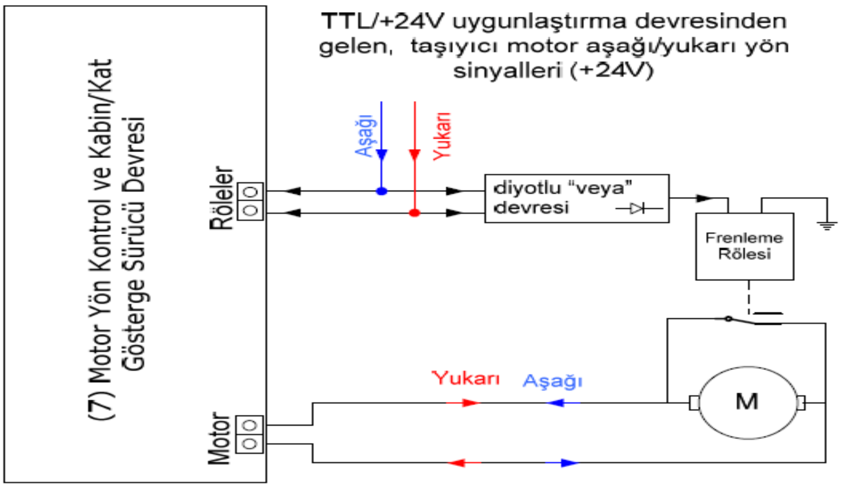
Kullanılan sensörlerin çalısma voltaj aralığı 10-30 Vdc'dir. 24 V'da 200 mA akım çekmektedir. Sinyal çıkısı siyah uçtan alınmaktadır. Sinyal ucu Normalde Açık seklindedir. Sensör metal bir nesne algıladığında üzerindeki kırmızı led yanar ve sinyal ucunda +24v görülür. Endüktif sensörlerin algılama mesafesi metalin tipine bağlı olduğundan, her cismi aynı mesafeden algılayamamaktadır. Bunun için kullanılan sensörün karakteristik özelliklerine dikkat etmek gerekir. Kullanılabilecek sensorler şunlardır

1. Ust Sınır Sensoru
2. 3. Kat Sınır Sensoru
3. 2. Kat Sınır Sensoru
4. Sensor Uyarıcı Metal
5. 1. Kat Sınır Sensoru
6. Alt Sınır Sensoru



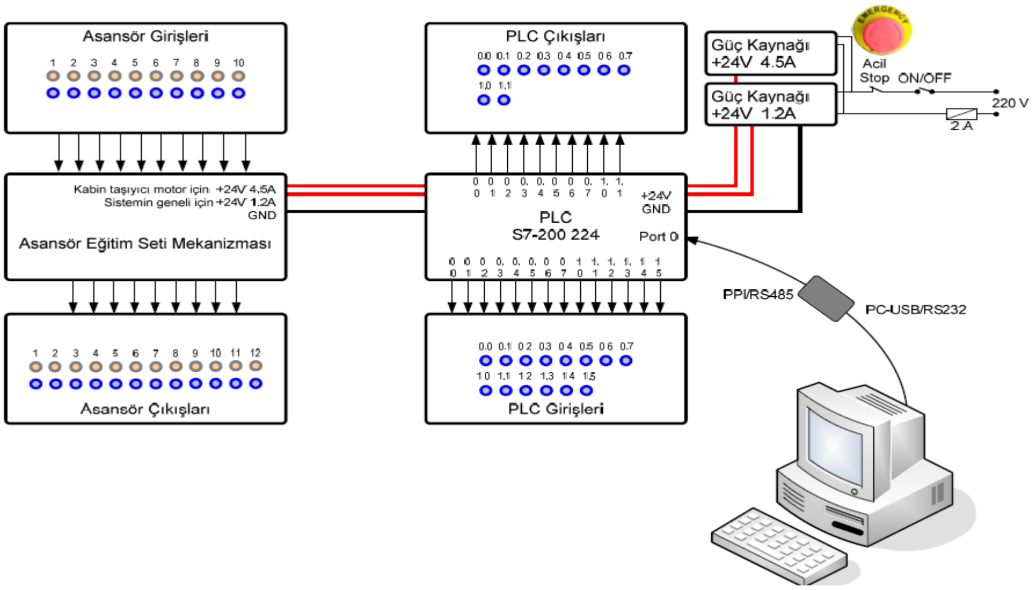
Şekil 2. Kat sensörleri ve alt sınır/üst sınır sensörleri

Tasıyıcı motorun enerjisi kesildiğinde kabini, istenen noktada durdurabilmek için frenleme devresi kullanılmıstır. Şekil 3'de görülen röle bu frenleme devresinde kullanılmaktadır. Asağıda frenleme devresinin prensip şeması görülmektedir.



Şekil 3. Tasıyıcı Motor Fren Rolesi

BULGULAR



Şekil 4. Asansör Eğitim Seti Blok Seması

Motor Yön Kontrol Devresinin, Röleler klemensine bir sinyal geldiği anda “veya” devresi üzerinden Frenleme Rölesi enerjilenecek ve Motor uçlarına bağlı Normalde kapalı kontak açılacaktır. Veya devresi ile Tasıyıcı motorun her iki yönündeki hareketi için de frenleme devresi çalıstırılacaktır. Böylece tasıyıcı motor enerjilendiğinde frenleme rölesi motor uçlarını serbest bıraktığından yukarıya veya asağıya hareketi gerçeklesecektir. Rölelere gelen asağı/yukarı sinyali kesildiği anda Tasıyıcı Motorun Enerjisi kesilecek ve aynı anda frenleme rölesi kontakları kapanacaktır. Bu anda tasıyıcı motor üzerindeki enerji hızlı bir sekilde desarj olacaktır. Böylece kabinin istenen noktada durması sağlanmıs olmaktadır. Aksi halde motorun enerjisi kesildiğinde serbest kalan motor ve asansör kabininde, ataletten dolayı kaymalar yasanabilmektedir. Gerçek asansörlerde frenleme sistemi mekanik (balatalı), değisken devirli motorlar veya elektronik devreler yardımı ile (invertör) yapılmaktadır.

SONUÇ

Asansör kabininin asağı/yukarı hareketi, bağlı olduğu çelik halat ile sağlanmaktadır. Asansör kabininin üzerinde, gerçek asansörlerde olduğu gibi tus takımı bulunmaktadır. Ayrıca kabin içi aydınlatma ve kapı güvenlik kilidi mekanizmaları mevcuttur. Tüm bu birimler PLC ile kontrol edilebilmektedir.

Bosaltım ve Tasıma İstasyonunu için PLC programı gelistirmek/düzenlemek ve sistemin giris/çıkıslarını bilgisayar ortamında izleyebilmek için kullanılan orijinal yazılımdır. Step 7-Micro/WIN programının bir bilgisayara kurulumu için gerekli minimum özellikleri;

- Windows 98 ve üzeri isletim sistemi
- En Az 50 Mb Hard Disk alanı
- En Az 128 Mb RAM
- Fare

Table 1. Asansör Eğitim Seti Giris/Çıkıs Bağlantı Noktaları

ABSTRACT: Today PLC, servo motors, conveyor and pneumatic systems are necessary equipment and topics for industrial automation. Therefore for that issue is very popular for vocal schools and engineering faculties. The course are based on electrical-electronics and mechanical engineering have to support by additional practical materials. The aim of that paper is focused on PLC based training education such as Elevator training set, the conveyor training set and servo - pneumatic training set. The paper propose a brief usage of mentioned PLC based sets and their effects on electrical course education in vocational school of technical science.

Key words:PLC, servo motors,pneumatic systems, education in Electrical & Electronics, Technical Science vocational school

GİRİŞ

Öğrenme-öğretme süresi boyunca bireyin ön plana çıkarılması, öğretme ve öğrenmenin öğrenci merkezli olması, bu süre boyunca uygulanacak tekniklerin çağdaş bir anlayışla zamanın gerekliliklerine uygun biçimde tasarlanması, uygulanması, değerlendirilmesi ve geliştirilmesi ile mümkün olacaktır (Boynak, 2004). Bilgisayar teknolojisinin sunduğu imkânlardan yararlanmasını bilen, bilgiye erişebilen, kullanabilen ve en önemlisi de bilgi üretebilen nesillerin yetiştirilmesi gerekliliği eğitim alanında bilgisayar teknolojisinin kullanılmasını zorunlu hale getirmiştir (Arıcı ve Dalkılıç, 2006). Hangi amaçla olursa olsun bilgisayar teknolojisinin yeri ve öneminin anlaşıldığı günümüzde artık asıl mesele onun etkin ve verimli kullanımı meselesidir (Çekbaş, Yakar, Yıldırım ve Savran, 2003). Aynı zamanda daha çok sayıda bireye daha kısa sürede daha fazla bilginin kalıcı şekilde aktarılması da bu tanıma girmektedir (Tekiner ve Korkut 2001). Literatürde Bilgisayar Destekli Öğretim olarak tanımlanan bu öğretim biçiminin öğrenme-öğretme sürecine sağlayacağı faydalar pek çok araştırma ve geliştirilen eğitim yazılımı uygulamaları ile kanıtlanmaya çalışılmıştır (Semerci, 2001). Bilgisayar Destekli Öğretim sürecinin başarısını doğrudan etkileyen eğitim yazılımları hazırlanmasında görsel yazılım tekniklerine sıkça başvurulmaktadır. Çünkü bu teknikler öğrencinin bütün duyu organlarına hitap edebilme imkanı sağlamaktadır (Arıcı ve Dalkılıç, 2006). Üniversitelerde ve mesleki-teknik eğitim veren liselerin ilgili bölümlerinde uygulanabilmektedir (Ekiz, Bayam ve Ünal, 2003). Bu konunun geleneksel yollarla öğretiminde devrenin işleyiş mantığının açıklanması sırasında gerçekleşen soyut iş adımlarının görselleştirilmesinde güçlüklerle karşılaşılmaktadır (Güzelbey ve Bayseç). Bunun için öğretici onlarca tablo hazırlamak zorunda kalmakta, öğrenci ise olayları kafasında canlandırmakta ve bütünleştirmekte zorlanmaktadır. Halbuki bilgisayar destekli ve kartlarda gerçekleşen işlemlerin görselleştirilmesi, konunun açıklanmasını ve anlaşılmasını kolaylaştıracaktır.

YÖNTEM

Bu uygulamada ana bilgisayar dediğimiz bir bilgisayara bağlı sayı sınırlaması olmamakla birlikte öğreticinin takip edebileceği sayıda bilgisayarın bağlanması mümkündür. Ana bilgisayar hem bilgisayarları kontrol etmekte hem de farklı veya aynı deney kartlarını ayrı olarak kontrol etmektedir.

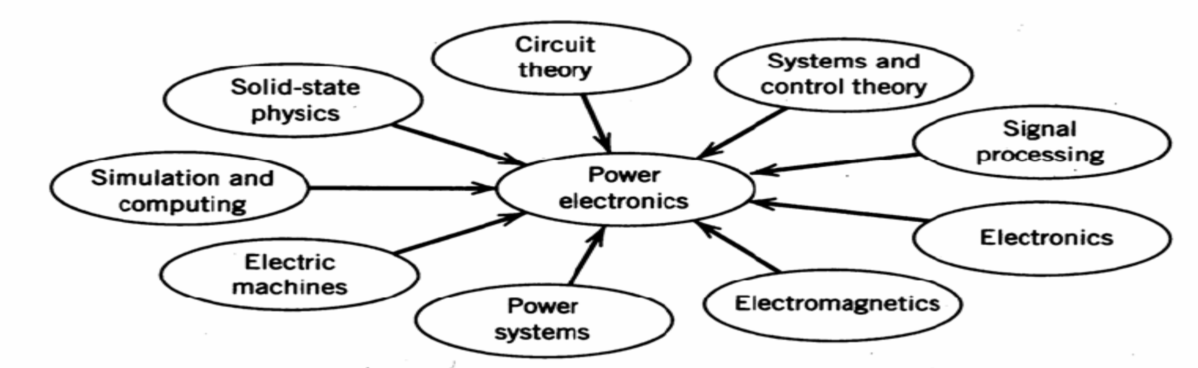
Ana bilgisayar üzerinden hangi işlemlerin yapılacağını şöyle sıralayabiliriz:

1. Bilgisayarları kontrol etmek
2. Kartları, bağlantı portları üzerinden kontrol etmek
3. Kartlara arıza göndererek öğrenciye problemler sunabilmek
4. Arızaların algoritma yöntemiyle bulunmasını sağlamak
5. Ayrı öğrenme düzeyine sahip öğrencilere ayrı hız ve öğretim yöntemlerini sunabilmek
6. Elektriksel büyüklüklerin grafik ve simülasyonlarını öğrenci bilgisayarlarında gösterebilmek

7. Süreyi ayarlayabilmek, uzun zaman alan deneylerin kaydedilerek birden çok haftada işlenmesini sağlamak
8. Her öğrencinin ayrı ayrı deneylerini kaydederek tüm performanslarını zaman ve grafiksel olarak görebilmek
9. Deney sırasında bilgisayarların sadece deneysel amaçlı kullanımlarını sağlamak
10. İhtiyaç halinde başka programlar ile bağlantı kurularak (internet dahil) problemin optimum çözümünü sağlamak

Öğrenci bilgisayarları ise;
1. Kartların görüntüsünü bilgisayarda görebilir
2. Deneyin çalışmasını adım adım izleyebilir
3. Devreye bağlı elemanlar ile ilgili dokümanlara istediği zaman bakabilir
4. Ana bilgisayarda verilen arızayı tespit için işlemler yapabilir, arızayı giderebilir
5. Devrenin elektriksel grafik ve eğrilerini görebilir
6. Ana bilgisayar ve diğer bilgisayarlar ile iletişim kurabilir
7. Yaptığı deneyleri kaydedebilir
8. Öğrenme hızına göre arkadaşlarından farklı deneylere bakabilir
9. Gerektiğinde başka programlar çalıştırarak işlemler yapabilir

Bunların yanında daha sayamadığımız birçok işlem ve görevi yaptırmamız mümkündür. Bunlarla ilgili daha açıklayıcı olması için şekil 1'de bağlantılar ve durumlar verilmiştir.



Şekil 1: Bilgisayar Destekli Deney Kartlarının Tümleşik Kontrol Edilmesi

Bilgisayar kontrollü deney kartlarının yapımı ve uygulaması konusunda birçok şirket ve üniversite çalışıyor olsa dahi, profesyonel anlamda ve dünya çapında referansları iyi sayılan 3 önemli isim vardır. Bu üç isimde birbirine yakın özelliklerde işlemleri sunabilmektedirler. Lucas Nülle Labsoft Unitrain Deney Kartları ve Programı ile yapılmış bir örnek çalışma sunmak, konunun daha açıklayıcı ve anlaşılır olabilmesini sağlayacaktır.

Uygulama için gerekli 5 temel öğe vardır. Bunlar; bilgisayar, program, modül, deney kartları ve bağlantı modemidir. Bu öğelerin bağlantı durumları Şekil.2'de blok olarak gösterilmiştir. Bu öğeleri inceleyecek olursak;

Bilgisayar
Programı çalıştırabilecek hızda ve portları mevcut olmalıdır. Her bilgisayar ağa bağlı ve modüle sahip olmalıdır.

Program

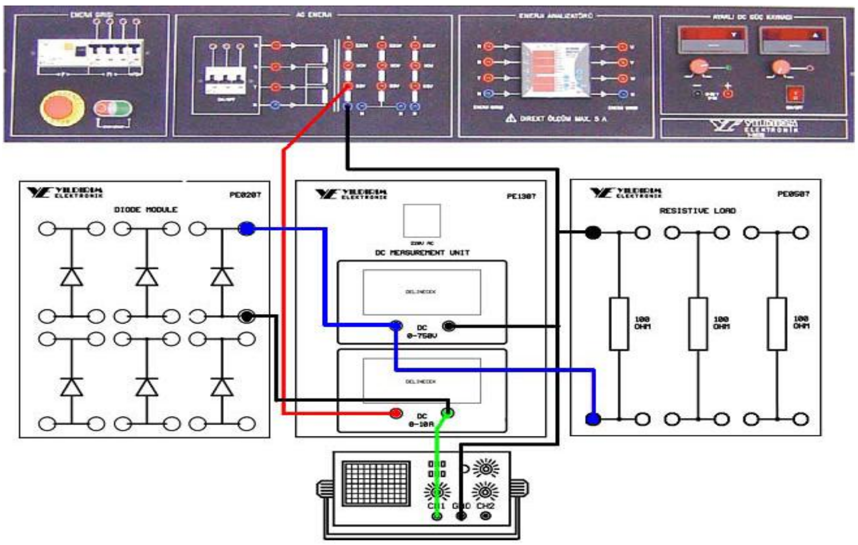
Tüm işletim sistemleri ile uyumlu çalışabilen, flash ve animasyonlar ile desteklenmiş görsel bir programdır. Bunun içerisinde bulunan önemli bazı öğeler;
a) Bağlantı modülünün gerçek görüntüsü
b) Bağlanacak kartın gerçek görüntüsü
c) Deney hakkında teorik bilgi
d) Deneyde kullanılacak elemanların gerçek görüntüsü ve karakteristikleri
e) Deneyin sembolik görüntüsü
f) Ölçü aletlerinin gerçek ve sanal görüntüsü
g) Deneydeki bağlantıların animasyon görüntüsü
h) Yanlış bağlantıların gösterimi ve hataların düzeltilmesi için yol gösterimi
i) Güç kaynakları

j) Not tutabilme, kayıt ve çıktı
k) Aşamalı olarak tüm deneylerin simülasyon gösterimi
l) Deneyde elde edilen veriler ile grafik çizimleri
m) Konu ile alakalı teorik bilgi ve problemler

Experiment Sets

Deney kartlarını yerleştirdiğimiz ve bilgisayara paralel port ile bağlı kısımdır. Bilgisayar kart ile bağlantıyı bu modül ile sağlar.Şekil.3'te modül görüntüsü mevcuttur.

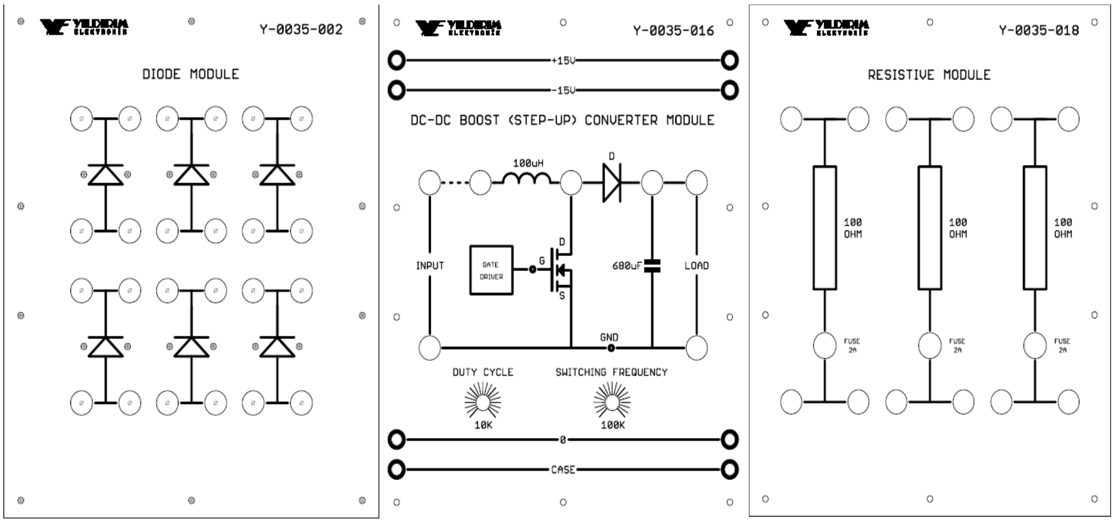
Şekil 2. Power Electronics Experiments Training Set



Şekil 3. Some Experiments in Power Electronics

Deney Kartları

Birden çok deneyin yapılabildiği, takıp çıkarılabilen portatif elektronik devrelerdir. Bir kartta birden çok deney yapmak mümkündür. Programda yapılacak deneye göre kart seçilir ve modüle yerleştirilir. Şekil.4' te farklı amaçlı kartlar görülmektedir.



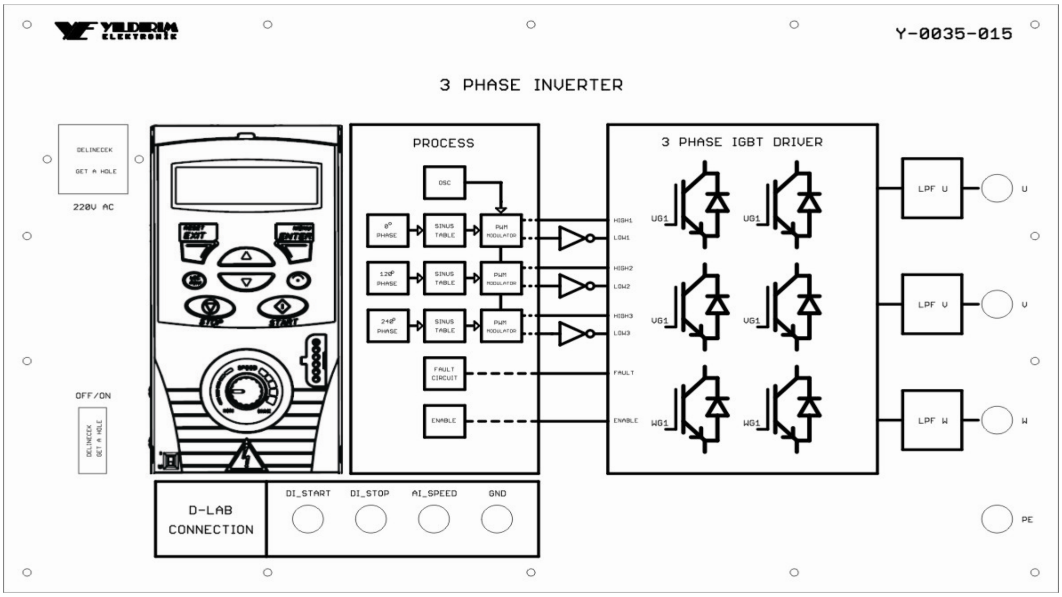
Şekil 4. Farklı özellikteki bazı deney kartları

Bağlantı Modemi

Tüm bilgisayarların bağlandığı ve ana bilgisayarın buradan bilgisayarlara kontrol sağladığı birimdir. Port sayısı bilgisayar sayısına göre seçilir.

Sistemin Çalıştırılması

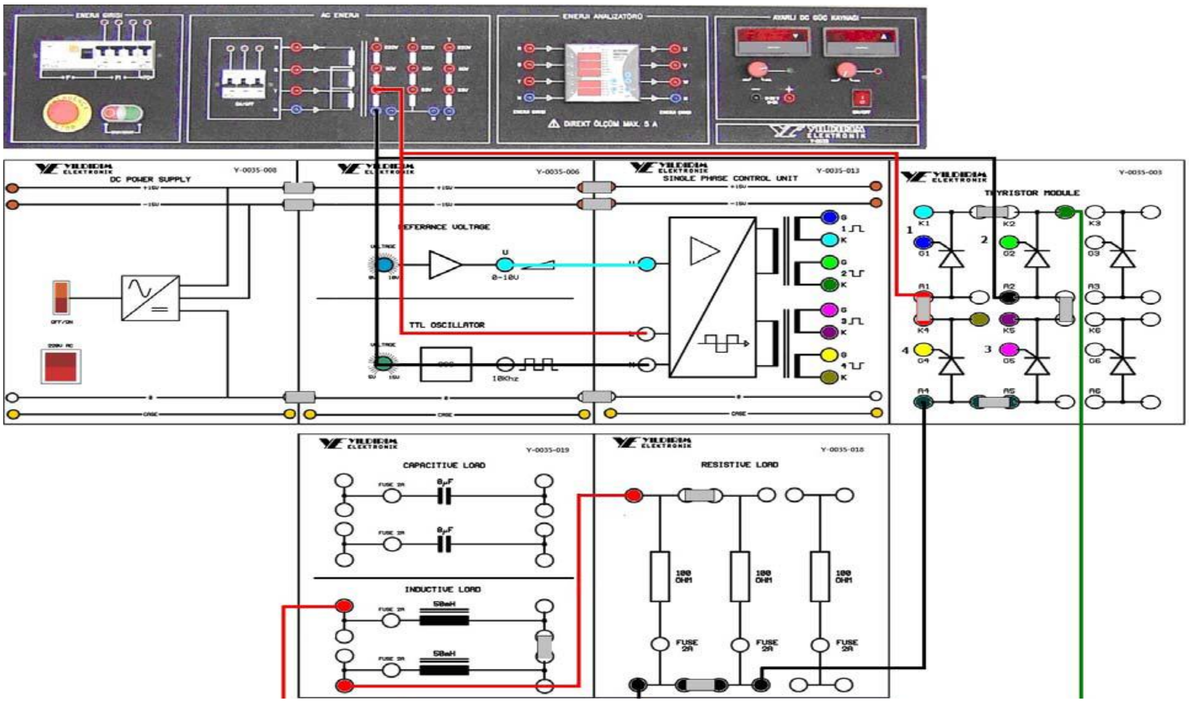
Bunun için örnek bir deney uygulaması yapalım. Yapacağımız deney bir yükseltici devresi(Amplifikatör) olsun. Devrenin şeması programımızda mevcuttur (Şekil.5).



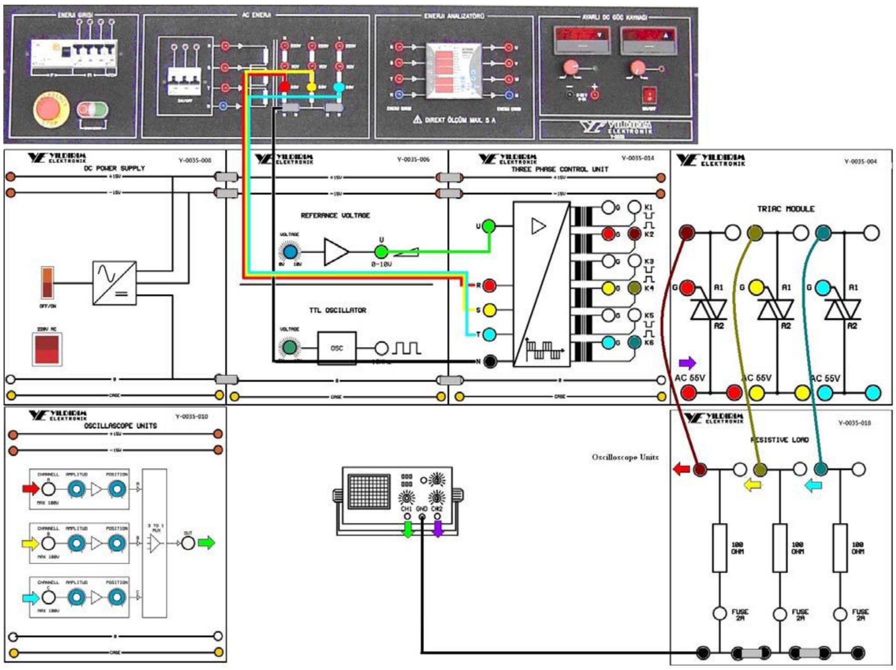
Şekil 5. Power Electronics three phase inverter module

Deney, program çalıştırıldıktan sonra menüden yapılacak deney ve deney kartı seçimi ile devam eder (Şekil.4). Daha sonra yapılacak deney kartı modüle takılarak istenirse programın yönlendirmesi ile bağlantıları yapılır (Şekil.5, 6 ve 7).

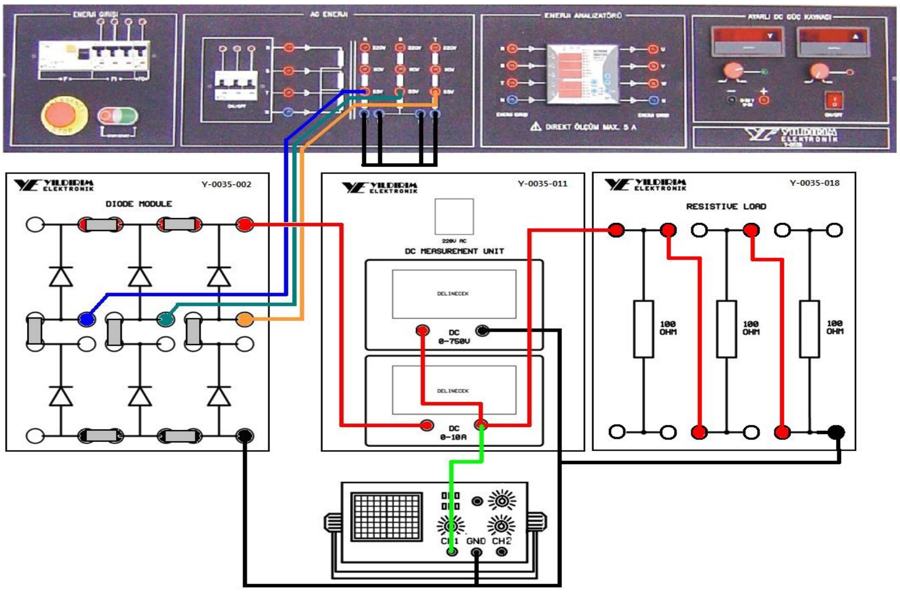
Bağlantı işleri tamamlandıktan sonra gerekirse bu konu ile ilgili teorik bilgiye bakılır (Şekil7 ve 8). Gerekirse konu program içindeki problemler ile daha da pekiştirilir.



Şekil 6. Singel Phase Full controlled Rectifier (With ohmic load)



Şekil 7. Three Phase Full controlled AC-AC converter (With ohmic load)



Şekil 8. Three Phase Full Wave Rectifier (With ohmic load)

Daha sonra gerekli hazırlıklar yapıldıktan sonra devreye enerji verme işlemine geçilir. Tabiki enerji verilirken devrede oluşan olayları gözlemlememiz ancak ölçü aletleri ile mümkündür. Bunun için örnek olarak dalga şeklini gösteren hepimizin görmüş olduğu osiloskobu kullanırız. Burada kullanılan ölçü aletleri gerçek ile tamamen benzerlik göstermektedir. Devreye enerji verildikten sonra diğer ölçü aletleri ile farklı büyüklükler ölçmek mümkündür.

Devre yapılırken oluşan hataları program göstermekte, doğru çözümü de istendiği taktirde ekrana getirmektedir. Ana bilgisayardan öğrenci bilgisayarlarına müdahale edilerek gerekli düzeltmeler yapılabildiği gibi, yapılan doğru problemin hatalı duruma getirilerek öğrencinin bu hatayı bulması sağlanabilmektedir. Bunların yanı sıra anabilgisayardan öğrenci bilgisayarlarında oluşan hatalar, işlemler, grafikler görülebilmektedir.

Bunların dışında daha birçok işlem bulunmakla birlikte burada asıl anlatılmak istenen bu deney kartlarının öğretime sağladığı katkılardır. Zaman, malzeme, farklı öğrenme düzeyleri, gelişen teknolojiye adaptasyon, maddi kazançlar ve saymadığımız daha birçok nedenden dolayı bu yöndeki uygulamaların öğretime katkıları oldukça fazladır.

BULGULAR

Birçok Bilgisayar Destekli Deney Kartlarının yazılımları, öğrencinin verdiği cevaplar doğrultusunda deneyi sunar ya da öğrenciye belli aralıklarla dönüt sağlar. Bu yüzden Bilgisayar Destekli Deney, ortamındaki her öğrencinin aktif şekilde deneye katılması, deneydeki performansını gösterebilme imkanı vermesi ve öğrenciye dönüt sağlayabilmesi nedeniyle öğrencinin deneye katılımını sürekli hale getirir.

Bilgisayar Destekli Deney Kartlarının uygulanmasında, bir öğrencinin bir deney üzerinde harcadığı zaman ve gösterdiği performans, bilgisayar tarafından kayıt edilebilir ve istendiği zaman öğreticinin kullanımına sunulabilir. Öğrenci performansı hakkındaki bu bilgiler, öğreticinin öğrencileri gözlemlemesi ve onları ihtiyaçları doğrultusunda yönlendirmesi bakımından oldukça önemlidir. Klasik deneysel öğrenme ortamlarında, öğreticinin her öğrencinin performansını gözlemlemesi ve buna bağlı olarak öğrenciyi yönlendirmesi oldukça zordur.

TARTIŞMA ve SONUÇ

Klasik deneysel öğretim ortamlarındaki öğrenciler, belli deneyleri belli zaman dilimleri içinde yapmalı ve belirlenmiş öğretimsel etkinlikler yine belirli zaman dilimleri içinde gerçekleştirilmelidir. Diğer taraftan, Bilgisayar Destekli Deney Kartlarının uygulanmasında bir öğrenci istediği öğretimsel etkinlikleri istediği zaman ders saati dışında kalan zamanlarda da uygulayabilir ya da tekrar edilebilir. Bu etkinlikleri evde bilgisayar başında uygulama şansı bulabilir.

ABSTRACT: Currently computer based training equipment are favorite part of education in vocational school of technical science and department of electrical-electronics entering. Lucas NülleUni-Train system is computer based tool that is used in laboratory for electrical-electronics engineering experiments. It is A host of multimedia courses are available for the UniTrain system in the areas of electrical engineering and electronics. Each of the courses consists of the training program, specific circuitry on one or more experiment cards and a browser (LabSoft) for the control, management and display of the training course. UniTrain courses convey practical skills by providing a theoretical basis then guiding students through numerous experimental measurements. Experiment cards are linked to the Interface and the training program via Experimenters. With the help of virtual instruments and power sources included with the system, circuits can be analyzed and results of measurements stored directly within the training program. In that paper it is focused on usage of Uni-Train set for electrical and electronics experiments and it is also revealed the effects of that set on electrical-electronics engineering

GRADUATE THESIS ANALYSIS BASED MADE EFFORTS TO FATIH PROJECT: THE SAMPLE OF YÖK DATABASES

Habib ÖZGAN
Doç. Dr.; Gaziantep Üniversitesi, Eğitim Fakültesi, Eğitim Bilimleri Bölümü

Asım BARUT
Milli Eğitim Bakanlığı

ABSTRACT: The purpose of this research is to make a comparative analysis of the graduate thesis, made under the Fatih Project. Research data from graduate thesis written between the years 2014-2015 and YÖK (Higher Education Council of the National Thesis Center) is limited to data obtained from the database. Qualitative research approach was adopted and the data obtained by the research conducted document analysis. The data were analyzed using content analysis. According to the results obtained from the research findings; While there is generally a positive attitude about the interactive whiteboard, it has been found to be inadequate use of tablet computers. Technological problems, as well as the contents of the missing teachers Fatih project, and that the technology they need to provide educational and vocational training services in the use of aspects, one of the important findings of this study.

Key Words: Fatih project, Interaction Smart Board, Educational Technology.

FATİH PROJESİNE YÖNELİK YAPILMIŞ ÇALIŞMALARIN LİSANSÜSTÜ TEZLERE DAYALI ANALİZİ: YÖK VERİ TABANI ÖRNEKLEMİ

ÖZET: Bu araştırmanın amacı Fatih Projesine yönelik yapılmış lisansüstü tezlerin karşılaştırmalı bir analizini yaparak var olan durumu ortaya koymaktır. Araştırma verileri 2014-2015 yılları arasında yapılan lisansüstü tezlerle ve YÖK (Yüksek Öğretim Kurumu Ulusal Tez Merkezi) veri tabanından elde edilen verilerle sınırlıdır. Nitel araştırma yaklaşımı benimsenerek gerçekleştirilen araştırmanın verileri doküman incelemesi yoluyla elde edilmiştir. Araştırma verileri içerik analizi ile çözümlenmiştir. Araştırma bulgularından elde edilen sonuçlara göre; etkileşimli tahta ile ilgili genel olarak olumlu bir tutum var iken, tablet bilgisayar kullanımının yetersiz olduğu tespit edilmiştir. Teknolojik sorunların yanı sıra içeriklerin eksik olması ve öğretmenlere Fatih projesi kapsamında sağlanan teknolojileri kullanımları konusunda pedagojik ve mesleki yönden hizmet içi eğitimlere ihtiyaç duydukları, bu çalışmanın önemli bulgularındandır.

Anahtar Sözcükler: Fatih projesi, Etkileşim Akıllı Tahta, Eğitim Teknolojileri.

GİRİŞ

Sürekli gelişen ve değişen günümüz dünyasında, özellikle teknolojinin hızına yetişmek gittikçe zorlaşmaktadır. Teknoloji, hemen her alanda etkisini hızla sürdürmektedir. Teknolojinin özellikle de eğitim alanındaki gelişmesi yadsınamaz bir gerçektir. Artık eğitim ve teknoloji birlikte anılan iki kavram olmuş ve bütünleşerek eğitim teknolojileri kavramını ortaya çıkarmıştır. Eğitim teknolojileri, eğitim ve öğretimi destekleyerek, maliyeti düşürmek ve öğrencilere daha zengin yaşantılar sağlamak amacıyla teknoloji ürünlerinden faydalanılmasıdır.

Bir ulusun gelişmesindeki en büyük etken eğitimdir. Bu nedenle olumlu anlamda bir değişiklik ve gelişim göstermek isteyen bir millet öncelikle eğitimi ön planda tutmalıdır ve eğitimin gelişmesi için gerekli çabayı göstermelidir. Günümüzde özellikle gelişmiş ülkeler eğitime çok büyük miktarlarda yatırımlar yapmaktadır ve eğitimde teknoloji kullanımının eğitim-öğretimde etkililiğini ve verimliliğini artırdığını düşünmektedir. Bu nedenle dünyanın her yerinde eğitim ve teknolojinin birlikte kullanımı ile ilgili projeler uygulanmıştır. Bu duruma birkaç örnek verecek olursak bu ülkelerin en başında Amerika gelmektedir ve Amerika, 2002 yılında Maine Eyaleti'nde "Her Öğrenciye Bir Bilgisayar" sloganıyla eyalet çapında tüm ortaokul öğrencileri ile öğretmenlerine dizüstü bilgisayarlar verilerek büyük bir proje başlatmıştır. 2003 yılında North Carolina Eyaleti'nde ortaokul öğrencilerine 1700 dizüstü bilgisayar dağıtılırken, 2004 yılında New Hampshire Eyaleti'nde okulların bütün 6. sınıf öğrencilerine aynı dizüstü bilgisayarlardan verilmiştir. 2004 yılında Kentucky'de başarısı düşük ve/veya evde internet bağlantısı olmayan ortaokul öğrencileri ile öğretmenlerine 3200 adet dizüstü bilgisayar dağıtılırken, aynı şekilde 2007 yılında Louisiana Eyaleti'nde "Öğrenmeye Dönüş" projesi kapsamında 54 okulda 3530 6. sınıf öğrencisine dizüstü bilgisayar verilmiştir (News Report, 2007). Daha yakın zamanda yapılan bir projeye örnek verilecek olursa Güney Kore 2015 yılına kadar "Akıllı Eğitim" projesi adı altında 7.5 milyon ilköğretim ve ortaöğretim öğrencisine tablet dağıtılmasını ve e-ders kitaplarının geliştirilmesini amaçlamaktadır (Kim ve Jung, 2010). Yapılan bu projelerin temel hedefi ise günümüz öğrencilerinin değişen dünyada teknolojiye karşı daha donanımlı olmaları, onu en etkili şekilde kullanabilmeleri, bilgiye en kısa sürede ve kolay ulaşabilmelerini sağlamaktır.

Ülkemizde de bu adımların son yıllarda en büyüğü olan "Fırsatları Artırma ve Teknolojiyi İyileştirme Hareketi" (FATİH) adı verilen proje yürütülmeye başlanmıştır. FATİH projesi ile birlikte ülkemizin her yerindeki okullarda akıllı sınıflar oluşturulmaya, öğrenci ve öğretmenlere tabletler dağıtılmaya başlanmıştır. Bu akıllı sınıflarda etkileşimli tahtalar, internet ve tabletlerle dersler işlenmeye başlanıp teknolojiye ayak uydurulmuştur. Bu proje ile birlikte ülkemizin her yerindeki ve her kademedeki okullara ulaşılmaya çalışılmaktadır. Böylece her öğrenci eşit şartlarda ve eşit imkanlar ile eğitimine devam edecektir.

Hiç kuşkusuz ilerleyen yıllarda FATİH projesinin etkililiği ve verimliliği için hem öğretmenlerin hem de öğrencilerin bu konuda daha bilinçli olması ve teknolojiyi doğru zamanda doğru kullanmasının önemi ortaya çıkmaktadır. Bu projenin sürdürülebilir ve geliştirilebilir olabilmesi için sürekli takip edilmesi ve bir takım araştırmalar yapılması gereklidir. Bu nedenle FATİH projesi ile ilgili birçok araştırmalar yapılmaktadır. Fatih projesine yönelik yapılan araştırmalara rağmen, yapılan alan yazın incelemesi sonucunda bu alanda gerçekleştirilen araştırmaların karşılaştırmalı bir biçimde betimlemesinin yapıldığı araştırmaya rastlanılmamıştır. Bu bakımdan araştırmada, fatih projesine yönelik ülkemizde yapılan tezlerin model dağılımının nasıl olduğu, hangi örneklemler üzerinde gerçekleştirildiği ve hangi sonuçlara ulaşıldığını bütüncül bir bakış açısı ile belirlenmesi ile bundan sonra yapılacak olan araştırmalara; araştırma önceliğini ortaya koyması bakımından katkı sağlayacağı düşünülmektedir. Yapılan bu araştırmanın fatih projesi konusunda gerçekleştirilen çalışmalara ilişkin Türkiye'de genel eğilimi vermesi, eksik yönlerin ortaya çıkarılması ve bu araştırma ile bu alanda çalışma yapacak uzmanlara yeni ufuklar açılması umulmaktadır. Araştırmada Fatih Projesi üzerine ülkemizde yapılmış lisansüstü tezlerin karşılaştırmalı bir analizi yapılarak var olan durumun ortaya konulması amaçlanmıştır. Araştırmada aşağıdaki sorulara yanıt aranmıştır:

- Fatih Projesini araştırmaya yönelik yapılan tezlerin lisansüstü düzeylerine göre dağılımı nasıldır?
- Fatih Projesini araştırmaya yönelik yapılan tezler hangi amaçlarla gerçekleştirilmiştir?
- Fatih Projesini araştırmaya yönelik yapılan tezlerde kullanılan modellerin dağılımı nasıldır?
- Fatih Projesi ile ilgili çalışmaların veri toplama aracının türüne göre dağılımı nasıldır?
- Yapılan tezler hangi örneklem üzerinde gerçekleştirilmiştir?
- İlgili çalışmalarda elde edilen sonuçlar nelerdir?

YÖNTEM

Araştırmanın Modeli

Bu çalışma nitel araştırma deseni benimsenerek gerçekleştirilmiştir. Nitel araştırmalar verilerin teker teker okunması yoluyla kod ve kategorilere dayalı olarak araştırma sonuçlarının sunulmasını sağlar (Merriam, 1998, s.58). Bu bağlamda, fatih projesi alanında yapılmış lisansüstü tezlerinin tematik bakımdan durumlarının saptanmasını, derinlemesine incelenmesini ve yorumlanmasını amaçlayan bu araştırma için en uygun araştırma yönteminin nitel araştırma yöntemi olduğuna karar verilmiştir. Araştırma verileri nitel araştırma yöntemlerinden doküman incelemesi yoluyla toplanmıştır. Doküman incelemesi, araştırılması hedeflenen olgu ya da olgular hakkında bilgi içeren yazılı materyallerin analizini kapsamaktadır. Doküman incelemesi, bir araştırma problemi hakkında belirli zaman dilimi içerisinde üretilen dokümanlar ya da ilgili konuda birden fazla kaynak tarafından ve değişik aralıklarla üretilmiş dokümanların geniş bir zaman dilimine dayalı analizini olanaklı kılmaktadır (Yıldırım ve Şimşek, 2013, s.217-218).

Evren ve Örneklem

Araştırmanın evrenini; Fatih Projesi hakkında Türkiye'de yapılan lisansüstü tezler oluşturmaktadır. Araştırmanın örneklemini ise 2014-2015 yılları arasında YÖK (Ulusal Tez Merkezi) veri tabanında ulaşım izni verilen fatih projesine ilişkin hazırlanan tezler oluşturmaktadır. Araştırmada herhangi bir örnekleme yöntemine başvurulmamış, çalışma örnekleminin tamamına ulaşılması amaçlanmıştır.

Veri Toplama Süreci

Araştırmada YÖK Ulusal Tez Merkezinde yapılan tarama sonucunda fatih projesi konusunda yapılan taramalar sonucunda 1 Ocak 2014- 1 Aralık 2015 tarihleri arasında yapılmış olan 7 tez araştırmanın örneklemini oluşturmuştur. Tezler lisansüstü düzeyi, araştırmalarda benimsenen model ve kullanılan veri toplama araçları bakımından sınıflandırılmıştır. İçerik analizi yapılırken hazırlanan tezlerin hangi örneklem düzeyinde gerçekleştirildiği, hangi amaçlarla yapıldığı ve hangi temel sonuçlara ulaşıldığı da araştırmada dikkate alınan inceleme ölçütleri arasında yer almaktadır.

Verilerin Analizi ve Yorumlanması

Araştırmada doküman incelemesi yöntemi kullanılarak ulaşılan tezlerin içerik analizleri yapılmıştır. Nitel çalışmalarda dokümanların incelenmesinde içerik analizi kullanılmaktadır (Merriam, 1998, s.123). İçerik analizi genellikle çok sayıdaki metin içeriklerinin ortak yönlerini ortaya çıkarmak amacıyla, önemli olan anlamların yapılandırılmasına ve sınıflandırılmasına yönelik, nitelden nicele doğru genelleştirmeyi sağlayan bir yorum biçimidir (Gökçe, 2006, s. 17-18). İçerik analizinde yapılan temel işlem, birbirine benzeyen verileri belirli kavramlar ve temalar çerçevesinde bir araya getirmek ve okuyucunun anlayabileceği bir biçimde düzenleyerek yorumlamaktır (Yıldırım ve Şimşek, 2013). İçerik analizinin gerçekleştirilmesi seçme-indirgeme, gruplandırma, genelleştirme-soyutlaştırma ve kuramla ilişkilendirme aşamalarının izlenmesini gerektirmektedir (Früh, 2001, 73- 74, akt: Gökçe, 2006, s.59-60). Çalışmada da verilerin içerik analizinin yapılmasında aşağıdaki basamaklar izlenmiştir:

• Seçme-indirgeme aşamasında araştırma evreninden belli bir örneklem seçilerek bunların içerikleri araştırma amaçları doğrultusunda oluşturulan kategori sistemine yerleştirilmeye çalışılmıştır. Araştırmanın çalışma evrenini Türkiye fatih projesi hakkkında yapılan tezler oluştururken, örneklemini 2014 – 2015 yılları arasında yapılan YÖK veri tabanında erişim izni olan tezler oluşturmaktadır.
• Gruplandırma aşamasında araştırma örneklemi belirlendikten sonra incelenecek tezler yıl ve gerçekleştirilen lisansüstü eğitim düzeyi, benimsenen model, kullanılan veri toplama araçları, çalışma örneklemi, amaç ve sonuçlar kategorileri sistemine yerleştirilmeye çalışılmıştır.
• Genelleştirme- soyutlaştırma aşamasında incelenen tezlerde söz konusu olan anlamlar birleştirilmeye ve genelleştirilmeye çalışılmıştır.
• Kuramla ilişkilendirme aşamasında ise incelenen tezlerden yola çıkılarak Türkiye'de fatih projesinin geliştirilmesi ve iyileştirilmesi ile ilgili tartışılmaya çalışılmıştır. İçerik analizinde incelenen tez verilerinin tablolaştırılmasında frekans değerleri dikkate alınmıştır.

Geçerlik ve Güvenirlik

İçerik analizinde geçerliğin sağlanabilmesi, araştırmanın amaçları ve araçları arasındaki uyuma bağlıdır (Gökçe, 2006, s.83; Bilgin, 2006, s.17). İçerik analizinde kategorilerin tanımlarından başka geçerliği ölçme aracı yoktur. Bu nedenle içerik analizinde kategorilerin tanımlarının herkesçe paylaşılabilir nitelikte olması ve aşamaların iyi tanımlanmış olması gerekmektedir. Güvenirlik ise özellikle kategori sistemi ve buna bağlı olarak kodlama işlemiyle sağlanmaktadır. Bu bağlamda güvenirliğin en önemli belirtisi, kategori sisteminin oluşturulması ve her bir kategorinin açıkça tanımlanması işlemidir (Gökçe, 2006, s.83). Bu bağlamda gerçekleştirilen bu araştırmanın geçerlik ve güvenirliğinin sağlanması için, içerik analizi yapılarak kategorilerin belirlenmesi sağlanmıştır. Veri analizi sürecinde oluşturulan kategoriler ve kodlamalar araştırmacı dışında başka bir araştırmacı tarafından birbirilerinden bağımsız bir biçimde yapılmış, daha sonra oluşturulan kod ve kategoriler karşılaştırılmıştır. Verilerin toplanma süreci ve analizindeki işlemlere ayrıntılı olarak yer verilmiştir. Ayrıca bilgisayar ortamına aktarılan tez kayıtlarının ve çözümlemelerinin ileriki dönemlerde olası teyide yönelik olarak muhafaza edilmesi sağlanmıştır.

Bulgular ve Yorum

Fatih projesi kapsamında yapılan tezlerin karşılaştırmalı analizini amaçlayan bu araştırmadan elde edilen bulgular, araştırmanın alt amaçları doğrultusunda sunulmuştur. Araştırmanın birinci amacı; Fatih projesine yönelik yapılan tezlerin hangi lisansüstü düzeyde yapıldığının belirlenmesidir. Bu amaç kapsamında elde edilen bulgular Tablo1'de gösterilmiştir.

Tablo1. Fatih projesi ile ilgili olarak incelenen tezlerin lisansüstü düzeylerine göre dağılımı

Yüksek lisans	Doktora	f
7	0	7

Tablo1'de görüldüğü gibi, Fatih projesinde yapılan tezlerin yüksek lisans düzeyinde gerçekleştiği ortaya çıkmıştır. Fatih projesi hakkında çok az sayıda tez yazıldığı ve doktora düzeyinde bu alanda yapılan çalışmaların olmadığı, üzerinde durulması gereken bir konudur. Araştırmanın ikinci amacı; Fatih projesine yönelik YÖK veri tabanında yer alan tezlerin hangi amaçlarla yapıldığının belirlenmesidir. Bu amaç kapsamında elde edilen bulgular Tablo2'de sunulmuştur.

Tablo 2. Fatih projesine yönelik yapılan tezlerin amaçlarına göre dağılımı

Amaçları	f
FATİH Projesi çerçevesinde e-içerik geliştirme becerilerinin değerlendirilmesi(T1, T7)	2
FATiH Projesi'nin uygulandığı kurumlardan birindeki etkililiğini ortaya koyarak projenin değerlendirilmesini sağlamak(T2)	1
Ortaöğretimlerde görev yapan öğretmenlerin FATİH Projesi ile akıllı tahta kullanımının faydalı ve kolay olup olmadığına yönelik algılarında, akıllı tahtayı kullanmasının gerektiğine dair kişisel normlara yönelik ve akıllı tahtayı derslerinde kullanım niyetleri arasında cinsiyet, yaş, branş, çalıştığı kurum ve meslek deneyimlerine göre farklılaşma olup olmadığını belirlemektir. (T2, T3)	2
İzmir İli metropol ilçelerde uygulanmaya başlanan eğitimde FATİH projesine ilişkin olarak, akademik ve mesleki liselerde görev yapan okul yöneticilerinin ve öğretmenlerin projenin uygulanmasına ilişkin okul yöneticilerinin ve öğretmenlerin görüşlerinin tespit edilerek, bunların çeşitli değişkenlere göre farklılık gösterip göstermediğinin incelenmesi amaçlanmaktadır. (T2, T3)	2
FATİH Projesi kapsamındaki okullarda bilişim teknolojilerinin kullanımının sınıf yönetimi açısından etkilerini betimlemek amaçlanmaktadır (T4)	1
Lise düzeyinde eğitim veren okullarda uygulamaya konulan FATİH projesine ilişkin öğrenciler, öğretmenler, okul yöneticileri ve veliler olmak üzere katılımcı paydaşların görüşlerini almak ve alınan görüşleri incelemektir (T2, T3, T4, T5, T6)	5

Tablo2'de görüldüğü gibi gerçekleştirilen tezlerde genellikle FATİH projesine ilişkin öğrenciler, öğretmenler, okul yöneticileri ve veliler olmak üzere katılımcı paydaşların görüşlerini almak ve alınan görüşlerin incelenmesini amaçlayan tezlerin çoğunluğu (%38.46) dikkat çekmektedir. Bu durum genel olarak var olan durumun betimlenmesine ilişkin çalışmaların yogun olarak yapıldığını gösterir. Araştırmanın üçüncü amacı; Fatih projesine yönelik yapılan tezlerde kullanılan araştırma desenlerinin analizinin yapılmasıdır. Bu amaç kapsamında elde edilen bulgular Tablo3'te gösterilmiştir.

Tablo 3. Fatih projesine yönelik yazılan tezlerde kullanılan araştırma deseninin dağılımı

Araştırma Deseni	f
Betimsel tarama	4
Olgu bilim	1
İlişkisel tarama	1
Deneysel	1

Tablo 3 fatih projesi ile ilgili çalışmaların araştırma desenine göre dağılımını göstermektedir. Tablo3'e göre yapılan çalışmaların büyük çoğunluğunun (%57,14) var olan durumu betimlemeye yönelik, geniş grupları kapsayan betimsel tarama modeli benimsenerek gerçekleştirildiği, bunun yanında az da olsa deneysel (%14,29) ve ilişkisel tarama modeli (%14,29) benimsenerek gerçekleştirilen çalışmaların yapıldığı dikkat çekmektedir. Boylamsal araştırma ve kuram oluşturma Fatih projesi konusunda henüz hiç benimsenmeyen araştırma desenleri arasında yer almaktadır. Yapılan analizler, tezlerin fatih projesine ilişkin var olan durumu betimlemeye yönelik çalışmalarla sınırlı olduğunu deneysel ya da eylem araştırması ve boylamsal araştırmalar tarzındaki çalışmaların bulunmadığını göstermektedir. Araştırmanın dördüncü amacı; Fatih projesine yönelik yapılan tezlerde hangi veri toplama araçlarının kullanıldığının belirlenmesidir. Bu amaç doğrultusunda incelenen tezlerin yöntem bölümlerinde, araştırma modeli ve bu modelde kullanılan veri toplama araçları dikkate alınarak kategoriler oluşturulmuştur. Bu amaç kapsamında elde edilen bulgular Tablo 4'te gösterilmiştir.

Tablo 4. Fatih projesine yönelik yapılan tezlerin veri toplama araçlarına göre dağılımı

Tezlerde Kullanılan Veri Toplama Araçları	f
Tutum Ölçeği	5
Görüşme	1
Gözlem	1

Tablo 4 projesine yönelik yapılan tezlerde hangi veri toplama araçlarına göre dağılımını göstermektedir. Tablo 4'te görüldüğü gibi tezlerin büyük çoğunluğunda veri toplama aracı olarak tutum ölçeği (%71,42), görüşme (%14,29) ve gözlem (%14.29) kullanılmaktadır.Yapılan tezlerde tutum ölçeğinin veri toplama aracı olarak kullanılması yoluyla gerçekleştirilen araştırmalarda daha çok nicel yaklaşımların benimsendiği, gözlem, görüşme gibi veri toplama araçlarıyla nitel araştırma yaklaşımlarının az kullanıldığı görülmektedir. Oysaki fatih projesinin etkililiğini ölçmek yalnızca nicel yaklaşımlarla mümkün olmamaktadır. Var olan durumun daha derinlemesine betimlenmesini, katılımcıların görüşlerini ayrıntılı bir biçimde irdelemeyi sağlayan nitel araştırma yaklaşımlarının ve bu yaklaşımlara bağlı veri toplama araçlarının da daha çok çalışmalarda benimsenmesi gerekmektedir.

Araştırmanın beşinci amacı; fatih projesine yönelik tezlerin hangi örneklem türüne göre yapıldığının analiz edilmesidir. Bu amaç kapsamında elde edilen bulgular Tablo5'te sunulmuştur.

Tablo 5. Fatih projesine yönelik yapılan tezlerin örneklem türüne göre dağılımı

Örneklem Türü	f
Öğrenciler	2
Öğretmenler	6
Öğretmen Adayları	1
Okul Yöneticileri	4
Ebeveynler	1

Not: Çalışmalarda birden fazla örneklem türünde çalışmalar yapıldığından dolayı incelenen toplam araştırma 7 iken toplam frekans daha fazla çıkmıştır.

Tablo 5'te fatih projesine yönelik yapılan tezlerin örneklem türüne göre dağılımı incelendiğinde yapılmış tezlerin büyük çoğunluğunun (%42,85) projenin uygulayıcıları öğretmenlerin seçildiği görülmektedir. Bunu okul yöneticileri (%28,72), öğrenciler (%.14,28) ve ebeveyn ile öğretmen adayları (%7.14) izlemektedir. Yapılan inceleme sonucunda öğretmen adayları, öğrenciler ve ebeveynlerle gerçekleştirilen çalışmaların çok az sayıda olduğu görülmektedir. Araştırmanın altıncı amacı, fatih projesine yönelik yapılan tezlerin genel sonuçlarının sunulmasıdır. Bu sonuçlar içerik, alt yapı- donanım, fırsat eşitliği, hizmet içi eğitim ve sınıf yönetimi olmak üzere beş kategori altında toplanmıştır. Bu amaç doğrultusunda elde edilen bulgular Tablo 6'da sunulmuştur.

Tablo 6. Fatih projesine yönelik yapılan tezlerin sonuçları

Kategoriler	Sonuçlar
İçerik	• Öğretmenlerin e-içerik geliştirme becerileri konusunda kaygılar yaşadığı sonucuna ulaşılmıştır (T1). • Öğretmenlerin e-içerik geliştirme yetenekleri; cinsiyete göre analizlerinde erkekler lehine anlamlı farklılık göstermiştir(T1). • Hazırlanan ders içi ve ders dışı eğitim materyallerinde etkileşimin az olduğu görülmektedir(T2). • Fatih projesi kapsamında hazırlanan uygulama materyallerinin öğrenci ve öğretmenler ile etkileşimlerinin artırılmasının projenin etkililiği açısından olumlu sonuçlar doğuracağı düşünülmektedir(T2). • Etkileşimli tahta ile tablet pc arasında ileitşimin sağlanması projenin verimliliğini artıracaktır(T2). • Akıllı tahtanın öğrencilerin motivasyonlarına etkisinin proje kapsamında derslerin daha eglenceli geçmesi ve derse olan katılımın daha fazla olduğu görülmektedir(T3). • Fatih projesi kapsamında e-içeriklerin geliştirilmesinin yetersiz kalması ve öğretmenlerin içerik bulmakta zorluklarla karşılaştıkları görülmektedir(T4). • Eba web sitesi ile ilgili olarakta web sitesinin yeterli olmadığı yaşlarına uygun olmadığı ve gereksiz bir site olduğu görülmüştür(T6).
Alt Yapı Donanım	• Etkileşimli tahtaların arıza durumlarında teknik servis yetkililerine ulaşılmaya çalışıldığında okul idarecileri büyük güçlük yaşamaktadırlar(T2). • Akıllı tahtanın en büyük sorunu sık sık kalibre edilme sorunu ile karşılaşması ve akıllı tahta kaleminin sorun çıkarması gibi teknik arıza yaşanması olarak ortaya çıkmaktadır(T3). • Etkileşimli tahtanın dersin işlenişini engellediği görülmüştür(T6). • Etkileşimli tahta ve tablet pc ler için teknik destek sunulmadığı, projeden verim alınamadığı okullarda fatih projesine gerek duyulmadığı projenin eğitim amaçlı kullanılmadığı ve bu

	projenini para israfı yapılan bir proje olduğu görülmüştür(T6). • Tablet pclerin yetersiz ve kalitesiz olduğu sürekli bozulduğu görülmüştür(T6). • Fatih projesi kapsamında yeterli teknik destek saglanmadığı sonucuna ulaşılmıştır(T7). • Etkileşimli tahta ve tablet pc de internet kısıtlamaları olduğu görülmüştür(T6). • Akıllı tahtanın öğretimde kalıcılığa etkisinin yüksek olduğu elde edilmektedir(T3).
Fırsat Eşitliği	• Eğitimde fırsat eşitliği çatısı altında aynı konuların farklı eğitim uygulamalarıla işlendiği materyallerin hazırlanmasının gerçek bir eşitlik sağlayacağı düşünülmektedir(T2). • Eğitimde Fatih projesi ülkemizde batıda doguya kuzyden güneye her bölgede okulların teknolojik açıdan iyileştirmeye gidilmektedir(T2).
Hizmet İçi Eğitim	• Proje kapsamında tüm paydaşlara eğitim verilmesi projenin etkililiğini ve anlaşılırlığını artıracaktır. Mevcut planmada sadece öğretmenlere teknoloji kullanım kursu verilmektedir. Bu eğitimlerin öğrenci ve velilerede farkındalık eğitimi olarak verilmesi gerekmektedir(T2). • Hizmet içi eğitimde etkileşimli tahta ve içerisindeki programların kullanımının gösterildiği eğitimin 1-2 haftalık süre zarfında verildiği materyal hazırlama ile ilgili bilgiler verildiği belirlenmiştir (T6). • Fatih projesinin yürütülmesinde öğretmenlerin aktif olarak katılmaları kıdem yıllarına göre anlamlı bir farklılık göstermektedir. Anlamlı farklılık 1*5 yıl olanların lehinedir(T7). • Fatih projesinin uygulanmasına ilişkin görüşlerinin sadece öz yeterlik boyutunda fatih teknoloji kullanım kursu hizmet içi eğitimi alıp almama değişkenine göre anlamlı farklılık olduğu sonucuna ulaşılmıştır(T4).
Sınıf Yönetimi	• Projenin öğrenciyle temas haline geldiği her noktada ciddi yasakların bulunması projenin tüm uygulayıcı ve kullanıcıları tarafından olumsuz bir şekilde karşılanmıştır. Bu durumda fatih projesinden vazgeçmeye umutlarını kesmeye başlamışlardır(T2). • Erkek öğretmenler bayan öğretmenlere göre daha etkin bir şekilde tahtayı kullanmaktadırlar(T3). • Öğretmenlerin akıllı tahtanın özelliklerini sınıf içi etkinliklerde kullanma sıklıkları hizmet yılı az olanlar lehindedir(T3). • Fatih projesinde öğretim süreçleri değişiklik beklentisi ve özyeterlik boyutlarında okuldaki görev değişkenine göre yönetici ve öğretmenler arasında anlamlı farklılıklar bulunmadığı görülmüştür(T4). • Sınıfla ilişki ve iletişim yönetimi açısından değerlendirildiğinde öğrencinin derse olan ilgi ve tutumlarının arttığı derse dikkatlerinin meraklarının arttığı öğrencilerin derse güdülendiği ve derse katılımlarının arttığı görülmüştür (T5). • Zaman açısından degerlendirildiğinde zamandan tasarruf edilmesini ve zamanı etkin kullanılmasının ve materyallerin zanginleşmesi açısından olumlu katkıda bulunduğu görülmektedir (T5).

Tablo 6 incelendiğinde, fatih projesine yönelik yapılan tezlerde donanım, sosyo-ekonomik düzey, sınıf yönetimi, hizmetiçi eğitimler gibi değişkenlerin dikkate alındığı dikkat çekmektedir. Araştırmalar sonucunda öğretmenlere verilen hizmetiçi eğitimlerin yetersizliği, sınıf yönetimini olumsuz etkilemesi, öğrencilerin akademik başarısını olumsuz etkilediği vb. nedenlere vurgu yapılmıştır. Buna karşın yapılan tezlerin bazıları öğrencilerin öğrenmesinde fatih projesinin etkililiğine dikkat çekmektedir. Eğitim bilişim ağı (EBA), z-kitaplar, sosyal platformlar, uzaktan eğitim etkinlikleri, online sınavlar gibi farklı eğitim etkinliklerinin öğrencilerin akademik başarısını ve okula olan ilgilerini olumlu yönde etkilediği sonuçlarına ulaşılmıştır.

SONUÇ VE ÖNERILER

Fatih projesine yönelik yapılan tezlerin karşılaştırmalı bir biçimde incelenmesini amaçlayan bu araştırmada, lisansüstü düzeyde gerçekleştirilen çalışmalara yönelik genel eğilim ve farklılıklar ortaya çıkarılmaya, eksiklikler tespit edilmeye ve bu alanda çalışma yapacak uzmanlara konu ile ilgili yeni ufuklar açılmaya çalışılmıştır. Araştırma verilerinin analizinde alt amaçlar doğrultusunda kategoriler oluşturulmuştur. İncelenen tezlere ilişkin oluşturulan kategoriler tezlerin lisansüstü düzeyleri, kullanılan araştırma desenleri ve veri toplama araçları, örneklemleri, amaçları ve sonuçları olmak üzere altı kategoride incelenmiştir. Araştırma sonucunda fatih projesine yönelik yapılan tezlerin yüksek lisans düzeyinde yapıldığı ortaya çıkmıştır. Fatih projesi gibi büyük bir yatırım gerektiren proje hakkında yazılan tezlerin oldukça az sayıda ve genellikle yüksek lisans düzeyinde gerçekleştirildiği üzerinde durulması gereken bir durumdur. Araştırmada, yapılan tezlerin genellikle fatih projesinde paydaşların görüşlerini ve tutumlarını belirlemeyi amaçlayan betimsel nitelikte tarama modelinde gerçekleştiği görülmüştür. Yapılan analizler, tezlerin genellikle fatih projesinde var olan durumu betimlemeye yönelik çalışmalarla sınırlı olduğunu, fatih projesinin uygulanmasına yön verecek değişkenler arası ilişkilerin saptanmasına yönelik deneysel ya da eylem araştırması ve boylamsal araştırmalar tarzındaki çalışmaların bulunmadığını ortaya çıkarmıştır. Bu durum genel olarak var olan durumun betimlenmesine ilişkin çalışmalara önem verildiğini; fakat iyileştirmeye, geliştirmeye, öğrenme ortamlarını zenginleştirmeye ve farklı yöntem ve tekniklerin kullanımına önem verilmediğini düşündürmektedir. Araştırmada, fatih projesi hakkında yapılan tezlerde veri toplama aracı olarak anket, tutum ölçeği ve başarı testlerinin kullanıldığı, nitel araştırmaya yönelik veri toplama araç ve tekniklerinin (görüşme, gözlem vs) çok fazla benimsenmediği ortaya çıkmıştır. Oysaki fatih projesinin etkililiğini ölçmek yalnızca nicel yaklaşımlarla mümkün olmamaktadır. Var olan durumun daha derinlemesine betimlenmesini, katılımcıların görüşlerini ayrıntılı bir biçimde irdelemeyi sağlayan nitel araştırma yaklaşımlarının ve bu yaklaşımlara bağlı veri toplama araçlarının da benimsenmesi gerekmektedir. Araştırmanın önemli bulgularından biri de projenin uygulanmasında başrol oynayacak en önemli öğelerden birinin öğretmenler olduğu söylenebilir. Bu bağlamda proje uygulamalarının sürdürülebilir olması için ana uygulayıcılar olarak görülen öğretmenlere yönelik sürekli mesleki eğitimlerin sağlanması ve onların sürece etkin olarak katılımlarının sağlaması önem arz ettiği söylenebilir. Adıgüzel (2011)' de yapmış olduğu çalışmasında fatih projesine değinmiş, akıllı tahta ve diğer yeni teknolojilerde problem yaşanmaması için öğretmenlerin bu teknolojinin nasıl kullanılacağı hakkında bilgilendirilmesi, öğrencilerin ve eğitim yöneticilerinin bilgilendirilmesi, eğitim yöneticilerinin, bu teknolojiye karşı yaklaşımlarının, maddi bir yükten çok, uzun vadede eğitim kalitesini arttıracak bir teknoloji olarak benimsemesi ve gerekli eğitimlerin verilmesi ve teknik desteğin sağlanması gerektiğini belirtmiştir. Araştırmada incelenen tezlerde öğretmen adayları, okul yöneticileri ve ebeveynlerle gerçekleştirilen çalışmaların çok az sayıda olduğu görülmüştür. YÖK veri tabanından elde edilen tezler sonuçları bakımından incelendiğinde öğretmenlerin fatih projesi hakkında hizmetiçi eğitim almaları, öğrencilerin ve velilerin fatih projesi hakkında bilgilendirilmelerinin yapılması ve takip edilmesi gerekmektedir. Araştırmadan elde edilen sonuçlara dayanarak şu öneriler getirilebilir:

• Yapılacak çalışmalarda nicel veri toplama yöntemleri dışında nitel veri yöntemleriyle çeşitlendirilen araştırmalara da yer verilebilir.

• Boylamsal ve eylem araştırması gibi araştırma modelleri ile desenlenen çalışmalara önem verilmelidir.

• Örneklem boyutunda öğretmen ve öğrencilerin yanı sıra okul yöneticilerinin ve velilerin de yer aldığı araştırmalar yapılabilir.

• Bu tür karşılaştırmalı çalışmaların periyodik olarak yapılması, bu alanda çalışma yapacak araştırmacıların alandaki gelişmeleri somut olarak görmelerini sağlayabilir.

IMPROVING PROSPECTIVE SCIENCE TEACHERS' INTEGRATED STEM TEACHING COMPETENCIES

Serhat ERCAN
Sinop University

ABSTRACT: STEM education can be identified as an integrated teaching approach towards STEM disciplines. It is obvious that this type of education requires different competencies rather than domain specific education. For instance, integrated STEM teaching requires extended content knowledge in comparison to teaching separate disciplines. Additionally, integrated education necessitates distinctive pedagogical strategies and tools. Teachers are educated to teach separate disciplines in current teacher training programs. They specialize in their own subjects. As a consequence, integrated STEM disciplines may seem difficult for them. As in every educational reform movement, "teacher" is one of the most critical elements for STEM education. For the success of STEM education, teachers' competencies related to integrated teaching should be developed. The current study investigated the efficiency of a professional development model which was developed to promote prospective science teachers' pedagogical competencies related to integrated STEM teaching. A qualitative paradigm was used in this study, which was lasted for 14 weeks. Nine prospective science teachers participated into the educational implementation. Participants have developed several integrated STEM teaching lesson plans during professional development activity. These lesson plans have been used as a primary data source for the study. Collected data were analyzed by using constant comparative method. The analysis of data indicated that the professional development model was effective in promoting the prospective science teachers' pedagogical adaptation towards integrated STEM teaching.

Key words: integrated STEM teaching competencies, prospective science teachers, STEM education

FEN BİLGİSİ ÖĞRETMEN ADAYLARININ BÜTÜNLEŞİK FeTeMM ÖĞRETİMİNE YÖNELİK YETERLİKLERİNİN GELİŞTİRİLMESİ

ÖZET: FeTeMM eğitim yaklaşımı, en genel haliyle FeTeMM disiplinlerine yönelik bütünleşik öğretim şeklinde tanımlanabilir. Bu doğrultuda gerçekleştirilecek bir öğretimin, mevcut öğretim programlarında sınırları keskin çizgilerle belirlenmiş alana özel öğretimden farklı yeterlikler gerektirdiği açıktır. Zira FeTeMM disiplinlerine yönelik bütünleşik öğretim, hâlihazırda uygulanan disipliner öğretim için gereken alan bilgisinin sınırlarını genişletmekte ayrıca alana özel öğretime nazaran farklı pedagojik strateji ve araçları gerekli kılmaktadır. Oysa mevcut öğretmen yetiştirme programları, öğretmen adaylarının kendi disiplinlerinin uzmanı olarak yetiştirilmesi üzerine kuruludur. Bu durum, FeTeMM eğitim yaklaşımının ülkemiz bağlamında uygulanabilirliği önündeki en büyük engellerden birini oluşturmaktadır. Zira her eğitim reformu hareketinde olduğu gibi FeTeMM eğitim yaklaşımı içinde en önemli boyutlardan biri sistemin uygulayıcısı konumundaki öğretmenlerdir. Okulların, bütünleşik FeTeMM öğretimi doğrultusunda yeniden yapılandırılması için öğretmen yetiştirme politikalarında değişikliğe gidilmesi ve FeTeMM öğretmenliği programlarının açılması bir alternatif olarak düşünülse de bu hedefe ulaşılması için gerekli zaman dilimi göz önüne alındığında, fen ve matematik öğretmenlerinin hizmet öncesi ve hizmet içi programlar ile bütünleşik öğretim için gerekli yeterlikleri kazanmaları daha gerçekçi bir yaklaşım olarak görülmektedir. Bu araştırma kapsamında fen bilgisi öğretmen adaylarının bütünleşik FeTeMM öğretimine yönelik pedagojik yeterliklerinin geliştirilmesi amacıyla hazırlanan bir öğretim sürecinin etkililiği mercek altına alınmıştır. Bu doğrultuda 9 fen bilgisi öğretmen adayı ile haftalık 2 saat olmak üzere toplam 14 haftalık bir uygulama gerçekleştirilmiştir. Nitel araştırma paradigması ekseninde yürütülen araştırmanın temel veri kaynağını, uygulama boyunca öğretmen adayları tarafından geliştirilen bütünleşik FeTeMM öğretimi ders planları oluşturmuştur. Elde edilen veriler sürekli karşılaştırma yöntemi ile analiz edilmiştir. Araştırma sonucunda öğretim sürecinin, öğretmen adaylarının bütünleşik FeTeMM öğretimine yönelik pedagojik adaptasyonlarına katkı sağladığı tespit edilmiştir. Adayların süreç içerisinde hazırladıkları öğretim programlarında, alana özel öğretim hedeflerine yönelik bakış açılarının farklılaştığı, farklı FeTeMM disiplinlerine yaptıkları vurgunun arttığı, disiplinlerin entegrasyonu için düşündükleri bağlamın gerçek yaşam uygulamaları eksenine kaydığı gözlenmiştir.

Anahtar sözcükler: bütünleşik FeTeMM öğretimi yeterlikleri, fen bilgisi öğretmen adayları, FeTeMM eğitimi

GİRİŞ

Son yıllarda uluslararası eğitim reformu hareketlerinin merkezinde bulunan FeTeMM eğitiminin, Türkiye'deki popülaritesinin de gün geçtikçe arttığı görülmektedir. Alan eğitimine yönelik akademik dergilerin FeTeMM eğitimine yönelik özel sayılar yayınlanması (örn. IJEMST, 2016; TUSED, 2016), gerçekleştirilen kongre ve sempozyumlarda FeTeMM eğitiminin odağa alınması ya da ana temalar içerisinde yer alması (örn. ICEMST, 2016; IDEAL, 2016; UFBMEK, 2016) bu ilginin göstergeleri olarak değerlendirilebilir. Fakat yaklaşıma yönelik akademik düzeydeki bu ilginin eğitim politikalarına yansımış etkilerinden şu an için söz edilememektedir. Bu durum potansiyel kazanımları açısından ülkemiz için büyük önem taşıyan FeTeMM eğitiminin, Türk eğitim sisteminin mevcut yapısı içerisinde ele alınmasını gerekli kılmaktadır.

FeTeMM eğitimi, en genel haliyle FeTeMM disiplinlerine yönelik bütünleşik öğretim şeklinde tanımlanabilir (Chiu, Price & Ovrahim, 2015; Meng, Idris & Eu, 2014). Bütüncül yaklaşımın esas alındığı bu doğrultudaki öğretim, öğrenilenlerin birbiri ile bağlantılı, gerçek yaşamla ilişkili ve öğrenenler için anlamlı olmasına hizmet edecektir (Smith & Karr-Kidwell, 2000). Bunun yanı sıra bütünleşik FeTeMM öğretiminin öğrencilerin üst düzey düşünme becerilerinin gelişime, akademik öğrenmelerine, öğrendiklerini gerçek yaşam problemlerini çözme sürecine transfer etmelerine katkı sağladığını gösteren çeşitli araştırmalar (Bkz. Elliot, Oty, McArthur & Clark, 2001; King & Wiseman, 2001; Morrison, 2006) mevcuttur. Elbette bu potansiyel kazanımların elde edilmesi öğretmenlerin bütünleşik FeTeMM öğretimini sınıflarında etkili şekilde uygulayabilmelerine bağlıdır (Stohlmann, Moore & Roehrig, 2012).

FeTeMM eğitiminin doğası gereği, bütünleşik FeTeMM öğretiminin ne şekilde gerçekleştirileceğine yönelik öğretmenlere rehberlik edecek genel bir modelden söz etmek mümkün değildir (Roehrig, Moore, Wang & Park, 2012). İlgili literatürde FeTeMM disiplinlerinin entegrasyonunu hedef alan çok sayıda öğrenme bağlamı tanımlanmaktadır (Mobley, 2015). Bu durum zaten karmaşık olan bütünleşik öğretim kavramını öğretmenler için daha da zorlu bir hale getirmektedir (Wang, Moore, Roehrig & Park, 2011).

FeTeMM eğitimi önündeki temel engellerden biri de öğretim programlarının mevcut yapısı olarak göze çarpmaktadır (NAE & NRC, 2009; Williams, 2011). Zira öğretim programlarının mevcut yapısında genellikle FeTeMM disiplinlerinden yalnızca matematik ve fen dersleri okul programlarında yer almakta (Bybee, 2010; NAE, 2010) ve bu dersler diğer disiplinlerden izole bir şekilde yürütülmektedir (Roberts & Cantu, 2012). Bu problemi aşmak için öğretim programlarında yer alan matematik ve fen derslerini diğer FeTeMM disiplinlerinin entegre edildiği uygulamalar çerçevesinde yürütmek makul bir yol olarak görülmektedir (Dugger, 2010; Roberts, 2012; Sampurno, Sari & Wijaya, 2015). Fakat sınıfını FeTeMM uygulamaları çerçevesinde yeniden yapılandırması beklenen (fen ya da matematik) öğretmen(i) büyük bir olasılıkla yalnızca kendi alanının uzmanı olacak (Lederman & Lederman, 2013) ve gerçekleştirdiği uygulamalarda kendi alanına özel öğrenim çıktılarına odaklanacaktır (English, 2015; Williams, 2011). Dolayısıyla gerçekleştirilen FeTeMM eğitimi arzu edilen FeTeMM eğitiminden oldukça farklı bir hal alacaktır (Breiner, Harkness, Johnson & Koehler, 2012). Bu açıklamalar ışığında FeTeMM eğitiminin başarısı için öğretmenlerin yaklaşıma yönelik yeterliklerinin geliştirilmesinin öncelikli hedeflerden biri olduğu ifade edilebilir (Williams, 2011).

Bu doğrultuda, yürütülen bu araştırmada fen bilgisi öğretmen adaylarının bütünleşik FeTeMM öğretimine yönelik pedagojik yeterliklerinin geliştirilmesi için tasarlanan bir öğretim sürecinin etkililiği mercek altına alınmış ve aşağıda belirtilen araştırma sorusuna yanıt aranmıştır.

Seçmeli disiplinler arası fen eğitimi dersi kapsamında yürütülen öğretim süreci, öğretmen adaylarının bütünleşik FeTeMM öğretimine yönelik pedagojik yeterliklerini nasıl etkilemektedir?

YÖNTEM

Bu çalışma, araştırma probleminin doğasına uygun olacak şekilde katılımcıların belirlenmesi, veri toplama ve analiz süreçleri açısından nitel araştırma paradigması esas alınarak yürütülmüştür.

Çalışma Grubu

Araştırmanın çalışma grubunu fen bilgisi öğretmenliği 3. sınıfa devam eden ve uygulamanın gerçekleştirdiği seçmeli "Disiplinler arası fen eğitimi" dersine kayıtlı bulunan 15 öğretmen adayı arasından belirlenmiş 9 aday oluşturmaktadır. Nitel araştırmalarda çalışma grubunun belirlenmesinde genellikle amaçlı örnekleme stratejisi kullanılır (Punch, 2005). Bu strateji için öncelikle hangi katılımcıların çalışma grubunda yer alacağına yönelik seçim kriterleri belirlenmelidir (Merriam, 2013). Bu doğrultuda araştırma kapsamında "uygulama süresince tüm etkinliklere katılım gösterme", "araştırmaya katılmaya gönüllü olma" ve "yazılı veri kaynaklarında zengin bilgi akışı sağlama" şeklinde üç kriter belirlenmiştir. Bu kriterleri karşılayan 9 öğretmen adayı (8 kız ve 1 erkek) araştırmanın çalışma grubunu oluşturmuştur.

Öğretim Süreci

Seçmeli "Disiplinler arası fen eğitimi" dersi doğrultusunda tasarlanan öğretim süreci haftada 2 ders saati olmak üzere 14 hafta boyunca devam etmiştir. Bu süreçte araştırmacı tarafından gerçekleştirilen teorik sunumların yanı sıra, öğretmen adayları bütünleşik FeTeMM öğretimine yönelik Mobley (2015) tarafından sınıflandırılan çeşitli öğrenme bağlamları (Araştırma – sorgulamaya dayalı öğrenme bağlamında bütünleşik FeTeMM, Tasarım temelli öğrenme bağlamında bütünleşik FeTeMM) içerisinde yer almışlar. Ayrıca öğretim süresi boyunca öğretmen adayları tarafından hazırlanan tüm ders planları sınıf içerisinde tartışmaya açılmış ve adaylara planlarına yönelik dönüt verilmiştir. Öğretim sürecinde ele alınan içerik ve etkinlikler Tablo 1.' de özetlenmiştir.

Tablo 1. Araştırma Kapsamında Yürütülen Öğretim Süreci

Süre (Hafta)	İçerik ve Etkinlikler
1	Disiplinler arası öğretimin kuramsal temelleri
1	Disiplinler arası fen eğitimine yönelik tarihsel girişimler
1	Disiplinler arası fen eğitimi ve teknoloji
1	FeTeMM eğitim yaklaşımına yönelik kuramsal açıklamalar
1	Bütünleşik FeTeMM öğretimi ders planı sunumu
1	Mühendislik disiplini ve K-12 mühendislik eğitimi
1	Araştırma – sorgulamaya dayalı öğrenme bağlamında bütünleşik FeTeMM
2	Araştırma – sorgulamaya dayalı öğrenme bağlamında bütünleşik FeTeMM uygulama
1	Bütünleşik FeTeMM öğretimi ders planı sunumu
1	Tasarım temelli öğrenme bağlamında bütünleşik FeTeMM
2	Tasarım temelli öğrenme bağlamında bütünleşik FeTeMM uygulama
1	Bütünleşik FeTeMM öğretimi ders planı sunumu

Veri Kaynakları ve Analizi

Çalışmanın temel veri kaynağını öğretmen adaylarının fen disiplini merkezinde geliştirdikleri bütünleşik FeTeMM öğretimi ders planları oluşturmaktadır. Bu planların analizinde sürekli karşılaştırma yöntemi (Strauss & Corbin, 1994) işe koşulmuştur. Bu doğrultuda ilk olarak geçmiş araştırmalardan (Bowers, 2015; Stearns, Morgan, Capraro, & Capraro, 2012; Stohlmann, Moore, & Roehrig, 2012) yararlanılarak "kısmi çerçeve" oluşturulmuştur (Glaser & Strauss, 1967). Bu kısmi çerçeve ekseninde ortaya konulan kriter ve kategoriler, analiz sürecinde kullanılacak kod şeması için başlangıç noktasını teşkil etmiş ve veri seti bu ilk kodlar ekseninde analiz edilmeye başlanmıştır. Sürekli karşılaştırma yönteminin doğasına uygun olacak şekilde analiz süreci boyunca bu kod ve kategoriler yeniden düzenlenerek tüm ders planlarının analizinde kullanılacak nihai kod şeması elde edilmiştir. Nihai kod şeması, ilk kod şemasında yer alan içerik, yaklaşım ve ölçme kategorilerine uygulanabilirlik kategorisinin de eklenmesi ile 4 kategori ve bu kategoriler altında yatan çeşitli kodlardan oluşmuştur. Tablo 2' de nihai kod şemasından (içerik kategorisi kapsamında) bir kesit sunulmuştur.

Tablo 2. Analiz Sürecinde Kullanılan Kod Şeması

Kategori	Kodlar	Kodların anlamı
İçerik	Yalnızca fen (yal_fen)	Yalnızca fen kazanımları dikkate alınmış
	Fen ve bağımsız diğer disiplin (fenvebağ=1)	Fenin yanı sıra bir diğer FeTeMM disiplini için de öğrenim hedefleri dikkate alınmış fakat disiplinler arası bağlantılardan söz edilemez, disiplinler ayrı ayrı ele alınmış
	Fen ile bütünleşik diğer disiplin (fenilebüt=1)	Fenin yanı sıra bir diğer FeTeMM disiplini için de öğrenim hedefleri dikkate alınmış, disiplinlere yönelik alan bilgisi ve uygulamalar arasında bağlantılar kurulmuş
	Fen ve bağımsız diğer disiplinler (fenvebağ>1)	Fenin yanı sıra birden fazla FeTeMM disiplini için de öğrenim hedefleri dikkate alınmış fakat disiplinler arası bağlantılardan söz edilemez, disiplinler ayrı ayrı ele alınmış
	Fen ile bütünleşik diğer disiplinler (fenilebüt>1)	Fenin yanı sıra birden fazla FeTeMM disiplini için de öğrenim hedefleri dikkate alınmış, disiplinlere yönelik alan bilgisi ve uygulamalar arasında bağlantılar kurulmuş

Analiz sürecinin devamında rastgele belirlenen 3 ders planı araştırmacı dışında birde FeTeMM eğitim yaklaşımı ile ilgili çalışmaları bulunan bir başka araştırmacı tarafından nihai kod şemasına göre analiz edilmiş ve bu veri seti için bağımsız kodlayıcılar arasındaki uyumun % 95 olduğu tespit edilmiştir.

BULGULAR

1. İpek, Ayça ve Şule' den Oluşan Gruba Yönelik Bulgular

İpek, Ayça ve Şule'den oluşan grubun süreç boyunca hazırladıkları 3 ders planının analizi ile elde edilen bulgular Tablo 3' te sunulmuştur.

Tablo 3. İpek, Ayça ve Şule'den Oluşan Gruba Ait Bulgular

Kategori	Kodlar		
	1. Ders Planı	**2. Ders Planı**	**3. Ders Planı**
İçerik	Yalnızca fen	Fen ile bütünleşik diğer disiplin	Fen ile bütünleşik diğer disiplin
Yaklaşım	Öğretmen sunumu	Teknoloji destekli araştırma-sorgulama	Mühendislik tasarım ve bilimsel araştırma-sorgulama
	Öğrenci rolleri belirsiz	Bireysel çalışma ve belirsiz takım çalışması	Bireysel çalışma ve belirsiz takım çalışması
Ölçme-değerlendirme	Ölçme-değerlendirme planlanmamış	Ölçme-değerlendirme planlanmamış	Ölçme-değerlendirme planlanmamış
Uygulanabilirlik	Etkinlik uygulanabilir	Etkinlik düzenlenmeli	Etkinlik uygulanabilir

Grup üyeleri ilk ders planlarında ortaokul fen bilimleri dersi öğretim programında 6.3.1.1. numarası ile yer alan "katıların, sıvıların ve gazların sıkışma-genleşme özelliklerini karşılaştırır" kazanımına yönelik yalnızca öğretmenin hangi kavramları ne şekilde aktaracağının belirtildiği bir ders süreci tasarlamıştır. Ders planında ortaokul matematik dersi öğretim programında yer alan bir kazanımın da bu dersin öğrenme hedefleri kapsamında olduğu belirtilmesine rağmen plan içerisinde bu kazanımın edinimine yönelik herhangi bir etkinliğe rastlanmamıştır. Ayrıca ders planında ölçme-değerlendirme süreci ile ilgili olarak hiçbir açıklama bulunmamaktadır.

Adaylar tarafından hazırlanan 2. ders planında ise diyabet hastalığı bağlam olarak seçilmiş, bu bağlama yönelik olarak tasarlanan öğretim sürecinde öğrencilerin fen bilimleri ve matematik dersi öğretim programında yer alan ilişkili kazanımları araştırma-sorgulama sürecinde yapılandırmaları üzerine odaklanılmıştır. Ayrıca öğrencilerin veri toplama sürecinde dijital teknolojilerden yararlanmalarına yönelik fırsatlar oluşturulmuştur. Öğrencilerin bireysel çalışmaların yanı sıra takım çalışmaları da yürütecekleri vurgulanmış olmasına rağmen takım çalışmalarının ne şekilde yürütüleceği ile ilgili herhangi bir açıklamaya yer verilmemiştir. İlk ders planında olduğu gibi bu ders planı için de öğretmen adayları ölçme-değerlendirme süreci ile ilgili herhangi bir bilgi vermemişlerdir.

Son planda ise öğretmen adayları gerçek yaşamla ilişkili bir problem bağlamında (barajların ekosistem üzerine olumsuz etkileri) mühendislik tasarım süreci ekseninde bir öğretim süreci yapılandırmışlardır. Dersin öğrenim hedefleri içerisinde fen kazanımlarının yanı sıra mühendislik disiplinine yönelik bazı öğrenim hedeflerine (Örn. öğrenciler mühendislik tasarım sürecine yönelik bilgi ve becerileri yapılandırırlar) de yer verilmiştir. Fakat bu öğrenim hedefleri ile ilişkili bir ölçme-değerlendirme süreci öğretmen adayları tarafından yine belirtilmemiştir.

2. Fatma, Burcu ve Ali'den Oluşan Gruba Yönelik Bulgular

Tablo 4' te Fatma, Burcu ve Ali'den oluşan grubun öğretim süreci boyunca hazırladıkları 3 ders planının analiz edilmesi ile elde edilen bulgulara yer verilmiştir.

Tablo 4. Fatma, Burcu ve Ali'den Oluşan Gruba Ait Bulgular

Kategori	Kodlar		
	1. Ders Planı	**2. Ders Planı**	**3. Ders Planı**
İçerik	Fen ve bağımsız diğer disiplin	Yalnızca fen	Fen ile bütünleşik diğer disiplin
Yaklaşım	Öğretmen sunumu Öğretmen merkezli araştırma	Teknoloji destekli araştırma-sorgulama	Mühendislik tasarım ve bilimsel araştırma-sorgulama

	Öğrenci rolleri belirsiz	Öğrenci rolleri belirsiz	Öğrenci rolleri belirsiz
Ölçme-değerlendirme	Yalnızca fenle ilişkili öğretimle iç-içe	Ölçme-değerlendirme planlanmamış	Ölçme-değerlendirme planlanmamış
Uygulanabilirlik	Etkinlik uygulanabilir	Etkinlik uygulanabilir	Etkinlik uygulanabilir

Öğretmen adayları hazırladıkları ilk ders planında fen bilimleri ve matematik öğretim programında yer alan ve birbirleriyle ilişkili kazanımlar (fen: maddelerin yoğunluklarının araştırılması ve matematik: sıvı ölçme birimlerini açıklama ve dönüştürme) odağında bir öğretim süreci tasarlamışlardır. Öğretmen sunumu ve öğretmen tarafından planlanan adım adım araştırmalar şeklinde hazırlanan öğretim etkinliklerinde bütünleşik bakış açısından ziyade önce matematik kazanımlarının edinimi sonrasında ise fen kazanımlarının edinimi üzerine yoğunlaşıldığı görülmektedir. Öğretim sürecini destekleyecek şekilde sürecin tamamına yayılan ölçme değerlendirme faaliyetlerinin ise yalnızca fen kazanımlarına yönelik olduğu görülmektedir.

Adaylar tarafından geliştirilen ikinci planda günlük yaşam bağlamı ile ilişkili olarak araştırma-sorgulama temelli etkinlikler tasarlandığı görülmektedir. Fakat bu etkinliklerde yalnızca fen kazanımlarının dikkate alındığı diğer disiplinlerin ise göz ardı edildiği ifade edilebilir. Araştırma-sorgulama temelli etkinliklerde öğrencilere dijital teknolojileri kullanma fırsatları hazırlayan adayların öğrenci rollerine yönelik herhangi bir açıklama getirmediği görülmektedir. Ayrıca sürece yönelik ölçme-değerlendirme etkinliklerine de yer verilmemiştir.

Son ders planında ise adayların mühendislik tasarım süreci ile ilişkili bir ders yapılandırdıkları görülmüştür. Adaylar belirledikleri fen kazanımları ile ilişkili bir tasarım görevi kapsamında öğrencilerin araştırma-sorgulama ve tasarım etkinlikleri yürütmelerini planlamıştır. Bu süreçte ilgili fen kazanımlarının yanı sıra mühendislik disipliniyle ilişkili öğrenim hedeflerinin de göz önünde bulundurulduğu ve öğretim etkinliklerinin bu disiplinler arasındaki bağlantıları ortaya çıkaracak bir yapıda olduğu tespit edilmiştir. Adaylar planlarındaki öğrenim hedefleri arasında matematik kazanımlarına da yer vermelerine rağmen etkinliklerin bu kazanımlarla ilişkili olmadığı görülmektedir. Ayrıca adaylar, etkinliklerin bireysel mi yoksa takım çalışmasıyla mı yürütüleceğine ve süreç boyunca ne gibi ölçme-değerlendirme faaliyetleri yapılacağına da değinmemişlerdir.

3. Canan, Zeynep ve Aslı' dan Oluşan Gruba Yönelik Bulgular

Canan, Zeynep ve Aslı'dan oluşan grubun süreç boyunca hazırladıkları 3 ders planının analizi ile elde edilen bulgular Tablo 5' te sunulmuştur.

Tablo 5. Canan, Zeynep ve Aslı'dan Oluşan Gruba Ait Bulgular

Kategori	**Kodlar**		
	1. Ders Planı	**2. Ders Planı**	**3. Ders Planı**
İçerik	Fen ile bütünleşik diğer disiplin	Fen ile bütünleşik diğer disiplin	Fen ile bütünleşik diğer disiplin
Yaklaşım	Araştırma-sorgulamaya dayalı	Teknoloji destekli araştırma-sorgulama	Mühendislik tasarım ve bilimsel araştırma-sorgulama Teknoloji destekli araştırma-sorgulama
	Öğrenci rolleri belirsiz	Bireysel çalışma ve belirsiz takım çalışması	Bireysel çalışma ve formal takım çalışması
Ölçme-değerlendirme	Yalnızca fenle ilişkili öğretimle iç-içe	Ölçme-değerlendirme planlanmamış	FeTeMM alanlarına yönelik bütünleşik
Uygulanabilirlik	Etkinlik uygulanabilir	Etkinlik düzenlenmeli	Etkinlik uygulanabilir

İlk ders planlarında gerçek yaşam bağlamı (öğün oluşturma) ile ilişkili olarak araştırma-sorgulamaya dayalı öğretim süreci tasarlayan adaylar, fen ve matematik öğretim programlarında yer alan kazanımların edinimini destekleyecek, disiplinler arası bağlantıların söz konusu olduğu öğretim etkinliklerine vurgu yapmışlardır. Buna rağmen adayların ölçme-değerlendirme sürecinde yalnızca fen kazanımlarına odaklandığı görülmüştür.

İkinci ders planında grup üyelerinin yine gerçek yaşam bağlamından bir durum özelinde (ülkemizin rüzgâr santrallerinden daha etkin yararlanılması) fen ve matematik kazanımlarına yönelik araştırma-sorgulama temelli öğretim süreci oluşturdukları görülmektedir. Ayrıca ilk plandan farklı olarak bu aşamada öğrencilerin bilimsel-araştırma sürecinde dijital teknolojilerden yararlanmalarına yönelik çeşitli fırsatların sunulduğu görülmektedir. Tasarlanan öğretim etkinliklerinde gerçek yaşam verileri toplanmasını planlayan adayların bunu, çok geniş bir alana yaymış olmaları etkinliklerin uygulanabilirliği önünde bir engel olarak dursa da planın daha lokal olarak yeniden düzenlenmesi bu engeli aşmak için yeterli görünmektedir. Adayların ölçme-değerlendirme süreci ve takım çalışmalarına yönelik herhangi bir açıklamaya yer vermemeleri ders planlarının zayıf yönleri olarak tespit edilmiştir.

Son ders planlarında evsel atık ve geri dönüşüm konusu ile ilişkili olarak mühendislik tasarım süreci ekseninde bir ders yapılandıran adayların bu süreçte teknoloji destekli bilimsel araştırma-sorgulamaya dayalı etkinliklere vurgu yaptıkları görülmektedir. Mühendislik tasarım süreci ile bilimsel araştırma-sorgulama sürecini iç içe olacak şekilde işe koşan adayların fen ve mühendislik disiplini ile ilişkili öğrenim hedefleri üzerinde odaklandığı tespit edilmiştir. Bu süreçte öğrencilerin bireysel çalışmalar ve takım çalışmaları içerisindeki rolleri adaylar tarafından detaylı bir şekilde ele alınmış ayrıca öğretim süreci ile iç içe, öğrencilerin de içinde aktif olarak yer alacağı çeşitli ölçme-değerlendirme etkinliklerine vurgu yapılmıştır.

SONUÇ

Araştırma bulguları doğrultusunda, gerçekleştirilen öğretim sürecinin genel olarak öğretmen adaylarının bütünleşik FeTeMM öğretimine yönelik yeterliklerinin gelişimine katkı sağladığı sonucuna ulaşılmıştır. 14 hafta boyunca çeşitli aktiviteler içerisinde yer alan adayların hazırladıkları her yeni planda özellikle “yaklaşım” kategorisi kapsamında gelişim gösterdikleri görülmektedir. İlk ders planlarında bilginin öğretmen tarafından doğrudan aktarıldığı ya da öğrencilerin öğretmen tarafından adım adım yapılandırılan aktiviteler içerisinde yer aldıkları öğretim süreçlerine vurgu yapan adayların sürecin sonlarında hazırladıkları öğretim planlarında bütünleşik FeTeMM öğretimi için daha uygun olan mühendislik tasarım ve teknoloji destekli bilimsel araştırma sorgulamaya dayalı etkinlikleri gündeme aldıkları görülmektedir. Fakat bu etkinlikler için öğrenci rollerinin açık olarak tanımlandığı çok az sayıda planın yer alması bu kategoriye yönelik bir eksiklik olarak ifade edilebilir.

İçerik kategorisi ile ilgili olarak tüm grupların son ders planlarında fenin yanı sıra bir diğer FeTeMM disiplini için de öğrenim hedeflerini dikkate aldıkları, disiplinlere yönelik alan bilgisi ve uygulamalar arasında bağlantılar kurdukları görülmüştür. Bu durum adayların bütünleşik FeTeMM öğretimine yönelik daha doğru bir anlayışla hareket ettiklerini göstermektedir. Fakat bu entegrasyonun fen dışında yalnız bir FeTeMM disiplini ile sınırlı kalması bir diğer eksiklik olarak ifade edilebilir.

Süreç kapsamında bir kez daha değerlendirilmesi gereken en önemli eksiklik ise ölçme-değerlendirme kategorisi ile ilişkili gözükmektedir. Zira yalnızca 3. grubun son ders planında arzulanan düzey olan “Öğretim süreci ile iç-içe öğretimi destekleyici, fenin yanı sıra diğer FeTeMM disiplinleri kazanımları ile ilişkili” ölçme-değerlendirme etkinliklerine yer verdiği, diğer iki grubun ise ders planlarında bu kategoriyi hiç dikkate almadıkları gözlenmiştir. Her ders planının sunumu sonrasında gerçekleştirilen sınıf tartışmalarında vurgulanan bu eksikliğin süreç boyunca tekrar yaşanması, öğretim sürecinin bu kategori açısından yeniden ele alınmasını gerektirmektedir.

Adayların ders planlarında yer verdikleri teknoloji destekli bilimsel araştırma sorgulamaya dayalı öğretim etkinliklerinin uygulanabilirlik açısından en çok problem yaşanılan etkinlikler olduğu tespit edilmiştir. Fakat bu etkinliklerin mühendislik tasarım süreci ile birlikte ele alındığında daha uygulanabilir oldukları görülmektedir. Bu durum mühendislik tasarım yaklaşımının bütünleşik FeTeMM öğretiminin uygulanabilirliğine sağladığı katkının bir göstergesi olarak değerlendirilebilir.

Nurhan ÖZTÜRK
Sinop University

ABSTRACT: The idea of integration is not new in science education. Integrated science and mathematics or technology has deep roots in the educational reform movements. STEM education which has become the motto for educators nowadays, appears to be different from previous attempts in the sense of emphasizing the engineering discipline. Engineering can serve as an integrator among STEM disciplines. Additionally, from the perspective of the 21st century proficiencies, students have to improve their competencies related to engineering. As a consequence, engineering has become a critical component of the STEM education. However, for a number of reasons, such as current structures of K-12 curriculum and teacher training programs, engineering education seems problematic. Although there have been several attempts to develop K-12 engineering education standards for improving current status of K-12 engineering, no such agreed upon standards have been existed yet. Even though there are several uncertainties associated with what K-12 engineering education should include or accomplish, it is clear that K-12 engineering education should emphasize engineering design. The current study investigated the impact of a design-based science learning process on 7th grade students' knowledge and comprehension related to engineering design process. A qualitative paradigm was used in this study, which was lasted for 5 weeks. 24, 7th grade students participated into the educational implementation. Writing texts and drawings which were created by students have been used as a primary data source for the study. Also, interview recordings were used for data collection process. Findings indicate that the design-based science learning process can contribute to enhancing students' knowledge and comprehension related to engineering design process.

Key words: design-based learning, engineering design process, K-12 engineering education, STEM education

ORTAOKUL ÖĞRENCİLERİNİN MÜHENDİSLİK TASARIM SÜRECİ DENEYİMİ: "MÜHENDİSLER NASIL PROBLEM ÇÖZER?"

ÖZET: Günümüzde motto haline gelen FeTeMM eğitim yaklaşımı için mühendislik disiplininin çok önemli bir boyut oluşturduğu ifade edilebilir. Mühendislik, diğer FeTeMM disiplinlerinin entegrasyonu için gerekli zemini oluşturma potansiyeline sahip olmanın yanı sıra 21. yy toplumunun gereksinimleri açısından değerlendirildiğinde de başlı başına öğrencilerin yeterlik kazanmaları gereken bir alan olarak gözükmektedir. Bu kapsamda öğrencilere disipline ilişkin yeterlikleri geliştirmeleri için fırsatlar sunulması gerektiği açıktır. Gerçekleştirilen bu araştırmada mühendislik tasarım süreci ekseninde yapılandırılan bir fen öğretim sürecinin (Tasarım Temelli Fen Öğretimi) 7. sınıf öğrencilerinin mühendislik tasarım sürecine yönelik anlayış düzeylerine etkisinin incelenmesi amaçlanmıştır. Nitel araştırma paradigması kapsamında yürütülen araştırmada veri toplama aracı olarak uygulama öncesi ve sonrasında öğrencilerin mühendislik tasarım sürecine yönelik değerlendirmelerinin yer aldığı yazılı metinler, süreç boyunca ortaya koydukları çizimler ve görüşme kayıtları kullanılmıştır. Araştırma sonucunda gerçekleştirilen öğretim sürecinin öğrencilerin tasarım sürecine yönelik anlayışlarının olumlu yönde gelişmesine katkı sağladığı tespit edilmiştir. Süreç sonrasında öğrencilerin uygulama öncesinden farklı olarak tasarım sürecinin döngüsel, dinamik, sistematik ve yaratıcı yapısını vurgulayan değerlendirmeler yaptıkları ayrıca tasarım süreci aşamalarına yönelik daha doğru ifadeler kullandıkları tespit edilmiştir.

Anahtar sözcükler: tasarım temelli eğitim, mühendislik tasarım süreci, K-12 mühendislik eğitimi, FeTeMM eğitimi

GİRİŞ

Fen eğitimine yönelik reform hareketlerinin tarihsel gelişimine bakıldığında matematik ve teknoloji disiplinlerinin entegrasyonunu hedef alan çeşitli girişimlerin varlığı göze çarpmaktadır (Lederman & Lederman, 2013). Bu bağlamda günümüzde motto haline gelen FeTeMM eğitimini bu girişimlerden ayıran en önemli boyutun mühendislik disiplini üzerine yapılan vurgu olduğu ifade edilebilir (NAE & NRC, 2009). Mühendislik, diğer FeTeMM disiplinlerinin entegrasyonu için gerekli zemini oluşturma potansiyeline sahip olmasının (Cantrell, Pekcan, Itanı & Velasquez-Bryant, 2006; Householder & Hailey, 2012) yanı sıra 21. yy toplumunun gereksinimleri açısından değerlendirildiğinde de başlı başına öğrencilerin yeterlik kazanmaları gereken bir alan olarak kritik öneme sahip gözükmektedir (Purzer, Moore, Baker & Berland, 2014). Buna rağmen disiplinin K-12 düzeyinde ne şekilde ele alınacağı, öğretim programları ve öğretmen yetiştirme programlarının mevcut yapısı açısından problemli bir görünüm sergilemektedir (Moore et al. 2014). K-12 mühendislik eğitiminin durumunu iyileştirmek adına gerçekleştirilen girişimlerde mühendislik disiplinine yönelik öğrenme hedeflerinin ortaya konulması öncelikli konulardan biri olarak ele alınmaktadır. Bu doğrultuda atılan ilk adım Massachusetts Eğitim Departmanı (MDOE) tarafından 2001 yılında yayınlanan öğretim standartlarının tanımlandığı raporda fen ve teknoloji ile birlikte mühendislik kazanımlarına da yer verilmesi olarak nitelendirilebilir (2006 ve 2010 yıllarında bu rapor revize edilmiştir). Bu rapordan sonra Pennsylvania ve Oregon Eğitim Departmanları da fen, teknoloji ve mühendislik eğitimi için akademik kazanımların tanımlandığı birer rapor yayınlamıştır (PDOE, 2009; ODE, 2009). Ulusal Mühendislik Akademisi (NAE, 2010) yayınladığı "K-12 için Mühendislik Standartları" adlı çalışmada mevcut fen, matematik ve teknoloji öğretim programlarında mühendislik eğitimi ile ilişkili kazanımların tespiti sağlanmış ve standartlar için temel teşkil edecek mühendislik konuları belirlenmiştir. "Teknoloji ve Mühendislik Okuryazarlığı Çerçevesi" adlı taslak raporda ise (NAGB, 2010) K-12 düzeyinde teknoloji ve mühendislik kazanımlarının ulusal bağlamda tanımlanması üzerine odaklanılmıştır.

Bu girişimler arasında gösterilebilecek bir diğer raporda ise (Bkz. NAE & NRC, 2009) mühendislik disiplininin ilkokul ve ortaokul düzeyinde konumlandırılmasına yönelik kapsamlı bir çerçeve sunulmuştur. İlkokul ve ortaokul düzeyi için mühendislik eğitiminin genel prensiplerinin tanımlandığı bu raporda, "K-12 mühendislik eğitiminin mühendislik tasarımını vurgulaması gerektiği" 3 temel prensip arasında yer almıştır. 2013 yılında Birleşik Devletler' de uygulamaya konulan yeni fen öğretim standartları (NGSS, 2013) kapsamında da öğrencilere mühendislik tasarım süreci çerçevesinde çalışma fırsatları sunulması ve öğrencilerin mühendislik tasarıma yönelik bilgi ve becerilerini yapılandırmaları gerekliliği üzerinde durulmuştur.

Mühendislik Tasarım Süreci

Mühendislerin problem çözme yaklaşımı olarak tanımlanan tasarım, problemin belirlenmesi ile başlayıp arzulanan performansa yönelik ortaya konulan kısıtlama ve başarı kriterlerini karşılayan çözüm ile tamamlanan bir süreçtir (NAE & NRC, 2009). Mühendislik tasarım problemleri için tek bir doğru çözümden söz etmek mümkün değildir (NAE, 2010). Bu problemler için genellikle birden fazla çözüm yolu bulunmaktadır (Jonassen, 2012). Bu sebeple mühendislik yaratıcı bir çaba olmak zorundadır (NAE & NRC, 2009). Dolayısıyla mühendislik tasarım sürecinin, hangi uygulama adımlarının hangi sıra ile izlenmesi gerektiğinin açıkça belirtildiği doğrusal bir süreci yansıtmaması son derece olağandır (NRC, 2012). Bununla birlikte mühendislerin tasarım sürecinde yararlandıkları birçok karakteristik adım bulunmaktadır. Mühendisler karşı karşıya kaldıkları tasarım problemi doğrultusunda bu adımları önceden tanımlanmış bir düzen içerisinde değil en uygun çözüm neyi gerektiriyorsa o haliyle kullanırlar (ITEA, 2007). NAGB (2010) tarafından yayınlanan "Teknoloji ve Mühendislik Okuryazarlığı Çerçevesi" adlı raporda mühendislik tasarım sürecinin tek bir yöntemle sınırlı olmaması gerektiği vurgulanmakta, sürecin kullanılacağı bağlam doğrultusunda farklı adımlarla gerçekleştirilebileceği açıklanmaktadır. Buna rağmen aynı raporda özellikle ilkokul ve ortaokul düzeyinde sürecin belirli aşamalar kapsamında sistematik şekilde ele alınmasının öğrenciler açısından daha uygun olduğu ifade edilmektedir.

Tasarım Temelli Fen Eğitimi (TTFE)

"Tasarım Temelli Fen Eğitimi (TTFE)" mühendislik tasarım problemlerinin gerçekleştirilecek fen eğitimi için gerekli bağlamı oluşturduğu bir yaklaşım olarak ifade edilmektedir (Kolodner, 2002; Wendell, 2008). Daugherty (2012) bu yaklaşımda fen kavram ve süreçlerine yönelik öğretimin, mühendislik problemleri doğrultusunda bilimsel araştırma ve mühendislik tasarım süreci yoluyla gerçekleştiğini belirtmektedir. Apedoe, Reynolds, Ellefson ve Schunn (2008) bu yapıyı vurgulayacak şekilde TTFE'yi bilimsel araştırma ve mühendislik tasarımının kombinasyonu olarak tanımlamaktadır. Bu doğrultuda gerçekleştirilecek bir öğretim sürecinin, fene yönelik akademik başarıyı desteklemenin yanı sıra öğrencilerin mühendislik disiplinine yönelik bazı öğrenim hedeflerini edinmelerine de katkı sağlayacağı çok sayıda araştırmacı (Bkz. Apedoe, Reynolds, Ellefson &

Schunn, 2008; Ercan, 2014; Fortus, Dershimer, Krajcik, Marx & Mamlok-Naaman, 2004; Ryan, Camp & Crismond, 2001) tarafından ifade edilmiştir.

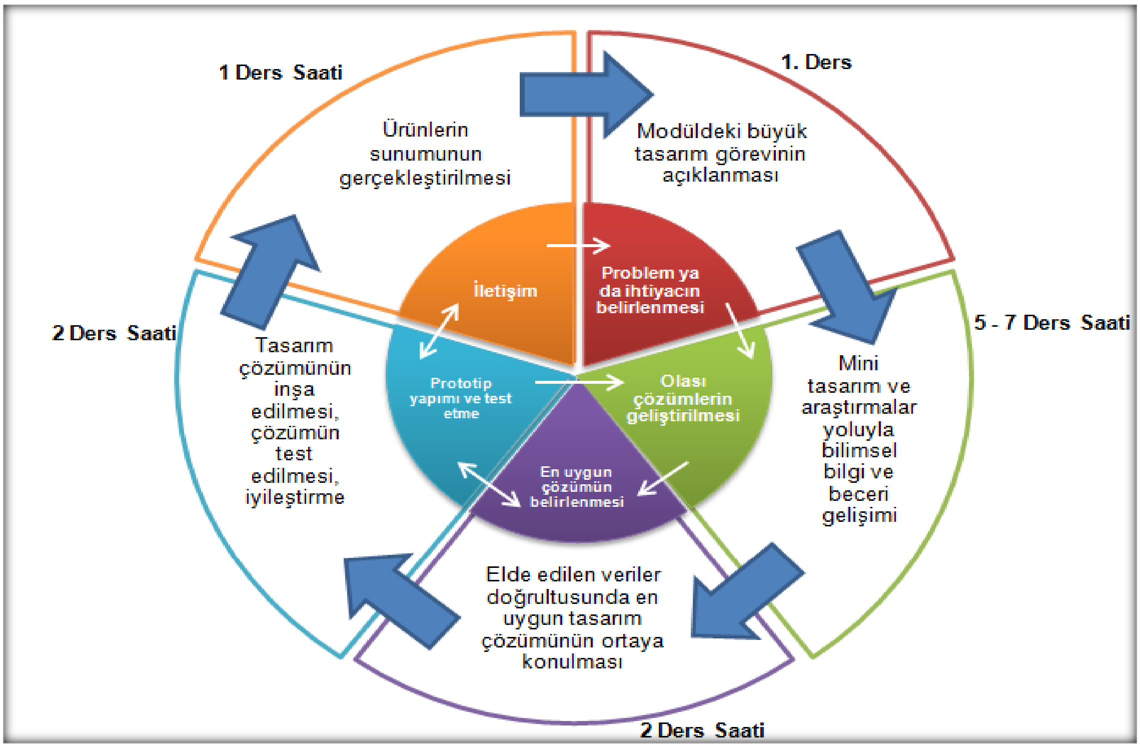
Bu doğrultuda gerçekleştirilen bu araştırmada ortaokul 7. sınıf öğrencilerinin mühendislik tasarım sürecine yönelik anlayışları üzerine odaklanılmış ve TTFE kapsamında yürütülen bir öğretim sürecinin öğrencilerin bu anlayışlarını nasıl etkilediği araştırılmıştır.

YÖNTEM

Nitel araştırma paradigmasına uygun olarak tasarlanan bu araştırmanın çalışma grubunun belirlenmesinde öğretim süreci boyunca hiç devamsızlık yapmama ve veri toplama süreci uygulamalarının tamamında yer alma kriterleri esas alınmıştır. Bu doğrultuda okul dışı bir uygulama olarak yürütülen sürece katılım gösteren 30 ortaokul 7. Sınıf öğrenci arasından 22 (16 kız ve 6 erkek) öğrenci çalışma grubunda yer almıştır.

Öğretim Süreci

Haftalık 3 ders saati olmak üzere 5 hafta boyunca devam eden öğretim süreci, ortaokul fen bilimleri dersi öğretim programında yer alan "7.3.5.1. Evsel atıklarda geri dönüştürülebilen ve dönüştürülemeyen maddeleri ayırt eder." ve "7.3.5.2. Evsel katı ve sıvı atıkların geri dönüşümüne ilişkin proje tasarlar." kazanımları esas alınarak geliştirilmiştir. Öğretim sürecinin yapılandırılmasında Ercan (2014) tarafından kullanılan (Bkz. Şekil 1) TTFE modelinden yararlanılmıştır.



Şekil 1. Araştırmada Kullanılan TTFE Süreci

Model kapsamında ilk olarak öğrencilere içerisinde çeşitli katı evsel atıkların bulunduğu kutular verilmiş, büyük tasarım görevi olarak öğrencilerin bu atıkları el değmeden ayıracakları mekanik bir sistem geliştirmeleri ve bu malzemelerin geri dönüşümü ile bir poşet tasarlamaları istenmiştir. 3-4 kişilik gruplar içerisinde çalışmalarını yürüten öğrenciler olası çözümlerin geliştirilmesi aşaması kapsamında internet üzerinden çeşitli araştırmalar yürütmüşler, basit malzemeler ile mekanik sistemler geliştirmeye çalışmışlar, çeşitli poşet tiplerinin avantaj ve dezavantajlarını gözden geçirmişlerdir. Sürecin devamında grup olarak en uygun çözüme karar veren öğrenciler mekanik sistem ve geri dönüşüm poşetlerinin prototiplerini hazırlamışlar ve poşetlerini test etmişlerdir. Öğretim süreci öğrenci gruplarının tasarım çözümlerine yönelik sunumları ve sınıf tartışmaları ile son bulmuştur.

Veri Kaynakları ve Analizi

Araştırmada veri toplama aracı olarak, öğrencilerin mühendislik tasarım süreci aşamalarına ve bu sürecin yapısına yönelik düşüncelerini açığa çıkartmak üzere araştırmacılar tarafından oluşturulan soru formu kullanılmıştır. Uygulamalar öncesi ve sonrasında öğrencilere dağıtılan soru formunda ilk olarak öğrencilere "Mühendisler tasarım problemlerini nasıl çözer?" sorusu yöneltilmiştir. Daha sonra öğrencilere çeşitli akış şemaları gösterilerek, aynı soruyu bu kez bir çizimle cevaplandırmaları istenmiştir. Soru formları ilk kez dağıtılmadan önce mühendislik ve mühendislik tasarım süreci ile ilişkili kısa bir sınıf içi tartışma gerçekleştirilmiş ve öğrencilerin mühendislik tasarımlarına yönelik vermiş oldukları doğru örnekleri vurgulanarak veri toplama sürecinin daha sağlıklı şekilde yürütülmesi hedeflenmiştir.

Elde edilen verilerin analizinde sürekli karşılaştırma yöntemi (Strauss & Corbin, 1994) kullanılmıştır. Bu doğrultuda ilk olarak ortaokul öğrencilerinin mühendislik tasarım süreci aşamaları ve sürecin yapısına yönelik düşüncelerinin hangi boyut ve kriterler çerçevesinde analiz edileceğinin belirlenmesi için var olan raporlar (NAE & NRC, 2009; NAE, 2010; NAGB, 2010; NGSS, 2013) ve geçmiş araştırmalardan (Ercan, 2014; Gaskins, Kukreti, Maltbie & Steimle, 2015) yararlanılmıştır. Mühendislik tasarım sürecinin farklı kaynaklarda farklı aşamalar kapsamında sınıflandırılması analiz sürecinin hangi boyutlar ekseninde ele alınacağına yönelik problem oluşturmuştur. Bu doğrultuda yeni nesil fen standartlarında gösterilen yapının esas alınması (Bkz. NGSS, 2013) daha uygun görülmüştür. Devam eden aşamada oluşturulan kısmi çerçeve ekseninde hazırlanan ilk kod şeması ile veriler tüm araştırmacılar tarafından ayrı ayrı analiz edilmeye başlanmış, veri analiz sürecinde meydana çıkan yeni kodlar dikkate alınarak araştırmacılar kod şemalarını yeniden düzenlemiştir. Daha sonra araştırmacılar tarafından bağımsız olarak ortaya konulan kod şemaları karşılaştırılmış, eklenen kodlar ve bunlara atfedilen anlam tartışılarak üzerinde uzlaşıya varılan nihai kod şeması (Bkz. Tablo 1.) oluşturulmuştur.

Tablo 1. Analiz Sürecinde Kullanılan Kod Şeması

<table>
<tr><th></th><th>Boyut</th><th>Kodlar</th><th>Kodların anlamı</th></tr>
<tr><td rowspan="12">Mühendislik tasarım süreci aşamalarına yönelik</td><td rowspan="3">Problemin belirlenmesi</td><td>pb_yok</td><td>Açıklama yok</td></tr>

</table>

Tüm veri seti nihai kod şeması doğrultusunda iki araştırmacı tarafından Tablo 2'de belirtilen kod cetveli yardımıyla ayrı ayrı analiz edilmiş ve aralarındaki uyum karşılaştırılmıştır. Tüm veri seti için bağımsız araştırmacılar arasındaki uyumun % 90' ın üzerinde olduğu tespit edilmiştir.

Tablo 2. Kod Cetveli

pb_yok	pb_genel	pb_detay	çöz_yok	çöz_arş	çöz_tek	çöz_çok	çöz_karar	çöz_mod
çöz_test	iyi_yok	iyi_vurgu	dt_değil	dön_tek	sist_değil	sistematik	y_değil	yaratıcı

Veri analizine bağlı olarak kodların ortaya konulmasından sonra bu kodlar, Tablo 3.' te belirtilen kategorilere yönelik kriterlerle karşılaştırılmış ve çalışma bulguları bu kategoriler doğrultusunda sunulmuştur.

Tablo 3. Kod Cetveli

	Kategoriler	Kriterler
Problemin belirlenmesi	Dikkate alınmamış	Aşamaya yönelik herhangi bir açıklamaya yer verilmemiş
	Yüzeysel bakış açısı	Aşama genel ifadelerle (problemi inceleme gibi) ele alınmış
	Ayrıntılı bakış açısı	Aşama kriter ve kısıtlamaların belirlenmesiyle ilişkili olarak ele alınmış
Olası çözümlerin ortaya konulması	Dikkate alınmamış	Aşamaya yönelik herhangi bir açıklamaya yer verilmemiş
	Yüzeysel bakış açısı	Aşama kapsamında yalnızca "bir çözüm geliştirilmesi" vurgulanmış
	Kısmi farkındalık	Model geliştirme ve test etmeye birlikte yer verilmemiş fakat aşamayla ilişkili diğer bazı işlemler tanımlanmış
	Derin anlayış	Model geliştirme ve test etme birlikte vurgulanmış
Tasarımın iyileştirilmesi	Dikkate alınmamış	Aşamaya yönelik herhangi bir açıklamaya yer verilmemiş
	Yüzeysel bakış açısı	Test sonuçlarının analizi ile ilişki kurulmadan aşama genel ifadeler ile vurgulanmış
	Ayrıntılı bakış açısı	Test sonuçlarına bağlı olarak modelin iyileştirilmesi vurgulanmış
Mühendislik Tasarım sürecinin yapısı	Döngüsel - tekrarlı değil	Test etme - analiz - iyileştirme sürecinin tekrarlı yapısı vurgulanmış
	Döngüsel - tekrarlı yapı	Test etme - analiz - iyileştirme sürecinin tekrarlı yapısı vurgulanmış
	Sistematik değil	Tek bir aşamaya vurgu yapılmış ya da birden fazla aşama arasında ilişki kurulmamış
	Sistematik yapı	Tasarım süreci aşamalarından en az ikisi doğru şekilde ilişkilendirilmiş
	Yaratıcı değil	Olası çözümlerin geliştirilmesinde yaratıcılığa vurgu yok
	Yaratıcı yapı	Olası çözümlerin geliştirilmesi aşaması hayal gücü, yenilik, yaratıcılık gibi kavramlarla ilişkilendirilmiş

BULGULAR

Öğrencilerin tasarım sürecine yönelik uygulama öncesinde ve sonrasındaki değerlendirmeleri aynı kod şeması ile (Bkz Tablo 1.) analiz edilmiştir. Bu durum uygulama öncesi ve sonrasına yönelik olarak elde edilen bulguların karşılaştırılmasına zemin hazırlamıştır. Devam eden bölümde araştırma bulguları bu karşılaştırmaya imkan sağlayacak şekilde bir arada sunulmuştur.

Tablo 4. Problemin Belirlenmesi Aşamasına Yönelik Bulgular

	Uygulama Öncesi		Uygulama Sonrası	
Kategoriler	f (N)	%	f (N)	%
Dikkate alınmamış	8	36	6	27
Yüzeysel bakış açısı	14	64	14	64
Ayrıntılı bakış açısı	-	-	2	9

Tablo 4'te problemin belirlenmesi aşamasına yönelik bulgulara yer verilmiştir. Gerek uygulama öncesinde gerekse sonrasında öğrenci değerlendirmelerinin büyük oranda yüzeysel bakış açısı kategorisinde olduğu görülmektedir. Uygulama sonrasında aşamayı dikkate almayan öğrenci değerlendirmelerinin az miktarda da olsa düşüş göstermesi ve ayrıntılı bakış açısını yansıtan değerlendirmelerde aynı oranda artış görülmesi (f=2), uygulamanın aşamaya yönelik gelişim sağlama potansiyelinin göstergeleri olarak değerlendirilebilir.

Tablo 5. Olası Çözümlerin Geliştirilmesi Aşamasına Yönelik Bulgular

	Uygulama Öncesi		Uygulama Sonrası	
Kategoriler	f (N)	%	f (N)	%
Dikkate alınmamış	1	4	-	-
Yüzeysel bakış açısı	13	60	9	41
Kısmi farkındalık	8	36	8	36
Derin anlayış	-	-	5	23

Olası çözümlerin geliştirilmesine aşamasına yönelik bulguların sunulduğu Tablo 5. incelendiğinde uygulama sonrasında aşamayı dikkate almayan ve yüzeysel bakış açısı kategorisinde değerlendirilen öğrenci görüşlerinin sayısında azalma olduğu görülmektedir. Kısmi farkındalık kategorisinde yer alan değerlendirmelerin oranında değişme olmazken uygulama öncesinde hiç gözlenmeyen "derin anlayış" kategorisinde uygulama sonrasında öğrenci değerlendirmelerinde artış olduğu (f=5) görülmektedir.

NGSS (2013) kapsamında tasarım sürecinin son aşaması olarak ifade edilen tasarımın iyileştirilmesi aşaması ile ilgili olarak bulgular Tablo 6' da sunulmuştur.

Tablo 6. Tasarımın İyileştirilmesi Aşamasına Yönelik Bulgular

	Uygulama Öncesi		Uygulama Sonrası	
Kategoriler	f (N)	%	f (N)	%
Dikkate alınmamış	21	95	14	64
Yüzeysel bakış açısı	-	-	2	9
Ayrıntılı bakış açısı	1	5	6	27

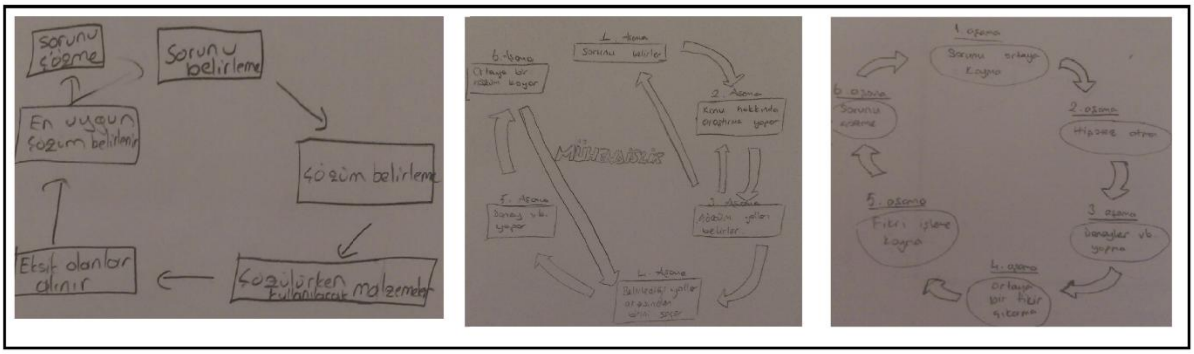
Tablo 6 incelendiğinde uygulama öncesinde öğrencilerin çok büyük oranda (% 95) bu aşamayı dikkate almadıkları görülmektedir. Uygulama sonrasında ise aşamayı dikkate almayan öğrencilerin sayısının azaldığı, bu öğrencilerin çoğunun da (f=6) aşamaya yönelik ayrıntılı bakış açısı sergiledikleri görülmektedir.

Son olarak Tablo 7' de öğrencilerin mühendislik tasarım sürecinin yapısına yönelik değerlendirmeleri ile ilgili bulgulara yer verilmiştir.

Tablo 7. Tasarım Sürecinin Yapısına Yönelik Bulgular

	Uygulama Öncesi		Uygulama Sonrası	
Kategoriler	f (N)	%	f (N)	%
Döngüsel - tekrarlı değil	21	95	14	64
Döngüsel - tekrarlı yapı	1	5	8	36
Sistematik değil	9	41	5	23
Sistematik yapı	13	59	17	77
Yaratıcı değil	22	100	20	91
Yaratıcı yapı	-	-	2	9

Tablo 7 incelendiğinde uygulama öncesinde öğrencilerin tasarım sürecinin döngüsel-tekrarlı ve yaratıcı yapısı ile ilişkili değerlendirmelerde bulunmadıkları görülmektedir. Sürecin sistematik yapısı ise uygulama öncesinde öğrencilerin çoğunluğu (% 59) tarafından vurgulanmıştır. Uygulama sonrasında her üç kategori kapsamında da yapılan doğru değerlendirmelerinin oranının arttığı tespit edilmiştir. Fakat sürecin yaratıcı yapısının uygulama sonrasında yalnızca iki öğrenci tarafından vurgulanması dikkat çekici bir bulgu olarak göze çarpmaktadır.



Şekil 2. Örnek Öğrenci Çizimleri

SONUÇ

Mühendislik tasarım süreci aşamalarına yönelik uygulama öncesi ve uygulama sonrası bulgular bir arada değerlendirildiğinde tasarım temelli fen eğitimi sürecinin öğrencilerin bu aşamalara yönelik anlayışlarının gelişimine genel anlamda katkı sağladığı görülmektedir. Buna rağmen özellikle tasarımın iyileştirilmesi aşamasının uygulama sonrasında öğrencilerin çoğunluğu (% 64) tarafından dikkate alınmamış olması sürecin bu kapsamda yeniden değerlendirilmesi gerekliliğini doğurmaktadır. Zira bu aşamada gerçekleştirilecek test etme -

sonuçları analiz etme - iyileştirme süreci mühendislik tasarım sürecinin en karakteristik uygulamaları arasında yer almaktadır (Crismond & Adams, 2012). Ayrıca aşama kapsamında sergilenecek bu karakteristik uygulamaların dikkate alınmaması, öğrencilerin mühendislik tasarım sürecinin tekrarlı-döngüsel yapısını tam olarak kavrayamadıklarının da bir göstergesidir. Sürecin yapısal özellikleri ile bulgular incelendiğinde bu tespit açık bir şekilde görülmektedir.

Tasarım sürecinin yapısal özellikleri ile ilgili bulgular incelendiğinde sürecin yaratıcı boyutunun uygulama öncesinde hiçbir öğrenci tarafından vurgulanmadığı, uygulama sonrasında ise yalnızca 2 öğrenci tarafından vurgulandığı görülmektedir. Bu doğrultuda yürütülen sürecin öğrencilerin tasarım sürecinin yaratıcı yapısına yönelik anlayışlarının gelişimine çok az düzeyde katkı sağladığı ifade edilebilir. Esasında mühendislik tasarım problemlerinin hemen her zaman birden fazla çözümünün bulunması özellikle olası çözümlerin geliştirilmesi aşamasını yaratıcı girişimlere uygun hale getirmektedir (NAE & NRC, 2009). Fakat TTFE' nde bu aşama belirlenen kazanımlar doğrultusunda öğretmenler (araştırmacılar) tarafından yapılandırılmaktadır. Mühendislik tasarım sürecinin doğasına aykırı olan bu durum TTFE sürecinde belirli fen kazanımlarına yönelik öğretim için bir gerekliliktir. Dolayısıyla TTFE kapsamında yürütülen tasarım süreci belirli düzeyde profesyonellerin uygulamalarından farklılaşmış ve bu durum öğrencilerin sürecin yaratıcı yapısına yönelik değerlendirmelerini etkilemiştir.

Araştırma kapsamında ortaya konulan bu sonuçlar, gerçekleştirilen uygulamaların öğrencilerin K-12 mühendislik eğitiminin en önemli kazanımları arasında gösterilen tasarım sürecine yönelik anlayışlarının geliştirilmesi için gerekli potansiyele sahip olduğunu göstermektedir. Bu doğrultuda K-12 mühendislik eğitimine yönelik öğrenim hedeflerine ulaşılması için TTFE uygulamalarının daha yaygın olarak kullanılması gerektiği ifade edilebilir.

INVESTIGATION OF THE PROPORTIONAL REASONING LEVELS IN SEVENTH GRADE STUDENTS

Mustafa GÖK
Yüzüncü Yıl University

ABSTRACT: The purpose of this study is the determination of the proportional reasoning levels of 7th grade students. Descriptive analysis, a qualitative research method, was employed. The data prepared by the researcher was incorporated into four problems and was gathered in a one page document in order to be solved by the students in a classical way. The participants of this study are consistent of 146 seventh grade students from two public schools located in the central cities of Van. The data was analysed in accordance with the levels specified in the studies of Langrall and Swafford (2000). The results of the study demonstrated low levels of proportional reasoning attitudes in most of the 7th grade students. We suggest that, more problem situations which are supportive of the proportional reasoning levels of the students have to be incorporated into the education system.

Key words: proportional reasoning levels, problem solving, 7th grade

YEDİNCİ SINIF ÖĞRENCİLERİNİN ORANTISAL MUHAKEME DÜZEYLERİNİN İNCELENMESİ

ÖZET: Bu çalışmanın amacı 7. sınıf öğrencilerinin orantısal muhakeme düzeylerini belirlemektir. Çalışmada nitel araştırma yöntemlerinden betimsel analiz kullanılmıştır. Veriler araştırmacı tarafından hazırlanan 4 adet problemi öğrencilerin klasik tarzda çözmelerinin istendiği 1 sayfalık bir dokümanla toplanmıştır. Çalışmanın katılımcılarını Van'ın merkez ilçelerinden birinde bulunan 2 devlet okulunda 7. sınıfta öğrenim gören 146 öğrenci oluşturmaktadır. Veriler Langrall ve Swafford (2000) çalışmalarında belirledikleri düzeyler doğrultusunda analiz edilmiştir. Araştırmanın sonuçları 7.sınıf öğrencilerinin çoğunun orantısal muhakeme yaklaşımlarının düşük düzeyde olduğunu göstermiştir. Öğretimde öğrencilerin orantısal muhakeme yaklaşımlarını destekleyici problem durumlarına daha çok yer verilmesi gerektiği düşünülmektedir.

Anahtar sözcükler: orantısal muhakeme düzeyleri, problem çözme, 7.sınıf

GİRİŞ

Orantısal muhakeme matematiksel muhakeme türlerinden biridir (Martinez Ortiz, 2015). Akkuş Çıkla ve Duatepe (2002) orantısal muhakemeyi, orantısal durumlar içindeki çarpımsal ilişkili matematiksel yapıları anlamak olarak tanımlamışlardır. Orantısal muhakeme ortaöğretimde geliştirilebilecek en önemli kabiliyetlerden biridir (Langrall & Swafford, 2000; National Council of Teachers of Mathematics [NCTM], 2000). Bunun en önemli nedeni öğretimde orantısal muhakeme yeteneğinin cebirde ve geometride birçok soru çözümünde etkili bir şekilde kullanılabilmesi olarak ifade edilebilir. NCTM (2000) orantısal muhakemenin yüzde, benzerlik, ölçekleme, lineer denklemler, göreceli sıklık histogramları ve olasılık gibi konularda kullanılabileceğini vurgulamıştır. Örneğin d=90t bir aracın saatte 90 km/sa hızla t saatte aldığı yol olarak koordinat ekseninde düşünüldüğünde, bu durum orantısal ilişkinin grafiksel temsili şeklinde incelenebilir (Usiskin vd., 2003). Burada d ve t değişkenleri arasında orantısal bir ilişki bulunmaktadır. Görüldüğü üzere bu ilişki d ile t arasında çarpımsal bir ilişkidir. Yani bu ilişkide t değişkeniyle herhangi bir sayı çarpıldığında d değişkeni de aynı miktarla çarpılmış demektir.

Orantısal muhakemenin kovaryasyonel anlama, çarpımsal karşılaştırma, zihinsel depolama kabiliyeti ve bazı bilgi parçalarının işlenmesi gibi kavramları içerdiğini belirtilmiştir (Lesh, Post & Behr, 1988). Lamon (1993) orantıyla ilgili dört farklı problem çeşidi tanımlamıştır. Bunlar: 1. Parça-parça-bütün, 2. İlişkili kümeler, 3. İyi bilinen ölçüler[10], 4. Büyüme[11] (germe ya da büzülme durumları) şeklinde ifade edilmiştir.

[10] well-known measures anlamında kullanılmıştır.
[11] growth kelimesine karşılık kullanılmıştır.

Orantısal Akıl Yürütmenin Düzeyleri

Langrall ve Swafford (2000) çalışmalarında orantısal akıl yürütmeyi düşükten yükseğe doğru olacak şekilde 4 düzeyde ifade etmişlerdir.
Düzey 0: Bu düzeydeki stratejiler orantısal muhakeme içermemektedir. Buradaki stratejiler çarpımsal karşılaştırmalardan ziyade toplamsal olarak karekterize edilebilir. Problemlerde sayılar ya da işlemler rasgele kullanılmaktadır. Tahmin ya da görsel ipuçları (Örneğin bir problemle ilgili "Yanıt 5 gibi görünüyor" şeklindeki ifadeler) şeklinde de görülebilmektedir. Son olarak iki ölçünün bağlantısız bir şekilde kullanımını da içerebilmektedir.

Düzey 1: Bu düzeyde öğrenciler orantısal durumla ilgili informel muhakemelerde bulunabilirler. Yani öğrenciler problem durumunu anlamlandırmak için resimler, modeller ve manipulatifler kullanabilirler. Ayrıca bu düzeyde öğrenciler nitel karşılaştırmalarda da bulunabilirler.

Düzey 2: Bu düzey nicel muhakemeler olarak ifade edilebilir. Daha ayrıntılı olarak bu düzeyde öğrenciler: a) Birimleştirme ya da farklı durumlarla ilgili birimlerin birleşimini kullanabilirler. b) Birim oran bulur ve kullanabilirler. c) Durumlarla ilgili çarpımsal sayıyı belirler ya da tablo kullanabilir. d) Denk kesirleri kullanır. e) Problemle ilgili farklı ölçüler arasındaki ilişkiyi artan ya da azalan durumlarda uygulayabilir.

Düzey 3: Bu düzey formel muhakeme olarak ifade edilebilir. Bu düzeyde öğrenciler değişken kullanarak orantı kurabilir. İçler dışlar çarpımı ya da denk kesirleri kullanarak problemi çözebilirler. Ayrıca değişmeyen ilişkileri ve kovaryasyonel ilişkileri tamamen anlamışlardır.

Literatür incelendiğinde orantısal akıl yürütmeyle ilgili birçok çalışma yapıldığı görülmektedir. (Langrall & Swafford, 2000; Lesh, Post, & Behr, 1988; Miyakawa & Winsløw, 2009; Tjoe & Torre, 2014; Akkuş Çıkla & Duatepe, 2002; Duatepe, Akkuş Çıkla & Kayhan, 2005). Akkuş Çıkla ve Duatepe (2002) ilköğretim matematik öğretmen adaylarıyla orantısal muhakeme içeren orantı problemleri için geliştirdikleri çözüm stratejileri görüşmeler yoluyla ortaya çıkarmayı amaçlamışlardır. Sonuç olarak öğretmen adaylarının orantı konusunu kavramsal düzeyde anlayamadıkları belirtilmiştir. Langrall ve Swafford (2000) çalışmalarında ortaokul öğrencilerinin orantısal muhakeme düzeylerini incelemişlerdir. Çalışmada orantısal muhakemenin karmaşık bir yapıya sahip olduğu ifade edilmiştir. Ayrıca orantısal muhakemenin kısa sürede geliştirilemeyeceğini ancak uzun bir sürece yayılarak farklı konularda ele alındığında geliştirilebileceği ifade edilmiştir.

Ortaokul matematik dersi öğretim programında sayılar ve cebir öğrenme alanında oran ve orantı alt öğrenme alanı içerisinde 7. sınıf seviyesinde bu konunun öğretiminin gerçekleştirildiği görülmektedir. Burada öğrencilerden oranları verilen çoklukları belirlemeleri, orantısal durumları tespit edebilmeleri (gerçek yaşam bağlamında, tabloda ya da grafik üzerinde), doğru ve ters orantı içeren problemleri çözebilmeleri beklenmektedir (Milli Eğitim Bakanlığı [MEB], 2013).

Orantısal akıl yürütmenin matematiğin birçok konusuyla ilişkisinin olduğu görülmektedir. Ancak ülkemizde orantısal akıl yürütme içeren problem çözümlerinde 7. sınıf seviyesinde öğrencilerin bu yeteneği hangi düzeyde kullanabildiklerine ilişkin sınırlı sayıda çalışma olduğu görülmektedir. Bu yüzden bu çalışmada 7. sınıfta öğrenim gören öğrencilerin orantısal muhakeme düzeyleri belirlenmeye çalışılmıştır.

YÖNTEM

Bu çalışmada nitel araştırma yöntemlerinden betimsel analiz kullanılmıştır. Betimsel analizde elde edilen veriler daha önceden belirlenen temalara göre özetlenir ve yorumlanırlar. Veriler araştırma sorularının ortaya koyduğu temalara göre düzenlenebileceği gibi, görüşme ve gözlem süreçlerinde kullanılan sorular ya da boyutlar dikkate alınarak da sunulabilir (Yıldırım & Şimşek, 2011).

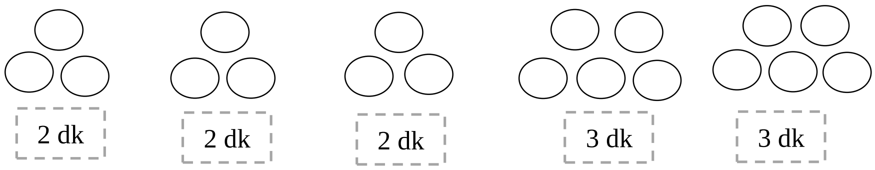
Veriler araştırmacı tarafından hazırlanan 4 adet problemi öğrencilerin klasik tarzda çözmelerinin istendiği 1 sayfalık bir dokümanla toplanmıştır. Bu problemler Lamon'un (1993) çalışmasında ifade ettiği problem tiplerinden ilişkili kümeler kategorisinde olduğu belirtilebilir. Çalışmanın katılımcılarını Van'ın merkez ilçelerinden birinde bulunan 2 devlet okulunda 7. sınıfta öğrenim gören 146 öğrenci oluşturmaktadır. Uygulama 1 ders saatinde gerçekleştirilmiştir. Veriler Langrall ve Swafford (2000) çalışmalarında belirledikleri düzeyler doğrultusunda analiz edilmiştir. (Ayrıntılar için literatüre bakınız)

Araştırmada kullanılan problemler problem 1 (P1), problem 2 (P2), problem 3 (P3) ve problem 4 (P4) şeklinde ve katılımcılar öğrenci 1(Ö1), öğrenci 2(Ö2),…vs şeklinde kodlanmıştır. Aşağıda çalışmada kullanılan orantısal muhakeme içeren bir problem, bu problemin farklı muhtemel stratejilerle çözümleri ve bu çözümlerin orantısal muhakeme düzeylerinden hangisine denk geldiği verilmiştir.

P1. Burak 2 dakikada 3 soru çözerken, Elif 3 dakikada 5 soru çözmektedir. Hangi öğrenci daha hızlı soru çözmektedir**?**

Strateji 1: "Elif daha hızlı çözer." Bu çözüm yaklaşımı bir tahmin içerdiğinden düzey 0 olarak ifade edilebilir.

Strateji 2: Belirtilen zamanlara göre Burak ve Elif'in çözdüğü sorular modellenerek karşılaştırılabilir.



Şekil 1. Burak (solda) ve Elif'in (Sağda) 6 Dakikalık Bir Zamanda Muhtemel Çözüm Yaklaşımları

Burada öğrenciler aynı zaman diliminde (örneğin 6 dakikada) Elif'in Burak'tan daha fazla soru çözdüğünü ifade edebilir. Bu strateji belli zaman dilimleri için öğrencilerin çözdüğü soruların bir modellemesini içerdiğinden düzey 1 şeklinde ifade edilebilir.

Strateji 3: Burak 2 dakikada 3 soru çözerse 1 dakikada 1,5 soru çözebilir. Benzer şekilde Elif 3 dakikada 5 soru çözerse 1 dakikada 1,66… soru çözebilir. 1 dakikalık zamanda Elif daha hızlı soru çözebilmektedir. Bu stratejide birimleştirme yaklaşımıyla çözüm yapıldığından düzey 2 olarak açıklanabilir.

Strateji 4: Burak 2 dakikada 3 soru çözerse bir dakikada 3/2 soru çözebilir. Elif 3 dakikada 5 soru çözerse bir dakikada 5/3 soru çözebilir. Daha sonra denk kesirler kullanılarak bu iki değer karşılaştırılabilir. $3/2 \equiv 9/6$ ve $5/3 \equiv 10/6$ sonuçta $9/6 < 10/6$ olduğundan Elif daha hızlı soru çözebilir. Bu stratejide denk kesirler kullanılarak çözüm tamamen gerçekleştirildiğinden düzey 3 olarak ifade edilebilir.

BULGULAR

Yedinci sınıf öğrencilerinin orantısal muhakeme düzeylerinin belirlenmeye çalışıldığı araştırmanın sonuçları her bir soru için ayrı ayrı tablolar şeklinde sunulmuştur. Bazı tablolardan sonra tablodaki verileri destekleyecek şekilde ilgili probleme ilişkin bazı öğrencilerin kullandıkları çözüm stratejileri kağıtlarından direkt alıntılar yapılarak sunulmuştur. Aşağıda tablo 1'de P1 problemi için öğrencilerin orantısal muhakemelerinin farklı düzeyleri için frekans ve yüzdeleri verilmiştir.

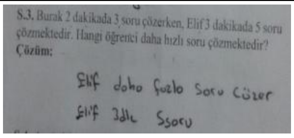
Tablo 1. P1 Problemiyle İlgili Öğrencilerin Muhakeme Düzeyleri

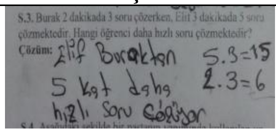
Orantısal Muhakeme Düzeyleri	f	Yüzde
Düzey 0	127	86.9
Düzey 1	1	0.7
Düzey 2	13	8.9
Düzey 3	5	3.5
Toplam	146	100

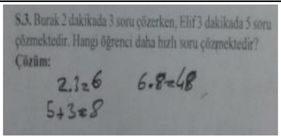
Tablo 1'de orantısal muhakeme kabiliyetine ilişkin 7. sınıf öğrencilerinin %86.9'unun düzey 0 kategorisinde, %0.7'sinin düzey 1 kategorisinde, %8.9'unun düzey 2 kategorisinde ve %3.5'inin düzey 3 kategorisinde olduğu görülmektedir. Bu problemde dikkat çeken önemli bir nokta düzey 1 de sadece 1 öğrencinin bulunması olarak ifade edilebilir. Buradan öğrencilerin orantısal muhakeme yeteneği açısından P1 problemi için çok düşük düzeyde muhakemeler ürettikleri söylenebilir.

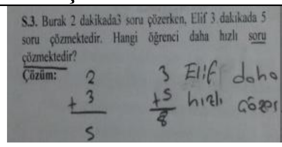
Tablo 2 ve tablo 3'de bazı öğrencilerin P1 probleminin çözümü için ürettikleri çözüm stratejileri verilmiştir. Bu sayede tablo 1'de sunulan farklı düzeylerde orantısal muhakeme yeteneğine sahip öğrencilerin P1 problemi için nasıl çözümler ortaya koyduklarıyla ilgili belli ölçüde fikir verilmektedir. Tablo 2'de orantısal muhakeme düzeylerinden düzey 0 içerisinde yer alan çözüm stratejilerine yer verilmiştir. Tablo 3'de ise düzey 1, düzey 2 ve düzey 3'e ait bazı çözüm stratejileri sunulmuştur.

Tablo 2. P1 Problemi İçin Bazı Öğrencilerin Düzey 0 Kategorisindeki Stratejileri

Ö78 Çözümü	**Ö112 Çözümü**	**Ö110 Çözümü**	**Ö39 Çözümü**
			


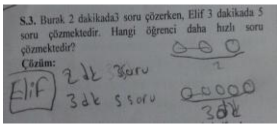


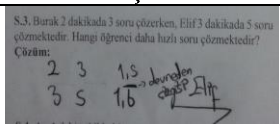


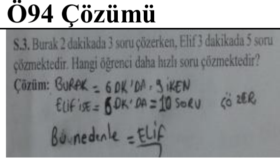


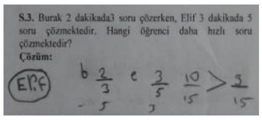
Tablo 2'de verilen P1 problemine ilişkin (Bu problem hazırlanan 1 sayfalık dokümanda S3 şeklinde geçmektedir) öğrencilerin ürettiği çözüm stratejilerin düzey 0 kategorisinde olduğu görülmektedir. Burada Ö78'in çözümü sadece bir tahmin içermekte, Ö112'nin ve Ö110'nun çözümü verilen sayılarla rasgele işlem yapma durumunu içermekte ve Ö39'un çözümü ise toplamsal bir yaklaşım içermektedir. Görüldüğü üzere öğrencilerin tablo 2'de kullandığı stratejilerde orantısal muhakeme gözlenmemektedir.

Tablo 3. P1 Problemi İçin Bazı Öğrencilerin Düzey 1 Dışındaki Kategorilerdeki Stratejileri

Ö25 Çözümü	**Ö115 Çözümü**	**Ö94 Çözümü**	**Ö32 Çözümü**
			








Tablo 3'de P1 problemine ilişkin bazı öğrencilerin orantısal muhakeme düzeylerinden düzey 1, düzey 2 ve düzey 3 ile ilgili çözüm stratejileri verilmiştir. Burada Ö25'in soruları yuvarlak küçük çemberlerle modelleyerek çözümü gerçekleştirdiği görülmektedir. Dolayısıyla bu öğrencinin orantısal muhakeme düzeylerinden düzey 1'de olduğu anlaşılmaktadır. Ö115'in birimleştirmeye başvurduğu görülmektedir. Bu açıdan orantısal muhakeme düzeylerinden düzey 2'de olduğu görülmektedir. Ö94 farklı ölçüm uzaylarında ilişkili olan 2 değişkenle ilgili artan bir durumu doğru bir şekilde kullandığı belirlenmiştir. Bu yönüyle Ö94'ün orantısal muhakeme düzeylerinden düzey 2'de olduğu belirlenmiştir. Son olarak Ö32'nin önce birimleştirme başvurarak 2 kesir elde ettiği daha sonra denk kesirleri kullanarak, bu kesirlerin belli bir doğrultuda karşılaştırılması neticesinde çözümünü gerçekleştirdiği belirlenmiştir. Bu açıdan bu öğrencinin orantısal muhakeme düzeylerinden düzey 3'de olduğu görülmektedir. Tablo 4'te P2 problemiyle ilgili öğrencilerin ürettiği orantısal muhakemelerin farklı düzeylerdeki frekans ve yüzdeleri verilmiştir.

Tablo 4. P2 Problemiyle İlgili Öğrencilerin Muhakeme Düzeyleri

Orantısal Muhakeme Düzeyleri	f	Yüzde
Düzey 0	95	65.1
Düzey 1	0	0
Düzey 2	40	27.4
Düzey 3	11	7.5
Toplam	146	100

Tablo 4 incelendiğinde P2 probleminde, orantısal muhakeme kabiliyetine ilişkin öğrencilerin %65.1'inin düzey 0 kategorisinde, %27.4'ünün düzey 2 kategorisinde ve %7.5'inin düzey 3 kategorisinde bulunduğu belirlenmiştir. Burada düzey 1 kategorisinde hiçbir öğrencinin bulunmaması dikkat çekici olarak ifade edilebilir. Öğrencilerin P2 probleminde orantısal muhakeme açısından düzey 0'da olanlar çoğunlukta olsa da bu problemde düzey 2 ve düzey 3 kategorisinde bulunanlar artış göstererek kabul edilebilir bir aralığa ulaştığı söylenebilir. Tablo 5'te P3 problemiyle ilgili öğrencilerin ürettiği orantısal muhakemelerin farklı düzeylerdeki frekans ve yüzdeleri verilmiştir.

Tablo 5. P3 Problemiyle İlgili Öğrencilerin Muhakeme Düzeyleri

Orantısal Muhakeme Düzeyleri	f	Yüzde
Düzey 0	109	74.7
Düzey 1	0	0
Düzey 2	11	7.5
Düzey 3	26	17.8
Toplam	146	100

Tablo 5 incelendiğinde P3 problemine ilişkin, öğrencilerin %74.7'sinin düzey 0 kategorisinde, %7.5'inin düzey 2 kategorisinde ve %17.8'inin düzey 3 kategorisinde bulunduğu görülmektedir. Yine burada da düzey 1 kategorisinde hiçbir öğrenci bulunmadığı belirlenmiştir. Öğrencilerin P3 probleminde büyük ölçüde düzey 0 kategorisinde olduğu söylenebilir. Tablo 6'da P4 problemiyle ilgili öğrencilerin ürettiği orantısal muhakemelerin farklı düzeylerdeki frekans ve yüzdeleri verilmiştir.

Tablo 6. P4 Problemiyle İlgili Öğrencilerin Muhakeme Düzeyleri

Orantısal Muhakeme Düzeyleri	**f**	**Yüzde**
Düzey 0	120	82.2
Düzey 1	0	0
Düzey 2	8	5.4
Düzey 3	18	12.4
Toplam	146	100

Tablo 6 incelendiğinde P4 problemine ilişkin, öğrencilerin %82.2'si düzey 0 kategorisinde, %5.4'ü düzey 2 kategorisinde ve %12.4'ü düzey 3 kategorisinde bulunduğu görülmektedir. Bu problemde de düzey 1'de hiçbir öğrenci bulunmadığı belirlenmiştir. Öğrencilerin P4 probleminde büyük oranda düzey 0 kategorisinde olduğu söylenebilir.

Tablolarda görüleceği üzere 7. sınıf öğrencilerinin çoğunun orantısal muhakeme yeteneği açısından düşük düzey olarak ifade edilebilecek düzey 0'da olduğu görülmektedir. Bazı öğrencilerin orantısal muhakeme yeteneği açısından yüksek düzey olarak ifade edilebilecek düzey 2 ve düzey 3'te olmalarına rağmen bu oransal anlamda genellikle kabul edilebilir düzeyde olmadığı tespit edilmiştir. Son olarak düzey 1'de neredeyse hiç kimsenin bulunmaması beklenmeyen bir sonuç olarak ifade edilebilir.

SONUÇ

Yedinci sınıf öğrencilerinin orantısal muhakeme düzeylerinin incelendiği bu araştırmada, öğrencilerin çoğunlukla düşük düzeyde orantısal muhakeme yeteneğine sahip oldukları belirlenmiştir. Diğer yandan az da olsa yüksek düzeyde bazı öğrencilerin bulunduğu söylenebilir.

Bu araştırmada beklenmeyen bir sonuç, düzey 1'de neredeyse hiçbir öğrencinin bulunmaması olarak ifade edilebilir. Düzey 1 öğrencilerin resim, model ve somut materyaller kullanarak problem durumunu anlamasını içermektedir. Ancak bu tür yaklaşımları öğrenciler problem çözümlerinde kullanmamışlardır. Böyle bir sonucun ortaya çıkmasında öğretim yaklaşımlarında resim ya da somut materyallerden yeterince yararlanılmaması neden olmuş olabileceği düşünülmektedir.

Bu araştırmada kullanılan düzeyler düzey 0'dan düzey 3'e doğru ardışık bir sıra takip etmektedir. Bu anlamda düzey 0'da oluşan yığılma ve düzey 1'de hiçbir öğrencinin bulunmaması orantısal muhakeme yeteneğinin geliştirilmesi açısından bir boşluk oluşturduğu söylenebilir. Bu yüzden öğretimde problem çözümlerimde resim, model ve somut materyal gibi araçlardan yararlanılması önemli görülmektedir. Ayrıca öğretimde öğrencilerin orantısal muhakeme yaklaşımlarını destekleyici problem durumlarına daha çok yer verilmesi gerektiği düşünülmektedir.

OPINIONS AND ATTITUDES OF PROSPECTIVE TEACHERS FOR THE USE OF TECHNOLOGY IN EDUCATION

Fatma ALKAN
Hacettepe University

Canan ALTUNDAĞ
Hacettepe University

ABSTRACT: This study aims at examining the attitudes of the prospective teachers towards the role of technology and the use of technology in education. The model of this research is survey model. The study group of the research consists of 138 prospective teachers who are enrolled at Hacettepe University, Faculty of Education. As data collection tools in the research the role of technology in education-instruction activities scale and attitude towards the use of technology in education scale were used. In general, it has been found out that the attitudes of prospective teachers towards the importance of technological equipment as a teaching tool in education are positive. In other words, statistically significant differences have occurred in attitudes of prospective teachers towards the role of technology.

Key words: prospective teachers, using technology in education, attitudes.

ÖĞRETMEN ADAYLARININ EĞİTİMDE TEKNOLOJİ KULLANIMINA YÖNELİK GÖRÜŞ VE TUTUMLARI

ÖZET: Bu araştırma, eğitim öğretim faaliyetlerinde teknoloji kullanımı konusunda üniversite öğrencilerinin düşüncelerini öğrenmeyi amaçlamaktadır. Araştırmanın çalışma grubunu Hacettepe Üniversitesi, Eğitim Fakültesi'nde öğrenim gören 138 öğretmen adayı oluşturmaktadır. Araştırma, betimsel yöntemlerden tarama modelli bir çalışmadır. Araştırmada veri toplama araçları olarak teknolojinin eğitim öğretimdeki rolü ölçeği ve eğitimde teknoloji kullanımına yönelik tutum ölçeği kullanılmıştır. Araştırma sonunda elde edilen verilere göre, genel olarak öğretmen adaylarının, teknoloji kullanımına karşı yüksek düzeyde olumlu düşüncelere sahip oldukları belirlenmiştir. Ayrıca öğretmen adaylarının eğitimde teknoloji kullanımının öğretim sürecine yansımasına, kendilerini geliştirmelerine, eğitimde teknoloji kullanımını gerçekleştirmelerine ve sınıf yönetimine yönelik görüşleri irdelenmiştir.

Anahtar sözcükler: öğretmen adayları, eğitimde teknoloji kullanımı, teknolojiye yönelik tutum.

GİRİŞ

Çağımızda bilgi teknolojilerinin yoğun olarak kullanılmasının yarattığı değişiklikler, bireylerin hayatın her alanında teknoloji ile bütünleşmesini gerekli hale getirmiştir. Teknoloji her geçen gün değişmekte ve günlük yaşamda olduğu gibi eğitim ve öğretim ortamlarında da gereksinimlere cevap verebilecek bir şekilde kullanılabilmektedir (Van Wyk & Louw, 2008). Bunun bir sonucu olarak teknolojik gelişmeler eğitim kurumlarının yapı ve işlevlerini etkilemektedir. Teknoloji; günlük yaşamı eğitim ortamına taşımakta, öğrenmeyi geliştirmek için araçlar sağlamakta ve öğretmen ile öğrencilere düşünme, düzeltme ve değerlendirme için daha fazla olanak sağlamaktadır (Bransford, Brown & Cocking, 2000). Teknolojinin eğitim ile bütünleştirilmesi ve eğitim alanında kullanılan teknolojilerin kolay öğrenilebilir ve kullanılabilir olması öğrenme-öğretme sürecinde verimliliği artırmaktadır. Öğrenme-öğretme ortamında teknolojiyi kullanma konusunda olumlu fikirlerin yaygınlaşması, söz konusu eğitim teknolojilerinin kullanılması, motivasyonun artmasına da yardımcı olacaktır. Bireyler, teknolojik yenilikleri günlük hayatlarına adapte edebilmeleri için, formal ve informal eğitim yoluyla teknolojiye aşina olarak yetiştirilmelidirler (Çepni, 2005). Eğitim dünyasındaki hızlı ilerlemeler, teknolojinin eğitim ve öğretimdeki rolünü kavrayan ve yeniliklere açık öğretmen adaylarının yetiştirilmesini gün geçtikçe daha da önemli kılmaktadır. Geleceğin öğretmeni olacak öğretmen adaylarının hem teknolojiyi çok iyi derecede kullanma becerileri sergileyebilmeleri hem de bu teknolojileri öğretme-öğrenme süreçlerinde optimum verimlilik düzeyinde kullanabilmeleri gereklidir. Bu nedenle öğretmen adaylarının teknolojinin eğitim ve öğretimde aktif kullanımı konusundaki görüşlerini belirlemek ve teknoloji kullanımındaki yetersizliklerini gidermek, öğretmen yetiştiren kurumlar açısından oldukça önemlidir. Bu görüşten hareketle yürütülen araştırmanın amacı, öğretmen adaylarının eğitimde teknoloji kullanımına yönelik tutumlarını ve teknolojinin eğitim öğretim faaliyetlerindeki rolüne yönelik görüşlerini belirlemektir. Bu şekilde öğretmen adaylarının teknolojinin eğitim-öğretimde kullanımına yönelik eksikliklerinin tespit edilebileceği ve teknolojinin eğitim amaçlı kullanımının yararlarının belirlenebileceği hedeflenmektedir.

YÖNTEM

Araştırma tarama modelinde tasarlanmıştır. Araştırmanın örneklem grubunu Hacettepe Üniversitesi, Eğitim Fakültesinden öğrenim gören 138 öğretmen adayı oluşturmaktadır. Öğretmen adaylarının eğitim teknolojilerine yönelik tutumları Öztürk (2006) tarafından geliştirilen "Eğitimde Teknoloji Kullanımına Yönelik Tutum Ölçeği" ile belirlenmiştir. Ölçeğin üç alt boyutu bulunmaktadır. Bu boyutlar "Eğitimde Teknoloji Kullanımının Öğretim Süreçlerine Yansıması, Eğitimde Teknoloji Kullanımında Kendini Geliştirme, Eğitimde Teknoloji Kullanımı ve Sınıf Yönetimi"dir. Ölçeğin Cronbach alpha güvenirlik katsayısı 0.90'dır. Ölçek için örneklem verilerinden elde edilen Cronbach alpha güvenirlik katsayısı .93'tür. Öğretmen adaylarının teknolojinin eğitim-öğretim faaliyetlerindeki rolüne yönelik görüşleri Çil (2008) tarafından geliştirilen ölçek ile belirlenmiştir. Ölçeğin Cronbach alpha güvenirlik katsayısı 0.70'tir. Ölçek için örneklem verilerinden elde edilen Cronbach alpha güvenirlik katsayısı .89'dur. Araştırmadan elde edilen verilerin analizi SPSS 15 paket programı ile gerçekleştirilmiştir. Ölçeklerden elde edilen verilerin analizi gerçekleştirilirken öncelikli olarak betimsel istatistik yapılmıştır. Böylece örneklem grubunun eğitimde teknoloji kullanımına yönelik tutumları ve teknolojinin eğitim öğretim faaliyetlerindeki rolüne yönelik görüşleri belirlenmiştir. Araştırmada kullanılan Likert tipi ölçekler için kişilerin verilen önermelerle ilgili görüşlerini, çok olumludan çok olumsuza doğru belirtmeleri istenmiştir. Ölçek sonuçlarının puan genişliği hesaplanmıştır. Buna göre; ölçek ifadelerinin ve boyut puanlarının değerlendirilmesi "1.00-1.79=Çok düşük; 1.80-2.59=Düşük; 2.60-3.39=Orta; 3.40-4.19=Yüksek; 4.20-5.00=Çok yüksek" şeklinde yapılmıştır. Eğitimde teknoloji kullanımına yönelik tutum ile teknolojinin eğitim öğretim faaliyetlerindeki rolü arasındaki ilişki ise korelasyon analizi ile incelenmiştir.

BULGULAR

Eğitimde teknoloji kullanımına yönelik tutuma ilişkin bulgular;

Öğretmen adaylarının eğitimde teknoloji kullanımına yönelik tutumlarının belirlenmesine ilişkin yapılan tanımlayıcı istatistikler Tablo 1'de özetlenmiştir.

Tablo 1. Tanımlayıcı İstatistikler

		N	X	Ss
Ölçek	Eğitimde Teknoloji Kullanımına Yönelik Tutum	138	3.83	.47
Alt boyutlar	Eğitimde teknoloji kullanımının öğretim süreçlerine yansıması	138	3.90	.49
	Eğitimde teknoloji kullanımında kendini geliştirme	138	3.83	.62
	Eğitimde teknoloji kullanımı ve sınıf yönetimi	138	3.71	.66

Tablo 1 incelendiğinde öğretmen adaylarının eğitimde teknoloji kullanımına yönelik tutumlarının yüksek olduğu görülmektedir. Ölçeğin alt boyutları incelendiğinde en düşük ortalama "Eğitimde teknoloji kullanımı ve sınıf yönetimi" boyutunda iken, en yüksek ortalama ise "Eğitimde teknoloji kullanımının öğretim süreçlerine yansıması" boyutundadır.

Teknolojinin eğitim öğretim faaliyetlerindeki rolüne ilişkin bulgular;

Araştırmaya katılan öğretmen adaylarının teknolojinin eğitim öğretim faaliyetlerindeki rolüne yönelik görüşleri incelenmiştir. Analiz sonuçları Tablo 2'de görülmektedir.

Tablo 2. Tanımlayıcı İstatistikler

		N	X	Ss
Ölçek	Teknolojinin eğitim öğretim faaliyetlerindeki rolü	138	3.90	.49
Alt boyutlar	Beceri ve uygulama öğretmede teknolojinin etkisi	138	3.81	.52
	Teknolojik araçlar sınıf içinde ne kadar önemli	138	4.00	.56

Öğretmen adayları eğitim öğretim faaliyetlerinde teknolojinin rolünün oldukça etkili olduğu görüşündedirler. Teknolojik araçların, sınıf içi eğitim öğretim faaliyetlerinde özellikle önemli olduğu, teknolojinin beceri ve uygulama öğretmedeki etkisinin de önemi vurgulanmaktadır.

Eğitimde teknoloji kullanımına yönelik tutum ile teknolojinin eğitim öğretim faaliyetlerindeki rolü arasındaki ilişki

Eğitimde Teknoloji kullanımına yönelik tutum ile teknolojinin eğitim öğretim faaliyetlerindeki rolü arasındaki ilişkinin incelenmesi amacıyla yapılan korelasyon analizi sonuçları Tablo 3'te verilmektedir.

Tablo 3. Eğitimde Teknoloji Kullanımına Yönelik Tutum ile Teknolojinin Eğitim Öğretim Faaliyetlerindeki Rolü Arasındaki İlişki

		Eğitimde Teknoloji Kullanımına Yönelik Tutum	Öğretim Süreçleri ne Yansıma	Kendini Geliştirme	Sınıf Yönetimi
Teknolojinin Eğitim Öğretim Faaliyetlerindeki Rolü	Pearson Correlation	.465**	.261**	.506**	.343**
	Sig. (2-tailed)	.000	.002	.000	.000
	N	138	138	138	138

		Beceri ve Uygulama Öğretmede Teknolojinin Etkisi	Teknolojik Araçlar Sınıf İçinde Ne Kadar Önemli
Eğitimde Teknoloji Kullanımına Yönelik Tutum	Pearson Correlation	.343**	.498**
	Sig. (2-tailed)	.000	.000
	N	138	138

**Correlation is significant at the 0.01 level (2-tailed).

Tablo 3 incelendiğinde öğretmen adaylarının teknolojinin eğitim öğretim faaliyetlerindeki rolüne yönelik görüşleri ile eğitimde teknoloji kullanımına yönelik tutumları arasında pozitif yönde orta düzeyde istatistiksel olarak anlamlı bir ilişki olduğu görülmektedir ($r=0.465$; $p<0.01$). Teknolojinin eğitim öğretim faaliyetlerindeki rolü ile eğitimde teknoloji kullanımına yönelik tutum ölçeğinin alt boyutları incelendiğinde ise istatistiksel olarak anlamlı ilişkiler dikkati çekmektedir. Eğitimde teknoloji kullanımının öğretim süreçlerine yansıması ile sınıf yönetimi boyutlarındaki ilişkiler zayıf düzeyde iken kendini geliştirme boyutunda ise orta düzeyde ilişki olduğu görülmektedir. Eğitimde teknoloji kullanımına yönelik tutum ile teknolojinin eğitim öğretim faaliyetlerindeki rolü ölçeği alt boyutları arasında da yine pozitif ve anlamlı ilişkiler bulunmaktadır.

SONUÇ

Eğitimde teknoloji kullanımı, öğrenciler için yeni ve zengin öğrenme yaşantıları sağlayan önemli öğrenme ortamlarından birisidir. Öğrenenlere sınırsız bir öğrenme ortamı sunarak öğrenme çevresini genişletmekte, gerçek hayata ilişkin uygulama ve değerlendirmelerle geleneksel sınıf ortamına yeni bir boyut kazandırmaktadır. Öğrencilerin ilgileri, beklentileri ve ihtiyaçları geleneksel eğitim yaklaşımına göre büyük farklılıklar göstermektedir (Frith & Kee, 2003; Glenn, 2001). Dolayısıyla öğrencilerin problemlerine geleneksel eğitim yaklaşımları ile çözümler üretmek sağlıksız sonuçlar üretebilir. Eğitimde hedeflenen başarının sağlanması öğrencinin tanınmasıyla olanaklıdır. Teknolojinin eğitim öğretim faaliyetlerinde kullanımı bireysel farklılıkların dikkate alınmasını sağlar ve her öğrenciye hitap edebilir olanaklar sunar. Eğitimde teknoloji kullanımında öğrencinin derse aktif katılımı esastır ve öğretim daha bireysel olarak gerçekleşmektedir. Bu ortamda öğrenmenin, öğrencinin aktif katılımıyla daha üst noktaya çıkacağı konusunda fikir birliği vardır (Collins, 1998; Horton, 2000). Bu araştırma sonucunda geleceğin öğretmeni olacak öğretmen adaylarının eğitimde teknoloji kullanımına yönelik tutumlarının oldukça yüksek olduğu belirlenmiştir. Bu bulgu diğer araştırma sonuçları ile desteklenmektedir (İpek & Acuner, 2011; Metin, Birişçi, & Coşkun, 2013; Özel, 2014; Bayrakçı, Tozkoparan, Durmuş, 2014; Paşa, Bolat, & Karataş, 2015). Öğretmen adayları teknolojinin özellikle öğretim süreci ve kendini geliştirme üzerinde etkili olduğunu ifade etmişlerdir. Öğretim sürecine katkı boyutu, derslerde teknolojiden faydalanmanın öğrencileri düşünmeye sevk etmesi ve öğrencilerin ilgisini artırması ile açıklanırken, kendini geliştirme boyutu ise teknolojiyi derslerinde kullanan öğretmenlerin bu konudaki bilgileri artırmak için diğer öğretmenlerle tartışmalar yapmaları, kendi becerilerini kullanarak araç-gereç tasarlamaları ve yeni gelişmeleri takip etmeleri ile açıklanmaktadır. Ayrıca araştırma sonucuna göre teknolojik araçların sınıf içinde öğrencilerin derse aktif katılımını sağlamak ve bağımsız düşünme becerilerini geliştirmek için önemli olduğu yadsınamaz bir gerçektir. Sınıfta eğitim öğretim faaliyetleri gerçekleştirilirken beceri ve uygulama öğretmede teknolojinin katkısına vurgu yapılmıştır. Son yıllarda bilgi ve iletişim teknolojilerinin okullarda kullanım oranı oldukça artmıştır. Eğitimde teknoloji kullanımı etkinlik temelli öğrenimi beraberinde getirirken, öğrenenin bilgi ve becerisinde artış sağlanmaktadır. Öğretimde teknoloji kullanımı öğrenenlere daha görsel, etkileşimli, kendi hızlarında çalışma fırsatı sunmaktadır (Eric & Stratton, 2003). Eğitim teknolojilerinin öğrenci becerilerini daha nitelikli geliştiren bir araç olduğu (Gökalp, 2013) ve derse görsellik ve canlılık kattığı ifade edilmektedir (Konur & Ayas, 2009). Teknolojinin eğitimde kullanılması öğretmenlere; öğrencilerin ilgisini çekme, sınıfı hazırlama ve yönetme, araştırmaya yönlendirme, öğrenci gelişimini tespit etme, çok yönlü ve bireysel geri dönütler alma fırsatı sunmaktadır. Bunun yanında, öğrenciler, klasik sınıf ortamına eğitim teknolojilerinin entegre edildiği dersleri eğitsel deneyimleri için anlamlı bir gelişme olarak değerlendirmektedirler (Hitz & Turoff, 2005). Eğitim teknolojileri öğrencinin ilgisini çekme, görsel işitsel araçların kalıcılığı artırma, sınıfta öğrencinin aktif katılımını sağlama ve öğrencinin algılamasında önemli etken olma görevlerini yerine getirmek için kullanılabilir. Eğitim öğretim faaliyetlerinde bu denli önemli etkiye sahip teknolojinin, geleceğin öğretmeni olacak öğretmen adayları tarafından amacına yönelik ve etkili olarak kullanılabilmesi için hizmet öncesi dönemde yani öğretim yaşantısında uygulamalı eğitimlerin verilmesi gerekmektedir. Öğretmen adaylarının eğitimde teknoloji kullanımına yönelik tutumlarının belirlenmesi ve teknolojinin eğitim öğretim faaliyetlerindeki rolünün ortaya çıkarılması amacıyla gerçekleştirilen bu araştırma sonucunda teknolojinin öğrenme süreci, kendine geliştirme ve sınıf yönetimi üzerinde olumlu etkileri olduğu ayrıca beceri ve uygulama öğretmede de kullanılabileceği tespit edilmiştir. Bu araştırma öğretmen adaylarından oluşan bir çalışma grubu ile yürütülmüştür. Öğretmenlerden oluşan örneklem grubu ile teknolojinin eğitim öğretim faaliyetlerindeki rolü daha ayrıntılı bir şekilde belirlenebilir. Ayrıca eğitimde teknoloji kullanımının soyut bilgilerin somut temsillere ulaşması üzerine etkileri belirlenebilir. Eğitimde teknoloji kullanımına yönelik tutumun başka değişkenlerle ilişkisi incelenebilir. Bu çalışma geleceğin öğretmeni olan öğretmen adaylarının hızla gelişen ve değişen çağa ayak uydurabilmelerini sağlamak ve donanımlı bireyler yetiştirebilmeleri için yol göstermek adına büyük önem taşımaktadır.

EXAMINATION OF HIGH SCHOOL STUDENTS' ENVIRONMENTAL ATTITUDES ACCORDING TO THEIR SELF EFFICACY BELIEFS

Canan ALTUNDAĞ
Hacettepe University

Ayşem Seda ÖNEN
Hacettepe University

ABSTRACT: The aim of this study was to examine the relationship between high school students' self-efficacy beliefs and attitudes towards environment. The study sample consists of 976 students enrolled in high schools in downtown Ankara. According to the data obtained from the study, it was seen that high school students' attitude towards environment according to their self-efficacy beliefs. When findings were examined, it was seen that students have different self-efficacy beliefs level. Moreover, it was found that there is a positive meaningful relationship between their self-efficacy beliefs and their attitude toward environment.

Key words: environmental attitudes, self-efficacy beliefs, high school students, environmental.

LİSE ÖĞRENCİLERİNİN YETKİNLİK BEKLENTİLERİNE GÖRE ÇEVREYE YÖNELİK TUTUMLARININ İNCELENMESİ

ÖZET: Bu çalışmanın amacı lise öğrencilerinin çevreye yönelik tutumları ile yetkinlik inançları arasındaki bağlantıları incelemektir. Bu araştırmanın örneklemini Ankara'da öğrenim görmekte olan 976 lise öğrencisi oluşturmuştur. Araştırmadan elde edilen verilerin analiz sonucuna göre, lise öğrencilerinin çevreye yönelik tutumları yetkinlik inançlarına göre değişiklik göstermektedir. Bulgular incelendiğinde öğrencilerin farklı yetkinlik inançlarına sahip oldukları görülmüştür. Ayrıca öğrencilerin, yetkinlik inançları ile çevreye yönelik tutumları arasında pozitif yönde anlamlı bir ilişki olduğu bulunmuştur.

Anahtar sözcükler: çevreye yönelik tutum, yetkinlik inancı, lise öğrencileri, çevre.

GİRİŞ

Kişinin bir davranışı veya kendisine verilen bir görevi başarılı bir şekilde yerine getirebilmesi için davranış veya görevle ilgili yeteneğine olan inancına "Yetkinlik Beklentisi (İnancı)" denir (Bandura, 1977). Bandura (1977)'ya göre yetkinlik; bilişsel, sosyal, duygusal ve davranışsal alt boyutları olan ve çeşitli amaçlar doğrultusunda, yönlendirilmesi ve organize edilmesi gereken kapasitedir. Yetkinlik kavramı, Sosyal Öğrenme Teorisi'nin (Bandura, 1977) en önemli kavramlarından biridir. Yetkinlik inancı Bandura (1986) tarafından, bireylerin bir performansı başarıyla yapabilmek için gerekli olan eylemleri organize edebilme ve bu eylemleri gerçekleştirebilme kapasiteleri hakkındaki yargıları olarak tanımlanmıştır. Düzey, genellenebilirlik ve güç olmak üzere üç boyuttan oluşan yetkinlik inancı (Bandura, 1997), bireylerin temel yaşantıları, dolaylı yaşantıları, yaşadığı sözel iknalar ile duygusal ve fiziksel durumlardan beslenmektedir (Bandura, 1986). İçinde bilişsel, sosyal, duygusal ve davranışsal becerileri barındıran ve sınırsız amaçlar doğrultusunda yönetilmek ve organize edilmek zorunluluğu olan genel bir kapasite olarak ele alınan yetkinlik inancı (Bandura, 1986) bireylerin bilişsel süreçlerini, güdülenme süreçlerini, duygusal süreçlerini ve seçim yapma süreçlerini etkilemektedir. Bandura (1986) yetenekleri hakkında güçlü bir inanca sahip olan insanların nasıl davranacakları konusunda, düşünce kalıplarının biçimlenmesinde ve yaşadıkları durumların gerektirdiği duygusal tepkilerinin nasıl şekilleneceği konusunda belirleyici olabildiklerini belirtmektedir (Çelikkaleli & Gündüz, 2010). Yüksek yetkinlik beklentisine sahip bireyler bilişsel araştırıcı, stratejilerinde esnek, çevreleri üzerinde etkili ve amaçlarına güdülenmiş bireylerdir. Kişinin kendini yetkin görmesi; kişinin kapasitesini, başarılarını, motivasyonunu ve kişilik özelliklerini oluşturan diğer öğelerin hepsini kapsayan çok geniş bir bakış açısıdır (Kuzgun, 2009).

"Çevre" kavramı; kapsamı çok geniş ve çeşitlilik arz eden bir kavramdır. Eğitimciler bu kavramın çevre eğitimi boyutuna odaklanarak, doğal varlıkların korunması için bireylere; çevre ile insanlık arasında bir denge sağlayabilecek kişiler haline gelebilmeleri için gerekli bilgi ve becerileri kazandırmayı hedeflerler (Steel, 2011). Çevre eğitimi, bir yandan ekolojik bilgileri aktarırken diğer yandan da bireylerde çevreye yönelik tutumlarının gelişmesini ve bu tutumların davranışa dönüşmesini sağlar (İbiş, 2009). Eğitim her kademede halkın doğayı koruması ve duyarlılık oluşturması için bir hazırlayıcı ve devam ettiricidir, fakat tüm bunlar bireylerin tutumları ile değişir (Deniş & Genç, 2010). Çevre ve çevreye yönelik konular üzerinde olumlu tutuma sahip bireylerin yetiştirilmesinde önemli bir aşama da bireylerin tutumlarının tespit edilerek buna göre eğitim verilmesidir. Bir tutum, genellikle, bireyi tutum nesnesine karşı davranışlarda bulunmaya eğilimli kılar. Bir nesneye yönelik olumlu tutumu olan birey, bu nesneye karşı olumlu davranmaya, ona yaklaşmaya, yakınlık göstermeye, onu desteklemeye, yardım etmeye eğilimli olacaktır. Bir nesneye yönelik tutumu olumsuz olan birey ise, bu nesneye ilgisiz kalma veya ondan uzaklaşma, eleştirme, hatta ona zarar verme eğilimi gösterecektir. Dolayısıyla, çevreye karşı olumsuz tutuma sahip bireylerin çevre sorunlarına duyarsız olacağı ve hatta çevreye sorun yaratmaya devam edeceği şüphesizdir (Uzun & Sağlam, 2006). Nitekim yapılan çalışmalar çevre eğitimi dersi alan öğrencilerin bu dersi almayan öğrencilere göre çevreye yönelik daha hassas ve duyarlı davranışlar sergilediklerini göstermektedir (Sever & Yalçınkaya, 2012; Çabuk & Karacaoğlu, 2003).

Uzun (2007)'a göre çevre sorunlarından kaynaklanan korkular, kızgınlıklar, huzursuzluklar, değer yargıları ve çevre sorunlarının çözümüne hazır bulunuşluk gibi çevreye yararlı davranışlara olan olumlu veya olumsuz tavır ve düşüncelerin hepsi kişinin çevreye yönelik tutumunu oluşturur. Rosenberg (1965)'e göre bireyler bütün nesnelere karşı bir tutuma sahip olurlar. Tutum, "bir bireye atfedilen ve onun bir psikolojik obje ile ilgili düşünce, duygu ve davranışlarını düzenli bir biçimde oluşturan bir eğilimdir. Tutum; bilişsel, duyuşsal ve davranışsal boyutlarıyla davranışın önemli bir açıklayıcısı olarak görülür (Kağıtçıbaşı, 2010). Bu nedenle tutumlar incelenirken bilişsel, duyuşsal ve davranışsal boyutlar ayrı ayrı incelenmelidir. Bu görüşten hareketle çalışmada öğrencilerin çevreye yönelik tutumları akademik, sosyal ve duygusal alt boyutları olan yetkinlik inançları ile beraber incelenmiştir.

YÖNTEM

Araştırmanın amacı lise öğrencilerinin çevreye yönelik tutumları ile yetkinlik inançları arasındaki bağlantıları incelemektir. Araştırma, ilişkisel tarama modeliyle gerçekleştirilmiştir. Bu araştırmanın evrenini lise öğrencileri oluştururken, çalışılabilir evrenini ise söz konusu grup içerisinden random yoluyla seçilen Ankara'da öğrenim gören öğrenim görmekte olan 976 lise öğrencisi oluşturmuştur.

Lise öğrencilerinin çevre bilinç düzeyinin belirlenmesi ve çevreye yönelik tutumlarının ölçülmesi için Ünal (2010) tarafından geliştirilen "Çevre Tutum Ölçeği" kullanılmıştır. Söz konusu ölçek öğrencilerin çevre bilinç düzeylerinin ölçüldüğü tutum, farkındalık ve davranışlarını belirleyen sorulardan oluşmaktadır. Çevre Tutum Ölçeği'nin verilerinin güvenirlilik katsayısı Ünal (2010) tarafından 0.80 olarak bulunmuştur. Çalışmada lise öğrencilerinin yetkinlik inançlarını belirleyebilmek için Muris (2001) tarafından geliştirilen ve Çelikkaleli, Gündoğdu ve Kıran-Esen (2006) tarafından Türkçeye uyarlanan "Ergenlerde Yetkinlik Beklentisi Ölçeği" kullanılmıştır. Geçerlik çalışmaları doğrultusunda yapılan faktör analizi çalışmasında ölçeğin orijinalinde olduğu gibi üç faktörlü bir yapıya sahip olduğu görülmüştür. Bu faktörler; Akademik Yetkinlik Beklentisi, Sosyal Yetkinlik Beklentisi (SYB) ve Duygusal Yetkinlik Beklentisi'dir. Toplanan verilerin istatistiksel değerlendirilmesinde SPSS 15 paket programı kullanılmıştır. Araştırmadan elde edilen veriler arasındaki ilişki, Pearson Korelasyon Katsayısı hesaplanarak incelenmiştir.

BULGULAR

Lise öğrencilerinin çevreye yönelik tutumları ile yetkinlik beklentileri arasındaki ilişkiyi belirleyebilmek için yapılan analiz sonuçları Tablo 1'de özetlenmiştir.

Tablo 1. Lise Öğrencilerinin Çevreye Yönelik Tutumlarının Yetkinlik Beklentilerine Göre İncelenmesi

		Akademik Yetkinlik	Sosyal Yetkinlik	Duygusal Yetkinlik
Çevreye	Pearson Correlation	.153**	.199**	.080*
Yönelik	Sig. (2-tailed)	.000	.000	.012
Tutum	N	976	976	976

**. Correlation is significant at the 0.01 level (2-tailed).
*. Correlation is significant at the 0.05 level (2-tailed).

Tablo 1'deki bulgular incelendiğinde öğrencilerin çevreye yönelik tutumlarının, akademik yetkinlik, sosyal yetkinlik ve duygusal yetkinlik inançları ile pozitif yönde anlamlı ilişkilere sahip olduğu görülmektedir.

Öğrencilerin çevreye yönelik farkındalıklarının, yetkinlik inançları ile bağlantılarına işaret eden araştırma bulguları Tablo 3'te görülmektedir.

Tablo 3. Lise Öğrencilerinin Çevreye Yönelik Farkındalıklarının Yetkinlik Beklentilerine Göre İncelenmesi

		Akademik Yetkinlik	Sosyal Yetkinlik	Duygusal Yetkinlik
Çevreye	Pearson Correlation	.148**	.201**	.070*
Yönelik	Sig. (2-tailed)	.000	.000	,028
Farkındalık	N	976	976	976

**. Correlation is significant at the 0.01 level (2-tailed).
*. Correlation is significant at the 0.05 level (2-tailed).

Öğrencilerin çevrelerine olan farkındalıklarının, akademik, sosyal ve duygusal yetkinlikleri ile pozitif ve anlamlı ilişki içerisinde olduğu Tablo 3'te dikkat çekmektedir.

Çalışmaya katılan öğrencilerin çevreye yönelik davranışlarının, akademik, sosyal ve duygusal yetkinlik boyutlarında incelenmesi sonucunda elde edilen bulgular Tablo 4'te belirtilmektedir.

Tablo 4. Lise Öğrencilerinin Çevreye Yönelik Davranışlarının Yetkinlik Beklentilerine Göre İncelenmesi

		Akademik Yetkinlik	Sosyal Yetkinlik	Duygusal Yetkinlik
Çevreye	Pearson Correlation	.214**	.169**	.103**
Yönelik	Sig. (2-tailed)	.000	.000	.001
Davranış	N	976	976	976

**. Correlation is significant at the 0.01 level (2-tailed).
*. Correlation is significant at the 0.05 level (2-tailed).

Tablo 4'te görüldüğü gibi, bulgular incelendiğinde öğrencilerin çevreye yönelik davranışlarının, yetkinlik beklentileri ile anlamlı ilişkiler içerisinde olduğu ortaya çıkmıştır.

SONUÇ

Bu çalışmada öğrencilerin çevreye yönelik tutumları bilişsel, sosyal, duygusal ve davranışsal alt boyutları olan yetkinlik inançları ile beraber incelenmiştir. Literatür incelendiğinde lise öğrencileri ile yapılan çalışmaların öğrencilerin çevresel olaylarla ilgili bilgilerini araştırma, (Gambro & Switzky, 1996) ve tutumlarını değiştirmeye yönelik etkinlikler planlamaya kadar geniş bir yelpazede gerçekleştirildiği görülmektedir (Bonnet &Williams, 1998; Bradley, Waliczek, Zajicek, 1999; Mangas, Martinz, Pedauye, 1997). İlgili alanyazın çerçevesinde yapılan bu çalışmada farklı olarak lise öğrencilerinin çevreye yönelik tutumları ile yetkinlik inançları arasındaki ilişkiler irdelenmiştir. Çalışmaya katılan öğrencilerin çevreye yönelik tutum ve yetkinlik beklentileri puanları arasında Pearson korelasyon katsayısı hesaplanmıştır. Araştırmada çevreye yönelik tutum ve yetkinlik beklentileri puanları arasında çok güçlü olmasa da pozitif ilişkilerin olduğu belirlenmiştir. Burada gerçekleştirilen korelasyon çalışmaları istatistiksel olarak orta düzeyde güçlü değerler vermekte, ancak ilişkilerin varlığını ortaya koymaktadır. Araştırmada öğrencilerin akademik, sosyal ve davranışsal yetkinlik beklentileri ile çevreye yönelik tutum, farkındalık ve davranış boyutlarında anlamlı ilişkiler olduğu belirlenmiştir. Bu durum öğrencilerin bilişsel esnekliği besleyen kaynaklardan olan deneyimlere (Cañas, Quesada, Antolí, & Fajardo, 2003) benzer oranlarda maruz kalmaları sonucunda benzer bilişsel yapılar oluşturmalarından kaynaklı olabilir. Bundan yola çıkarak ergenlerin akademik, duygusal, sosyal ve kültürel olarak benzer bilişsel yaşantılar geçirdikleri söylenebilir (Çelikkaleli, 2014). Çünkü bireyler akademik ve sosyal yeterlik alanlarında benzer yaşantılara maruz kalabilmekte, benzer dolaylı yaşantılar geçirebilmekte (okul, sosyal çevre gibi), yetkinlik inancının temel bilgilendirici kaynaklarına benzer şartlarda ve benzer miktarlarda maruz kalabilmektedirler. Bu da bireylerin benzer yetkinlik inancı geliştirmelerine neden olabilir (Telef & Karaca, 2011).

Araştırma sonucunda elde edilen bulgular yapılan başka çalışmalarda da ortaya çıkmış ve yetkinlik beklentisi ile sosyal davranışlar arasında ilişki olduğu belirlenmiştir (Bandura, Barbaranelli, Caprara & Pastorelli, 1996, 2001; Bandura, Pastorelli, Barbaranelli & Caprara, 1999; Caprara, Regalia & Bandura, 2002). Bireylere çevreyle ilgili değer yargılarının ve hislerin çevrenin korunmasını ve düzeltilmesini sağlamak için gerekli güdülenmenin kazanılmasına yardımcı olan çevre tutumu, çevreye yönelik olumlu ve olumsuz tavırlar sergileme biçiminde kendini gösteren öğrenilmiş eğilimlerdir (Brause, 1995). Bu nedenle çevre eğitimi olumlu tutumlar geliştirmede oldukça önemlidir. Nitekim çevre eğitiminin bireylerin çevreye yönelik olumlu tutumlar geliştirmelerini sağladığı yararlar, çalışma sonuçlarından bilinmektedir (Grodzinska-Jurczak, Bartosiewicz, Twardowska, Ballantyne 2003; Leeming, Porter, Dwyer, Cobern, Oliver, 1997). Dolayısıyla çevre eğitimine gereken önem verilmelidir.

ASSESSMENT OF SECONDARY SCHOOL STUDENTS' SAFE INTERNET USAGE AND METACOGNITIONS

Murat ALTUNDAĞ
Hacettepe University

Canan ALTUNDAĞ
Hacettepe University

ABSTRACT: The increase of internet usage by people from all parts of society, especially children has increased the question of the importance of safe internet use. In the light of these, this study aims to determine the effects of student teachers' positive and negative metacognitive beliefs on their safe internet usage. The model of this research is "Based on Survey Model". As data collection tool, "Metacognitive Skills Scale" was used, this scale was designed by Çetinkaya (2000). Moreover, in order to get information about students' safe internet usage, "Safe Internet Usage Scale", which was developed by Beder (2015), was used. According to the results of research; the usage of safe internet, the awareness and metacognitions beliefs of pupils are generally higher.

Key words: secondary school students, safe internet, conscious use of internet, metacognition.

ORTAOKUL ÖĞRENCİLERİNİN GÜVENLİ İNTERNET KULLANIM DURUMLARININ VE BİLİŞÖTESİ BECERİLERİNİN BELİRLENMESİ

ÖZET: Toplumun her kesiminden insanın özellikle de çocukların internet kullanımındaki artış, internetin ne derece güvenli kullanıldığı sorusunun önemini arttırmıştır. Bu çalışmada öğrencilerin bilişüstü becerileri ve güvenli internet kullanımları incelenmiştir. Araştırma tarama modeli ile gerçekleştirilmiştir. Bu araştırmada veri toplama araçları olarak Çetinkaya (2000) tarafından geliştirilen "Bilişüstü Beceriler Ölçeği" kullanılmıştır. Ayrıca öğrencilerin güvenli internet kullanımları hakkında bilgi edinebilmek için Beder (2015) tarafından geliştirilen "Güvenli İnternet Kullanımı Ölçeği" uygulanmıştır. Araştırma sonuçlarına göre, öğrencilerin güvenli internet kullanımı ile ilgili bilinç düzeyi genel olarak yüksek çıkmıştır.

Anahtar sözcükler: ortaokul öğrencileri, güvenli internet, bilinçli internet kullanımı, bilişötesi.

GİRİŞ

İnternet kullanımının giderek artması, sınırsız, denetimsiz, yasaksız her türlü bilgiye ve kişilere erişimin kolaylığı, birçok faydasının olmasının yanında olumsuz sonuçların doğmasına da neden olabilmektedir. Teknolojinin yaygınlaşması ile birlikte bilgisayar çocukların dünyasında önemli yer edinmiştir. Teknolojinin tüm alanlarda gelişmesi ve ilerlemesiyle bilişim teknolojileri eğitim alanında gerek amaç olarak gerekse araç olarak, hem yönetimde hem de eğitim-öğretim süreci içerisinde kullanılmaya başlanmıştır (Tuti, 2005). Teknoloji, gelişmişliğin ve çağdaşlaşmanın bir ölçütü olarak insan hayatını kolaylaştırıp toplumsal gelişime olumlu katkı sağlarken diğer yandan da internetin bilinçsiz kullanımından kaynaklanan bazı sorun ve tehlikeleri de beraberinde getirmektedir (Bolışık & Muslu, 2009). Bilgisayar ve internet teknolojilerinin yaygınlaşması bilgi edinme, iletişim gibi birçok yönden günlük hayatımıza katkı sağlarken çocuklar ve gençler için tehdit oluşturmaya başlamıştır. Bilgisayar ve internet teknolojilerinin kullanımının artmasıyla birlikte çocukların ve gençlerin maruz kaldığı olumsuz durumlar çevrimiçi ortamlarda çeşitli önemler alınması gerekliliğini ortaya çıkarmış ve öğrencilerin interneti bilinçli kullanmasına nelerin etkisinin olduğu gibi birçok soruyu gündeme getirmiştir (Canbek & Sağıroğlu, 2007; Çelen, Çelik & Seferoğlu, 2011). Araştırmanın başlangıç noktası olan "Acaba bireyin sahip olduğu bilişüstü beceriler ile bilinçli internet kullanımı arasında bir bağlantı olabilir mi?" sorusu, bu sorulardan sadece bir tanesidir.

Bilişüstü kavramını ilk kez kullanan Flavell (1976) onu, bir kişinin kavraması ve öğrenmesi için kendisine gerekli olan bilişsel süreçler hakkında bilgi sahibi olması olarak özetlemiştir. Bilişüstü beceriler, kişinin kendi bilgisini bilmesini, kontrol etmesini ve haberdar olmasını sağlar (Case, 2000). Topçu ve Ubuz (2004)'e göre bilişüstü, bir öğrencinin seçimi, gelişimi, değişimi, öğrenme kabiliyeti ve ilgi çekici ne öğrendiğini içerir. Vockell (2004), kendi bilgi ve becerileri hakkında değerlendirme yapan öğrencilerin bilişüstü becerilerini kontrol etmelerinde ve kendilerini tanımlamaların da daha başarılı oldukları görüşündedir. Bu ve benzeri görüşlerden hareketle çalışmada ortaokul öğrencilerinin bilişüstü becerileri ve güvenli internet kullanımları incelenmiştir.

YÖNTEM

Bu çalışmanın amacı ortaokul öğrencilerinin bilişüstü becerileri ve güvenli internet kullanımlarını incelemektir. Araştırma tarama modeli ile gerçekleştirilmiştir. Bu araştırmada veri toplama araçları olarak Çetinkaya (2000) tarafından geliştirilen "Bilişüstü Beceriler Ölçeği" kullanılmıştır. Ayrıca öğrencilerin güvenli internet kullanımları hakkında bilgi edinebilmek için Beder (2015) tarafından geliştirilen "Güvenli İnternet Kullanımı Ölçeği" uygulanmıştır. Bu ankette öğrencilerin, güvenli internet kullanımı ile ilgili oluşturulan yirmi bir adet senaryoyu değerlendirebilecekleri bölüme yer verilmiştir. Senaryolar üç adet "Siber Zorbalık", "Sorun Olabilecek Paylaşımlar", "Şifre ve Kullanıcı Adı Kolaylığı", "Telif Hakkı İhlali", "Tuzak E-posta", "Yazılımsal Tehdit", "Sahtecilik ve Dolandırıcılık" , "İstenmeyen İçerik" ile ilgili içeriklerinden oluşmaktadır. Bu senaryolar öğrencilere teker teker gösterilmiş ve gerekli açıklamalar yapılmıştır. Öğrencilerden her senaryo sonunda davranışı değerlendirmeleri istenmiştir. Öğrencilerin internet güvenliği hakkındaki bilinçli davranışlarını seçme konusunda puanlama yapmak için, ankete verdikleri yanıtların ortalama puanı hesaplanmıştır.

BULGULAR

Güvenli İnternet Kullanımı Ölçeğine İlişkin Değerlendirmeler

Araştırma kapsamında, öğrencilerin cinsiyetlerine göre güvenli internet kullanımları arasında fark olup olmadığını belirlemek için yapılan t-testi analiz sonuçları Tablo 1'de görülmektedir.

Tablo 1. Cinsiyete Göre Güvenli İnternet Kullanımı Puanlarının Karşılaştırılması

	Cinsiyet	N	X	Ss	sd	t	p
Güvenli İnternet Kullanımı Ölçeği	Kız	111	3.8	.33	219	3.4	.00
	Erkek	110	3.7	.36			

Tablo 1'de görüldüğü gibi yapılan analiz sonucunda anlamlı bir farklılaşma gerçekleşmiştir. Ayrıca kızların erkeklere göre senaryo davranışları değerlendirme puanlarının yüksek olduğu görülmektedir. Başka bir ifadeyle kız öğrencilerin bilinç seviyesinin daha yüksek olduğu söylenebilir.

Araştırma kapsamında, öğrencilerin farklı alanlardaki güvenli internet kullanımlarını belirleyen boyutlarda cinsiyetlerine göre arasında fark olup olmadığını belirlemek için yapılan t-testi analiz sonuçları Tablo 2'de verilmiştir.

Tablo 2. Cinsiyete Göre Güvenli İnternet Kullanım Boyutları Puanlarının Karşılaştırılması

	Cinsiyet	N	X	Ss	sd	t	p
Siber Zorbalık	Kız	111	4.03	.743	219	3.8	.00
	Erkek	110	3.60	.927			
Sorun Olabilecek Paylaşımlar	Kız	111	4.24	.437	219	3.6	.00
	Erkek	110	4.02	.482			
Şifre ve Kullanıcı Adı Kolaylığı	Kız	111	3.79	.927	219	-1.6	.10
	Erkek	110	3.99	.821			
Telif Hakkı İhlali	Kız	111	2.97	.723	219	3.8	.00
	Erkek	110	2.60	.706			
Tuzak E-posta	Kız	111	3.06	1.02	219	-2.5	.01
	Erkek	110	3.43	1.08			
Yazılımsal Tehdit	Kız	111	3.45	1.10	219	0.5	.60
	Erkek	110	3.37	1.13			
Sahtecilik ve Dolandırıcılık	Kız	111	4.80	.629	219	-0.8	.90
	Erkek	110	4.80	.613			
İstenmeyen İçerik	Kız	111	4.45	.841	219	1.9	.05
	Erkek	110	4.21	.929			

Tablo 2'de görüldüğü gibi yapılan analiz sonucunda anlamlı farklılaşmalar gerçekleşmiştir. Siber Zorbalık, Sorun Olabilecek Paylaşımlar, Telif Hakkı İhlali ve İstenmeyen İçerik boyutlarında kız öğrencilerin erkek öğrencilere göre daha bilinçli oldukları belirlenmiştir. Ayrıca Şifre ve Kullanıcı Adı Kolaylığı boyutunda erkek öğrencilerin çok daha bilinçli olduğu ortaya çıkmıştır.

Bilişüstü Beceriler Ölçeğine İlişkin Değerlendirmeler

Araştırma kapsamında, kız ve erkek öğrencilerin bilişüstü becerileri arasında fark olup olmadığını belirlemek için yapılan t-testi analiz sonuçları Tablo 3'te verilmiştir.

Tablo 3. Cinsiyete Göre Bilişüstü Beceriler Puanlarının Karşılaştırılması

	Cinsiyet	N	X	Ss	sd	t	p
Bilişüstü Beceriler Ölçeği	Kız	111	2.9	.44	219	3.2	.00
	Erkek	110	2.7	.43			

Tablo 3'te görüldüğü gibi öğrencilerin bilişüstü becerileri arasında cinsiyete göre anlamlı bir farklılaşma gerçekleşmiştir. Kızların erkeklere göre bilişüstü beceri puanlarının daha yüksek olduğu belirlenmiştir.

Bilişüstü Beceriler ve Güvenli İnternet Kullanımı Arasındaki İlişkiye Ait Değerlendirmeler

Öğrencilerin bilişüstü becerileri ile güvenli internet kullanımları arasında ilişki olup olmadığı Pearson Korelâsyon Katsayısıyla bakılmış ve sonuçlar Tablo 4'te verilmiştir.

Tablo 4. Öğrencilerin Güvenli İnternet Kullanımlarının Bilişüstü Becerilere Göre İncelenmesi

		Bilişüstü Beceriler
Güvenli İnternet Kullanımı	Pearson Correlation	.322**
	Sig. (2-tailed)	.000
	N	221

**. Correlation is significant at the 0.01 level (2-tailed).

Tablo 4'te görüldüğü gibi bilişüstü beceriler ve güvenli internet kullanımı puanları arasında çok güçlü olmasa da pozitif bir ilişkinin olduğu belirlenmiştir. Burada gerçekleştirilen korelasyon çalışmaları istatistiksel olarak orta düzeyde güçlü değerler vermekte, ancak ilişkilerin varlığını ortaya koymaktadır.

SONUÇ

Bilgisayar ve haberleşme teknolojilerinde yaşanan baş döndürücü gelişmeler ve özellikle internetin katalizör etkisi ile insanların, çalışma, iletişim kurma ve her türlü günlük ihtiyaçlarını karşılama biçimi sürekli bir dönüşüm halindedir (Nagurney, Dong & Mokhtarian, 2002). Araştırmalara göre kız öğrencilerde daha yüksek tespit edilen internet bağımlılığı skoru, ayrıca ailenin gelir düzeyiyle beraber de artmaktadır. Kız öğrenciler, interneti iletişim ağırlıklı motivasyonla kullanırken, erkekler ise video oyunları, gazete ve dergi takibi önceliğinde kullanmaktadır. İnternet kullanım sebepleri arasında birinci sırada facebook, ikinci sırada ödev, üçüncü sırada gazete dergi takibi gelirken, liste, müzik, dosya indirme, e-mail, video indirme ve sanal video oyunları sıralamasıyla devam etmektedir (Ak, Koruklu & Yılmaz, 2013; Cömert & Ziyalar, 2012).

Araştırma sonucunda kız öğrencilerin erkek öğrencilere göre güvenli internet kullanımında daha bilinçli oldukları belirlenmiştir. Benzer bir sonuç Beder (2015) tarafından yapılan araştırma sonuçlarında da görülmüştür. Çalışmada kız öğrencilerin erkek öğrencilere göre güvenli internet kullanımında daha bilinçli ve problemsiz hareket ettikleri görülmüştür. Literatür incelendiğinde problemli internet kullanımı ile ilgili daha önce yapılmış olan çalışmalarda erkek öğrencilerin kızlara göre daha çok problemli internet kullandıkları ifade edilmiştir (DiNicola, 2004; Kubey, Lavin & Barrows, 2001; Johansson & Götestam, 2004; Yang & Tung, 2007). Araştırmada yapılan daha özel incelemelerde ise Siber Zorbalık, Sorun Olabilecek Paylaşımlar, Telif Hakkı İhlali ve İstenmeyen İçerik boyutlarında kız öğrencilerin erkek öğrencilere göre daha bilinçli oldukları belirlenmiştir. Şifre ve Kullanıcı Adı Kolaylığı boyutunda ise erkek öğrencilerin daha bilinçli olduğu ortaya çıkmıştır.

Araştırmada kız öğrencilerin erkek öğrencilere göre bilişüstü becerileri puanlarının daha yüksek olduğu belirlenmiştir. Bu sonuç yapılan çalışmaların sonuçlarına benzer bir bulgudur (Altındağ, 2008; İflazoğlu & Saban, 2008). Araştırmada bilişüstü beceriler ve güvenli internet kullanımı puanları arasında çok güçlü olmasa da pozitif bir ilişkinin olduğu belirlenmiştir. Literatür taramasında güvenli internet kullanımı ile bilişüstü becerileri beraber inceleyen çalışmalara rastlanmamıştır. Ancak Kılınç ve Doğan (2014) tarafından yapılan çalışmada biliş üstü farkındalık düzeyleri yüksek olan öğrencilerin, internet bağımlılıklarının düşük olduğu belirlenmiştir. Ayrıca bilişüstü beceri aktivitelerini arttırmada, bilgisayar tabanlı programların önemli etkilerinin olduğuna işaret eden çalışmalar da bilinmektedir (Küçük-Özcan, 2000). Ortaokullardaki tüm öğrencilerimizin bilinç seviyelerinin daha yüksek çıkması için, bu araştırmanın sonuçları doğrultusunda çocuklara güvenli internet kullanımı ile ilgili bilinçlendirmeye yönelik eğitsel çalışmalar planlanmalı ve yapılmalıdır. Bilişötesi ve güvenli internet kullanımı arasındaki ilişki eğitim literatürüne katkıda bulunmak amacıyla diğer değişkenler açısından da değerlendirilmelidir.

APPLICATIONS OF DAILY LIFE BASED SCIENCE EDUCATION TECHNOLOGY SUPPORT

Canan ALTUNDAĞ
Hacettepe University

Murat ALTUNDAĞ
Hacettepe University

ABSTRACT: The aim of this study is to examine the effects of activities designed according to computer assisted education under the name of daily life science on students ‘attitudes towards science, motivation for science course. According to the results gathered by the data’s, positive results in the favor of experimental group were taken in the total scores of attitudes and motivation scale for learning science. As a result, it was determined that the computer assisted daily life based science teaching affected the attitudes and motivations of the students towards science. When the answers are examined, it was found out that the answers are changed according to the stipulation and the concern of the students. The results of this research show that if the quality of education and the usage of the technology are increased, it is going to influence the student’s attitudes towards the computer assisted education.

Key words: computer assisted-instruction, science teaching, attitude, motivation.

GÜNLÜK YAŞAM TEMELLİ FEN ÖĞRETİMİNİN TEKNOLOJİ DESTEKLİ UYGULAMALARI

ÖZET: Bu çalışmanın amacı, günlük yaşam bilimleri adı altında bilgisayar destekli eğitim sistemine göre tasarlanmış faaliyetlerin öğrencilerin fen bilgisine yönelik tutum ve motivasyonlarına etkilerini incelemektir. Araştırma sonucunda; bilgisayar destekli günlük yaşam temelli fen öğretiminin öğrencilerin fen bilgisine dönük tutumlarını ve motivasyonlarını olumlu yönde etkilediği tespit edilmiştir. Tutum ölçeğindeki önermelere öğrencilerin verdikleri yanıtlar incelendiğinde bu tutumların da koşullara göre değiştiği görülmektedir. Bu araştırma sonuçları göstermektedir ki, eğitim kalitesinin artırılması, teknolojinin eğitim dünyasında daha fazla kullanılmaya başlanması, öğrencilerin derslere olan ilgisini etkileyerek, bilgisayar destekli eğitime yönelik tutumlarını belirleyecektir.

Anahtar sözcükler: bilgisayar destekli eğitim, fen bilgisi öğretimi, tutum, motivasyon.

GİRİŞ

Fen, nesnenin doğasını keşfetmeyi denemenin bir yoludur. Fen derslerinin asıl amacı öğrencilere fen kavramlarını ezberletmek değil, öğrenmeyi öğreterek düşünme becerilerinin geliştirilmesini sağlamak, araştırmacı ve sorgulayıcı bireyler yetiştirmektir (Lin, 2004). Ancak fen öğretiminde ağırlıklı olarak geleneksel yöntemlerle gerekli kavramlar belli bir sistematik içerisinde verilmekte, günlük yaşama yönelik problemlerin çözümünde kullanılacak bilgilere daha az yer verilmektedir. Bu nedenle bilgiler arasında boşluklar oluşmaktadır. Çünkü verilen bilgiler, öğrenme durumuna bağlı olarak kolayca uygulanabilir değildir (Wanjek, 2000). Binbaşıoğlu (2004)’na göre olay ya da olgulardan soyutlanmış bir eğitim ve öğretim ortamının eğitimsel değeri yeterli olamaz. Böyle bir yolla kazanılan bilgiler, yaşamla ilişkisi olmayan, kuru birtakım kavram ve kurallar olmaktan kendilerini kurtaramaz. Bu nedenle özellikle fen öğretiminde soyut bilgilerin somutlaştırılabildiği ve öğrencilerin daha aktif olabildiği günlük yaşam temelli yöntem ve teknikler uygulanmalıdır.

Fen dersleri, bilgisayarların yetenekleri kullanılarak hazırlanmış, ses, görüntü ve etkileşimler içeren ders yazılımları sayesinde daha etkili bir şekilde anlatılabildiğinden öğrencilerin derse daha aktif bir şekilde katılmaları sağlanabilir. Bilgisayar destekli öğretim sayesinde öğrenciler soyut bilgileri daha kolay kavrayabilirler (Yumuşak & Aycan, 2002). Bilgisayar destekli öğretim sayesinde, öğretimin kalitesi, etkinliği ve derslerin çekiciliği artırılabilir. Ayrıca içerik farklı biçimlerde sunulabildiğinden, esnek bir öğrenme ortamı sağlanarak öğrenci motivasyonu artırılabilir (Alessi & Trollip, 2001).
Teknoloji kullanımı, tüm eğitsel sorunların üstesinden gelebilecek bir çözüm olmamasına rağmen; günümüzde teknoloji ortamlarının, öğretim işlerinde kullanılması gereklilik göstermektedir (Kirschner & Selinger, 2003). Renshaw ve Taylor (2000)’ a göre bilgisayar destekli eğitimin başarıyı artırmasının yanı sıra öğrencilerde üst

düzey düşünme becerilerinin gelişmesini sağladığı, dolayısıyla öğrencilerin ezberden çok kavrayarak öğrendiği görülmüştür (Çevik, Önen & Koçak, 2009). Bu nedenle günlük yaşam temelli öğretim ortamı bilgisayar yazılımları ile gerçekleştirilebilir. Bu görüşten hareketle çalışmada günlük yaşam bilimleri adı altında bilgisayar destekli öğretim sistemine göre tasarlanmış faaliyetlerin öğrencilerin fen bilgisine yönelik tutum ve motivasyonlarına etkilerini incelemek amaçlanmıştır.

YÖNTEM

Bu çalışmanın amacı, günlük yaşam bilimleri adı altında bilgisayar destekli eğitim sistemine göre tasarlanmış faaliyetlerin öğrencilerin fen bilgisine yönelik tutum ve motivasyonlarına etkilerini incelemektir. Yöntem olarak ön test- son test kontrol gruplu yarı deneysel yöntem tercih edilmiştir. Araştırmanın çalışma grubunu 40 kontrol, 40 deney grubu olmak üzere 80 öğrenci oluşturmaktadır. Araştırmada geri dönüşüm ve yangın konuları deney grubuna 20 adet günlük yaşam temelli fen deneyi videoları ile anlatılırken, kontrol grubunda geleneksel yöntemle anlatılmıştır.

Veri Toplama Araçları

Araştırmada Yılmaz ve Çavaş-Huyugüzel (2007) tarafından düzenlenen "Fen Öğrenimine Yönelik Motivasyonları Ölçeği" ve Geban ve arkadaşları (1994) tarafından geliştirilen "Fen Bilgisi Tutum Ölçeği" kullanılmıştır. Veriler SPSS 21,0 programında değerlendirilmiştir. Verilerin değerlendirmesinde t testinden yararlanılmıştır.

BULGULAR

Deney grubu ile kontrol grubu deneklerinin fen bilgisi tutum ile motivasyon ön test puanları arasında anlamlı bir farkın olup olmadığını belirlemek amacıyla bağımsız örneklemli t-testi kullanılmıştır. Tablo 1'de deney grubu ve kontrol grubunun tutum ile motivasyon ön test puanlarıyla ilgili sonuçlar verilmiştir.

Tablo 1. Fen Bilgisi Tutum İle Motivasyon Ön Test Puanlarının Karşılaştırılması

	Grup	N	X	Ss	t	p
Fen Bilgisi Tutum	Deney Grubu	40	3.31	.36	1.69	0.95
	Kontrol Grubu	40	3.15	.45		
Fen Öğrenmeye Yönelik Motivasyon	Deney Grubu	40	3.75	.48	3.07	0.30
	Kontrol Grubu	40	3.42	.49		

Tablo 1'e göre araştırmada kullanılan fen bilgisi tutum ve motivasyon ölçeklerine ait ön test puanları arasındaki farka ilişkin yürütülen ilişkisiz t-testi sonucunda anlamlı farklılık bulunmamıştır. Elde edilen bu sonuçlar grupların başlangıçta denk olduğunu göstermektedir.

Deney ve kontrol grubunda bulunan öğrencilerin fen bilgisi tutum ile motivasyon son test puanları arasında anlamlı bir farkın olup olmadığını belirlemek amacıyla yapılan analiz sonucunda elde edilen veriler Tablo 2'de görülmektedir.

Tablo 2. Fen Bilgisi Tutum ile Motivasyon Son Test Puanlarına İlişkin İlişkisiz Gruplar t-Testi Değerleri

	Grup	N	X	Ss	t	p*
Fen Bilgisi Tutum	Deney Son Test	40	3.36	.37	5.6	0.00
	Kontrol Son Test	40	3.13	.51		
Fen Öğrenmeye Yönelik Motivasyon	Deney Son Test	40	4.03	.40	5.06	0.00
	Kontrol Son Test	40	3.45	.52		

Tablo 2'ye göre öğrencilerin deney ve kontrol grubu fen bilgisi tutum ve motivasyon son test puan ortalamalarının anlamlı bir farklılık gösterip göstermediğini belirlemek amacıyla yapılan ilişkisiz t-testi sonucunda grup ortalamaları arasındaki fark istatistiksel açıdan anlamlı bulunmuştur. Deney grubunun fen bilgisi tutum ve motivasyon ölçeklerine genel puanlarının, kontrol grubunun genel puanlarından yüksek olduğu görülmüştür.

Deney grubunda bulunan öğrencilerin fen bilgisi tutum ile motivasyon ön-son test puanları arasında anlamlı bir farkın olup olmadığını belirlemek amacıyla yapılan analiz sonucunda elde edilen bulgular Tablo 3'te özetlenmiştir.

Tablo 3. Deney Grubu Ön Test İle Son Test Puanları Arasındaki Farka İlişkin Değerler

	Grup	N	X	Ss	t	p*
Fen Bilgisi Tutum	Deney Ön Test	40	3.31	.36	-4.9	0.00
	Deney Son Test	40	3.64	.37		
Fen Öğrenmeye Yönelik Motivasyon	Deney Ön Test	40	3.75	.48	-3.05	0.00
	Deney Son Test	40	4.03	.40		

Tablo 3'e bakıldığında öğrencilerin deney grubu fen bilgisi tutum ve motivasyon genel puanları ortalamalarının anlamlı bir farklılık gösterip göstermediğini belirlemek amacıyla yapılan ilişkili gruplar t-testi sonucunda grup ortalamaları arasındaki fark istatistiksel açıdan anlamlı bulunmuştur. Benzer şekilde kontrol grubunda bulunan öğrencilerin fen bilgisi tutum ile motivasyon ön-son test puanları arasında anlamlı bir farkın olup olmadığını belirlemek amacıyla yapılan analiz sonucunda elde edilen bulgular Tablo 4'te özetlenmiştir.

Tablo 4. Kontrol Grubu Ön Test İle Son Test Puanları Arasındaki Farka İlişkin Değerler

	Grup	N	X	Ss	t	p
Fen Bilgisi Tutum	Kontrol Ön Test	40	3.15	.45	.44	0.66
	Kontrol Son Test	40	3.13	.51		
Fen Öğrenmeye Yönelik Motivasyon	Kontrol Ön Test	40	3.42	.49	-0.57	0.56
	Kontrol Son Test	40	3.45	.52		

Tablo 4'te görüldüğü gibi öğrencilerin kontrol grubu fen bilgisi tutum ve motivasyon ortalamaları arasındaki fark istatistiksel açıdan anlamlı bulunmamıştır.

SONUÇ

Gittikçe hızlanan bilimsel bilgi birikmesinin sonucu olarak, öğretim programı içerikle dolmaktadır. Zamanla öğretim programı, çoğu kez kendi bilimsel kökenlerinden ayrılan soyutlanmış bilgi yığınlarına dönüşmektedir. Dolayısıyla öğrenciler, tutarlı zihinsel şema oluşumu için uygun olmayan, soyutlanmış bilgi birikintilerini nasıl birleştireceklerini bilememektedirler. Öğrenciler, bildikleri yolların dışında, diğer durumlarda kavramları kullanarak problemleri çözmede başarısız olmaktadırlar (Koçak, 2011). Bu ve benzeri görüşlerden hareketle çalışmanın amacı, günlük yaşam bilimleri adı altında bilgisayar destekli eğitim sistemine göre tasarlanmış faaliyetlerin öğrencilerin fen bilgisine yönelik tutum ve motivasyonlarına etkilerini incelemektir.

Araştırmada geri dönüşüm ve yangın konuları deney grubuna 20 adet günlük yaşam temelli fen deneyi videoları sayesinde sanal bir laboratuvar ortamı sağlanmıştır. Araştırma sonucunda günlük yaşam temelli fen deneyi videoları sayesinde deney grubunun fen öğrenmeye yönelik motivasyonlarının ve fen bilgisine yönelik tutumlarının olumlu yönde değiştiği belirlenmiştir. Öğrencilerin, günlük yaşam temelli materyalleri kullandıklarında ve günlük yaşam temelli dersleri takip ettiklerinde, fen derslerine olan ilgilerinin ve fen derslerinden aldıkları hazzın arttığı yapılan çalışmalar sonucunda ortaya çıkmıştır (Bennett, 2003; Gilbert, 2006; Milner, Templin & Czerniak, 2010; Gilbert, Bulteb, & Pilot, 2011). Literatür incelendiğinde bilgisayar destekli öğretimin türlerinden olan sanal laboratuar uygulamalarının, laboratuar ortamında riskli, zaman alıcı, tehlikeli ya da uygulanması mümkün olmayan deneylerin yapılabilmesini sağlayan ve motive edici yönleri olan bir öğretim türü olduğu görülmektedir (Demirer, 2009; Kelly, Bradley & Gratch, 2008). Martínez, Pedrajas ve Polo, (2003) tarafından yapılan çalışmada fen eğitiminde çok önemli bir yeri olan bilgisayarların, deney hazırlamada ve problem çözmede de etkili bir şekilde kullanılabileceğini gösterilmiştir. Günlük yaşam temelli öğretim ile geleneksel öğretim programları kıyaslandığında günlük yaşam temelli öğretim programlarıyla yapılan öğretim sonucunda öğrencilerin ilgilerinin, motivasyonlarının ve başarılarının daha çok arttığı görülmektedir (Wu, 2003; Gilbert, 2006).Yapılan bu çalışmada da öğrencilerin izlediği videoların günlük yaşam olayları ile birleştirilmiş olması, konuya ilgiyi arttıran bir unsur oluşturmuştur. Bu çalışmada olduğu gibi, yapılan çalışmalarda da derse karşı tutumun anlamlı bir şekilde olumlu yönde değiştiği bulgularına rastlanmaktadır (Kulik, Kulik & Cohen, 1980; Kulik, Bangert & Williams; 1983).

Yaşamakta olduğumuz bilgi ve teknoloji çağı büyük oranda fen bilimlerindeki değişme ve gelişmelerin bir sonucu veya ürünüdür. Bilim, doğada oluşan tüm olayların sistematik olarak izlenmesi, akıl ve mantık çevresinde izah edilmesi yönündeki tüm faaliyetlerdir. Teknoloji ise, insanın doğayı egemenliği altına alması ve daha mutlu yaşam koşulları oluşturması için bilimsel verilerin yol göstericiliğinde çevresini değiştirme faaliyetleri biçiminde tanımlanmaktadır. Bir başka ifadeyle teknoloji, fen bilimlerinin uygulamaya yansımasıdır (Arslan, 2001). Aycan (2002)'a göre bilgisayar destekli öğretim, öğretim sürecini ve öğrenci motivasyonunu güçlendiren, öğrencinin kendi öğrenme hızına göre yararlanabileceği, kendi kendine öğrenme ilkelerinin bilgisayar teknolojisiyle birleşmesinden oluşan bir öğretim yöntemidir. Dolayısıyla bundan sonra yapılacak benzer çalışmalarda da bilgisayar destekli fen öğretimi ile günlük yaşam temelli fen öğretiminin birleştirilmesi başarılı sonuçlar vermeye devam edecektir.

RANKING THE INTERNET USAGE PURPOSES OF INDIVIDUALS IN TURKEY WITH MULTIMOORA METHOD

Aslı ÇALIŞ
Gazi University

Cevriye TEMEL GENCER
Gazi University

ABSTRACT: Today, increasing communication need with developing technology appears as a factor in promoting the use of internet. The internet which was used with under speed and high cost in the 1990s, has been available for many people in recent years with high speed and lower cost due to the diversification of firms operating in the market and the increasingly competitive environment. In this study, it was aimed to rank the purposes of using the internet for internet users in Turkey between the years of 2012 and 2015 with MULTIMOORA which is one of the Multi Criteria Decision Making Methods and analysis results were interpreted.

Key words: Multi Criteria Decision Making, MULTIMOORA.

MULTIMOORA YÖNTEMİYLE TÜRKİYE'DE BİREYLERİN İNTERNETİ KULLANMA AMAÇLARININ SIRALANMASI

ÖZET: Günümüzde, gelişen teknolojiyle birlikte artan iletişim ihtiyacı, internet kullanımını yaygınlaştıran bir etken olarak karşımıza çıkmaktadır. 1990'lı yıllarda düşük hızla ve yüksek bir maliyetle kullanılan internet, son yıllarda piyasada faaliyet gösteren firmaların çeşitlenmesi ve artan rekabet ortamıyla yüksek hız ve daha düşük maliyetle çok sayıda insanın kullanımına sunulmaktadır. Bu çalışmada Çok Kriterli Karar Verme (ÇKKV) yöntemlerinden MULTIMOORA ile 2012-2015 yılları arasında Türkiye'deki internet kullanıcılarının interneti kullanım amaçlarının sıralanması hedeflenmiş ve analiz sonuçları yorumlanmıştır.

Anahtar sözcükler: Çok Kriterli Karar Verme, MULTIMOORA.

GİRİŞ

Günümüzün en önemli iletişim araçlarından olan internet, dünyayı küçülterek ayağımıza getiren bir teknolojidir. İsteyen herkes istediği bilgiye bir tuşla ulaşabilmektedir. Önceleri düşük hızla ve yüksek bir maliyetle kullanılan internet, son yıllarda piyasada faaliyet gösteren firmaların çeşitlenmesi ve artan rekabet ortamıyla yüksek hız ve daha düşük maliyetle çok sayıda insanın kullanımına sunulmaktadır.

Günümüzde gelişen teknoloji ile birlikte artık internet erişimi sadece bilgisayarlardan değil, akıllı telefonlardan ve televizyonlardan da sağlanabilmektedir. Dolayısıyla, Türkiye genelinde internet erişim imkânına sahip hanelerin oranı gittikçe artmaktadır. TÜİK verilerine göre, 2015 yılında on hanenin yedisinde internet erişimi mevcuttur.

Dünya çapında yaygın olarak kullanılan bu iletişim ağı, diğer tüm teknolojik ürünlerde olduğu gibi amacına uygun kullanıldığında faydalı olmaktadır. Bu çalışmada ÇKKV yöntemlerinden MULTIMOORA ile Türkiye'deki internet kullanıcılarının son dört yıla göre interneti kullanım amaçlarının sıralanması hedeflenmiştir.

Literatürde MOORA yöntemi ile gerçekleştirilen çalışmalardan bazıları şöyledir: Brauers ve Zavadskas (2008, 2008a 2010, 2011); Brauers ve Ginevicius (2009, 2010); Chakraborty (2011); Kracka vd. (2010); Özçelik vd, (2014); Akkaya vd. (2015); Altuntas vd. (2015); Achebo ve Odinikuku (2015); Patel ve Maniya (2015).

YÖNTEM & BULGULAR

Çalışmada, Türkiye İstatistik Kurumu (TÜİK)' ndan elde edilen "Hanehalkı Bilişim Teknolojileri Kullanım Araştırması" verileri kullanılarak bireylerin interneti kişisel kullanma amaçlarını temsil eden sekiz alternatifin 2012-2015 yılları arasındaki değerlerine göre MULTIMOORA yöntemi ile sıralanması amaçlanmıştır. Kriterlere ve alternatiflere ilişkin detaylı bilgiler Tablo 1'de verilmektedir.

Tablo 1. Kriterler ve Alternatifler

		Kriterler			
		2012	**2013**	**2014**	**2015**
Alternatifler	**E-Posta gönderme / alma** (Sending / receiving e-mails)	66,8	62,5	53,9	49,5
	İnternet üzerinden telefonla görüşme/ video görüşmesi (webcam ile) (Telephoning over the Internet / video calls (via webcam) over the Internet)	42,5	55,1	37,1	38,1
	İnternet üzerindeki sosyal gruplara (Facebook, twitter vb) katılma (Participating in social networks)	41,6	73,2	78,8	80,9
	Online haber, gazete ya da dergi okuma (Reading online news / newspapers / news magazines)	72,5	75,6	74,2	70,2
	Mal ve hizmetler hakkında bilgi arama (Finding information about goods or services)	61,3	59,9	67,2	59,4
	Seyahat veya seyahat ile ilgili konaklama için online hizmetleri kullanma (Using services related to travel or travel related accommodation)	18,9	26,6	23,4	19,7
	Mal veya hizmet satışı (Selling of goods or services, e.g. via auctions (e.g. eBay))	7,2	9,3	16,5	20,8
	İnternet bankacılığı (Internet banking)	17,1	24,8	28,2	29,3

MOORA Yöntemleri

MOORA metodu; ilk olarak Willem Karel M. Brauers ve Edmundas Kazimieras Zavadskas tarafından bir bütün olarak 2006 yılında 'Control and Cybernetics' adlı çalışmaları ile tanıtılmıştır (Brauers ve Zavadskas, 2006). Literatürde çeşitli MOORA yöntemleri bulunmaktadır:

- MOORA-Oran Metodu
- MOORA-Referans Noktası Yaklaşımı
- MOORA-Tam Çarpım Formu
- MULTIMOORA

MOORA-Oran Metodu

Oran sisteminde, kriter temelindeki her bir alternatif, o kriterle ilgili bütün alternatifleri temsil eden bir payda (*bölen*) ile karşılaştırılır (Kracka vd., 2010). Payda, her kriterin, her bir alternatifte aldığı değerlerin kareler toplamının karekökünü içerir. X_{ij}: *i* kriteri için *j* alternatifinin değeri; *j* = 1, 2, …, *m*; m alternatiflerin sayısı; *i* = 1, 2, …, *n*; n kriterlerin sayısı; X^*_{ij}: *i* kriteri için *j* alternatifinin normalize değerini ifade eden boyutsuz (*ölçüleri olmayan*) sayını ifade etmektedir (Kracka vd., 2010).

Bu doğrultuda, öncelikle her bir alternatifin kriterler bazında aldığı değerlerin kareler toplamı ve kareler toplamının karekökleri bulunmuştur (Tablo 2), daha sonra kriterler bazında alternatiflerin aldığı değerler eşitlik 1'deki formülasyona göre normalize edilmiş ve Tablo 3'de gösterilmiştir.

$$x_{ij}^{*} = \frac{x_{ij}}{\sqrt{\sum_{j=1}^{m} x_{ij}^{2}}} \qquad (1)$$

MOORA metodunun oran sistemi yaklaşımına dayanan optimizasyonu için, normalize değerler eşitlik 2'deki formülasyonda belirtildiği gibi maksimizasyon durumunda eklenir minimizasyon durumunda ise çıkarılır (Stanujkic vd., 2012);

$$y_{j}^{*} = \sum_{i=1}^{g} x_{ij}^{*} - \sum_{i=g+1}^{i=n} x_{ij}^{*} \qquad (2)$$

i = 1, 2, ..., *g*, maksimize edilecek (*fayda*) kriterilerdir; *i* = g + 1, g + 2, ..., *n* ise minimize edilecek (*maliyet*) kriterleridir. *j* = 1, 2, ..., *m* alternatifleri temsil etmektedir ve y_j: *j* alternatifinin toplam sıralama indeksidir. y_j'nin büyüklük sıralaması nihai durumu verecektir, dolayısıyla en iyi alternatif en yüksek y_j^* değerine sahipken, en kötü alternatif en düşük y_j^* değerine sahiptir (Chakraborty, 2011). Bu doğrultuda Moora-Oran yöntemine ilişkin sonuçlar Tablo 4'te gösterilmiştir.

Tablo 2. Kareler Toplamı ve Karekökler

	Kriter 1	Kriter 2	Kriter 3	Kriter 4
Alternatif 1	66,8	62,5	53,9	49,5
Alternatif 2	42,5	55,1	37,1	38,1
Alternatif 3	41,6	73,2	78,8	80,9
Alternatif 4	72,5	75,6	74,2	70,2
Alternatif 5	61,3	59,9	67,2	59,4
Alternatif 6	18,9	26,6	23,4	19,7

MOORA-Referans Noktası Yaklaşımı

Referans noktası yaklaşımında en iyi kriter değeri referans noktası olarak dikkate alınır (Brauers ve Zavadskas, 2009). Referans noktası yaklaşımı daha gerçekçi ve objektiftir, her bir kriter için aday alternatiflerin en iyi skorları belirlenerek (r_i) referans seri oluşturulur. Karar matrisinde verilen normalize değerlerin referans seriden sapmaları eşitlik 3'te verilen formülasyona göre hesaplanır. Bu yaklaşımda 4. eşitlikteki gibi hesaplanan (P_i), i. alternatifin tüm dikkate alınan fayda ve maliyet kriterleri için toplam sapmasını ölçmektedir (Karande ve Chakraborty, 2012). Referans noktaları ve sonuç değerleri Tablo 5 ve Tablo 6'da gösterilmektedir.

$$d_{ij} = \left| r_i - x_{ij}^* \right| \tag{3}$$

$$P_i = \min_{(i)} (\max \left| ri - x_{ij}^* \right|_{(j)}) \tag{4}$$

Tablo 5. Referans Noktaları

	Kriter 1	Kriter 2	Kriter 3	Kriter 4
Referans Noktaları	0,544721	0,498351	0,529736	0,563899

Tablo 6. Referans Noktası Yaklaşımı Sonuç Tablosu

	Kriter 1	Kriter 2	Kriter 3	Kriter 4	Skor	Sıralama

Tam Çarpım Formu

Brauers and Zavadskas, MOORA (MULTIMOORA) diğer karışık formlardan ayıran tam çarpım formu için aşağıdaki formulasyonu (eşitlik 5) geliştirmişlerdir (Karande ve Chakraborty, 2012; Brauers ve Zavadskas, 2010; Brauers ve Zavadskas, 2011).

$$U_i = \frac{A_i}{B_i} \tag{5}$$

Burada $A_i = \prod_{j=1}^{g} x_{ij}^*$, $B_i = \prod_{j=g+1}^{n} x_{ij}^*$ şeklinde ifade edilmiştir, U_i ise *i.* alternatifin kullanım derecesidir. 5. eşitlikte maksimize edilecek kriter (fayda kriteri) pay olarak, minimize edilecek kriter ise (maliyet kriteri) payda olacak şekilde dikkate alınmıştır (Balezentis vd., 2010). Tam çarpım metoduna göre yapılan analiz sonuçları Tablo 7'de gösterilmiştir.

Tablo 7. Tam Çarpım Formu

	Kriter 1	Kriter 2	Kriter 3	Kriter 4	TAM ÇARPIM	
	Max	Max	Max	Max	(K1*K2*K3*K4)	Sıralama

MULTIMOORA

Multi-Moora ilk kez 2010 yılının başlarında Brauers ve Zavadskas tarafından ortaya atılmıştır. Multi-Moora, Moora yöntemlerinin ve çok amaçlı tam çarpan formlarının bir dizisi şeklindedir. Temelde amaç, baskın alternatifleri belirlemek ve bu doğrultuda karar vericiye yön vermektir.

Multi-Moora analizi sonuçları Tablo 8'de gösterilmiştir. Her bir alternatif için yukarıdaki üç yöntemin sonucuna göre baskınlık durumları dikkate alınarak sıralama yapılmıştır. Örneğin Alternatif 1, yapılan analizlerde oran metodu ve tam çarpım formuna göre 4. sırada, referans noktası yaklaşımına göre ise 3. sırada yer almıştır. Alternatif 1 çoğunlukla 4. Sırada yer aldığı için Multi-Moora analizine göre 1. alternatif, 4. sıradadır denilmektedir.

Tablo 8. Multi-Moora Analizi

	Oran	Referans	Tam Çarpım	**MULTIMOORA**
Alternatif 1	4	3	4	**4**
Alternatif 2	5	5	5	**5**
Alternatif 3	2	4	2	**2**
Alternatif 4	1	1	1	**1**
Alternatif 5	3	2	3	**3**
Alternatif 6	7	7	7	**7**
Alternatif 7	8	8	8	**8**
Alternatif 8	6	6	6	**6**

SONUÇ

Günümüzde gelişen teknoloji ile birlikte internet erişimi gittikçe artmaktadır. TÜİK verilerine göre, Türkiye genelinde internet erişim imkânına sahip hanelerin oranı 2015 yılında %69,5 olmuştur. Diğer tüm teknolojik ürünlerde olduğu gibi internet de amacına uygun kullanıldığında faydalı olmaktadır.

Bu çalışmada, ÇKKV yöntemlerinden MULTIMOORA ile Türkiye'deki internet kullanıcılarının 2012-2015 yılları arasında interneti kullanım amaçlarının sıralanması hedeflenmiştir. Tablo 9 incelendiğinde, son dört yıl baz alındığında bireylerin interneti kullanım amaçlarının başında online haber, gazete ya da dergi okumanın geldiği, bu alternatifi internet üzerindeki facebook, twitter vb sosyal gruplara katılmanın takip ettiği görülmektedir. Sekiz alternatif arasında internet üzerinden mal veya hizmet satışı, bireylerin interneti kullanma amaçlarında son sırada tercih edilmektedir.

Tablo 9. MULTIMOORA ile Alternatifler Arası Sıralama

Sıralama	**Alternatifler**
1	Online haber, gazete ya da dergi okuma
2	İnternet üzerindeki sosyal gruplara (Facebook, twitter vb) katılma
3	Mal ve hizmetler hakkında bilgi arama
4	E-Posta gönderme / alma
5	İnternet üzerinden telefonla görüşme/ video görüşmesi (webcam ile)
6	İnternet bankacılığı
7	Seyahat veya seyahat ile ilgili konaklama için online hizmetleri kullanma
8	Mal veya hizmet satışı

RESEARCH OF THE EFFECTS OF SCIENCE EDUCATION BASED ON PREDICT - OBSERVE - EXPLAIN STRATEGY ON STUDENTS' SCIENCE PROCESS SKILLS AND SUCCESS

Elif KARA
Milli Eğitim Bakanlığı

Doç. Dr. Mehtap YILDIRIM
Marmara Üniversitesi

ABSTRACT: In this study, it is aimed to research the effect of a lecturing of "Visit and Learn the Creatures World" based on POE technique on 5th grade middle school students' academic success and science process skills. Focus group of this research consists of 52 students studying in 5/A and 5/B classes of a state school located in Büyükçekmece district of Istanbul City during the 2014-2015 academic year. The study has two groups, control group and experiment group, consisting of 26 people each. Experimental design of the research, since the students forming the study groups are not randomly assigned to the experiment and control groups, it's pretest-posttest quasi-experimental design with control group. Experimental work of the research is 4 weeks long covering a 7-week-long period. In experiment group, activities on "Visit and Learn the Creatures World" topic of science lectures are done according to POE strategy while in control group, lecturing is done according to the teaching method of the lecture present in the program. Data collection tools used in this research are academic success test and science process skills test. Data analysis of the studies are done by using SPSS.18 statistics program while independent t-test is utilised for analysis of intergroup tests and dependent t-test is utilised for analysis of intragroup tests. By looking at the analysis results of the research, a significant difference on behalf of experiment group is seen for the effect of a lecturing of "Visit and Learn the Creatures World" based on POE technique on 5th grade middle school students' academic success and science process skills.

Key words: poe strategy, science education, science process skills

TAHMİN ET- GÖZLE-AÇIKLA STRATEJİSİNE DAYALI FEN ÖĞRETİMİNİN ÖĞRENCİLERİN BİLİMSEL SÜREÇ BECERİLERİNE VE BAŞARISINA ETKİSİNİN ARAŞTIRILMASI

ÖZET: Bu çalışmada Canlıların Dünyasını Gezelim Tanıyalım konusunun TGA tekniğine dayalı bir ders anlatımının ortaokul 5. sınıf öğrencilerinin akademik başarısına ve bilimsel süreç becerilerine etkisinin incelenmesi amaçlanmaktadır. Bu araştırmanın çalışma grubunu 2014-2015 Eğitim Öğretim yılında İstanbul ili Büyükçekmece ilçesinde bulunan bir devlet okulunda 5/A ve 5/B sınıflarında okuyan 52 öğrenci oluşturmaktadır. Çalışmada her biri 26 kişilik olup kontrol ve deney grubu olmak üzere iki küme bulunmaktadır. Araştırmanın deneysel deseni, çalışma grubunu oluşturan öğrenciler deney ve kontrol gruplarına rastgele dağıtılmadıklarından ön test-son test kontrol gruplu yarı deneysel desendir. Araştırmanın deneysel çalışması 4 hafta olup toplam 7 haftalık bir süreci kapsamaktadır. Deney grubunda fen bilimleri dersindeki canlıların dünyasını gezelim tanıyalım konusundaki etkinlikler TGA stratejisine göre yapılırken kontrol grubunda ise programdaki dersin öğretim yöntemine göre ders anlatımı yapılmıştır. Araştırmada veri toplama araçları olarak akademik başarı testi ve bilimsel süreç beceri testi kullanılmıştır. Veri analizinde SPSS.18 istatistik programından yararlanılmıştır. Araştırmanın sonucunda ortaokul 5. sınıf Canlıların Dünyasını Gezelim Tanıyalım konusunun TGA tekniğine dayalı etkinliklerle anlatıldığı deney grubu lehine öğrencilerinin akademik başarısına ve bilimsel süreç becerilerine etkisinde anlamlı bir fark görülmüştür.

Anahtar sözcükler: TGA stratejisi, fen Eğitimi, bilimsel süreç becerileri

GİRİŞ

Çağımız teknolojiden ayrı düşünülemez ve teknolojinin gelişmesi, küreselleşme gibi unsurların etkisi ile değişen ve gelişen koşullar, eğitim alanında da kendisini göstermektedir. Öğrenme, eğitiminin en temel taşlarından birisidir. Öğrenmenin sağlıklı gerçekleşebilmesi için pek çok yaklaşım ve teknik ortaya atılmıştır. Özelikle son yıllarda yapılan akademik çalışmalara ve verilen ürünlere bakıldığında karşımıza büyük bir yelpaze çıkmaktadır. Tüm bu yaklaşımlar öğrenme ile ilgili olarak kendi içerisinde önemli olgular barındırmaktadır. Dolayısı ile bu da öğrenmeden elde edilen beklentilerin günümüz koşullarında ilerlemesine ve değişmesine yol açmaktadır.

Öğrenmeden elde edilen beklenti çıtasının yükselmesi için; öğrencinin zihinsel yapılarının oluşması, ön bilgilerinin tamamlanması, varsa kavramsal anlama yanılgılarının giderilmesi, bilgi ve becerilerini, tutum ve inançlarını olumlu yönde değiştirmesi gereklidir. Gerekli olan değişim ve doğru ön bilgiler için ise pastanın en önemli payı ilköğretim yaşlarında saklıdır. Fakat bazı kavramlar, bazı konular öğrenci düzeyine uygun dahi olsa bireysel farklılıktan ötürü geleneksel yaklaşımla işlenen bir ders planlaması, eksiklerin giderilmesinde yeterli olmamaktadır. Bu da eğitimde yeni tekniklerin kullanılmasını, buna göre bir ders tasarlanmasını zorunluluk haline getirmiştir. Bu bağlamda ise 2004 yılında yaklaşımı değişen fen ve teknoloji dersinin kavram öğrenmeli bir tabanla öğretilmesi gerekliliğini, öğrencinin çevresini gözleyip bilgiye kendi ulaşması gerektiğini ve öğrenme düzeyinin ülkemizde yükselip nitelikli bireylerin yetiştirilmesi ihtiyacını gözler önüne sermektedir.

1.1 Problem Durumu

Fen, geçmişten günümüze insan ve çevresiyle bağlantılı bir disiplindir. İnsanın kendisini, çevresini ve yaşadığı hayatı tanıması bireyin farkındalığını arttırır. Fen dersi, İçinde gündelik hayatta kullanılan birçok kavram, olay, olgu barındırmaktadır. Ayrıca fen ve teknoloji dersi, bireyin akademik hayatındaki hayat bakışını, nitelikli sosyal insanı, ileriki sayısal çalışmalarında fizik, kimya, biyoloji disiplinlerine karşı ön tutum, ön bilgi tamamlama süreçlerini sağlıklı yürütmesi için verilen ilk adım disiplinidir. İlköğretim düzeyinde alınmış iyi bir fen eğitimi, bireyin ileriki sayısal akademik başarısında ve sözel olan hayat başarısında etkili olmaktadır.

Ortaokul 5. Sınıf düzeyindeki 'Canlılar Dünyasını Gezelim ve Tanıyalım' ünitesinde öğrencilere verilmesi gereken kazanımlar incelendiğinde bir öğretim süreci içinde, bireyin çevresini tanımasında, canlı kavramını algılayıp sınıflandırmasında, yaşamı ve yaşamın içindeki yerini algılayabilmesinde öğrencinin çevresini gözlemlemesi ve genel olarak kalıcı bilgiler içinse kendi doğrusuna kendinin oluşturması gerekli olduğu anlaşılmaktadır.

Öğrencilerin, öğrenme seviyelerine ve bireysel algılamalarına göre kavram öğretimi stratejilerinin geliştirilmesi için, öğrencilerin kavramlar hakkındaki bilgi birikimlerinin ve kavramı kavramsallaştırdıkları farklı yolların bilinmesi gerekmektedir (Çalık, 2003; Ebenezer & Fraser, 2001,Aktr.Bilen &Köse, 2012).Bu bağlamda geleneksel bir ders anlatımı, günümüzde aranan nitelikli insan tanımına uymamaktadır. Günümüzde öğretim teknikleri yelpazesine baktığımız zaman özellikle fen dersi için birçok alternatif görülmektedir. Kavram öğretiminde uygulanan Tahmin Et – Gözle – Açıkla (TGA, Prediction-Observation-Explanation, POE) yöntemi son zamanlarda göze çarpmaktadır.

Bu araştırmanın temel problemi, 'Canlıların Dünyasını Gezelim Tanıyalım konusunun Tahmin Et – Gözle – Açıkla(TGA) tekniğine dayalı bir ders anlatımının ortaokul 5. sınıf öğrencilerinin akademik başarısına ve bilimsel süreç becerilerine etkisi var mıdır?' sorusuna çözümler bulmaktır.

1.2 Araştırmanın Önemi ve Amacı

İlköğretim öğrencilerinin en zorlandığı derslerin başında matematik ve fen derslerinin geldiği, uluslararası karşılaştırma sınavlarından biri olan TIMSS'den elde edilen bulgular, Türkiye ve başarı sıralamasında ilk beş içinde bulunan ülkelerin Fen Bilimleri ve Matematik derslerine yönelik başarıları arasında bir paralellik olduğunu göstermektedir (Uzun, Bütüner ve Yiğit, 2010).Ülkemizde kullanılan Yapılandırmacı anlayış, Ausubel'in 'öğrenmeyi etkileyen en önemli faktör öğrencinin bilgi birikimidir' şeklinde ifade edilen düşüncesine dayanmakla birlikte temelde öğrencilerin mevcut bilgilerini kullanarak yeni bilgi edinmelerini, öğrenmeyi ve kendine özgü bilgi oluşturmayı açıklayan bir öğrenme kuramı olarak kabul edilmektedir (Hand ve Treagust, 1991; Turgut ve ark., 1997; Appleton, 1997; Akt. Özmen, 2004).Ön öğrenmelerin eksik veya hatalı olduğu durumlarda yeni bilgi anlaşılması zorlaşır ya da doğru bir şekilde kazandırılamaz. Bu durumlarda ortaya kavram yanılgıları çıkar. İlköğretim fen dersinde oluşturulan kavram yanılgıları ise bireyin ileriki kazanımlarını önemli boyutta etkilemektedir. Bu bakımdan fen öğretiminde yararlı stratejiler kullanmak, ders deseninin değiştirmek, bir konu üzerinde etkili olan bir yaklaşım benimsemek, ortaokul öğretmenleri için kaçınılmaz olmuştur. Çünkü fen öğretimi ön bilgileri toparlayarak, öğrencinin bilgiye kendisinin ulaşmasını sağlatmak ve dolayısıyla bilginin kalıcı olmasını hedef almaktadır. Bu nedenle fen öğretiminde öğretim yöntemleri ve teknikleri açısından birçok çalışma yapılıp çeşitlilik sağlanmıştır ve öğrencilerin temel fen kavramlarını doğru bir şekilde öğrenmeleri için değişik yaklaşımlar geliştirilmiştir.

İlköğretim ilk kademenin son basamağı olan 5. Sınıfı değişen 4+4+4 eğitim sistemimize göre ilköğretim 2. Kademesinin ilk basamağı olmuştur. Bu nedenle beşinci sınıf fen konuları, programlarında değişiklikler yer almış hatta öğretmenlerden günlük ders planlamaları hazırlamaları zorunluluk haline getirilmiştir. Ara bir sınıf oluşturulduğundan dolayı başkalaşım haline gelen beşinci sınıf, öğrencilerin gözünde anlaşılması güç konuları olan bir basamak olarak görülmektedir. Fen dersine ilişkin 5. Sınıf 'Canlıların Dünyasını Gezelim Ve Tanıyalım' ünitesinde yer alan canlı sınıflandırılması, insan ve çevre ilişkisi temaları, öğrencilerin edinilmesi gereken kazanımları ilk öğrenme boyutundan ortaokul düzeyine harmanlanmıştır ve bu bakımdan hem öğretmeyle hem de ilgili kazanımların öğrencilere benimsetilmesi zorlaşmıştır. Çünkü MEB(2012)'e göre ilkokul kazanımları üst programlarının bütününe yönelik olarak fazla sayıda seçeneği barındırmaktadır. Buradan anlaşılacağı gibi öğretimde geniş bir öğretim tekniği kullanılmalıdır. Fakat kullanılacak tüm ihtiyaç olan ders gereksinimlerini bir yaklaşım altında toparlamak zordur. Bu bağlamda öğrencilerin öğretim öncesi bilgilerini, kendi yaşam deneyimlerini, ön bilgilerini, inançlarını öğretim süreci ile birlikte harmanlayarak yeniden yapılandırması gerekmektedir. Bir başka deyişle öğrencilerin öğretim öncesi bilgilerini, öğretim süreci sonunda arzu edilen noktaya taşımak için kavramsal değişim stratejilerinden yararlanılması gerekmektedir. Bunun için Tahmin Et – Gözle – Açıkla(TGA) yöntemi de uygun bir stratejidir. Çünkü Tahmin Et – Gözle – Açıkla(TGA) yönteminde öğrenci kendi ön bilgileriyle olası problem karşısında tahminlerde bulunur, gözlemlerine dayanarak ve tahminlerini harmanlayarak ta kendi oluşturduğu kavram bilgisini açıklar.

YÖNTEM

2.1.Araştırmanın Modeli

Bu çalışmada, canlıların sınıflandırılması, toplum, insan ve çevre kavramlarına ilişkin öğrencide kavram yanılgılarını engellemek ve bu zihinde oluşturulacak bilginin günlük yaşamda kullanılabilirliğini arttırmak amaçlanmıştır. Dolayısı ile öğrenci fikirlerini belirleme, kavram gruplandırılmalarını doğru bir şekilde örgütleme ve tek yöntem kullanılmayı amaçlama adına TGA yöntemi ile ders anlatımı seçilmiştir. Çalışmada kıyas ve uygulama çalışması olduğundan deneysel yöntem uygulanması belirlenmiştir. Bu araştırmada, uygulanan deneysel yöntemde, deney grubu üzerinde etkisi incelenen bağımsız değişken "TGA Yöntemine Dayalı Canlıların Dünyasını Gezelim Tanıyalım Ünitesinin ders anlatımı" kontrol altına alınmıştır. Kontrol grubunda ise, "MEB in uygun gördüğü ders Yaklaşım planına göre klasik ders anlatımı" kullanılmıştır.

Araştırmanın deneysel deseni, ön test-son test kontrol gruplu yarı deneysel desendir. Çünkü çalışma grubunu oluşturan öğrenciler, deney ve kontrol gruplarına rastgele dağıtılmadıklarından yarı deneyseldir (Campbell & Stanley, 1966). Bu yöntemde, deney ve kontrol gruplarının birbiri ile tamamen aynı özelliklere sahip olması mümkün değildir. Bu nedenle deney ve kontrol gruplarının tespitinde mümkün olduğu kadar benzer özellikler taşıyan grupların seçilmesi gerekmektedir. Deney grubuna müdahale yapılırken kontrol grubuna herhangi bir müdahale yapılmamaktadır (Cohen & Manion, 1994). Araştırmada kontrol gruplu ön test-son test deseni kullanılmıştır. Bu desen işlemin bağımlı değişken üzerindeki etkisinin test edilmesiyle ilgili olarak araştırmacıya yüksek bir istatistiksel güç sağlayan, elde edilen bulguların neden-sonuç bağlamında yorumlanmasına olanak veren ve davranış bilimlerinde sıklıkla kullanılan güçlü bir desendir (Büyüköztürk, 2010).

Araştırmada uygulama yapılan deney ve kontrol grubu öğrencilerine deneysel işlem öncesi ve sonrası uygulanan testler Tablo 1'de gösterilmiştir.

Tablo 1.Deney ve Kontrol Grubuna Uygulanan Ölçme Araçları

GRUP	ÖN TEST	DENEYSEL İŞLEM	SON TEST
Deney Grubu	CDGTT, BSBT	TGA yöntemine dayalı ders anlatımı	CDGTT, BSBT
Kontrol Grubu	CDGTT, BSBT	MEB Planına göre ders anlatımı	CDGTT, BSBT

•**CDGTT** Canlıların Dünyasını Gezelim Tanıyalım Başarı Testi •**BSBT** Bilimsel Süreç Becerileri Testi

2.2 Araştırmanın Çalışma Grubu

Bu araştırmanın çalışma grubunu 2014-2015 Eğitim Öğretim yılında İstanbul ili Büyükçekmece ilçesinde bulunan bir devlet okulunda 5/A ve 5/B sınıflarında okuyan 52 öğrenci oluşturmaktadır. Oluşturulan öğrenme ortamında başarı testleri her öğrenciye uygulanmıştır. Kontrol ve deney grupları rastgele belirlenememesine rağmen, uygulamadan önce öğrencilere uygulanan dönemsel ortak birinci ve ikinci yazılı sınavları arasında aritmetik ortalama sonucu anlamlı bir fark bulunamamıştır.

2.3. Araştırmanın Uygulama Aşaması

Bu araştırma oluşturulmuş olan başarı testinin ön uygulaması, Uygulama zamanı olarak okulun ve öğrencilerin mağdur olmaması için fen bilimleri dersinin yıllık planı doğrultusunda 'Canlıların Dünyasını Gezelim Tanıyalım' ünitesinin denk geldiği süreç kabul edilmiştir.

Araştırmanın deneysel çalışması 4 hafta olup toplam 7 haftalık bir süreç belirlenmiştir. Çalışmalar, deney grubu ve kontrol grubu olmak üzere 26 kişilik kümelerden oluşmaktadır. Deney grubunda fen bilimleri dersindeki canlıların dünyasını gezelim tanıyalım konusundaki etkinlikler TGA stratejisine göre yapılırken kontrol grubunda ise programdaki dersin öğretim yöntemine göre ders anlatımı yapılmıştır. Etkinlikler yapılmadan önce iki gruba da CDGTT ve BSBT ön test uygulanmıştır. Ön testler uygulandıktan sonra sınıf yoklama listesi baz alınarak okul numaralarına göre öğrenci çalışma grupları belirlenmiş ve çalışmalar en az 2 en fazla 4er kişilik gruplar halinde yapılmıştır.

Çalışmada; Deney grubuna TGA ile uygulanan 7 tane etkinlik kâğıdı hazırlanmıştır. Bu etkinliklerin uygulanma süreci eğitim öğretimin aksamaması için ilgili yıllık planın doğrultusunda yapılmıştır. Her etkinlikte bir tahmin et kâğıdı, bir de gözle ve açıkla kâğıdı yer almaktadır. Tahmin et aşamasında öğrencilere o günkü etkinlik ile ilgili tahminde bulunmaları istenmiş ve öğrencilere dağıtılan etkinlik kâğıdına görüşlerini yazmaları belirtilmiştir. Cevaplar yazıldıktan sonra öğrencilerden kâğıtlar toplanmıştır. Buradaki amaç diğer aşamalarda öğrencilerin önceden verdiği cevapları düzeltme durumuna girmelerini engellemektir. Tahmin aşamasında ayrıca öğrencilerin kavram yanılgıları varsa tespit edilmesi de amaçlanmıştır. Bu aşamanın en önemli tarafı da öğrencilerin verdikleri cevaptan sonra kâğıtların neden toplandığını, cevapların doğruluğunu merak etmeleri dersi onlar için daha keyifli hale gelmesini sağlamaktır. Bu aşamadan sonra gözlem ve açıklama soruları olan kâğıt öğrencilere dağıtılıp araştırmacı ve bir gözleyici öğretmen eşliğinde etkinlikler öğrenci grupları tarafından yapılmıştır. Etkinlikler yapılırken öğrencilerin gözlemlerini kâğıda yazmaları istenmiştir. Son aşamada ise çalışma grupları gözlemlerini başlangıçta yaptıkları tahmin sonuçlarına göre karşılaştırıp fikirlerinin doğru ya da neden yanlış olduklarını analiz etmiş ve bunu açıklamışlardır. Kontrol grubunda ise aynı ünite ve kazanımlarını içeren M.E.B kitabı rehber edinilmiştir.

Çalışmanın uygulama süreci bittikten sonra her iki gruba da uygulama başında yapılan başarı testi ve bilimsel süreç beceri testleri son test olarak tekrar uygulanarak veriler toplanılmıştır.

2.4 Araştırmada Kullanılacak Veri Toplama Araçları

Araştırmada Canlıların Dünyasını Gezelim ve Tanıyalım Ünitesine yönelik olarak öğrencilerin başarılarını, kavram yanılgılarını ve bilimsel süreç becerilerine yönelik değişimlerini ortaya koymak adına araştırmacı tarafından derlenen bir akademik başarı testi, bilimsel süreç beceri testi kullanılmıştır.

2.4.1 CDGT Akademik Başarı Testi

Bu çalışmada kullanılacak akademik başarı testi program kazanımları dikkate alınarak çeşitli kaynaklardan ve milli eğitim müfredatından yararlanılarak kavram yanılgılarını ortaya koymak ve öğrencilerin ön bilgilerini yoklamak amacıyla araştırmacı tarafından uzman görüşü alınarak hazırlanan, çoktan seçmeli sorular içeren ve bu soruların açıklamalarını sorgulayan açık uçlu sorulardan da oluşan iki aşamalı bir testtir.

İki aşamalı testler, adından da anlaşılacağı üzere iki kısımdan oluşan testlerdir. İki aşamalı testleri çoktan seçmeli testlerden farklı kılan onun ikinci kısmıdır. Bu bölümde, öğrencinin ilk aşamada işaretlediği seçeneği, işaretleme gerekçesini belirtmesi istenmektedir (Karataş vd. 2003). Böylelikle ikinci kısımda öğrencinin işaretlediği birinci kısım seçenekte olası kavram yanılgısı, bilgi eksikliği kolaylıkla araştırmacıya somutlaştırılır. Ayrıca bu ikinci bölüm, öğrencilerin muhakeme yeteneğini daha iyi ölçebilmek ve daha önce belirlenen yanılgılardan farklı alternatif kavramların olup olmadığını tespit edebilmek amacıyla açık uçlu bir yapıda da düzenlenebilmektedir (Mann & Treagust, 1998; Voska & Heikkinen, 2000). Akademik başarı testinin geliştirilmesi için 4 fen ve teknoloji öğretmeninden, bir konu uzmanı akademisyenden görüş alınmıştır. Hazırlanan başarı testi güvenirlik açısından pilot çalışması 2014-2015 eğitim öğretim yılında İstanbul ili, Büyükçekmece ilçesinde bulunan 3 ilköğretim okulunda 286 adet 6. Sınıf öğrencileri üzerinde uygulanmıştır. Pilot uygulama sonucunda 26 soruluk başarı testinin güvenirlik kat sayısını 0,725 alfa bulunmuştur. Fakat madde ayırt ediciliği düşük olan (0.20nin altında) 1.5.7. ve 16. Sorular çıkarıldığı zaman güvenirlik kat sayısı 0,7512'e yükselmiştir. Uygulanmış olan başarı testi 22 soruya indirilmiştir.

2.4.2 BSB Testi

Araştırmada kullanılacak Bilimsel süreç becerileri testinin orijinali Okey, Wise ve Burns (1985) tarafından geliştirilmiştir. Testin Türkçeye çevirisi ve uyarlaması ise Özkan, Aşkar ve Geban tarafından yapılmıştır (Doğruöz, 1998). Testin orijinalinde KR-20 güvenirlik katsayısı 0.86 olarak hesaplanmıştır (Burns vd. 1985:169). Bu test, bilişsel gelişim düzeyi bakımından İlköğretim 8. sınıf öğrencilerine uygun olduğu saptanmıştır (Tobin ve Capie, 1982:133). Ancak, araştırma örneklemi 5. sınıf öğrencilerinde oluştuğu için test incelenmiş ve teste bulunan maddeler 5. sınıf Fen ve Teknoloji Programına ve öğrencilerin bilişsel gelişim düzeylerine göre yeniden düzenlenerek 5. sınıf Fen ve Teknoloji programında yer alan 24 bilimsel süreç becerileri kazanımlarını temsil edecek şekilde oluşturulmuştur(Çakar, 2008). Bilimsel Süreç Becerileri Testinin geçerliği konusunda 1 uzman görüşü ve 5 fen öğretmeninin görüşleri alınmıştır (Çakar, 2008). Uzmanların ve öğretmenlerin belirttikleri görüşlere göre maddeler üzerinde düzeltmeler yapılarak uygulama yapılmıştır.

Kullanılacak bilimsel süreç beceri testinde dört seçenekli 24 soru yer almaktadır. Bu testte yer alan maddelerin, madde ayırt edicilik gücü indeksleri 0.31 ile 0.73 arasında ve madde güçlük indeksleri 0.36 ile 0.79 arasında değişmektedir(Çakar, 2008) Bilimsel Süreç Becerileri Testinin KR-20 güvenirlik katsayısı ise 0.86 olarak hesaplanmıştır. KR-20 güvenirlik katsayısının 0.70 ve daha yüksek olması test puanlarının güvenirliği için yeterlidir (Büyüköztürk,2010).

BULGULAR

Araştırmada analiz yolunu belirlemek için öncelikle çalışma gruplarının normal dağılım gösterip göstermeyeceğine bakılmıştır. Bu amaçla başarı sınavı ile bilimsel süreç becerileri testinden elde edilen veriler ile SPSS 18.00 paket programından yararlanılarak Shapiro-Wilks testine aktarılmıştır. Veri sayısı 29'dan az olduğunda Shapiro-Wilks testi kullanılır (Kalaycı, 2010). Araştırmada deney ve kontrol grubundaki öğrenci sayısı eşit (26 kişi) tir. Tablo 2 de de görüldüğü gibi Shapiro-Wilks testi sonucunda verilerin normal dağılım göstermesi sonucu çalışmada parametrik testler olan ilişkili t testi ve ilişkisiz t testi kullanılmıştır.

Tablo2: Çalışmada uygulanan ölçme araçlarının normal dağılım açısından karşılaştırılması

BSB Ön Test	26	13,50	3,79	25	-6,986	0,00
BSB Son Test	26	16,53	3,40			

Tablo 9 incelendiğinde deney grubu öğrencilerinin bilimsel süreç becerileri ön test ortalamalarının 13,50, standart sapmasının 3,79; son test ortalamalarının 16,53, standart sapmasının 3,40 olduğu görülmektedir. Deney grubunun bilimsel süreç becerileri ön test puanları ile son test puanları arasında istatistiksel olarak anlamlı bir fark oluşmuştur (t=-6,986, p<0.05).

Tablo10: Kontrol Grubunun BSB testi ön ve son test puanlarının karşılaştırılması

TEST	N	X	S.S	t Testi		
				Sd	t	p
BSB Ön Test	26	13,50	3,55	25	-4,183	0,00
BSB Son Test	26	14,15	3,78			

Tablo 10 incelendiğinde kontrol grubu öğrencilerinin BSB ön test ortalamalarının 13,50, standart sapmasının 3,55; BSB son test ortalamalarının 14,15, standart sapmasının 3,78 olduğu görülmektedir. Kontrol grubunun bilimsel süreç becerileri ön test puanları ile son test puanları arasında istatistiksel olarak anlamlı bir fark oluşmuştur ($t=-4,183$, $p<0.05$).

SONUÇ

Bu çalışmada Tahmin et- Gözle-Açıkla tekniğine dayalı fen öğretiminin ortaokul 5. sınıf öğrencilerinin akademik başarısına ve bilimsel süreç becerilerine etkisinin olup olmadığı incelenmiştir. Araştırmada elde edilen bulgulara dayanarak; (1) Deney grubunun ön test puanları ile son test puanları arasında son test puanları lehine anlamlı bir farklılığın çıkması deney grubunda uygulanan TGA yöntemine dayalı dersin öğrencilerin akademik başarısına olumlu etkisinin olduğu sonucunu ortaya çıkarmıştır. Elde edilen bu sonuç literatürde yapılan TGA ilgili çalışmalara bakıldığında aynı doğrultuda olduğu saptanmıştır (Acar,2010; Özdemir,2011;Sünkür,2013; Bilen, 2014). (2) Kontrol grubunun ön test ve son test puanları arasında da son test puanları lehine anlamlı bir fark ortaya çıkmıştır. Fakat Deney grubunun son test puan ortalamaları kontrol grubundan daha yüksek olduğu görülmektedir. Bu da ders tekniğinin olumlu katkı sağladığını göstermektedir.

Çalışmanın öneminde değinildiği gibi 5. sınıf fen bilimleri dersi müfredatı ve kazanımları ilkokul ve ortaokul düzeylerinde harmanlanması hem öğretmeyle hem de ilgili kazanımların öğrencilere benimsetilmesi zihinsel şekil olarak zorlaşmıştır. Sorun giderilmesi için bilişsel düzeyde teknik ve yöntemler bir arada kullanılmalı alternatif materyaller ile öğretim zenginleştirilmelidir. Fakat kullanılacak tüm ihtiyaç olan ders gereksinimlerini bir yaklaşım altında toparlamak zordur. Bu bağlamda öğrencilerin öğretim öncesi bilgilerini, kendi yaşam deneyimlerini, ön bilgilerini, inançlarını öğretim süreci ile birlikte harmanlayarak yeniden yapılandırması gerekmektedir. Bir başka deyişle öğrencilerin öğretim öncesi bilgilerini, öğretim süreci sonunda arzu edilen noktaya taşımak için kavramsal değişim stratejilerinden yararlanılması gerekmektedir. Burada çalışmanın da bulgularına dayanarak TGA yönteminin bunu gerçekleştirdiği söylenebilir.

ÖNERİLER

TGA ders tekniği ile ilgili yapılan çalışmalara bakıldığı zaman ortaokul düzeyinde pek fazla çalışmaya rastlanmamıştır. Olan çalışmaların çoğu lise düzeyi öğrencileri ve yahut öğretmen adayları üzerinde yapılan incelemelerdir.
Bu çalışmada ortaokul 5. sınıf fen bilimleri dersinde canlıların dünyasını gezelim tanıyalım adlı ünitede TGA tekniğinin olumlu katkı sağladığı görülmektedir. Diğer araştırmalarda başka ünitelere katkısı da incelenebilir.
Yapılan çalışma göz önüne alınarak teknolojik imkânlar kullanılarak ders materyalleri görsel, videolar ile de ders ortamları çeşitlendirilebilir.

PERCEPTUAL INTERFACES FROM THE PERSPECTIVE OF HUMAN-COMPUTER INTERACTION AND ITS USE IN EDUCATION

Neşe GÜRBULAK
Marmara University, Institute of Educational Sciences, Department of Computer Education and Instructional Technologies

Esad ESGİN
Marmara University, Atatürk Faculty of Education, Department of Computer Education and Instructional Technologies

The human-computer interaction is a hot topic because of the considerable increase in the production and use of information and communication technologies. In this interaction context, new generation interaction styles have emerged by the constant advancements in the technology. One of these interaction styles is perceptual interfaces that contain different kinds of high level natural interaction. This interaction is based on natural human-human interaction style like gestures, touching and speaking.

The purpose of this research is that to examine perceptual interfaces in the perspective of human-computer interaction and infer some results about how to use them in education and offer suggestions about it. In this study, interaction design of the perceptual interfaces was discussed according to the reviewed literature. Also motion-based technologies, used in these interfaces, were presented and use of these technologies in the field of educational technologies was examined. It is considered that the results of the study can provide guidance to researchers and practitioners.

There are many types of perceptual user interface interaction. Today, the most popular application area of the motion-based technology is Kinect technology. This technology includes a variety of perceptual interaction such as; image viewing, skeletal detection and monitoring system. Kinect technology is one of the most popular devices in the field of image processing technology that can detect movements and send these to computers.

Kinect technology was developed by Microsoft to play digital games with Xbox console and it has been used in other areas as time goes by. Although this technology originally developed for digital games, it has often begun to be used in scientific researches by the capability of catching depth of an image. By considering that perceptual interfaces can provide natural interaction to individuals like in their social life, users can exhibit their skills without extreme cognitive load and they can learn easier via perceptual interfaces. In this context, it is envisaged that perceptual interfaces can support learning by providing ease of use and control.

Key Words: Natural User Interfaces, Perceptual Interfaces, Motion Based Technologies, Kinect Technologies, Educational Technologies

İNSAN-BİLGİSAYAR ETKİLEŞİMİ PERSPEKTİFİNDE ALGISAL ARAYÜZLER VE EĞİTİMDE KULLANIMI

ÖZET: Bilgi ve iletişim teknolojilerinin üretiminin ve kullanımının hızla artması ile birlikte insan-bilgisayar etkileşimi konusu sıkça gündeme gelmektedir. Bu etkileşim kapsamında sürekli yenilenen teknolojilerle birlikte birçok yeni nesil etkileşim stili de ortaya çıkmıştır. Bu etkileşim stillerinden birisi; araştırmanın odak noktasını da oluşturan, yüksek oranda etkileşim ve çeşitlilik arz eden, insanla insan arasındaki doğal olan etkileşimler (örn; görme, işitme, dokunma, konuşma vb.) temel alınarak modellenen algısal kullanıcı arayüzleridir.
Bu araştırmanın amacı, insan-bilgisayar etkileşimi perspektifinde algısal arayüzleri incelemek ve bu arayüzlerin eğitimde kullanımına ilişkin sonuçlar çıkararak bu konuda öneriler sunmaktır. Çalışmada literatür taraması yapılarak algısal arayüzlerin etkileşim tasarımı boyutuna ilişkin analizlere yer verilmiştir. Ayrıca ilgili literatürden yola çıkarak, bu arayüzlerde kullanılan hareket tabanlı teknolojilere örnekler verilmiş ve bu teknolojilerin eğitim teknolojileri alanındaki kullanımları irdelenmiştir. Yapılan analiz ve sentezlerin sonucunda çıkarılan anlamların araştırmacılara ve uygulayıcılara yol gösterici olacağı düşünülmektedir.
Birçok algısal arayüz etkileşim çeşidi bulunmaktadır. Günümüzde en popüler uygulama alanı ise hareket tabanlı teknolojilerden Kinect teknolojisidir. Bu teknoloji; görüntü izleme, iskelet algılama ve izleme sistemi gibi algısal etkileşim çeşitlerini içermektedir. Kinect Teknolojisi; insan hareketlerini algılayıp bu hareketleri bilgisayarlara gönderebilen, görüntü teknolojisi alanındaki en popüler cihazlardandır.

Kinect teknolojisi Microsoft tarafından Xbox oyun konsolu ile oyun oynamak için geliştirilmiş ve zamanla diğer alanlarda da kullanılmaya başlanmıştır. Algısal bir etkileşim çeşidi içeren bu teknoloji başlangıçta oyun amacıyla üretilmiş olsa da derinlik görüntüsü alınabildiği için bilimsel çalışmalarda da sıklıkla kullanılmaya başlanmıştır.

Algısal arayüzlerin bireylere sosyal hayatlarındaki gibi doğal etkileşim sunduğu düşünüldüğünde, algısal arayüzler sayesinde kullanıcıların becerilerini aşırı bilişsel yüke maruz kalmadan sergileyecekleri ve daha kolay öğrenebilecekleri düşünülmektedir. Bu bağlamda, algısal arayüz kullanımının bireylere kullanım ve kontrol kolaylığı sağlayıp öğrenmeyi destekleyeceği ön görülmektedir.

Anahtar Kelimeler: Doğal Kullanıcı Arayüzleri, Algısal Arayüzler, Hareket Tabanlı Teknolojiler, Kinect Teknolojisi, Eğitimde Teknoloji Kullanımı.

GİRİŞ

Günlük hayatta, farklı birçok ürünü çeşitli amaçlar için kullanmaktayız. Bu ürünlerle birlikte var olan her şey birbiri ile bir etkileşim içerisindedir (Dix, Finlay, Abowd ve Beale, 2004). Bu sebeple, bir ürünün tasarımının kullanılabilir olması isteniyorsa o ürünün insanlarla olan etkileşimi mutlaka hesaba katılmalıdır (Olson ve Olson, 2003). Etkileşim; bir durumdan etkilenme ya da karşılıklı olarak birbirini etkileme olarak tanımlanmaktadır (Dix, Finlay, Abowd ve Beale, 2004). Bilgi ve iletişim teknolojilerinin üretimindeki ve kullanımındaki hızlı artışın sonucu olarak insanlarla teknolojik ürünler arasındaki etkileşim sayısı ve çeşidi de artmaktadır. Ortaya çıkan bu yeni durumda, insan-bilgisayar etkileşimi kavramı daha çok bilimsel araştırmaya konu olmaya başlamıştır. Çağıltay (2005), insan-bilgisayar etkileşimini etkileşimli teknolojilerin tasarımı, değerlendirmesi ve uygulaması ile ilgilenen disiplinler arası bir çalışma alanı olarak tanımlamaktadır. Bu tanım çerçevesinde etkileşimli teknolojilerin kullanıldığı alanlardan birisi eğitimdir. Stephanidis, Kouroumalis ve Antona (2012), etkileşimin "yeni medya" ve "eğitim teknolojilerinin" ilişkisi bağlamında ele alınması gerektiğini savunmaktadır. Eğitim teknolojilerinde yeni medya kullanımının öğrenme ortamlarına katkı yapması için; bu teknolojilerin, kullanıcıların (öğrenenlerin) ihtiyaçlarını en kolay şekilde karşılayabilecekleri şekilde tasarlanması (Norman ve Draper, 1986) gerekmektedir.

Eğitim teknolojilerinde kullanılacak yeni medyanın tasarlanmasında insan-bilgisayar etkileşimi alanında gelişen teknolojilerle birlikte ortaya çıkan yeni nesil etkileşim stilleri önemli rol oynamaktadır. Bu araştırmanın odak noktasını ise yeni nesil etkileşim stillerinden biri olan algısal arayüzlerin eğitim teknolojileri alanında kullanılması oluşturmaktadır.

Algısal Arayüzler

Algısal arayüzler kullanıcı ile birden fazla kanal yolu ile etkileşim kurulmasına olanak tanıyan yapılardır. Geleneksel arayüzlerde kullanıcı sadece yazarak ya da fare yardımı ile etkileşime geçerken algısal arayüzlerde bunlara ek olarak konuşma, dokunma, mimik gibi etkileşimler de devreye girmektedir. Yüksek oranda etkileşimli ve çeşitlilik arz eden algısal kullanıcı arayüzleri insanla insan arasındaki doğal olan etkileşimler (örn; görme, işitme, dokunma, konuşma vb.) baz alınarak modellenmiştir (Turk, 2000).

Algısal Arayüzlerin Kullanım Alanları

Algısal arayüzlerin kullanım alanları ile ilgili literatür incelendiğinde, bu etkileşim stilinin pek çok alanda kullanıldığı görülmektedir. Geng vd. (2003) gerçekleştirdiği araştırmada algısal arayüzlerin insanlara fiziksel olarak bulunamadıkları bir alışveriş merkezinden sanal olarak alışveriş yapabilme imkanı sunduğunu göstermektedir. Bu çalışmada, insanların 3 boyutlu navigasyonlar ve vücut hareketleri ile kontrol edebilecekleri koşu bandı benzeri bir aygıt kullanarak nasıl sanal alışveriş yapabilecekleri incelenmiştir.

Öğrenci motivasyonu öğrenme sürecinin en önemli etkenlerindendir. Geleneksel yöntemlerde öğrenci motivasyonu yapılan anketlerle ölçülmektedir, ancak oyun temelli öğrenmede oyun oynayan kişinin konsantrasyonu olumsuz etkilendiği için bu tarz ölçümler pek uygun değildir. Ghergulescu ve Muntean (2014) tarafından yapılan çalışma, oyuncuyu rahatsız etmeden EEG yardımıyla algılayıcı temelli bir ölçüm yöntemi ile öğrencinin motivasyonunu ölçmeyi hedeflemektedir. Yaşları 18-55 arasında değişen 48 kişi ile yürütülen bu çalışma birebir uygulanmış ve 45 dakika sürmüştür. Sonuç olarak, kullanıcıların motivasyonunu ölçmede anket uygulamasının yetersiz olduğu bunun yerine algılayıcı temelli bir ölçüm yönteminin motivasyonu daha iyi ölçümlediği ortaya çıkmıştır (Ghergulescu ve Muntean, 2014).

Okuma, karışık bilişsel süreçleri içerdiği için öğrencilerin gelişimlerini gözlemleyerek tespit etmek zordur. E-kitaplar öğrencilerin okuma zorluklarını ve zayıflıklarını anlamak için bir yol olarak gösterilmektedir. Dokunmatik arayüzler ve e-kitaplar yardımı ile öğrencilerin okuma davranışlarının gözlemlenmesi hedeflenmektedir. Bunun için yapılan bir araştırmada 3 aşama takip edilmiştir: 1) Gerçek sınıf koşullarının analiz edilmesi, 2) Sistemin tasarlanması ve uygulanması, 3) Sistemin kullanılabilirliğinin ve fonksiyonelliğinin değerlendirilmesi. 15 kişi ile gerçekleştirilen bu çalışmada dokunmatik ekran ve web kamerası yardımı ile bir algoritmaya dayalı olarak öğrencinin okuma süreci kayıt altına alınmıştır. Sonuç olarak, bu kayıt yardımı ile gözlemlenerek tespit edilmesi zor olan okuma süreci daha kolay tespit edilmiştir (Huang, Hsu, Su ve Liu, 2014).

Yüz mimiklerinden bilişsel yük ölçmeyi hedefleyen bir başka çalışmada ise 20 kişinin zihinsel matematiksel işlemleri gerçekleştirirkenki durumları bilgisayarın başına yerleştirilen bir kamera ve katılımcılara takılan bazı aygıtlar sayesinde (ECG, SC, BIOPAC MP1502ve RESP) ölçülmüştür. Sonuçlar, bilişsel yük ölçülürken yüz modellemeden faydalanmanın bilişsel yüke sebebiyet veren unsurları tespit etmekte oldukça başarılı olduğunu göstermektedir (Hussain, Calvo ve Chen, 2014).

İlgili araştırmalarda da bahsedildiği gibi birçok algısal arayüz etkileşim çeşidi bulunmaktadır. Günümüzde en popüler uygulama alanı ise Kinect teknolojisidir. Bu teknoloji görüntü izleme, iskelet algılama ve izleme sistemi gibi algısal etkileşim çeşitlerini içermektedir.

Kinect Teknolojisi

İnsan hareketlerini algılayıp bu hareketleri bilgisayarlara gönderebilen ve görüntü teknolojisi alanındaki en popüler cihazlardan olan Kinect, Microsoft tarafından Xbox oyun konsolu ile oyun oynamak için geliştirilmiş ve kullanımı zamanla diğer alanlarda yaygınlaşmıştır. Algısal bir etkileşim çeşidi içeren bu teknoloji başlangıçta oyun amacıyla üretilmiş olsa da derinlik görüntüsü alınabildiği için bilimsel çalışmalarda da sıklıkla kullanılmaya başlanmıştır.

Üzerinde mikrofon, hareket sağlayıcı bir motor mekanizması ve 3 göz bulunan Kinect'in soldaki gözü lazer projeksiyonu yaparken, sağdaki kızılötesi sensör bu ışınların gidiş – geliş süresini hesaplayarak her bir noktanın mesafesini bildirmektedir. Bu veriler ışığında Kinect'in içerisinde yer alan yazılım, iskelet yapısını hesaplayıp veriyi XBox'a ya da bilgisayara göndermektedir (Colvin, Babcock, Forrest, Stuart, Tonnemacher ve Wang, 2011). Kinect'in ortasında bulunan göz ise 640 x 480 çözünürlüğünde 30 FPS (Frame Per Second) bir VGA (Video Graphics Array) kameradır. Yakalanan görüntü, saniyede 30 kez resim olarak uygulamaya iletilmektedir (Stowers ve Hayes, 2011). Ayrıca, Kinect, sensörlerini kullanarak topladığı verileri ses, görüntü ve derinlik olarak doğal kullanıcı ara yüzü kütüphanesine iletip burada yorumlayarak uygulamalara iletmektedir (Çolak, Yüksel, Sunguray ve Gümüş, 2013).

Kinect teknolojisinin diğer bir özelliği ise iskelet algılama ve izleme sistemidir. Kinect'e hareket algılama komutu verilmesi ile beraber kızılötesi kamera, ortama kızılötesi ışın yaymakta ve bu sayede insan vücudunda bulunan 20 farklı hareket noktası algılanıp izlenebilmektedir (Sidik, Sunar, İsmail ve Mokhtar, 2011; Ikemura, Fujiyoshi, 2011). Gerçekleştirilen hareket, Kinect'in ROM'unda kayıtlı olan bir hareket ise sistem tarafından bilgisayara uyarı kodu gönderilmektedir. Eğer gerçekleştirilen hareket tanımlı hareketler arasında yok ise Kinect, sistemi beklemeye almaktadır (Tong, Zhou, Pan, ve Yan, 2012).

Kinect Teknolojisinin Kullanım Alanları

Microsoft'un el ve kol hareketleriyle kontrol imkanı sunan konsolu Kinect teknolojisi ve farenin kullanılabilirliğini ölçmek için gerçekleştirilen bir çalışmada; bilginin görselleştirildiği bir yazılım olan MetricSPlat'dan faydalanılarak 10 kişiye fare, 10 kişiye hareket tabanlı etkileşim imkanı sunan Kinect teknolojisi kullandırtılmıştır. Kullanılabilirlik testi ile yapılan ölçümlerde Kinect teknolojisinin daha etkili olduğu (doğal etkileşim sağladığı) sonucuna varılmıştır (Libardi, Traina ve Rodrigues, 2014).

Chang, Chen ve Huang (2011), Kinect teknolojisi kullanılarak oluşturulan öğrenme ortamlarının öğrencilere günlük yaşam becerilerini kazanma ve gerçek yaşama transfer etme konusunda yardımcı olduğunu belirtmişlerdir. Tenekeci ve Gümüşçü (2016), Türkçe'de kullanılan latin harflerinin ilk okuma yazma eğitiminde kullanımına yönelik geliştirilen uygulama ile iki aşamalı bir çalışma gerçekleştirmiştir. Uygulamanın ilk aşamasında, harfleri tanıtmak için bir ekran hazırlanmıştır. Uygulamayı kullanan kişiye ait iskelet bilgileri programla yorumlanarak istediği harfin üzerine gelip yeteri kadar beklerse o harfin adının kullanıcıya sesli olarak aktarılması sağlanmaktadır. Çocuk hangi harfin ismini tekrar dinlemek istiyorsa, o harfin üzerine gelip belirtilen ikonda belirli bir süre beklemesi gerekmektedir. İkinci aşamada ise, harfleri öğrenen çocuğun kendini test edebileceği bir ekran geliştirilmiştir. Bu ekranda, kullanıcıya harflerin isimleri rastgele dinletilmekte ve öğrenciden dinlediği harfin ikonu üzerine gelerek belirli süre durması istenmektedir. Öğrenci doğru cevap vermiş ise tebrik ederek yeni harf sorulmakta, yanlış harf seçmişse yanlış olduğu belirtilerek tekrar denemesi istenmektedir. Sonraki aşamada Kinect'ten elde edilen iskelet verisi yorumlanarak ellerden birisinin herhangi bir harf üzerinde belirli bir süre bekleyip beklememe işlemine bağlı uygulama kodlanmaktadır.

Microsoft Visual Studio platformunda geliştirilen eğitim uygulaması ve Kinect teknolojisi kullanılarak, kullanıcının tüm uygulamaları temassız bir şekilde yürütüp kullanabileceği; hesap makinesi, müzik orkestrası yerleşimi, insan vücudundaki organların yerleştirilmesi ve Powerpoint sunumunun yönetilmesi gibi uygulamalar geliştirilmiştir. Sunum işlemlerinde sununun açılması için ses özellikleri de eklenerek bir sununun ses ile otomatik bir şekilde çalışması ve yönetilmesi sağlanırken aynı işlemlerin yine temassız bir şekilde kontrolü de sağlanmıştır. Bu eğitim uygulamasında kullanıcıların daha çok yaparak öğrenmesi hedeflendiğinden kullanımı oldukça basit tutulmaya çalışılan Kinect Yazılım Geliştirme Kitinden (SDK) faydalanılmıştır (Çolak, Yüksel, Sunguray ve Gümüş, 2013).

SONUÇ VE TARTIŞMA

Algısal arayüzlerin bireylere sosyal hayatlarındaki gibi doğal etkileşim sunduğu göz önüne alındığında, algısal arayüzler sayesinde kullanıcıların becerilerini aşırı bilişsel yüke maruz kalmadan sergileyecekleri ve daha kolay öğrenebilecekleri düşünülmektedir (Turk ve Robertson, 2000). Bu bağlamda, algısal arayüz kullanımının bireylere kullanım ve kontrol kolaylığı sağlayıp öğrenmeyi destekleyeceği ön görülmektedir. Algısal arayüzlerin kullanımının ve kontrolünün kolaylığını sağlamak için de insanların ürünle olan etkileşimi mutlaka hesaba katılmalıdır (Olson ve Olson, 2003) ve algısal deneyimlerinin nasıl çalıştığına, makinelerin insan algısını nasıl değiştirebileceğine ve iyileştirebileceğine dikkat edilmelidir (Reeves ve Nass, 2000).

İlgili araştırmaların sonuçlarına bakıldığında, kullanıcının sistemle birebir etkileşim kurmasını sağlayan teknolojilerin öğrenme üzerinde daha etkili olduğu söylenebilir (Preece, Rogers ve Sharp, 2002). Kullanıcı ile etkileşimi ne kadar arttırırsak teknolojinin o ölçüde kullanıcıya fayda sağlayacağı da çıkarılabilecek diğer sonuçlardandır (Preece, Rogers ve Sharp, 2002). Öte yandan tasarlanan bir sistemin kullanılabilirliği ölçülürken çoktan seçmeli anketlerin her zaman yeterli olamayacağı, özellikle etkileşim ölçülmek istendiğinde kullanıcının etkileşim sürecini bölmeden yapılacak algısal ölçümlerin daha faydalı olduğu belirtilmektedir (Ghergulescu ve Muntean, 2014).

PRE-SERVICE SCIENCE TEACHERS' VIEWS TOWARDS SOCIOSCIENTIFIC ISSUES

Sibel ER NAS
Karadeniz Technical University Fatih Faculty of Education

Hava İPEK AKBULUT
Karadeniz Technical University Fatih Faculty of Education

ABSTRACT: The aim of this study is to uncover pre-service science teachers' views about socioscientific issues. The sample of the study consisted of 152 pre-service science teachers. An open ended questionnaire and interviews are used to gather data. Open ended questionnaire applied to 152 pre-service teachers while interviews are conducted with 7 pre-service science teachers on a voluntary basis. Open ended questionnaire consist of 3 questions. Interviews were recorded with recording devices. Interviews done with each of the pre-service science teachers took about 8-12 minutes. Data obtained from questionnaire and interviews were analyzed descriptively. In the analysis of survey data tables have been created within the framework of the common perceptions of pre-service science teachers. Frequency and percentiles are utilized in the creation of the tables. At the end of the study it has seen that most of the pre-service science teachers expressed socioscientific issues as nuclear energy, global warming and cloning.

Key words: socioscientific issues, pre-service science teachers.

FEN BİLGİSİ ÖĞRETMEN ADAYLARININ SOSYOBİLİMSEL KONULARA YÖNELİK GÖRÜŞLERİ

ÖZET: Bu çalışmanın amacı fen bilgisi öğretmen adaylarının sosyobilimsel konular hakkındaki düşüncelerini ortaya çıkarmaktır. Çalışmanın örneklemini 152 fen bilgisi öğretmen adayı oluşturmaktadır. Çalışmada veri toplama aracı olarak açık uçlu anket ve mülakatlardan yararlanılmıştır. Açık uçlu anket 152 öğretmen adayına uygulanırken, mülakatlar gönüllülük esasına göre seçilen 7 öğretmen adayı ile yürütülmüştür. Açık uçlu anket 3 sorudan oluşmaktadır. Mülakatlar ses kayıt cihazı ile kayıt edilmiştir. Her bir öğretmen adayıyla yapılan mülakatlar yaklaşık 8-12 dakika sürmüştür. Anket ve mülakatlardan elde edilen nitel bulgular betimsel analize tabi tutulmuştur. Anket verilerinin analizinde öğretmen adaylarının ortak görüşleri çerçevesinde tablolar oluşturulmuştur. Bu tabloların oluşturulmasında frekans ve yüzdelik dilimlerden yararlanılmıştır. Çalışma sonucunda öğretmen adaylarının sosyobilimsel konu olarak çoğunlukla nükleer enerji, küresel ısınma ve klonlamayı ifade ettikleri sonucuna varılmıştır.

Anahtar sözcükler: sosyobilimsel konu, fen bilgisi öğretmen adayları.

GİRİŞ

Bilim ve teknolojideki gelişmelere paralel olarak bilim, teknoloji ve toplum etkileşimi ile ortaya çıkan sosyal sorunlar tartışılmaya başlanmıştır. Bu konulardan klonlama (Sadler & Zeidler, 2004; Sürmeli & Şahin, 2010), genetiği değiştirilmiş organizmalar (Walker & Zeidler, 2007), küresel ısınma (Kılınç, Boyes & Stanisstreet, 2011), nükleer enerji (Kılınç, Boyes & Stanisstreet,2012; Topçu, Yılmaz-Tüzün & Sadler, 2011; Topçu, Sadler & Yılmaz- Tüzün, 2010) gibi konular ülkelerin ortak konuştukları sosyal ve tartışmalı konular haline gelmiştir (Kolsto, 2001). Bu konular hem sosyal hem de bilimsel faktörlerde merkezi role sahip oldukları için sosyobilimsel konu olarak adlandırılmıştır. Sosyobilimsel konular öğrencilerin bilimsel konular ile ilgili diyalog, tartışma ve düşünmelerini gerektirmektedir. Bu konular doğada tartışmalı ama ahlaki bir rolü gerektiren, karar verme sürecinde etik değerlerin de rol oynadığı durumlardan oluşmaktadır (Zeidler & Nichols, 2009).

1980'lerden beri fen- teknoloji ve toplum arasındaki bağ konusunda öğrencilere eğitim verilmektedir. Nitekim ülkemizde de 2004 yılında kabul edilen fen ve teknoloji öğretim programında da bu üç unsura ek olarak çevre alanı eklenmiş ve fen-teknoloji-toplum-çevre (FTTÇ) olarak bir öğrenme alanı oluşturulmuştur (Yetişir & Kaptan, 2008). Bu programda FTTÇ yaklaşımı bir bütün olarak yer bulurken 2013 yılında uygulanmaya başlayan fen bilimleri öğretim programında ise 6 alt alana ayrılmış ve sosyobilimsel konular da doğrudan programda bir alt alan olarak yer almıştır. Zeidler vd. (2005)'in çalışmasında sosyobilimsel konuların eğitimde kullanılmasının bilimin doğasına argümantasyon, değerler, ahlaki yargıları entegre etmede fen-teknoloji-toplum hareketinden daha iyi bir yol olduğunu göstermiştir (Simonneaux, 2010). Eğitimi, toplumu, ahlaki ve etik değerleri bir araya getiren ve bu değerler arasında bağ kurmayı sağlayan sosyobilimsel konular ile ilgili yurt içinde ve yurt dışında birçok çalışma yürütülmüştür (Choi, Cho & Kim, 2000; Zengin, Keçeci, Kırılmazkaya & Şener, 2011; Topçu, Muğaloğlu & Güven, 2014).

Fen eğitiminde Türkiye'de sosyobilimsel konular ile ilgili yapılan araştırmalar incelendiğinde genellikle fen öğretmen adaylarının sosyobilimsel konu örnekleri ve bu örnekler ile ilgili bilgi düzeylerinin, öğretim öz yeterliklerinin ve informal muhakeme yeteneklerinin incelendiği çalışmaların yürütüldüğü görülmüştür (Topçu, Muğaloğlu & Güven, 2014). Cebesoy & Dönmez Şahin (2013) yaptıkları çalışmada fen bilgisi öğretmen adaylarının sosyobilimsel konulara yönelik tutumlarının, cinsiyet ve sınıf düzeyi değişkenleri açısından incelemiş ve cinsiyet ve sınıf düzeyinin öğretmen adaylarının sosyobilimsel konulara yönelik tutumlarını etkilemediğini belirlemişlerdir. Zengin, Keçeci, Kırılmazkaya & Şener (2011) ilköğretim 7. sınıf öğrencilerinin bir sosyobilimsel konu olan nükleer enerji kullanımı, nükleer santrallerin riskleri ve faydaları hakkındaki farkındalıklarını ölçmek, arttırmak ve çevreye duyarlılıklarını geliştirmek amacıyla yürüttükleri çalışmanın sonucunda fen ve teknoloji derslerinde öğrencilerin bilinçlendirilmesi için sosyobilimsel konulara daha fazla yer verilmesi gerektiğini belirtikleri görülmektedir. Öğrencilerin sosyobilimsel konulara dikkatini çekmenin onların fene yönelik tutum ve fen ve teknoloji ile ilişkili kişisel ve sosyal problemlerle başa çıkma kabiliyetlerini de artırdığını göstermektedir (Choi, Cho & Kim, 2000).

Gençlerin alternatif çözümlerin riskleri ve kazanımları, elde edilen kanıtları sorgulama ve bu sorgulamalardan sonra sonuçlara ulaşarak doğru düşünceye ulaşma becerisini kazanmaları gerekmektedir (Dawson & Venville, 2010). Bu durumda onları en iyi şekilde yönlendirecek ve doğru bilgiyi sağlayacak kişiler eğitim kurumlarındaki öğretmenler olmaktadır. Öğretmenlerin de sınıflarında sosyobilimsel konular ile ilgili tartışma yürütebilmeleri ve öğrencileri yönlendirebilmeleri için konu ile ilgili güçlü bir altyapıya sahip olmaları gerekmektedir (Knippels, Severiens & Klop, 2008). Bu noktada öğretmen adaylarının eğitim fakültelerinde sosyobilimsel konularla ilgili bilgilendirilmeleri ve bu konular ile ilgili eksiklerinin giderilmesi gerekmektedir. Bu çalışmanın amacı öğretmen adaylarının sosyobilimsel konular ile ilgili düşüncelerini belirlemektir.

YÖNTEM

Yapılan çalışma nitel bir araştırma olup mevcut durumu betimlemek amacı ile yürütülmüştür. Bu çalışmada veri toplamak amacıyla açık uçlu anket ve yarı yapılandırılmış mülakatlardan yararlanılmıştır. Araştırmanın örneklemini fen bilgisi öğretmenliği programında öğrenim gören 152 (45 erkek, 107 kız) öğretmen adayı oluşturmaktadır. Çalışmaya katılan öğretmen adayları araştırma etiği çerçevesinde Ö1, Ö2, Ö3, Ö4, Ö5,……., Ö152 şeklinde kodlanmıştır.

Açık Uçlu Anket

Üç sorudan oluşan açık uçlu anket, 152 öğretmen adayına uygulanmıştır. Açık uçlu anketin geçerliliğini sağlamak amacıyla iki alan eğitimi (fen eğitimi ve biyoloji eğitimi) uzmanın görüşüne başvurulmuştur. Açık uçlu anket fen bilgisi öğretmenliğinde öğrenim gören 8 öğretmen adayına uygulanarak anketin anlaşılabilirliği belirlenmeye çalışılmıştır. Açık uçlu ankette öğretmen adaylarına aşağıda belirtilen 3 soru yöneltilmiştir.
1. Sosyobilimsel konu kavramını nasıl tanımlarsınız? Açıklayınız.
2. Sizce hangi konular sosyobilimsel konu kapsamına girer? Belirtiniz.
3. Sizce sosyobilimsel konuların özellikleri nelerdir? Açıklayınız.

Mülakat

Çalışma kapsamında yarı yapılandırılmış mülakatlardan yararlanılmıştır. Mülakatlar 7 öğretmen adayı (Ö9, Ö28, Ö45, Ö68, Ö71, Ö133, Ö141) ile yürütülmüştür. Yarı yapılandırılmış mülakatlarla açık uçlu anket sorularının desteklenmesi amaçlanmıştır. Öğretmen adayları ile yürütülen mülakatlarda gönüllülük esas alınmıştır. Mülakatlar bireysel mülakatlar şeklinde gerçekleştirilmiştir. Araştırma sürecinde veri kaybını önlemek açısından mülakatlar ses kayıt cihazı ile kaydedilmiş olup, her bir mülakat yaklaşık 8–12 dakika sürmüştür. Mülakat sorularının anlaşılabilirliğini belirlemek için 2 öğretmen adayı ile mülakatlar yürütülmüştür. Geçerlik çalışmaları kapsamında mülakat sorularının ilk hali fen eğitimi uzmanına inceletilmiştir.

Veri Analizi

Anket ve mülakatlardan elde edilen nitel bulgular betimsel analize tabi tutulmuştur. Anket verilerinin analizinde öğretmen adaylarının ortak görüşleri çerçevesinde tablolar oluşturulmuştur. Bu tabloların oluşturulmasında frekans ve yüzdelik dilimlerden yararlanılmıştır. Mülakat verilerinin analizi ise öğretmen adaylarının görüşleri önemlilik ve anlamlılık düzeyi dikkate alınarak analiz edilmiş ve bazı ifadeler tırnak işareti içinde aynen verilerek düzenlenmiştir.

BULGULAR

Elde edilen bulguların analizinde öncelikle anket sorusu yazılıp ardından öğretmen adaylarının ortak görüşlerinden yararlanılarak tablolar oluşturulmuştur.
"Sosyobilimsel konu kavramını nasıl tanımlarsınız? Açıklayınız." sorusuna öğretmen adaylarının verdikleri cevaplar analiz edilerek Tablo 1 oluşturulmuştur.

Tablo 1. Öğretmen Adaylarının Sosyobilimsel Konu Kavramına İlişkin Düşünceleri

Sosyobilimsel konu;	f	%
Toplumu ilgilendiren konulardır.	94	61.8
Bilimsel konulardır.	47	30.9
Fen konuları ile ilgilidir.	24	15.7
Evrenseldir.	23	15.1
Tartışmaya açık konulardır.	23	15.1
Belli bir grup insanı ilgilendiren konulardır.	4	2.6
İlgisiz cevap/ cevapsız	21	13.8

Tablo 1 incelendiğinde öğretmen adaylarının % 61,8' inin sosyobilimsel konu kavramını "Toplumu ilgilendiren konu" şeklinde tanımladıkları görülmektedir.

Sosyobilimsel konu kavramıyla ilgili yapılan mülakatlardan elde edilen bulgular aşağıda sunulmuştur. Mülakat yapılan öğretmen adaylarından 4'ünün sosyobilimsel konu kavramını toplumu ilgilendiren, 2'si toplumu ilgilendiren bilimsel konular ve 1'si ise toplumu ilgilendiren tartışmaya açık konular şeklinde açıkladıkları görülmüştür. Öğretmen adayı ifadelerine örnekler aşağıda sunulmuştur.

> "*Sosyobilimsel konu toplumun genelini ilgilendiren, toplumun geneli tarafından önemsenen ya da dikkat edilen konulardır.* " (Ö71)
> "*Sosyobilimsel konular bilimsel konulardır. Tüm toplumu ilgilendirirler. Sadece birkaç kişi ile ilgili değildirler. Bu tür konuların bilimsel bir alt yapısının olması gerekir. Kısacası tüm toplumu ilgilendiren, bilimsel konuları biz sosyobilimsel konu olarak tanımlayabiliriz.*" (Ö45)
> "*Bir konu sosyobilimsel olabilmesi için tartışmaya açık olması gerekir. Sosyobilimsel konu hakkında doğru veya yanlış demek olmaz. Çünkü bu konular tartışmalı konulardır. Tüm toplumla alakalıdırlar.*" (Ö141)

"Sizce hangi konular sosyobilimsel konu kapsamına girer? Belirtiniz." sorusuna öğretmen adaylarının verdikleri cevaplar analiz edilerek Tablo 2 oluşturulmuştur.

Tablo 2. Öğretmen Adaylarına Göre Sosyobilimsel Konular

Konular	f	%
Nükleer enerji	59	38.8
Küresel ısınma	24	15.7
Klonlama	21	13.8
Genetiği Değiştirilmiş Organizma (GDO)	16	10.5
İklim değişikliği	12	7.8
Genetik	10	6.5
Hidroelektrik santral (HES)	16	10.5
Kök hücre	17	11.1
Kürtaj	10	6.5
Aşı	8	5.2
İlgisiz cevap/ cevapsız	32	21.0

Tablo 2 incelendiğinde öğretmen adaylarının % 38,8'i sosyobilimsel konu olarak "nükleer enerji" ve % 15,7'si "küresel ısınma" konularını ifade etmişlerdir.

Hangi konuların sosyobilimsel konu kapsamına gireceğine yönelik yürütülen mülakat sorusundan elde edilen bulgular aşağıda sunulmuştur. Mülakat yapılan öğretmen adaylarından 3'ü nükleer enerjinin, 3'ü nükleer enerji ve küresel ısınmanın, 1'i ise hidroelektrik santral ve klonlamanın sosyobilimsel konu kapsamına girdiğini ifade etmiştir.

> "*Sosyobilimsel konu kapsamına tartışmalı konular girer. Bu nedenle nükleer enerjinin sosyobilimsel konu kapsamına girdiğini düşünüyorum. Birçok insan bu konuda tartışıyor. Kimine göre bu santraller kurulmalı, kimine göre ise kurulmamalıdır*. " (Ö9)
> "*Sosyobilimsel konular tüm toplumu ilgilendiren konular olduğuna göre nükleer enerji ve küresel ısınma sosyobilimsel konudur bence. Çünkü küresel ısınma tüm dünyanın sorunudur. Aynı şekilde nükleer enerji. Bu iki konuda tüm toplumla alakalıdır.* " (Ö45)
> "*Sosyobilimsel konu olarak hidroelektrik santral ve klonlamadan bahsedebilirim. Bu konular sosyobilimsel konulardır. Bu konuların bilimsel yönleri var. Tüm insanlığa açık ve evrensel boyutları da var.* " (Ö133)

"Sizce sosyobilimsel konuların özellikleri nelerdir? Açıklayınız." sorusuna öğretmen adaylarının verdikleri cevaplar analiz edilerek Tablo 3 oluşturulmuştur.

Tablo 3. Öğretmen Adaylarına Göre Sosyobilimsel Konuların Özellikleri

Sosyobilimsel konu özellikleri;	f	%
Toplumla ilgili	98	64.4
Nesnel	53	34.8
Tartışmaya açık	31	20.3
Güncel	30	19.7
Bilimsel	28	18.4
Evrensel	15	9.8
Disiplinler arası	10	6.5
Öznel	6	3.9
İlgisiz cevap/ cevapsız	30	19.7

Tablo 3 incelendiğinde öğretmen adayları sosyobilimsel konuların özelliklerini "toplumla ilgili" (% 64.4), "nesnel" (% 34,8) ve "tartışmaya açık" (%20,3) şeklinde ifade ettikleri görülmektedir.

Sosyobilimsel konuların özelliklerinin neler olacağına yönelik yürütülen mülakat sorusundan elde edilen bulgular aşağıda sunulmuştur. Mülakat yapılan öğretmen adaylarından 2'si sosyobilimsel konuların özelliklerini toplumla ilgili, 2'si toplumla ilgili, tartışmaya açık, 2'si toplumla ilgili, nesnel ve 1'i ise güncel konular olarak ifade etmişlerdir.

> "*Sosyobilimsel konular toplumla alakalıdır. Toplumlar içerisinde üretilirler.* " (Ö133)
> "*Bir konunun sosyobilimsel olabilmesi için tartışılması gerekir. Tartışılabilmek sosyobilimsel konu özelliğidir. Aynı şeklide tartışılabilmenin yanında toplumla ilgili de olmalıdır. Sosyobilimsel konu toplumla ilgili ve toplumca tartışılabilmelidir* " (Ö68)
> "*Sosyobilimsel konu bana toplumu ve nesnelliği ifade ediyor. Sosyobilimsel konuların en önemli özelliklerinden biri nesnel olmasıdır. Aynı zamanla toplumla ilgili olduğunu da ifade edebilirim.* " (Ö71)
> "*Sosyobilimsel konuların güncel olması gerekir. Güncel konular sosyobilimsel konular olabilir.*" (Ö28)

SONUÇ

Açık uçlu anketin 1. sorusuna verilen cevaplar incelendiğinde (Tablo1) öğretmen adaylarının sosyobilimsel konu kavramını tanımlarken en çok "Toplumu ilgilendiren konu" ve "Bilimsel konu" ifadelerini kullandıkları görülmektedir. Öğretmen adaylarının bu şekilde tanımlamalarda bulunmaları sosyobilimsel kavramından yola çıktıklarının bir göstergesi olabilir. Öğretmen adayları sosyobilimsel kavramının anlamını bilmeden sadece kelimeden yola çıkarak tanımlama yapmış olabilirler. Fen Bilimleri Dersi Öğretim Programında "sosyobilimsel konular" "*bilim ve teknoloji ile ilgili sosyo-bilimsel problemlerin çözümüne yönelik bilimsel ve ahlaki muhakeme becerilerini kapsamaktadır*" şeklinde ifade edilmektedir (MEB, 2013). Öğretmen adaylarının yaptıkları tanımlamalar ve mülakatlar incelendiğinde sosyobilimsel konu kavramına yönelik yeterli bilgiye sahip olmadıkları sonucuna varılabilir. Bu çalışmanın sonucuna paralel olarak, Sadler (2004) çalışmasında bireylerin sosyobilimsel konularla ilgili bilgi eksikliklerinin bulunduğunu belirtmektedir. Aynı şekilde, Kortland (1996) da öğrencilerin basit bir argüman oluşturma becerilerini incelediği çalışması sonucunda öğrencilerin sosyobilimsel konularla ilgili bilgi eksikliklerinin olduğunu tespit etmiştir.

Açık uçlu anketin 2. sorusu ile öğretmen adaylarına göre sosyobilimsel konu kapsamının belirlenmesi amaçlanmıştır. Öğretmen adaylarının bu soruya verdikleri cevaplar incelendiğinde (Tablo 2) öğretmen adaylarının nükleer enerji, küresel ısınma ve klonlama konularına daha çok vurgu yaptıkları görülmüştür.

Öğretmen adaylarının bu üç kavrama vurgu yapmalarına eğitim fakültelerinde aldıkları “Bilimin Doğası ve Öğretilmesi” ve “Genetik ve Biyoteknoloji” gibi derslerin içeriğinde çoğunlukla nükleer enerji, küresel ısınma, klonlama konularının tartışılmasının sebep olarak gösterilebileceği düşünülmektedir. Öğretmen adaylarının aldıkları dersler ile birlikte bu konulardaki bilgi seviyeleri ve farkındalıkları da artmaktadır (Cebesoy & Dönmez Şahin, 2013).

Anketin 3. sorusu ile öğretmen adaylarının sosyobilimsel konuların özellikleri ile ilgili görüşlerinin belirlenmesi amaçlanmıştır. Öğretmen adaylarının bu soruya verdikleri cevaplar ve mülakat verileri incelendiğinde sosyobilimsel konuların özelliklerini "toplumla ilgili", "tartışmaya açık" ve "nesnel" şeklinde ifade ettikleri görülmektedir. Sosyobilimsel konuların toplumu ilgilendiren, tartışmaya açık ve kişilerin kendi görüşlerini belirttikleri konular olması sebebiyle öğrencilerin sosyobilimsel konuların özelliklerini de bu şekilde gruplandırdıkları görülmüştür. Yapılan çalışmalarda da öğretmen adaylarının sosyobilimsel konuların eğitimde tartışma için ortam yaratacağını ve bu durumun konuların daha iyi anlaşılmasına yardımcı olacağını düşündükleri belirlenmiştir (Lee, Abd-EI-Khalick & Choi, 2006). Ayrıca sosyobilimsel konuların kişisel veya sosyal anlamda değerler, ahlaki ve etik öğeler, fayda- zarar dengesi gibi konularda karar vermeyi gerektirmesi toplum ve bilim dünyası arasında anlaşmazlığa sebep verebildiği için toplumla ilgili ve tartışmaya açık bir konu olarak nitelendirilmektedir (Sönmez & Kılınç, 2012).

ÖNERİLER

Son zamanlarda sıklıkla gündeme gelen sosyobilimsel konular ile ilgili öğretmen adaylarının gerek derslerde gerekse sosyal hayatlarında bilgi sahibi olmaları ve bilinçlendirilmeleri gerekmektedir.

Fen bilimleri öğretim programında yer alan FTTÇ öğrenme alanının bir alt boyutu olan sosyobilimsel konuların tanımı ve içeriği öğretim programında daha detaylı olarak anlatılmalıdır.

Öğretmen adaylarının sosyobilimsel konular ile ilgili okutulan derslerde edindikleri bilgileri öğretmen olduklarında hangi yöntem ve teknikleri kullanarak öğrencilerine kazandıracakları konusunda da bilgilendirilmeleri gerekmektedir.

CYBER SECURITY EDUCATION IN TURKEY

Mehmet SEVRİ
Gazi University

Nurettin TOPALOĞLU
Gazi University

ABSTRACT: Widespread use of technology have made information security and more specifically the security of critical infrastructure indispensable for countries. Thus, it is important to have well-trained cyber security experts and national software and systems that provide security for computer technologies. The importance of cyber security education becomes evident considering global and more recently local cyber attacks. Developed countries value the importance of cyber security and use different methods in educating their own security experts. With a newly developed consciousness for cyber security in Turkey, it is predicted that 20.000 experts are needed to work in this field. In Turkey, education of cyber security is generally provided by private sector. The most appropriate institutions for training qualified staff and enough experts to meet the country's needs are the universities. Although some universities in Turkey began education on cyber security in the last years, it is not sufficient. This paper examines the importance of cyber security education, Turkey's condition in cyber security education and developed countries' policies and methods for cyber security education.

Key words: cyber security, information security, education

TÜRKİYE' DE SİBER GÜVENLİK EĞİTİMİNİN DURUMU

ÖZET: Teknolojinin yaygın kullanımı, ülkeler açısından bilgi güvenliğini ve daha özelde kritik altyapı güvenliğini vazgeçilemez unsurlar haline getirmiştir. Bu bakımdan iyi yetişmiş siber güvenlik uzmanlarına sahip olmak, bilgisayar teknolojilerinin güvenliğini sağlayan yazılım ve sistemlerin milli olması önem arz etmektedir. Dünyadaki siber saldırılar ve son yıllarda ülkemizde yaşanan siber saldırılar göz önüne alındığında, siber güvenlik eğitiminin önemi ortaya çıkmaktadır. Gelişmiş ülkeler siber güvenlik konusuna gereken önemi göstermekte ve güvenlik uzmanlarının eğitiminde farklı metotlar kullanmaktadır. Ülkemizde siber güvenlik bilinci yeni oluşmaya başlamış olmakla birlikte bu alanda çalışacak 20.000 uzmana ihtiyaç duyulduğu öngörülmektedir. Türkiye'de siber güvenlik alanındaki eğitimler genelde özel firmalar tarafından verilmektedir. Nitelikli eleman ve ülke ihtiyacını karşılayacak sayıda uzman yetiştirilmesi işini yapabilecek en uygun kurum üniversitelerdir. Ülkemizde son yıllarda, bazı üniversiteler siber güvenlik konusunda eğitim vermeye başlamış olmakla birlikte, ihtiyaçları karşılama hususunda yeterli düzeye ulaşılamamıştır. Bu çalışmada siber güvenlik eğitiminin önemi, Türkiye'nin siber güvenlik eğitimindeki durumu ve gelişmiş ülkelerin siber güvenlik eğitiminde izledikleri politikalar ve yöntemler incelenmiştir.

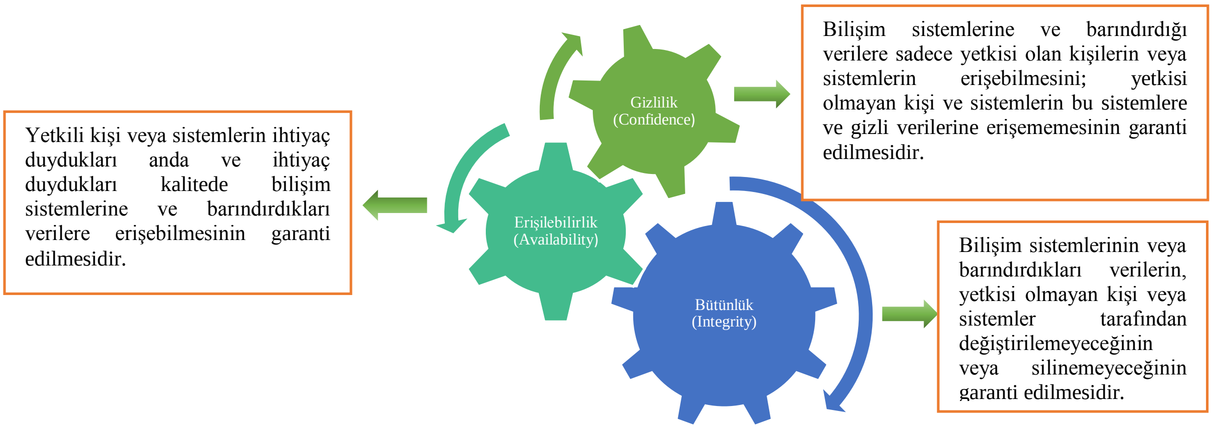
Anahtar sözcükler: siber güvenlik, bilgi güvenliği, eğitim

GİRİŞ

Teknolojinin hızlı gelişimi, dijital ortamda bilgi ve haber iletiminin dünyanın en ücra köşelerine dek yayılmasını sağlamıştır. Teknolojideki bu hızlı gelişme, sorunlarını da beraberinde getirmiştir. Teknolojinin yoğun kullanımından kaynaklanan sosyal, psikolojik vb. sorunlar bir yana, teknik olarak en önemli sorunu bilgi ve iletişim güvenliği sorunu oluşturmaktadır (Sevgi, 2001). Haberleşme ve bilişimde temel sorunlardan birisi siber güvenliktir. İnternet gibi dünyanın hemen her noktasına açık erişimin sağlandığı bir ortamda siber güvenliğin sağlanması kritik bir öneme sahiptir. Teknoloji geliştikçe bilgi çoğalmakta, bilgiye erişim, paylaşma, koruma, eleme, vb. konular önem kazanmaktadır. Bilgi teknolojilerine giderek artan bağımlılık, yönetimleri değişik güvenlik önlemleri almaya yöneltmektedir. İnternet üzerinden banka fon transferleri, bireysel bankacılık işlemleri, uçak rezervasyonları, sanal ortamda alışveriş gibi ekonomik ve toplumsal yaşamın her alanında olduğu kadar, ulusal savunma ve ulusal güvenlik konularında da güvenlik bir numaralı sorun haline gelmiştir (Bektaş, 2006).

Siber güvenlik, siber ortamda, kurum, kuruluş ve kullanıcıların varlıklarını dışardan veya içeriden gelebilecek saldırılara karşı korumak amacıyla kullanılan cihazlar, yazılımlar, araçlar, güvenlik stratejileri, güvenlik politikaları, güvenlik kavramları, kılavuzlar, risk yönetimi, eğitimler ve güvenlik için kullanılan teknolojiler bütünü olarak tanımlanmaktadır. Kurum, kuruluş ve kullanıcıların varlıkları, bilgi işlem ekipmanları, kurum veya kuruluş personelini, altyapıları, uygulamaları, hizmetleri, elektronik haberleşme sistemlerini ve siber ortamda iletilen ve/veya depolanan bilgilerin tümünü kapsamaktadır. Siber güvenlik, kurum, kuruluş ve kullanıcıların varlıklarına karşı siber ortamda bulunan güvenlik risklerine karşı koyabilecek güvenlik özelliklerinin bulundurulması, devam ettirilmesi ve yeni saldırı türlerine karşı güncellenebilmesini amaçlamaktadır (ITU, 2008; Ünver & Canbay, 2010).

Şekil 1'de görüleceği üzere siber güvenliğin; gizlilik, bütünlük ve erişilebilirlik olmak üzere temelde üç saç ayağı bulunmaktadır. Bu bakımdan siber güvenlik; siber ortamı oluşturan bilişim sistemlerinin saldırılardan korunmasını, bu ortamda işlenen bilginin gizlilik, bütünlük ve erişilebilirliğinin güvence altına alınmasını, saldırıların ve siber güvenlik olaylarının tespit edilmesini, bu tespitlere karşı tepki mekanizmalarının devreye alınmasını ve sonrasında ise sistemlerin yaşanan siber güvenlik olayı öncesi durumlarına geri döndürülmesini ifade etmektedir.



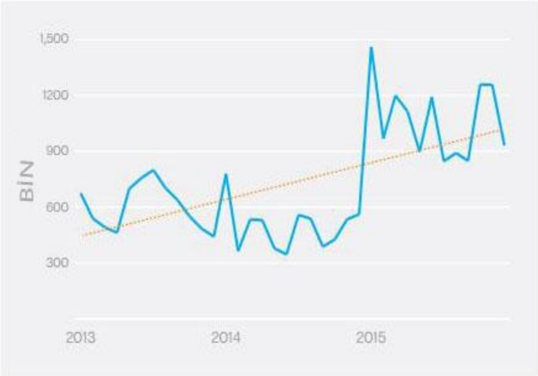
Şekil 1. Siber Güvenliğin Temel Unsurları

Siber alanın bir sınırı bulunmadığı için devletler açısından önemli bir problem teşkil etmekte olup, devletlerin zaman ve mekân sınırlaması bulunmayan, ne zaman başlayıp, ne zaman biteceği belli olmayan siber saldırılara karşı etkili önlemler ve çözümler getirmeleri gerekmektedir. Devletler açısından bakıldığında, siber güvenlik ile alakalı gelecek tehditler ve bunlara karşı alınacak tedbirlerle ilgili değişik algılama seviyeleri ve yöntemler ortaya çıkmaktadır. Siber ortamda gerçekleştirilecek bir saldırıyı askeri savaş sebebi sayacağını ve bu saldırılara konvansiyonel silahlar ile karşılık vereceğini deklare eden devletlerin (Pentagon, ABD) yanı sıra, siber ortamdan gelen saldırılara yine siber ortamda karşılık verilmesinin gerektiğini savunan yaklaşımlarda bulunmaktadır. Farklı bakış açıları beraberinde saldırıların kaynağının neresi olduğu, amacının ne olduğu, neyi hedeflediği ve bu saldırılara karşı nasıl karşılık verilmesi gerektiği gibi tartışmalarını da beraberinde getirmektedir (ESSARP, 2013; Öğün & Adem, 2013).

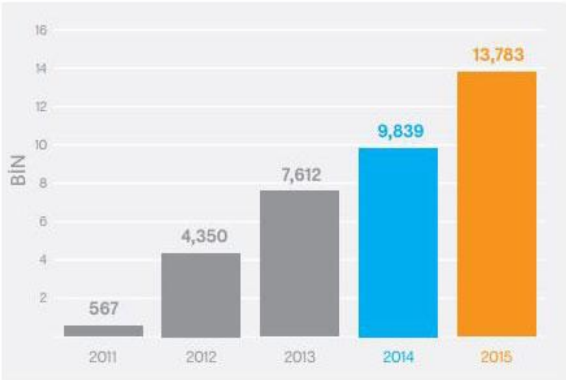
SİBER GÜVENLİK EĞİTİMİNİN ÖNEMİ

Her şeyin teknolojiye bağımlı hale geldiği günümüzde, çok fazla emek harcamadan ve maliyetsiz şekilde yüksek maddi kazanımların elde edildiği bilgisayar korsanlığı yetenekli kişiler için cazip hale gelmiştir. Son zamanlarda sık yaşanan fidye zararlı yazılımı incelendiğinde bu durum net şekilde görülmektedir. ZDnet araştırmacıları tarafından fidye zararlı yazılımın bir türevi olan Cryptolocker ile fidye talep edilen 4 tane Bitcoin hesabı takip edilmiş olup, 15 Ekim ile 18 Aralık 2013 tarihleri arasında bu hesaplara toplam 41928 bitcoin, yani o günkü değeri ile yaklaşık 27 milyon USD (Amerikan Doları) gönderildiği tespit edilmiştir (Blue, 2013). Sadece 3 ayda bu kadar para toplanması diğer bilgisayar korsanlarının iştahını kabartmakta ve buna benzer zararlı yazılım türevleri her geçen gün artmaya devam etmektedir. Siber ortamda gerçekleşen saldırılar her geçen gün daha da karmaşıklaşarak artmakta ve daha hedef odaklı hale gelmektedir.

Symantec firmasının 2016 internet güvenliği tehdit raporuna (Symantec, 2016) göre Android tabanlı mobil zararlı yazılım çeşidindeki artış önceki yıl %29 iken 2015 yılında toplam %40 artış olmuştur. Şekil 2'de 2011 yılından itibaren ortaya çıkan yeni Android tabanlı mobil zararlı yazılım çeşidi gösterilmektedir. Aynı rapora göre 2015 yılında günlük engellenen web saldırısı sayısı ortalama 1 milyon olup, 2014'e göre %117 (iki katıdan fazla) artış olduğu tespit edilmiştir. Şekil 3'de 2013 yılından itibaren günlük engellenen web saldırılarının grafiği gösterilmektedir.



Şekil 2. Android Tabanlı Zararlı Yazılım Çeşitleri



Şekil 3. Günlük Engellenen Web Saldırı Sayısı

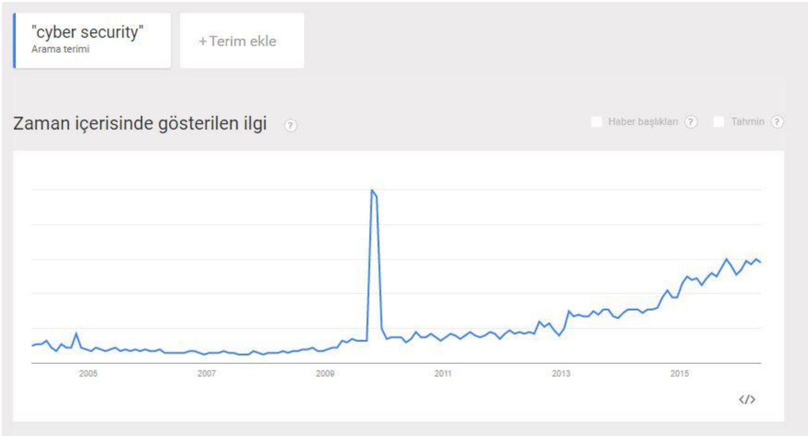
Ülkeler açısından bakılacak olursa, Sun Tzu' nun meşhur Savaş Sanatı (Tzu, 2011) kitabında geçen "En iyi zafer savaşmadan kazanılan zaferdir" sözü ekseninde, gelişmiş ülkeler arasındaki konvansiyonel savaşlar günümüzde yerini bilgi ve istihbarat savaşlarına bırakmıştır. Devletlerarasında gerçekleşen bilgi savaşlarının en önemli aracını teknoloji ve siber ortam oluşturmaktadır. Devlet arasında gerçekleşen siber saldırılara çok çarpıcı örnekler bulunmaktadır. Bu saldırılardan ilk akla geleni, Rusya tarafından gerçekleştirildiği tahmin edilen ve 27 Nisan 2007 yılında Estonya'ya gerçekleştirilen ve bankacılık, devlet kurumları, radyo ve televizyon istasyonları gibi kritik yerleri hedef alan, Estonya'nın siber alandaki altyapısını çökerten siber saldırıdır. Bu saldırı sonrasında NATO tarafından Estonya merkezli Siber Savunma Mükemmeliyet Merkezi kurulmuştur. Ayrıca bu saldırının ardından NATO siber güvenlik alanındaki çalışmalara hız vererek 2011 yılında siber güvenlik doktrinini açıklamıştır. Bu doktrine göre, NATO önemli tesisleri, altyapıları ve insan hayatını tehlikeye sokan herhangi bir siber saldırıyı silahlı bir saldırıyla eş tutacağını ve gerekirse bu türdeki siber saldırılara silahla karşılık vermekten kaçınmayacağını açıklamıştır. 2011 yılında gerçekleşen ve devlet desteği olmadan gerçekleştirilmesinin imkânsız olduğu düşünülen, İran devletinin nükleer faaliyetlerini hedef alan, Stuxnet saldırısı, siber saldırıların gücünü ve etkisini tüm ülkelere göstermiştir.

Ülkeler arasında bu tür saldırıların yanı sıra istihbarat amaçlı siber saldırılarda yoğun olarak yaşanmaktadır. Teknolojide yaşanan gelişmeler askeri harekât ortamına farklı bir mekân boyutu eklemiş ve harplerin icra edildiği kara, deniz ve hava gibi fiziksel mekânlara ek olarak bütün bu alanlarda icra edilen harekâtları doğrudan etkileyen yeni bir boyut olan siber ortamı kazandırmıştır (Bayraktar, 2014; Özteke, 2013). Siber istihbarat alanında tasarlanmış en gelişmiş dinleme ağı; Avustralya, Kanada, Yeni Zelanda, Birleşik Krallık ve Amerika Birleşik Devletleri arasında imzalanan UKASA sözleşmesi çerçevesinde hayata geçirilen ECHELON (Sloan, 2001) ve Amerika Birleşik Devletleri tarafından geliştirilen istihbarat toplama yazılımı olan PROMIS (Prosecutor's Management Information System) programıdır.

DÜNYA'DA SİBER GÜVENLİK EĞİTİMİ

Siber güvenliğin öneminden dolayı birçok ülkede farklı yöntemlerle siber güvenlik uzmanı yetiştirilmektedir. Siber güvenlik konusunda eğitim ve araştırmaya yönelik olarak üniversitelerde lisans, yüksek lisans, doktora düzeylerinde programlar açılmakta, üniversitelerin ve devlet kurumlarının bünyesinde araştırma enstitüleri ve birimler kurulmaktadır. Bu eğitimlerin yanı sıra ülkeler siber saldırı anında güvenliklerini sağlamak ve gerektiğinde karşı saldırı yapmak için siber ordular kurmaya başlamışlarıdır. 2011 yılı Haziran ayında Çin tarafından 30 kişilik ekiple kendi siber ordusunu kurduğunu resmen açıklamış olup, günümüzde ekip sayısının 9000'e çıktığı tahmin edilmektedir. ABD'nin de direk ABD Genelkurmay Başkanlığına bağlı ve askerler tarafından yönetilen, 12 bin kişinin görev yaptığı tahmin edilen siber ordusu uzun süredir mevcut olup, askeri operasyonlarda istihbarat ve saldırı amaçlı görev yaptıkları bilinmektedir. Bunun yanı sıra Rusya, İran, İsrail, Kuzey Kore, Suriye ve bazı Avrupa ülkelerinin kendi siber ordusuna sahip olduğu bilinmektedir.

Dünya'daki siber güvenliğe olan ilginin 2004 ile 2016 yılları arasındaki değişimi Google Trend 'den sağlanan eğilim grafiği ile Şekil 4' de gösterilmiştir. Şekil 4'dende anlaşılacağı üzere insanların siber güvenliğe olan ilgisi her geçen yıl artış göstermektedir. 2009 yılı ekim ayında görülen tepe noktasının oluşma nedeni ABD başkanı Barack Obama tarafından o ayın Ulusal Siber Güvenlik Bilinçlendirme Ayı ilan edilmesi dolayısıyla insanların arama eğilimlerinde meydana gelen artıştan kaynaklanmaktadır.



Şekil 4. Dünya'da Siber Güvenliğe Olan İlginin Değişimi

Dünyada siber güvenlik eğitimi veren kurumlar incelendiğinde eğitimler genellikle lisans düzeyinde yoğunlaşmakla birlikte yüksek lisans, doktora ve ön lisans düzeyinde eğitim veren veya sertifikalı kurs düzenleyen üniversiteler ve eğitim kurumları bulunmaktadır. Dünyada siber güvelik eğitimi verilen programların ülkelere göre dağılımı Tablo 1' de verilmiştir (Orakcı, Kök, & Çakır, 2016). Buna göre siber güvenlik alanında en çok eğitim programını barındıran ülke ABD olup toplam 85 tane üniversite programı ve 25 tane sertifika programı bulunmaktadır. ABD'yi İngiltere 38 program ile takip ederken, diğer ülkelerin program sayıları bu ülkelerin çok gerisinde kalmaktadır. Kanada'nın siber güvenlik uzmanı ihtiyacını üniversite programlarından ziyade daha çok sertifika programları ile gidermeye çalıştığı görülmektedir.

Tablo 13. Siber Güvenlik Eğitimi Programlarının Ülkelere Göre Dağılımı

Ülkeler	Ön Lisans	Lisans	Y. Lisans	Doktora	Sertifika
Kanada	-	3	1	-	13
USA	13	46	23	3	25
İngiltere	-	23	14	1	-

Toplam	**13**	**97**	**61**	**4**	**38**

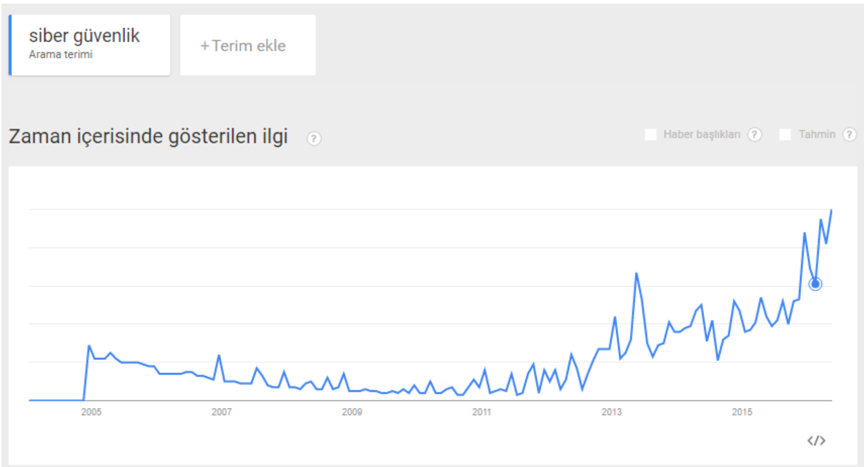
Siber güvenlik eğitim programlarının kıtalara göre dağılımı Tablo 2' de gösterilmiştir (Orakcı, Kök & Çakır, 2016). Buna göre siber güvenlik eğitiminin en yaygın olduğu kıta ABD' yi barındırması nedeniyle Amerika kıtası olup toplam 128 program bulundururken, Avrupa kıtasında toplam 64 eğitim programı bulunup diğer kıtaların toplam program sayısının neredeyse 3 katı program bulundurmaktadır.

Tablo 2. Siber Güvenlik Eğitimi Programlarının Kıtalara Göre Dağılımı

Kıtalar	Ön Lisans	Lisans	Y. Lisans	Doktora	Sertifika	Toplam
Amerika	13	49	24	4	38	128
Avrupa	-	40	23	1	-	64
Asya	-	2	6	-	-	8
Okyanusya	-	6	7	1	-	14
Afrika	-	-	1	-	-	1

TÜRKİYE' DE SİBER GÜVENLİK EĞİTİMİNİN DURUMU

Türkiye'de 20 Kasım 2012 yılında resmi gazetede yayınlanarak yürürlüğe giren bakanlar kurulu kararı ile Siber Güvenlik Kurulu kurulmuş olup, bu kurul tarafından Ulusal Siber Güvenlik Stratejisi ve Eylem Planı hazırlanması kararlaştırılmıştır. Bu karar, ülke olarak siber güvenlik alanında atılmış en etkili ilk adım olup, ilgili strateji belgesi ile kritik altyapılar belirlenmiş olup, kurumların siber güvenlik alanında yapması gerekenler açıklanmıştır. İlgili belge siber güvenliğin sürdürülebilirliği açısından üniversitelerin siber güvenlik alanında uzman yetiştirmelerini tavsiye etmektedir. Türkiye' de Türk Silahlı Kuvvetleri bünyesinde TSK Siber Savunma Merkezi Başkanlığı oluşturulmuştur. Bunun yanında siber güvenlik konusunda Ulaştırma Denizcilik ve Haberleşme Bakanlığı, Bilgi Teknolojileri ve İletişim Kurumu, Siber Güvenlik Kurulu, Ulusal Siber Olaylara Müdahale Merkezi (USOM) ve TÜBİTAK gibi kurumlar da çalışmalar ve düzenlemeler yapmaktadır. Şekil 5'de Google Trend aracılıyla 2004 yılından günümüze kadar Türkiye' den gerçekleşen "siber güvenlik" aramalarının eğilim grafiği gösterilmektedir. Şekil 5'den görüleceği üzere Türkiye'de siber güvenliğe olan ilgi Dünyadaki ilgiye paralellik göstermekte ve her geçen gün artmaktadır.



Şekil 5. Türkiye'de Siber Güvenlik Terimi Aramalarının Eğilimi

Cisco firması tarafından 2014 yılında yayınlanan bir tavsiye raporuna (Cisco, 2014) göre 5 yıl içinde dünya genelinde 1 milyon siber güvenlik uzmanına ihtiyaç duyulacaktır. Aynı rapora göre Türkiye için 20 bin siber güvenlik uzmanına ihtiyaç bulunmaktadır. Türkiye'de siber güvenlik konusunda en önemli problemi yetişmiş siber güvenlik uzmanı ihtiyacı oluşturmaktadır. Ülkemizin diğer sektörlerden farklı olarak Siber Güvenlikle ilgili eleman yetişme potansiyeli yaklaşık % 1 dir. Son iki yılda Üniversitelerin ilgili bölümlerinden mezun olup Siber Güvenlik sektöründe yer alanların oranı % 0,7 dir (Derneği, 2016). Bu da ulusal siber güvenlik vizyonunun tamamlanmasının önünde en büyük engel olarak gözükmektedir.

Türkiye'de siber güvenlik alanında uzman yetiştirmeye yönelik kamu ve özel üniversitelerde yüksek lisans ve doktora programları açılmıştır. Ülkemizde bulunan siber güvenlik eğitimine ilişkin programlar Tablo 3' de gösterilmekte olup, Adli Bilişim gibi siber güvenlik alanına yakın programlara tabloda yer verilmemiştir. Buna göre Türkiye'de 13 yüksek lisans ve bir doktora programı bulunmakta olup, lisans veya ön lisans seviyesinde hiç programa rastlanmamıştır. Diğer ülkeler ile karşılaştırıldığında Türkiye'nin ortalamanın üstünde bulunduğu görülmekte olup, halen kendi ihtiyacını karşılayacak uzman yetiştirmek için yeterli program sayısına ulaşılamamıştır. Bunun yanı sıra özel eğitim kurumları ile birlikte TSE (Türk Standartları Enstitüsü) bünyesinde "Beyaz Şapkalı Hacker" eğitimi ile birlikte çeşitli sertifika programları düzenlenmektedir (TSE, 2015). Bu sertifika programları aracılıyla Ulusal Siber Güvenlik Stratejisi ve Eylem Planı çerçevesinde kurumlarda kurulması zorunlu hale getirilen SOME'lere (Siber Olaylara Müdahale Ekibi) uzman eleman yetiştirilmesi planlanmaktadır.

Tablo 3. Türkiye'de Bulunan Siber Güvenlik Programları

Üniversite	Enstitü	Program	YL/DR
Yaşar Ünv.	Fen Bilimleri Enstitüsü	Siber Güvenlik	YL
İstanbul Ticaret Ünv.	Fen Bilimleri Enstitüsü	Siber Güvenlik	YL

SONUÇ

Siber güvenliğinin ülkeler ve kurumlar açısından göz ardı edilemeyecek bir unsur haline geldiği günümüzde bu alanda yaşanan en büyük sorun yetişmiş uzman sorunudur. Bu çalışmada siber güvenlik eğitiminin dünyadaki durumu ve ülkemizdeki durumu ortaya koyulmuştur. Dünyada üniversitelerde çeşitli program seviyelerinde eğitim verilmekte olup, en çok programın bulunduğu ülke ABD'dir. Türkiye'de siber güvenlik ve bilgi güvenliği alanında yüksek lisans ve doktora programı düzeyinde programlar açılmış ve uzman yetiştirilmeye başlanmıştır. Bununla birlikte sektörün önemi ve gün geçtikçe hızlı şekilde artan ihtiyaç göz önünde bulundurulduğunda çok daha fazla uzmana ihtiyaç duyulduğu görülmektedir. Sektörün ihtiyacını karşılayacak kalifiye eleman yetiştirme konusunda en büyük sorumluluk üniversitelere düşmektedir. En kalifiye elemanların lisans programlarından yetiştirileceği göz önüne alındığında, üniversitelerin iş sıkıntısı yaşanmayacak olan siber güvelik alanına yönelik lisans hatta ön lisans programları açmaları gerekmektedir.

Erzincan University

Yasin SOYLU
AtatürkUniversity

ABSTRACT: Despite of great improvements in ICT (information and communications technology) the textbooks continue to be one of the most important learning materials (Aslan, 2010). It is stated that the presence of the historical development of math concepts in renewed middle school mathematics curriculum develops positive attitudes towards math among students (MEB, 2013). In other words, it can be said that the presence of the activities about the history of mathematics in the math textbooks is important for the development of positive attitudes towards mathematics among students. In this regard, the aim of this study is to thematically examine the activities about the history of mathematics in the math textbooks. In this study, the case study method, one of the qualitative research designs was used. In this study, in order to identify how to take place the history of mathematics in the 6th grade textbooks, the textbooks from two publishers were examined. The existence of the activities about the anecdotes, the old methods and the historical development of concepts of scientists is observed in the end of the study. It is observed that the activities take place mostly in the introduction of lesson of the math textbooks so as to get students' attention and to increase their interest and motivation. Moreover, the history of mathematics was also found in the sample questions and project works. However, it is stated that there aren't enough problem solving techniques in the history of mathematics in the textbooks. Additionally, it can be said that the activities concentrate more on teaching numbers and geometry. In the result of the study, it seems that there aren't enough activities about the history of mathematics in the 6th grade textbooks.

Key words: History of mathematics, lesson book, learning activities

ALTINCI SINIF MATEMATİK DERS KİTAPLARINDA MATEMATİK TARİHİNİN YERİ

ÖZET: Bilgi ve iletişim teknolojilerinde meydana gelen büyük gelişmelere rağmen ders kitapları en önemli öğrenme materyallerinden biri olmaya devam etmektedir (Aslan, 2010). Yenilenen Ortaokul Matematik Dersi Öğretim Programı'nda ise matematik derslerinde kavramların tarihsel gelişimlerine yer vermenin öğrencilerin matematiğe karşı tutumlarını olumlu yönde geliştireceği ifade edilmiştir [MEB, 2013]. Yani matematik ders kitaplarında matematik tarihi etkinliklerinin yer almasının öğrencilerin matematiğe olan bakış açılarının olumlu yönde gelişmesi açısından önemli olduğu söylenebilir. Bu bağlamda bu çalışmanın amacı altıncı sınıf matematik ders kitaplarında yer alan matematik tarihi etkinliklerinin tematik açıdan incelenmesidir. Bu çalışmada nitel araştırma desenlerinden durum çalışması yöntemi kullanılmıştır. Bu çalışmada altıncı sınıf ders kitaplarında matematik tarihine nasıl yer verildiğini belirlemek amacıyla iki yayınevinin öğrenci ders kitapları incelenmiştir. Çalışma sonunda ders kitaplarında bilim adamlarının hayatlarını, eski yöntemleri ve kavramlarının tarihsel gelişimlerini ele alan etkinliklerin yer aldığı görülmüştür. Matematik ders kitaplarında etkinliklere, daha çok öğrencilerin derse karşı dikkatlerini çekme, ilgilerini ve motivasyonlarını artırma amacıyla dersin giriş bölümünde yer verildiği görülmüştür. Ayrıca matematik tarihine soru örnekleri içerisinde ve proje ödevlerinde de rastlanmıştır. Fakat ders kitaplarında matematik tarihinde yer alan problem çözme tekniklerine yeterince yer verilmediği de belirlenmiştir. Bunlara ek olarak etkinliklerin daha çok sayılar ve geometri öğrenme alanlarında yoğunlaştığı söylenebilir. Çalışma sonucunda altıncı sınıf matematik öğrenci ders kitaplarında matematik tarihi etnikliklerine yeterince yer verilmediği görülmektedir.

Anahtar sözcükler: Matematik tarihi, ders kitabı, etkinlik

GİRİŞ

Matematik anlaşılması ve öğrenilmesi zor bir ders olduğundan, onu öğrencilere sevdirecek yaklaşımlara ihtiyaç vardır (Alkan, 2011). Bu nedenle, sadece sayılara ve sembollere bağlı olarak matematiğin ele alınması, öğrencilerin matematiği daha fazla sevmesini sağlamayacaktır (Yevdokimov, 2007; Gazit, 2013). Milli Eğitim Bakanlığı tarafından hazırlanan son müfredatta da öğrencilerin bilgiyi işlemesi, sorgulaması, derinlemesine öğrenmesi ve araştırma yapması gibi benzer bakış açıları üzerinde durulmuştur (Pesen, 2008). Dolayısı ile matematik derslerinde klasik matematik öğretimi bakış açısı dışında bazı yaklaşımlara da yer vermek, matematiğin derinlemesine öğrenilmesi açısından önem arz etmektedir. Kuşkusuz bu yaklaşımlardan biri de matematik tarihidir (Marshall, 2010; Swetz, 1994; Bidwell, 1993; Fauvel, 1991).

Matematik tarihi, matematiğin gelişim süreçlerini, matematiğe katkı yapmış kişilerin hayatlarını ve çalışmalarını, matematiğin sosyal ve kültürel boyutunu ele alan bir bilim dalıdır (Bidwel, 1993). NCTM (2000) matematik tarihinin matematik öğretiminde kullanılmasın avantajlarını;

a) öğrencilerin derse olan motivasyonlarını arttırması.
b) geçmiş dönemlerde matematiğin gelişim aşamalarına bağlı olarak bazı zorlukları fark edilmesi ve buradan hareketle günümüzle ilişki kurabilme.
c) matematiksel bilginin ortaya çıkış aşamalarına tanıklık ederek matematiğin bir insan ürünü olduğunu görebilme.
d) tarihsel problemler çerçevesinde matematiksel düşünmeyi geliştirme alt başlıkları kapsamında yer verilmiştir.

Yenilenen Ortaokul Matematik Dersi Öğretim Programı'nda ise matematik derslerinde kavramların tarihsel gelişimlerine yer vermenin öğrencilerin matematiğe karşı tutumlarını olumlu yönde geliştireceği ifade edilmiştir [MEB, 2013]. Yani, matematik tarihi derslerde konuların başında motivasyonu arttırmak için derse hazırlık aşamasında, tarihsel problem çözümüyle derslerde derinlemesine bir bakış açısı geliştirme için kullanılabilir (Swets, 1994; Tzanakis ve Arcavi, 2002).

Bilgi ve iletişim teknolojilerinde meydana gelen büyük gelişmelere rağmen ders kitapları en önemli öğrenme materyallerinden biri olmaya devam etmektedir (Aslan, 2010). Matematik tarihi ders kitaplarında konuya göre farklı bölümlerde kullanılmaktadır. Ders kitaplarında matematik tarihine yer vermek, öğretmenlerinde bu kapsamda derslerinde matematik tarihini kullanmalarını sağlayacaktır. Böylece bu kitaplar matematik tarihi kullanma noktasında yetersiz olan öğretmenlere (Avital, 1995; Fried, 2001) bir rehber olacaktır. Ülkemizde de son dönemde yapılan bazı revizyonlarla matematik tarihi ders kitaplarında yer bulmaya başlamıştır (Baki ve Bütüner, 2013). Yani ders kitaplarında matematik tarihi etkinliklerine yer verilmesinin hem öğrencilerin kavramları daha iyi öğrenmesine hem de matematiğe karşı olan tutumlarının gelişmesine katkı sağlayacağı söylenebilir. Bu bağlamda bu çalışmanın amacı altıncı sınıf matematik ders kitaplarında yer alan matematik tarihi etkinliklerinin tematik açıdan incelenmesidir.

YÖNTEM

Çalışmanın bu bölümünde, araştırmanın yöntemi, veri toplama ve analiz tekniklerine yer verilmiştir.

Araştırmanın Deseni

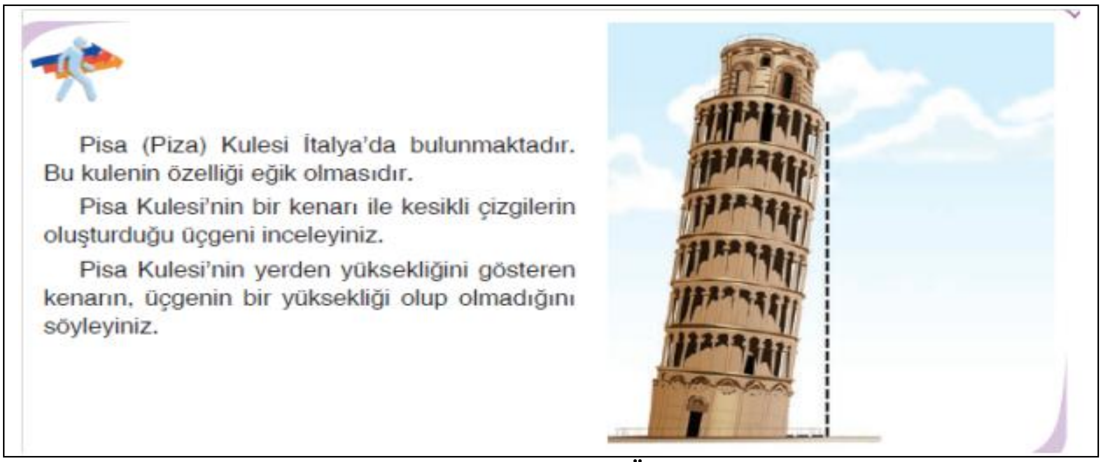
Bu araştırmada nitel araştırma yaklaşımına dayalı durum çalışması yöntemi kullanılmıştır. Nitel araştırma yaklaşımı, sosyal yaşamı ve insanla ilgili problemleri kendine özgü metotlarla sorgulayan ve anlamlandıran süreçtir (Creswell, 1998). Araştırmada nitel yaklaşımın benimsenmesinin sebebi; nitel araştırmalarda, belirli bir içeriğin derinlemesine olarak irdelenmesi (Yıldırım & Şimşek, 2011) ve zengin veri elde etmeye imkân veren yaklaşım olması gösterilebilir.

Veri Toplama

Bu çalışmada nitel veri toplama tekniklerinde doküman incelemesi yöntemi kullanılmıştır. Doküman incelemesi araştırılması hedeflenen olgu ve olaylar hakkında bilgi edinilmesini sağlayan yazılı, sözlü ve görsel materyallerin incelenmesidir (Yıldırım&Şimşek, 2011).Bu bağlamda bu çalışmada veri toplama sürecinde iki yayın evine ait ders kitaplarından yararlanılmıştır. Bulgular kısmında yayın evlerinin isimleri verilmemiştir. Bunun yerine ders kitapları için A yayın evine ve B yayın evine ait ders kitapları ifadesi kullanılmıştır.

Veri Analizi

Çalışmadan elde edilen veriler betimsel ve içerik analizi tekniklerinin bir arada kullanılması ile gerçekleştirilmiştir. Matematiksel beceri, öğrenme alanı ve bilişsel beceri değişkenlerine ait verilerin analizinde betimsel analiz tekniği kullanılırken diğer değişkenlere ait verilerin analizinde ise içerik analizi tekniği kullanılmıştır. Ayrıca birden fazla araştırmacının veri analizinde birlikte çalıştığı durumlarda kodlama güvenirliğinin kontrol edilmesi gerekmektedir. Bu durumda araştırmacılar aynı veri setini kodlar ve ortaya çıkan kodlama benzerliklerini ve farklılıklarını sayısal olarak karşılaştırarak bir kodlama yüzdesine ulaşırlar. Bu tür çalışmalarda en az %70 düzeyinde bir güvenirlik yüzdesine ulaşmak gerekir (Yıldırım & Şimşek, 2011). Bu amaçla çalışmadan elde edilen veriler iki araştırmacı tarafından kodlanmıştır. Ve kodlama güvenirlik yüzdesi %98 olarak bulunmuştur. Aşağıda yer alan Şekil 1' de ve Tablo 1'de veri analiz çerçevesinin daha iyi anlaşılması için bir etkinliğin nasıl analiz edildiğine yer verilmiştir.



Şekil 1. Bir Etkinlik Örneği

Tablo 1. Örnek Veri Analiz Çerçevesi

Etkinliğin Ders Esnasında Verilmesi Sırası	Dersin Başı
Öğrenme Alanı	Geometri ve Ölçme
Kavram	Yükseklik
Etkinliğin İçeriği	Tarihi Yapıtlar
Etkinliğin Amacı	Derse karşı Güdüleme
Matematiksel Beceri	İlişkilendirme
Bilişsel Beceri	Kavrama
Öğretim yöntemi	Tartışma

3. BULGULAR

Çalışmanın bu bölümünde incelenen ders kitaplarında matematik tarihinin yeri; etkinliklerin dersin hangi aşamasında ele alındıkları, amaçları, öğrencilerin rolü, öğrenme alanı, ele aldıkları kavramlar, dayandığı öğretim yöntemi, matematiksel beceri ve bilişsel beceri değişkenleri bağlamında tablolar halinde sunulmuştur.

Etkinliklerin Dersin Hangi Aşamasında Ele Alındığına Ait Bulgular

Aşağıda yer alan Tablo 2' de incelenen ders kitaplarında matematik tarihi etkinliklerin dersin hangi aşamasında yer aldığına ait bulgulara yer verilmiştir.

Tablo 2. Etkinlerin Ders Esnasında Verilme Aşamasına Ait Bulgular

	A Yayınevi		**B Yayın Evi**		**Toplam**	
	f	**%**	**f**	**%**	**f**	**%**
Ders Öncesi	-	-	1	25	1	8.33
Dersin Girişinde	5	62.5	1	25	6	50
Ders Esnasında	-	-	1	25	1	8.33
Dersin Sonunda	3	37.5	1	25	4	33,33
Toplam	8	100	4	100	12	100

Yukarıda yer alan Tablo 2'den görüldüğü üzere, B yayınevine ait ders kitabında etkinlikler dersin tüm aşamalarına eşit bir şekilde yayılırken A yayınevine ait kitapta ise etkinliklerin dersin giriş bölümünde yoğunlaştığı görülmektedir. Ayrıca A yayınevine ait kitapta ders öncesi ve ders esnasına yönelik matematik tarihi etkinliklerine ise yer verilmemiştir.

Etkinliklerin Yer Aldığı Öğrenme Alanlarına Ait Bulgular

Aşağıda yer alan Tablo 3' de incelenen ders kitaplarında matematik tarihi etkinliklerin hangi öğrenme alanlarında yer aldığına ait bulgulara yer verilmiştir.

Tablo 3. Etkinlerin Yer Aldığı Öğrenme Alanlarına Ait Bulgular

	A Yayınevi		B Yayın Evi		Toplam	
	f	%	f	%	f	%
Öğrenme Alanlarından Bağımsız	1	12.5	-	-	1	8.33
Sayılar ve İşlemler	3	37.5	2	50	5	33.33
Veri İşleme	1	12.5	-	-	1	8.33
Cebir	1	12.5	-	-	1	8.33
Geometri ve Ölçme	2	25	2	50	4	41.66
Toplam	8	100	4	100	12	100

Yukarıda yer alan Tablo 3'den görüldüğü üzere, A yayınevine ait ders kitabında tüm öğrenme alanlarına ait etkinlikler yer almaktadır. B yayınevine ait ders kitabında ise sadece "*Sayılar ve İşlemler*" ile "*Geometri ve Ölçme*" öğrenme alanlarına ait etkinlikler yer almaktadır. Tüm etkinliklerin genel bir şekilde incelersek, etkinliklerin "*Sayılar ve İşlemler*" ile "*Geometri ve Ölçme*" öğrenme alanlarında yoğunlaştığı görülmektedir.

Etkinliklerin Ele Aldıkları Kavramlara Ait Bulgular

Aşağıda yer alan Tablo 4' de incelenen ders kitaplarında matematik tarihi etkinliklerin hangi matematiksel kavramı ele aldığına ait bulgulara yer verilmiştir.

Tablo 4. Etkinlerin Ele Aldığı Kavramlara Ait Bulgular

	A Yayınevi		B Yayın Evi		Toplam	
	f	%	f	%	f	%
Kavramların Ele alınmadığı Etkinlikler	2	25	-	-	2	16.66
Doğal sayılarda işlemler	1	12.5	-	-	1	8.33
Kesirlerde İşlemler	-	-	1	25	1	8.33
Asal Sayı	1	12.5	1	25	2	16.66
Açı	1	12.5	-	-	1	8.33
Kesir	1	12.5	-	-	1	8.33
Örüntü	1	12.5	-	-	1	8.33
Pi Sayısı	1	12.5	-	-	1	8.33
Yükseklik	-	-	1	25	1	8.33
Sıvı Ölçme Birimleri	-	-	1	25	1	8.33
Toplam	8	100	4	100	12	100

Yukarıda yer alan Tablo 4'den görüldüğü üzere, her iki ders kitabında da asal sayı kavramına ait etkinliklere yer verilmiştir. Ayrıca A yayınevine ait ders kitabında yer alan iki etkinlikte herhangi bir kavrama yer verilmemiştir.

Etkinliklerin İçeriklerine Ait Bulgular

Aşağıda yer alan Tablo 5' de incelenen ders kitaplarında yer alan matematik tarihi etkinliklerin içeriklerine ait bulgulara yer verilmiştir.

Tablo 5. Etkinlerin İçeriklerine Ait Bulgular

	A Yayınevi		B Yayın Evi		Toplam	
	f	%	f	%	f	%
Bilim Adamlarının Hayatı	3	37.5	-	-	3	25
Eski Matematiksel Yöntemler	2	25	2	50	4	33.33
Kavramların Tarihsel Gelişim Süreci	1	12.5	1	25	2	16.66

Tarihi Yapıtlar	1	12.5	1	25	2	16.66
Eski Aletler	1	12.5	-	-	1	8.33
Toplam	8	100	4	100	12	100

Yukarıda yer alan Tablo 5'den görüldüğü üzere, ders kitaplarına yer alan etkinliklerin özellikle daha önce kullanılan matematiksel yöntemlerle (Eski Mısır Sayı Sistemi) ve bilim adamlarının hayatlarıyla ilgili olduğu söylenebilir. Ayrıca ders kitaplarında kavramların tarihsel gelişim süreçlerine, tarihi yapıtlara ve eski aletlere de yer verildiği görülmektedir.

Etkinliklerin Amaçlarına Ait Bulgular

Aşağıda yer alan Tablo 6' da incelenen ders kitaplarında yer alan matematik tarihi etkinliklerin amaçlarına ait bulgulara yer verilmiştir.

Tablo 6. Etkinlerin Amaçlarına Ait Bulgular

	A Yayınevi		**B Yayın Evi**		**Toplam**	
	f	**%**	**f**	**%**	**f**	**%**
Derse Karşı Güdüleme	4	50	1	25	5	41.66
Bilgilendirme	2	25	-	-	2	16.66
Pekiştirme (Alıştırma)	1	12.5	1	25	2	16.66
Proje-Araştırma Ödevi	1	12.5	2	50	3	25
Toplam	8	100	4	100	12	100

Yukarıda yer alan Tablo 6'dan görüldüğü üzere, A yayın evine ait ders kitabında yer alan matematik tarihi etkinliklerin daha çok dersin giriş bölümünde öğrencileri derse karşı güdülemek amacıyla kullanıldığı görülmektedir. B yayınevine ait kitapta ise etkinliklerin daha çok araştırma amaçlı olduğu görülmektedir.

Etkinliklerin Kazandırdığı Matematiksel Becerilere Ait Bulgular

Aşağıda yer alan Tablo 7' de incelenen ders kitaplarında yer alan matematik tarihi etkinliklerin kazandırdığı matematiksel becerilere ait bulgulara yer verilmiştir.

Tablo 7. Etkinlerin Kazandırdığı Matematiksel Becerilere Ait Bulgular

	A Yayınevi		**B Yayın Evi**		**Toplam**	
	f	**%**	**f**	**%**	**f**	**%**
İletişim	2	25	-	-	2	16.66
Akıl Yürütme	2	25	-	-	2	16.66
Problem Çözme	-	-	2	50	2	16.66
İlişkilendirme	4	50	2	50	6	50
Toplam	8	100	4	100	12	100

Yukarıda yer alan Tablo 7'den görüldüğü üzere, ders kitaplarında yer alan etkinliklerin matematiksel temel becerilerinden *"ilişkilendirme"* becerisi üzerine yoğunlaştığı görülmektedir. Ayrıca A yayınevine ait ders kitabında "problem çözme" becerisine ait etkinliklere yer verilmezken B yayınevine ait ders kitabında ise "iletişim" ve "akıl yürütme" becerilerine dönük etkinliklere yer verilmemiştir.

Etkinliklerin Gerektirdiği Bilişsel Becerilere Ait Bulgular

Aşağıda yer alan Tablo 8' de incelenen ders kitaplarında yer alan matematik tarihi etkinliklerin gerektirdiği bilişsel becerilere ait bulgulara yer verilmiştir.

Tablo 8. Etkinlerin Gerektirdiği Bilişsel Becerilere Ait Bulgular

	A Yayınevi		**B Yayın Evi**		**Toplam**	
	f	**%**	**f**	**%**	**f**	**%**
Bilgi	4	50	-	-	4	33.33
Kavrama	3	37.5	2	50	5	41.66
Uygulama	1	12.5	2	50	3	25
Analiz	-	-	-	-	-	-
Sentez	-	-	-	-	-	-

Değerlendirme	-	-	-	-	-	-
Toplam	8	100	4	100	12	100

Yukarıda yer alan Tablo 8'den görüldüğü üzere, ders kitaplarında yer alan matematik tarihi etkinliklerin Bloom taksonomisinde yer alan bilgi, kavrama ve uygulama basamaklarına dönük olduğu görülmektedir. Buna rağmen üst düzey bilişsel becerilerden olan analiz, sentez ve değerlendirme basamaklarına dönük etkinliklere ise yer verilmemiştir.

Etkinliklerin Gerektirdiği Öğretim Yöntemlerine Ait Bulgular

Aşağıda yer alan Tablo 9' da incelenen ders kitaplarında yer alan matematik tarihi etkinliklerin gerektirdiği öğretim yöntemlerine ait bulgulara yer verilmiştir.

Tablo 9. Etkinlerin Gerektirdiği Öğretim Yöntemlerine Ait Bulgular

	A Yayınevi		**B Yayın Evi**		**Toplam**	
	f	**%**	**f**	**%**	**f**	**%**
Düz Anlatım	3	37.5	-	-	3	25
Buluş Yolu	2	25	-	-	2	16.66
Araştırma	1	12.5	2	50	3	25
Tartışma	2	25	2	50	4	33.33
Toplam	8	100	4	100	12	100

Yukarıda yer alan Tablo 9'dan görüldüğü üzere, A yayınevine ait ders kitabında daha çok düz anlatıma yönelik etkinlikler yer almakta iken B yayınevine ait ders kitabında araştırma ve tartışmaya yönelik etkinlikler yer almaktadır.

SONUÇLAR

Ortaokul altıncı sınıf ders kitaplarında yer alan matematik tarihi etkinliklerin tematik açıdan incelenmesi amacıyla yapılan bu çalışma sonunda, iki yayınevine ait altıncı sınıf matematik öğrenci ders kitapları incelenmiştir. Çalışma sonucunda ders kitaplarında matematik tarihine yeterince yer verilmediği görülmüştür. Siu (2007) bu sonucu matematik tarihinin derslerde kullanımına engel durumlardan biri olarak ifade etmiştir. Bu konuyla ilgili benzer çalışmalar incelendiğinde (Fasanelli, 2000; Lakoma, 2000) Çin, Norveç ve Polonya gibi ülkelerde program ve ders kitabı bazında matematik tarihinin etkin bir kullanım alanı olduğu görülmektedir. Ortaokul Matematik Dersi Öğretim Programı'nda kavramların öğretilmesinde ve öğrencilerin matematiğe karşı olumlu tutum geliştirmesinde matematik tarihi etkinliklerinin kullanılması gerçeği [MEB, 2013] göze alındığında, ders kitaplarının matematik tarihi açısından yetersiz olduğu söylenebilir. Ayrıca 18000 üyesi olan The Mathematical Association of America (MAA) ders kitaplarında ve öğretim programlarında matematik tarihine yer verilmesi gerektiğini vurgulamıştır.

Çalışma sonucunda ders kitaplarında yer alan matematik tarihi etkinliklerinin daha çok dersin giriş bölümünde yer aldığı görülmektedir. Etkinliklerin daha çok öğrencilerin derse karşı olan ilgilerini çekmek ve derse karşı güdülemek amacıyla verildiği söylenebilir. Bu çalışmaya paralel olarak Baki ve Bütüner (2013) yaptıkları çalışmada matematik ders kitaplarında, matematik tarihinin kullanımının aydınlatma yaklaşımına dayalı olarak, tarihsel ufak parçaların ilgili konunun hemen başında verilmesiyle gerçekleştirildiği sonucuna ulaşılmışlardır.

Bu çalışmada altıncı sınıf matematik ders kitaplarında yer alan etkinliklerin araştırma ödevi, alıştırma ve bilgilendirme amacıyla da kullanıldığı görülmüştür. Bunlara ek olarak matematik tarihi etkinliklerinin daha çok *"Sayılar ve İşlemler*" ile *"Geometri ve Ölçme"* öğrenme alanlarına yoğunlaştığı sonucuna da ulaşılmıştır. Buna rağmen öğrencilerin yoğun bir şekilde öğrenme zorlukları yaşadığı (Şahin&Soylu, 2011) cebir öğrenme alanına yönelik ise yeterince etkinliğe yer verilmediği görülmüştür. Matematik ders kitaplarında yer alan etkinliklerde bilim adamlarının hayatlarına, eski yöntemlere (Eski Mısır sayı sistemi), tarihi yapıtlara, kavramların tarihsel gelişim süreçlerine ve çeşitli aletlerin geçmişteki kullanım şekillerine yer verildiği görülmüştür. Ayrıca ders kitaplarında daha çok eski yöntemlere yönelik etkinliklerin yer aldığı sonucuna ulaşılmıştır. Matematik ders kitaplarında yer alan etkinliklerin bilgi, kavrama ve uygulama bilişsel becerilerine dönük olduğu buna karşın analiz, sentez ve değerlendirme basamaklarına yönelik etkinliklerin yer almadığı görülmüştür. Ayrıca matematik tarihi etkinliklerinin daha çok *"ilişkilendirme"* becerinse hizmet ettiği sonucuna da ulaşılmıştır Bunlara ek olarak ders kitaplarına yer alan matematik tarihi etkinliklerin genel olarak öğretim yöntemlerinden "tartışma" yöntemini esas aldığı da görülmüştür.

ÖNERİLER

- Matematik ders kitaplarında matematik tarihi etkinliklerine daha fazla yer verilmelidir.
- Matematik ders kitaplarında yer alan matematik tarihi etkinlikleri sadece bilim adamlarının hayatları üzerine odaklanmamalıdır. Bunun yerine eski matematiksel yöntemlere ve kavramların tarihsel gelişimlerine dönük etkinliklere ağırlık verilmelidir.
- Matematik ders kitaplarında yer alan matematik tarihi etkinlikleri sadece öğrencilerin derse karşı ilgilerini çekme ve güdülemede değil aynı zamanda kavramların öğretim sürecinde de kullanılmalıdır.
- Cebir ve veri işleme öğrenme alanlarına dönük daha fazla matematik tarihi etkinliklerine yer verilmelidir
- Matematik tarihi etkinliklerinde sözel anlatımlardan ziyade matematik tarihine ait dokümanlara yönelik görsel öğelere ağırlık verilmelidir.

LIFELONG LEARNING TENDENCIES OF ACADEMICIANS

Hasan ÖZGÜR
Computer Education and Instructional Technology Department, Faculty of Education, Trakya University

Fatma AKGÜN
Computer Education and Instructional Technology Department, Faculty of Education, Trakya University

Cem ÇUHADAR
Computer Education and Instructional Technology Department, Faculty of Education, Trakya University

ABSTRACT: The aim of this study is to determine the lifelong learning tendencies of academicians in terms of some variables. The sample group for the research comprised a total of 408 academicians that works in various faculties of the Trakya University during the spring term of the 2014-2015 academic year. The "Lifelong Learning Tendency" scale and the "IT Literacy" scale were used for the research. Descriptive statistics, Mann Whitney U and Kruskal-Wallis H tests were used to analyze the data. Spearman Brown rank correlation coefficient was used to examine the relationships between scales. It was emerged that the lifelong learning tendencies and information technology literacies of academicians were high and their tendencies vary according to years of service and academic title. The findings of the research revealed a positive and moderate relationship between the lifelong learning tendencies of academicians and their information technology literacies.

Key words: lifelong learning tendency, IT literacy, academician.

AKADEMİSYENLERİN YAŞAM BOYU ÖĞRENME EĞİLİMLERİ

ÖZET: Bu çalışmada, akademisyenlerin yaşam boyu öğrenme eğilimlerinin çeşitli değişkenlere göre incelenmesi amaçlanmıştır. Çalışmanın örneklemini, 2014-2015 öğretim yılında Trakya Üniversitesi'nin çeşitli fakültelerinde görev yapan 408 akademisyen oluşturmaktadır. Çalışmada veri toplama araçları olarak "Yaşam Boyu Öğrenme Yeterlik Algısı Ölçeği" ve "Bilgi Teknolojileri Okuryazarlığı Ölçeği" kullanılmıştır. Verilerin analizinde betimsel istatistikler, Mann Whitney U testi ve Kruskal Wallis H testlerinden yararlanılmıştır. Ölçekler arasındaki ilişkiyi belirlemek amacıyla Spearman Brown sıra farkları korelasyon katsayısı kullanılmıştır. Araştırmada Akademisyenlerin yaşam boyu öğrenme eğilimlerinin ve bilgi teknolojileri okuryazarlıklarının yüksek olduğu, eğilimlerin hizmet yılı ve akademik unvana göre farklılaştığı ortaya çıkmıştır. Araştırma bulguları, akademisyenlerin yaşam boyu öğrenme eğilimleri ve bilgi teknolojileri okuryazarlıkları arasında pozitif yönde ve orta düzeyde bir ilişki olduğunu ortaya koymuştur.

Anahtar sözcükler: yaşam boyu öğrenme eğilimi, bilgi teknolojileri okuryazarlığı, akademisyen.

GİRİŞ

1970'li yıllardan beri UNESCO (United Nations Educational, Scientific and Cultural Organization), OECD (Organization for Economic Cooperation and Development) ve Avrupa Birliği gibi uluslararası kuruluşların en önemli gündem konularından biri olan ve hala önemini koruyan yaşam boyu öğrenme, insan yaşamının her alanında devam eden bilgi, beceri ve potansiyelini geliştirildiği süreç olarak tanımlanmaktadır (Borat, 2010; Ersoy ve Yılmaz, 2009; European Commission, 2002). Güleç, Çelik ve Demirhan (2012)'a göre ise yaşam boyu öğrenme, mevcut sistemi yeniden yapılandırarak, formal eğitim sisteminin dışında da eğitimle ilgili her türlü gelişmeyi sağlayan, örgün ve yaygın her türlü eğitim faaliyetini kapsayan geniş bir alan olarak tanımlanmaktadır. Öte yandan, Kılıç ve Tuncel (2015) ise yaşam boyu öğrenme kavramını, gelişmiş ülkeler başta olmak üzere hemen hemen her ülkenin eğitim politikalarında yer alan ve kazandırılmak istenilen temel beceriler olarak tanımlanmaktadır.

Okuryazarlık kavramları alanyazında genel olarak, belirli bir alana özgü bilgiyi edinebilmek amacıyla, gerekli olan önkoşulların yerine getirilmesi olarak tanımlanmaktadır. Bu tanımdan hareketle, bilgi teknolojileri okuryazarlığı ise; bilgi toplumu yolunda, bilginin edinimi, yönetimi ve entegrasyonu, değerlendirilmesi ve yeni bilgilerin üretimi ile ilgili gerekli olan etik ve yasal kullanım becerisinin edinilmesi olarak tanımlanmaktadır (iSkills, 2007).

Yaşam boyu öğrenmeye yönelik gerçekleştirilen pek çok alanyazın çalışmasında (Dinevski ve Dinevski, 2004; Göksan, Uzundurukan ve Keskin, 2009), bilgi toplumunun ihtiyaç duyduğu niteliklere sahip olan başka bir değişle yaşam boyu öğrenebilen bireylerin yetiştirilmesinde yükseköğretim kurumlarının rolü vurgulanmıştır (Coşkun Diker, 2009; Dağ, 2016; Konakman ve Yelken, 2014; Soran, Akkoyunlu ve Kavak, 2006). Üniversitelerin yaşam boyu öğrenme bağlamında üzerlerine düşen sorumluluğu yerine getirebilmeleri için öncelikle bu süreçte en temel unsur olan akademisyen ve eğitmenlerin yaşam boyu öğrenme becerilerine sahip olmaları ve bu becerileri öğrencilerine aktarabilmek için de öğretim sürecini ve ortamını uygun şekilde tasarlamaları beklenmektedir (Demirel, Sadi ve Dağyar, 2016; Konakman ve Yelken, 2014; Selvi 2011). Buna karşın, gerçekleştirilen alanyazın çalışmaları, yaşam boyu öğrenme bağlamında üniversite öğrencilerinin kendilerini geliştirmeye yönelik çalışmalara katılma konusunda isteksiz olduklarını ve yaşam boyu öğrenen bağlamında yetersiz bireyler olarak fakültelerden mezun olduklarını belirtmektedir (Diker Çoşkun ve Demirel 2012; Selvi 2011). Bu nedenle bilgi çağının gerekleri doğrultusunda analiz-sentez yapabilen, problem çözme becerisi gelişmiş, yaratıcı ve yenilikçi ve aktif öğrenen bireylerin yetiştirilmesinde akademisyenlere çok önemli görevler düşmektedir. Bu bağlamda, yaşam boyu öğrenen bireyleri yetiştirecek olan öğretim elemanlarının yaşam boyu öğrenme eğilimlerinin belirlenmesi ve bu eğilim üzerinde etkili olan değişkenlerin ortaya çıkarılması gerekmektedir. Araştırmada akademisyenlerin yaşam boyu öğrenme eğilimlerinin belirlenmesi amaçlanmış olup aşağıda belirtilen alt sorulara yanıt aranmıştır.

- Akademisyenlerin yaşam boyu öğrenme eğilimleri hangi düzeydedir?
- Akademisyenlerin yaşam boyu öğrenme eğilimleri çeşitli değişkenlere (cinsiyet, akademik unvan, yaş ve hizmet yılı) göre anlamlı bir farklılık göstermekte midir?
- Akademisyenlerin yaşam boyu öğrenme eğilimleri ile bilgi teknolojileri okuryazarlık düzeyleri arasında ilişki var mıdır?

YÖNTEM

Araştırma Modeli

Bu araştırma, betimsel bir araştırma olup ilişkisel tarama modeli kullanılarak gerçekleştirilmiştir. Karasar (2005, s.81)'a göre ilişkisel tarama modelinde; iki veya daha çok sayıdaki değişken arasında var olan değişim ve/veya bu değişimin derecesini belirlemek amaçlanır. Tarama yolu ile bulunan ilişkiler bir neden sonuç ilişkisinden ziyade bir değişkendeki durumun bilinmesi halinde diğerinin kestirilmesini sağlaması bağlamında yorumlanır. Bu doğrultuda gerçekleştirilen bu araştırmada, akademisyenlerin yaşam boyu öğrenme eğilimleri ile bilgi teknolojileri okuryazarlık düzeyleri arasındaki ilişki, korelasyon türü ilişkisel tarama modeli kullanılarak çözümlenmeye çalışılmıştır. Cinsiyet, akademik unvan, hizmet yılı, yaş değişkenleri ile yaşam boyu öğrenme eğilimleri arasında farklılaşma olup olmadığını belirlemek amacıyla ise karşılaştırma türü ilişkisel tarama modeli kullanılmıştır.

Evren ve Örneklem

Araştırmanın örneklemini 2014-2015 öğretim yılı Bahar döneminde, Trakya Üniversitesi'nin çeşitli fakültelerinde görev yapan 408 akademisyen oluşturmaktadır. Araştırma örneklemini oluşturan akademisyenlere ilişkin demografik bilgiler Tablo 1'de sunulmuştur.

Tablo 1. Akademisyenlere İlişkin Demografik Bilgiler

Cinsiyet	N	(%)	Akademik Unvan	N	(%)
Erkek	233	51.1	Prof. Dr.	24	5.9
Kadın	175	42.9	Doç. Dr.	70	17.2
			Yrd. Doç. Dr.	136	33.3
Yaş	**N**	**(%)**	Öğr. Gör. Dr.	13	3.2
30 ve altı	60	18.6	Arş. Gör. Dr.	40	9.8
31-40 arası	175	15.4	Öğr. Gör.	65	15.9
41-50 arası	117	30.9	Arş. Gör.	50	12.3
51 ve üzeri	56	18.1	Okutman	10	2.5

1-5 yıl	76	18.6	16-20 yıl	74	18.1
6-10 yıl	63	15.4	21 ve üstü yıl	69	16.9
11-15 yıl	126	30.9			

Veri Toplama Araçları

Araştırma verileri, Yaşam Boyu Öğrenme Eğilimleri Ölçeği ve Bilgi Teknolojileri Okuryazarlığı Ölçeği aracılığı ile toplanmıştır. Araştırmada ayrıca çalışma grubuna ilişkin demografik bilgilerin edinilmesi amacıyla kişisel bilgiler formu kullanılmıştır.

Yaşam Boyu Öğrenme Eğilimleri Ölçeği: Araştırmada Coşkun Diker (2009) tarafından geliştirilen "Yaşam Boyu Öğrenme Eğilimleri Ölçeği" kullanılmıştır. 6'lı Likert tipindeki ölçek Motivasyon (6 madde), Sebat (6 madde), Öğrenmeyi Düzenlemede Yoksunluk (6 madde) ve Merak Yoksunluğu (9 madde) olmak üzere dört alt boyuttan oluşmaktadır. Ölçekte toplam 27 madde bulunmaktadır. Ölçeğin genel ortalamasında ölçekten alınabilecek minimum puan (27x1) 27 ve maksimum puan (27x6) 162 olarak belirlenmiştir. Cronbach Alpha güvenirlik katsayısı α=.89 olarak belirlenen ölçeğin güvenirlik katsayısı eldeki araştırmada α=.91 olarak saptanmıştır.

Bilgi Teknolojileri Okuryazarlığı Ölçeği: Ölçek, Varış (2008) tarafından geliştirilmiş 38 maddelik 6'lı Likert tipinde ve altı alt boyuttan oluşan bir ölçektir. Her bir madde için alınabilecek minimum puan 0, maksimum puan ise 5'tir. Her bir alt boyut için alınabilecek minimum ve maksimum puanlar ise o boyuttaki madde sayısı ile çarpılarak elde edilmiştir. Bu şekilde elde edilen maksimum ve minimum değer arasındaki fark 3'e bölünerek, 3 farklı düzey için puanlar elde edilmiştir. Bu düzeyler ise düşük, orta ve yüksek olarak adlandırılmıştır. Ölçeğin Cronbach Alfa katsayıları; Problem Çözme Becerileri alt boyutu (6 madde) için .94, İletişim ve Metabilişsel Beceriler alt boyutu (4 madde) için .90, Temel Bilgi Teknolojileri Becerileri alt boyutu (6 madde) için .92, Analiz ve Üretim Becerileri (7 madde) ve Bilgi ve İnternet İle İlgili Beceriler alt boyutu (12 madde) için .95, Sürdürebilme ve Transfer Etme Becerileri alt boyutu (3 madde) için .94 ve toplam için de .98'dir. Mevcut çalışmada ölçeğin geneline ilişkin güvenilirlik değeri α=.92 olarak saptanmıştır.

Kişisel Bilgiler Formu: Araştırmacılar tarafından hazırlanan kişisel bilgi formunda cinsiyet, akademik unvan, hizmet yılı ve yaş gibi bazı demografik bilgilerin belirlenmeye çalışıldığı bir grup soru yer almaktadır.

Verilerin Toplanması ve Analizi

Araştırma yüz yüze gerçekleştirilmiş olup, araştırma öncesinde akademisyenlere öncelikle araştırma konusu ve veri toplama araçları hakkında bilgi verilmiş, ardından araştırmaya katılımın gönüllülük esasına dayalı olduğu hatırlatılarak ölçeklerin yanıtlanması sağlanmıştır. Ölçekler yaklaşık 20 dakikalık sürede yanıtlanmıştır. Verilerin analizinden önce veri girişinin doğruluğu ve değişkenlerin dağılımının normalliğe uygunluğu test edilmiştir. Veri toplama araçlarını uygun bir şekilde doldurmayan 5 akademisyenin verileri analiz dışında bırakılarak araştırma örneklemi 408 akademisyenden oluşmuştur. Normal dağılım göstermediği tespit edilen verilerin değerlendirilmesi amacıyla betimsel istatistikler, Mann Whitney U testi ve Kruskal Wallis H testlerinden yararlanılmıştır. Alt gruplar arasındaki farklılığın tespiti için ise grupların ikili kombinasyonları üzerinden Mann Whitney U testi kullanılarak farkın kaynağı incelenmiştir. Ölçekler arasındaki ilişkiyi belirlemek amacıyla Spearman Brown Sıra Farkları korelasyon katsayısı kullanılmıştır.

BULGULAR

Akademisyenlerin Yaşam Boyu Öğrenme Eğilimleri ve Bilgi Teknolojileri Okuryazarlık Düzeylerine İlişkin Bulgular

Akademisyenlerin yaşam boyu öğrenme eğilimleri ve bilgi teknolojileri okuryazarlık düzeylerine ilişkin betimsel istatistikler Tablo 2'de sunulmuştur. Akademisyenlerin yaşam boyu öğrenme eğilim puanları incelendiğinde ($\bar{X}$=133.49) yaşam boyu öğrenme eğilimlerinin "yüksek" düzeyde olduğu söylenebilir. Akademisyenlerin yaşam boyu öğrenme eğilimi ölçeğinden elde ettikleri en yüksek ortalama puanın "Motivasyon" alt boyutunda ($\bar{X}/m$=5.22) olduğu, en düşük ortalama puanın ise "Merak Yoksunluğu" alt boyutunda ($\bar{X}/m$=4.67) olduğu görülmektedir. Akademisyenlerin bilgi teknolojileri okuryazarlık düzeylerine ilişkin ortalamalar incelendiğinde ise ($\bar{X}$=137.53) bilgi teknolojileri okuryazarlığı konusunda kendilerini "yüksek" düzeyde yeterliğe sahip bireyler olarak algıladıkları söylenebilir. Alt boyutlar bazında yapılan incelemede ise ölçek bazında elde edilen en yüksek ortalama puanın "Problem Çözme Becerileri" alt boyutunda ($\bar{X}/m$=3.97) olduğu, en düşük ortalama puanın ise "Sürdürebilme ve Transfer Etme Becerileri" alt boyutunda ($\bar{X}/m$=3.22) olduğu görülmektedir.

Tablo 2. Akademisyenlerin Yaşam Boyu Öğrenme Eğilimleri ve Bilgi Teknolojileri Okuryazarlık Düzeylerine İlişkin Ortalamaları

Değişken	*N*	*m*	$\bar{X}$	$\bar{X}/m$	*S*
Yaşam Boyu Öğrenme Eğilimi	408	27	133.49	4.94	9.33
Motivasyon	408	6	31.29	5.22	2.40
Sebat	408	6	30.13	5.02	3.00
Öğrenmeyi Düzenlemede Yoksunluk	408	6	30.01	5.00	3.24
Merak Yoksunluğu	408	9	42.07	4.67	4.38
Bilgi Teknolojileri Okuryazarlığı	408	38	137.53	3.62	9.24
Problem Çözme Becerileri	408	6	23.81	3.97	3.92
İletişim ve Metabilişsel Beceriler	408	4	15.78	3.95	2.58
Temel Bilgi Teknolojileri Becerileri	408	6	21.10	3.52	4.62
Analiz ve Üretim Becerileri	408	7	24.74	3.53	5.00
Bilgi ve İnternet İle İlgili Beceriler	408	12	42.43	3.54	8.20
Sürdürebilme ve Transfer Etme Becerileri	408	3	9.67	3.22	2.82

Not: m=madde sayısı

Akademisyenlerin Yaşam Boyu Öğrenme Eğilimlerinin Demografik Değişkenlerle Karşılaştırılmasına İlişkin Bulgular

Akademisyenlerin yaşam boyu öğrenme eğilimlerinin cinsiyet değişkenine göre farklılaşıp farklılaşmadığının belirlenmesi için araştırmada ilişkisiz ölçümler için Mann Whitney U testinden yararlanılmıştır. Gerçekleştirilen analiz sonucunda elde edilen bulgular Tablo 3'te sunulmuştur.

Tablo 3. Cinsiyet Değişkenin Akademisyenlerin Yaşam Boyu Öğrenme Eğilimlerine Göre U-Testi Sonucu

Değişken	*Grup*	*N*	*Sıra Ortalaması*	*Sıra Toplamı*	*U*	*p<*
Yaşam Boyu Öğrenme Eğilimi	Erkek	233	202.83	47260.50	19999.50	.742
	Kadın	175	206.72	36175.50		
Motivasyon	Erkek	233	203.08	47317.50	20056.50	.777
	Kadın	175	206.39	36118.50		
Sebat	Erkek	233	212.65	49548.00	18488.00	.105
	Kadın	175	193.65	33888.00		
Öğrenmeyi Düzenlemede Yoksunluk	Erkek	233	199.43	46466.50	19205.50	.314
	Kadın	175	211.25	36969.50		
Merak Yoksunluğu	Erkek	233	201.70	46996.00	19735.00	.579
	Kadın	175	208.23	36440.00		

Tablo 3'te yer alan bulgulara göre akademisyenlerin yaşam boyu öğrenme eğilimlerinin ($U=19999.50$, $p>.05$) cinsiyet değişkenine göre anlamlı bir farklılık göstermediği ortaya çıkmıştır. Ölçeğin alt boyutları bazında yapılan incelemede ise, erkek akademisyenler ile kadın akademisyenler arasındaki en büyük fark, ölçeğin Sebat alt boyutunda ortaya çıkmıştır.

Araştırmada akademisyenlerin yaşam boyu öğrenme eğilimlerinin akademik unvan değişkenine göre farklılaşıp farklılaşmadığın incelenmiş ve gerçekleştirilen Kruskal Wallis H testi sonucunda elde edilen bulgular Tablo 4'te sunulmuştur.

Tablo 4. Akademisyenlerin Yaşam Boyu Öğrenme Eğilimlerinin Akademik Unvana Göre Kruskal Wallis H Testi Sonucu

Değişken	*N*	*Sıra ortalaması*	*sd*	χ^2	*p*	*Anlamlı fark*
Prof. Dr. (A)	24	235.04	7	17.29	.016	A-D, A-E, B-D, B-E, C-D, C-E
Doç. Dr. (B)	70	227.91				
Yrd. Doç. Dr. (C)	136	218.41				
Öğr. Gör. Dr. (D)	13	144.65				
Arş. Gör. Dr. (E)	40	160.73				
Öğr. Gör. (F)	65	196.32				
Arş. Gör. (G)	50	186.66				
Okutman (H)	10	173.45				

Tablo 4'te yer alan analiz sonuçları, akademisyenlerin akademik unvan değişkeni ile yaşam boyu öğrenme eğilimleri arasında anlamlı bir fark olduğunu göstermektedir (χ^2(sd=7 n=408)=17.29, p<.05). Gruplar arasında gözlenen farkın kaynağını belirlemek amacıyla, grupların ikili kombinasyonları üzerinden Mann Whitney U testileri uygulanmıştır. Gerçekleştirilen testler sonucunda, profesör, doçent ve yardımcı doçent kadrosuna sahip öğretim üyelerinin yaşam boyu öğrenme eğilimine ilişkin sıra ortalamalarının, doktorası olan, öğretim görevlisi ve araştırma görevlisi kadrolarında görevlerini sürdüren akademisyenlerin yaşam boyu öğrenme eğilimine ilişkin sıra ortalamadan daha yüksek olduğu ortaya çıkmıştır.

Araştırmada akademisyenlerin yaşam boyu öğrenme eğilimlerinin yaş değişkenine göre farklılaşıp farklılaşmadığı incelenmiş ve gerçekleştirilen Kruskal Wallis H testi sonucunda elde edilen bulgular Tablo 5'te sunulmuştur.

Tablo 5. Akademisyenlerin Yaşam Boyu Öğrenme Eğilimlerinin Yaşa Göre Kruskal Wallis H Testi Sonucu

Değişken	***N***	***Sıra ortalaması***	***sd***	χ^2	***p***
30 ve altı	60	185.71	3	2.89	.409
31-40 arası	175	210.30			
41-50 arası	117	211.13			
51 ve üzeri	56	192.64			

Tablo 5'te sunulan bulgular, akademisyenlerin yaş değişkeni ile yaşam boyu öğrenme eğilimleri arasında anlamlı bir fark olmadığını göstermektedir (χ^2(sd=3 n=408)=2.89, p>.05).

Araştırmada akademisyenlerin yaşam boyu öğrenme eğilimlerinin hizmet yılı değişkenine göre farklılaşıp farklılaşmadığın incelenmiş ve gerçekleştirilen Kruskal Wallis H testi sonucunda elde edilen bulgular Tablo 6'da sunulmuştur.

Tablo 6. Akademisyenlerin Yaşam Boyu Öğrenme Eğilimlerinin Hizmet Yılına Göre Kruskal Wallis H Testi Sonucu

Değişken	***N***	***Sıra ortalaması***	***sd***	χ^2	***p***	***Anlamlı fark***
1-5 yıl (A)	76	205.89	4	9.66	.047	A-E, B-E, C-E, D-E
6-10 yıl (B)	63	212.17				
11-15 yıl (C)	126	215.92				
16-20 yıl (D)	74	213.87				
21 yıl ve üstü (E)	69	165.05				

Tablo 6'da sunulan bulgular, akademisyenlerin hizmet yılı değişkeni ile yaşam boyu öğrenme eğilimleri arasında anlamlı bir fark olduğunu göstermektedir (χ^2(sd=4 n=408)=9.66, p<.05). Gruplar arasında gözlenen farkın kaynağını belirlemek amacıyla, grupların ikili kombinasyonları üzerinden Mann Whitney U testileri uygulanmıştır. Gerçekleştirilen testler sonucunda, akademisyenlik görevini 20 ve daha az yıldır sürdüren katılımcıların yaşam boyu öğrenme eğilimlerine ilişkin sıra ortalamalarının, hizmet yılı 21 ve üstü olanlara kıyasla daha yüksek olduğu ortaya çıkmıştır.

Akademisyenlerin Yaşam Boyu Öğrenme Eğilimleri ve Bilgi Teknolojileri Okuryazarlık Düzeyi Arasındaki İlişkiye Yönelik Bulgular

Gerçekleştirilen korelasyon analizinden elde edilen bulgulara göre yaşam boyu öğrenme eğilimi ile bilgi teknolojileri okuryazarlık düzeyi arasında orta düzeyde (r=.367; p<.01), pozitif ve anlamlı bir ilişki olduğu Tablo 7'de görülmektedir.

Tablo 7. Öğretmen Adaylarının Yaşam Boyu Öğrenme Eğilimi ve Bilgi Teknolojileri Okuryazarlık Düzeyi Arasındaki İlişki

SONUÇ

Akademisyenlerin yaşam boyu öğrenme eğilimleri ve bilgi teknolojileri okuryazarlık düzeylerinin incelendiği bu araştırmada, katılımcıların hem yaşam boyu öğrenme eğilimlerinin hem de bilgi teknolojileri okuryazarlıklarının yüksek düzeyde olduğu ortaya çıkmıştır. Öte yandan bu bulgular, araştırmanın bir diğer bulgusu olan yaşam boyu öğrenme eğilimlerinin yaşa göre değişmediği bulgusu ile de tutarlıdır. Bu bulgular alanyazın çalışmaları ile de benzerlik göstermektedir (Köğce, Özpinar, Mandaci Şahin ve Aydoğan Yenmez, 2014). Görev tanımı gereği akademisyenler, yükseköğretim kurumlarında öğretim faaliyetlerine katılan, özgün ve alanına katkı yapan araştırmalar gerçekleştiren ve alanındaki gelişmeleri takip ederek bu gelişmeleri derslerine taşımak durumunda kalan kişilerdir. Bu bağlamda, araştırmada elde edilen bu bulguların ortaya çıkmasında, mesleği gereği kendini sürekli geliştirme çabası içinde olan akademisyenin bu süreçte çeşitli bilgi ve iletişim teknolojilerinden de yararlanmasının hem yaşam boyu öğrenme hem de teknoloji okuryazarlığı konusunda kendilerini yüksek düzeyde yeterli görmelerine yol açtığı şeklinde yorumlanabilir.

Araştırmanın bir diğer bulgusu, akademisyenlerin yaşam boyu öğrenme eğilimlerinin cinsiyet değişkenine göre farklılaşmadığıdır. Bu bulgu, Uysal (2013) tarafında gerçekleştirilen ve cinsiyetin akademisyenlerin öze-yeterlikleri üzerinde etkili bir değişken olmadığı sonucu ile benzerlik göstermektedir. Bu bulgunun ortaya çıkmasında, cinsiyetin, mesleğin ihtiyaçlarını yerine getirmede bir engel teşkil etmemiş olmasının etkisi olduğu düşünülmektedir. Başka bir değişle mesleğin gereği olan araştırma ve kendini geliştirme sürecinde bilgi teknolojilerinin kullanımı ve yaşam boyu öğrenme anlamında hem erkek hem de kadın akademisyenlerin kendilerini eşit düzeyde yeterli gördükleri söylenebilir. Öte yandan elde edilen bu bulgu, Konakman ve Yelken (2014) tarafından gerçekleştirilen ve cinsiyetin yaşam boyu öğrenme üzerinde etkili bir değişken olduğunu belirten çalışmanın sonuçları ile örtüşmemektedir. Alanyazın araştırmaları arasında ortaya çıkan bu farkın katılımcıların özelliklerinden kaynaklandığı düşünülmektedir.

Hizmet yılındaki artış ile birlikte akademisyenlerin yaşam boyu öğrenme eğilimlerinin azaldığı bulgusu araştırmanın bir diğer bulgusudur. Elde edile bulgu, 21 yıl ve daha uzun mesleki hizmeti bulunan akademisyenlerin yaşam boyu öğrenme eğilimlerinin meslektaşlarına kıyasla daha düşük düzeyde olduğu ortaya çıkarmıştır. Alanyazın çalışmalarında Sağlam (2011) ile İraz ve Ganiyusufoğlu (2011), mesleki tükenmişliğin bir alt boyutu olan kişisel başarı bağlamında bu araştırmanın bulguları ile örtüşen sonuçları ortaya koymuştur. Bu bulgunun ortaya çıkmasında, kişinin fiziksel gücündeki azalma ya da kariyerindeki olası başarısızlıklar sebebiyle bireyin kendini geliştirme yönündeki motivasyonu, sabrı ve merakındaki azalmanın etkisinin olduğu düşünülmektedir.

Unvan değişkeninin akademisyenlerin yaşam boyu öğrenme eğilimleri üzerinde etkili bir değişken olduğu bulgusu araştırmanın bir diğer önemli bulgusudur. Nitekim araştırmada, yaşam boyu öğrenme eğilimi en düşük düzeyde olan katılımcıların doktorasını tamamlamış fakat ilgili kadrosunu alamamış akademisyenler olduğu ortaya çıkmıştır. Bu bulgu, Sağlam (2011)'ın mesleki tükenmişliğin en az profesör ve doçent unvanlarına sahip akademisyenlerde olduğu en fazla ise doktorasını tamamlamış araştırma görevlilerinde olduğunu belirten araştırmanın sonuçları ile örtüşmektedir. Öte yandan elde edilen bu bulgu Konakman ve Yelken (2014) tarafından gerçekleştirilen ve akademik unvanın yaşam boyu öğrenme üzerinde etkili bir değişken olmadığını belirten çalışmanın sonuçları ile örtüşmemektedir. Alan yazın çalışmaları arasındaki farklılığın ortaya çıkmasında, kariyer gelişimi bağlamında engellendiğini düşünen akademisyenin duygusal tepkilerinin etkili olduğu düşünülmektedir.

Araştırmada ayrıca, bilgi teknolojileri okuryazarlık düzeyi ile yaşam boyu öğrenme eğilimi arasında orta düzeyde ve pozitif yönde bir ilişkinin olduğu ortaya çıkmıştır. İlgili alanyazında Tan ve Morris (2006) ile Günüç, **Odabaşı ve Kuzu** (2012) bilgi ve iletişim teknolojileri ile yaşam boyu öğrenme arasında yüksek düzeyde bir ilişki olduğunu belirtmektedir. Benzer şekilde Mouzakitis ve Tuncay (2011) ile Nordin, Embi ve Yunus (2010) da bilgi ve iletişim teknolojileri sayesinde yaşam boyu öğrenmenin en temel bileşenlerinden biri olan esnekliğin sağlandığını belirtmiş ve iki kavram arasındaki ilişkiye vurgu yapmıştır.

Sonuç olarak, gerçekleştirilen bu araştırmada akademisyenlerin yaşam boyu öğrenme yeterliklerinin ve bilgi teknolojileri okuryazarlıklarının yüksek düzeyde olduğu ve akademik unvan ile hizmet yılının yaşam boyu öğrenme üzerinde etkili değişkenler olduğu ortaya çıkmıştır. Yükseköğretimin kalitesini belirleyen en önemli unsurun, akademisyenlerin gösterdiği performans olduğu göz önüne alındığında, özellikle hizmet yılı artan ve kadrosunu alamayan akademisyenlerin yaşam boyu öğrenen bireyler olma yolunda motivasyonlarının artmasına yardımcı olabilecek çalışmalara ihtiyaç vardır. Ayrıca akademisyenlerin yaşam boyu öğrenme eğilimleri üzerinde etkisi olabilecek diğer değişkenlerin değerlendirildiği nitel ve nicel çalışmaların yapılması önerilebilir.

Canan CENGİZ
Karadeniz Technical University

Suat ÇELİK
Atatürk University

ABSTRACT: Language is an essential element of learning. Therefore, educators should use different kind of language activities suc as reading, writing, talking, listening, enacting and visualizing in teaching. Writing is one of these activities. It is aimed to determine pre-service elementary teachers' opinions related to keeping learning journals in Science-Technology-Society-Environment (STSE) lesson. Senior pre-service elementary teachers (N=33) participated in this study. Pre-service elementary teachers kept learning journals at the end of each STSE lesson through one term once a week. At the end of the term, pre-service elementary teachers were asked to answer an online survey which consists of ten open-ended questions to determine pre-service teachers' opinions regarding the implementation. The answers given by pre-service teachers show that pre-service teachers think that learning journals have positive effect on their learning, language and thinking abilities. Some of the pre-service teachers thought that the time for given keeping learning journals was not enough. To overcome this problem giving the learning journals as homework is recomended.

Keywords: Learning journal, elementary pre-service teachers, writing

INTRODUCTION

Language is an important factor in learning. Therefore, educators should use language activities in their professional courses. This can be via reading, writing, talking, listening, enacting and/or visualizing (Norton-Meier, Hand, Hockenberry ve Wise, 2008).

The aim of this study is to use writing activities in classroom environment. The writing has a positive effect on students' learning. Through writing, students can see how they can use their prior knowledge and new knowledge and they think about what they know (Günel, Kabataş Memiş ve Büyükkasap, 2009). Brian Cambourne (1987) listed the essential elements of writing as follows (cited in Norton-Meier et all. 2008):

1. *Immersion.* Students should be faced with different kind of language activities. To enable using language activities in classroom environment, teachers should provide texts, audiences and materials.
2. *Demonstration.* It is not important for students do everything right while they are engaging in writing activities. Teachers should focus on students' learning about using language appropriately.
3. *Expectation.* Teachers should trust all the students that can be successful at language activities.
4. *Responsibility.* Students should be given responsibility for using language in classroom environment.
5. *Use.* It should be known that if students are expected to sit quietly in classroom, they will never attemt to use the language.
6. *Approximation.* Students can learn more from their mistakes rather than their achievements. In this sense, students should be given enough time to confront their misconceptions.
7. *Response.* Feedback should be given to students by their teachers and peers, because feedback is the essential element for the development of the writer.

There are different kinds of writing activities for different purposes including personal writing, two column writing, dialogue writing, whole class writing, particular subject area writing and learning journals (Ünver, 2003).

In learning journals, students write about their learning process, their opinions which change during the learning process and the knowledge they gained. Learning journals do not only consist of gained knowledge but they also consist of students' reflections and analysis about their learning and learning process (Wilson ve Jan, 1993). Learning occurs via journal writing because it provides favorable conditions for learning. Writing journal enables focusing and ordering thoughts and makes sense out of a situation or information. Furthermore journal writing encourages reflection which is associated with the deep approaches to learning. In addition to this, writing forces learner to clarify his/her thoughts and it enables learner to understand if s/he does or does not understand the subject (Moon, 2010). According to Boud (2001, p.9) "Journal writing can be used to enhance what we do and how we do it. As a vehicle for lerning, it can be used in formal courses."

In this study, to enable elementary pre-service teachers to successfully negotiate meaning in the STSE course, they were asked to record their initial understanding by using learning journals (Norton-Meier et all., 2008). The aim of this study was to determine elementary pre-service teachers' opinions about keeping learning journals on STSE lesson.

METHOD

This study was based on qualitative research approach. Qualitative approach allows studying the subject in depth and detail. But if it is compaired with quantitative methods it can be seen that qualitative approach allows studying with participant and case. Studying with fewer participants enables to understand the cases deeply but it limits its generalizability. In this study, phenomenographic metod which is one of the qualitative approaches was used. Phenomenographic metod focuses on people's descriptions on what they have experienced (Patton, 2002).

Participants

This study was conducted with 33 senior pre-service elementary teachers (20 female and 13 male) in an education faculty which is located in Blacksea Region of Turkey. Seven of these pre-service teachers have never kept journal before this research, ten pre-service teachers have tried journal keeping but could not continue to keep after one or two times. The remaining 16 pre-service teachers have an experience on keeping journals regularly.

Implementation Process

This study was conducted in 2013-2014 term with senior pre-service elementary teachers in STSE course. One of the researchers was the lecturer of the course. STSE course was held once a week for two hours. The pre-service teachers were informed about what learning journal is and how to prepare it at the beginning of the semester. They were asked to prepare learning journal every week after STSE course. In journals they were asked to write what did they learn in each session and they also encouraged adding their reflections on their learning. These journals picked up by the research assisstant of the course (one of the researchers of the study). The journals that were prepared by the pre-service teachers were graded by using a likert scale which is developed by one of the researchers (see Table 1).

Table 1. Likert scale for assessment of the learning journals

Score	Description
4 points	Demonstrates complete understanding of the content of the course
3 points	Demonstrates considerable understanding of the content of the course
2 points	Demonstrates partial understanding of the content of the course
1 point	Demonstrates little understanding of the content of the course
0 point	Demonstrates no understanding of the content of the course

Pre-service teachers were also given written feedback to their journals. The journals were given back to pre-service teachers, in the next STSE class. At the beginning of the class pre-service teachers read one of their friends' journals. The study lasted one term. At the end of the term pre-service teachers were asked to answer an online survey which was developed by one of the researchers to determine pre-service teachers' opinions related to the implementation process. The implementation process is summarized in Figure 1.

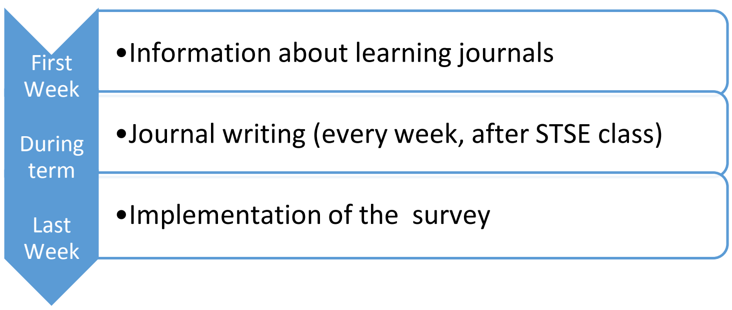

Figure 1. Summary of Implementation Process

Data Collection Tools

In this study an online survey, which was developed by the researchers of the study, was used. Questions were examined by an expert in scinece education and revised. In the survey there were ten open ended questions. Some of these questions are as following

- Considering your experiences in this lesson, are you going to use learning journals in your professional life? Please explain the reasons of your answer.
- What do you think about using learning journals as an assessment tool? Please explain in detail.
- What do you think about the defective points of keeping learning journals? Please explain in detail.

Data Analysis

The data was analysed through content analysis. By reading pre-service teacher's online entries started the analyse process. Codes were determined by classifying the entries according to their similarities and differences and the frequency of the codes were calculated. Then themes were determined according to the similar features (Johnson ve Christensen, 2014). These themes were then examined by the other researchers as an external observer, and the researchers finalized the themes through discussion.

FINDINGS

In this section, findings gathered from pre-service teachers' responses to the online survey are presented. 33 pre-service teachers responded to the online survey. Analysis of these entries was carried out according to nine themes, found out from data analysis,including first impressions, learning, evaluation, professional life, reflecting ideas, language skills, thinking skills, inconveniences, and suggestions. In Table 2, each theme, the codes gathered under each theme, the frequency of the codes in the entries and illustrative quotes from the entries are presented.

First impressions

The first impressions theme involves pre-service teachers' opinions about their first impressions according to journal writing. There were three main repeated codes under the first impression theme: difficult, useless, and refrain from the reader. The frequencies of these codes are outlined in Table 2. Each code gathered under this theme is explained.

Difficult: The pre-service teachers mentioned that at the beginning of the term they found journaling difficult but later they gained experience and learned how to write (f=7).
Useless: The pre-service teachers mentioned that they find writing journal as a useless activity at the beginning of the implementation but later their opinions changed in positive way when they saw the benefits of journaling in the process (f=3).
Refrain from the reader: The pre-service teachers expressed that at the beginning of the implementation they hesitated to share their writing with the researcher (f=2).

Table 2. Pre-service teachers' opinions related to keeping journals

Theme	Code	f	Quotes from the online survey
First impressions	Difficult	7	At first, I did not know how to start (my journal), how to express (what I know). In time I learned what I need to write and how can I tell it. (P2)
	Useless	3	At first I tought that keeping journal is worthless and meaningless. (P14)
	Refrain from the reader	2	There is no problem about how to keep it (journal) but knowing that it is going to read by someone else challenged me. (P10)
Learning	Understanding and reinforcement	27	It is effective in developing understanding because it impulses you to listen the course both for learning and finding something to write (in journal). (P3)
	Permanent learning	18	I think that it has provided more permanent learning. (P11)
	Self-evaluation	7	…in every lesson writing what I have learned about the lesson has showed me what I have learned and have not learned. (P23)
	Ineffective	2	I don't think that keeping journal is effective on understanding and reinforcing the subject of the lesson. (P16)

Evaluation	Should not be used	11	Being evaluated by using journals may be not reliable. It may be not trustable to use the journals for students' understanding. (P31)
	Should be used	9	…the journals can be used for evaluating learning. Because some people has board phobia or some can not talk in front of the community… (P29)
	Should not be used alone	4	Journaling is a very good application as a part of evaluating learning but using merely journals for evaluation can not be enough. (P1)
Professional life	Will be use	24	I think (I will use journals) but it will be better to ask to write journals home rather than in class. (P8)
	Will not be use	3	No I do not think (to use journals). It takes a lot of time. (P7)
	Indecisive	2	I am indecisive in this subject because it might be beneficial for some courses and it might not be beneficial for some other courses. (P2)
Reflecting ideas	Effective	24	I can better evaluate and express myself. (P12)
	Ineffective	5	Obviously I do not think (that journaling is effective for reflecting ideas better). That's may be about my negative precudice to writing. (P11)
Language skills	Effective	27	…Yes I think (that it impoves language skills)… When I read what I wrote my journal last week, I saw some meaningless sentences there and I think that my writing will improve through writing. (P5)
	Ineffective	1	I think that journals do not any addition to the development of language abilities. I use the same vocabulary which I used before journal keeping. (P16)
Thinking skills	Effective	15	It is an effective method because it was a review of the course and it helped us to express ourselves. (P19)
	Ineffective	3	I do not think that it is effective for developing critical thinking or reflection. ..I think this make our learning permanent. (P11)
Inconveniences	Sometimes boring	12	Sometimes people do not want to speak with themselves at these times keeping journal is becomes a boring activity. (P4)
	Insufficient time	11	…the most problematic thing is (insufficient) time and the abstract words related to the content of the lesson. (P33)
	Insufficient feedback	5	…the feedback given the journals should be better and explanatory. (P19)
Suggesions	Reducing the course time	6	It is tiring to write journals after the lesson which takes one and a half hour. Writing the journals at the last 20 minutes of the course should be more effective. (P27)
	Different content	4	Instead of writing about the content of the course it would be better to answer a question about the subject by writing. (P14)
	Training for journaling	3	students should be informed more about journaling and the importance of reflective thinking should be emphasized. (P4)
	Journal as an homework	3	Instead of writing journals at the end of the course, it would be more benefical if it is given as homework. (P13)
	Verbal feedback	2	…I think that students need to get verbal feedback about their writing. (P30)
	Voluntary	2	I think it would be better if it is not compulsory. (P10)

Learning

Pre-service teachers mentioned the effects of journaling on learning. These ideas are presented under learning theme. There are four main tendencies under this theme: understanding and reinforcement, permanent learning, self-evaluation, and ineffective.

Understanding and reinforcement: The pre-service teachers frequently mentioned that preparing learning journals enabled them to better understand the lesson and it helped them to reinforce their learning (f=27).
Permanent learning: As seen in Table 2, 18 pre-sevice teachers stated that journaling makes learning permanent.
Self-evaluation: Occassionaly pre-service teachers wrote that journaling enabled them to evaluate their own learning (f=7).
Ineffective: As can be seen in Table 2. Two pre-service teachers did not find journaling effective on learning process.

Evaluation

As can be seen in Table 2, the evaluation theme is about views of using journals as assessment tools. The participants' views were coded in three actions.

Should not be used: Pre-service teachers (f=11) mentioned that journals are not good assessment tools because assessing by journals may be not reliable.
Should be used: Pre-service teachers (f=9) mentioned that journals are useful assessment tools.
Should not be used alone: Some pre-service teachers (f=4) mentioned that journals are useful assessment tool when they are used with other assessment tool(s).

Professional life

The Professonal life theme is consists of pre-service teachers views about using learning journals in their classroom in the future.
Will use: Pre-service teachers mentioned that they will use learning journals in their professional life (f=24).
Will not use: Pre-service teachers mentioned that they will not use learning journals in their professional life (f=3).
Indecisive: Two pre-service teachers stated that they are indecisive about using learning journals in their classrooms in the future (f=2).

Reflecting ideas

The Reflecting ideas theme is consists of pre-service teahers' opinions about the effect of journaling on reflecting ideas.
Effective: Most of the pre-service teachers indicated that journaling is effective in development of reflecting ideas. Pre- service teachers mentioned that writing made them start to think. Some of the pre-service teachers emphasized the benefits of journaling for pre-service teachers who are refrain from saying what he/she thinks (f=11).
Ineffective: Five pre-service teachers stated that they did not find journals effective in the development of reflecting ideas. Four pre-service teachers said that that's why they wrote their journals reluctantly. The other pre-service teacher indicated that it was difficult to reflect for him because the subject was difficult and he couldn't understand it very well.

Language skills

The Language skills theme is consists of pre-service teachers' opinions about the effect of journaling on language skills.
Effective: Pre-service teachers found journaling effective on language skills' development. They thought that by writing, they learn some new vocabulary and they improve their writing. Also they thought that reading old journals give them opportunity to see their grammer mistakes and meaningless sentences.
Ineffective: One pre-service teacher did not find journaling effective on the development of language skills.

Thinking skills

The Thinking skills theme consists of the pre-service teachers' opinions about the journals effect on thinking skills. As seen in Table 2, there are two repeating codes under the Thinking skills theme: Effective (f=15) and Not effective (f=3).
Effective: Pre-service teachers stated that by writing, they ask themselves what they learned and how they learned so this improved their thinking skills. Also they discussed course subject in each journal and this also improved their thinking skills.
Ineffective: Pre-service teachers who didn't find journaling beneficial for the development of thinking skills found journaling just as a summarizing process.

Inconveniences

Although in general pre-service teachers have positive opinions about keeping journals, some of them have some negative opinions. In Inconveniences theme pre-service teachers mentioned the failing points of the implementation process.
Sometimes boring: Pre-service teachers indicated that writing journals was sometimes boring (f=12).
Insufficient time: Pre-service teachers mentined that the time given for writing journals in class was not enough (f=11).
Insufficient feedback: Some pre-service teachers indicated that feedbacks were not interpretive enough (f=5).

Suggesions

Pre-service teachers made some suggesions for making journaling more effective method in STSE lesson. These are classified in Suggesions theme.
Reducing the course time: Some pre-service teachers suggested reducing the course time and increasing the time for journal writing (f=6).
Different content: A few of the participants suggested the instructor should prepare questions for journals (f=4).
Training for journaling: Three participants noted that it would be better to train pre-service teachers longer at the beginning of the implementation.
Journal as homework: Few participants mentioned that it would be better to write journals at home rather than in class (f=3).
Verbal feedback: Only two participants indicated that it would be better to provide verbal feedback in addition to written feedback.
Voluntary: Another two pre-service teachers suggested that journaling shoud be voluntary.

DISCUSSION AND CONCLUSIONS

When the data from the survey is examined it can be seen that pre-service teachers have generally positive views about keeping learning journals in STSE lesson. Most of the pre-service teachers felt that writing learning journals had a positive effect on their learning (see Table 1). Pre-service teachers mentioned that they learned from writing of learning journals when they first do the writing and when they re-read what they have written (URL-1). Pre-service teachers focused on different features of writing journals as an indicator of learning. As they stated, writing journals gave them opportunity to compare their prior knowledge and new knowledge, think about what they know, fix up their thoughts and so they can make sense of knowledge by writing (Günel ve ark., 2009; Moon, 2007). Also some pre-service teachers indicated that by showing the weak points of the learner, the journals impulse them for studying (Wilson and Jan, 1993). Based on the findings, we can conclude that writing journal in the STSE class had a positive effect on the pre-service teachers' learning skills.

Further more, most of the pre-service teachers indicated that journal writing helped them to develop higher order thinking skills. They mentioned that they found the answers of questions such as 'what did I learn' and 'how did I learn' while writing journals. As Gleaves, Walker and Grey (2008) mentioned that journal writing is a reflexive meta-cognitive strategy by enabling students to critically review processes of their own learning and to understand their ability to transform their own learning strategies. So it can be said that learning journals improved pre-service teachers' metacognitive thinking skills. In literature similar results were reported by Amedeo, (1996) and Lew and Schmidt (2011).

Most of the pre-service teachers think that writing journal improves their language skills. Pre-service teachers mentioned that journaling also improves their writing skill which is one of four language systems (speaking, listening, reading, and writing). Pre-service teachers did not recognized any effect of journaling on their speaking, listening and reading but it is known that four language systems, speaking, listening, reading and writing develop in overlapping and parallel waves (Berlinger, 2000). Similar results were found by Kozan (2007). We can conclude that pre-service teacher' language skills -especially writing skill- were improved by journaling.

Pre-service teachers' frequently mentioned that they get bored while journaing and they find the time given for keeping journals insufficient. In this study each week STSE lesson was lasted one and a half hour and at the end of this session pre-service teachers are asked to keep journals in 30 minutes. Pre-service teachers indicated that they get tired after one and a half hour session and find keeping journal tiring. Cengiz and Karataş (2015) determined that pre-service teachers sometimes get bored when keeping journals, in their study which they were conducted with pre-service science teachers in General Chemistry Class.

Some of the pre-service teachers stated that they had negative attitude toward keeping journals at the beginning of the implementation but in time they saw the benefits of keeping journals and their opinions were changed. The reason might be related to half of the pre-service teachers who did not keep journals regularly before this implementation. So, at the begining they had difficulty about what to write and others whoread their journal made them worried. As Boud (2001) stated that "The expectation of writing for an external audience profoundly shapes what we write and even what we allow ourselves to consider (p.15)."

Pre-service teachers were divided into nearly equal two groups according to their views about using journals as an assessment tool. One half of the pre-service teachers did not find journals as an appropriate assessment tool.

Cengiz and Karataş's (2013) study showed that when journals are not scored by the instructors, students do not pay enough attention to preparing them. As Boud (2001) stated that "The conventions of assessment demand that students display their best work for it to be judged (p.16)."

SUGGESIONS

Whether the benefits of learning journals, pre-service teachers' found some inconveniences about the implementation process. Based on these findings and our discussions we have some suggestions for improving journaling implementation STSE lesson;

- Journals can be given as homework in further studies to give more time for student to prepare them.
- More extensive training for journaling can make the journaling process more beneficial.
- First weeks of the implementation, the journals may not be scored. So pre-service teachers' may have better attitudes towards journaling.
- It is worth examining effects of verbal feedbacks in addition to written ones about their journals as few of the participants suggested.

A GENERAL VIEW OF COMPUTER FORENSICS EDUCATION IN TURKEY: EXIGENCE OF COMPUTER FORENSICS AND ITS EDUCATION

Merve ORAKCI
Bilişim Enstitüsü

ABSTRACT: Nowadays, information technologies as a part of the social life cause to many negative situations, along with their benefits on people lives. They have spread in the whole branches of the society fast and now they become essential for it. Moreover, security gaps in information systems are abused by some people and people have started perpetration via information systems. Crimes that are committed via information technologies are called as cyber crimes. As time passes by, cyber crimes' danger and number increase as a new crime type and also more complicated structure of cyber crimes becloudes their detection. This difficulty reveals needs of computer forensics expert who capable to struggle with these types of crimes. Computer forensics is an interdisiplinary science and to be capable in this branche possible with having knowledge of law, information systems and criminology. Therefore, education of computer forensics becomes a necessity to train qualified individuals in this branche that needs existence of experts. In this study, the processes of computer forensics are analysed by explaining "computer forensics" term, at first. Thereafter, current situation is evaluated by discussing exigence and importance of the computer forensics education in Turkey.

Key words: computer forensic, computer forensics education, cyber crime

TÜRKİYE'DE ADLİ BİLİŞİM EĞİTİMİNE GENEL BİR BAKIŞ: ADLİ BİLİŞİMİN VE ADLİ BİLİŞİM EĞİTİMİNİN GEREKLİLİĞİ

ÖZET: Günümüzde sosyal yaşamın bir parçası haline gelen bilişim teknolojileri, insan hayatına fayda sağlamasının yanı sıra birçok olumsuzluğu da beraberinde getirmiştir. Toplumun her kurumuna hızlı bir şekilde yayılan bilişim teknolojileri, toplum için vazgeçilmez bir hal almıştır. Öte yandan, bilişim sistemlerinde oluşan güvenlik zaafiyetleri kötü niyetli insanların dikkatini çekmiş ve artık bilişim sistemleri üzerinden suç işlenmeye başlanmıştır. Bilişim teknolojileri kullanılarak işlenen suçlar, diğer adıyla siber suçlar, yeni bir suç türü olarak tehlikeli bir hal almış ve sayı olarak günden güne artmıştır. Siber suçların zamanla karmaşık bir hal alması durumu ise, bu suçların tespitini zorlaştırmıştır. Bu durum; siber suçlarla mücadele edebilecek yeterliliğe ve beceriye sahip, adli bilişim uzmanı ihtiyacını doğurmuştur. Adli bilişim, birden fazla alanı kapsadığı için disiplinler arası bir bilim olma özelliği taşımaktadır. Bu alanda yetkin sayılabilmek; hukuk, bilişim sistemleri ve kriminoloji(suç bilimi) alanlarında ileri düzeyde bilgi sahibi olmayı gerektirmektedir. Bu sebeple, adli bilişim eğitimi, bilirkişi ihtiyacı olan bu alanda nitelikli birey yetiştirmek için bir gereklilik halini almıştır. Yapılan çalışmada öncelikle adli bilişim kavramı açıklanarak, adli bilişim süreçleri incelenmiştir. Daha sonra ise, Türkiye'de adli bilişim eğitiminin gerekliliği ve önemi tartışılarak mevcut durum değerlendirmesi yapılmıştır.

Anahtar sözcükler: adli bilişim, adli bilişim eğitimi, siber suçlar

GİRİŞ

Son dönemlerde bilişim teknolojilerinde yaşanan hızlı gelişme, suç işlemeye eğilimli kişilerin ilgisini çekmekte ve normal yollarla işlenmesi daha güç olan suçlar bilişim teknolojileri sayesinde daha kolay işlenebilir hale gelmektedir. Geleneksel suçların aydınlatılmasında fiziksel delillerden faydalanılırken, bilişim teknolojileri üzerinde işlenen suçların çözüme kavuşturulması için elektronik delillere ihtiyaç duyulmaktadır. Elektronik deliller ise bir elektronik aygıt üzerinde saklanıp bu aygıtlar vasıtasıyla iletilen ve soruşturma kapsamında değeri olan veriler (Keser Berber, 2004) olarak tanımlanabilmektedir. Klasik delillerin, elle tutulup gözle görülüyor olmaları dolayısıyla tespitleri, el koyma ve muhafaza altına alma işlemleri kolaydır. Ancak dijital delillerde bu durum farklılık göstermektedir. Dijital delillerin ortaya çıkartılabilmesi için birkaç katmandan oluşan inceleme sürecinin gerçekleştirilmesi gerekmektedir. Dijital delillerin adli bir vakada delil olarak kullanılabilmeleri için, fiziksel delillerin sahip olması gereken özelliklere de sahip olmaları gerekmektedir. Bu özellikler:

1. Kabul edilebilir: Hukuki kurallara uygun şekilde elde edilmelidir.
2. Gerçeklik: Adli vaka ile ilgili ve diğer belgelerle ilişkilendirilebilir nitelikte olmalıdır.
3. Bütünlük: Elde edilmiş olan veriler tarafsız ve adli vakayı yansıtır şekilde olmalıdır.

4. Güvenilir: Elde edilmesi sırasında herhangi bir kuşkuya yer verilmeyecek şekilde hareket edilmelidir.
5. İnanılır: Adli merciler tarafından inandırıcı ve anlaşılabilir nitelikte olmalıdır (Brezinski & Killalea, 2002).

Dijital deliller elektronik bir yapı içerisinde saklandıklarından, ortam koşullarından ve geçen zamandan olumsuz etkilenmekte ve kolaylıkla zarar görebilmektedirler. Bu sebeple adli bilişim olarak adlandırılan ve bilgisayar sistemlerinden delillerin elde edilerek, yargıya intikal ettirilme süreci olarak tanımlanan adli bilişim süreci titiz bir çalışma gerekmektedir. Mahkemeye sunulacak delillerin suçun aydınlığa kavuşturulmasındaki önemi ve bu delillerin ortaya çıkarılma sürecinin hassasiyeti göz önüne alındığında bu sürecin ancak adli bilişim uzmanlarınca yürütülmesi gerektiği unutulmamalıdır. Gerçekleştirilen adli bilişim süreci; olay yerine ilk müdahale ile başlayarak, olay yerinde delil olma niteliğini gösterebilecek elektronik aygıtlara el konulması, bu medyaların laboratuvar ortamında veya olay yerinde incelenmesi, sonuçların analiz edilmesi ve bu işlemler sonucunda elde edilen delillerin mahkemeye sunulması için rapor haline getirilmesi olarak özetlenebilmektedir.

Adli bir vakada bilgisayar sistemlerinin olayla ilgisi iki şekilde olabilmektedir. Bunlar;

6. Bilgisayar veya diğer elektronik cihazların suçun işlenmesinde kullanılması
7. Bilgisayar veya diğer elektronik cihazların geleneksel suçlarda yardımcı unsur olarak kullanılması sonucu, delil niteliğinde bilgileri bulundurması (Aydoğan, 2009)

ADLİ BİLİŞİM

Adli bilişim; bilişim sistemlerinin, herhangi bir suçu işlemede veya yasaklanmış bir faaliyette kullanılıp kullanılmadığının tespiti üzerine çalışmaların yürütülmesini içermektedir (Henkoğlu, 2014). Temel amacı dijital veriler ile vaka arasındaki bağlantıyı bulmak, bu doğrultuda vakanın çözümüne ışık tutabilmektir. Terim olarak İngilizce "Computer Forensic" deyiminden Türkçeye kazandırılmıştır. Adli bilişimin genel bir tanımını yapmak gerekirse adli bilişim; vakada delil olarak kullanılabilecek bulguların elde edilmesi amacıyla, bilgisayar inceleme ve analiz teknikleri kullanılarak yapılan bir uygulamadır (Keser Berber, 2004). Adli bilişim bilgisayardaki verilerden delillerin elde edilmesini, dökümantasyonunu ve yorumlanmasını içermesinin yanında; hukuki kuralları dikkate alarak, elde edilen deliller hakkında rapor yazılmasını da kapsamaktadır.

Adli Bilişim Aşamaları:

Adli bilişim süreçlerini tanımlamaya yönelik farklı yaklaşımlar geliştirilmiştir. Bu yaklaşımlar temelde birbirine benzemektedir. Ancak izlenecek teknik ve yöntemler farklı aşamalarda ele alınmıştır. Bazı kaynaklar bu süreçleri üç aşamada (Henkoğlu, 2014) değerlendirirken, bazı kaynaklar dört aşamada (Brown, 2006) ele alabilmektedir. Bu çalışmada adli bilişim aşamaları Elde Etme(Acquisition), Tanımlama(Identification), Değerlendirme (Evaluation) ve Sunum (Presentation) olmak üzere dört aşamada değerlendirilecektir.

Elde Etme(Acquisition)

Adli bilişimde elde etme aşaması, olay yeri çalışmaları ile başlamaktadır. Olay yerindeki dijital delil içerebilecek bilişim malzemelerine belirli kurallara göre müdehale edilmekte ve yine belirli kurallara göre delillerin bozulmaması, değiştirilmemesi için özel bir taşıma prosedürü uygulanmaktadır. İnceleme yapmak üzere adli bilişim laboratuvarlarına getirilen bilişim malzemelerinin mühürleri açılmakta ve olayın çözüme kavuşturulmasında ihtiyaç duyulan dijital delillerin ortaya çıkartılması için analizlere başlanmaktadır. Yapılan analizler, sistemin veri depolama birimlerinin birebir alınmış kopyaları üzerinde gerçekleştirilmelidir. Bu kopyalara adli bilişimde "imaj (Forensic Image)" adı verilmektedir. Birebir alınmış kopya üzerinde orijinal medyada bulunmayan en küçük bir bilgi olmamalıdır. Doğru bir imaj alma işlemi, orijinal medya üzerinde en ufak bir değişiklik yaratmamalıdır (Altheide & Carvey, 2011).

Tanımlama (Identification)

Elde etme aşaması sonucunda elde edilen ham veriler tanımlama aşamasında anlamlı verilere dönüştürülmektedir. Bu safhada yapılan analizler yalnızca kayıtlı veriler üzerinde değil de silinmiş veya disk üzerinde artık olarak kalmış veriler üzerinde de çalışılmaktadır. Yapılan inceleme ve analizler özel adli bilişim yazılım ve donanımları ile yapılmaktadır. İnceleme ve analizde kullanılan yazılım ve donanımların sınırları iyi bilinmeli ve sadece tek bir yazılım veya donanıma bağlı kalınmamalıdır. Her yazılım kendi içinde farklı becerilere sahiptir. Bu yüzden farklı yazılımlar kullanarak farklı sonuçlara ulaşılabilir. Bu doğrultuda; adli bilişim uzmanları için hangi durumda hangi yazılımı kullanacağı bilgisi önem arz etmektedir (Jones, Bejtlich, & Rose, 2006).

Değerlendirme (Evaluation)

Bu aşamada, elde edilen dijital delillerden hangilerinin delil olarak adli mercilere sunulacağına karar verilmektedir. Karar aşamasında önemli olan, adli mercilere sunulan delillerin olayın çözümüne ışık tutabilecek nitelikte olmasıdır. Bu doğrultuda; suç ile ilişkili olabilecek dosya içeriği, dosya erişim bilgileri, internet geçmişi bilgileri, mesaj bilgileri gibi veriler analiz edilerek, delil olarak hangilerinin kullanılacağına karar verilmektedir (Aydoğan, 2009).

Sunum (Presentation)

Sunum safhasına gelindiğinde artık, olayla bağlantısı bulunan dijital deliller tespit edilmiştir. Bu aşamadan sonra yapılacak olan elde edilen bulguların adli mercilere rapor halinde sunulmasıdır. Burada dikkat edilmesi gereken nokta, sunulacak olan raporun belli standartlara göre oluşturulması ve adli makamların anlayabileceği şekilde yazılmasıdır. Adli bilişim sürecinde amaç; suç vakasından sorumlu kişi ya da kişilerin kesin olarak bulunmasına yönelik, bilişim sistemleri üzerindeki delillerin dökümante edilmesi amacıyla yapılan sistematik bir araştırmadır (Jadhav & Patil, 2012). Bu doğrultuda sunum aşaması; adli mercilere sunulmak üzere, suçun aydınlatılmasını sağlayacak olan delillerin bilimsel olarak ortaya konmasıdır.

NEDEN ADLİ BİLİŞİM?

İşlenen suçların çözüme kavuşturulması için ihtiyaç duyulan elektronik delillerle karşılaşma sıklığı, teknolojinin gelişimi ile doğru orantılı olarak artmaktadır. Bu durum; Bilişim sistemleri üzerinde bulunan dijital verilerin toplanması, delilleştirilmesi ve raporlandırılması aşamalarını kapsayan adli bilişim biliminin öneminin giderek artmasına sebep olmuştur. Adli bilişimin konusu olabilecek her türlü elektronik medyanın günlük hayatın her noktasında kullanılıyor olması, önemli boyutlarda maddi ve manevi kayıplara sebep olabilecek bilişim suçlarının işlenme oranı da artmaktadır. Ancak bu noktada adli bilişim açısından sadece bilişim suçlarını değerlendirmek doğru olmayacaktır. Bilişim sistemleri sadece bilişim suçlarını işlemede değil diğer birçok suç türünün de işlenmesinde yardımcı unsur olarak kullanılabilmektedir. Bu doğrultuda bu suçların çözüme kavuşturulmasında adli bilişim tekniklerinden her geçen gün daha fazla faydalanıldığını söylemek mümkün olacaktır.

Adli bilişim süreçlerinde uygulanan yöntemler de gelişen teknolojiyle birlikte değişime uğramaktadır. Bu sebeple yeni yöntem ve tekniklerin sürece entegre edilmesi önemli bir konudur. Aksi durumda elde edilmesi beklenen elektronik delilleri elde etme konusunda sıkıntılar yaşanabilmektedir. Bu doğrultuda gelişimini henüz tamamlamamış olan adli bilişim, teknik gelişmelere bağlı olarak kendini yenileyebilmek ve değişen ihtiyaçlar doğrultusunda ilerleme kaydedebilmek için ancak kendini bu alanda yetiştirmiş olan ve adli bilişim uzmanı olarak adlandırabileceğimiz bireyler sayesinde ilerleme kaydedecektir.

Adli bilişim uzmanlığı, adli bilişim aşamalarında yalnızca teknik açıdan değil hukuk alanında bilgi ve beceriye sahip olma zorunluluğunu da içeren bir uzmanlık alanıdır. Bu sebeple adli bilişim uzmanlarından faydalanılması, adli mercilere katkı sunmakla kalmayıp; bilişim hukuku, bilişim suçları ile mücadele ve adli bilişim uygulama alanlarında daha güçlü ve bilinçli kadrolardan oluşan hukuku sisteminin oluşmasına katkı sağlayacaktır (Henkoğlu, 2014). Adli bilişim uzmanlarınca gerçekleştirilen, adli bilişim sürecinde yapılan tüm işlemler genel kabul edilen yöntemler kullanılarak yapılmalıdır. Ayrıca dijital delillerin kolaylıkla değiştirilebilmesinin ve yok edilebilmesinin mümkün olması, adli bilişim süreçlerinin belli prosedürler içinde yapılmasını gerekli kılmaktadır. Bu sebeple adli bilişim alanında sadece adli bilişim eğitimi almış kişilerin görev alması, adli bilişim süreçlerinin doğru işlemesine, delillerin güvenirliğinin artmasına ve bu konuda bilinçliliğin artmasına katkı sağlayacaktır.

TÜRKİYE'DE ADLİ BİLİŞİM EĞİTİMİ

Bilişim sistemleri vasıtası ile işlenen suçlar yalnızca sayı bakımından değil, çeşitlilik bakımından da artış göstermektedir. Bu alandaki suç türleri çoğaldıkça, bu suçlar karşısında gerekli tedbirleri zamanında ve etkin biçimde almak da zorlaşmaktadır. Bilişim sistemleri vasıtası ile işlenen suçlar karşısında yeterli eğitimi hem deneysel hem de uygulamalı olarak uzmanlaşmış eleman bulmak her geçen gün daha da güçleşmektedir. Bu doğrultuda siber suçlarla mücadele edebilecek beceri ve eğitimi bu alanda çalışanlara kazandırmak gerekmektedir. Bu amaçla adli bilişim alanında çeşitli düzeylerde eğitim ve öğretim verilmesi kaçınılmazdır (Varol, Cooper, & Varol, 2013).

Teknolojinin sürekli gelişimi, bilgisayar sistemleri yolu ile işlenen suçların dünyada olduğu gibi ülkemizde de yaygın olarak görülmesine sebep olmuş ve adli bilişimin ülkemizde önemli bir bilim dalı haline gelmesine zemin hazırlamıştır. Bu doğrultuda ülkemizde son yıllarda adli bilişim eğitimi alanında yapılan çalışmalar artmış, adli bilişim veya adli bilişime yakın olan siber güvenlik, bilgi güvenliği ve bilişim hukuku alanlarında lisans, yüksek lisans ve doktora programları oluşturulmaya başlanmıştır (Çakır, Orakcı, & Kök, 2016).

Ülkemizde adli bilişim eğitimini veren lisans ve yüksek lisans düzeyinde sınırlı sayıda üniversite bulunmaktadır. Doktora düzeyinde program ise yalnızca Gazi Üniversitesi bünyesinde bulunan Bilişim Enstitüsünde bulunmaktadır. Ülkenin adli bilişim uzmanına duyduğu ihtiyaç düşünüldüğünde, hali hazırda bulunan eğitim programlarının yetersizliği göze çarpmaktadır. Bu alanda duyulan ihtiyacın giderilmesi için adli bilişim alanında her düzeyde yeni programların oluşturulması gerekmektedir. Mevcut durumda adli bilişim alanında eğitim öğretim veren üniversiteler aşağıdaki tabloda gösterilmiştir.

Tablo 14. Adli Bilişim Eğitimi veren Üniversiteler

Üniversite	Fakülte/Yüksekokul	Program	L / YL/ DR
Fırat Üniversitesi	Fen Bilimleri Enstitüsü	Adli Bilişim Müh.	L
Mustafa Kemal Üniversitesi	Bilişim Teknolojisi Yüksekokulu	Adli Bilişim	L
Gazi Üniversitesi	Bilişim Enstitüsü	Adli Bilişim	YL
Turgut Özal Üniversitesi	Fen Bilimleri Enstitüsü	Adli Bilişim Müh.	YL
Atatürk Üniversitesi	Sosyal Bilimler Enstitüsü	Güvenlik ve Adli Bilimler	YL
Ankara Üniversitesi	Adli Bilimler Enstitüsü	Adli Bilişim	YL
Gazi Üniversitesi	Bilişim Enstitüsü	Adli Bilişim	DR

SONUÇ

Bilişim teknolojileri kullanılarak işlenen suçların her geçen gün artması, bu suçlarla mücadele edebilecek beceri ve birikime sahip insan gücü ihtiyacını da her geçen gün arttırmaktadır. Adli bilişim uzmanı olarak adlandırabileceğimiz bu insan gücü sayesinde işlenen suçların çözüme kavuşturulması sağlanabilecektir. Bu bağlamda gelişen teknolojiye uyum gösterebilecek adli bilişim uzmanlarının yetiştirilmesi için Türkiye'de lisans ve lisansüstü düzeylerde programlar oluşturulmaya başlanmıştır. Ancak bu programların sayılarına bakıldığında ülkemizdeki adli bilişim uzmanı ihtiyacını karşılayacak yeterlilikte olmadığı görülmektedir. Ülkemizde adli bilişim eğitiminin daha yaygın ve daha köklü olarak verilmesi, alana uzman yetiştirilmesi açısından ülke gereksinimlerini karşılayacak seviyeye ulaştıracaktır.

LITERATURE REVIEW ABOUT THE CONCEPT OF GRAVITY IN SCIENCE EDUCATION

Numan BADEMLİ
Mehmet Akif Ersoy Üniversitesi

Seyit Ahmet KIRAY
Necmettin Erbakan Üniversitesi

ABSTRACT: The concept of gravity is a subject which has a vital importance for science educators. Because of its nature,students have got understanding and learning difficulty. As the gravity is a concept that we are in a relationship in our daily lives, it is important for science teaching. For this reason, the studies about gravity will be viewed. In this work in the database of Web of Science,Eric and EBSCO untill the 2000 will be analyzed. It is estimated that the results of studies will be shed light on later researches.

Key words: gravity, science education, teaching of concept.

FEN EĞİTİMİNDE YERÇEKİMİ KAVRAMI ÜZERİNE BİR LİTERATÜR TARAMASI

ÖZET: Yerçekimi kavramı fen eğitimcileri için hayati önemi olan bir konudur. Doğası gereği yerçekimi konusunda öğrenciler çok sayıda öğrenme ve anlama güçlüklerine sahiptir. Günlük yaşamımızda sürekli iç içe olduğumuz bir kavram olması nedeniyle fen eğitimi açısından oldukça önemli bir kavramdır. Bu nedenle bu çalışmada fen eğitiminde yerçekimi kavramı ile ilgili yapılan çalışmalar gözden geçirilecektir. Çalışma da 2000 yılından günümüze kadar Web of Science, ERIC ve EBSCO veritabanlarında yer alan çalışmaların analizi yapılacaktır. Çalışma sonuçlarının yerçekimi kavramı ile ilgili bundan sonra yapılacak çalışmalar ışık tutması beklenmektedir.

Anahtar sözcükler: yerçekimi, fen eğitimi, kavram öğretimi.

GİRİŞ

Yerçekimi evrenin başlangıcından günümüze kadar var olmuş olan bir kavramdır. Hayatımızın her döneminde doğumumuzdan ölümümüze kadar aralıksız olarak bu kavramı tecrübe ederiz. Bu şekilde elde ettiğimiz deneyimler sayesinde bu kavram hakkında devamlı olarak kaçınılmaz bir deneysel öğrenme yaşarız. Bu öğrenmelerimiz kişiseldir ve her zaman bilimsel açıdan doğruyu ifade etmemektedir. Doğruyu ifade etmeyen fikirlerimiz eğitim öğretim yaşantılarımız için birer engel oluşturmaktadır. Bu nedenle yerçekimi kavramı ve hakkında edinilen yanlış fikirler üzerine çalışmaların yapılması oldukça doğal bir durumdur. Bu doğrultuda antik yunan filozoflarından günümüze kadar yerçekimi kavramının kendisi ve öğretimiyle ilgili birçok çalışma yapılmıştır.

Bu çalışmada incelenen araştırmalar ilgilenilen konu, çalışmanın gerçekleştirildiği örneklem ve metot olarak yerçekimi kavramı çerçevesinde gerçekleştirilmiş birbirinden farklı araştırmalardır. Yapılan araştırmalara bakıldığında hayatın içerisinde kolayca rastlanabilecek düşen cisimlerden (Cahyadi ve Butler, 2004) ileri düzey öğretim programlarında rastlanabilecek karanlık madde, görelilik, uzay-zaman (Baldy, 2007; Ford, Stang ve Anderson, 2015; Gao, 2013; Pitts, Venville, Blair ve Zadnik, 2013; Williamson, Willoughby ve Prather, 2013) gibi konulara uzanan geniş bir çalışma yelpazesi görülmektedir. Bazı çalışmalar yerçekimi kavramı, yerçekimi kavramının öğretilmesi, yerçekimi kavramı anlamaları ve yanlış kavramaları, problem durumlarındaki kullanımları, tarihsel gelişimi (Apostolides ve Valanides, 2008; Asghar ve Libarkin, 2010; Aydın, Bakırcı, Artun ve Çepni, 2013; Blown ve Bryce, Feeley, 2007; 2012; Kocakülah ve Açıl, 2011; Küçük, 2005; Lelliot, 2014; Öztürk ve Doğanay, 2011; Palmer, 2001; Sharma, Millar, Smith ve Sefton, 2004; Zhou, Zhang ve Xiao, 2015) gibi yerçekimi kavramını doğrudan merkeze alan araştırmalar yapmıştır. Bazıları ise kütle ve ağırlık merkezi, manyetik ve yerçekimsel alan, kuvvet kavramı, fizikte bilgi yapıları, ağırlık tanımı, cismin hareketi ve fen eğitim merkezi kavramları (Blair, De Laeter, Deshon, Meagher, Nicolson ve Cody, 2006; Bradamante ve Viennot, 2007; Galili, 2001; Kırtak ve Kocakülah, 2013; Kikas, 2003; Özdemir, 2007; Özdemir ve Clark, 2009; Mildenhall ve Williams, 2001) gibi içerisinde doğrudan olmasa da yerçekimi kavramıyla ilgili konular incelenmiştir. Bu çalışmada ayrıca yanlış kavramalar, ön öğrenmeler, kavramsal değişim ve öğrenci algıları

(Gönen, 2007; Pocovi, 2007; Varelas, Becker, Luster ve Wenzel, 2002) üzerine yapılmış çalışmalar da incelenmiştir.

Geçen on yıl içinde yapılan araştırmalar öğrencilerin Newton'un üçüncü kanunu hakkında birçok yanlış kavramaya sahip olduğunu göstermektedir. Zhou, Zhang ve Xiao (2015)'in çalışmasındaki bu bulgu tüm sınıflardaki öğrencilerin sayısal olarak yerçekimi etkileşimi hakkında kötü olduklarını göstermektedir. Baldy (2007)'ye göre öğrenciler Einstein'ın uzay-zaman bozulma teorisi ile düşen cisimlerin nedenini, yerçekimi olgusunu ve g.'nin anlamını kavramayı başarabilir. Bu teori ile öğrenciler çekim ile ilgili problemlere daha yetenekli hale gelebilir ve evrenin çalışma prensibi hakkında fikir sahibi olur. Kelimeler her alanda aynı anlama gelmese de kullanılmaya devam eder. Bu sözel bir problemdir. Einstein teorisinin olumlu yanları Newton teorilerinin okulda yer almayacağı anlamına gelmez. Newton fiziği eğitimin belirli düzeylerinde Einstein fiziğinden daha işlevsel olmaktadır. Newton ve Einstein fizikleri birbiri ile uyumsuz görünse de birbirlerini bütünleyici bir role sahiptir.

Einstein fiziği ile ilgili kavramlar genellikle öğrenciler üniversiteye gelene kadar öğretilmez, uzay zaman yerçekimi anlamasının bu güçlü yoluna erişimden genç çocuklar mahrum bırakılmaktadır. Ancak, önemli araştırmalar gösterdi ki karmaşık ve soyut bilim fikirleri ölçülebilir öğrenme ile sonuçlanan yaşa uygun yöntemlerde sunulabilir. Araştırmalar öğrencilerin çoğunun üniversite öncesi için Einstein fiziğiyle ilgili kavramları öğrenmekte kendilerini çok genç hissetmediklerini ve bu konuyu öğrenebildiklerini rapor etmektedir (Pitts, Venville, Blair ve Zadnik, 2013).

Lelliott (2014) yaptığı çalışmada yerçekimi kavramı ile ilgili bazı kavram yanılgıları tespit etmiştir. Bunlar şu şekildedir. A) Uzayda yerçekimi yoktur B) Ay veya diğer gökcisimlerinde yerçekimi yoktur. C) Yerçekimi atmosfer veya cisimlerin özelliklerinden dolayı oluşur. Kırtlak ve Kocakülah (2013) ise çalışmalarında kütle merkezi, ağırlık merkezi ve yerçekimi ile ilgili yanılgılara dikkat çekmişlerdir. Bu çalışmada bulunan yanılgılar şu şekildedir. A) Ağırlık merkezi yerçekimi etkisiyle cismin odak noktasındadır. B) Ağırlık merkezi cisimlerin ağırlıklarının yerçekimi kuvvetine bağlı olarak oluşturdukları yerdir. C) Kütle merkezine yerçekiminin etkisi yoktur. D) Ağırlık merkezi maddenin her yerinde yerçekimi etkisiyle oluşan kuvvetlerin bileşkesinin olduğu yerdir. E) Ağırlık merkezi hesaplamalarında yerçekimi ivmesi kullanılır. E) Yerçekimi ivmesine bağlı olarak kütle merkezi değişmezken ağırlık merkezi değişebilir.

Gao (2013)'e göre yerçekimi kökeni halen tartışılan bir konudur. Farklı kültürlerde bilimsel dünya görüşüne sahip öğretmenlerle yapılan çalışmalar, yerçekiminin dünyanın şekli ve hareketi kavramları ile ilgili ön öğrenme ve deneyimlere dayanan sezgisel yerçekimi düşüncelerine sahip olduklarını göstermektedir. Bu durumda yerçekimi hakkındaki sezgilerimizle yaptığımız çıkarımlardan kaynaklanan kavram yanılgılarının her yaş düzeyinde var olduğunu göstermektedir. Blown ve Bryce (2012) yaptıkları çalışmaya göre ğrencilerin yeryüzü ve yerçekimi kavramları hakkındaki düşünceleri parça parça değil bütünleşik şekildedir. Öğrencilerin yeryüzü şekli, hareketi ve yerçekimi kavramları hakkındaki düşünceleri astronomi ve yerçekimi kavramlarının tarihsel gelişimi ile paralellik göstermektedir. Geçmiş dönemlerde inanılmış ama günümüzde geçerliğini kaybetmiş bilgiler hala öğrencilerin zihninde varlığını sürdürmektedir.

Fizik dersi almayan lise öğrencilerinin yerçekimi kavramları kendilerinden küçük yaşlardaki çocukların yerçekimi hakkındaki fikirleriyle benzerlik göstermektedir. Yeryüzü ve uzay bilimi gibi alanlarda alternatif kavramaların mantık üzerine etkisi küçümsenemez. Yeryüzü merkezli yerçekimi modeli taşıyan öğrenciler yerçekiminin yalnızca yeryüzünde gerçekleştiğini düşünürler veya Mars'ta manyetik alan olmadığından yerçekiminin de olmayacağı görüşüne sahip olabilirler (Asghar ve Libarkin, 2010). Bu nedenle gerçek dünyada her gün iç içe olduğumuz yerçekimi kavramının okullarda herkes tarafından öğrenilmesi önem arz etmektedir.

Yerçekimi kavramı öğretilirken verilecek eğitimin öğrencilerde var olan fikirlerle bu konudaki bilimsel bilgiler arasındaki boşluğu dolduracak nitelikte olması önemlidir (Apostolides ve Valanides, 2008). Öğrenciler yerçekimi kavramını yerçekimi kuvveti, ağırlık ve serbest düşme ile ilişkilendirmede tutarlı görünseler de kendi deneyimsel bakış açılarına dayanan yerçekimi algısına sahiptirler. Bununla birlikte öğrencilerin bu yanılgılarının nasıl ölçüldüğü önemlidir. Öğrenciler yerçekimi hakkında yanlış kavramalara sahip olsalar bile çoktan seçmeli sorularda doğru sonuçlara ulaşabilirler (Feeley, 2007).

Bradamante ve Viennot (2007)'ye göre öğrenciler mıknatıs ve yeryüzünde meydana gelen yerçekimi gibi olaylardan haberdardır fakat bu iki olayı karıştırma veya bu olayların yalnızca belirli uzay bölümlerinde gerçekleştiğini düşünme eğilimleri vardır. Öğrenciler çevrelerinde gerçekleşen yerçekimi olaylarını öngörebilmektedir fakat bunu gezegen ölçeğinde ifade edemezler. Çünkü burada asıl güçlük durumun yeryüzünde değil yeryüzünden belirli bir mesafedeki uzaklıkta çizilen durumdur. Öğrencilere yerçekimi ile ilgili kavramlar küresel ölçekte kafalarında canlandırılarak verilebilir

Sharma, Millar, Smith ve Sefton (2004)'e göre öğrenciler yörüngedeki bir uzay aracı içerisinde yerçekiminin sıfır olduğunu düşünür. Öğrenciler farklı öğretim süreçlerinden geçmiş olsalar da uzay aracında sıfır yerçekimi yaklaşımında benzer anlamalara sahip olabilirler. Öğrencilerin yörüngedeki uzay aracı içerisinde yerçekimi kavramı için anlamaları astronotların ağırlıksız olacağı kadar küçük fakat aracı yörüngede tutacak kadar büyük cümlesi ile özetlenebilir.

Cahyadi ve Butler (2004)' e göre öğrenciler idealleştirilmiş ortamda ağır cisimlerin yere ilk olarak ulaşacağını çünkü ağır cisimlerin daha hızlı hareket edeceğini düşünürler. Eğer ortam idealleştirilmemişse yani gerçek dünya ortamıysa cisimlerin boyutları ve kütleleri de işin içine girmektedir. Gerçek dünya ortamındaki sorularda öğrenciler yerçekimi kuvveti ile sürtünme kuvvetini aynı anda düşünüp kullanmada başarısızlık göstermektedirler. Öğrenciler farklı boyutlu aynı kütleli cisimlere uygulanan hava direncini farklı kütleli aynı boyuttaki cisimlere uygulanan hava direncinden daha kolay anlamaktaydı. Bunun sebebi farklı boyuttaki cisimlerle gündelik hayatta daha fazla örnek üzerinde karşılaşmak olabilir. Öğrenciler ağırlıktan dolayı ağır cisimlerin düşmek için daha az zamana ihtiyaç duyduğuna inanırlar. Ayrıca farklı boyutlu cisimlerin üzerine etki eden hava direnci öğrencilerce görmezden gelinir. Öğrenciler boşluktaki cisimlerin yerçekimi etkisinde olmadığı fikrine sahiptir.

Yerçekimi kavramı antik çağlardan günümüze dek araştırılmaya değer bulunmuş hayati öneme sahip gözlemlenebilir bir astronomi ve fizik kavramıdır (Galili, 2001). Yerçekimi düşen cisimlerde aşağı doğru etki eder. Yerçekiminin düşey doğrultuda yukarı doğru hareket eden cisimlere etkisi yoktur. Yerçekimi hareketsiz cisimlerde aşağı doğru etki eder. Yerçekimi hareketsiz cisimlere etki etmez. Yerçekimi yukarı yönde hareket eden cisimlere yukarı yönde etki eder. Yerçekimi yukarı doğru hareket eden cisimlere aşağı doğru etki eder. Yerçekimi düşen cisimlere etki etmez. Yerçekimi toprakta gömülü olan cisimlere etkimez. Bunun sebebi yerçekimi yeryüzündeki cisimleri yerin altına doğru çeker fakat yerin altındakilere etki etmez. Ayrıca yerçekimi atmosfere ihtiyaç duyduğundan ve yer altında hava olmadığından yerçekimi de yoktur. Öğrencilerin yukarı yönde hareket eden cisimlere yerçekiminin yukarı yönde etki ettiğini düşündüğü kavrama durumunda yerçekimi bir hareket kuvveti anlamını taşır (Palmer, 2001).

SONUÇ VE ÖNERİLER

Yapılan araştırmalar yerçekimi hakkında öğrencilerin çok sayıda kavram yanılgısına ve öğrenme güçlüklerine sahip olduklarını göstermektedir. Bu kavram yanılgıları ilköğretim öğrencilerinden öğretmenlere kadar her yaş kuşağında bulunabilmektedir. Bireylerin gerçek dünyayı anlamlandırabilmesi için yerçekimi kavramının okullarda öğretilmesi önemlidir. Okullarda bu eğitimi almayan yetişkinler yerçekimi hakkında dünyayı yeni keşfeden çocuklar ile aynı seviyede yanılgılara sahip olabilmektedir. Yerçekimi konusu benimsenen kurama göre farklı anlamlar içeren bir konudur. Aristoteles'in algıladığı evren, Newton'un algıladığı evren ve Einstein'ın algıladığı evrene göre yerçekimi kavramı farklı anlamlar içermektedir. Einstein fiziğine göre yerçekimi kavramının öğretimi genellikle ileri yaşlara bırakılmaktadır. Bazı ülkelerde üniversite düzeyine kadar bu konu öğretilmemektedir. Oysa öğrenciler lise seviyesinde Einstein fiziğini kavrayabilmektedir.

Yerçekimi kavramı hakkındaki anlamalar literatür de genellikle dünyada yerçekimi ve uzayda yerçekimi algısı üzerine yoğunlaşmaktadır. Öğrencilerin dünyamızın dışındaki alanda yerçekimi kavramının varlığını anlamada daha fazla zorlandıkları görülmektedir. Bu durumda öğrencilere yerçekimi kavramı öğretilirken dünyamızın dışındaki etkilerine de dikkat çekilerek öğretilmesinin önemine işaret etmektedir.

DISCOVERING RELATION BETWEEN PYTHAGORAS RELATIONSHIP AND THE GRANDI'S ROSES WITH A DYNAMIC GEOMETRY SOFTWARE

Recep ASLANER
Inonu University

Kübra AÇIKGÜL
Inonu University

ABSTRACT: In the second half of the 20th century new technologies were emerged rapidly. Mathematics education was also affected by this change like other education areas. When it comes to technologies used in mathematics education, one of the most conceivable ones is Dynamic Geometry Softwares such as Cabri, Cinderella, Geogebra. Dynamic Geometry Softwares has the important potential to teach and learn geometry subjects. One of the subjects is locus. It is taught that Dynamic Geometry Softwares are highly effective in the process of solving locus problems. The dynamic geometry softwares's "Trace", "Animation" and "Locus" features offer new possibilities for solving locus problems. In traditional learning processes including use of paper, pencil, ruler, solving locus problems is very hard. Contrary to application process used paper, pencil, ruler in the process of the software solution, students get opportunity to discover mathematical associations by recognizing invariant features in addition to variant features by the help of the software's drag and feedback features. Snapshot impressions can be easily done with these softwares. In this study, it is presented a locus activity using Dynamic Geometry Software. In activity, Dynamic Geometry Softwareoffer the opportunity to create curves called as Grandi's roses using the Pythagorean relationship and open the way for the generalization.

Key words: pythagorean relationship, rose curves, locus, Dynamic Geometry Software

PİSAGOR BAĞINTISI VE GRANDİ'NİN GÜLLERİ ARASINDAKİ İLİŞKİNİN BİR DİNAMİK GEOMETRİ YAZILIMI İLE KEŞFEDİLMESİ

ÖZET: 20. yüzyılın ikinci yarısında yeni teknolojiler hızla ortaya çıkmıştır. Diğer eğitim alanları gibi matematik eğitimi de bu değişimden etkilenmiştir. Matematik eğitiminde kullanılan teknolojilere gelindiğinde ilk akla gelenlerden biri Cabri, Cindirella ve Geogebra gibi Dinamik Geometri Yazılımlarıdır. Dinamik Geometri yazılımları geometri konularını öğrenmek ve öğretmek için önemli potansiyele sahiptir. Bu konulardan biri geometrik yerdir. Dinamik Geometri yazılımlarının geometrik yer problemlerinin çözümünde oldukça etkili olduğu düşünülmektedir. Dinamik Geometri Yazılımlarının "İz", "Animasyon" ve "Geometrik Yer" özellikleri geometrik yer problemlerinin çözümünde yeni olanaklar sunmaktadır. Kâğıt, kalem, cetvelin kullanıldığı geleneksel öğrenme süreçlerinde geometrik yer problemlerinin çözümü oldukça zordur. Kalem, kâğıt, cetvel kullanılan uygulama sürecinin aksine, yazılımla çözüm sürecinde, öğrenciler yazılımın çizim ve geri bildirim özelliklerinin yardımıyla değişen özelliklere ek olarak değişmeyen özelliklerin farkına vararak matematiksel ilişkileri keşfetme fırsatı bulur. Bu yazılımlarla anlık gösterimler kolaylıkla yapılabilir. Bu çalışmada dinamik geometri yazılı kullanılarak bir geometrik yer etkinliği sunulmuştur. Bu etkinlikte Dinamik Geometri Yazılımı Pisagor bağıntısı kullanılarak literatürde Grandi'nin gülleri olarak adlandırılan eğrileri oluşturma imkânı sunmuş ve genellemelerin yolunu açmıştır.

Anahtar sözcükler: pisagor bağıntısı, gül eğrileri, geometrik yer, Dinamik Geometri Yazılımı

GİRİŞ

Teknolojinin hızlı gelişimi diğer eğitim alanlarını olduğu gibi matematik eğitimini de etkilemiştir (Habre ve Grundmeier, 2007). Matematik eğitiminde kullanılan teknolojilere gelindiğinde ilk akla gelenlerden biri Cabri, Cindirella ve Geogebra gibi Dinamik Geometri Yazılımlarıdır (Hohenwarter ve Fuchs, 2004; Karataş, 2011; Kokol- Voljc, 2007; Laborde, 2003). Dinamik Geometri yazılımları geometri konularını öğrenmek ve öğretmek için önemli potansiyele sahiptir (Leung, 2008; Lee, Wong ve Tang, 2004; Mariotti, 2000; Mariotti, 2001; Straesser, 2001). Bu konulardan biri geometrik yer konusudur. Geometrik yer kavramı, 100 yıl kadar önce

Alman müfredatı başta olmak üzere gelişmiş birçok ülkenin müfredatında fonksiyonel düşünme biçiminden doğmuştur (Pekdemir, 2004). Böyle bir düşünme biçiminde bağımsız değişkenlerin farklı konumları için bağımlı değişkenin yeni konumunun tahmin edilmesi gerekmektedir (Güven ve Karataş, 2009). Bu düşünme biçimi ve tamamen soyutlamayı gerektiren yapısı geometrik yer konusunun müfredatlarda sembolik olarak yer almaya başlamasına (Pekdemir, 2004) ve eğitim-öğretim ortamlarında önem verilmeyen, çoğu zaman üzerinden geçilen bir konu haline gelmesine neden olmuştur (Güven ve Karataş, 2009).

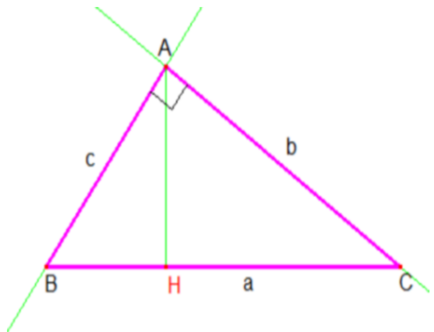
Geleneksel ortamlarda geometrik yer problemlerinin çözümüyle ilgili genel bir yöntem olmamakla birlikte (Cha ve Noss, 2001; Gorghiu, Puana ve Gorghiu, 2009) problemler büyük bir dikkatle analiz edilerek aranan geometrik yerin keşfedilmesini gerektirmektedir (Gorghiu, Puana ve Gorghiu, 2009). Bazı geometrik yer problemlerinin çözümü açıktır. Örneğin Düzlemde sabit bir noktadan eşit uzaklıktaki noktaların geometrik yeri bir çember, bir doğru parçasının uç noktalarına eşit uzaklıktaki noktaların geometrik ise bu doğru parçasının orta dikme doğrusudur. Geleneksel ortamlarda sonucu açıkça görülmeyen problemlerin çözümünde kağıt-kalem, pergel-cetvel kullanılabilir. Gülkılık (2008), geometrik yer problemlerinin çözümünde, istenilen şarta uygun en az üç tane olmak üzere özel noktalar bulunması ve daha sonra bu noktaları birleştirerek oluşturulan yörüngenin sezgisel olarak tahmin edilmesi gerektiğini belirterek aşağıdaki adımların izlenmesi gerektiğini söylemiştir.

1. Verilen koşulları yansıtacak şekil çizilmelidir.
2. Bu şekilden de yararlanarak tahmin yapılmalıdır.
3. Yapılan tahmini doğrulamak için matematiksel açıklamalar yapılmalıdır.

Bahsedilen çözüm yönteminde neredeyse her bir soru için farklı bir şekil tasarlamak gerekmektedir. Ancak kağıt-kalem, pergel cetvel gibi araçların kullanıldığı geleneksel ortamlarda bu mümkün olmamaktadır (Güven ve Karataş, 2009). Bu gibi nedenlerden dolayı birçok öğrenci bu konuyla ilgili problemleri çözmekte zorluklar yaşamaktadır (Açıkgül ve Aslaner, 2012; Gorghiu, Puana ve Gorghiu, 2009; Gülkılık, 2008; Güven ve Karataş, 2009). Birçok araştırmacı bu problemlerin giderilmesinde DGY lerin önemli bir potansiyele sahip olduğunu belirtmektedir (Güven, 2002; Güven ve Karataş, 2009; Jahn, 2002; Real and Leung, 2006). Bu programların sahip oldukları *İz Bırakma* ve *Geometrik Yer* gibi özellikler geometrik yer problemlerinin çalışılması için yeni imkânlar sağlamaktadır. Bu araç çubukları kullanılarak mevcut müfredat tarafından reddedilen fonksiyonel ilişki kavramı keşfedilebilmektedir (Cha ve Noss, 2001). Geometrik yer problemlerinin çözümünde gerekli olan ve geleneksel ortamlarda gerçekleştirilmesi pek de mümkün olmayan anlık gösterimler bu programlar sayesinde yapılabilmektedir. Böylece öğrenciler çeşitli varsayımlarda bulunabilmekte ve bu durum onların hayal gücünü geliştirmektedir (Güven ve Karataş, 2009). Bu çalışmada Pisagor Bağıntısı ile gül veya çiçek yaprağına benzeyen eğriler arasındaki ilişkinin bir geometrik yer problemi olarak ele alınması ve bir DGY ile matematiksel ilişkileri araştırma ve keşfetme süreçlerinin betimlenmesi amaçlanmıştır.

ETKİNLİK

Verilen şartları sağlayan noktaların kümesi (bu şartlar cebirsel veya geometrik olabilir) olarak tanımlanan geometrik yer geometrinin en önemli konularından biridir. Bir yörünge üzerinde hareket eden bir A noktasına bağımlı olan ve verilen şartları sağlayan bir P noktası (veya birden fazla P_1,P_2, … noktaları) bulunarak, A noktası kendi yörüngesinde hareket ederken P noktasının nasıl bir küme oluşturduğu tahmin edilmeye çalışılır. Bu tahmin bazen kolaylıkla yapılabilirken bazen de oldukça zordur. Ancak gerekli ortamlar hazırlandıktan sonra (DGY)'nın sahip olduğu *iz bırakma, animasyon* ve *geometrik yer* özelliklerinden faydalanarak bu geometrik yer kolayca tahmin edilebilir. Hatta "*P noktasının A noktasına geometrik nedir?* " sorusu sorularak geometrik yer tam olarak görülebilir.



Şekil 1. ABC Dik Üçgeni

Pisagor bağıntısı bir dik üçgende $a^2=b^2+c^2$ olduğunu ifade eder. A noktasının hipotenüs üzerindeki dik iz düşüm noktası olan H noktası bu üçgen için özel noktalardan birisidir. Özellikleri;

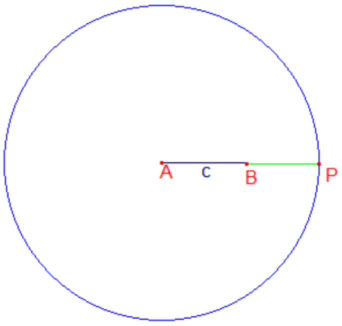
1) [AH] doğru parçası verilen üçgeni kendine ve bir birine benzeyen iki üçgene ayırır. Yani *ABC≈HBC≈HCA* dir. Bu önerme üçgenlerde Açı-Açı benzerlik Teoremi ile gösterilebilir.

2) $|AH|^2=|BH|.|HC|$ dir. Bu eşitliğe dik üçgende *Öklid'in yükseklik bağıntısı* adı verilir.

3) $|AB|^2=|BH|.|BC|$ ve $|AC|^2=|CH|.|CB|$dir. Bu eşitliklere de *dik üçgende kenar bağıntıları* adı verilir ve *"Benzer üçgenlerin karşılıklı kenar uzunlukları orantılıdır."* önermesinden görülmektedir (Aslaner 2015).

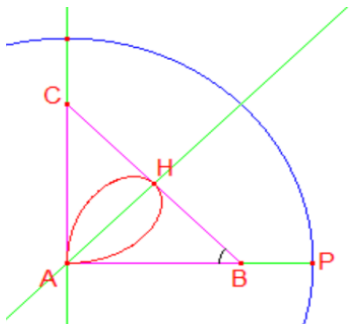
B (ya da C) noktası doğru üzerinde hareket ettirildiğinde *H* noktasının da değiştiği görülmektedir. *Burada H noktası B* (veya C) noktası bağımlıdır. Bu durum acaba *"H noktasının B noktasına göre geometrik yeri nedir?"* sorusunu aklımıza getirmektedir. Bu durum acaba *"H noktasının B noktasına göre geometrik yeri nedir?"* sorusunu aklımıza getirmektedir.

Bunun için Cabri programında bir [AP] doğru parçası ve üzerinde bir B noktası alalım. Eğer P noktasını, *çember* seçeneğini kullanarak *A* merkezli *a* yarıçaplı bir çember çizip bu çember üzerinde seçersek elde ettiğimiz şeklin hem büyüklüğünü değiştirme hem de A noktası etrafında döndürme imkânımız olur.



Şekil 2. A Merkezli Çemberde [AP] Doğru Parçası Üzerinde Alınan B Noktası

|AB|=c diyelim. Burada daima c<a ve b=√(a2-c2) tanımlı olup bu değeri A noktasında [AP] ye dik olan ışın üzerine aktararak varılan noktaya C dersek elde edilen ABC üçgeni bir dik üçgen olup [BC] bu üçgenin hipotenüsüdür.
Burada B noktası [AP] üzerinde hareket ederken H noktası da bir eğri çizer. Cabri programına "H noktasının B noktasına göre geometrik yeri nedir?" diye sorduğumuzda elde edilen eğrinin yandaki gül yaprağına benzeyen bir eğri olduğu görülür.

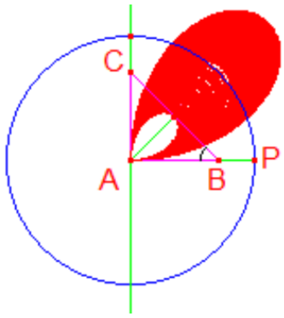


Şekil 3. H Noktasının B Noktasına Göre Geometrik Yeri Sonucu Elde Edilen Gül Yaprağına Benzeyen Eğri

BULGULAR VE YORUMLAR

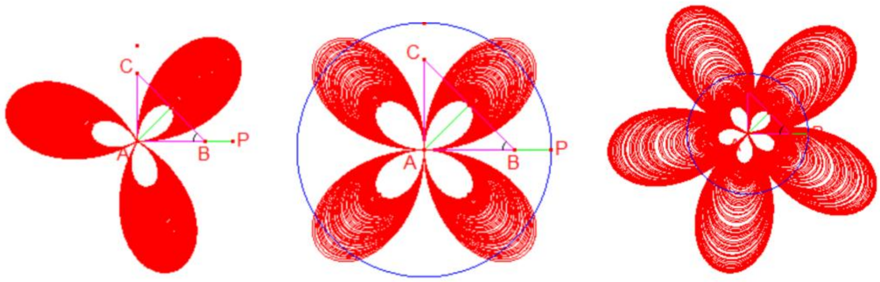
1) ABC üçgeninde |AB|=|AC| olması, yani üçgenin bir ikizkenar dik üçgen olması durumunda AH doğrusu elde edilen eğrinin simetri eksenidir.

2) Elde edilen geometrik yere iz vererek çemberin yarıçap uzunluğu olan a değerini değiştirip elde edilen eğrinin içini doldurarak gerçek bir yaprak resmi elde edilir.



Şekil 4. a Değerine Bağlı Olarak Elde Edilen Yaprak Resmi

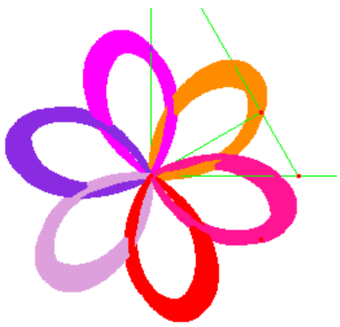
3) *n>2* bir doğal sayı *ve* $\alpha = 360/n$ olmak üzere *H* noktası A noktası etrafında *(n-1)* defa α açısı kadar döndürüp elde edilen H_n noktalarının B noktasına göre geometrik yerleri bulunarak n yapraklı gül resimleri elde edilir.



n=3 n=4 n=5

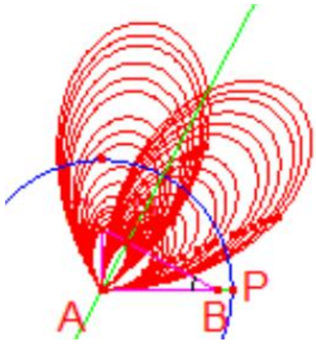
Şekil 5. n Yapraklı Gül Resimleri

Gül ve çiçeklere benzeyen eğriler üzerine uzun yıllar çalışmalar yapan İtalyan matematikçi, fizikçi ve papaz **Guido Grandi** (1671-1742) anısına bu tür eğriler *"Grandi`nin gülleri"* olarak bilinir. Bu eğrilere *iz verip* çemberin yarıçap uzanluğu olan *a* değeri sürüklenerek eğrilerin büyüklüğü değiştirilip iç bölgeleri doldurulup istenilen renkte gerçek bir gül resmi elde edilebilir.



Şekil 6. a Değeri Değiştirilerek Elde Edilen Gül Resmi

4) ABC üçgeninde |AB|>|AC| olması durumunda AH doğrusu simetri ekseni değildir. Geometrik yerin AH doğrusuna göre simetriği alınırsa kalp eğrisine benzer bir eğri elde edilir.



Şekil 7. |AB|>|AC| Olması Durumunda Elde Edilen Kalp Eğrisine Benzer Eğri

SONUÇ VE ÖNERİLER

Yapılan etkinlikte de görüldüğü gibi DGY'ler öğrencilerin pergel cetvel gibi geleneksel araçlarla çözmekte zorlandıkları GY problemlerinin çözümünde soyut matematiksel ilişkileri somutlaştırarak öğrencilerin anlamalarına katkıda bulunabilir. Teknoloji, sunduğu olanaklarla sezgilere dayalı olarak yeni matematiksel ilişkilerin bulunmasına ortam sağlayabilir. Geometrik yer problemlerinde geleneksel ortamlarda yaşanan sıkıntılar göz önünde bulundurularak farklı geometrik yer probleminin çözümü için DGY etkinlikleri hazırlanabilir. DGY'lerin geometrik yer konusundaki potansiyelleri dikkate alınarak öğretmen ve öğretmen adaylarına bu programları nasıl kullanılması gerektiği örnek etkinliklerle uygulamalı olarak yaptırılabilir. Bu sayede hem yaşanan güçlükler giderilebilir hem de etkinlikleri derslerine kolaylıkla taşımaları sağlanabilir.

ABSTRACT: Customer loyalty has become an all important factor under today's economic conditions. At first, consumer was consuming what manufacturer produced but today, manufacturer produces what consumer wants. Because, there are many equivalent of products which customers buy. In this study, customer loyalty survey related to GSM operators was applied to 454 people who use three biggest GSM operators of Turkey. The analysis was performed by using decision trees which are one of the Data Mining method. It was aimed to measure the customer loyalty according to educational status with C 5.0 algorithm and the results were interpreted.

Key words: GSM Operators, Customer Loyalty, Data Mining.

GSM OPERATÖRLERİNİ KULLANAN MÜŞTERİLERİN SADAKATLERİNİN EĞİTİM DURUMUNA GÖRE VERİ MADENCİLİĞİ İLE DEĞERLENDİRİLMESİ

ÖZET: Müşteri sadakati günümüz piyasa koşullarında oldukça önem arz eden bir unsur haline gelmiştir. Önceleri üretici ne üretirse tüketici onu tüketirdi, fakat günümüzde tüketici ne isterse üretici onu üretmek durumundadır. Çünkü günümüzde bir müşteri için alacağı ürün ya da hizmetin birçok muadili bulunmaktadır. Bu çalışmada Türkiye'nin en büyük üç GSM operatörünü kullanan 454 kişiye, kullandıkları operatörlerle alakalı müşteri sadakat anketi uygulanmıştır. Elde edilen veriler Veri Madenciliği (VM) yöntemlerinden karar ağaçları ile analiz edilmiştir. Uygulamada C 5.0 algoritması kullanılarak, eğitim durumuna göre müşteri sadakatinin ölçülmesi amaçlanmış ve sonuçlar yorumlanmıştır.

Anahtar sözcükler: GSM Operatörleri, Müşteri Sadakati, Veri Madenciliği.

GİRİŞ

Günümüzde firmalar rakipleriyle rekabet edebilmek için marka oluşturma stratejilerine önem vermektedirler. Fakat gelişen teknoloji ile birlikte işletmelerin ürettikleri stratejiler ve ürünler kolaylıkla kopyalanabilmektedir. Bu sayede pazarlarda birbirlerine çok benzeyen benzer kalitede ve fiyatta birçok ürün bulunabilmektedir. Böylece tüketicilerin alternatifleri artmakta ve sıklıkla marka değiştirebilmeleri kolaylaşmaktadır. Bu da şirketlerin müşterilerinde marka sadakati yaratmaları gerekliliğini doğurmaktadır. Müşteri sadakati, müşterilerin satın alacağı servis veya ürünün benzer özellikte, fiyatta ve kalitede başka markalar bulunmasına rağmen, uzun süreli olarak belirli bir markayı tercih etmeleri olarak tanımlanmaktadır (Gülmez ve Dörtyol, 2009).

Türkiye'de en hızlı gelişen sektörlerin başında GSM operatörlüğü gelmektedir. Ülkemizde GSM sektörünün doygunluk aşamasına gelmesi ve GSM operatörlerinin hali hazırdaki müşterilerinin diğer operatörlerin potansiyel müşterisi olması sektörde rekabetin kızışmasına yol açmıştır. Bu nedenle müşteri sadakati GSM operatörleri için önemini artırmıştır. Numara değişmeden operatör değiştirme imkânı, operatör değiştirme maliyetlerinin firmalarca karşılanması, numarasını taşıyan müşterilere çok daha cazip imkânlar sunulması gibi etmenler tüketicilerin operatör değiştirmelerini kolaylaştırmıştır. Bu etmenler firmaların müşterilerini ellerinde tutma ve onları sadık müşteriler haline getirmek için yoğun pazarlama faaliyetleri yapmalarını gerektirmektedir (Türker ve Türker, 2013). 2005 yılında ABD'de yayınlanan Tüketici raporlarına göre, 2004 yılında cep telefonu kullanıcılarının %35'i operatörünü değiştirmeyi düşünmüştür (Kim ve diğ., 2006:208).

Bu çalışmada GSM operatörleri için önem arz eden müşteri sadakatini etkileyen faktörler incelenmiştir. Ankara'da yaşayan 454 kullanıcıya GSM operatörlerine yönelik müşteri sadakati anketi uygulanmıştır. Elde edilen veriler VM yöntemlerinden çalışmamız için en yüksek doğruluk oranına sahip olan C 5.0 algoritması ile analiz edilmiştir. Araştırma sonuçları GSM operatörlerinin müşteri sadakati stratejileri geliştirmelerine ışık tutacak niteliktedir.

YÖNTEM

Türkiye'de faaliyet gösteren en büyük 3 GSM operatörü müşterilerinin sadakatlerini etkileyen faktörleri belirlemek amacıyla, Ankara ilinde toplam 454 kişi ile hem yüz yüz hem de elektronik posta aracılığıyla, anket yöntemiyle veri toplanmıştır. Ankette gönüllülük esası kullanılmış, gönüllü olan katılımcılara anket uygulanmıştır. Elde edilen veriler C 5.0 algoritması ile analiz edilmiştir.

Müşteri Sadakati

Müşteri sadakati, bir müşteri için alternatiflerinin de olduğu bir ortamda belirli bir ürüne, hizmete, satıcıya veya işletmeye yönelik duyduğu, hissettiği, içten bağlılık ve tesadüfi olmayan alışveriş eğilimi, arzusu ve eylemi olarak tanımlanmaktadır. Müşteri sadakati kavramı bir ürüne veya hizmete yönelik olabileceği gibi bir şirkete yönelik de olabilmektedir (Bayuk ve Küçük, 2007).

Bu çalışmada öncelikle cevaplayıcılara eğitim durumları, kullandıkları GSM operatörleri ve kaç yıldır bu operatörlerle çalıştıkları sorulmuştur. İkinci kısımda müşterilerin algıladıkları hizmet kalitesi neticesinde kendilerinde oluşan sadakate ilişkin 7 soru sorulmuştur. Bu ölçek Parasuraman ve diğerlerinin hizmet kalitesini ölçmek için geliştirdikleri SERVQUAL modelinin GSM hizmetlerine uyarlanması sonucu 5'li likert ölçeğine göre hazırlanmıştır. Araştırmada kullanılan anket Çiğdem Erk(2009:135) 'in yüksek lisans tez çalışmasında kullandığı anketin birinci ve üçüncü kısmından oluşmaktadır.

Veri Madenciliği

Veri madenciliği, tek başına ham verinin sunamadığı bilgiyi ortaya çıkaran veri analizi sürecidir (Jacobs,1999). Farklı bir ifadeyle veri madenciliği, büyük miktardaki veriden, anlamlı örüntüler ve kurallar keşfetme sürecidir (Linoff ve Berry, 2011).

Veri madenciliği, karar destek, pazar stratejisi, finansal tahminler gibi birçok alanda uygulanabilir olması nedeniyle son zamanlarda veritabanı kullanıcıları ve araştırmacıların önemli ölçüde dikkatini çekmektedir. Veri madenciliği, makine öğrenme, istatistik ve veri tabanları alanlarındaki teknikleri birleştirerek, büyük veri tabanlarından faydalı ve değerli bilgiyi çıkarmamıza imkân tanımaktadır (Ching ve Pong, 2002).

Karar Ağaçları

Karar ağaçları, sınıflandırma ve tahmin için sıkça kullanılan bir veri madenciliği yaklaşımıdır. Sinir ağları gibi diğer metodolojilerin de sınıflandırma için kullanılabilmesine rağmen karar ağaçları, kolay yorumu ve anlaşılabilirliği açısından karar vericiler için avantaj sağlamaktadır (Chien ve Chen, 2008).

Karar ağaçları; düşük maliyetli olması, anlaşılmasının, yorumlanmasının ve veri tabanları ile entegrasyonun kolaylığı, güvenilirliklerinin iyi olması gibi nedenlerden ötürü en yaygın kullanılan sınıflandırma tekniklerinden biridir.

C 5.0 Algoritması

En yaygın kullanılan karar ağacı algoritması Quinlan'ın ID3 algoritmasının geliştirilmiş hali olan C4.5 (Quinlan, 1993) algoritmasıdır. C5.0 algoritması ise C4.5'in geliştirilmiş hali olup, özellikle büyük veri setleri için kullanılmaktadır. C5.0 algoritması doğruluğu arttırmak için boosting algoritmasını kullandığından boosting ağaçları olarak da bilinir. C5.0 algoritması C4.5'e göre çok daha hızlı olup, hafızayı daha verimli kullanmaktadır. Her iki algoritmanın sonuçları aynı olsa da C5.0 biçim olarak daha düzgün karar ağaçları elde etmemizi sağlamaktadır.

BULGULAR

C 5.0 Algoritması Doğruluk Oranı

Eğitim durumu değişkeni için algoritmanın doğruluk oranı Şekil 1'de verildiği gibi %93,39 olarak hesaplanmış olup, algoritma yüksek doğruluk oranına sahip olduğundan bu aşamadan sonra C 5.0 algoritması ile karar ağacı oluşturulmuştur.

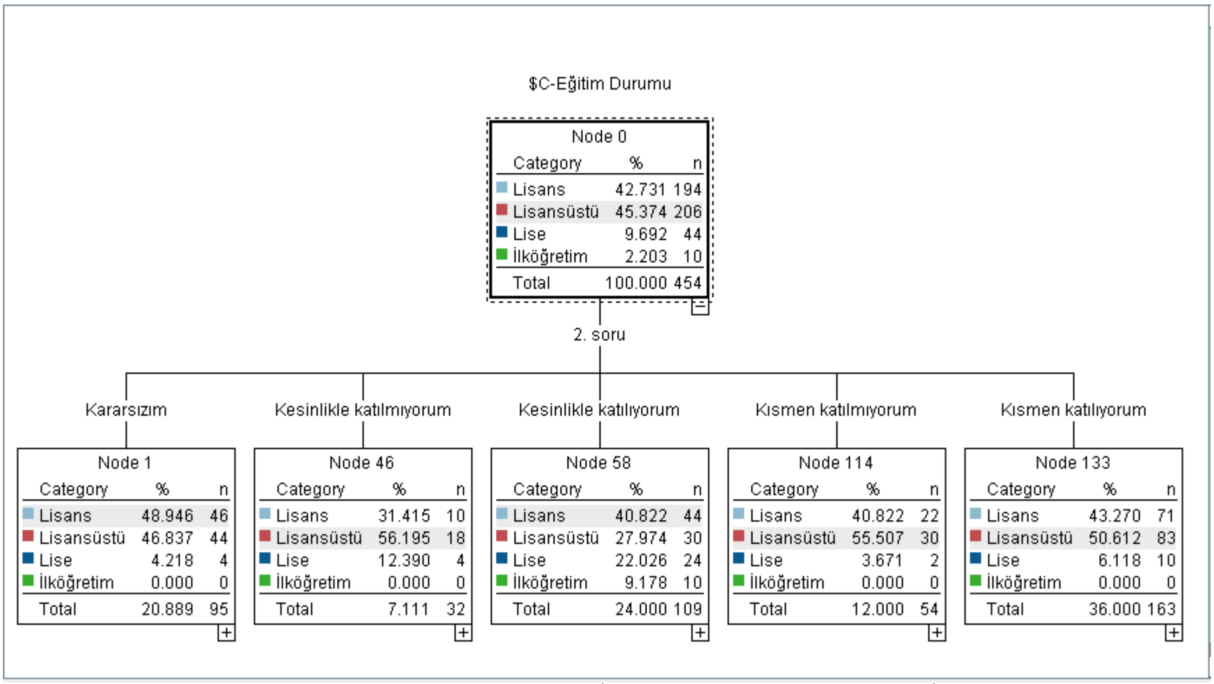
Results for output field Eğitim Durumu
Comparing $C-Eğitim Durumu with Eğitim Durumu

Correct	424	93,39%
Wrong	30	6,61%
Total	454	

Şekil 1. C 5.0 Algoritması Doğruluk Oranı

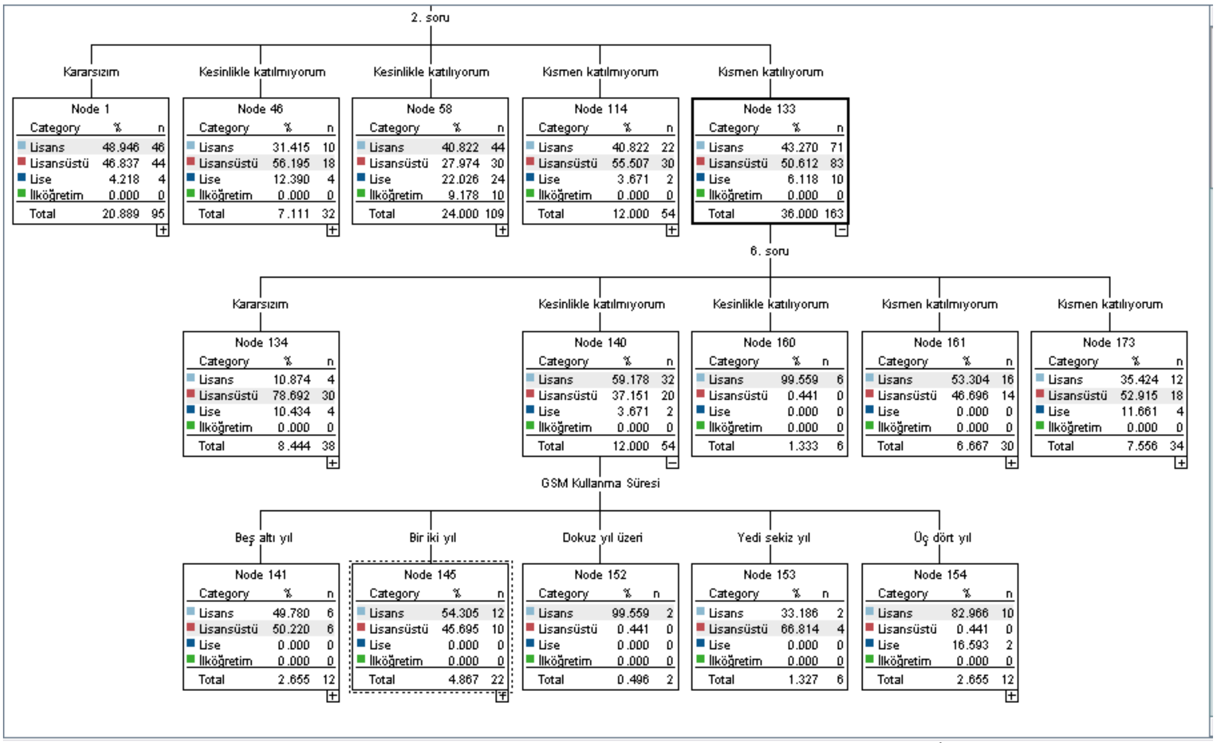
C 5.0 Algoritması ile Elde Edilen Karar Ağacı

Şekil 2 incelendiğinde, eğitim durumu değişkeni için C5.0 Algoritması ile oluşan karar ağacının ilk olarak 2. sorudan dallandığı görülmektedir. Yani eğitim durumu değişkeni için ağacın dallanmasındaki en etkili sorunun "İletişim hizmetlerinden yararlandığım GSM işletmesini soranlara tavsiye ederim" olduğu görülmektedir. Anketi uygulayan 454 kişiden çoğunlukta olan 163'ü bu soruya "Kısmen Katılıyorum" cevabını verirken, azınlıkta olan 32'si ise "Kesinlikle katılmıyorum" cevabını vermiştir.

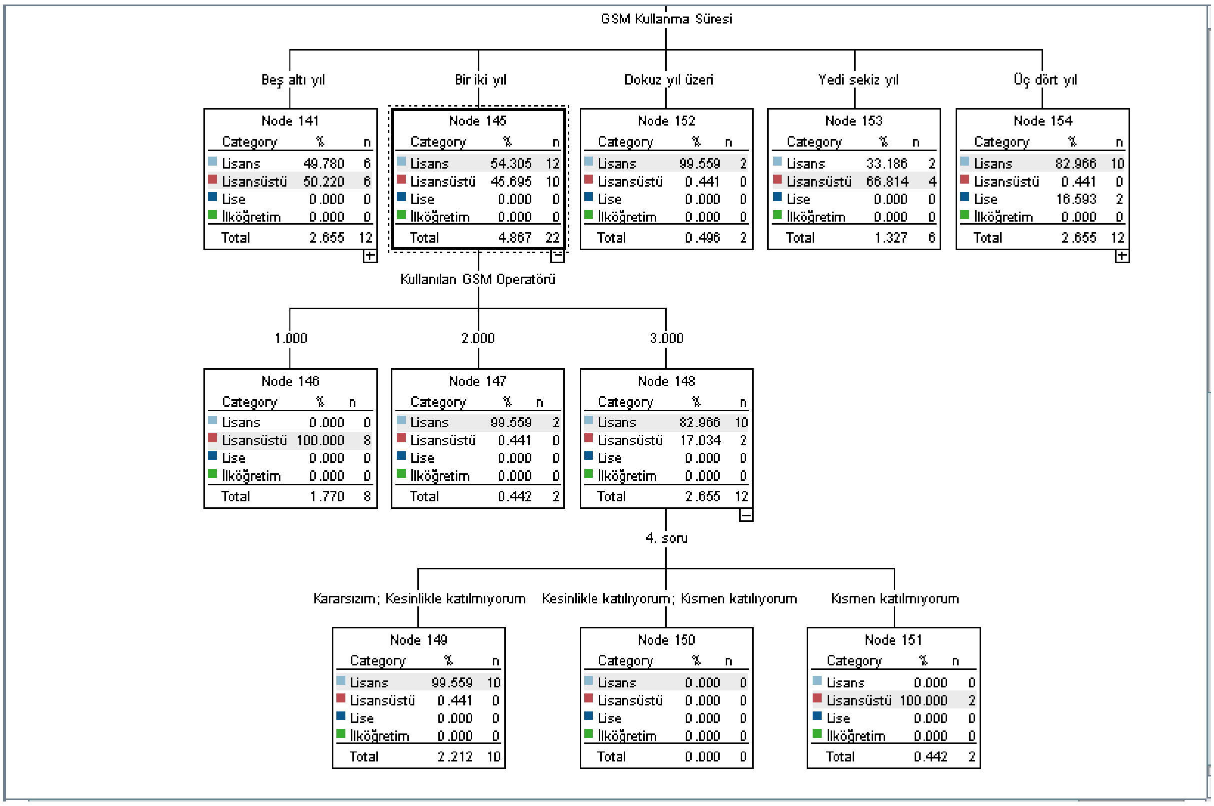


Şekil 2. Eğitim Durumu Değişkeni İçin Karar Ağacında Oluşan İlk Dal

2. soruya "Kısmen Katılıyorum" cevabını verenlerin eğitim durumlarının çoğunlukla lisansüstü düzeyinde olduğu görülmektedir. Bu gruptaki kişiler için karar ağacı dallanmaya 6. soru olan "İletişim hizmetlerinden yararlandığım GSM işletmesi, konuşma ve mesaj ücretlerini arttırsa da onu kullanmaya devam ederim" ile devam etmektedir. Şekil 3 incelendiğinde bu soruya çoğunluğun "Kesinlikle Katılmıyorum" cevabını verdiğini söylemek mümkündür. Bu gruptakilerin büyük bir kısmının GSM kullanma süreleri bir iki yıl arasındadır. Bu kişilerin çoğunlukla 3 numaralı GSM operatörünü kullandıkları ve iletişim hizmetlerinden yararlandıkları bu operatörün her zaman ilk tercihleri olmadığı ifadesi Şekil 4'ten elde edilebilmektedir.

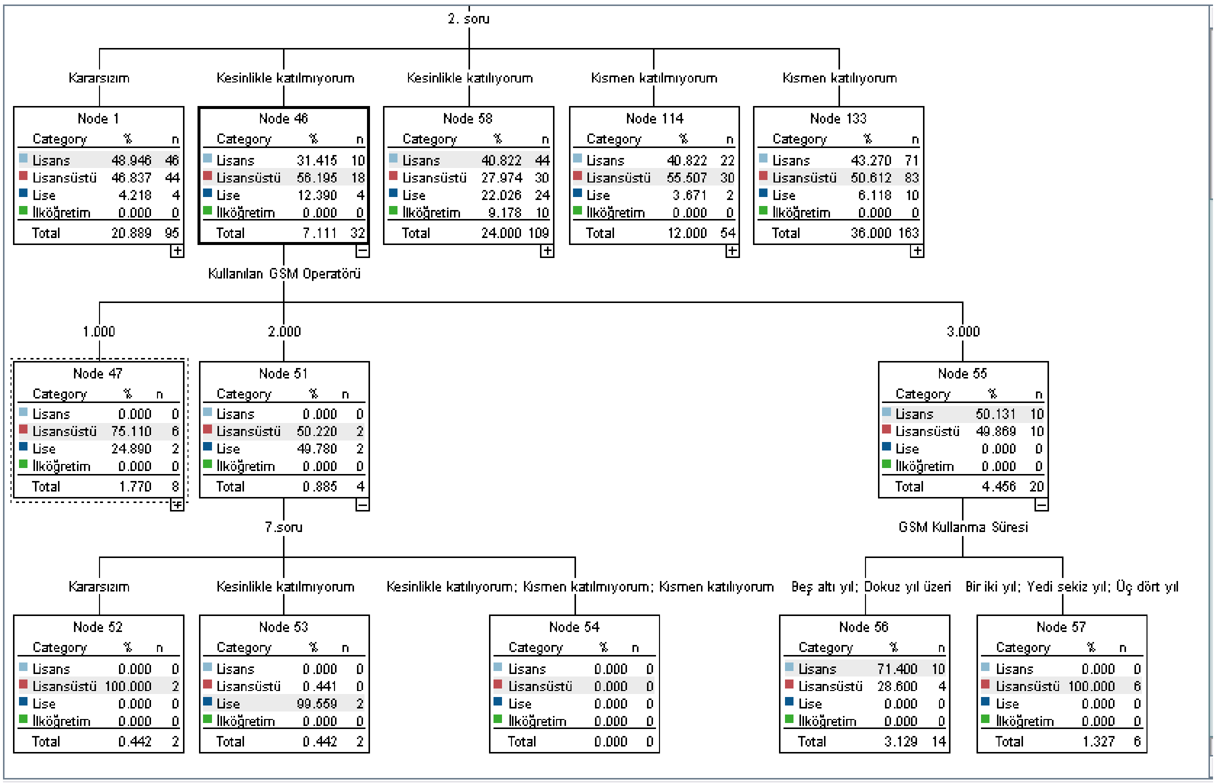


Şekil 3. Eğitim Durumu Değişkenine Göre 2. Soruya "Kısmen Katılanlar" İçin Karar Ağacı



Şekil 4. Eğitim Durumuna Göre GSM Kullanma Süresi 1-2 Yıl Arasında Olanlar için Karar Ağacı

Şekil 5 incelendiğinde 2. soruya kesinlikle katılmayanlar, yani iletişim hizmetlerinden yararlanılan GSM operatörünü soranlara kesinlikle tavsiye etmeyenlerin çoğunlukla 3 numaralı GSM operatörünü kullanan kişilerden oluştuğu görülmektedir. 3 numaralı GSM operatörünü kullanan kişiler için de karar ağacı dallanmayı "GSM Kullanma Süresi" ile bitirmektedir.



Şekil 5. Eğitim Durumu Değişkenine Göre 2. Soruya "Kesinlikle Katılmayanlar" İçin Karar Ağacı

SONUÇ

Müşteri sadakati, müşterinin algıladığı hizmet kalitesinden ortaya çıkan duygusal bağın müşteriler ile ilerletilmesidir (Kandampully, 1998). Bugüne kadar yapılan birçok çalışma müşteri sadakatinin sağlanması için müşteri memnuniyetinin çok ciddi bir öneme sahip olduğunu ortaya koymuştur (Örn. Hackl ve diğ., 2000, Cassel ve Eklöf, 2001). Yeni müşteri kazanma maliyetini, mevcut müşterileri elde tutma maliyetinden daha fazla olduğunun farkına varılmasıyla birlikte, müşteri sadakati şirketler için daha fazla önem kazanmıştır (Too, Souchon, Thirkell, 2000).

Bu çalışmada, Türkiye'de faaliyet gösteren 3 büyük GSM operatörü müşterilerinin sadakatlerinin oluşmasındaki en önemli faktörlerin VM tekniğiyle analiz edilmesi amaçlanmıştır. Çalışmada C5.0 algoritması kullanılarak eğitim durumu bağımlı değişken; müşteri sadakatini analiz etmeye yönelik oluşturulan anket soruları ise bağımsız değişkenler olarak ele alınmıştır. Eğitim durumuna göre karar ağacının 2. sorudan dallanmaya başladığı görülmüştür. Katılımcıların çoğunun bu soruya ''Kısmen katılıyorum'' cevabını verdikleri ve bu kişilerin eğitim durumlarının çoğunlukla lisansüstü düzeyinde olduğu belirlenmiştir. Kısmen katılıyorum cevabını verenler için ağaç dallanmaya 6. soru ile devam etmiştir. Bu soruya çoğu katılımcının "Kesinlikle katılmıyorum" cevabını verdiği tespit edilmiştir. Bu doğrultuda, bu gruptaki kişilerin öncelikle kullandıkları operatörleri yakınlarına tavsiye etmek istedikleri, fakat yine de ücretlendirme kriterini göz önünde bulundurdukları görülmüştür. Buradan yola çıkarak, genellikle GSM operatörlerinin müşteri sadakatini oluşturmak için müşterilerine rakiplerinden daha uygun ücret sunmaları gerektiğini söylemek mümkündür. Fakat ülkemizdeki GSM operatörlerinin bunun tam aksi bir strateji izlediği görülmektedir. Ocak 2016 itibariyle ülkemizdeki GSM operatörleri incelendiğinde, hali hazırdaki kampanyaların diğer operatörlerden geçiş yapan veya yeni hat alan abonelere, mevcut müşterilerden daha uygun fiyatla hazırlanmış olduğu gözlemlenmekte ve bu durumun müşteri sadakatini olumsuz etkileyen bir strateji olduğu düşünülmektedir.

EKLER

EK:1 GSM OPERATÖRLERİNİ KULLANAN MÜŞTERİLERİN SADAKATİNİ ÖLÇME ANKETİ

MÜŞTERİ SADAKATİ

Bu bölümde müşteri sadakatine ilişkin görüşlerinizi öğrenmek amacıyla çeşitli sorular verilmiştir. Lütfen bu soruları kendi düşünceleriniz doğrultusunda;
1-Kesinlikle Katılmıyorum, 2-Katılmıyorum, 3-Fikrim Yok, 4-Katılıyorum, 5-Kesinlikle Katılıyorum, seçeneklerinden birini tik **(X)** koyarak cevaplandırınız.

SORU NO	SORULAR	Kesinlikle Katılmıyorum	Katılmıyorum	Fikrim Yok	Katılıyorum	Kesinlikle Katılıyorum
1.	İletişim hizmetlerinden yararlandığım GSM işletmesi hakkında eş, dost ve yakınlarıma olumlu şeyler söylerim					
2.	İletişim hizmetlerinden yararlandığım GSM işletmesini soranlara tavsiye ederim					
3.	Arkadaşlarımı ve yakınlarımı, iletişim hizmetlerinden yararlandığım GSM işletmesiyle çalışmaları konusunda ikna etmeye çalışırım					
4.	İletişim hizmetlerinden yararlandığım GSM işletmesi, iletişim konusunda her zaman ilk tercihimdir					
5.	İletişim hizmetlerinden yararlandığım GSM işletmesiyle gelecekte daha çok iş yapmayı düşünürüm					
6.	İletişim hizmetlerinden yararlandığım GSM işletmesi, konuşma ve mesaj ücretlerini arttırsa da onu kullanmaya devam ederim					
7.	Rakipleri fiyat avantajı sağlasa bile GSM hizmetlerinden yararlandığım işletmeyle çalışmaya devam ederim					

USABILITY AND PERFORMANCE ANALYSIS OF MEB WEBSITE

Mehmet SEVRİ
Gazi Üniversitesi

Sedat HAKYEMEZ
Gazi Üniversitesi

ABSTRACT: According to Internet usage statistics; Turkey's estimated number of Internet users is 46.2 millions, which is 59.6% of the country's population, by November 2015. When people need information on a subject, the first source they refer to is the related institution's website. Design and usability of websites are important for users to rapidly and easily access to the information they demand. Ministry of National Education (MEB) website serves many users including millions of students and their guardians. In this study, MEB website's task based performance analysis and usability analysis according to Xerox heuristic scala are performed. The usability and human interaction level of this website, which belongs to a very important government organisation and is visited by multitudinous users, are determined. Website's inadequate parts are reported.

Key words: usability, human-computer ınteraction, meb, website

MEB WEB SİTESİ KULLANILABİLİRLİK VE PERFORMANS ANALİZİ

ÖZET: İnternet kullanım istatistiklerine göre ülkemizde internet kullanıcı sayısının 2015 Kasım ayı itibariyle 46.2 milyon yani ülke nüfusunun %59.6 sı olduğu tahmin edilmektedir. Kullanıcılar bir konu hakkında bilgiye ihtiyaç duyduklarında ilk başvurdukları ilgili kurum veya kuruluşun web sitesi olmaktadır. Kullanıcıların talep ettikleri bilgiye daha hızlı ve kolay ulaşabilmeleri için web sitelerinin tasarım ve kullanılabilirliği önem arz etmektedir. Milli Eğitim Bakanlığı (MEB) web sitesi, başta milyonlarca öğrenci ve velisi olmak üzere çok sayıda kullanıcıya hizmet vermektedir. Bu çalışmada MEB web sitesinin görev bazında performans ve Xerox sezgisel ölçeğine göre kullanılabilirlik analizi gerçekleştirilmiştir. Önemli bir kamu kurumuna ait olan ve çok sayıda kullanıcı tarafından ziyaret edilen bu web sitesinin kullanılabilirliği ve kullanıcı etkileşim düzeyi tespit edilmiştir. Sitenin eksik görülen yönleri belirlenmiştir.

Anahtar sözcükler: kullanılabilirlik, insan-bilgisayar etkileşimi, meb, web sitesi

GİRİŞ

Günümüzde bilgiye ulaşmak ve bunu hızla gerçekleştirmek insanların günlük yaşamlarının bir parçası haline gelmiştir. Bu sebeple insanlar bilgiye ulaşmak için ilk tercih ettikleri mecra internet ve web siteleri olmaktadır. Her geçen gün web sitelerinin sayısı, bilgi derinliği artmakta bunun sonucunda ise bu ortamda yer alan bilginin kontrolü ve takibi zorlaşmaktadır. Bu sebeple bilgiye hızla erişmek isteyen kullanıcılar için, web sitelerinin tasarımlarının ve kullanıcılara bilginin sunulma şeklinin nasıl olacağı ile ilgili soruların ortaya çıkmasına neden olmaktadır. Kullanıcıların etkin ve verimli bir kullanım edinebilmeleri açısından web sitelerinin kullanılabilirliklerinin yüksek olması önem arz etmektedir (Ateş & Karacan, 2009; Fang & Holsapple, 2007). Çok sayıda kullanıcının hizmet aldığı kamu kurumlarının internet sitelerinin kullanılabilirliğinden kaynaklanan sorunlar, kullanıcılar açısından verimlilik kayıplarına neden olmakta ve alınan hizmetin kalitesini düşürmektedir (İnal, Çınar, & Çağıltay, 2016). Literatür incelendiğinde kamu veya özel kurumlara ilişkin, anket tabanlı, göz takibi ile(eyes trakcing), performans bazlı, ölçek tabanlı vb. yöntemler ile birçok çalışmada yapıldığı görülmektedir (Ateş & Karacan, 2009; Bayram & Yaylı, 2009; Çakmak, Güneş, & Tahsin, 2011; İnal et al., 2016; Karacan & Demirtel, 2009; Kurulgan & Bayram, 2006; Özçelik, Kurşun, & Çağıltay, 2006; Tarhan, 2007; Uçak & Çakmak, 2009; Yeniad, Mazman, Tüzün, & Akbal, 2011).

Bu çalışmanın amacı T.C Milli Eğitim Bakanlığı web sitesi "www.meb.gov.tr"yi görev bazında performans analizine ve Xerox Sezgisel Ölçeğine göre incelenmesi ve sonuçların raporlanmasıdır. Önemli bir kamu kurumu olan ve milyonlarca öğrenci, veli, öğretmen ve vatandaş tarafından kullanılan bu web sitesinin kullanılabilirliği ve kullanıcı etkileşim düzeyi tespit edilmeye çalışılmış, sitenin eksik görülen yönleri ve kısımları açıklanmıştır.

Kullanıcılara daha iyi hizmet verilebilmesi ve zaman kaybının önlenebilmesi için çalışmada belirtilen eksiklik ve iyileştirmelerin yapılması önem arz etmektedir.

YÖNTEM

Web sayfasının kullanılabilirlik analizinde farklı kriterler göz önünde bulundurulmaktadır. Web sayfasının değerlendirilmesinde kullanılacak yöntemin doğru seçilmesi önem arz etmektedir. Yöntemin seçiminde zaman, bütçe, kullanıcı sayısı, kaynaklar ve amaç gibi kıstaslar göz önünde bulundurulmalı ve bu kıstaslar doğrultusunda en uygun yöntem belirlenmelidir. Her yöntemin bir diğerine göre avantajı ve dezavantajı olup, seçilen yönteme göre analiz sonuçları farklılık gösterebilmektedir. Web sayfası kullanılabilirlik analizi, tasarım sürecinin hangi aşamasında yapılacağı da seçilecek yöntemin belirlenmesinde etkin rol oynamaktadır (BAŞ, 2013).

Ara yüz tasarımı ve testinde izlenen yaklaşım türlerinden birisi ara yüzün uzmanlarca değerlendirilmesidir. Değişik uzman değerlendirmeleri arasında en yaygını, iyi bir ara yüz tasarımının sahip olması gereken özellikleri veren sezgisel yöntemlerin kullanılmasıdır.

Sezgisel yöntemler genelde platform (hem donanım hem de yazılım olarak) bağımsız ve kullanılabilirliği arttırmaya yöneliktir. Günümüzde kullanıcı ara yüz tasarımı için kullanılan en popüler rehberlerden biri, Jakob Nielsen (Nielsen, 1994) tarafından önerilen Sezgisel (Heuristic) değerlendirmedir. Sezgisel (Heuristic), bir tasarım kararına rehberlik edecek genel ilke, prensip ya da alınan bir kararı eleştirmek için kullanılır. Sezgisel (Heuristic) değerlendirme, bir sistem ya da kullanıcı ara yüzünün kullanışlılık açısından sistemli bir şekilde incelenmesidir (Tüzün & Çıralı, 2011). Bu değerlendirme yönteminde değerlendiriciler birbirinden bağımsız bir şekilde sistemin olası kullanılabilirlik problemlerini ileri sürerek sistemi eleştirirler.

Nielsen'e (Nielsen, 1994) göre üç ya da beş değerlendirici yeterlidir. Ortalama 5 kişinin yaptığı değerlendirmeyle, kullanışlılıkla ilgili problemlerin %75'i ortaya çıkmaktadır. Esnek, nispeten ucuz bir yaklaşımdır. Amaç, sistem ya da ara yüzün, belirlenen kullanışlılık kriterleriyle uyumlu olup olmadığını anlamak, büyük, küçük bütün problemleri tespit etmektir. Nielsen (Nielsen, 1994) kullanılabilirlik değerlendirme yöntemlerini, sezgisel değerlendirme (heurestic evaluation), performans ölçümleri (performance measurements), sesli düşünme (think aloud), gözlem, anket, görüşme, odak grup, gerçek kullanımın kaydedilmesi (logging actual use) ve kullanıcı dönütleri şeklinde sıralamaktadır.

Nielsenin 10 kullanılabilirlik sezgiseli adı verilen bu rehbere göre, kullanıcı ara yüzleri tasarımında dikkat edilmesi gereken noktalar ve kullanılabilirliğin bu çerçevede sorgulanması aşağıdaki gibidir (Tüzün & Çıralı, 2011).

1. Sistem durumunun görünürlüğü
2. Sistem ile gerçek dünyanın eşleşmesi
3. Kullanıcı kontrolü ve özgürlüğü
4. Tutarlılık ve standartlar
5. Hata engelleme
6. Hatırlama yerine tanımlama
7. Kullanımın esneklik ve verimliliği
8. Estetik ve sade tasarımlar
9. Hataları tanıma, tanımlama ve geri almada kullanıcılara yardım
10. Yardım ve belgelendirme

Şekil 1. Nielsen'nin 10 Kullanılabilirlik Değerlendirme Yöntemleri

Nielsen'nin (Nielsen, 1999) 10 Kullanılabilirlik Değerlendirme Yöntemlerine göre bir ara yüzde olması gereken 10 özellik ve açıklamaları şu şekildedir (www.userspots.com, 2009) :

Sistem durumunun görünürlüğü:

Sistem kullanıcıyı makul bir zaman içerisinde geri beslemeler ile sistemde neler olduğu konusunda haberdar etmelidir. Örneğin; "Sayfa yükleniyor…" veya "Sistemimizde hata oluştu Daha sonra tekrar deneyiniz" gibi mesajlar verilip kullanıcı bilgilendirmelidir.

Gerçek dünyaya yakınlık:

Sistem, kullanıcıların anlamayacağı terimler yerine kullanıcılara yakın gelen kelime ve ifadeleri kullanarak kullanıcıların dilinden konuşmalıdır.

Kullanıcı kontrolü ve özgürlük:

Kullanıcılar genellikle sistem fonksiyonlarını yanlışlıkla seçtikleri için sistem onlara bu durumdan uzunca bir diyaloga girmeden kurtulacakları bir acil çıkış kapısı sunmalıdır. Bu yüzden Geri Al ve Yinele fonksiyonları sistemde bulunmalıdır.

Tutarlılık ve standartlar:

Kullanıcılar farklı kelime, durum ve aksiyonların aynı anlama gelip gelmediğini merak etmek durumunda kalmamalıdır.

Hata Önleme:

Çok iyi hata mesajları yerine kullanıcıların hata yapmasını önleyen dikkatli tasarımlar oluşturmak daha önem kazanmaktadır. Kullanıcıların hata yapma olasılıklarını artıran durumlar elimine edilmeli veya kullanıcılardan bir aksiyon öncesi yapmak isteyip istemediğinin onayı alınmalıdır.

Hatırlanma yerine bilinme:

Kullanıcının hafıza yükünü minimuma indirecek şekilde aksiyonlar, objeler ve opsiyonlar görünür olmalıdır. Kullanıcı bir diyalogdan diğerine geçtiğinde bazı bilgileri hatırlamak zorunda kalmamalıdır. Sitenin nasıl kullanılacağına dair bilgiler görünür veya gerektiğinde kolayca bulunabilir olmalıdır.

Esneklik ve kullanım etkinliği:

Kullanıcı ihtiyaçlarını tahmin edip gerekli adımların sayısı düşürülmeli ve sistem özelleştirmeye imkân sağlamalıdır.

Estetik ve mininmalist tasarım:

Diyaloglar ihtiyaç duyulmayan veya alakasız bilgiler içermemelidir. Diyalog içinde bulunan fazladan her birim asıl ilgili olan bilgi ile rekabete gireceğinden onun görünürlülüğünü düşürmektedir.

Hataları tanıma, tanımlama ve geri almada kullanıcılara yardım:

Hata mesajları kod içermeyen açık bir dille ifade edilip, problem tam olarak anlatılmalı ve olumlu bir şekilde kullanıcıya çözüm önerilmelidir.

Yardım ve dokümantasyon:

Bir sistemin dokümantasyon olmadan kullanılabilmesi daha iyi olsa bile kullanıcılara yardım ve dokümantasyon sunmak gerekli olabilmektedir. Bu bilgiler kolayca aranabilmeli, kullanıcı görevlerine odaklanmalı, çözüme dönük somut adımlar içermeli ve çok uzun olmamalıdır.

Bu çalışmada www.meb.gov.tr sitesinin, seçilen 4 görevin performans analizi ve yukarıda verilen sezgisel değerlendirme mantığı çerçevesinde Xerox firmasına ait sezgisel ölçeğe göre değerlendirilmesi işlemlerinden oluşmaktadır.

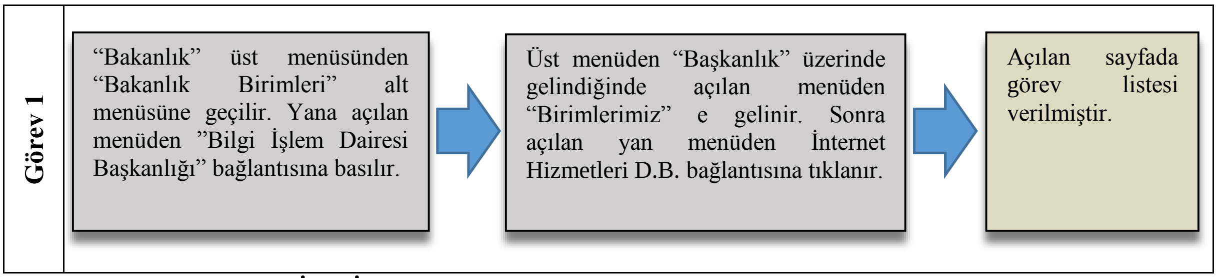
GÖREV BAZINDA PERFORMANS ANALİZİ

Görev bazında performans analizi için 2 kişiden oluşan uzmanlar ekibine aşağıdaki 4 görev verilmiştir. Bu uzmanlar ileri seviye bilgisayar kullanıcısı olup, görevler öncesinde ilgili siteyi ziyaret etmiş ve siteye aşina kullanıcılardan oluşmaktadır. Verilen sonuçların bu çerçevede değerlendirilmesi gerekmektedir. Görev bazından performans analizi sonuçları iki uzmanın ortalamaları alınarak hesaplanmıştır.

1. BİDB İnternet Hizmetleri şubesinin görevlerini bulunuz.
2. 2016 aday öğretmen sınav sonuç duyurusunu bulunuz.
3. 1990 yılında görev yapmış bakanlık müsteşarlarının adlarını bulunuz.
4. Ankara Çankaya İlçe Milli Eğitim Müdürlüğü'nün telefon numarasını bulunuz.

Görev 1: BİDB İnternet Hizmetleri Daire Başkanlığı görevlerini bulunuz.

Site üzerinde deneyimli bir kullanıcının, BİDB Ağ Yönetimi şubesinin görevlerini bulma işlemi 17 saniye içerisinde 3 ana adım ile tamamlanmıştır. Göreve ait adım listesi Şekil 2'de sunulmuştur.



Şekil 2. BİDB İnternet Hizmetleri Şubesinin Görevlerini Bulma Adımları

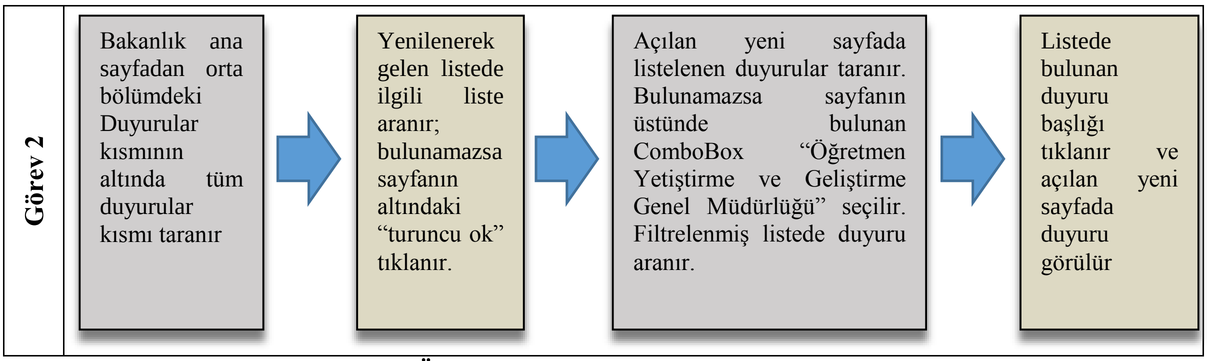
Yana açılan Bakanlık Birimleri menüsünde 23 adet alt menü bulunmaktadır. Bu kadar fazla sayıdaki alt menünün kullanıcının ekranına sığmadığı gözlemlenmiştir. Bu sebeple ekranın boyutu, çözünürlük değeri ve web tarayıcısının yakınlaşma düzeyi değerleri dikkate alınarak alt menünün çok sayıda olması çoğu deneyimsiz kullanıcıda sorun teşkil edebilecektir.

23 adet alt menüden "Bilgi İşlem Dairesi Başkanlığı" bağlantısına basıldığında açılan yeni sayfada ana sayfanın yatay üst menünün hiçbir değişikliğe uğramadığı, alt sayfalara ait menün sol düşeyde tasarlandığı gözlemlenmiştir. Bu durum kullanıcıda ilgili menüyü arayıp bulma sıkıntısı yaratmaktadır.

"Bilgi İşlem Dairesi Başkanlığı" sayfasında üst yatayda bulunan menülerden "Başkanlık" üzerinde gelindiğinde alta açılan menüden "Birimlerimiz" e gelinir. Sonra açılan 2. yan menüden İnternet Hizmetleri Daire Başkanlığı bağlantısına tıklanır. Açılan yeni sayfanın altında birimin görevleri eklenmiştir.

Görev 2: 2016 Aday öğretmen sınav sonuç duyurusunu bulunuz.

Site üzerinde deneyimli bir kullanıcının, "2016 Aday öğretmen sınav sonuç duyurusunu" nu bulma işlemi 32 saniye içerisinde 4 ana adım ile tamamlanmıştır. Göreve ait adım listesi Şekil 3'te sunulmuştur.

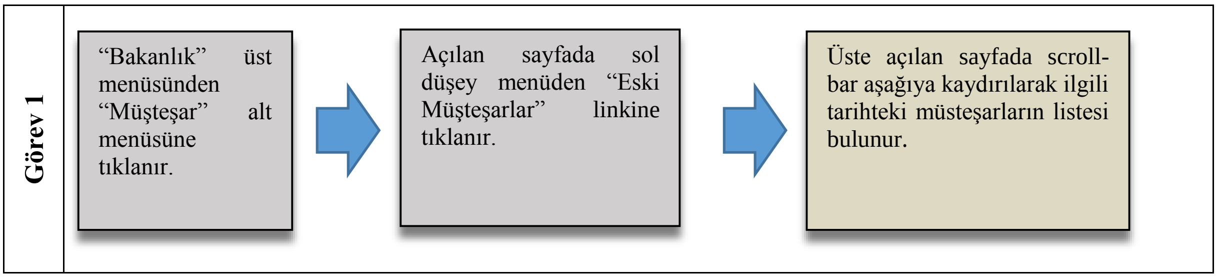


Şekil 3. 2016 Aday Öğretmen Sınav Sonuç Duyurusunu Bulma Adımları

Bakanlığın alt birimlerinin çok olması sebebiyle ana sayfadaki duyuru bölümünde birim duyurularının sayısı çok olmaktadır. Bu durum duyuruların fark edilmesini zorlaştırmaktadır. Alt birim sayfalarında duyuru bölümü olmasına rağmen fark edilmeyecek endişesiyle az kullanılmaktadır. Alt birim sayfalarının duyuru bölümünün kullanılmasını özendirmek gerekmekte ve duyuruların önem derecesine göre üst sıralara gelebilmesini sağlayacak bir mekanizma kullanılmalıdır.

Görev 3: 1990 yılında görev yapmış bakanlık müsteşarlarının adlarını bulunuz.

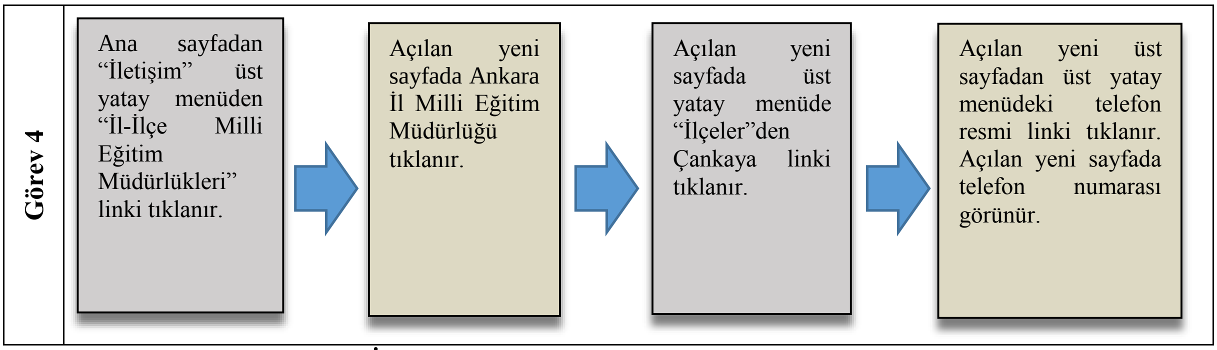
Site üzerinde deneyimli bir kullanıcının, "1990 yılında görev yapmış bakanlık müsteşarlarının adlarını" bulma işlemi 24 saniye içerisinde 3 ana adım ile tamamlanmıştır. Göreve ait adım listesi Şekil 4'de sunulmuştur.



Şekil 4. "1990 yılında görev yapmış bakanlık müsteşarlarının adları" Bulma Adımları

Görev 4: Ankara Çankaya İlçe Milli Eğitim Müdürlüğü'nün telefon numarasını bulunuz.

Site üzerinde deneyimli bir kullanıcının, "Ankara Çankaya İlçe Milli Eğitim Müdürlüğü'nün telefon numarası" bulma işlemi 28 saniye içerisinde 4 ana adım ile tamamlanmıştır. Göreve ait adım listesi Şekil 5'de sunulmuştur.



Şekil 5. "Ankara Çankaya İlçe Milli Eğitim Müdürlüğü'nün telefon numarası" Bulma Adımları

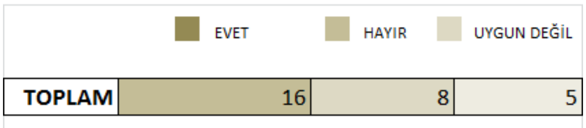
XEROX SEZGİSELLERİ BAZINDA DEĞERLENDİRME

Web sayfası iki uzman tarafından ayrı ayrı incelenmiş olup, kullanılabilirlik değerlendirme özelliğine göre yaptıkları analiz sonucunda, web sayfasının sağladığı kriterlere "Evet", sağlamadığı kriterlere "Hayır", web sayfası açısından değerlendirilmesi uygun olmayan kriterlere "Uygun Değil" cevabı verilmiştir. İki uzmanın verdiği farklı cevaplar daha sonra tekrar değerlendirilerek nihai değerlendirme yapılmıştır.

MEB web sitesinin Nielsen'nin Kullanılabilirlik Değerlendirme Yöntemine göre yapılan kullanılabilirlik analizine ilişkin sonuçlar aşağıda başlıklar halinde verilmiştir.

Sistem Durumunun Görünürlüğü

Şekil 6' da "Sistem Durumunun Görünürlüğü" özelliğine ilişkin analiz sonucu verilmiştir.

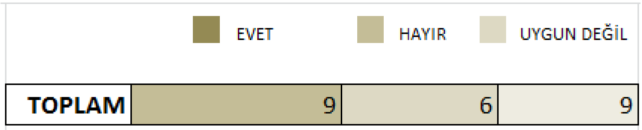


Şekil 6. "Sistem Durumunun Görünürlüğü" Başlığı İçin Sonuç Dağılımı

Web sayfasında her menüdeki bilgilendirmeler, hatırlatmalar ve hata mesajları sistem içerisinde aynı yerde görünmemektedir. Sistem içerisinde, veri girişi ekranları birden fazla sayfaya dağılmış ve bu sayfaların birbirleri ile ilişkisini gösteren adlandırmalar/etiketler mevcut değildir. Kullanıcı hareketleri ile ilgili herhangi bir geribildirim sistemi mevcut değildir. Sitenin hiçbir yerinde kullanıcıya ses ile geri bildirim yapılmamış, ayrıca onaylama veya tıklama işlemlerinde kullanıcıya görsel bir geri bildirimde verilmemektedir (Örneğin "İşleminiz onaylandı" gibi). Sistemin geri cevap vermesinde uzun süreli bekleme gerektiren durumlarda (15 saniyeden fazla), kullanıcı sistemin çalışır durumda olduğuna dair bilgilendirilmemektedir. Örneğin; Okul haritalarının açılması gerektiğinde harita geç açılmakta, ancak kullanıcıya işlemin devam ettiğine ilişkin bilgilendirme mesajı yapılmamaktadır.

Sistem ve Gerçek Dünyanın Uyumu

Şekil 7' de "Sistem ve Gerçek Dünyanın Uyumu" özelliğine ilişkin analiz sonucu verilmiştir.

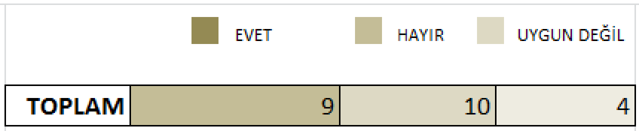


Şekil 7. "Sistem ve Gerçek Dünyanın Uyumu" Başlığı İçin Sonuç Dağılımı

Web sayfasının menü diziliminde bazı yerlerde alfabetik sıralamayı takip ettiği, bazı kısımlarda ise, doğal sıralamayı takip etmediği görülmüştür. Sayfalar geneli kırmızı olarak tasarlandığı görülmekte olup, bazı sayfalarda uyumsuz resimler ve renkler kullanılmaktadır.

Kullanıcı Kontrol ve Özgürlüğü

Şekil 8' de "Kullanıcı Kontrol ve Özgürlüğü" özelliğine ilişkin analiz sonucu verilmiştir.

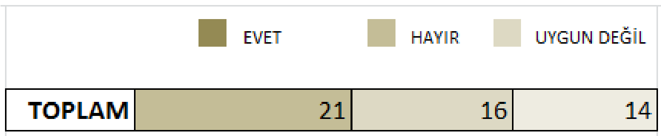


Şekil 8. "Kullanıcı Kontrol ve Özgürlüğü" Başlığı İçin Sonuç Dağılımı

Web sayfası, açılan pencereyi kapatmadan yeni pencere açılımına izin vermemektedir. Sadece web tarayıcısı yeni pencere açmakta olup, bu açılan pencereler arasında işlem yapılmaktadır. Web sayfasında uzun formların doldurulması sırasında, kullanıcının yaptığı işlemler kontrol edebilmesi açısından onay mekanizması kullanılmamaktadır. Herhangi bir işlem hareketi veya veri girişi işlemlerinde "geri al" fonksiyonu bulunmamaktadır. Web sayfası, zaman tasarrufu sağlamak adına, kullanıcının var olan verisini kopyalayarak ya da değiştirerek veri girişi yapmasına izin vermemektedir. Sayfalar üzerinde veri girişinin yapılmasında zaman tasarrufu gerektirecek bir yapı kurulmamıştır.

Tutarlılık ve Standartlar

Şekil 9'da "Tutarlılık ve Standartlar" özelliğine ilişkin analiz sonucu verilmiştir.

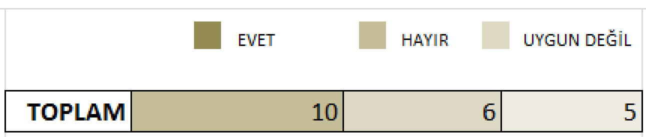


Şekil 9. "Tutarlılık ve Standartlar" Başlığı İçin Sonuç Dağılımı

Web sayfasındaki bütün ekranlarda, kuruma ait biçimlendirme standartları tutarlı bir şekilde kullanılmamaktadır. Web sayfasında kullanılan ikon tipleri kullanılabilirlik analizine uygun olan 12 ile 20 punto aralığını sağlamamaktadır. Web sayfası yazı büyüklüğü, yazı tipi, yazı rengi açısından kullanılabilir kriterlerine uymaktadır.

Hata Tanıma ve Önleme

Şekil 10'da "Hata Tanıma ve Önleme" özelliğine ilişkin analiz sonucu verilmiştir.

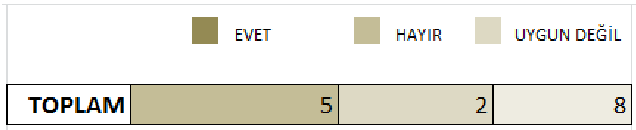


Şekil 10. "Hata Tanıma ve Önleme" Başlığı İçin Sonuç Dağılımı

Web sayfası herhangi bir hatayı bildirmek için sesli uyarıda bulunmamaktadır. Hata mesajlarında ünlem işareti kullanılmaktadır. Örneğin öneri kısmında kullanıcının eksik veya yanlış girdiği bilgiler ünlem ile uyarılmaktadır. Veri giriş alanında bir hata fark edilirse, sistem tarafından imleç hatanın olduğu alana yerleştirilmemekte veya hatayı vurgulamaya yönelik bir işlem yapılmamaktadır. Hata mesajları ile birlikte imlecin kullanıcıyı hatanın olduğu alana yönlendirmesi daha kullanışlı olacaktır. Web sayfasındaki hata mesajları sorunun nedeni hakkında herhangi bir öneride bulunmamaktadır. Sadece hatanın olduğunu belirtmektedir. Kullanıcıların hatalı veri girişleri hakkında, ilgili hata ile alakalı daha detaylı bilgilendirilmesi uygun olacaktır.

Hatadan Korunma

Bu başlık altında sistemin, hatadan korunması ve hata yapılmasının engellemesi ile ilgili olarak 15 kriter bazında değerlendirme yapılmaktadır. Değerlendirme sonuçlarının dağılımı şekil 11'de verilmiştir.

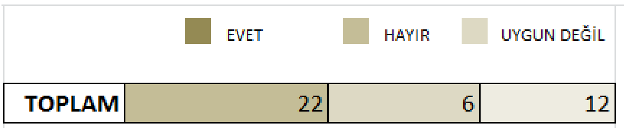


Şekil 11. "Hatadan Korunma" Başlığı İçin Sonuç Dağılımı

Web sayfası kullanıcıların mümkün olabildiğince az hata yapmasını sağlayacak bir yapıda tasarlanmamıştır. Örneğin "Öneri Formu" kısmında e-posta ve telefon numarası kontrolü yapılırken, "Bilgi Edinme" kısmında herhangi bir veri giriş kontrolü yapılmamaktadır.

Hatırlama Yerine Tanıma

Bu başlık altında sistemin kullanıcıya sistemi kullanırken hatırlatılması gereken yerleri belirtmesi ve bulunduğu yerle alakalı olarak bilgilendirmesi ile ilgili olarak 40 kriter bazında değerlendirme yapılmaktadır. Değerlendirme sonuçlarının dağılımı Şekil 12'de verilmiştir.

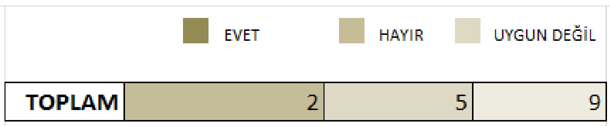


Şekil 12. "Hatırlama Yerine Tanıma " Başlığı İçin Sonuç Dağılımı

İsteğe bağlı veya zorunlu olan veri giriş alanları açıkça belirtilmiştir. Kullanıcıların girmesi mecburi olan yerler kırmızı * işareti ve altta bulunan açıklaması ile belirtilmesi gerekmektedir. Menü seçimlerinin varsayılan değerleri ayarlanmamıştır. Kullanıcıların sık seçtikleri seçenekler belirlenerek menü seçimlerinde bu seçenekler varsayılan olarak seçili yapılması gerekmektedir.

Esneklik ve Minimalist Tasarım

Bu başlık altında sistemin esneklik ve minimalist bir tasarıma sahip olduğu ile ilgili olarak 16 kriter bazında değerlendirme yapılmaktadır. Değerlendirme sonuçlarının dağılımı Şekil 13'de verilmiştir.



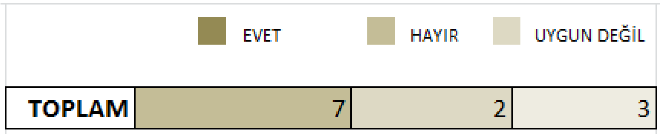
Şekil 13. "Esneklik ve Minimalist Tasarım" Başlığı İçin Sonuç Dağılımı

Kullanıcılar, birçok alandan oluşan ve tamamlanmamış olan veri giriş ekranlarında tanımlanmış olan bilgileri kaydedilerek daha sonra devam edebilmesine ve değişiklik yapabilmesine imkân sağlanmamıştır. Bu çerçevede ajax gibi teknolojiler kullanılarak, kullanıcıların girdikleri hali hazırdaki veriler saklanıp, aynı browser ile veri girişine kaldığı yerden devam etmesinin sağlanması gerekmektedir.

Sistem veri tabanı taramalarında “sonrakini bul” ve “öncekini bul” seçeneklerini sunmamaktadır. Okul listesinin alındığı alanlar gibi çok sayıda sonuç döndüren alanlarda veri tabanı sorguları önceki ve sonraki şeklinde gruplar halinde listelenmesi gerekmektedir.

Estetiklik ve Minimalist Tasarı

Bu başlık altında sistemin esneklik ve minimalist bir tasarıya sahip olduğu ile ilgili olarak 12 kriter bazında değerlendirme yapılmaktadır. Değerlendirme sonuçlarının dağılımı Şekil 14’ de verilmiştir.

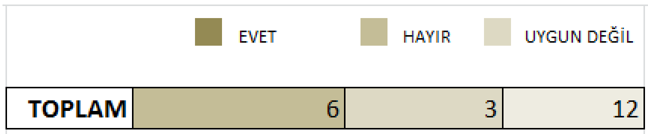


Şekil 14. “Estetiklik ve Minimalist Tasarı ” Başlığı İçin Sonuç Dağılımı

Menü başlıkları kısaltmak için yapılana kısaltmalar, kullanıcıların anlayabileceği şekilde olması gerekirken, sınavlar kısmında bulunan yan menüdeki kısaltmalar anlaşılır bulunmamıştır. Yapılan kısaltmalarda kullanıcılar tarafından sık kullanılmayan ve bilinmeyen kısaltmalardan kaçınmak gerekmektedir.

Yetenekler

Bu başlık altında sistemin yetenekleri ile ilgili olarak 21 kriter bazında değerlendirme yapılmaktadır. Değerlendirme sonuçlarının dağılımı aşağıdaki Şekil 15’ de verilmiştir.



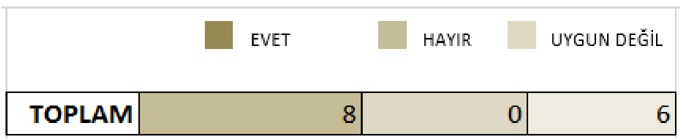
Şekil 15. “Yetenekler” Başlığı İçin Sonuç Dağılımı

Web sayfası tarafından kullanıcılar için herhangi bir veri transferi yapılmamaktadır. Örneğin öneri kısmında veya online bilgi edinme kısmında kullanıcının yaptığı başvurular ile alakalı bilgiler zaman belirterek kullanıcıya raporlanmalıdır, bu sayede kullanıcı ile daha iyi bir etkileşim sağlanmış olurken, kullanıcı da girdiği bilgilere sonradan göz atma olanağına sahip olacaktır.

Alan değerleri, mümkün olduğunca, alfabetik ve sayısal karakterlerin birbirine karıştırılmasından kaçınması gerekirken, sistemde bu durum göz önüne alınmamıştır. Örneğin, “Dilek ve Öneriler” kısmında isim soy isim gibi alfabetik olması gereken alanlara sayısal ve sembol türünden karakterler ile veri girişi yapılabilmektedir.

Kullanıcı ile Zevkli ve Saygılı İletişim

Bu başlık altında sistemin kullanıcı ile zevkli ve saygılı bir iletişim gerçekleştirmesi ile ilgili olarak 14 kriter bazında değerlendirme yapılmaktadır. Değerlendirme sonuçlarının dağılımı Şekil 16’ da verilmiştir.

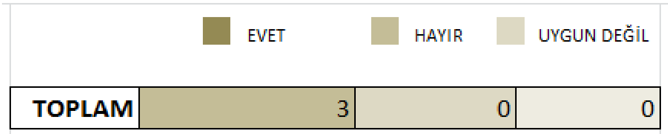


Şekil 16. “Kullanıcı ile Zevkli ve Saygılı İletişim” Başlığı İçin Sonuç Dağılımı

Renk kullanımı sırasında özenli ve dikkatli bir kullanım göz çarpmaktadır. Renklerin bulundukları alan itibariyle uyumlu bir ilişki bulunmaktadır.

Gizlilik

Bu başlık altında sistemin gizlilik ile ilgili olarak 3 kriter bazında değerlendirme yapılmaktadır. Değerlendirme sonuçlarının dağılımı Şekil 17’ de verilmiştir.



Şekil 17. "Gizlilik" Başlığı İçin Sonuç Dağılımı

Bu başlık altında bulunan 3 kriterden 3'ü de uygulama kriterini sağlamaktadır. Bu sistemin gizlilik ile ilgili bir kusuruna rastlanmamıştır.

SONUÇ

Bu çalışmada Türkiye'nin en büyük kamu kurumlarından biri olan, milyonlarca öğrenci ve veliye hizmet veren MEB.'e ait web sayfası kullanılabilirlik açısından değerlendirilmiştir. Değerlendirme işlemi Xerox sezgisel ölçeği ve görev bazında performans analiziyle yapılmıştır. Uzman değerlendirmesi, 2 uzman tarafından Nielsen'in 10 adet sezgisel ilkesi kullanılarak gerçekleştirilmiştir. Görev bazında performans analizi için uzmanlara web sayfasını kullanarak gerçekleştirmeleri için 4 adet görev verilmiştir. Verilen görevlerin en kısası 3 adım ve 17 saniye, en uzunu ise 4 adım 32 saniyede tamamlanmış olup ortalama görev süresi 25 saniye olarak ölçülmüştür. Xerox sezgisel ölçeğine göre, web sayfasının 10 özellik açısından 2 uzman tarafından değerlendirilmesi sonucunda, "Kullanıcı Kontrol ve Özgürlüğü" ve "Esneklik ve Minimalist Tasarım" özellikleri açısından kötü, "Sistem ve Gerçek Dünyanın Uyumu" özelliği açısından orta, diğer 7 özellik açısından ise iyi bulunmuştur.

Bakanlık ana sayfası genel olarak kullanılabilirlik açısından uygun tasarlanmış olmasına rağmen, bakanlığın bazı alt alanların (sub-domain) ve alt sayfaların tasarım bütünlüğüne uymadığı görülmektedir. Bu alt alan ve sayfalarda kırık bağlantılar bulunduğu görülmüştür. Alt sayfalar ve alt domainlerde menü linklerinin hiyerarşik olmadığı, ilişkisiz bir dizilimde olduğu görülmüştür. Linklerin hiyerarşik olarak diziliminin sağlanması kullanılabilirlik açısından uygun olacaktır. 'Bilgi Edinme' sayfasının tasarımı kullanılabilirlik açısından bilgisayar deneyimi zayıf kullanıcılarda sorun teşkil edebilecek bir yapıya sahiptir. 'Bilgi Edinme' sayfası bir kurumun direk dışarıya açılan kapısı olması nedeniyle, kullanıcı profili açısından her kesime hitap etmesi gerekmektedir.

OPINIONS OF PRE-SERVICE SCIENCE TEACHERS ON THE CHEMISTRY LABORATORY II

Hülya KAHYAOĞLU
Niğde Üniversitesi

Zehra MOLU
Niğde Üniversitesi

Ela Ayşe KÖKSAL
Niğde Üniversitesi

ABSTRACT: In science education laboratory is a teaching method that provides meaningful learning of concepts, permanent learning, and working individually or in groups for students. Applications such as laboratory constitute the basis of scientific studies. Since students actively participate in experimental work in the laboratory, their views related to laboratory courses become important. This study was conducted in order to determine pre-service science teachers' views on General Chemistry Laboratory II course. Qualitative research model was used in the study. The study was conducted with 45 students who are in their first year in science teacher education department at a university in the spring semester of the 2014-15 academic year. 14 open-ended questions prepared by the researchers were asked to the students participating in the study. The answers to the questions were analysed with descriptive analysis.

Key words: general chemistry laboratory, pre-service science teachers, experiment, student opinion

FEN BİLGİSİ ÖĞRETMEN ADAYLARININ GENEL KİMYA II LABORATUVARINA İLİŞKİN GÖRÜŞLERİ

ÖZET: Fen eğitiminde laboratuvar, kavramların anlamlı öğrenilmesi, öğrenmenin kalıcı olması ve öğrencilerin bireysel ya da gruplar halinde çalışmalarını sağlayan bir öğretim yöntemidir. Fen araştırmalarının temelini laboratuvar gibi uygulamalar oluşturmaktadır. Öğrenciler laboratuvarda deneysel çalışmalara aktif olarak katıldıkları için laboratuvar dersleri ile ilgili görüşleri önem kazanmaktadır. Bu çalışma fen bilgisi öğretmen adaylarının Genel Kimya II Laboratuvar dersi ile ilgili görüşlerini belirlemek amacı ile yapılmıştır. Çalışmada nitel araştırma modeli kullanılmıştır. 2014-15 akademik yılının bahar döneminde bir üniversitenin fen bilgisi öğretmenliği bölümü birinci sınıfta okuyan 45 öğrenci ile çalışma gerçekleştirilmiştir. Çalışmaya katılan öğrencilere araştırmacılar tarafından hazırlanan açık uçlu 14 adet soru yöneltilmiştir. Sorulara verilen yanıtlar betimsel analiz yöntemi ile analiz edilmiştir.

Anahtar Sözcükler: genel kimya laboratuvarı, fen bilgisi öğretmen adayları, deney, öğrenci görüşü

GİRİŞ

Fen bilimleri insanların gündelik yaşamı ve çevreyle doğrudan ya da dolaylı olarak ilgilidir. Fen bilimlerindeki konuların çoğu gündelik yaşamla ilgili olmasına karşın, konular öğrencilere soyut ve karmaşık gelmektedir (Akdeniz, Ayas ve Çepni, 1994). Ayrıca bilim ve teknolojideki hızlı gelişmeler bireylerin bilimsel okur-yazar olmasını gerektirmektedir. Bireyler bilimsel okur-yazar olarak yetiştiklerinde; günlük yaşamlarında karşılaştıkları çeşitli problemlere çözüm yolları önerebilir, bilgiye nasıl ulaşacağını bildiğinden bilgiye daha hızlı ulaşır, yeni bilgiler üretebilir, çağdaş teknolojileri etkili ve verimli bir şekilde kullanabilirler (Yaşar ve diğ., 1998, akt. Pekbay ve Kaptan, 2014). Milli Eğitim Bakanlığı, fen eğitiminin amaçları doğrultusunda İlköğretim programını yeniden yapılandırmış ve geleneksel öğrenme ortamlarının kullanıldığı ders plan ve programlarını ortadan kaldırarak bunun yerine öğrencilerin yaparak-yaşayarak öğrenmelerini sağlayıcı yeni yöntem ve süreçleri programlarda kullanmıştır. Bu yöntemler içerisinde fen eğitimi kapsamında en etkili olanlardan bir tanesi laboratuvar yöntemidir (Hamurcu, 1998). Laboratuvar, öğretilmek istenen bir konu veya kavramın öğrenciye; birinci elden kendisinin yapması gösteri deneyi şeklinde öğretildiği ortamdır (Yılmaz ve Morgil, 1999). Genel olarak fen öğretiminde öğrencilerin kazanması beklenen davranış değişikliklerinin laboratuvar ortamındaki uygulamalar sayesinde olduğu kabul görmektedir. Çünkü öğrenci öğrenmesi gereken konuyu kendisi yaparak yaşayarak öğrendiği için bilgiler daha kalıcı olmaktadır. Kimya öğretiminde de laboratuvar, gözlem ve deney öğrencilere birinci elden deneyim kazanmayı sağladığı için öğrenmede önemli bir etken olarak görülmektedir (Yılmaz, Uludağ ve Morgil, 2001). Bundan dolayı kimya derslerinin işlenirken teorik bilgi, deneye bağlı bilgiden yola çıkılarak verilmelidir. Öğrenciye kimya öğretiminde deneye bağlı bilgiden çıkarak bilgi aktarımı yapılmazsa, öğrencinin kalıcı bilgi elde etmesi mümkün olmayacaktır (Ayas, ve ark.,1997 akt. Ayas ve ark., 2002). Kimya konularının çoğu soyut olduğu için, laboratuvar yöntemi kullanmadan, kimya kavramlarını öğrencilere öğretmek ve kalıcı davranış değişikliğini sağlamak mümkün olmamaktadır. Bu nedenle fen bilgisi öğretmen adaylarına eğitim-öğretim sürecinde laboratuvar kullanımı ve uygulama becerisi kazandırmak laboratuvar çalışmalarına gereken önemi vererek mümkün olacaktır. Ayrıca fen derslerinin deneylerle birlikte işlenmesi soyut ve öğrenciye zor gelen kavramların öğretilmesini kolaylaştıracağı gibi fen bilgisi dersine ilişkin başarı ve tutumlarını arttıracak ve dersi daha çok sevmelerine neden olacaktır (Aydoğdu, 2000; Aycan, Arı, Türkoğuz, 2001; Ergin, Akgün, Küçüközer, Yakal, 2001). Öğrencilerin fen derslerine ve laboratuvar uygulamalarına yönelik olumlu tutumları başarılarını da olumlu yönde etkilemektedir (Feyzioğlu, 2009; Hofstein ve Naaman, 2007). Bu çalışmanın amacı fen bilgisi öğretmen adaylarının Genel Kimya II Laboratuvar dersi ile ilgili görüşlerini belirlemektir.

YÖNTEM

Araştırmanın Modeli

Fen Bilgisi öğretmen adaylarının Genel Kimya II Laboratuvar dersine yönelik görüşlerinin belirlenmesi amacını taşıyan bu çalışmada nitel araştırma yöntemi kullanılmıştır.

Çalışma Grubu

Etkinlik 2014-15 akademik yılı bahar döneminde Niğde Üniversitesi Eğitim Fakültesi Fen Bilgisi Öğretmenliği 1. sınıfa devam eden 45 öğrenci ile gerçekleştirilmiştir.

Veri Toplama Aracı

Çalışmaya katılan öğrencilere alan yazın araştırması sonunda araştırmacılar tarafından hazırlanan açık uçlu 14 adet soru yöneltilmiştir.

Verilerin Analizi

Sorulara verilen yanıtlar betimsel analiz yöntemi ile analiz edilmiştir.

Geçerlik ve güvenirlik

Bu çalışmanın iç geçerliğini arttırmak amacıyla öğrencilere sorulan sorular alan yazın incelemesi sonucunda hazırlanmış ve uzman kontrolü ile çalışma son haline ulaştırılmıştır. Kodlamayı yapan kişiler tarafından yapılan analizler birbirleri ile yüksek oranda uyumlu bulunmuştur. Araştırmanın dış geçerliğini sağlayabilmek için öğrencilerden elde edilen nitel bulguların hamlığı korunmuştur.

BULGULAR

Soru 1. Deneylerin günlük yaşamla ilişkisi

Öğrenciler deneylerin günlük yaşamla ilişkisinin olup olmadığını sorgulayan bu soruya değişen derecelerde olumlu görüş bildirmişlerdir: 40 öğrenci olumlu, bir öğrenci çoğunlukla olumlu ve dört öğrenci de kısmen olumlu görüşe sahip olduğunu belirtmiştir. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir.

Tablo 1. Öğrencilerin yaptığı deneylerin günlük yaşamla ilişkisi üzerine görüşler

	f
Olumlu	40
Çoğunlukla olumlu	1
Kısmen olumlu	4

Soru 2. Deney ön hazırlığı

Öğrenciler deney öncesi ön hazırlığın gerekliliğini sorgulayan bu soruyla ilgili tamamen olumlu görüş bildirmişlerdir. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir. Tablo'ya göre ön hazırlık yapılmazsa deneyde zorlanılır ve deney doğru yapılmaz, deney anlaşılmaz. Ön hazırlık teori ve deneyin yapılışı hakkında bilgilendirir, deney sırasında herhangi bir zarara uğranmamasını sağlar. Ön hazırlık ayrıca malzemenin nasıl kullanılacağı, deneye nasıl başlanacağı, deneyden nasıl bir sonuç çıkacağı hakkında bilgi verir. Ön hazırlık sayesinde öğrenciler daha bilinçli olacağından deneyi kısa sürede yapar.

Tablo 2. Öğrencilerin deney ön hazırlığı ile ilgili görüşleri

	f
Zorlanır, deneyi doğru yapamama	11
Deneyi anlama, anlamama	7
Teori, yapılış bilgisi	5
Yapılacakların bilgisi	4
Zarar vermemesi	3
Malzeme kullanım bilgisi	2
Deneye başlama, malzeme, üründen sonuç çıkarma	2
Bilinçli olma, kısa sürede yapma	2
Faydalanma	2
Ne yapılacak, nasıl ve niçin yapılacak	1
Kavram ve kullanılanların bilgisi	1
Rahat olma, çabuk kavrama	1
Malzeme, aşama	1
Deney öncesi donanım	1
Malzeme temini, teoriyi araştırıp kavrama, deneyi verimli yapma	1
Deneyi yorumlama	1
Deneyi yaparken ve sözlüde gerekli	1

Soru 3. Deneylerin öğreticiliği ve deney kazanımları

Deneylerin öğreticiliğini ve kazanımlarını sorgulayan bu soruyla ilgili öğrencilerin çoğunluğu olumlu görüş bildirirken bir öğrenci kararsız kalmıştır. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir.

Tablo 3. Öğrencilerin yaptığı deneylerin öğreticiliği ve kazanımları üzerine görüşleri

	f
Olumlu	38
Kısmen olumlu	6
Kararsız	1

Deneylerin öğreticiliği ve kazanımlarıyla ilgili olarak olumlu görüşe sahip öğrencilerin verdikleri ifadelerin dağılımı aşağıdaki tabloda gösterilmektedir. Tablo'ya göre deneyler, kimyanın günlük hayatla ilişkisini kurmada ve bu alanda yapabileceklerini anlamada öğrencilere yardımcı olmaktadır. Deneylerle uygulaması yapıldığından teorik bilgilerin kalıcılığını sağlamaktadır.

Tablo 3.1.Olumlu görüş bildiren öğrenciler

	f
Günlük hayatta nasıl olduğu neler yapabileceğini anlama, malzemelerin kimyayla ilgisi	16
Teorik bilgilerin uygulanmasını yapıp kalıcılığı sağlama	5
Yeni bilgi	2
Gerekirse sabunu bile yapma	2
Deney, gözlem, kalıcı bilgi	2
Günlük yaşamda zorlukla karşılaşıldığında ve öğretmen olduğunda yapma	2
Hesap yapma, çözelti hazırlama	1
Deneye yönelik özgüven kazanma	1
Kuramları kavrayıp kanıtlama	1
Öğretmen olduğunda kolay deney yapma	1
Deney bilgisi	1
El-göz koordinasyonu	1

Deneylerin öğreticiliği ve kazanımlarıyla ilgili olarak kısmen olumlu görüşe sahip öğrencilerin verdikleri ifadelerin dağılımı aşağıdaki tabloda gösterilmektedir. Tablo'ya göre deneyler, gözlem becerisini geliştirmek ve günlük yaşamla ilişkiyi sağlamakla birlikte bazıları gereksiz ve öğretici değildir.

Tablo 3.2. Kısmen olumlu görüş bildiren öğrenciler

	f
Çok zor olanlar dışındakiler anlaşılır (bazı kimyasal maddeleri içeren ürünler konusunda dikkatli olma)	1
Bazıları günlük yaşamla ilgili	1
Gözlem becerisi geliştirme	1
Bazıları öğretici bazıları gereksiz	1
Fazla öğretici değil, insanı geliştirmiyor	1
Açıklama yok	1

Kararsız olan öğrenci deneylerin adını bile hatırlayamadığını belirtmiştir.

Soru 4. Öğrencilerin laboratuvarla ilgili duyguları

Laboratuvara yönelik duygularını sorgulayan bu soruyla ilgili öğrencilerin yaklaşık yarısı karışık duygulara sahipken, bir kısmı olumlu bir öğrenci de olumsuz duygu taşıdığını belirtmiştir. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir.

Tablo 4. Öğrencilerin laboratuvarla ilgili duyguları üzerine görüşleri

	f
Karışık	25
Olumlu	19
Olumsuz	1

Laboratuvara yönelik olarak karışık duygulara sahip olan öğrencilerin verdikleri ifadelerin dağılımı aşağıdaki tabloda gösterilmektedir. Tablo'ya göre öğrenciler deneye göre dersten keyif olmakta ya da almamaktadır. Öğrenciler deneyleri eğlenceli bulmakla birlikte tehlikeli olduğunu düşündüğü deneylerde tedirgin olmaktadır.

Tablo 4.1. Karışık duyguları olan öğrenciler

	f
Bazen keyifli (paslanma, sabun vb.)	4
Keyif alıp almama deneye göre değişmesi	4
Eğlenceli, tehlikeli olduğunda tedirgin	2
Biraz endişe heyecan	1
Sözlü telaşı, deneyde keyifli, teoriği pratiğe aktarma keyifli	1
Genelde zevkli bazen sıkıcı	1
Sözlü korkusu, grup deneyi keyifli	1
Zor deneylere üzüntülü gelme, keyif almaya çalışma	1
Sözlü stresi korkusu ama şimdi zevk alma	1
Heyecan merak,sözlüde doğru cevap verince mutlu	1
Ne deneyi yapacağı beklentisi ama genelde olumlu	1
Heyecanlı ama sözlüde korkma	1
Tedirgin,teorik bilgi karmaşık,bazı deneyler zevkli,bazıları karmaşık-sıkıcı	1
Zor ve uzun deneyi yapamadığında sıkıcı, bazı deneyler keyifli	1
Hazırlıklı geldiği deneyden keyif alma yoksa almama	1
Normal duygu,çoğu deney keyifli	1

Laboratuvara yönelik olarak olumlu duygulara sahip olan öğrencilerin verdikleri ifadelerin dağılımı aşağıdaki tabloda gösterilmektedir. Tablo'ya göre öğrenciler bilgi edindikleri ve deney yeteneği geliştirdiği için keyif almakta, merak gidermekte ve deney yapmayı sevmektedir.

Tablo 4.2. Olumlu duyguları olan öğrenciler

	f
Bilgi edinme, deney yeteneği, uygulama yapma öğrenme (keyifli)	4
Heyecanlı (yeni bilgi)	2
Laboratuvar dersini sevme, deneyden keyif	2
Yeni bilgi, malzeme kullanma	1
Merak (yeni bilgi)	1
Yeni bilgi öğrenme	1
Heyecanlı ve istekli kolay deneylerde keyif alma	1

Deneyi sevme, eğlenme, öğrenme	1
Malzemeyi hazırlama, biran önce deneye başlamadan zevk alma	1
Açıklama yok	5

Olumsuz duygusu olan bir öğrenci laboratuvardan keyif almadığını belirtmiştir.

Soru 5. Deney yapma yeteneği

Deney yapma yeteneği kazanıp kazanmadıklarını sorgulayan bu soruyla ilgili öğrencilerin yaklaşık üçte ikisi olumlu görüş belirtirken üçte biri kısmen olumlu görüş bildirmiş, bir öğrenci is bu soruyu boş bırakmıştır. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir.

Tablo 5. Öğrencilerin deney yapma yeteneği kazanmasına yönelik görüşleri

	f
Kazananlar	31
Kısmen kazananlar	13
Yanıtsız	1

Deney yapma yeteneği kazandıklarını belirten öğrencilerin verdikleri ifadelerin dağılımı aşağıdaki tabloda gösterilmektedir. Tablo'ya göre öğrenciler deneye hazırlıklı geldiklerinde ve gözetmen eşliğinde düzenek hazırlamada sıkıntı çekmeyeceklerini ifade etmişlerdir.

Tablo 5.1. Deney yapma yeteneğini kazanan öğrenciler

	f
Teorik bilgi ve ön hazırlık yapıldığında düzenek ve deney sıkıntı değil	1
Evet, gözetmen eşliğinde	1
Açıklama yok	29

Deney yapma yeteneği kısmen kazandıklarını belirten öğrencilerin verdikleri ifadelerin dağılımı aşağıdaki tabloda gösterilmektedir. Tablo'ya göre öğrenciler çoğu deney için deney yapma becerisi kazandıklarını, bazı deneyleri yardımla yapabileceklerini ifade etmişlerdir.

Tablo 5.2.Deney yapma yeteneğini kısmen kazanan öğrenciler

	f
Çoğu deney için deneyimli	4
Tam değil yardımla	3
Birçok deneyde tamam ama çözelti hazırlama deneyini yapamama	1
Çok düzenek kurmamasına rağmen yapabilme	1
Özgüveni olma ama tek başına tedirgin	1
Açıklama yok	3

Soru 6. Emniyet kurallarını uygulama

Emniyet kurallarını uygulayıp uygulamadıklarını sorgulayan bu soruyla ilgili öğrencilerin ikisi hariç olumlu görüş belirtmişlerdir. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir.

Tablo 6. Öğrencilerin emniyet kurallarını uygulama üzerine görüşleri

	f
Evet	43
Tam değil	1
Yanıtsız	1

Öğrencilerin uyguladıkları emniyet kurallarına yönelik öğrencilerin verdikleri yanıtların dağılımı aşağıdaki tabloda gösterilmektedir. Tablo'ya göre öğrenciler genelde deneyde önlük ve eldiven giymekte ve saçlarını bağlamaktadır.

Tablo 6.1. Öğrencilerin uyguladıkları emniyet kuralları üzerine görüşleri

	f
Önlük ve eldiven giyme	9
Önlük ve eldiven giyme, saçı toplama	8
Önlük ve eldiven giyme	8
Önlük giyme, saçı toplama	3
Eldiven giyme	3
Önlük giyme	3
Eldiven giyme, zararlı şeylerden uzak durma	1
Önlük ve eldiven giyme, kimyasallara dikkat etme	1
Önlük ve eldiven giyme, çok hızlı hareket etmeme	1
Kimyasalla temasta el yıkama	1
Önlük giyme, saçı toplama, kimyasalla temasta dikkat etme, koşmama	1
Koşmama, tezgaha bir şey koymama	1
Önlük ve eldiven giyme, saçı toplama, aside önce su katma	1
Önlük ve eldiven giyme, kesici alet taşımama	1
Gözlük hariç uymaya çalışma	1
Eldiven giyme, gaz çıkışında solumama	1
Kendi ve diğerlerinin sağlığı için uyulması	1
İstisnalarla	1
Açıklama yok	5

Geri kalan iki öğrenciden biri bu soruyu boş bırakırken, diğer öğrenci emniyet kurallarını tam olarak uygulamadığını bazen takı-saat taktığını belirtmiştir.

Soru 7. Olumsuz Durumlar

Deneyde olumsuz bir durumla karşılaşıp karşılaşmadıklarını sorgulayan bu soruyla ilgili öğrencilerin yarıdan fazlası herhangi bir olumsuzlukla karşılaşmadığını belirtirken yaklaşık üçte biri karşılaştıklarını belirtmişlerdir. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir.

Tablo 7. Öğrencilerin laboratuvarda olumsuz durumla karşılaşıp karşılaşmaması üzerine görüşleri

	f
Hayır	24
Evet	18
Hem evet hem hayır	1
Yanıtsız	2

Öğrenciler olumsuzlukla karşılaşmadıkları için herhangi bir açıklama yapmamışlardır. Bununla birlikte aşağıdaki tabloda gösterildiği gibi bu durumlarda deneyi tekrarladıklarını ve eğiticiden yardım aldıklarını belirten öğrenciler de vardır.

Tablo 7.1. Öğrencilerin laboratuvarda olumsuz durumla karşılaşmamasıyla ilgili görüşleri

	f
Yanlış yapılan deneyleri tekrarlama, eğiticiden yardımla deneyi yapma	2
Deney sonrası ellerini yıkadığından olumsuz durumla karşılaşmama	1
Açıklama yok	21

Öğrencilerin laboratuvarda deney yaparken karşılaştıkları durumlar aşağıdaki tabloda gösterilmektedir. Tablo'ya göre asit çözeltisi hazırlarken şişenin ısınması, kırılması, bazı deneylerde yetersiz kalan malzeme vb. nedenlerden dolayı olumsuzluk yaşamışlardır.

Tablo 7.2. Öğrencilerin laboratuvarda olumsuz durumla karşılaşması üzerine görüşleri

	f
Balonjojeye konan sülfürik asit ısındığından korkma	3
Bazı deney malzemelerinin gruplara yetmemesi	3
Koyulaşması gereken ama koyulaşmadığı durumlar	1
Bazı değerleri örneğin sıcaklığı fazla uygulama	1
Birkaç defa süblimleşmede beher oturmadığından suyun dökülmesi	1
Grup arkadaşlarının deneye ilgisizliği	1

4 kat fazla asit kullanma	1
Naftalinin kalitesizliğinden deneyin geç olması	1
Büretin musluğunu açarken kırıp elini kesme	1
Suyu fazla ısıtmak ve sabun deneyinde zorlanmak	1
Sabun deneyinde iki defa sonuç elde edememe	1
Tam yapılmasına rağmen deneyin olmaması	1
Bazı deney sonuçlarının çıkmaması, malzeme yetmemesi	1
Fazla ya da eksik madde kullanımında sonucun hatalı çıkması	1

Bir öğrenci olumsuz durumla karşılaşacağını sezdiğinde eğiticiyi çağırdığını belirtmiştir. İki öğrenci de bu soruyu boş bırakmıştır.

Soru 8. Eğiticinin katkısı

Eğiticinin katkısını sorgulayan bu soruyla ilgili öğrencilerin 43'ü eğiticinin katkısını olumlu bulurken, iki öğrenci bu soruyu boş bırakmıştır. Eğiticinin yaptığı katkı hakkında öğrencilerin verdiği yanıtların aşağıdaki tabloda özetlenmektedir. Tablo'ya göre eğitmen deneydeki zorlukları giderici, yol gösterici, yanlış ve eksiklerde uyarıcı, bilinmeyene yardımcı bir rol oynamıştır.

Tablo 8. Öğrencilerin eğiticinin katkısı üzerine görüşleri

	f
Deney zorluklarını giderici, yol gösterici, bilinmeyene yardımcı	9
Yanlış ve eksiklerde uyarma, doğruyu yaptırma	3
Bilinmeyeni söyleme, dikkat etme konusunda uyarma, güvenli deney yaptırma	2
Bilgili, bilinmeyende yardımcı	2
Günlük yaşamda kullanımı hakkında bilgilendirme	2
Yol gösterici, rehber	2
Sıkı, disiplinli ve ılımlı	1
Deneydeki eksikleri belirtme	1
Nasıl yapıldığını anlatma, teoriyi kolaylaştırma	1
Ders konularını deneyle pekiştirme, sonuçları gözlemleme	1
Ön bilgi vererek deneyi kolaylaştırma	1
Deney ortamı sağlama, konuyu kavratma	1
Deneyde yardımcı, korkmamayı öğretme	1
Takılınan yerlerde yardımcı, sözlüde korku yaşatıcı, deneyle ilgili bilgilendirici	1
Daha verimli ders olmasında etkili	1
Deneyin doğruluğu hakkında bilgi verici, sözlü yapma, hatalarda yardım etme	1
Deneyi kavramayı, sorunsuz-hatasız yapmayı sağlama	1
Deneyi nasıl yapacağını bilgilendirme	1
Deney bilgisi ve deneyin nasıl yapılacağını bilgilendirme	1
Eğiticiyle tedirgin olmama	1
Sakin, eğlenceli ve anlayışlıysa dinlenilme	1
Deney bilgisi veren, hatada uyaran	1
Yardımcı	1
Eksikleri sorup gidererek hızlı ve eksiksiz deney yapmayı sağlama	1
Bilgiyi Öğrenciye aktarabilme	1
Yeterli	1
Deneyi okuyup gerekenleri yapıp gördüğünde kalıcı	1
Açıklama yok	2

Soru 9. Deney grubuyla uyum

Deney grubuyla uyumu sorgulayan bu soruyla ilgili öğrencilerin büyük çoğunluğu uyumlu olduklarını ifade ederken az sayıda öğrenci uyumsuzluk da yaşadığını belirtmiştir. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir.

Tablo 9. Öğrencilerin deney gruplarıyla uyum üzerine görüşleri

	f
Evet	41
Hem evet hem hayır	4

Öğrencilerin ideal grup elemanı sayısı hakkındaki görüşleri ise aşağıdaki tabloda özetlenmektedir. Tablo'ya göre grupların 4-6 kişilik olmasını isteyen öğrenciler çoğunluktadır.

Tablo 9.1. Öğrencilerin deney gruplarıyla uyumlu olup gruptaki kişi sayısı üzerine görüşleri

	f
5 kişi	8
6 kişi	7
4 kişi	6
5-6 kişi	4
4-5 kişi	3
7 kişi	2
En fazla 3-4 kişi	2
Daha az olmalı	1
3 olmalı	1
2-3 kişi olmalı	1
Açıklama yok	4

Grubuyla kısmen uyumlu olduğunu belirten öğrencilerin görüşleri ise aşağıdaki tabloda özetlenmektedir. Tablo'ya göre deneylere gruptaki herkes çalışıp geldiyse grup uyumlu çalışmakta ya da uyum süreci zaman almaktadır.

Tablo 9.2. Öğrencilerin deney gruplarıyla hem uyum hem uyumsuz olma üzerine görüşleri

	f
Birinci dönem grupta sivrilenlerden dolayı yoktu ama şimdi uyumlu	1
Çoğunluk çalışıp geldiyse uyumlu, sayı iyi, rahat çalışma	1
Grup değiştirince memnun olma, 5-6 kişilik grup ideal	1
Tek başına olunmalı	1

Soru 10. Raporun öğrenmeye katkısı

Raporun öğrenmeye katkısını sorgulayan bu soruyla ilgili öğrencilerin çoğunluğu olumlu, az bir kısmı ise kısmen olumlu görüş bildirmiş, bir öğrenci ise olumsuz görüş bildirmiştir. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir.

Tablo 10. Öğrencilerin rapor hazırlamanın öğrenmeye katkısının olup olmaması üzerine görüşleri

	f
Var	40
Kısmen var	3
Yok	1
Yanıtsız	1

Rapor hazırlamanın öğrenmeye katkısına dair olumlu görüş bildiren öğrencilerin açıklamaları aşağıdaki tabloda özetlenmektedir. Tabloda gösterildiği gibi rapor yazılarak hazırlandığından konunun daha iyi öğrenilmesini sağlamakta ve kalıcı olmaktadır.

Tablo 10.1. Öğrencilerin rapor hazırlamanın öğrenmeye katkısı üzerine görüşleri

	f
Yazarak daha iyi öğrenme, kalıcı olma	4
Kalıcı olma	3
Araştırmayla bilgi elde etme	2
Bilgiyi tazeleyip tekrar etme	2
Araştırdıkça deneyi kavrama	2
Sınava çalışma, öğrenileni paylaşma	2
Deney sonuçlarına göre yorum yaparken deneyi anlamayı sağlama	2
Deney hakkında bilgiye sahip olma, deneyde zorluk çekmeme	2
Öğrenme, deneyi anlama	1
Öğretici	1
Verimli	1
Bilgi ve yorumları yazarak somutlaştırma	1

Kaynaklardan araştırma	1
Eğitici bilgilendirmeli ve ona göre rapor beklemeli	1
Araştırmayla öğrenme, yorum yeteneği geliştirme	1
Herkesin ortak yorumu olması	1
Yapılanları tekrar etme	1
Deneyi özetleme, yorum yaparak daha iyi öğrenme	1
Tahtadaki soruları araştırıp deneyle ilişkilendirme	1
İyi çalışmayla iyi öğrenme	1
Deneyin nasıl olduğu konusunda bilgilenme	1
Deneyi daha iyi kavrama	1
Araştırıp geldiği, uyguladığı ve neden sorusunu cevaplama	1
Teorik bilgi hazırladığından daha iyi öğrenme	1
Herkes kendi hazırlasa daha iyi kazanım elde edilmesi	1
Teorik bilgiyi ve günlük hayattaki yerini öğrenme	1
Açıklama yok	1

Rapor hazırlamanın öğrenmeye kısmen katkı yaptığını bildiren öğrencilerin açıklamaları aşağıdaki tabloda özetlenmektedir. Tabloda gösterildiği gibi rapor grupça değil bireysel hazırlanmalı ve sade olmalıdır.

Tablo 10.2. Öğrencilerin rapor hazırlamanın öğrenmeye kısmen katkısı olması üzerine görüşleri

	f
Kişisel yazılmadığından, ders öncesi hazırlanmalı	1
Araştırmanın zor olması, yazarken akla girmemesi	1
Teorik bilginin yeterli olması, gereksiz bilgilerin de yazılması	1

Rapor hazırlamanın öğrenmeye katkı sağlamadığını bildiren öğrencilerin görüşleri aşağıdaki tabloda özetlenmektedir. Tabloda gösterildiği gibi bu konuda açıklama yapan öğrenci raporun sadece hesaplamalar kısmının faydalı olduğunu ifade etmiştir.

Tablo 10.3. Öğrencilerin rapor hazırlamanın öğrenmeye katkısı olmaması üzerine görüşleri

	f
Teorik bilgi dersten önce yazılması, hesaplamalar kısmı yardımcı	1
Açıklama yok	1

Soru 11. Teorik dersle deney arasında ilişki

Deneyin teorik dersle ilişkisini sorgulayan bu soruyla ilgili öğrencilerin çoğunluğu olumlu görüş bildirmiştir. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir

Tablo 11. Öğrencilerin teorik dersle deney arasındaki ilişki olup olmaması üzerine görüşleri

	f
İlişkili	38
Çok az ilişkili	2
Yanıtsız ya da farklı yanıt	5

Deneyin teorik dersle ilişkili olduğunu bildiren öğrencilerin ifadeleri aşağıdaki tabloda özetlenmektedir. Tablo'ya göre teori-uygulama ilişkisiyle teorik derste öğrenilenin laboratuvarda uygulamasının yapılması, böylece kalıcılığının sağlanması, deneyin teorik bilgiye ilgili olması ve teorik bilginin deneyle somutlaştırılması sağlanmaktadır.

Tablo 11.1. Öğrencilerin teorik dersle deney arasındaki ilişki üzerine görüşleri

	f
Teorik derste öğrenileni laboratuvarda uygulama /örn. mol hesabı)	10
Teorik derste öğrenileni laboratuvarda uygulamanın kalıcılığı sağlaması	9
Deneyin teorik bilgiyle ilgisi olması (örn. süblimleşme)	4
Teorik konuyu kavramada sıkıntı, deneyle somutlaştırma	2
Teorik dersin sıkıcı, laboratuvarın eğlenceli olması	2
Deney hesaplarını derste gördüğünden sıkıntı çekmeme	2
Teori ve laboratuvara aynı gün olduğundan bilgiyi rahatça kullanma	1
Deney yapılan konunun derste çıkması	1
Çözelti hazırlama ve hesaplama yapmanın kalıcı olması	1

Deneyde görüleni derste daha akıcı işleme	1
Laboratuvarla teorik kısmı görsel hale getirme	1
Teorik sıkıcı olması akılda kalmaması, laboratuvar kalıcı	1
Teoridekileri ispat etme	1
Teorik derste düşünüp yapma, laboratuvarda görerek yapma	1

Deneyin teorik dersle tam ilişkili olmadığını bildiren öğrencilerin ifadeleri aşağıdaki tabloda özetlenmektedir. Tablo'ya göre teorik ders soyut, laboratuvar somut olmakta ve bazı deneylerin teorik dersin içeriğinde olmaması teori-uygulama ilişkisini yansıtmamaktadır.

Tablo 11.2. Öğrencilerin teorik dersle deney arasındaki çok az ilişki üzerine görüşleri

	f
Teorik dersin soyut, laboratuvarın somut olması	1
Sabun ve yapıştırıcı yapımını derste görmeme	1

Soru 12. Lisede laboratuvar uygulaması yapma

Öğrencilerin lisede laboratuvar uygulaması yapıp yapmadıklarını sorgulayan bu soruyla ilgili öğrencilerin çoğunluğu olumsuz bir kısmı da olumlu görüş bildirmiştir. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir.

Tablo 12. Öğrencilerin lisede laboratuvar uygulaması yapıp yapmadığı üzerine görüşleri

	f
Hayır	36
Evet	8
Hatırlamayan	1

Lisede laboratuvar uygulaması yapmamış olan bu konuyla ilgili öğrencilerin çoğunluğu herhangi bir açıklama yapmazken sadece 3 öğrenci görüş bildirmiştir. Aşağıdaki tablo bu durumu özetlenmektedir. Tablo'ya göre öğretmenin gösteri deneyi yapması ve düzenli bir laboratuvarın bulunmamasından dolayı öğrenciler lisede laboratuvar uygulaması yapmamışlardır.

Tablo 12.1. Öğrencilerin lisede laboratuvar uygulaması yapmama üzerine görüşleri

	f
Öğretmenin gösteri deneyi yapması	2
Düzenli laboratuvarın bulunmaması	1
Açıklama yok	33

Lisede laboratuvar uygulaması yapmış olan öğrencilerin bu konuyla ilgili görüşleri aşağıdaki tanoda özetlenmektedir. Tablo'ya göre öğrenciler konularıyla ilgili çeşitli deneyler yapmışlardır.

Tablo 12.2. Öğrencilerin lisede laboratuvar uygulaması yapma üzerine görüşleri

	f
Fazla değil (yanma, filtrasyon, süblimleşme, maddenin halleri, asit-baz, fiziksel-kimyasal değişim)	4
Haftada en az bir deney (konuyla ilgili)	2
Asit-baz, organik kimya deneyleri	1
Lise 1'de süzme deneyi	1

Soru 13. Laboratuvar Uygulamasının Süresi

Laboratuvar uygulamasının ideal süresi ile ilgili olarak öğrencilerin büyük çoğunluğu mevcut 2 saatin yeteri olduğunu, az sayıda öğrenci ise daha fazla olması gerektiği belirtmiştir. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir.

Tablo 13. Öğrencilerin laboratuvar saati üzerine görüşleri

	f
Mevcut 2 saat yeterli olması; deneylerin uzun olmaması, kolay olması, fazlasının bıktırması	33
4 saat olmalı çünkü daha çok deneyin daha çok bilgi olması, unutmama, kavrama	4
2-3 saat uygun	2
3 saat uygun	2

İki katına çıkarılmalı, daha çok görselle anlama kolaylaştırılmalı	1
Bir ders daha fazla olmalı, laboratuvarı daha iyi anlama	1
İki katına çıkarılmalı, bilgi neden sonuç ilişkisi içerdiğinden daha çabuk öğrenme	1
Normalden fazla olmalı	1

Soru 14. Öneriler

Laboratuvar dersine yönelik önerileri sorgulayan bu soruyla ilgili öğrencilerin çoğunluğu bir öneride bulunmuş az sayıda dersin zaten etkili olduğunu belirterek herhangi bir öneride bulunmamıştır. Bir öğrencinin önerinsin olmadığını ifade etmiş, dört öğrenci de yanıt vermemiştir. Aşağıdaki tablo öğrencilerin bu soruya verdiği yanıtların dağılımını göstermektedir.

Tablo 14. Öğrencilerin önerileri

	f
Önerisi olanlar	33
Mevcut ders zaten etkili	7
Önerisi yok	1
Yanıtsız	4

Öğrencilerin laboratuvar dersiyle ilgili önerileri aşağıdaki tabloda özetlenmektedir. Tabloda gösterildiği gibi grupların daha az olması, eğiticinin zor deneylerde gösteri deneyi yapması ve laboratuvar uygulama süresinin artırılması en çok bahsedilen önerilerdendir.

Tablo 14.1. Öğrencilerin önerileri

	f
Grupların az olması	5
Rahat psikolojiyle deney yapma; eğiticinin zor deneyleri yapması ve bilgilendirmesi	3
Eğiticinin deneyin yapılışını anlatması (deneyin kolay yapılmasını sağlama)	3
Ders saatinin artırılması	3
Malzeme eksiğinin giderilmesi	2
Günlük yaşamla ilişkili olup ilgiyi çekmesi	2
Deneyle ilgili soru verilmesi, sonraki hafta sorularının tahtaya yazılması	2
Daha eğlenceli olması	2
Eğiticinin öğrenciye olumlu davranması	1
Daha dikkat çekici deney yapma	1
Ezber yerine öğretici olması	1
Sözlüden korktuğundan değil merak ettiğinden çalışması	1
Eğiticinin cevap yüzdesine bakıp soruyu yanıtlaması	1
İlk deneylerin basit ve günlük yaşamla ilişkili olması böylece ilgiyi çekmesi	1
Daha az kişiyle çalışma ve tüm malzemeleri barındıran bir laboratuvar olması	1
Açık havada deney yapma	1
Birden fazla eğiticinin görev alması	1
Deneyin kısa ve anlaşılır olması	1
Rapor yazılmaması çünkü derse gelmeden deneyi okumanın yeterli olması	1

SONUÇ VE TARTIŞMA

Genel Kimya II Laboratuvarı dersinde öğrencilerle yapılan bu araştırmanın sonuçları laboratuvarda yapılan deneylerden sadece sabun ve yapıştırıcı yapımının günlük yaşam ile ilişkisinin kurulduğu görülmüştür. Öğrencilerin ilk yıllarında olmaları ve lise öğrenimlerinde laboratuvar uygulamaları yapmamış olmaları nedeniyle kimyayla ilgili tüm kavramları bilememeleri nedeniyle bu dersi günlük yaşamla ilişkilendirmelerini zorlaştırmıştır. Öğrenciler deneylerin, günlük yaşamda çok sık karşılaştıkları olay ve olgularla bağlantısını kurabilmiş (örneğin sabun) ancak günlük yaşamda çok sık karşılaşmadıkları durumlarla ilişkilendirememişlerdir (örneğin paslanma).

Öğrenciler deneyi yapmadan önce bir hazırlığın gerekli olduğunu belirtmişlerdir. Ancak öğrenciler yeterince hazırlıklı gelmediklerinden konunun günlük yaşamla bağlantısını kurmakta sıkıntı çekmektedirler. Öğrenciler laboratuvarda yaptıkları deneylerin öğretici olduğu görüşündedirler. Zira genel kimya derslerinde gördükleri teorik bilgilerin uygulamasını yaptıklarını ve el becerisi kazandıklarını ifade etmişlerdir.

Öğrenciler laboratuvara hem olumlu hem de olumsuz duygularla geldiklerini belirtmişlerdir. Olumlu duygular; deney yapacakları için mutlu olmaları, deneyden keyif almaları, merak olarak belirtilirken olumsuz duygular; deneyi yapamayacağı korkusu, sözlüde yanlış cevap verme kaygısı, bazı deneylerin uzun sürmesi ve zor olması olarak ifade edilmiştir. Öğrencilerin ön hazırlığının yeterli olmadığı duydukları kaygıdan anlaşılmaktadır. Deneyle ilgili kavramlara yeterince çalışılırsa öğrencilerin olumlu duygularının artacağı düşünülmektedir. Öğrencilerin laboratuvara çok meraklı ve istekli olarak gelmemeleri de olumsuz tutum içinde olmalarının nedeni olabilir.

Yapılan uygulamalarla öğrencilerin tümü deneylerin çoğu için deney düzeneklerini kurabileceklerine inanmaktadırlar. Ancak birkaç öğrencinin belirttiği gibi derste tek eğiticinin değil birkaç gruptan sorumlu olacak eğiticilerin de görev alması gerekmektedir. Öğrencilerin hepsi genel laboratuvar kurallarına uyduklarını ifade etmişlerdir. Eldiven ve önlük giyilmesi ve saçın toplanması öğrencilerin en çok belirttikleri güvenlik kuralıdır. Bu malzemeler dönem başında eğitici tarafından zorunlu koşulduğu için öğrenciler tarafından alınmakta ve kullanılmaktadır. Öğrencilerin çoğunluğu laboratuvarda olumsuz bir durumla karşılaşmadıklarını belirtmişlerdir. Az sayıda öğrenci bazı deneyleri tekrarlamak zorunda kaldıklarını, deneyin sonucunu bulamadıklarını ifade etmişlerdir. Eğitici ile ilgili düşünceli olumlu olup, deneyde yol gösterdiği, deneylerine yardımcı olduğu, bilgi verici, dönüt verici ve sonuçları tartışmalarına yardımcı olduğunu belirtmişlerdir.

Öğrenciler grup arkadaşları ile uyum içerisinde çalıştıklarını ifade etmişler, çalışma gruplarının dört-altı kişilik olmasını istemişlerdir. Grupların oluşturulması eğitmen tarafından cinsiyet durumları göz önüne alınarak bölümde okuyan öğrencilerin çoğunluğunun kız öğrenci olması nedeniyle her grupta en az bir erkek öğrenci olmasına dikkat edilerek yapılmıştır. Öğrencilerin gruplardan genel memnuniyeti bu düzenlemenin olumlu olduğuna işaret etmektedir. Ayrıca laboratuvar dersinin mevcudu yaklaşık 30 kişi olduğundan dersin ve grup deneylerinin etkililiği için grubu mevcudundan daha çok sınıf mevcudunun azaltılması gerekmektedir.

Deney sonunda hazırlanan rapor için öğrencilerin çoğu olumlu görüş bildirmiştir. Raporların bireysel hazırlanması gerekirken öğrenci sayısının fazlalığı ve öğrencilerin birbirlerinden yararlanarak rapor yazma durumunu engellemek için gruptan tek bir rapor istenmekteydi. Gruptakiler dönüşümlü olarak raporun teorik kısmını yazmaktaydı diğer kısımlar ise deney bitiminde grupça hazırlanmaktaydı.

Dersin daha etkili olması için deneylerin sıkıcılığına karşı eğlenceli, çarpıcı sonuçlar veren deneyler yapılmalı, bazı tehlikeli deneylerde robotlardan yararlanılmalıdır. Üniversitede laboratuvar dersi veren öğretim elemanları liselerde fen bilimleri öğretmenleriyle ortak laboratuvar uygulamaları yapabilir, bu amaçla üniversite laboratuvarlarından yararlanılabilir. Yazarlar benzer bir uygulamayı Niğde'deki lise ve bilim sanat merkezi öğrencileriyle yapmışlar ve öğrencilerden ve öğretmenlerinden olumlu dönüt almışlardır.

EKLER

EK 1. Kimya Laboratuvarı ile ilgili sorular

Aşağıdaki soruları cevaplayarak Genel Kimya II Laboratuvarı ile ilgili görüşlerinizi yazınız

1. Laboratuvarda yaptığınız deneylerin günlük yaşamla ilişkisi var mıdır? Günlük hayatta kullanım yerleri nerelerdir?
2. Laboratuvara gelmeden önce yapılacak deneyle ilgili ön hazırlık gerekli midir? Deney öncesi teorik bilgiye sahip olmalı mı? Neden?
3. Yaptığınız deneyler öğretici mi? Deneylerin kazanımı nedir?
4. Laboratuvara gelirken hangi duygularla geliyorsunuz? Deney yaparken keyif alıyor musunuz?
5. Deney yapma yeteneğini kazandığınızı düşünüyor musunuz? Deney düzeneklerini kendiniz kurabilir misiniz?
6. Laboratuvar emniyet kurallarını uyguluyor musunuz? Nasıl?
7. Laboratuvarda deney yaparken herhangi olumsuz bir durumla karşılaştınız mı? Karşılaştıysanız bu durumlar nelerdir?
8. Laboratuvarda, eğiticinin katkısı nasıldır?
9. Laboratuvarda çalıştığınız deney grubuyla uyumlu musunuz? Deney gruplarınızın kaç kişi olmasını isterdiniz?
10. Laboratuvar derslerinde rapor hazırlamanın öğrenmeye katkısı var mıdır? Açıklayınız.
11. Teorik dersleriniz ile laboratuvarda uygulamasını yaptığınız deneyler arasında ne ölçüde ilişki var? Kısaca açıklayınız.
12. Mezun olduğunuz lisede kimya laboratuvar uygulaması yaptınız mı? Yaptıysanız ne tür deneyler ya da uygulamalar yaptınız?
13. Bu dersin laboratuvar uygulaması haftada kaç ders saati olmalıdır? Neden?
14. Laboratuvar derslerinin daha etkin yürütülebilmesi için önerileriniz nelerdir?

EK 2. Genel Kimya Laboratuvarı II'de Yapılan Deneylerin Listesi

INVESTIGATING THE ECOLOGICAL FOOTPRINTS OF PROSPECTIVE TEACHERS

Safa ÖZGÜRLER
Arzu CANSARAN

ABSTRACT: The aim of this study is to investigate the ecological footprints of prospective teachers. In this scope the ecological footprints of the prospective teachers were analysed with regard to their state of taking environmental courses, the department they go to, and their gender. The scanning model, one of the descriptive research methods, was used for this research. The population of the research consisted of the prospective teachers studying in the departments of Science Teaching, Class Teaching, Pre-school Teaching, and Turkish Language Teaching in Amasya University in the educational year of 2013-2014.

The ecological footprint calculating scale was applied to the prospective teachers within the scope of the research. The data gathered from the research were analysed by the SPSS 18.0 statistics software. According to the results of the research, it was discovered that the prospective teachers have apparent footprints. Besides, the findings show that there is significant difference between the footprints of the prospective teachers. A significant difference couldn't be found with regard to the prospective teachers' state of taking the environmental courses. In addition, it was discovered that, when their footprints regarding the departments they go to was investigated, there wasn't any significant difference.

Keywords: Ecological Footprint, Environment, Prospective Teachers

ÖĞRETMEN ADAYLARININ EKOLOJİK AYAK İZLERİNİN İNCELENMESİ

ÖZET: Bu çalışmanın amacı öğretmen adaylarının ekolojik ayak izlerinin incelenmesidir. Bu kapsamda öğretmen adaylarının ekolojik ayak izleri çevre dersi alma durumu, öğrenim gördükleri bölüm ve cinsiyete göre analiz edilmiştir. Araştırmada betimsel araştırma yöntemleri içerisinden tarama modeli tercih edilmiştir. Çalışma 2013-2014 eğitim öğretim yılında Amasya Üniversitesi Eğitim Fakültesi' nin Fen Bilgisi Öğretmenliği, Sınıf Öğretmenliği, Okul Öncesi Öğretmenliği ve Türkçe Öğretmenliği programlarında öğrenim görmekte olan öğretmen adaylarının katılımı ile gerçekleşmiştir.

Çalışma kapsamında öğretmen adaylarına ekolojik ayak izi hesaplama ölçeği uygulanmıştır. Araştırmadan elde edilen veriler SPSS 18.0 istatistik programı ile analiz edilmiştir. Analizler neticesinde ulaşılan sonuçlara göre öğretmen adaylarının ekolojik ayak izlerinin yüksek olduğu tespit edilmiştir. Ayrıca elde edilen bulgulara göre öğretmen adaylarının ekolojik ayak izlerinde anlamlı bir farklılık saptanmıştır. Öğretmen adaylarının çevre dersi alma durumlarına göre ekolojik ayak izlerinde anlamlı bir farklılık gözlemlenmemiştir. Bununla birlikte öğretmen adaylarının öğrenim gördükleri bölümlere ekolojik ayak izleri incelendiğinde anlamlı bir farklılık bulunmadığı görülmektedir.

Anahtar Kelimeler: Ekolojik Ayak İzi, Çevre, Öğretmen Adayları

GİRİŞ

Ekolojik ayak izi, sürdürülebilir kalkınmayla beraber ortaya çıkan kavramlar biridir. İnsanlar yaşamlarını devam ettirirken bir yandan tabii kaynaklar yok olmakta bir yandan da fazla miktarda zararlı atık ortaya çıkmaktadır. Kullanılan tabii kaynak ve ortaya çıkan atıklar belirli oranlarda su ve toprak gerektirmektedir. Kullanılan kaynakların ve ortaya çıkan atıkların telafi edilmesi için gerekli olan verimli su toprak alanına ekolojik ayak izi denir (Schaller, 1999). Farklı bir tanımla ekolojik ayak izi, belli bir hayat kalitesi ve tüketim miktarına sahip insan topluluğunun ihtiyacı olan kaynakların üretildiği, oluşan zararlı atıkların da absorbe edildiği, karbon dioksit emiliminin olduğu, belirli sınırlardaki üretken alandır (Marin, 2004).

Ekolojik ayak izi kavramı ilk kez William Rees' in taşıma kapasitesi konusundaki bir seminerinin ardından gündeme gelmiştir. Ekolojik ayak izi hesabı, üretim, mal ve hizmet kullanımı ekolojik verimlilikle ilgilidir. Bu ekolojik verimlilik toprak alanına karşılık gelecek şekilde düzenlenir. Ekolojik ayak izi hesaplarını kolaylaştırmak adına tüketim kategorileri beş başlık altında toplanmıştır. Bu başlıklar gıda, ulaşım, barınma, tüketim malları ve hizmetlerdir. Ayrıca alt başlıklar da bulunabilir (Wackernagel & Rees. 1996).

Tabii kaynaklara karşı talep, sürdürülemeyen kaynak tüketimi, kirlilik ve karbon dioksit emisyonundaki yükselişle beraber artmaktadır. Yapılan araştırmalar 1972 Stockholm İnsan ve Çevre Konferansı' ndan itibaren dünyanın doğal refahında %33' lük bir gerileme ve insanın ekolojik baskısında %50' den fazla artış olduğunu göstermektedir. Bu oranlar biyosferin kendini yenileyebilme sınırını aşmaktadır (Bond, 2003).

İnsanların ekolojik ayak izlerinin azalması, dünyanın sürdürülebilir geleceği açısından önemlidir. Bilinçli tüketim alışkanlıkları, dış kaynaklardan ziyade öz kaynaklara yönelme, tasarruflu enerji kullanımı gibi tedbirler ekolojik ayak izlerinin küçülmesi için gerekli görülmektedir (Yeşil Kutu, 2007). Seyahat tercihleri, alışveriş yeri tercihleri, ne alındığı gibi günlük hayatımızla ilgili olan tercihler ve tabii kaynakların daha bilinçli ve tasarruflu kullanımı ile ekolojik ayak izi küçültülebilir. Ekolojik değerlerimizi, en az diğer önemli gördüğümüz alanlar kadar değerli görüp, bilinçli kullanmayı ve korumayı öğrenmeliyiz (Keleş ve Aydoğdu, 2010).

YÖNTEM

Araştırmanın Modeli

Bu çalışmada, betimsel araştırma yöntemleri içerisinden tarama modeli tercih edilmiştir. Tarama modeli, geçmişteki veya mevcut durumdaki şekli ile betimlemeyi hedefleyen araştırma modelidir (Karasar, 2007).

Örneklem

Bu araştırmanın çalışma grubunu Amasya Üniversitesi Eğitim Fakültesinde 2013-2014 eğitim öğretim yılında öğrenim görmekte olan toplam 496 öğretmen adayı oluşturmaktadır. Bunların 144' ü Fen ve Teknoloji Öğretmenliği, 217'si Sınıf Öğretmenliği, 92' si Türkçe Öğretmenliği ve 43'ü Okul Öncesi Öğretmenliği programlarında öğrenim görmektedirler.

Tablo 15. Öğretmen Adaylarının Bulundukları Bölümlere Göre Betimsel İstatistikleri

Bölümler	Öğrenci Sayıları
Fen ve Teknoloji Öğretmenliği	144
Sınıf Öğretmenliği	217
Türkçe Öğretmenliği	92
Okul Öncesi Öğretmenliği	43
Toplam	496

Ayrıca örneklem 151 erkek ve 344 bayan öğretmen adayından oluşmaktadır.

Tablo 16. Öğretmen Adaylarının Cinsiyetlerine Göre Betimsel İstatistikleri

Cinsiyet	Öğrenci Sayıları
Kız	344
Erkek	151
Toplam	496

Fen ve Teknoloji öğretmen adaylarının 66' sı son sınıfta, 78' i ise birinci sınıfta öğrenim görmektedirler. Sınıf öğretmeni adaylarının ise 132' si üçüncü sınıfta, 85' i ise birinci sınıfta öğrenim görmektedir. Türkçe ve Okul Öncesi öğretmen adaylarının tamamı son sınıfta öğrenim görmektedir.

Tablo 17. Öğretmen Adaylarının Bölüm ve Sınıflara Göre Betimsel İstatistikleri

Bölümler	Sınıflar			Toplam
	1. Sınıf	3. Sınıf	4. Sınıf	
Fen ve Teknoloji Öğretmenliği	78	0	66	144
Sınıf Öğretmenliği	85	132	0	217
Türkçe Öğretmenliği	0	0	92	92
Okul Öncesi Öğretmenliği	0	0	43	43
Toplam	163	132	201	496

Veri Toplama Aracı

Ekolojik Ayak İzi Hesaplama Ölçeği

Ekolojik ayak izi hesabı uzmanlık gerektiren bir konudur. Ekolojik ayak izi hesabı web tabanlı olarak birçok internet sitesinden yapılabilmektedir. Kişilerin ayak izlerinin global olarak ölçülebilmesi, "Küresel Ayak İzi Ağı" nın ekolojik ayak izi alanında yapılan çalışmalar için ana kaynaklardan biri olması, ekolojik ayak izi hesaplama ölçeğinin oluşturulması aşamasında ekolojik ayak izi kavramını literatüre sokan bilim insanlarından Mathis Wackernagel' in bulunması sebebiyle Earth Day Network' ün kullanıma sunmuş olduğu ölçme aracının güvenilir olduğu düşünülmüş ve bu çalışmada tercih edilmiştir (Meyer, 2004; Ryu, 2005; Kitzes ve Galli, 2007).

Ekolojik ayak izi hesaplama ölçeği, ekolojik ayak izi kavramının bileşenleri dikkate alınarak düzenlenmiş gıda (5 soru), eşya (3 soru), barınak (6 soru), ulaşım (4 soru) bileşenlerinde toplam 18 sorudan oluşmaktadır. Bu ölçek herkesin ulaşabileceği ve katılabileceği şekilde (http://www.earthday.net/footprint/index.asp) web sayfasında kullanıma sunulmuştur. Kişisel olarak ekolojik ayak izini hesaplayan bu ölçek, insanların tüketimini karşılayacak olan biyolojik üretim alnını baz almakta, hesap yapılırken ülkelerin değişik kullanım alanları, biyolojik üretim alanları, iklim şartları, nüfusu göz önünde bulundurulmaktadır.

Ekolojik Ayak İzi Hesaplama Ölçeğinin Değerlendirilmesi

Katılımcıların ekolojik ayak izi hesaplama ölçeğindeki cevapları, (http://www.earthday.net/footprint/index.asp) web sayfasında aynı şekilde işaretlenerek kişilerin gıda, eşya, barınak ve ulaşım ayak izleri ile birlikte toplam ayak izleri global hektar cinsinden belirlenmiştir. Böylece kişilerin halihazırdaki yaşam stillerini devam ettirdikleri takdirde kaç gezegene ihtiyaç duydukları belirlenmiştir.

BULGULAR

Ekolojik Ayak İzi Değerlerinin Cinsiyet, Çevre Dersi Alma ve Bölümlere Göre Analizi

Öğretmen adaylarının ekolojik ayak izlerini cinsiyete göre incelemek amacıyla araştırmaya katılan öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplara göre hesaplanan ekolojik ayak izi ortalamalarında cinsiyete göre anlamlı bir fark olup olmadığı araştırılmıştır.

Tablo 4' te öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplardan elde edilen verilere göre hesaplanan değerler bulunmaktadır. Bu değerler ortalama ve standart sapmalara ilişkin verilerdir. Bu veriler incelendiğinde kız ve erkek öğretmen adaylarının ekolojik ayak izi ortalamaları arasında bir fark olduğu görülmektedir. Ayrıca standart sapma değerlerinde de farklılık olduğu görülmektedir. Bununla birlikte öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplardan elde edilen verilere göre hesaplanan ekolojik ayak izi ortalamalarının cinsiyete göre t-Testi sonuçları bulunmaktadır.

Tablo 4. Çevresel Problemlere İlgi Anketi Puanlarının Cinsiyete Göre t-Testi Sonuçları

Cinsiyet	N	X	S	sd	t	p
Kız	344	2.18	0.30	493	2.427	0.016
Erkek	151	2.25	0.36			

Tablo incelendiğinde öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplara göre hesaplanan ortalamaları cinsiyete göre anlamlı bir farklılık göstermektedir, $t(493)= 2.427$, $p<.05$. Kız öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplara göre hesaplanan ekolojik ayak izi ortalamalarının (X= 2.18) erkek öğretmen adaylarının ekolojik ayak izi ortalamalarından (X= 2.25) düşük olduğu görülmektedir.

Öğretmen adaylarının ekolojik ayak izlerini çevre dersi almaya göre incelemek amacıyla araştırmaya katılan öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplara göre hesaplanan ekolojik ayak izi ortalamalarında çevre dersi alıp almama durumlarına göre anlamlı bir fark olup olmadığı araştırılmıştır.

Tablo 5' te öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplardan elde edilen verilere göre hesaplanan değerler bulunmaktadır. Bu değerler ortalama ve standart sapmalara ilişkin verilerdir. Bu veriler incelendiğinde çevre dersini alan ve almayan öğretmen adaylarının ekolojik ayak izi ortalamalarının birbirine yakın değerlerde olduğu görülmektedir. Ayrıca standart sapma değerlerinin de yine birbirine yakın değerlerde olduğu görülmektedir. Bununla birlikte öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplardan elde edilen verilere göre hesaplanan ekolojik ayak izi ortalamalarının çevre dersi alıp almama durumuna göre t-Testi sonuçları bulunmaktadır.

Tablo 5. Çevresel Problemlere İlgi Anketi Puanlarının Cinsiyete Göre t-Testi Sonuçları

Çevre Dersi	N	X	S	sd	t	p
Alan	198	2.21	0.33	494	0.522	0.602
Almayan	298	2.19	0.32			

Tablo incelendiğinde öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplara göre hesaplanan ortalamaları çevre dersi alıp almama durumuna göre anlamlı bir farklılık göstermemektedir, t(494)= .522, p>.05. Çevre dersini alan öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplara göre hesaplanan ekolojik ayak izi ortalamalarının (X= 2.21) çevre dersini almayan öğretmen adaylarının ekolojik ayak izi ortalamalarından (X= 2.19) yüksek olduğu görülmektedir. Ancak aradaki fark anlamlı bir farklılık ifade etmemektedir.

Öğretmen adaylarının ekolojik ayak izlerini öğrenim gördükleri bölümlere göre incelemek amacıyla araştırmaya katılan öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplara göre hesaplanan ekolojik ayak izi ortalamalarında öğrenim gördükleri bölümlere göre anlamlı bir fark olup olmadığı araştırılmıştır.

Tablo 6' da öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplardan elde edilen verilere göre hesaplanan değerler bulunmaktadır. Bu değerler ortalama ve standart sapmalara ilişkin verilerdir. Bu veriler incelendiğinde öğretmen adaylarının ekolojik ayak izi ortalamalarının öğrenim gördükleri bölümlere göre birbirine yakın değerlerde görülmektedir. Ayrıca öğretmen adaylarının standart sapma değerlerinin de yine bölümlere göre birbirine yakın değerlerde olduğu gözlenmektedir.

Tablo 7' de ise öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplardan elde edilen verilere göre hesaplanan ekolojik ayak izi ortalamalarının öğrenim gördükleri bölümlere göre ANOVA sonuçları bulunmaktadır.

Tablo 6. Ekolojik Ayak İzi Ortalama Ve Standart Sapma Değerleri

Bölümler	N	X	SS
Fen Bilgisi	144	2.23	0.32
Türkçe	92	2.19	0.31
Sınıf	217	2.20	0.33
Okul Öncesi	43	2.15	0.32

Analiz sonuçları, öğretmen adaylarının Ekolojik Ayak İzi Hesaplama Ölçeği' ne verdikleri cevaplardan elde edilen verilere göre, öğretmen adaylarının ekolojik ayak izi ortalamaları arasında öğrenim gördükleri bölümler bakımından anlamlı bir fark olmadığını göstermektedir, F(3,492) = .740, p>.05. Başka bir deyişle öğretmen adaylarının ekolojik ayak izi ortalamaları, öğrenim gördüklere bölümlere bağlı olarak anlamlı bir şekilde değişmemektedir.

Tablo 7. Ekolojik Ayak İzi Ortalamalarının Bölümlere Göre ANOVA Sonuçları

Varyansın Kaynağı	Kareler Toplamı	Sd	Kareler Ortalaması	F	P	Anlamlı Fark
Gruplararası	0.235	3	0.078	0.740	0.528	Yok
Gruplariçi	52.076	492	0.106			
Toplam	52.311	495				

TARTIŞMA

Bu çalışma kapsamında öğretmen adaylarının ekolojik ayak izlerinde cinsiyete, çevre dersi almaya ve öğrenim gördükleri bölümlere göre anlamlı bir farklılık olup olmadığı incelenmiştir. Ayrıca öğretmen adaylarının ekolojik ayak izi ortalamaları ile çevre bilgi, tutum, kullanım ve ilgi ortalamaları arasındaki ilişki ile ekolojik ayak izlerinin çevre okuryazarlığı boyutlarına göre yordanması araştırılmıştır. Buna göre bayan öğretmen adayları ile erkek öğretmen adaylarının ekolojik ayak izi ortalamaları arasında anlamlı bir farklılık bulunmaktadır. Bayan öğretmen adaylarının ekolojik ayak izi ortalamaları daha düşük olarak hesaplanmıştır.

Keleş (2007) tarafından gerçekleştirilen çalışmada, öğretmen adayları fen bilgisi dersi kapsamında sürdürülebilir kalkınma alanında bir eğitime alınarak, ekolojik ayak izleri ölçülmüş ve ekolojik ayak izinin düşürülmesi ile ilgili fikirleri alınmıştır. Elde edilen sonuçlara göre öğretmen adaylarının ekolojik ayak izi ortalamaları X=3.91 olarak hesaplanmıştır. Öğretmen adaylarının ekolojik ayak izlerinin bileşenlerine göre ortalamaları, gıda alanında X=1.70, mallar/hizmetler alanında X=1.03, barınak alanında X=1.01 ve ulaşım alanında X=0.17 olarak hesaplanmıştır. Buna göre ekolojik ayak izine en fazla etkisi olan bileşen gıda, en az etkisi olan bileşen ise ulaşım olarak ulaşım olarak belirlenmiştir.

Akıllı ve diğerleri (2008) tarafından gerçekleştirilen çalışmada, Akdeniz Üniversitesi İktisadi ve İdari Bilimler Fakültesi' nde öğrenim görmekte olan öğrenciler ve çalışmakta olan personellerin ekolojik ayak izleri incelenmiştir. Ulaşılan sonuçlara göre ekolojik ayak izi ortalamaları 4.83 gha olarak hesaplanmıştır. Bu ortalama Türkiye ortalamasının çok üstünde bir değerdir. Ekolojik ayak izi bileşenlerinden atık ayak izi 2.42 gha olarak hesaplanmıştır. Buna göre ekolojik ayak izi ortalamasının yüksek çıkmasındaki en büyük etkenin atık ayak izi bileşeni olduğu belirlenmiştir.

Keleş, Uzun ve Özsoy (2008) tarafından gerçekleştirilen çalışmada, Aksaray Üniversitesi Eğitim Fakültesi İlköğretim Bölümü' nün Fen Bilgisi Öğretmenliği, Sınıf Öğretmenliği ve Sosyal Bilgiler Öğretmenliği programlarında öğrenim görmekte olan öğretmen adaylarının ekolojik ayak izleri incelenmiştir. Bu amaçla 81 öğretmen adayına ekolojik ayak izi ölçeği uygulanmıştır. Elde edilen sonuçlara göre bayan öğretmen adaylarının ekolojik ayak izi ortalamaları (X=4.19), erkek öğretmen adaylarının ekolojik ayak izi ortalamalarından (X=3.86) yüksek çıkmıştır. Ancak aradaki fark istatiksel olarak anlam ifade etmemektedir. Ekolojik ayak izinin gıda bileşeni dikkate alındığında bayan öğretmen adaylarının ortalamalarının erkek öğretmen adaylarının ortalamalarından daha yüksek olduğu belirlenmiştir. Ulaşım, barınak ve mal hizmetler bileşenlerinde ise bayan öğretmen adaylarının ortalamaları ile erkek öğretmen adaylarının ortalamaları arasında anlamlı bir fark bulunmadığı saptanmıştır.

Meyer (2004) tarafından gerçekleştirilen araştırmada, su koruma ve çevre yönetimi alanlarında öğrenim görmekte olan kişiler üzerinde, ekolojik ayak izi kavramından eğitim aracı olarak faydalanılmıştır. Ulaşılan sonuçlara göre, ekolojik ayak izi kavramından faydalanılarak verilen eğitimin, katılımcıların sürdürülebilir yaşam konusundaki bilgi ve tutumlarının artmasında ve sürdürülebilir yaşama dönük sorumlu davranışlar edinmelerinde etkin rol oynadığı tespit edilmiştir.

Wada, İzumi ve Mashiba (2007) tarafından gerçekleştirilen çalışmada, Japonya' da halktan insanların ekolojik ayak izleri incelenmiştir. Buna göre bireylere ekolojik ayak izlerini düşürmeye yönelik farkındalık kazandırmak için çalışma yapılmış ve bu çalışma sonucunda web tabanlı bireysel ekolojik ayak izi hesaplama ölçeği oluşturulmuştur. Ulaşılan sonuçlara göre sürdürülebilir yaşamın devamlılığı için ekolojik ayak izi eğitiminin önemli rol oynadığı tespit edilmiştir.

Ryu ve Brody (2006) tarafından gerçekleştirilen çalışmada üniversiteden mezun olmuş bireylere verilen eğitimlerde ekolojik ayak izi eğitim aracı olarak kullanılmıştır. Ulaşılan sonuçlara göre ekolojik ayak izi kullanılarak verilen eğitimlerin, sürdürülebilir yaşamın devamlılığı konusunda öğrenmeyi, davranış ve algıları değiştirmeyi kolaylaştırdığı belirlenmiştir.

SONUÇ VE ÖNERİLER

Çalışmadan elde edilen sonuçlara göre öğretmen adaylarının ekolojik ayak izi ortalamaları ortalamanın üstünde olarak hesaplanmıştır. Gelecek nesillerin şekillenmesinde en önemli rolü öğretmenlerin oynayacağını düşünürsek, bu durum sürdürülebilir yaşamın devamlılığı için endişe verici diyebiliriz. Çevreci bir dünya görüşüne sahip nesillerin yetişmesi için öğretmenlerin de aynı görüşe sahip olması gerekir. Bunun için üniversite öncesi eğitim seviyelerinde, üniversitelerde ve mesleki hayatta çevre eğitimleri verilmelidir.

Verilecek çevre eğitimleri sürdürülebilir kalkınma, çevre okuryazarlığı ve ekolojik ayak izi gibi kavramları da kapsamalıdır. Bu sayede bireylerin güncel çevre konularından ve sorunlarından haberdar olmaları ve çevre farkındalıklarının oluşması sağlanabilir.

ABSTRACT: Salt is extremely important substance for life and it has fairly wide range of applications in different disciplines. In this study, misconceptions held by science teacher candidates about the formula of the salt, strength of acid and bases that is formed salt, type of the salt as acidic / basic / neutral have been investigated bu using the prediction-observation-explanation method. In this study a post-test design without a control group has been used. The study group consisted of a total of 43 third-year science teacher candidates attending the Department of Science Teaching of a Faculty of Education. Science teacher candidates realised experimental activity that was prepared according to prediction-observation-explanation method in the laboratory. Experimental activity contains preparing solutions of the potassium iodide, sodium chloride, ammonium nitrate, ammonium sulphate, sodium acetate and sodium carbonate, immersing the pH indicator card in the solutions, recording the colour change that will occur in the pH paper and the pH value for the corresponding colour on the scale. Teacher candidates have been asked to make prediction about types of the salt before the experimental activity. Teacher candidates have been asked to write their observations after the experimental activity. Teacher candidates have been asked to compare predictions and observations in the explanation section and asked to answer discussion questions. Predictions and observations made by teacher candidates and discussion questions answered by them have been discussed in the laboratory. Results of the study showed that more than half of the science teacher candidates could write the formula of the salt, strength of acid and bases that is formed salt and type of the salt as acidic / basic / neutral. According to the results, their predictions are compatible with observations. It was determined that few science teacher candidates have misconceptions. Some of the science teacher candidates expressed that memorizing knowledge were proved to be really true by the experimental activity conducted in accordance with the POE method. They expressed that misconceptions were noticed by working actively in the learning process in the interview. Important part of science teacher candidates expressed that POE create positive effects on the visual memory and provides permanent learning. Some of the science teacher candidates expressed that activities carried out by TGA is intertwined with a variety of scientific process skills including prediction, observation, experimentation, data recording, classification, drawing conclusion.

Keywords: Science education, prediction-observation-explanation method, misconception, salt, science teacher candidates.

TAHMİN-GÖZLEM-AÇIKLAMA (TGA) YÖNTEMİNE DAYALI BİR LABORATUVAR ETKİNLİĞİ: TUZ

ÖZET: Yaşam için son derece önemli olan tuz farklı disiplinlerde oldukça geniş kullanım alanı olan bir maddedir. Bu maddeyle ilgili fen bilgisi öğretmen adaylarının tuzun formülü, tuzu oluşturan asit ve bazın kuvvetli/zayıf olma durumu, tuzun asidik, bazik ve nötr olma durumu hakkında sahip oldukları kavram yanılgıları Tahmin-Gözlem-Açıklama (TGA) yöntemi kullanılarak araştırılmıştır. Araştırmada kontrol grupsuz son test desen kullanılmıştır. TGA yöntemine uygun olarak düzenlenen deneysel etkinlik Eğitim Fakültesi Fen Bilgisi Eğitimi Anabilim Dalında üçüncü sınıfta öğrenim görmekte olan 43 fen bilgisi öğretmen adayı ile laboratuvarda yapılmıştır. Deneysel etkinlik potasyum iyodür, sodyum klorür, amonyum nitrat, amonyum sülfat, sodyum asetat ve sodyum karbonat tuzlarının sulu çözeltilerinin hazırlanması, çözeltilere pH indikatör kağıtlarının batırılması, pH kağıdında gerçekleşecek renk değişimi ve skaladaki renge karşılık gelen pH değerinin kaydedilmesini içermektedir. Deneysel etkinlik öncesinde, öğretmen adaylarından tuzların türleriyle ilgili tahminde bulunmaları istenmiştir. Deneysel etkinlikten sonra öğretmen adaylarından gözlemlerini kaydetmeleri istenmiştir. Açıklama aşamasında ise tahminleriyle gözlemlerini karşılaştırmaları ve tartışma sorularını cevaplamaları istenmiştir. Öğretmen adaylarının yaptıkları tahmin ve gözlemler ile cevaplandırdıkları tartışma soruları laboratuvarda tartışılmıştır. Araştırma sonucunda fen bilgisi öğretmen adaylarının yarısından fazlasının tuzların formüllerini yazabildikleri, tuzu oluşturan asit ve bazı kuvvetli/zayıf olarak belirtebildikleri, tuzun asidik/bazik/nötr olma durumunu doğru olarak tahmin edebildikleri, tahminleriyle gözlemlerinin uyumlu olduğu saptanmıştır. Az sayıda öğretmen adayının ise kavram yanılgılarına sahip olduğu saptanmıştır. Yapılan görüşmede bazı öğretmen adayları ezbere bildikleri bilgilerin gerçekten doğru olduğunu TGA yöntemine uygun olarak gerçekleştirilen deneysel etkinlikle ispatladıklarını ve bazıları ise kavram yanılgılarını öğrenme sürecinde aktif çalışarak fark ettiklerini ifade etmişlerdir. Ayrıca öğretmen adaylarının önemli bir bölümü TGA'nın görsel hafızayı olumlu etkileyerek öğrenmede kalıcılığı sağlama bağlamında önemli olacağını belirtmiştir. Araştırma sonunda, bazı öğretmen adayları tarafından TGA ile yürütülen etkinliğin tahminde bulunma, gözlem yapma, deney yapma, verileri kaydetme, sınıflama, sonuç çıkarma olmak üzere çeşitli bilimsel süreç becerileri ile iç içe olduğu vurgulanmıştır.

Anahtar sözcükler: Fen eğitimi, Tahmin-gözlem-açıklama yöntemi, kavram yanılgısı, tuz, fen bilgisi öğretmen adayı.

GİRİŞ

Tahmin-gözlem-açıklama olarak üç aşamada gerçekleştirilen (Driver ve Bell, 1986; Çepni, 2011) TGA yöntemi öğrencilerin konuya ilişkin ön bilgilerinin (Çepni, 2011), kavram yanılgılarının belirlenmesi (Boo ve Watson, 2001; Atasoy, 2004), kavramların yapılandırılması (Driver & Bell, 1986) ve etkili bir öğretim için kullanılan bir yöntemdir (Liew ve Treagust, 1995). Yöntemin tahmin, gözlem ve açıklama aşamalarında bilimsel süreç becerileri aktif bir şekilde kullanılmaktadır.

Öğrenciler gözlem yapma, ölçme, sınıflama, verileri kaydetme, sayı ve uzay ilişkisi kurma, önceden kestirme, değişkenleri belirleme, sonuç çıkarma (yordama), hipotez kurma, model oluşturma, deney yapma, değişkenleri değiştirme ve kontrol etme ve karar verme becerilerini kullanarak deneysel etkinlikler yaparlar. Bu beceriler bilimsel süreç becerileridir ve öğrenmeyi kolaylaştıran araştırma yeteneği kazandıran, öğrencileri öğrenme ortamında aktif olmasını sağlayan, öğrenmelerinde sorumluluk alma duygusu geliştiren ve öğrenmenin kalıcılığını arttıran beceriler olarak ifade edilmektedir (Akdeniz, 2011).

I-Tahmin Aşaması

Bu aşama etkinlikte yer alan olayla ilgili tahmin yapma ve tahmini gerekçeli olarak ifade etmeyi içermektedir. Tahmin yapılacak olayın net bir biçimde anlaşılmış olması (Driver ve Bell, 1986) ve tahminlerin gerekçeli olarak ifade edilmesi son derece önemlidir (Kearney ve Treagust, 2001). Çünkü yapılan tahminler kavram yanılgılarını ortaya çıkarır (Liew ve Treagust, 1995). Ayrıca gözlem için öğrenciyi motive eder ve gözleme odaklanmayı sağlar (Driver ve Bell, 1986).

II-Gözlem Aşaması

Bu aşamada deneysel etkinlik gerçekleştirilir ve öğrenciden gözlem yapması istenir. Tüm öğrencilerin gözlem yapabilecekleri ve zihinsel çelişki oluşturacak bir etkinlik aşamayı daha da etkili kılar (Tao ve Gunstone, 1999). Gözlem aşamasında bir öğrencinin diğer öğrencilerin ifadelerinden etkilenmesini ve gözlem verilerinde değişiklik yapmasının önüne geçebilmek için olayın gerçekleşmesi ile gözlem etkinliği paralel yürütülmeli ve kaydedilmelidir (Driver ve Bell, 1986).

III-Açıklama Aşaması

Bu aşamada yapılan tahmin ve gözlem sonuçları öğretmen rehberliğinde karşılaştırılarak tartışılır ve açıklanır. Öğrencilerin yapacakları aşamalarda bütün ihtimalleri dikkate almaları ve alternatifleri düşünerek yorum yapmaları önemlidir (Driver ve Bell, 1986). Bireysel ya da grup halinde gerçekleştirilebilen yöntemde (Kearney ve Treagust, 2001);

- Etkinliğin iyi anlaşılması,
- Etkinlikle ilgili tahminleri ve gerekçeleri öğrencilerin kendi cümleleri ile açıklamaları,
- Etkinlikle ilgili tahminlerini gerek gözleme odaklanmaları gerekse tahminlerini yapacakları gözleme bağlı değiştirmemeleri için gözlem öncesinde tamamlamaları,
- Etkinliği gözlemlerken kaydetmeleri,
- Tahmin ve gözlemlerini karşılaştırmaları gereklidir (Köse, Coştu ve Keser, 2003).

Ulusal ve uluslararası alanyazın incelendiğinde TGA yönteminin başarıyı arttırdığı (Tao ve Gunstone 1999; Windschitl ve Andre, 1998; Kearney ve Treagust, 2001; Kearney, Treagust, Yeo ve Zadnik, 2001; Kearney, 2004; Bilen ve Aydoğdu, 2010; Bilen ve Köse, 2012a, 2012b; Karatekin ve Öztürk, 2012; Mısır ve

Saka, 2012a, 2012b; Akgün, Tokur ve Özkara, 2013; Yavuz ve Çelik, 2013); laboratuvara (Köseoğlu, Tümay ve Kavak, 2002; Russell, Lucas ve McRobbie, 2003; Karaer, 2007; Bilen ve Aydoğdu, 2010), derse (Mısır ve Saka, 2012a, 2012b; Öner Sünkür, Arıbaş, İlhan ve Sünkür, 2012; Yavuz ve Çelik, 2013) ve fen öğretimine yönelik tutum üzerinde olumlu etkileri olduğu görülmektedir (Bilen ve Köse, 2012b). TGA yönteminin kavramların yapılandırılmasını, anlamlı ve kalıcı öğrenmeyi (Bilen ve Aydoğdu, 2010; Özdemir, Köse ve Bilen, 2012; Yavuz ve Çelik, 2013), etkili bir şekilde ders işlemeyi, öğrencilerin kavram yanılgılarını yaparak yaşayarak fark etmelerini sağladığı (Bilen ve Köse, 2012b; Harman, 2014, 2015); problem çözme, uygulama (Mısır ve Saka, 2012a, 2012b) ve kavramsal anlama becerilerini geliştirdiği (Bilen, Köse ve Uşak, 2011; Mısır ve Saka, 2012a, 2012b) ve kavram yanılgılarının giderilmesinde etkili olduğu saptanmıştır (Bilen ve Köse, 2012a; Harman, 2014, 2015; Mısır ve Saka, 2012a; Öner Sünkür, İlhan ve Sünkür, 2013; Özdemir, Köse ve Bilen, 2012; Yavuz ve Çelik, 2013). TGA yönteminin konunun anlaşılmasını sağladığı (Tekin, 2008a, 2008b) ve yöntemin ispat için yapılan deneyleri kavramsal anlama bağlamında desteklediği belirlenmiştir (Tekin, 2008b). TGA yönteminin deneysel etkinliğe ilişkin ilgi, istek, merak (Karaer, 2007) ve motivasyonu arttırdığı; ilgi çekici olduğu (Mısır ve Saka, 2012a, 2012b; Tekin, 2008b); aktif katılımı sağladığı ve sosyalleşmeyi olumlu yönde etkilediği saptanmıştır (Mısır ve Saka, 2012a, 2012b). TGA yönteminin bilimsel süreç becerileri (Özyılmaz, 2008; Bilen ve Aydoğdu, 2012; Karatekin ve Öztürk, 2012), bilimin doğası (Bilen ve Aydoğdu, 2012) ve bilimsel bilgiye yönelik görüşler üzerinde olumlu etkileri olduğu ortaya konmuştur (Akgün, Tokur ve Özkara, 2013). TGA yönteminin kavram yanılgılarının saptanmasında etkili olduğu saptanmıştır (Harman, 2014, 2015; Liew ve Treagust, 1995; Tao ve Gunstone,1999; Kearney ve Treagust, 2001; Karaer, 2007; Bilen ve Aydoğdu, 2010; Bilen ve Köse, 2012a; Mısır ve Saka, 2012a; Özdemir, Köse ve Bilen, 2012; Öner Sünkür, İlhan ve Sünkür, 2013).

Bu araştırma fen bilgisi öğretmen adaylarının tuzun formülü, tuzu oluşturan asit ve bazın kuvvetli/zayıf olma durumu, tuzun asidik, bazik ve nötr olma durumu hakkında sahip oldukları kavram yanılgılarını TGA yöntemini kullanarak belirlemek amacıyla yapılmıştır.

YÖNTEM

Araştırmada kontrol grupsuz son test desen kullanılmıştır. Araştırmaya katılan örneklemde uygulamanın sonundaki deneysel işlemden kaynaklanan değişmeler ölçülür ve bir karara varılır. Bu desen türünde ön test uygulaması ve kontrol grubu yoktur (Sönmez ve Alacapınar, 2013).

Örneklem

Araştırmaya Eğitim Fakültesi Fen Bilgisi Eğitimi Anabilim Dalında üçüncü sınıfta öğrenim görmekte olan 43 fen bilgisi öğretmen adayı katılmıştır. 3. sınıfta öğrenim gören öğretmen adaylarının seçilme nedeni Genel Kimya I-II, Genel Kimya Laboratuvarı I-II ve Fen Bilgisi Laboratuvar Uygulamaları I-II derslerini almış olmalarıdır. Bu nedenle araştırmada amaçlı örnekleme yapılmıştır.

Veri toplama aracı

Alanyazın taraması yapılarak ve laboratuvar derslerine giren bir öğretim üyesinin görüşü alınarak hazırlanan ölçme aracındaki ifadelerin anlaşılır ve görünüş geçerliliği bakımından uygun olup olmadığını anlamak ve cevaplama süresini belirlemek için 20 öğrenci ile pilot uygulaması yapılmıştır. Uzman görüşü ve pilot uygulama sonuçları dikkate alınarak düzenlenen ölçme aracının son hali tablo 1'de verilmiştir.

Tablo 1. Veri Toplama Aracında Yer Alan Sorular

Aşamalar	Sorular
Tahmin	6 deney tüpü için deney tüplerindeki çözeltilere pH indikatör kağıtlarını batıralım. pH indikatör kağıtlarındaki renk değişimini dikkate alarak pH skalası ile yapacağınız karşılaştırmada pH değerinin kaç olmasını beklersiniz? Tahminlerinizi ve tahminlerinizin gerekçesini yazınız.
Gözlem	Deneysel etkinliğe ilişkin gözlemlerinizi kaydediniz.
Açıklama	Deneysel etkinlikle ilgili olarak yaptığınız tahminleri ve gözlemleri karşılaştırınız.
Tartışma	Tuzların formülerini yazınız.
	Tuzları oluşturan asit ve bazları yazınız.
	Tuzu oluşturan asit ve bazın kuvvetli/zayıf olma durumunu belirtiniz.
	6 deney tüpü için deney tüplerindeki çözeltilere pH indikatör kağıtları batırıldığında pH skalası ile yapacağınız karşılaştırmada pH değeri kaç olur? Yazınız.
	Aşağıda verilen ifadelerin doğru ya da yanlış olduklarını belirtiniz. Yanlış olan ifadelerin üzerini çizerek doğrusunu yazınız.

- Kuvvetli asit ve kuvvetli bazın tepkimesi sonucunda oluşan tuz nötr tuzdur.
- Kuvvetli asit ve zayıf bazın tepkimesi sonucunda oluşan tuz bazik tuzdur.
- Zayıf asit ve kuvvetli bazın tepkimesi sonucunda oluşan tuz asidik tuzdur.
- Zayıf asit ve zayıf bazın tepkimesi sonucunda oluşan tuz nötr, bazik veya asidik tuzdur.

Gerçekleştirilen uygulamaya ilişkin yapılan görüşmede öğretmen adaylarına "TGA yöntemine uygun olarak işlenen ders ile ilgili düşünceleriniz nedir?" sorusu yöneltilmiştir.

Uygulama

TGA yöntemine uygun olarak düzenlenen etkinlik Eğitim Fakültesi Fen Bilgisi Eğitimi Anabilim Dalında 3. sınıfta öğrenim gören 43 fen bilgisi öğretmen adayı ile birlikte 4 saatlik bir sürede laboratuvarda yapılmıştır. Etkinlikler sırasında öğretmen adayları laboratuvara 14-15 kişilik gruplar halinde alınmıştır. Her grup kendi içinde 2-3 kişilik daha küçük gruplara ayrılmıştır.

Tahmin Aşaması

Öğretmen adaylarından; 6 deney tüpü içindeki Potasyum iyodür, sodyum klorür, amonyum nitrat, amonyum sülfat, sodyum asetat ve sodyum karbonat çözeltilerine pH indikatör kağıtlarını batırdıklarında, pH indikatör kağıtlarındaki renk değişimi ve pH skalası arasında yapılacak karşılaştırmaya göre çözeltilerin pH değeri için tahminde bulunmaları ve tahminlerinin gerekçelerini yazmaları istenmiştir.

Gözlem Aşaması

Araç-gereçler: Potasyum iyodür, sodyum klorür, amonyum nitrat, amonyum sülfat, sodyum asetat, sodyum karbonat, saf su, pH indikatör kağıtları, 6 adet deney tüpü, tüplük, damlalık, spatül, baget, beher
Öğrencilerden 6 deney tüpü almaları ve tüplerin içerisine aşağıdaki tabloda belirtilen maddeleri ilave edip baget ile karıştırmaları istenmiştir.

Tüp no	İlave edilecek maddeler		
1	5 mL saf su	0.2 g	Potasyum iyodür
2	5 mL saf su	0.2 g	Sodyum klorür
3	5 mL saf su	0.2 g	Amonyum nitrat
4	5 mL saf su	0.2 g	Amonyum sülfat
5	5 mL saf su	0.2 g	Sodyum asetat
6	5 mL saf su	0.2 g	Sodyum karbonat

Daha sonra pH indikatör kağıtlarını çözeltilere batırmaları, pH indikatör kâğıtlarında gerçekleşen renk değişimini incelemeleri ve pH skalasından gözlemledikleri renk için pH değerini kaydetmeleri istenmiştir. pH değerlerini dikkate alarak tuz çözeltilerinin asidik, bazik ya da nötr özellikten hangisine sahip olduğunu belirlemeleri beklenmiştir.

Açıklama Aşaması

Öğretmen adaylarından yaptıkları tahmin ve gözlemleri önce kendi grupları içinde sonrada laboratuvarda yer alan tüm öğrencilerle karşılaştırmaları istenmiştir. Öğrencilerden kendilerine yöneltilen tartışma sorularını cevaplandırmaları istenmiştir. Deneysel etkinlik tamamlandıktan sonra TGA yönteminin tüm aşamaları ve sorular öğrencilerle birlikte tartışılmıştır.

Verilerin Analizi

Araştırmadan elde edilen veriler betimsel analiz yöntemi ile çözümlenmiştir. Araştırma öncesinde araştırma soruları ve kavramsal çerçeve ışığına veri analizi için bir çerçeve hazırlanmıştır. Verilerin hangi tema altına yazılacağı belirlenmiştir. Hazırlanan çerçeveye göre okunan veriler düzenlenmiş, anlamlı, mantıklı olacak şekilde birleştirilmiş ve tanımlanmıştır. Tanımlanan veriler açıklanarak birbiri ile ilişkilendirilmiş, verilere anlam kazandırılmıştır (Yıldırım ve Şimşek, 2011). Veri analizinde temalara yerleştirilen cevapların frekansları ve yüzdeleri hesaplanarak tablolar hazırlanmış ve yorumlanmıştır. Ayrıca veri analizi öğrenci cevaplarından doğrudan alıntılarla desteklenmiştir.

BULGULAR VE YORUM

Araştırmadan elde edilen bulgular tahmin, gözlem, açıklama ve tartışma olmak üzere dört bölüm halinde verilmiştir.

1-Tahmin Aşaması

Fen bilgisi öğretmen adaylarının tuzlu su çözeltilerinin pH değerlerinden hareketle tuzun asidik, bazik ve nötr olma durumu ile ilgili tahminlerine ait frekanslar ve yüzdeler Tablo 2' de verilmiştir.

Tablo 2. Fen Bilgisi Öğretmen Adaylarının Tuzlu Su Çözeltilerinin Ph Değerleri- Tuzun Asidik, Bazik ve Nötr Olma Durumu ile İlgili Tahminlerine Ait Frekanslar ve Yüzdeler

		Potasyum iyodür		Sodyum klorür		Amonyum nitrat		Amonyum sülfat		Sodyum asetat		Sodyum karbonat	
	Tuzun türü	**f**	**%**	**f**	**%**	**f**	**%**	**f**	**%**	**f**	**%**	**f**	**%**
pH<7	KA+ZB=AT	12	27,9	-	-	31*	72,1	34*	79,1	5	11,6	3	7,0
pH>7	ZA+KB=BT	8	18,6	2	4,7	11	25,6	6	14,0	37*	86,0	34*	79,1
pH=7	KA+KB=NT	21*	48,8	29*	67,4	-	-	2	4,7	1	2,3	5	11,6
	Boş	2	4,7	12	27,9	1	2,3	1	2,3	-	-	1	2,3
	Toplam	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**

*:doğru. K: kuvvetli, Z: zayıf, A: asit, B: baz, AT: asidik tuz, BT: bazik tuz, NT: nötr tuz

Fen bilgisi öğretmen adaylarının yarısından fazlası deneysel etkinlikten önce potasyum iyodür ve sodyum klorürün nötr tuz, amonyum nitrat ve amonyum sülfatın asidik tuz ve sodyum asetat ve sodyum karbonatın bazik tuz olduğunu doğru olarak ifade etmiştir. Bazı öğrenciler ise altı tuz için tuzların türü ile tuzu oluşturan asit ve bazın kuvvetli ve zayıf olmasını yanlış belirtmiştir.

Öğrencilerin tahminlerine ait ifade ettikleri gerekçelerden bazı örnekler aşağıda verilmiştir.

Potasyum iyodür için öğrencilerin tahminlerine ilişkin ifade ettikleri gerekçeler:
"HI (KA), KOH (KB) oluğu için nötrdür. Bu yüzden pH=7'dir."
"KOH+HI -> KI+H_2O kuvvetli asit ve kuvvetli baz olduğu için nötr."
"Tuzu oluşturan HI kuvvetli asit ve KOH'da kuvvetli baz olduğu için suda yüzde yüz iyonlaşır. Nötrdür."
"pH 7'den küçüktür. Çünkü KI kuvvetli asit ve zayıf bazdan oluşmaktadır. Yani asidik tuzdur. pH<7"
"KOH + HI -> KI + H_2O, KOH: zayıf baz, HI: kuvvetli asit, KI: asidik tuz. pH<7"
"KOH + HI -> KI + H_2O, KOH: kuvvetli baz, HI: zayıf asit, KI: bazik tuz. pH>7"
"KOH: kuvvetli baz, HI: zayıf asit. Tepkimede KOH kuvvetli baz olduğu için tuzda bazik özellik gösterir. Bu yüzden pH>7 olur."
"Potasyum kuvvetli asittir. I zayıf bazdır. Bu yüzden pH 7'den küçük olur."

Sodyum klorür için öğrencilerin tahminlerine ilişkin ifade ettikleri gerekçeler:
"NaOH (KB) ve HCl (KA)'ten oluştuğu için nörtdür. Bu yüzden pH=7"
"NaOH+HCl -> NaCl+H_2O kuvvetli asit ve kuvvetli baz olduğu için nötr."
"Tuzu oluşturan HCl kuvvetli asit ve NaOH'da kuvvetli baz olduğu için suda yüzde yüz iyonlaşır. Nötrdür."

Amonyum nitrat için öğrencilerin tahminlerine ilişkin ifade ettikleri gerekçeler:
"HNO_3 (KA) ve NH_3 (ZB)'den meydana geldiği için asidiktir. Bu yüzden pH<7'dir."
"Kuvvetli baz ve zayıf asidin birleşmesinden meydana geldiği için pH'ı 7'den büyük olacak."
"Kuvvetli asit olur. pH>7"
"HNO_3 + NH_3 -> NH_4NO_3 + H_2O. zayıf baz (NH_3) ve kuvvetli asit (HNO_3)"
"Amonyumdan dolayı baziktir."

Amonyum sülfat için öğrencilerin tahminlerine ilişkin ifade ettikleri gerekçeler:
"H_2SO_4 (KA) ve NH_3 (ZB)'den meydana geldiği için asidiktir. pH<7'dir."
"Kuvvetli baz ve zayıf asidin birleşmesinden meydana geldiği için pH'ı 7'den büyük olacak. Çünkü baziktir."
"Kuvvetli asit olur. pH>7"
"H_2SO_4 + NH_3 -> $(NH_4)_2SO_4$ + H_2O. H_2SO_4 (KA) ve NH_3 (ZB)"
"Amonyumdan dolayı baziktir."

Sodyum asetat için öğrencilerin tahminlerine ilişkin ifade ettikleri gerekçeler:
"CH_3COOH (ZA) ve NaOH (KB)'den meydana geldiği için baziktir. pH>7'dir."
"Kuvvetli baz + kuvvetli asitten dolayı nötr"
"Kuvvetli baz olur. pH<7"
"CH_3COOH + NaOH -> CH_3COONa + H_2O. CH_3COOH (ZA) ve NaOH (KB)"

Sodyum karbonat için öğrencilerin tahminlerine ilişkin ifade ettikleri gerekçeler:
"NaOH (KB) ve H_2CO_3 (ZA)'ten meydana geldiği için baziktir. Bazikte pH>7'dir."
"Kuvvetli baz + kuvvetli asitten dolayı nötr"
"Kuvvetli baz olur. pH<7"
"NaOH + H_2CO_3 -> Na_2CO_3 + H_2O. NaOH (KB) ve H_2CO_3 (ZA)"

2-Gözlem Aşaması

Tahmin-gözlem-açıklama yönteminin ikinci aşaması olan gözlem aşamasında fen bilgisi öğretmen adaylarından kendilerine verilen formda belirtildiği şekilde deneyi yapmaları, gözlem yaparak gözlem verilerini yazmaları istenmiştir. Öğretmen adaylarının yazdıkları veriler incelenmiş ve bu gözlemlerden bir tanesi örnek olarak aşağıda sunulmuştur.

"1.tüpteki çözeltinin (potasyum iyodür + saf su) pH değeri pH=7 ve 2.tüpteki çözeltinin (sodyum klorür + saf su) pH değeri pH=7 olup iki çözelti de nötr özelliktedir. 3.tüpteki çözeltinin (amonyum nitrat + saf su) pH değeri pH<7 ve 4. tüpteki çözeltinin (amonyum sülfat + saf su) pH değeri pH<7 olup iki çözelti de asidik özelliktedir. 5. tüpteki çözeltinin (sodyum asetat + saf su) pH değeri pH>7 ve 6. tüpteki çözeltinin (sodyum karbonat + saf su) pH değeri pH>7 olup iki çözelti de bazik özelliktedir."

3-Açıklama Aşaması

Tahmin-gözlem-açıklama yönteminin açıklama aşamasında kavramların yeniden yapılandırılmasını sağlamak için yapılan tahmin ve gözlemler araştırmacının rehberliğinde laboratuvarda tartışılmıştır. Öğretmen adaylarının gözlemleri ile uyuşmayan tahminleri aşağıda sunulmuştur.

Potasyum iyodür için
"pH 7'den küçüktür. Çünkü KI kuvvetli asit ve zayıf bazdan oluşmaktadır. Yani asidik tuzdur. pH<7"
"KOH + HI -> KI + H_2O, KOH: zayıf baz, HI: kuvvetli asit, KI: asidik tuz. pH<7"
"KOH + HI -> KI + H_2O, KOH: kuvvetli baz, HI: zayıf asit, KI: bazik tuz. pH>7"
"KOH: kuvvetli baz, HI: zayıf asit. Tepkimede KOH kuvvetli baz olduğu için tuzda bazik özellik gösterir. Bu yüzden pH>7 olur."
"Potasyum kuvvetli asittir. I zayıf bazdır. Bu yüzden pH 7'den küçük olur."

Amonyum nitrat için öğrencilerin tahminlerine ilişkin ifade ettikleri gerekçeler:
"Kuvvetli baz ve zayıf asidin birleşmesinden meydana geldiği için pH'ı 7'den büyük olacak."
"Amonyumdan dolayı baziktir."

Amonyum sülfat için öğrencilerin tahminlerine ilişkin ifade ettikleri gerekçeler:
"Kuvvetli baz ve zayıf asidin birleşmesinden meydana geldiği için pH'ı 7'den büyük olacak. Çünkü baziktir."
"Amonyumdan dolayı baziktir."

Sodyum asetat için öğrencilerin tahminlerine ilişkin ifade ettikleri gerekçeler:
"Kuvvetli baz + kuvvetli asitten dolayı nötr"
"Kuvvetli baz olur. pH<7"

Sodyum karbonat için öğrencilerin tahminlerine ilişkin ifade ettikleri gerekçeler:
"Kuvvetli baz + kuvvetli asitten dolayı nötr"
"Kuvvetli baz olur. pH<7"

4-Tartışma aşaması

Fen bilgisi öğretmen adaylarının tuzların formüllerini adlandırmaya ilişkin verdikleri cevaplara ait frekans ve yüzdeler tablo 3'te verilmiştir.

Tablo 3. Fen Bilgisi Öğretmen Adaylarının Tuzların Formülleri ile İlgili Verdikleri Cevapların Frekans ve Yüzde Değerleri

	Potasyum iyodür		Sodyum klorür		Amonyum nitrat		Amonyum sülfat		Sodyum asetat		Sodyum karbonat	
	f	%	f	%	f	%	f	%	f	%	f	%
Doğru	38	88,4	42	97,7	24	55,8	25	58,1	37	86,0	33	76,7
Yanlış	2	4,7	1	2,3	17	39,5	16	37,2	5	11,6	8	18,6
Boş	3	7,0	-	-	2	4,7	2	4,7	1	2,3	2	4,7
Toplam	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**

Tablo incelendiğinde öğretmen adaylarının yarısından fazlasının tuzların formüllerini doğru yazdıkları görülmektedir. Öğretmen adaylarının tamamına yakınının sodyum klorürün formülünü doğru yazabildiği saptanmıştır. Bu durum üzerinde tuzlara örnek olarak sıklıkla sodyum klorürün verilmesinin ve deneylerde yoğun olarak kullanılmasının etkili olduğu düşünülmektedir.

Fen bilgisi öğretmen adaylarının tuzu oluşturan asit ve bazın kuvvetli/zayıf olma durumu ile ilgili verdikleri cevapların yüzde ve frekans değerleri tablo 4'de verilmiştir.

Tablo 4. Fen Bilgisi Öğretmen Adaylarının Tuzu Oluşturan Asit ve Bazın Kuvvetli/Zayıf Olma Durumu ile İlgili Verdikleri Cevapların Yüzde ve Frekans Değerleri

Asit-Baz Türü	Potasyum iyodür		Sodyum klorür		Amonyum nitrat		Amonyum sülfat		Sodyum asetat		Sodyum karbonat	
	f	%	f	%	f	%	f	%	f	%	f	%
KA-KB	25*	58,1	40*	93,0	2	4,7	1	2,3	2	4,7	1	2,3
KA-ZB	4	9,3	-	-	28*	65,1	27*	62,8	-	-	-	-
ZA-KB	6	14,0	-	-	2	4,7	3	7,0	32*	74,4	34*	79,1
ZA-ZB	-	-	-	-	2	4,7	-	-	1	2,3	-	-
KA-?	1	2,3	2	4,7	2	4,7	4	9,3	-	-	1	2,3

Toplam	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**	**43**	**100,0**

*:doğru. K: kuvvetli, Z: zayıf, A: asit, B: baz, ?:asit ya da bazın kuvvetli/zayıf olma durumu belirtilmemiş.

Tablo incelendiğinde öğretmen adaylarının yarısından fazlasının tuzu oluşturan asit ve bazın kuvvetli/zayıf olma durumunu doğru ifade ettiği görülmektedir. Öğretmen adaylarının tamamına yakınının sodyum klorürü oluşturan asit ve baz türünü kuvvetli olarak ifade ettiği saptanmıştır. Bu sonucun sodyum hidroksit ve hidroklorik asidin deneylerde sık sık kullanılması ve kitaplarda kuvvetli baz - kuvvetli asit için verilen ilk örnekler olmalarından kaynaklandığı düşünülmektedir. Ayrıca fen bilgisi öğretmen adaylarının yarısından fazlası potasyum iyodür ve sodyum klorürün "*Kuvvetli asit ve kuvvetli bazdan oluşur*" gerekçesi ile nötr tuz, amonyum nitrat ve amonyum sülfatın "*Kuvvetli asit ve zayıf bazdan oluşur*" gerekçesi ile asidik tuz ve sodyum asetat ve sodyum karbonatın *"Zayıf asit ve kuvvetli bazdan oluşur."* gerekçesi ile bazik tuz olduğunu doğru olarak ifade etmiştir. Öğrencilerin önemli bir bölümü 37 öğrenci potasyum iyodür, 43 öğrenci sodyum klorür, 40 öğrenci ise amonyum nitrat, amonyum sülfat, sodyum asetat, sodyum karbonat oluşumuna katılan asit ve baz türlerini doğru ifade edebilmiştir. 6 öğrenci potasyum iyodür, 3 öğrenci ise amonyum nitrat, amonyum sülfat, sodyum asetat, sodyum karbonat oluşumuna katılan asit ve baz türlerini belirtememiştir.

Fen bilgisi öğretmen adaylarının tuzlu su çözeltilerinin pH indikatör kağıtları ile verecekleri rengin pH skalasında vereceği pH değerlerinden hareketle tuzun asidik, bazik ve nötr olma durumu ile ilgili tahminlerine ait frekanslar ve yüzdeler Tablo 5' de verilmiştir.

Tablo 5. Fen Bilgisi Öğretmen Adaylarının Tuzlu Su Çözeltilerinin Ph Değerleri- Tuzun Asidik, Bazik ve Nötr Olma Durumu ile İlgili Tahminlerine Ait Frekanslar ve Yüzdeler

	Tuzun türü	Potasyum iyodür		Sodyum klorür		Amonyum nitrat		Amonyum sülfat		Sodyum asetat		Sodyum karbonat	
		f	%	f	%	f	%	f	%	f	%	f	%
pH<7	KA+ZB=AT	10	23,3	3	7,0	31*	72,1	31*	72,1	2	4,7	5	11,6
pH>7	ZA+KB=BT	2	4,7	1	2,3	10	23,3	7	16,3	38*	88,4	36*	83,7
pH=7	KA+KB=NT	29*	67,4	26*	60,5	1	2,3	3	7,0	2	4,7	1	2,3
	Boş	2	4,7	13	30,2	1	2,3	2	4,7	1	2,3	1	2,3
	Toplam	**43**	100,0	**43**	100,0	**43**	100,0	**43**	100,0	**43**	100,0	**43**	100,0

*:doğru. K: kuvvetli, Z: zayıf, A: asit, B: baz, AT: asidik tuz, BT: bazik tuz, NT: nötr tuz

Deneysel etkinlikten sonra fen bilgisi öğretmen adaylarının yarısından fazlası potasyum iyodür ve sodyum klorürün nötr tuz, amonyum nitrat ve amonyum sülfatın asidik tuz ve sodyum asetat ve sodyum karbonatın bazik tuz olduğunu doğru olarak ifade etmiştir. Bazı öğrenciler ise altı tuz için tuzların türü ile tuzu oluşturan asit ve bazın kuvvetli ve zayıf olmasını yanlış belirtmiştir.

Fen bilgisi öğretmen adaylarının tuzu oluşturan asit ve bazın kuvvetli/zayıf olma durumuna bağlı olarak tuzun türü ile ilgili olarak verdikleri cevaplara ait frekans ve yüzde değerleri tablo 6'da verilmiştir.

Tablo 6. Fen Bilgisi Öğretmen Adaylarının Tuzun Türü ile İlgili Olarak Verdikleri Cevaplara Ait Frekans ve Yüzde Değerleri

	İfade doğrudur.		İfade yanlıştır.		Boş	
	f	%	f	%	f	%
Kuvvetli asit ve kuvvetli bazın tepkimesi sonucunda oluşan tuz nötr tuzdur.	43	100	-	-	-	-
Kuvvetli asit ve zayıf bazın tepkimesi sonucunda oluşan tuz bazik tuzdur.	-	-	43	100	-	-
Zayıf asit ve kuvvetli bazın tepkimesi sonucunda oluşan tuz asidik tuzdur.	-	-	43	100	-	-
Zayıf asit ve zayıf bazın tepkimesi sonucunda oluşan tuz nötr, bazik veya asidik tuzdur.	39	90,7	3	7,0	1	2,3

Tabloda da görüldüğü üzere öğretmen adaylarının tamamı "Kuvvetli asit ve kuvvetli bazın tepkimesi sonucunda oluşan tuz nötr tuzdur." ifadesinin doğru bir ifade olduğunu belirtmiştir. Öğretmen adaylarının tamamı "Kuvvetli asit ve zayıf bazın tepkimesi sonucunda oluşan tuz bazik tuzdur." ifadesinin yanlış bir ifade olduğunu, doğru ifadenin "Kuvvetli asit ve zayıf bazın tepkimesi sonucunda oluşan tuz asidik tuzdur." olduğunu belirtmiştir. Öğretmen adaylarının tamamı "Zayıf asit ve kuvvetli bazın tepkimesi sonucunda oluşan tuz asidik tuzdur." ifadesinin yanlış bir ifade olduğunu, doğru ifadenin "Zayıf asit ve kuvvetli bazın tepkimesi sonucunda oluşan tuz bazik tuzdur." olduğunu belirtmiştir. Öğretmen adaylarının %90,7'si "Zayıf asit ve zayıf bazın tepkimesi sonucunda oluşan tuz nötr, bazik veya asidik tuzdur." ifadesinin doğru olduğunu belirtirken 3 öğretmen adayının ise zayıf asit ve zayıf bazın tepkimesi sonucunda oluşan tuzun nötr olduğunu belirttiği saptanmıştır.

TARTIŞMA, SONUÇ VE ÖNERİLER

Araştırma sonucunda fen bilgisi öğretmen adaylarının yarısından fazlasının tuzların formüllerini yazabildikleri, tuzu oluşturan asit ve bazı kuvvetli/zayıf olarak belirtebildikleri, tuzun asidik/bazik/nötr olma durumunu doğru olarak tahmin edebildikleri, tahminleriyle gözlemlerinin uyumlu olduğu saptanmıştır. Az sayıda öğretmen adayının ise kavram yanılgılarına sahip olduğu saptanmıştır. Alanyazında da ifade edildiği üzere TGA yönteminin bireyin sahip olduğu kavram yanılgılarının saptanmasında (Harman, 2014, 2015; Liew ve Treagust, 1995; Tao ve Gunstone,1999; Kearney ve Treagust, 2001; Karaer, 2007; Bilen ve Aydoğdu, 2010; Bilen ve Köse, 2012a; Mısır ve Saka, 2012a; Özdemir, Köse ve Bilen, 2012; Öner Sünkür, İlhan ve Sünkür, 2013) ve giderilmesinde (Bilen ve Köse, 2012a; Harman, 2014, 2015; Mısır ve Saka, 2012a; Özdemir, Köse ve Bilen, 2012; Öner Sünkür, İlhan ve Sünkür, 2013; Yavuz ve Çelik, 2013) etkili olduğu ortaya konulmuştur.

Yapılan görüşmede bazı öğretmen adayları ezbere bildikleri bilgilerin gerçekten doğru olduğunu TGA yöntemine uygun olarak gerçekleştirilen deneysel etkinlikle ispatladıklarını ve bazıları ise kavram yanılgılarını öğrenme sürecinde aktif çalışarak fark ettiklerini ifade etmişlerdir. Alanyazında da TGA yönteminin bireyin sahip olduğu kavram yanılgılarını yaparak yaşayarak fark etmesi (Bilen ve Köse, 2012b; Harman, 2014, 2015) ve etkinliklere aktif katılım üzerinde etkili olduğu saptanmıştır (Mısır ve Saka, 2012a, 2012b). Ayrıca öğretmen adaylarının önemli bir bölümü TGA'nın görsel hafızayı olumlu etkileyerek öğrenmede kalıcılığı sağlama bağlamında önemli olacağını belirtmiştir. Benzer şekilde alanyazında da TGA yönteminin kavramların yapılandırılmasını, anlamlı ve kalıcı öğrenmeyi sağladığı saptanmıştır (Bilen ve Aydoğdu, 2010; Özdemir, Köse ve Bilen, 2012; Yavuz ve Çelik, 2013). Bazı öğretmen adayları tarafından TGA ile yürütülen etkinliğin tahminde bulunma, gözlem yapma, deney yapma, verileri kaydetme, sınıflama, sonuç çıkarma olmak üzere çeşitli bilimsel süreç becerileri ile iç içe olduğu vurgulanmıştır. Alanyazında da TGA yönteminin bilimsel süreç becerileri (Özyılmaz, 2008; Bilen ve Aydoğdu, 2012; Karatekin ve Öztürk, 2012) üzerinde etkili olduğu ortaya konulmuştur.

Laboratuvarlarda gruplar halinde gerçekleştirilen deneysel etkinliklerde bazı sıkıntılar yaşanabilir. Örneğin; bazı gruplarda yer alan üyelerin hepsinin aktif bir şekilde deneysel etkinliği yapmadığı görülür. Bu öğrenciler grupta çalışarak deney yapan arkadaşlarından daha sonra verileri alacaklarını, hatta aktif olarak deneyi yapan arkadaşlarının raporlarına bakarak kendi deney raporlarını yazabileceklerini düşünerek deney yapmadan boş boş otururlar ya da yapılan deneysel etkinlikleri olumsuz etkileyecek türden hareketler sergilerler. Bu tür olumsuz durumların önüne geçebilmek amacı ile deneysel etkinlik TGA yöntemine uygun olacak şekilde yürütülmüştür. Araştırma süresince deneysel etkinliği gerçekleştiren öğrenciler gözlemlenmiş, yapılan gözlemlerde tüm öğrencilerin tahmin, gözlem, açıklama ve tartışma olmak üzere bütün aşamalarda aktif olarak yer aldıkları görülmüştür. Öyle ki, öğrenciler deneysel etkinliğin tahmin, gözlem, açıklama aşamalarında bireysel, gözlem ve tartışma aşamalarında ise grup içerisinde diğer üyelerle işbirliği halinde çalışmıştır.

Araştırma sonucunda TGA yönteminin kavram yanılgılarının saptanması ve giderilmesi, bireyin sahip olduğu kavram yanılgısını bizzat fark etmesi, öğretim ve aktif katılım üzerinde olumlu etkileri olduğu saptanmıştır. Ayrıca öğretmen adaylarının TGA yönteminin bilgilerin ispatlanmasında, kalıcılığın sağlanmasında etkili olduğu ve bilimsel süreç becerilerini kapsadığına ilişkin görüş belirttikleri ortaya konulmuştur. TGA yönteminin öğrenmenin bilişsel, devinişsel ve duyuşsal boyutları üzerinde oluşturduğu olumlu etkiler nedeni ile deneysel etkinliklerde kullanılması önerilmektedir.

DETERMINATION OF THE SCIENCE TEACHER CANDIDATES' UNDERSTANDING LEVEL OF SCIENCE PROCESS SKILLS: EXAMPLE OF THE STRENGTH OF THE ELECTROMAGNET

Gonca HARMAN
Ondokuz Mayıs Üniversitesi, Eğitim Fakültesi, İlköğretim Fen Bilgisi Eğitimi ABD.

Aytekin ÇÖKELEZ
İstanbul Teknik Üniversitesi, Fen Edebiyat Fakültesi

ABSTRACT: It is extremely important and necessary to gain the skills as identifying variables, establishing hypothesis, changing and controlling variables. Because, individuals solve problems in daily life by using the science process skills and testing their hypothesis. Therefore, this study aims to determine last year science teacher candidates' understanding level of science process skills. For this purpose, teacher candidates have been asked to solve problem about "What are factor/factors that effect the strength of the electromagnet?" by determining variables, establishing hypotheses, changing and controlling variables. The study group consisted of a total of 90 last year science teacher candidates attending the Department of Science Teaching of a Faculty of Education. General screening model has been used in this study. The data obtained from this study have been analysed using descriptive analysis. More than half of the science teacher candidates expressed that when the number of coil is kept fixed, but the number of battery is increased, the strength of the electromagnet is increased. When the number of battery is kept fixed, but the number of coil is increased, the strength of the electromagnet is increased. The results of this study showed that some of the teacher candidates have been used interchangeably independent, controlled and dependent variable types. According to the results, some of the science teacher candidates expressed that temperature, the distance between material and electromagnets, the type, length and thickness of the nails, the type and mass of the matter effect on the strength of the electromagnet.

Keywords: science process skills, science teacher candidate.

FEN BİLGİSİ ÖĞRETMEN ADAYLARININ BİLİMSEL SÜREÇ BECERİLERİNİ ANLAMA DÜZEYLERİNİN BELİRLENMESİ: ELEKTROMIKNATISIN ÇEKİM GÜCÜ ÖRNEĞİ

ÖZET: Bireylerin günlük yaşamlarında karşılaştıkları bir problemi çözerken bilimsel süreç becerilerinden yararlanarak problemleri kuracakları hipotezleri test ederek çözebilecekleri düşünüldüğünde, hipotez test etmede değişkenleri belirleme, hipotez kurma, değişkenleri değiştirme ve kontrol etme becerilerinin kazanılması son derece önemli ve gereklidir. Bu gereklilikten hareketle, araştırmada son sınıf fen bilgisi öğretmen adaylarının bilimsel süreç becerilerini anlama düzeylerinin belirlenmesi amaçlanmıştır. Bu amaçla öğretmen adaylarından "Elektromıknatısın çekim gücü ne/nelere bağlıdır?" problem durumuna çözüm bulacak şekilde değişkenleri belirlemeleri, hipotezler kurmaları, değişkenleri değiştirmeleri ve kontrol etmeleri istenmiştir. Araştırmaya Eğitim Fakültesi Fen Bilgisi Eğitimi Anabilim Dalında son sınıfta öğrenim görmekte olan 90 fen bilgisi öğretmen adayı katılmıştır. Araştırma genel tarama modeli ile yürütülmüştür. Elde edilen veriler betimsel analiz yöntemi kullanılarak çözümlenmiştir. Araştırma sonucunda son sınıf fen bilgisi öğretmen adaylarının yarısından fazlasının sarım sayısı sabitken pil sayısı arttırıldığında veya pil sayısı sabitken sarım sayısı arttırıldığında elektromıknatısın çekim gücünün artacağını ifade ettikleri saptanmıştır. Bazı öğretmen adaylarının bağımsız, kontrol edilen ve bağımlı değişken türlerini birbirlerinin yerine kullandıkları görülmüştür. Bazı öğretmen adaylarının ise sıcaklık, elektromıknatıs ile çekilen madde arasındaki uzaklık, çivinin cinsi, çivinin uzunluğu ve çivinin kalınlığını, çekilen maddenin cinsi ve kütlesini elektromıknatısın çekim gücü üzerinde etkili olan bir değişken olarak ifade ettikleri belirlenmiştir.

Anahtar sözcükler: bilimsel süreç becerileri, fen bilgisi öğretmen adayı.

GİRİŞ

Gözlem yapma, ölçme, sınıflama, verileri kaydetme, hipotez kurma, verileri kullanma ve model oluşturma, değişkenleri değiştirme ve kontrol etme, deney yapma gibi bilimsel süreç becerileri (MEB, 2013) bilim insanlarının bilgi üretirken kullandıkları yöntemlerin fen öğretimine yansımasıdır. Son derece önemli olan bu beceriler bilimsel okuryazar toplumlarda çeşitli meslek gruplarındaki bireylerin sahip olması ve kullanması gereken, hayatın hemen her alanına uygulanabilen süreçleri içermektedir. Bilimsel süreç becerilerinden biri olan değişkenleri belirleme hem fen derslerinde hem de günlük hayatın hemen her alanında kullanılmaktadır. Bilimsel süreç becerilerini kullanmak günlük hayatta karşılaşılan olayları anlamayı, yorumlamayı ve öğrenilen bilgilerle ilişkilendirmeyi, yani bilimsel okur-yazar birey olmayı sağlamaktadır. Öğrencilerin laboratuvar çalışmalarında, derslerde ve günlük yaşamlarında olaylara bilim insanı gibi bakan, araştıran, sorgulayan, yaratıcı düşünceler üreten bireyler olmaları açısından bu becerilerin geliştirilmesi son derece önemli ve gereklidir. Bu nedenle bilimsel süreç becerilerinin bireylere kazandırılması için okul öncesinden başlanarak ilköğretim, ortaöğretim ve lise fen (fizik, kimya, biyoloji) derslerinde öğretimine yer verilmelidir. Bunun yanında fen derslerinde kullanılan ölçme değerlendirme etkinliklerinde de bu beceriler ölçülmelidir (Temiz ve Tan, 2009). Ders kitaplarındaki etkinlikler gerçekleştirilirken bilimsel süreç becerileri bir bütün olarak göz önünde tutulmalı ve bu beceriler vurgulanmalıdır (Durmaz ve Mutlu, 2012).

Bilimsel süreç becerileri gözlem yapma, ölçme, sınıflama, verileri kaydetme, sayı ve uzay ilişkisi kurma olarak temel beceriler; önceden kestirme, değişkenleri belirleme, sonuç çıkarma olarak nedensel beceriler ve hipotez kurma, model oluşturma, deney yapma, değişkenleri değiştirme ve kontrol etme, karar verme olarak deneysel beceriler olarak üç grupta incelenebilir. Bu beceriler öğrenmede kolaylık ve kalıcılık sağlayan, araştırma yeteneği kazandıran, öğrencilerin aktif katılımını destekleyen, sorumluluk almayı sağlayan becerilerdir (Akdeniz, 2011).

"Doğanın keşfedilmesi ve insan-çevre arasındaki ilişkinin anlaşılması sürecinde, bilimsel süreç becerilerini ve bilimsel araştırma yaklaşımını benimseyip karşılaşılan sorunlara çözüm üretmek" (MEB, 2013) ve "Günlük yaşam sorunlarına ilişkin sorumluluk alınmasını ve bu sorunları çözmede fen bilimlerine ilişkin bilgi, bilimsel süreç becerileri ve diğer yaşam becerilerinin kullanılmasını sağlamak" (MEB, 2013) tüm bireylerin fen okuryazarı olarak yetişmesini amaçlayan fen bilimleri dersi öğretim programının temel amaçları arasındadır. Fen okuryazarı bir bireyin fen bilimleri ile ilgili temel bilgilere (Biyoloji, Fizik, Kimya, Yer, Gök ve Çevre Bilimleri, Sağlık ve Doğal Afetler) ve doğal çevrenin keşfedilmesine ilişkin bilimsel süreç becerilerine sahip olması beklenir (MEB, 2013). Bununla birlikte alanyazın incelendiğinde öğrencilerin bilimsel süreç becerilerinden biri olan değişkenleri belirleme becerisi ile ilgili olarak (Laçin-Şimşek, 2010) bağımlı, bağımsız ve kontrol edilen değişken türlerini belirlemede güçlük yaşadıkları görülmektedir (Ateş, 2005; Ateş ve Bahar, 2002; Ayas-Kör, 2006; Aydoğdu, 2012; Bağcı-Kılıç, Yardımcı ve Metin, 2009; Durmaz ve Mutlu, 2012; Griffiths ve Thompson, 1993; Saka, 2012; Temiz ve Tan, 2009).

Bireylerin günlük yaşamlarında karşılaştıkları bir problemi çözerken bilimsel süreç becerilerinden yararlanarak problemleri kuracakları hipotezleri test ederek çözebilecekleri düşünüldüğünde, hipotez test etmede hipotez kurma, değişkenleri belirleme, değiştirme ve kontrol edebilme becerilerinin kazanılması son derece önemlidir. Bu nedenle bireylerin kendilerine verilen bir durumla ilgili bağımlı, bağımsız ve kontrol edilen değişkenleri belirleyebilmeleri ve bir sonraki adımda da sonuca ulaşabilmeleri için değişkenleri değiştirmeleri ve kontrol edebilmeleri gereklidir. Bu gereklilik ışığında araştırmada son sınıf fen bilgisi öğretmen adaylarının bilimsel süreç becerilerinden değişkenleri belirleme, hipotez kurma, değişkenleri değiştirme ve kontrol etme becerilerini anlama düzeylerinin belirlenmesi amaçlanmıştır.

YÖNTEM

Araştırmada, örneklemin mevcut durumunu ayrıntılı olarak betimlemek amacıyla (Karakaya, 2009) betimsel araştırma yöntemlerinden genel tarama modeli kullanılmıştır. Araştırmada mevcut durum üzerinde herhangi bir müdahalede bulunulmadan öğretmen adaylarının değişkenleri belirleme, hipotez kurma, değişkenleri değiştirme ve kontrol etme becerilerini anlama düzeyleri ayrıntılı bir şekilde tanımlanmış, açıklanmış ve değerlendirilmiştir.

Örneklem

Araştırmaya Eğitim Fakültesi Fen Bilgisi Eğitimi Anabilim Dalında dördüncü sınıfta öğrenim görmekte olan 90 fen bilgisi öğretmen adayı katılmıştır. Araştırmada genel kimya, fizik ve biyoloji laboratuvarı I-II ve fen bilgisi laboratuvar uygulamaları I-II dersleri ile bilimsel araştırma yöntemleri derslerini almış olmaları nedeni ile son sınıf fen bilgisi öğretmen adayları tercih edilmiştir. Bu nedenle araştırmada amaçlı örnekleme yapılmıştır.

Veri toplama aracı

Son sınıf öğretmen adaylarından "Elektromıknatısın çekim gücü ne/nelere bağlıdır?" problem durumuna çözüm bulacak şekilde değişkenleri belirlemeleri, hipotezler kurmaları, değişkenleri değiştirmeleri ve kontrol etmeleri istenmiştir.

Verilerin analizi

Araştırmadan elde edilen veriler betimsel analiz yöntemi ile çözümlenmiştir.

Anlama düzeylerinin belirlenmesinde Abraham, Grzybowski, Renner ve Marek (1992) tarafından belirlenen kriterler kullanılmıştır.

Anlama Düzeyleri	Kriterler
Tam anlama (TA)	Geçerli cevabın tamamını içeren cevaplar
Kısmi anlama (KA)	Geçerli cevabın tamamını içermeyen bir kısmını içeren cevaplar
Kavram yanılgısıyla kısmi anlama (KYKA)	Kısmen anlama ile birlikte kavram yanılgısı içeren cevaplar
Kavram yanılgısı (KY)	Bilimsel anlamda yanlış olan cevaplar
Anlamama (A)	Cevap vermeme, bilmiyorum, anlamadım vb. cevaplar
	Soruyu tekrarlama
	İlgili ya da net olmayan cevaplar

BULGULAR VE YORUM

Fen bilgisi öğretmen adaylarının "Elektromıknatısın çekim gücü ne/nelere bağlıdır?" problem durumu için kurdukları hipotez cümleleri tablo 1'de anlama düzeyleri frekans ve yüzde değerleri ile birlikte verilmiştir.

Tablo 1. Fen Bilgisi Öğretmen Adaylarının Kurdukları Hipotez Cümlelerine İlişkin Frekans ve Yüzde Değerleri

Tam anlama (TA), Kısmi anlama (KA), Kavram yanılgısıyla kısmi anlama (KYKA), Kavram yanılgısı (KY), Anlamama (A)

Tablo incelendiğinde öğretman adaylarının % 63,3'ünün tam anlama düzeyinde cevap verdiği görülmektedir. Bunun yanında öğretmen adaylarının % 15,6'sının kısmi anlama, % 8,9'unun kavram yanılgılı kısmi anlama, % 7,8'inin kavram yanılgısı ve % 4,4'ünün de anlamama düzeyinde olduğu anlaşılmaktadır. Tam anlama düzeyinde cevap veren öğretmen adayları sarım sayısı sabitken pil sayısındaki, pil sayısı sabitken sarım sayısındaki değişimin elektromıknatısın çekim gücü üzerinde doğru orantılı bir etki oluşturduğunu ifade etmişlerdir. Kısmi anlama düzeyinde cevap veren öğretmen adaylarının bazıları sadece pil sayısı, bazıları da sadece sarım sayısının elektromıknatısın çekim gücü üzerinde doğru orantılı bir etki oluşturduğunu ifade etmişlerdir. Kavram yanılgılı kısmi anlama düzeyinde cevap veren öğretmen adaylarının bazıları sarım sayısı sabitken pil sayısındaki artış ile birlikte çekilecek cisim ile mıknatıs arasındaki uzaklık, çekilen maddenin cinsi, çivinin cinsi ve sıcaklığın elektromıknatısın çekim gücü üzerinde etkili olduğunu ifade etmişlerdir. Kavram yanılgılı kısmi anlama düzeyinde cevap veren öğretmen adaylarından bazıları ise pil sayısı sabitken sarım sayısındaki artış ile birlikte çivinin kalınlığı ve çekilen maddenin cinsinin elektromıknatısın çekim gücü üzerinde etkili olduğunu ifade etmişlerdir. Kavram yanılgısı düzeyinde cevap veren öğretmen adayları çekilecek cisim ile mıknatıs arasındaki uzaklık, sıcaklık, çivinin kalınlığı, çekilen maddenin cinsi ve çekilen maddenin kütlesinin elektromıknatısın çekim gücü üzerinde etkili olduğunu ifade etmişlerdir.

Tablo 1'de verilen hipotez cümleleri değişken türlerinin analizi için tablo 2'de bağımsız düşünülerek ayrı ayrı verilmiştir.

Tablo 2. Fen Bilgisi Öğretmen Adaylarının Kurdukları Hipotez Cümlelerine İlişkin Frekans ve Yüzde Değerleri

Hipotez cümlesi	**f**	**%**
Sarım sayısı sabitken pil sayısı artarsa elektromıknatısın çekim gücü artar.	71	78,9
Pil sayısı sabitken sarım sayısı artarsa elektromıknatısın çekim gücü artar.	65	72,2
Çekilen maddenin cinsi değişirse elektromıknatısın çekim gücü değişir.	8	8,9
Çekilen maddenin kütlesi artarsa elektromıknatısın çekim gücü azalır.	1	1,1
Çekilecek cisim ile mıknatıs arasındaki uzaklık artarsa elektromıknatısın çekim gücü azalır.	5	5,6
Sıcaklık artarsa elektromıknatısın çekim gücü azalır.	2	2,2
Sıcaklık artarsa elektromıknatısın çekim gücü artar.	1	1,1

Tam anlama (TA), Kısmi anlama (KA), Kavram yanılgısıyla kısmi anlama (KYKA), Kavram yanılgısı (KY), Anlamama (A)

Tablo incelendiğinde öğretmen adaylarının yaklaşık yarısının bağımsız ve bağımlı değişkeni, 1/3'ününün ise kontrol edilen değişkeni doğru ifade ettiği görülmektedir. Bazı öğretmen adaylarının bağımsız, kontrol edilen ve bağımlı değişken türlerini birbirinin yerine kullandıkları, bazı öğretmen adaylarının ise elektromıknatısın çekim gücü üzerinde etkili olmamasına karşın sıcaklık, elektromıknatıs ile çekilen madde arasındaki uzaklık, çivinin cinsi ve çivinin uzunluğunu değişken olarak ifade ettikleri görülmektedir.

"Çekilen maddenin cinsi değişirse elektromıknatısın çekim gücü değişir." hipotez cümlesine ilişkin öğretmen adaylarının ifade ettikleri değişken türlerine ait frekans ve yüzdeler Tablo 5'te verilmiştir.

Tablo 5. Öğretmen Adaylarının Kurdukları Hipotez ile İfade Ettikleri Değişken Türlerine Ait Frekans ve Yüzde Değerleri

	Anlama Düzeyi		f	%
Hipotez	KY	Çekilen maddenin cinsi değişirse elektromıknatısın çekim gücü değişir.	8	8,9
Bağımsız değişken	KY	Çekilen maddenin cinsi	7	7,8
		Pil sayısı, Çivinin cinsi	1	1,1
Kontrol edilen değişken	KY	Pilin gücü	2	2,2
		Pilin gücü, Sarım sayısı	2	2,2
		Çekilen maddenin cinsi	2	2,2
		Çekilen maddenin büyüklüğü Elektromıknatıs ile çekilen madde arasındaki uzaklık	1	1,1
		Sıcaklık	1	1,1
Bağımlı değişken	KY	Çekim gücü	8	8,9

Kavram yanılgısı (KY)

Tablo incelendiğinde öğretmen adaylarının % 8,9'unun çekilen maddenin cinsini elektromıknatısın çekim gücü üzerinde etkili olan bir değişken olarak kabul ettikleri görülmektedir. Öğretmen adaylarının ifade ettikleri "*En çok demiri çekti. Alüminyum gibi cisimleri çekmez.*", "*Demir, nikel gibi manyetik özellik gösteren maddeler mıknatıs tarafından daha çok çekilir.*", "*Mıknatıs en çok toplu iğneyi çekti. Bakırı çekmedi.*", "*Demir, bakır, gümüş ve altın maddeleri elektromıknatısla tek tek çekmeye çalışırsak bazılarını çekemediğini bazılarını çektiğini görürüz.*" gerekçelerinden elektromıknatısın çekim gücü ile maddelerin manyetik olma/olmama durumu arasında kavram yanılgısı içeren bir ilişki kurdukları anlaşılmaktadır. Öğretmen adayları çekilen cismin demir, nikel, toplu iğne olma durumunda elektromıknatısın çekim gücünün artacağına, alüminyum olması durumunda ise elektromıknatısın çekim gücünün azalacağına inanmaktadır.

"Çekilen maddenin kütlesi artarsa elektromıknatısın çekim gücü azalır." hipotez cümlesine ilişkin öğretmen adaylarının ifade ettikleri değişken türlerine ait frekans ve yüzdeler Tablo 6'da verilmiştir.

Tablo 6: Öğretmen Adaylarının Kurdukları Hipotez ile İfade Ettikleri Değişken Türlerine Ait Frekans ve Yüzde Değerleri

	Anlama Düzeyi		f	%
Hipotez	KY	Çekilen maddenin kütlesi artarsa elektromıknatısın çekim gücü azalır.	1	1,1
Bağımsız değişken	KY	Çekilen maddenin kütlesi	1	1,1
Kontrol edilen değişken	KY	Çekilen maddenin cinsi	1	1,1
Bağımlı değişken	KY	Çekim gücü	1	1,1

Kavram yanılgısı (KY)

Tablo incelendiğinde 1 öğretmen adayının çekilen maddenin kütlesini elektromıknatısın çekim gücü üzerinde etkili olan bir değişken olarak kabul ettiği görülmektedir. Öğretmen adayının ifade ettiği "*Çekilecek maddenin kütlesi artarsa elektromıknatısın çekim gücü azalır. Aynı elektromıknatısa farklı kütlelerde aynı cins madde çekmek istersek örneğin 2g Fe, 4g Fe ve 8g Fe gibi.*" gerekçesinden çekilecek maddenin kütlesindeki artışla elektromıknatısın daha az sayıda cismi yerinden kaldıracağına inandığı anlaşılmaktadır. Bu durum öğretmen adayının 2g Fe çeken elektromıknatısın çekim gücünün, 4g Fe çeken elektromıknatısın çekim gücünden daha fazla olacağını düşündüğünü ortaya koymaktadır.

"Sıcaklık artarsa elektromıknatısın çekim gücü artar." hipotez cümlesine ilişkin öğretmen adaylarının ifade ettikleri değişken türlerine ait frekans ve yüzdeler Tablo 7'de verilmiştir.

Tablo 7. Öğretmen Adaylarının Kurdukları Hipotez ile İfade Ettikleri Değişken Türlerine Ait Frekans ve Yüzde Değerleri

	Anlama Düzeyi		f	%
Hipotez	KY	Sıcaklık artarsa elektromıknatısın çekim gücü artar.	1	1,1
Bağımsız değişken	KY	Çekim gücü	1	1,1
Kontrol edilen değişken	KY	Sarım sayısı	1	1,1
Bağımlı değişken	KY	Sıcaklık	1	1,1

Kavram yanılgısı (KY)

Tablo incelendiğinde 1 öğretmen adayının sıcaklığı elektromıknatısın çekim gücü üzerinde doğru orantılı etki oluşturan bir değişken olarak kabul ettiği görülmektedir. Öğretmen adayının ifade ettiği "*Sıcaklık artınca manyetik alan artar*." gerekçesinden sıcaklığın artışı ile artacak manyetik alan neticesinde elektromıknatısın çekim gücünün artacağına inandığı anlaşılmaktadır.

"Sıcaklık artarsa elektromıknatısın çekim gücü azalır." hipotez cümlesine ilişkin öğretmen adaylarının ifade ettikleri değişken türlerine ait frekans ve yüzdeler Tablo 8'de verilmiştir.

Tablo 8. Öğretmen Adaylarının Kurdukları Hipotez ile İfade Ettikleri Değişken Türlerine Ait Frekans ve Yüzde Değerleri

	Anlama Düzeyi		f	%
Hipotez	KY	Sıcaklık artarsa elektromıknatısın çekim gücü azalır.	2	2,2

		Çekilen cismin cinsi	1	1,1
Bağımlı değişken	KY	Sıcaklık	1	1,1
	KY	Çekim gücü	1	1,1

Kavram yanılgısı (KY)

Tablo incelendiğinde 2 öğretmen adayının sıcaklığı elektromıknatısın çekim gücü üzerinde ters orantılı etki oluşturan bir değişken olarak kabul ettikleri görülmektedir.

"Çekilecek cisim ile mıknatıs arasındaki uzaklık artarsa elektromıknatısın çekim gücü azalır." hipotez cümlesine ilişkin öğretmen adaylarının ifade ettikleri değişken türlerine ait frekans ve yüzdeler Tablo 9'da verilmiştir.

Tablo 9. Öğretmen Adaylarının Kurdukları Hipotez ile İfade Ettikleri Değişken Türlerine Ait Frekans ve Yüzde Değerleri

	Anlama Düzeyi		f	%
Hipotez	KY	Çekilecek cisim ile mıknatıs arasındaki uzaklık artarsa elektromıknatısın çekim gücü azalır.	5	5,6
Bağımsız değişken	KY	Elektromıknatıs ile çekilen madde arasındaki uzaklık	4	4,4
		Çekim gücü	1	1,1
Kontrol edilen değişken	KY	Çekilen cisim	4	4,4
		Pil sayısı, Sarım sayısı	1	1,1
Bağımlı değişken	KY	Çekim gücü	4	4,4
		Elektromıknatıs ile çekilen madde arasındaki uzaklık	1	1,1

Kavram yanılgısı (KY)

Tablo incelendiğinde 5 öğretmen adayının çekilecek cisim ile mıknatıs arasındaki uzaklığı elektromıknatısın çekim gücü üzerinde ters orantılı etki oluşturan bir değişken olarak kabul ettikleri görülmektedir. Bu bulgu öğretmen adaylarının mıknatısın çekilen cisme yakınlığının çekim gücü üzerinde etkili olduğunu düşündüklerini ortaya koymaktadır.

"Çivinin cinsi değişirse elektromıknatısın çekim gücü değişir." hipotez cümlesine ilişkin öğretmen adaylarının ifade ettikleri değişken türlerine ait frekans ve yüzdeler Tablo 10'da verilmiştir.

Tablo 10. Öğretmen Adaylarının Kurdukları Hipotez ile İfade Ettikleri Değişken Türlerine Ait Frekans ve Yüzde Değerleri

	Anlama Düzeyi		**f**	**%**
Hipotez	KY	Çivinin cinsi değişirse elektromıknatısın çekim gücü değişir.	1	1,1
Bağımsız değişken	KY	Çivinin cinsi	1	1,1
Kontrol edilen değişken	KY	Pil sayısı, sarım sayısı	1	1,1
Bağımlı değişken	KY	Çekim gücü	1	1,1

Kavram yanılgısı (KY)

Tablo incelendiğinde 1 öğretmen adayının çivinin cinsini elektromıknatısın çekim gücü üzerinde etkili olan bir değişken olarak kabul ettiği görülmektedir. Öğretmen adayının ifade ettiği "*Demir çivinin çekim gücü çoktur.*" gerekçesinden demirin mıknatıs tarafından çekilebilme özelliği nedeni ile elektromıknatıs yapımında kullanılması halinde çekim gücünün artacağına inandığı düşünülmektedir.

"Çivinin kalınlığı artarsa elektromıknatısın çekim gücü artar." hipotez cümlesine ilişkin öğretmen adaylarının ifade ettikleri değişken türlerine ait frekans ve yüzdeler Tablo 11'de verilmiştir.

Tablo 11. Öğretmen Adaylarının Kurdukları Hipotez ile İfade Ettikleri Değişken Türlerine Ait Frekans ve Yüzde Değerleri

	Anlama Düzeyi		**f**	**%**
Hipotez	KY	Çivinin kalınlığı artarsa elektromıknatısın çekim gücü artar.	1	1,1
Bağımsız değişken	KY	Çivinin kalınlığı	1	1,1
Kontrol edilen değişken	KY	Pil sayısı	1	1,1
Bağımlı değişken	KY	Çekim gücü	1	1,1

Kavram yanılgısı (KY)

Tablo incelendiğinde 1 öğretmen adayının çivinin kalınlığını elektromıknatısın çekim gücü üzerinde doğru orantılı etki oluşturan bir değişken olarak kabul ettiği görülmektedir. Öğretmen adayının ifade ettiği "*Mıknatısın kütlesi ve hacmi artarsa çekim gücü artar. Mıknatısın hacim ve kütle artışı yüzey alanını genişleteceğinden daha güçlü çekecektir.*" gerekçesinden çivinin kapladığı yüzey alanı ile manyetik alan arasında kavram yanılgısı içeren bir ilişki kurduğu anlaşılmaktadır.

TARTIŞMA, SONUÇ VE ÖNERİLER

Araştırma sonucunda son sınıf fen bilgisi öğretmen adaylarının yarısından fazlasının sarım sayısı sabitken pil sayısı arttırıldığında veya pil sayısı sabitken sarım sayısı arttırıldığında elektromıknatısın çekim gücünün artacağını ifade ettikleri; değişkenleri belirleme, hipotez kurma, değişkenleri değiştirme ve kontrol etme bilimsel süreç becerilerini anlama düzeylerinin tam anlama düzeyinde olduğu saptanmıştır. Bazı öğretmen adaylarının ise elektromıknatısın çekim gücü üzerinde etkili olmamasına karşın sıcaklık, elektromıknatıs ile çekilen madde arasındaki uzaklık, çivinin cinsi, çivinin uzunluğu ve çivinin kalınlığını, çekilen maddenin cinsi ve kütlesini değişken olarak ifade ettikleri belirlenmiştir.

Bu araştırmada bazı öğretmen adaylarının bağımsız, kontrol edilen ve bağımlı değişken türlerini birbirlerinin yerine kullandıkları saptanmıştır. Benzer şekilde alanyazında da değişkenleri belirleme becerisi ile ilgili olarak (Laçin-Şimşek, 2010) bağımlı, bağımsız ve kontrol edilen değişken türlerini belirlemede problem yaşandığı belirlenmiş (Ateş ve Bahar, 2002; Aydoğdu, 2012) ve bağımlı, bağımsız, kontrol edilen değişken türlerinin birbirinin yerine kullanıldığı saptanmıştır (Ayas-Kör, 2006; Durmaz ve Mutlu, 2012; Saka, 2012).

Bu araştırmada değişken türlerini birbirine karıştıran öğretmen adaylarının çoğunlukla bağımsız yerine bağımlı değişken, kontrol edilen yerine bağımsız değişken, bağımlı değişken yerine de bağımsız değişken yazdıkları saptanmıştır. Alanyazında yer alan çalışmalarda ise kontrol edilen değişken yerine çoğunlukla bağımlı değişken; bağımlı değişen yerine de bağımsız değişken yazıldığı; buna karşın bağımsız değişken yerine bağımlı değişken yazan katılımcı sayısının daha az olduğu saptanmıştır (Bağcı-Kılıç, Yardımcı ve Metin, 2009). Bağımlı ve bağımsız değişkenin birbiri ile karıştırıldığı, bağımlı ve bağımsız değişkenlerin kontrol edilen değişkenler olarak ifade edildiği ortaya konulmuştur (Ateş, 2005; Griffiths ve Thompson, 1993; Temiz ve Tan, 2009). Alanyazında bağımsız, bağımlı ve kontrol edilen değişken kavramları öğrenmeyi güçleştirdiği için bağımsız değişken yerine değiştirilen değişken, bağımlı değişken yerine cevap veren, ölçülen ya da gözlenen değişken ve kontrol edilen değişken yerine sabit tutulan değişken, sabitler, kontrol altına alınan ya da etkisi kontrol edilen değişken sözcüklerinin kullanılması gerektiği önerilmektedir (Ateş, 2005; Bağcı-Kılıç, Yardımcı ve Metin, 2009).

Bağımsız, bağımlı ve kontrol edilen değişken kavramlarını öğrenmek, akılda tutmak ve birbirleri ile karıştırmadan doğru bir şekilde ifade edebilmek güç olduğu için bağımsız değişken ile birlikte değiştirilen değişken, bağımlı değişken ile birlikte cevap veren, ölçülen ya da gözlenen değişken ve kontrol edilen değişken ile birlikte sabit tutulan değişken, sabitler, kontrol altına alınan ya da etkisi kontrol edilen değişken sözcükleri de kullanılmalıdır. Değişkenleri belirlemenin öğretiminde daha ilgi çekici ve eğlenceli etkinliklerle ders işlenmeli ve dikkat çekici materyaller kullanılarak somut uygulamalar yapılmalıdır.

ABSTRACT: The requirements of today's learning conditions have made the necessary changes on the preparation of the learning environment, the role of teachers and students and using technology. Teacher training institutions aim to gain the changes, and in this sense they are especially trying to integrate technology to their programs. Integrating the technology to the teaching activities by teachers began to be seen as professional competence. As a result of the training school to train qualified teachers set targets for the use of technology, Technological Pedagogical Content Knowledge (TPACK) concept was born. TPACK consists of 3 types of knowledge [Technological Knowledge (TK), Pedagogical Knowledge (PK) and Content Knowledge (CK)] and knowledge from their partnership/intersections [Technological Content Knowledge (TCK), Technological Pedagogical Knowledge (TPK), Pedagogical Content Knowledge (PCK)] that should have an educator. TPACK is the extent to support education at all stages of a lesson and to use technology in the educational environment. In this manner, it seems important for teacher candidates to examine their TPACK. This research aimed to determine TPACK of science teacher candidate and to compare their knowledge in terms of some variables. The research was carried out by 87 science teacher candidate (4th grade) at a university in Black Sea Region of Turkey. The survey research model was used in the study. Data were collected by using a TPACK scale. The scale has 47 items and 7 factors (technology knowledge, content knowledge, pedagogical knowledge, pedagogical content knowledge, technological content knowledge, pedagogy technological knowledge, and technological pedagogical content knowledge). Data were analyzed using descriptive statistics in SPSS. In the analysis, it was determined that average TPACK scores of participants were close to each other although they feels themselves most sufficient in PK dimension, and in least TCK dimension. The training of science teacher candidate is considered to be done by increasing the content of the relevant regulations and is recommended for TCK.

Key words: Technological pedagogical content knowledge, teacher training, science teacher candidate

FEN BİLGİSİ ÖĞRETMEN ADAYLARININ TEKNOLOJİK PEDAGOJİK ALAN BİLGİLERİNİN İNCELENMESİ

ÖZET: Günümüz öğrenme koşullarının gerekleri öğrenme ortamlarının hazırlanmasında, öğretmen ve öğrencinin rollerinde ve teknolojiye uyum doğrultusunda değişiklikleri gerekli kılmıştır. Öğretmen yetiştiren kurumlar da değişimleri yakalamayı ve bu anlamda özellikle programlarına teknolojiyi entegre edebilmeyi amaçlamaktadırlar. Bir öğretmenin konuyu teknolojiyle buluşturabilmesi mesleki bir yetkinlik olarak görülmeye başlamıştır. Eğitim fakültelerinin nitelikli öğretmen yetiştirmekte teknoloji kullanımına ilişkin hedefler belirlemesi sonucunda, alan bilgisi, pedagoji ve teknolojinin özel bir bileşimi olan Teknolojik Pedagojik Alan Bilgisi (TPAB) kavramı doğmuştur. TPAB bir eğitimcinin sahip olması gereken 3 bilgi türünden [Teknolojik Bilgi (TB), Pedagojik Bilgi (PB) ve Alan Bilgisi (AB)] ve bunların ortaklıklarından [Teknolojik Pedagojik Alan Bilgisi (TPAB); Teknolojik Pedagojik Bilgi (TPB), Bilgisi Teknolojik Alan Bilgisi (TAB); Pedagojik Alan Bilgisi (PAB)] oluşmaktadır. TPAB, bir dersin tüm aşamalarında öğretimi desteklemek ve eğitim ortamında teknolojiyi temellendirebilmekte ölçüttür. Bu noktadan hareketle hem bulundukları çağın gereği olarak hem de öğretmenlik mesleği açısından TPAB yönünden yeterli olması beklenen öğretmen adaylarının bu boyutlardaki bilgilerini incelemek önemli görülmektedir. Bu araştırmada fen bilgisi öğretmen adaylarının TPAB'larını belirlemek ve TBAP boyutlarını bazı değişkenler açısından karşılaştırmak amaçlanmıştır. Çalışma Batı Karadeniz Bölgesinde yer alan bir üniversitede 4. sınıfta öğrenim görmekte olan 87 fen bilgisi öğretmen adayıyla gerçekleştirilmiştir. Tarama modelinde gerçekleştirilen çalışmada veriler 47 madde ve 7 faktörden

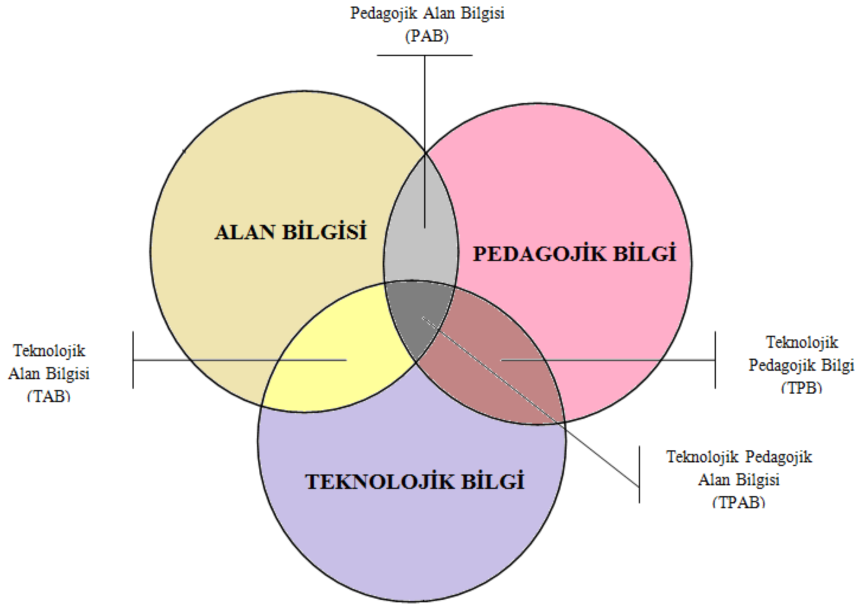
(teknoloji bilgisi, içerik bilgisi, pedagoji bilgisi, pedagojik içerik bilgisi, teknolojik içerik bilgisi, teknolojik pedagoji bilgisi, teknolojik pedagojik içerik bilgisi) oluşan TPAB Ölçeği kullanılarak toplanmıştır. Veriler, SPSS Programında betimsel istatistikler kullanılarak analiz edilmiştir. Analizlerde öğretmen adaylarının TPAB boyutları ortalama puanları birbirine yakın olmakla birlikte en çok PB boyutunda en az TAB boyutunda kendilerini yeterli gördükleri bulunmuştur. Fen bilgisi öğretmen adaylarının eğitiminde TAB'a yönelik içeriklerin artırılmasıyla ilgili düzenlemelerin yapılması gerektiği düşünülmekte ve önerilmektedir.

Anahtar Kelimeler: Teknolojik pedagojik alan bilgisi, öğretmen eğitimi, fen bilgisi öğretmen adayı

GİRİŞ

Günümüz bilgi-teknoloji ve iletişim çağında, fen ve teknoloji eğitiminin önemi giderek artmakta, gelişmiş ülkeler bu eğitimi ileriye götürebilecek yollar aramaktadır. Bu amaçla fen/bilim/bilgi okuryazarı nesiller yetiştirmekte, eğitime teknoloji entegrasyonunun yapılması etkili bir yol olarak görülmektedir (Pierson, 1999; Baran ve Canbazoğlu-Bilici, 2015). Eğitimde teknolojinin kullanımı özellikle ilköğretim düzeyindeki öğrencilerin soyut düşünmede zorlandıkları göz önünde bulundurulduğunda, fen kavramlarının öğrencilerin seviyesine uygun bir şekilde somutlaştırılmasında ve bunların görselleştirilmesinde önemli bir rol üstlenmektedir (Akpınar vd. 2005).

Teknolojinin eğitimdeki önemi öğretmen eğitiminde de kendini göstermektedir. Öğretmen yetiştirmede, alan bilgisi ile pedagoji ve teknolojinin birleştirildiği Teknolojik Pedagojik Alan Bilgisi (TPAB)'ne doğru bir yönelme yaşanmaktadır (TED, 2009). TPAB'ın temel bileşenleri Şekil 1'de sunulmuştur.



Şekil 1. TPAB Bileşenleri (Mishra ve Koehler, 2006)

TPAB öğretmenlerin ve öğretmen adaylarının sahip olması gereken 3 bilgi türünden [Teknolojik Bilgi (TB), Pedagojik Bilgi (PB) ve Alan Bilgisi (AB)] ve bunların kesişimlerinden meydana gelen bilgi türlerinden [Teknolojik Pedagojik Alan Bilgisi (TPAB); Teknolojik Alan Bilgisi (TAB); Pedagojik Alan Bilgisi (PAB)] oluşmaktadır (Mishra ve Koehler, 2006; Shin vd. 2009). Bu bilgi alanları bileşenlerine ait açıklamalar şu şekildedir (Mishra ve Koehler, 2006):

- Alan Bilgisi (AB): İlgili alanda yer alan ve öğrenilecek ya da öğretilecek konuyu kapsamaktadır.
- Pedagojik Bilgi (PB): Öğretim yöntemi, modeli, stratejisi ve tekniğinin yanı sıra öğretim yaklaşımlarına ilişkin bilgileri kapsamaktadır.
- Teknolojik Bilgi (TB): Klasik eğitim araçları ve gelişmiş teknolojileri içeren bilgilerdir.
- Pedagojik Alan Bilgisi (PAB): Konunun nasıl öğretileceğine ilişkin bilgileri içermektedir.
- Teknolojik Pedagojik Bilgi (TPB): Teknolojinin eğitim ortamında kullanımının ve bu teknolojinin eğitim üzerindeki etkisine ait bilgileri içermektedir.
- Teknolojik Alan Bilgisi (TAB): Teknoloji ve alan bilgisinin karşılıklı ilişkisini içeren bilgi alanıdır.
- Teknolojik Pedagojik Alan Bilgisi (TPAB): Teknoloji, pedagoji ve alan bilgisinin bileşiminden oluşan ve kompleks bir bilgi alanıdır.

TPAB temelde, Shulman (1987)'ın öğretmen yeterliliklerini teorik bir çerçevede ele aldığı Pedagojik Alan Bilgisi'ne teknolojik bilginin de entegre edilmesiyle oluşmaktadır (Baran ve Canbazoğlu-Bilici, 2015; Kaleli-Yılmaz, 2015). TPAB, öğretmenin öğrencisinin konuyu algılama ve anlamlandırma seviyesinin farkına varabilmesi ve seziyi kazanabilmesi anlamına gelmektedir. TPAB'ı gelişmiş bir öğretmen, bireylerde bilişsel seviyeyi geliştirmeye yönelik örnekler verebilen, çeşitli öğretim stratejileri kullanarak bilgiyi daha kapsamlı ve etkili olarak veren bir eğitimci olarak görülmektedir (Uşak, 2009). Bu noktada, öğretmen eğitimi programları öğretmen adaylarının teknolojiyi öğretmenliklerine aktarabilmelerini sağlamada önemli bir role sahiptir (Hofer ve Grandgennett, 2012). Öğretmen adayları, TPAB'ın öğretmenlik hayatlarındaki öneminin farkında olmalı ve kendilerini bu yönde geliştirmelidirler. Bu durum öğretmenlerin eğitim ortamında teknoloji kullanımını sağlayan kişiler olmalarından kaynaklanmaktadır (Heinich, Molenda, Russell ve Smaldino, 2002). Öğretmen adaylarının TPAB'a ilişkin eğitim alma, teknolojiye ulaşma ve teknolojiyi kullanma düzeyleri gibi birçok faktör TPAB'a ilişkin farkındalıklarını etkilemektedir.

Araştırmanın Amacı

Bu çalışmanın amacı, astronomi dersini alan fen bilgisi öğretmen adaylarının teknolojik pedagojik alan bilgilerinin (TPAB), fakültede ihtiyaç duyulan teknolojiye erişme, teknolojiyi kullanma, teknoloji kullanımıyla ilgili eğitim alma değişkenlerine göre farklılaşma durumlarının belirlenmesi amaçlanmaktadır. Bu amaç doğrultusunda araştırma problemi şu şekildedir: Fen bilgisi öğretmen adaylarının TPAB ölçeğinden aldıkları puan ortalamaları çeşitli değişkenler açısından anlamlı farklılaşma göstermekte midir? Araştırma problemi doğrultusunda alt problemler ise şu şekildedir:

1. Fen bilgisi öğretmen adaylarının TPAB ölçeğinden aldıkları puan ortalamalarıyla eğitim aldıkları fakültede ihtiyaç duyulan teknolojiye erişebilme düzeyleri arasında anlamlı bir farklılık var mıdır?
2. Fen bilgisi öğretmen adaylarının TPAB ölçeğinden aldıkları puan ortalamalarıyla teknoloji kullanımıyla ilgili eğitim alma durumları arasında anlamlı bir farklılık var mıdır?
3. Fen bilgisi öğretmen adaylarının TPAB ölçeğinden aldıkları puan ortalamalarıyla teknoloji kullanma düzeyleri arasında anlamlı bir farklılık var mıdır?

Teknoloji kullanımını içerisinde barındıran bir ders kapsamında, adayların TPAB ve bileşenlerine ilişkin görüşlerinin farklı değişkenlerle yordanmasıyla elde edilecek sonuçlar literatüre katkı sağlayacağı düşünülmektedir. Araştırma bulgularının öğretmen eğitiminde önemli olan bir konu alanına ışık tutacağından çalışma sonuçlarının kıymetli olduğuna inanılmaktadır.

YÖNTEM

Fen bilgisi öğretmen adaylarının teknolojik pedagojik alan bilgilerinin (TPAB) ve fakültede ihtiyaç duyulan teknolojiye erişme, teknolojiyi kullanma seviyesi ve teknoloji kullanımıyla ilgili eğitim alma değişkenlerine göre bu bilgilerin farklılaşıp farklılaşmadığının belirlenmesinin amaçlandığı araştırma tarama modelinde yürütülmüştür.

Çalışma Grubu

Araştırma, Batı Karadeniz Bölgesinde bulunan bir üniversitede, astronomi dersini alan 87 fen bilgisi öğretmen adayıyla gerçekleştirilmiştir.

Veri Toplama Araçları

Araştırmada veriler, Schmidt, Baran, Thompson, Mishra, Koehler ve Shin (2009) tarafından geliştirilen ve Öztürk ve Horzum (2011) tarafından Türkçeye uyarlanan Teknolojik Pedagojik Alan Bilgisi Ölçeği ile toplanmıştır. Ölçekte 47 madde yer almaktadır. Teknoloji bilgisi, alan bilgisi, pedagoji bilgisi, pedagojik alan bilgisi, teknolojik alan bilgisi, teknolojik pedagoji bilgisi, teknolojik pedagojik alan bilgisi olmak üzere yedi faktörden oluşmaktadır. Ölçeğin ana çalışma için hesaplanan Cronbach alpha değeri .96'dır.

Verilerin Analizi

Veriler, SPSS 22 Paket Programında betimsel istatistikler kullanılarak analiz edilmiştir. Katılımcıların ölçekte yer alan her bir faktördeki maddelerden aldıkları ortalama puanlarıyla toplam puanlarının "fakültede ihtiyaç duyulan teknolojiye erişme", "teknolojiyi kullanma seviyesi" ve "teknoloji kullanımıyla ilgili eğitim alma" değişkenlerine yönelik farklılaşıp farklılaşma durumu için bağımsız-t testi kullanılmıştır.

BULGULAR

Araştırmanın amacı doğrultusunda fen bilgisi öğretmen adaylarının TPAB Ölçeğinde yer alan her bir boyuta ilişkin elde edilen ortalama puanlarıyla ölçekten aldıkları toplam ortalama puanlara ilişkin betimsel istatistikler ve bu ortalama puanların fakültede ihtiyaç duyulan teknolojiye erişme, teknolojiyi kullanma seviyesi ve teknoloji kullanımıyla ilgili eğitim alma değişkenlerine göre farklılaşıp farklılaşmadığına ilişkin yapılan bağımsız t-testi sonuçları tablolar halinde bu bölümde yer almaktadır. Öğretmen adaylarının TPAB ölçeğinin her bir boyutu için aldıkları ortalama puanlara ilişkin betimsel istatistikler Tablo 1'de sunulmuştur.

Tablo 1. Katılımcıların TPAB ölçeğinden her bir boyut için aldıkları ortalama puanlara ilişkin betimsel istatistikler

Boyutlar	N	$\bar{X}$	SS
Teknoloji bilgisi	87	3,54	,71
Alan bilgisi	87	3,50	,47
Pedagojik bilgi	87	3,92	,45
Teknolojik alan bilgisi	87	3,39	,64
Pedagojik alan bilgisi	87	3,59	,54
Teknolojik pedagojik bilgi	87	3,76	,50
Teknolojik pedagojik alan bilgisi	87	3,72	,47
Toplam	87	3,63	,40

Tablo 1 incelendiğinde fen bilgisi öğretmen adaylarının en fazla pedagojik bilgi boyutunda ortalama puana ($\bar{X}$=3,92) sahip oldukları görülmektedir. Daha sonra sırasıyla teknolojik pedagojik bilgi ($\bar{X}$=3,76), teknolojik pedagojik alan bilgisi ($\bar{X}$=3,72), pedagojik alan bilgisi ($\bar{X}$=3,59), teknoloji bilgisi ($\bar{X}$=3,54), alan bilgisi ($\bar{X}$=3,50), teknolojik alan bilgisi ($\bar{X}$=3,39) gelmektedir. Katılımcıların son sınıf öğretmen adayları olması dolayısıyla tüm pedagojik dersleri almasından ötürü pedagojik bilgi boyutunda yüksek ortalama çıkması beklenebilir durum olarak karşımıza çıkmaktadır.

Fen bilgisi öğretmen adaylarının TPAB Ölçeğinde yer alan her bir boyut ve toplam puanlarına yönelik fakültede teknoloji erişim kolaylığına ilişkin verdikleri cevaplara göre yapılan bağımsız t-testi sonuçları Tablo 2'de yer almaktadır.

Tablo 2. Öğretmen adaylarının TPAB ölçeği boyutlarına ilişkin ortalama puanlarının fakültede teknoloji erişim kolaylığı değişkenine göre bağımsız t-testi sonuçları

	Fakültede teknoloji erişim kolaylığı	N	$\bar{X}$	SS	t	p
Teknoloji bilgisi	Evet	31	3,63	,69	,835	,406
	Hayır	56	3,49	,72		
Alan bilgisi	Evet	31	3,58	,45	1,274	,206
	Hayır	56	3,44	,47		
Pedagojik bilgi	Evet	31	3,91	,37	,051	,960
	Hayır	56	3,92	,49		
Teknolojik alan bilgisi	Evet	31	3,51	,62	1,267	,209
	Hayır	56	3,32	,65		
Pedagojik alan bilgisi	Evet	31	3,63	,62	,470	,639
	Hayır	56	3,57	,50		
Teknolojik pedagojik bilgi	Evet	31	3,92	,35	2,352	,021
	Hayır	56	3,66	,55		
Teknolojik pedagojik alan bilgisi	Evet	31	3,78	,47	,904	,369
	Hayır	56	3,69	,47		
Toplam	Evet	31	3,70	,39	1,286	,202
	Hayır	56	3,59	,40		

Tablo 2'ye bakıldığında katılımcıların boyutlara yönelik ortalama puanlarıyla toplam puanlarının fakültede teknoloji erişim kolaylığına 'evet' ve 'hayır' cevabı verme durumlarına göre anlamlı bir farklılık göstermediği bulunmuştur [t=,835, p>,05; t=1,274, p>,05; t=,051, p>,05; t=1,267, p>,05; t=,470, p>,05; t=2,352, p>,05; ; t=,904, p>,005; t=1,286, p>,05]. Bunun yanında genel olarak fakültede teknoloji erişim kolaylığına 'evet' diyen öğrencilerin diğerlerinden az da olsa daha fazla puan aldığı görülmektedir. Teknoloji kullanma seviyesi açısından katılımcıların kendilerini yeterli ve yetersiz görme durumlarına göre TPAB Ölçeğinde yer alan her bir boyut ve toplam puanlarına ilişkin yapılan bağımsız t-testi sonuçları Tablo 3'te yer almaktadır.

Tablo 3. Öğretmen adaylarının TPAB ölçeği boyutlarına ilişkin ortalama puanlarının teknoloji kullanma seviyesi değişkenine göre bağımsız t-testi sonuçları

	Teknoloji kullanma seviyesi	N	$\bar{X}$	SS	t	p
Teknoloji bilgisi	Yetersiz	25	2,83	,42	7,553	,000
	Yeterli	62	3,83	,59		
Alan bilgisi	Yetersiz	25	3,26	,41	3,012	,003
	Yeterli	62	3,59	,46		
Pedagojik bilgi	Yetersiz	25	3,92	,38	,106	,915
	Yeterli	62	3,91	,47		
Teknolojik alan bilgisi	Yetersiz	25	3,05	,54	3,309	,001
	Yeterli	62	3,53	,63		
Pedagojik alan bilgisi	Yetersiz	25	3,58	,58	,129	,897
	Yeterli	62	3,60	,54		
Teknolojik pedagojik bilgi	Yetersiz	25	3,47	,57	3,566	,001
	Yeterli	62	3,87	,43		
Teknolojik pedagojik alan bilgisi	Yetersiz	25	3,46	,38	3,405	,001
	Yeterli	62	3,82	,46		
Toplam	Yetersiz	25	3,37	,27	4,313	,000
	Yeterli	62	3,74	,39		

Tablo 3 incelendiğinde öğretmen adaylarının teknoloji kullanma seviyesi açısından kendilerini yeterli görüp görmeme durumlarına göre pedagojik bilgilerinde ve pedagojik alan bilgilerinde anlamlı farklılık bulunamamıştır [t=,106, p>,005; t=,129, p>,005]. Ancak teknoloji bilgisi, alan bilgisi, teknolojik alan bilgisi, teknolojik pedagojik bilgi, teknolojik pedagojik alan bilgisi ve toplam puanlara yönelik katılımcıların teknoloji kullanma seviyesi açısından kendilerini yeterli görüp görmeme durumlarına anlamlı bir fark bulunmuştur [t=7,553, p<,05; t=3,012, p<,05; t=3,309, p<,05; t=3,566, p<,05; t=3,405, p<,05; t=4,313, p<,05]. Teknoloji kullanma seviyesi açısından kendilerini yeterli gören öğretmen adaylarının teknoloji bilgisi ($\bar{X}$=3,83), alan bilgisi ($\bar{X}$=3,59), teknolojik alan bilgisi ($\bar{X}$=3,53), teknolojik pedagojik bilgi ($\bar{X}$=3,87), teknolojik pedagojik alan bilgisi ($\bar{X}$=3,82) ve toplam ($\bar{X}$=3,74) puanlarının diğer katılımcılardan daha fazla olduğu belirlenmiştir. Katılımcıların TPAB Ölçeğinde yer alan her bir boyut ve toplam puanlarına yönelik teknoloji kullanımı eğitimi alıp almadıklarına ilişkin verdikleri cevaplara göre yapılan bağımsız t-testi sonuçları Tablo 4'te yer almaktadır.

Tablo 4. Öğretmen adaylarının TPAB ölçeği boyutlarına ilişkin ortalama puanlarının teknoloji kullanımı eğitimi değişkenine göre bağımsız t-testi sonuçları

	Teknoloji kullanımı eğitimi	N	$\bar{X}$	SS	t	p
Teknoloji bilgisi	Evet	40	3,84	,72	3,834	,000
	Hayır	47	3,29	,59		
Alan bilgisi	Evet	40	3,65	,48	2,984	,004
	Hayır	47	3,36	,41		
Pedagojik bilgi	Evet	40	3,95	,53	,556	,580
	Hayır	47	3,89	,36		
Teknolojik alan bilgisi	Evet	40	3,50	,72	1,468	,146
	Hayır	47	3,30	,56		
Pedagojik alan bilgisi	Evet	40	3,64	,63	,717	,475
	Hayır	47	3,55	,47		
Teknolojik pedagojik bilgi	Evet	40	3,83	,53	1,351	,180
	Hayır	47	3,69	,48		
Teknolojik pedagojik alan bilgisi	Evet	40	3,79	,52	1,282	,203
	Hayır	47	3,66	,42		
Toplam	Evet	40	3,75	,43	2,702	,008
	Hayır	47	3,53	,34		

Tablo 4'e göre, fen bilgisi öğretmen adaylarının teknoloji kullanımı eğitimi alıp almama durumlarına göre pedagojik bilgilerinde, teknolojik alan bilgilerinde, pedagojik alan bilgilerinde, teknolojik pedagojik bilgilerinde, teknolojik pedagojik alan bilgilerinde ve toplam puanlarında anlamlı bir farklılık olmadığı ortaya çıkmıştır [t=,556, p>,05; t=1,468, p>,05; t=,717, p>,05; t=1,351, p>,05; t=1,282, p>,05; t=2,702, p>,05]. Buna ek olarak katılımcıların teknoloji bilgileri ve alan bilgilerinde teknoloji kullanımı eğitimi alıp almamaları açısından anlamlı bir fark bulunmuştur [t=3,834, p<,05; t=2,984, p<,05]. Buradan hareketle teknoloji kullanımı eğitim alan öğretmen adaylarının teknoloji bilgisi ($\overline{X}$=3,82) ve alan bilgisi ($\overline{X}$=3,65) puanlarının diğer öğretmen adaylarından daha fazla olduğu ortaya çıkarılmıştır.

TARTIŞMA

Teknolojinin kullanımı her alanda olduğu gibi eğitimde de çok önemlidir. Teknolojik bilgiyi içerisine alan Teknolojik Pedagojik Alan Bilgisi (TPAB), öğretmenlerin eğitim ortamında kullandıkları bilgi ve iletişim teknolojilerini sınıf içerisinde aktif bir şekilde kullanabilecek bir olgunluğa eriştirmeyi ifade etmektedir (Kaya, Emre ve Kaya, 2010). Bu çalışmada fen bilgisi öğretmen adaylarının TPAB boyutlarına yönelik düzeylerinin, fakültede ihtiyaç duyulan teknolojiye erişme, teknolojiyi kullanma seviyesi ve teknoloji kullanımıyla ilgili eğitim alma değişkenlerine göre farklılaşma durumları araştırılmıştır.

Öğretmen adaylarının ölçekten aldıkları puanlar sırasıyla Pedagojik Bilgi ($\overline{X}$=3,92), Teknolojik Pedagojik Bilgi ($\overline{X}$=3,76), Teknolojik Pedagojik Alan Bilgisi ($\overline{X}$=3,72), Pedagojik Alan Bilgisi ($\overline{X}$=3,59), Teknoloji Bilgisi ($\overline{X}$=3,54), Alan Bilgisi ($\overline{X}$=3,50), Teknolojik Alan Bilgisi ($\overline{X}$=3,39) şeklindedir. Ortalamalar incelendiğinde, öğretmen adaylarının ölçeğin geneline yönelik "katılıyorum" düzeyinde görüşe sahip olunduğu görülmektedir. Öğretmen adayları en çok Pedagojik Bilgi, en az ise Teknolojik Alan Bilgisi boyutunda görüş ortalamasına sahiptirler. Spesifik bir bilgi alanından bağımsız olarak eğitime ilişkin yöntem, program ve özel öğretim stratejileri bilgisini kapsayan Pedagojik Bilgi alanına (Grossman, 1990) yönelik görüşler ortalamasının yüksek olmasının, öğretmen adaylarının son sınıf öğrencileri olmalarından ve bu düzeye kadar öğretmenlik alan derslerini almalarından kaynaklandığı düşünülmektedir. Öğretmenlerin kara tahta kullanımından, bilgisayar kullanabilmeye kadar olan tüm teknolojik araçlara ilişkin bilgi yeterliliği olan Teknolojik Bilgi (Kaleli-Yılmaz, 2015) düzeyinin düşük olmasıysa düşündürücü bir sonuçtur. Bu bulgular ışığında, öğretmen adaylarının pedagojik bilgi alanında kendilerini yeterli gördüğü, ancak teknolojik bilgi alanında aynı düzeyde bir yetkinliğe sahip olmadıklarını düşündükleri sonucuna ulaşılmıştır. Alan yazın incelendiğinde, çalışmanın bu bulgusuyla paralellik gösteren TPAB'a yönelik benzer ölçme araçlarıyla belirlenen teknolojik bilgi boyutu ortalamasının düşük olduğu çalışmalar bulunmaktadır (Öztürk 2006; Yeşil, 2006; Chai, Koh ve Tsai, 2010; Özgün-Koca, Meagher ve Edwards, 2010; Bal, 2012; Bal ve Karademir, 2013).

Öğretmen adaylarının fakültelerinde teknolojiye ulaşabilmelerine yönelik görüşleri ve ölçek alt boyutları puan ortalamaları arasında anlamlı farklılık tespit edilmemiştir. Katılımcılardan 31'i fakülte içerisinde teknolojiye ulaşabildiklerini; 56'sı ulaşamadıkları belirtmişlerdir. Öğretmen yetiştiren kurumların, öğretmen adaylarının teknolojik pedagojik alan bilgilerini geliştirecek uygulamalara imkân sağlamaları gerektiği bilinmektedir (Sancar-Tokmak, Konokman ve Yelken, 2013). Öğretmen adaylarının çoğunluğunun bu teknolojilere ulaşamadıklarını söylemeleri düşündürücü bir sonuçtur. Diğer yandan araştırmanın diğer bir bulgusu olan teknolojik bilginin diğer bilgi boyutlarından düşük bir düzeyde olmasının nedeninin, fakültede teknolojiye ulaşamadıklarını belirtmeleriyle ilişkili olabileceği düşünülmektedir. Teknolojik araçları (örneğin bilgisayarı) kullanmanın teknolojiye yönelik öz yeterliliği geliştirdiğini gösteren çalışmalar mevcuttur (Kutluca ve Ekici, 2010; Sutton, 2011; Tezci, 2011). Alan yazındaki bu çalışmalar, çalışmanın bulgusunda tespit edilen eksikliğin ciddiyetini gösterir niteliktedir.

Teknoloji kullanma yeterliliklerine ilişkin görüşleri bakımından ölçek puan ortalamaları incelendiğinde; öğretmen adaylarının teknoloji bilgisi, alan bilgisi, teknolojik alan bilgisi, teknolojik pedagojik bilgi, teknolojik pedagojik alan bilgisi boyutlarında anlamlı farklılık tespit edilmiştir. Öğretmen adayları kendilerini, teknolojik cihazları kullanabilme; teknolojiye ilişkin bilgilerini eğitim ortamına aktarabilme; öğretmenlik alanında gerekli yöntem ve teknik bilgiye sahip olma ve buna teknolojiyi entegre etme konusunda kendilerini yeterli görmektedirler.

Öğretmen adaylarının teknolojiyle ilgili eğitim alma durumlarına göre bilgi boyutları incelediğindeyse; yalnızca teknoloji bilgi ve alan bilgisi boyutlarında anlamlı farklılık tespit edilmiştir. Teknoloji ile alınan eğitimin temel bilgi boyutlarında farklılaşmaya neden olurken, bu temel bilgi alanlarına teknolojinin entegresiyle oluşan kompleks bilgi alanlarında bir değişime neden olmaması dikkat çekicidir. Başka bir ifadeyle öğretmen adaylarına verilen teknoloji eğitimi, onların teknoloji paydaşlı bilgi alanlarında bir değişim meydana getirmemiştir. Çalışmanın bu bulgusu teknoloji eğitimi eksikliklerinin varlığını gösteren araştırmaları desteklemektedir (Cüre ve Özdener, 2008; Martinovic ve Zhang, 2012).

SONUÇ VE ÖNERİLER

Yapılan araştırma sonucunda öğretmen adaylarının TPAB bilgi boyutlarında, çeşitli değişkenler açısından yeterlilikleri araştırılmış ve bazı eksiklikler tespit edilmiştir. Öğretmen adayları öğretmenlik mesleğinin önemli bir kısmını oluşturan pedagojik bilgiye yönelik yeterliliğe sahip olduklarını belirtmekte ve teknolojik bilgi alanında kendilerini aynı düzeyde yeterli görmemektedirler. Teknoloji bilgisinin öneminin giderek arttığı ve "Fırsatları Artırma Teknolojiyi İyileştirme Hareketi (FATİH)" projesi kapsamında teknolojinin etkili kullanımı büyük çaplı çalışmalar yapıldığı bilinmektedir (Keleş, Öksüz ve Bahçekapılı, 2012). Bu teknolojik donanımı kullanabilecek teknolojik bilgiye sahip olamayan öğretmenlerin varlığı, bütün çalışmanın işlerliğini bozabilecek yapıda bir engel teşkil edebilir. Bu anlamda teknoloji bilgisinin iyileştirilmesi büyük önem taşımaktadır.

Çalışmada elde edilen bir diğer bulguysa öğretmen adaylarının fakültede teknolojiye ulaşamama konusundaki görüşleridir. Öğretmen eğitiminde, öğretmen adaylarına teknolojiye ulaşmaktan öte teknolojinin içerisinde yaşayacakları modeller oluşturulması bir gerekliliktir (Russell vd., 2003; Martinovic ve Zhang, 2012). Günümüz koşullarında katılımcıların teknolojiye ulaşamamaları, öğretmen eğitim sisteminin hedeflerini gerçekleştirebilmesine gölge düşürür yapıdadır. Bir öğretmen rehberlik yaparken, bilgi aktarırken ya da ders anlatımına ilişkin yöntem seçerken teknolojiden yararlanmalıdır. Bir öğretmen adayına bu yolu gösterebilecek bir alt yapı sağlanmalı, sağlanan alt yapının kullanımı konusunda özendirilmeli ve bu yöndeki çalışmalara öncelik tanınmalıdır.

ABSTRACT: Candidate teachers who studying in education faculty which trained future teachers, have individual differences, encounter with many case/problem and hence emotional intelligence plays an important role to cope with them. The aim of this study is to reveal the relationship between emotional intelligence and graduated high school and economic level of candidate teachers who studied in different programs (science education, elementary mathematics teaching, classroom teaching, social studies teaching, pre-school teaching, computer and instructional technology teaching). Survey method carried out by the method in this research. The working group consists a total of 484 candidate teachers who were studying in 1th class of different department of a university in the western Black Sea region in the fall semester 2015-2016 academic year: 87 from science, 57 from elementary mathematics, 105 classroom, 74 social studies, 132 pre-school, 29 computer and instructional technology. Schutte Emotional Intelligence Scale was used for the data collection tool. The scale is a three-factor scale (Optimism/Mood Regulation, Utilisation of Emotions, Appraisal and Expression of Emotions) with 5-point likert type. SPSS 22 was used to analyze data and was benefited two factor variance analysis. As a result, seperately it was found that the interplay between the programs candidate teachers are enrolled in*graduated high school was not significant in predicting optimism, utilisation of emotions, appraisal and expression of emotions and emotional intelligence (p>0,05). Besides, it was determined that the interplay between the programs candidate teachers are enrolled in*economic level was not significant in predicting optimism, utilisation of emotions, appraisal and expression of emotions and emotional intelligence (p>0,05). It is suggested that different researches can be done about emotional intelligence in the subject field according to different perspectives and/or different variables during training candidate teachers.

Keywords: Emotional intelligence, candidate teachers, programme, economic level, graduated high school

FARKLI BÖLÜMLERDE ÖĞRENİME BAŞLAYAN ÖĞRETMEN ADAYLARININ DUYGUSAL ZEKÂLARININ İNCELENMESİ

ÖZET: Geleceğin öğretmenlerini yetiştiren eğitim fakültelerinde öğrenim gören bireysel farklılıklara sahip öğretmen adayları, birçok durumla/sorunla karşılaşmakta ve bunlarla mücadele edebilmelerin de duygusal zekâ önemli rol oynamaktadır. Bu araştırmanın amacı, farklı programlarda (fen bilgisi eğitimi, matematik öğretmenliği, sınıf öğretmenliği, sosyal bilgiler öğretmenliği, okul öncesi öğretmenliği, bilgisayar ve öğretim teknolojileri öğretmenliği) öğrenim gören öğretmen adaylarının duygusal zekâlarıyla mezun olunan lise türü ve ekonomik düzey arasındaki ilişkiyi ortaya koymaktır. Araştırmada tarama yöntemi kullanılmıştır. Çalışma grubu, 2015-2016 öğretim yılı güz döneminde Batı Karadeniz bölgesindeki bir üniversitenin farklı bölümlerinin birinci sınıfında öğrenim görmekte olan 87 fen bilgisi, 57 matematik, 105 sınıf, 74 sosyal bilgiler, 132 okul öncesi, 29 bilgisayar ve öğretim teknolojileri öğretmen adayı olmak üzere toplam 484 öğretmen adayından oluşmaktadır. Veri toplama aracı olarak, Schutte Duygusal Zekâ Ölçeği kullanılmıştır. Ölçek 5'li likert tipinde üç faktörlü (İyimserlik/Ruh Halini Düzenleme, Duyguların Değerlendirilmesi ve Duyguların Kullanımı) bir ölçektir. Verilerin analizinde SPSS 22 paket programı kullanılmış olup iki faktörlü varyans analizinden yararlanılmıştır. Sonuç olarak öğrenim görülen program*mezun olunan lise türü etkileşiminin, iyimserlik, duyguların değerlendirilmesi, duyguların kullanımı faktörleri üzerindeki ortak etkisinin ve duygusal zekâ üzerindeki ortak etkisinin ayrı ayrı anlamlı olmadığı bulunmuştur (p>0,05). Ayrıca, öğrenim görülen program*ekonomik düzey etkileşiminin, iyimserlik, duyguların değerlendirilmesi, duyguların kullanımı faktörleri üzerinde ve duygusal zekâ üzerinde istatistiksel olarak anlamlı bir farklılığa neden olmadığı saptanmıştır (p>0,05). Öğretmen adayların yetiştirilmelerinde duygusal zekâlarını farklı bakış açılarından ve/veya farklı değişkenlere göre konu alan araştırmalar yapılması önerilmektedir.

Anahtar Kelimeler: Duygusal zekâ, öğretmen adayı, program, ekonomik düzey, mezun olunan lise

GİRİŞ

Bireylerin meslek seçimlerinde, mesleki ve kişilik özellikleriyle ilgi ve yeteneklerinin uyum göstermesi bireyin verimli olması ve kendini gerçekleştirmesi açısından büyük önem taşıdığı düşünülmektedir. Bu durum öğretmenlik mesleği açısından da önemlidir. Öğretmenlik mesleğini seçen bireylerin yetiştirilmeleri oldukça kapsamlı ve çok boyutlu olan bir süreçtir (Kuru ve Uzun, 2008). 'Öğretmenlik mesleğine kimler yönelmelidir?' ve 'Adaylar nasıl eğitilmelidir?' gibi sorular yıllardır tartışılmakta ve bu tartışma güncelliğini hala korumaktadır. Türkiye'de öğretmen adayları, bilişsel süreçleri sorgulayan çoktan seçmeli soruları içeren bazı sınavlarla belirlenmektedir. Bu sınavların öğretmen adaylarının sadece bir/birkaç yönünü ölçebildiği açıktır. Buradan öğretmenlik mesleğinde çok önemli olan 'uygun kişilik' özelliğine yönelik bir değerlendirme yapılamadığını göstermektedir (Hotaman, 2011). Türkiye İstatistik Kurumu (TUİK) tarafından yapılan bir araştırmada vatandaşların % 82,4'nün üniversiteye girişiyle ilgili sınav sisteminin öğrencileri yeteneklerine uygun mesleklere yerleştirmediğin inandığını belirlemiştir (TUİK'ten aktaran: Hotaman, 2011). Benzer sonuçlar Türk Eğitim Derneği'nin (2009) yayınladığı 'Öğretmen Yeterlilikleri Raporu' kapsamında da vurgulanmaktadır. Bu raporda öğretmenlerin en az üçte birinin ilgi ve istekleri dışında zorunlu kalarak öğretmenlik mesleğini seçtiği bildirilmektedir. Bu raporda, sınıf öğretmenliğini seçenlerin % 38.8'inin ve branş öğretmenliğini seçenlerin % 32.2'sinin ilgi ve istekleri dışında seçim yaptıkları dikkat çekmektedir. Ubuz ve Sarı'nın (2008) 109 sınıf öğretmen adayıyla yürüttüğü araştırma sonuçlarıysa adayların yarısından fazlasının öğretmenlik mesleğini 'üniversite sınav sonuç puanının' yeterliliğini dikkate alarak seçim yaptığını göstermektedir.

Bireylerin ilk eğitimleri ailelerinde başlar. Belli bir dönemden sonra eğitim kurumlarında edinmiş olduğumuz bilgi ve tecrübelerimizle yeterli deneyim ve donanıma sahip nitelikli bireyler haline gelir ve kişiliğimizin gelişmesini sağlarız. Bu süreçte bireylerin yetişmelerindeki en önemli unsurlardan biri nitelikli eğitimciler/öğretmenlerdir. Nitelikli öğretmenlerin yetiştirilmesi, öncelikli olarak öğretmen yetiştiren kurumların sorumluluğundadır (Murat, Aslantaş ve Özgen, 2006). Geleceğinden kaygılı henüz mezun olmamış binlerce üçüncü ve dördüncü sınıf öğretmen adaylarının meslek yöneliminde hiçbir şekilde nitelik aranmadığı aksine istihdam edilebilirliğin öne çıktığı görülmektedir. Nitelikli öğretmen yetiştirebilmek için, öğretmenlik alanının korunması gerektiği, hatta sıkı bir giriş denetiminin gerekli olduğu söylenebilir. Şu an itibariyle değişik alan ve branşlarda yaklaşık 300 000 öğretmen fazlası olduğu dile getirilmekte fakat insan yetiştirme planlarının, toplumların gereksinim duyduğu alanlar dikkate alınarak ileriye yönelik çalışmalar sergilenmemektedir (Hotaman, 2011). Toplum mimarı olarak nitelenen ve takdir edilen öğretmenlik mesleği için yeni ve isabetli, bireylerin ilgi, yetenek ve kişilik özelliklerini dikkate alan, mesleğin gerekleriyle bireyin özelliklerini eşleştirerek seçme yapılmasına olanak sağlayan yeni bir modelin gerekli olduğu açıktır (Okçabol, 2004).

Eğitim sisteminin başarısı, öğretmenlerin niteliğiyle yakından ilişkilidir. Toplumu tüm yönleriyle etkileme gücüne sahip mesleklerin basında geldiğini, dolayısıyla da taşıdığı sorumluluk, toplumsal beklentiler ve kazandırması gerekli özellikler dikkate alındığında, öğretmenlik mesleğinin herkes tarafından yapılamayacak bir meslek grubu olduğu düşüncesine kolayca ulaşılmaktadır (Şimşek, 2005). Küçükahmet'e (1996) göre bir ülkede yeni nesillerin yetiştirilmesinden eğitim sisteminin işleticisi olan öğretmen sorumludur. Bu nedenle, günümüzde nitelikli insan modelinin yetiştirilmesi, nitelikli öğretmen adaylarının seçimi ve eğitimiyle yakından ilişkilidir. Öğretmenlik mesleğini seçen bireylerin kişilik olarak öğretmenlik mesleğinin gerektirdiği özelliklere de sahip olmaları gerekmektedir. Etkili iletişim becerisi yüksek, sevecen, coşkulu, sosyal, sabırlı, açık fikirli, esnek, anlayışlı, esprili, yüksek başarı odaklı, iddialı, çalışkan, cesaretlendirici, teşvik edici, destekleyici, öğretmekten zevk alan, yeniliklere ve kendini geliştirmeye ve değiştirmeye açık olan, demokratik, entelektüel ve yaratıcı olma gibi özelikleri taşımaları sağlanmalıdır. Bu kişilik özelliklerini yansıtabilmelerindeyse bireylerin duygusal zekâları etkin bir rol oynamaktadır. Duygusal zekâları yüksek öğretmenler mesleklerini yapmaktan mutlu olan, görevlerini daha iyi bir şekilde yapmaya gayret eden, sınıf içi davranışlarında nitelikli tavırlar gösteren ve nihayetinde öğrenci yetişmesinde büyük katkıları olan bireyler olacaklarına inanılmaktadır.

Duygusal zekâ (emotional intelligence, EI) kavramı 1995'te yayınlanan bir kitapla (Goleman, Duygusal Zekâ Neden IQ'dan Daha Önemlidir?) popüler bir kavram haline gelmiştir (Özyalçın Oskay, Erdem ve Yılmaz, 2008). Goleman'a (2015) göre duygusal zekâ kişiliğin bir yansımasıdır ve bilişsel zekâ (Cognitive Intelligence, CI) ile birlikte bireyin karar alma sürecinin bileşenidirler. Gerçekte Goleman kitabında, bilişsel zekâsı yüksek yani IQ'su (Intelligence Quotient) yüksek bireylerin hayattaki başarısızlıklarını irdelemekte ve bunu duygusal zekâlarının düşüklüğüyle yani EQ'nun (Emotional Quotient) düşüklüğüyle açıklamaktadır. Ona göre duygusal zekâ bireylerin eyleme geçebilme, problemler karşısında kararlı şekilde devam edebilme, empati kurabilme ve karşısındaki yönlendirebilme, kendini kontrol edip ruh halini olumlu şekilde düzenleyebilme, olaylar ve durumlar karşısında ümidini koruyabilme yetileri vb. yetkinliklerin birleşimidir. Doğuştan gelen bir yönü olmakla beraber edinilen deneyimlerle geliştirilebilirdir. Bu nedenlerle birey yetiştiren öğretmenlerin EQ'larının yüksek olması gerektiği açıktır. Öğretmenlerin yetiştirilmeleri süreçlerinde öğrenim gördükleri pedagojik derslerde EQ'larını yükselttikleri veya yükseltmeleri gerektiği düşünülebilir. Burada dikkat edilmesi gereken durum, öğretmen adaylarının öğrenim süreçlerindeki EQ gelişimi pedagojik derslerin dışındaki (önceki öğrenimleri, ekonomik durumları, öğrenim gördükleri program gibi) değişkenlere de bağlı olduğu gerçeğidir.

Son yıllarda yoğun bir araştırma konusu haline gelen (örn. Göçet, 2006; Özdemir, 2015; Şirin, 2007) duygusal zekâ kavramının farklı programlarda öğrenim gören öğretmen adayları için mezun olunan lise türü ve ekonomik düzeye göre incelenmesinin alana katkı sağlayacağı düşünülmektedir. Duygusal zekâ konusunda ulusal ve uluslararası literatürde farklı değişkenleri ele alarak yapılan çalışmalar mevcuttur (Austin, Evans, Goldwater ve Potter 2005; İkiz ve Totan 2012; Yılmaz ve Özkan, 2011). Göçet (2006) üniversite öğrencilerinin duygusal zekâ düzeyleriyle stresle başa çıkma tutumları arasındaki ilişkiyi araştırmıştır. Araştırma sonucunda duygusal zekâyla stresle başa çıkma tutumları arasında anlamlı düzeyde ilişki olduğu, duygusal zekâ düzeyi yüksek olan bireylerin stresle daha iyi başa çıkabildiklerini ve kız öğrencilerle erkek öğrencilerin duygusal zekâları arasında anlamlı fark olduğu ortaya konmuştur. İkiz ve Totan (2012) öz-duyarlığın duygusal zekâyı açıklayıcı etkisini üniversite öğrencilerinde incelemişlerdir. Çalışmada, öz-duyarlık alt alanlarının duygusal zekânın alt alanları üzerinde istatistiksel olarak anlamlı etkileri olduğu, öz sevecenlik ve bilinçlilik alanlarının duygusal zekâyı arttırdığı, öz yargılama ve aşırı özdeşleşme alanlarının duygusal zekânın stresle başa çıkma ve genel ruh sağlığı alanlarını olumsuz etkilediği tespit edilmiştir. Ayrıca duygusal zekâ alanlarında cinsiyete göre anlamlı farklılık olduğu ancak cinsiyetin öz-duyarlık alanlarında etkisinin olmadığı belirlenmiştir. Özdemir (2015) eğitim fakültesi öğrencilerinin duygusal zekâlarıyla yaşam doyumlarının ne düzeyde olduğunu, duygusal zekâlarıyla yaşam doyumları arasındaki ilişkiyi, duygusal zekânın yaşam doyumunu yordama durumu ve duygusal zekâyla yaşam doyumları arasındaki ilişkiyi çeşitli değişkenler (alan, bölüm/anabilim dalı, sınıf düzeyi) açısından incelemiştir. Araştırma sonucunda, eğitim fakültesi öğrencilerinin duygusal zekâ ve yaşam doyumları genel olarak ortalamanın üzerinde olduğu, duygusal zekâ toplam ve alt boyutlarıyla yaşam doyumları arasında pozitif yönde ve anlamlı ilişki olduğu belirlenmiştir. Duygusal zekâ alt boyutlarıyla yaşam doyumları arasında, yaşam doyumuyla en yüksek ilişkinin duygusal zekâ iyi oluş alt boyutuyla en düşük ilişkinin sosyallik alt boyutuyla olduğu tespit edilmiştir. Duygusal zekâ düzeyinin öğrenim görülen alana göre öz kontrol alt boyutu hariç anlamlı düzeyde farklılaşmadığı, öz kontrol alt boyutunda eşit ağırlık alanı lehine, yaşam doyumundaysa eşit ağırlık ve sözel alanları lehine anlamlı düzeyde farklılaştığı bulunmuştur. Duygusal zekâ düzeyinde öğrenim görülen bölümlere göre anlamlı bir farklılaşmanın olmadığı ve duygusallıkla sosyallik alt boyutları hariç diğer boyutlarda ve yaşam doyumunda dördüncü sınıfların lehine anlamlı bir farklılaşma olduğu ortaya konmuştur. Şirin (2007) özel dershanelerde çalışan öğretmenlerin duygusal zekâ düzeyleriyle stresle başa çıkma tarzları arasındaki ilişki incelemiştir. Araştırma sonucunda, öğretmenlerin duygusal zekâ düzeyleriyle stresle başa çıkma tarzları arasında anlamlı bir ilişki olduğu belirlenmiştir. Yılmaz ve Özkan (2011) hemşirelik öğrencilerinin duygusal zekâ düzeylerinin yaş, sınıf, yaşanan yer, mezun olunan okul, aile tipi, anne-baba eğitim düzeyi gibi bağımsız değişkenlerle ilişkisini inceledikleri çalışmanın sonucunda, hemşirelik öğrencilerinin orta düzeylerde duygusal zekâya sahip olduğunu ve öğrencilerin duygusal zekâlarının geliştirilmeye ihtiyacı olduğunu tespit etmişlerdir. Austin, Evans, Goldwater ve Potter (2005) tıp fakültesi öğrencileriyle yaptıkları çalışmanın sonucunda da duygusal zekâsı yüksek olan öğrencilerin iletişim becerileri ile ilgili daha olumlu duygular ifade ettikleri belirlenmiştir.

Yukarıda belirtilen literatür doğrultusunda konu alanında yeni/farklı bakış açılarıyla yürütülen çalışmalara ihtiyaç olduğu düşünülmektedir. Bu anlamda öğretmen adaylarının yetiştirilme süreçlerinde öğrenimlerinin duygusal zekâ gelişimlerini yordayabilmek için fakülteye nasıl bir yeterlilikte geldiklerinin tespit edilmesi gerektiğine inanılmaktadır. Böylelikle lisans öğrenimlerinde dikkat edilmesi gereken durumların tespiti ve gelişimlerinin yönü üzerinde görüş belirtmenin mümkün olacağı düşünülmektedir. Bu araştırmanın amacı, farklı programlarda öğrenim gören birinci sınıf öğretmen adaylarının duygusal zekâlarıyla mezun olunan lise türü ve ekonomik düzey arasındaki ilişkiyi ortaya koymaktır. Bu amaç doğrultusunda aşağıdaki sorulara cevap aranmıştır:

1. Araştırmaya katılan birinci sınıf öğretmen adaylarının öğrenim gördükleri program*mezun olunan lise türü etkileşiminin duygusal zekâ alt boyutları ve duygusal zekâ puanları arasında anlamlı bir ilişki var mıdır?
2. Araştırmaya katılan birinci sınıf öğretmen adaylarının öğrenim gördükleri program*ekonomik düzey etkileşiminin duygusal zekâ alt boyutları ve duygusal zekâ puanları arasında anlamlı bir ilişki var mıdır?

YÖNTEM

Bu bölümde çalışma yöntemi, çalışma grubu, veri toplama aracı ve verilerin analiziyle ilgili bilgiler sunulmuştur.

Araştırma nicel perspektifte yürütülmüştür. Araştırma yöntemi olarak tarama yönteminden yararlanılmıştır. Tarama yöntemi, seçilen bir örneklem üzerinde zaman içinde gerçekleşen değişiklikler ya da mevcut bir durumun/olayın iç yüzünün araştırıldığı sıklıkla kullanılan bir araştırma yöntemidir (Aypay, 2015).

Çalışma Grubu

Çalışma grubu, 2015-2016 öğretim yılı güz döneminde Batı Karadeniz bölgesindeki bir üniversitenin farklı bölümlerinin birinci sınıfında öğrenim görmekte olan fen bilgisi, matematik, sınıf, sosyal bilgiler, okul öncesi, bilgisayar ve öğretim teknolojileri öğretmen adayı olmak üzere toplam 484 öğretmen adayından oluşmaktadır. Çalışma grubunu oluşturan öğretmen adaylarına ilişkin bilgiler Tablo 1'de yer almaktadır.

Tablo 1. Çalışma Grubunu Oluşturan Öğretmen Adayları

	Öğrenim Görülen Program	N
Schutte Duygusal Zekâ Ölçeği	Fen Bilgisi Eğitimi	87
	Matematik Öğretmenliği	57
	Sınıf Öğretmenliği	105
	Sosyal Bilgiler Öğretmenliği	74
	Okul Öncesi Öğretmenliği	132
	Bilgisayar ve Öğretim Teknolojileri Öğretmenliği	29
	Toplam	**484**

Veri Toplama Aracı

Veri toplama aracı olarak Schutte, Malouff, Hall, Haggerty, Cooper, Golden ve Dornheim (1998) tarafından geliştirilen Schutte Duygusal Zekâ Ölçeği bilinen ölçekten yararlanılmıştır. Bu çalışmada kullanılan ölçek Austin, Saklofske, Huang ve McKenney (2004) tarafından güncellenerek 41 madde şeklinde düzenlenen ve Tatar, Tok ve Saltukoğlu (2011) tarafından Türkçe'ye uyarlanan ölçektir. 5'li likert tipindeki ölçeğin üç faktörlü (İyimserlik/Ruh Halini Düzenleme, Duyguların Değerlendirilmesi ve Duyguların Kullanımı) bir yapısı mevcuttur. Ölçekten en düşük 41 en fazla 205 puan almak mümkündür. Ölçeğin Türkçe'ye uyarlanmış halinin Cronbach-Alpha iç tutarlık katsayısı .82'dir. Alt boyutlarının Cronbach-Alpha iç tutarlık katsayıları sırasıyla .75, .39 ve .76 olarak tespit edilmiştir (Tatar, Tok ve Saltukoğlu, 2011).

Verilerin Analizi

Elde edilen verilerin analizinde SPSS 22 paket programı kullanılmıştır. Örneklemin genel özelliklerinin belirlenmesinde betimsel istatistikten değişkenlere ait çıkarımsal istatistiklerden yapılmıştır. Öğretmen adaylarının öğrenim görülen program*mezun olunan lise türü etkileşiminin duygusal zekâ alt boyutları ve duygusal zekâ puanlarına etkisi olup olmadığına yönelik ve öğrenim görülen program*ekonomik düzey etkileşiminin duygusal zekâ alt boyutları ve duygusal zekâ puanlarına etkisi olup olmadığına yönelik iki yönlü ANOVA analizi yapılmıştır. Gözlenen ilişkilerin istatistiksel olarak anlamlılığı 0,05 düzeyinde sınanmış ve elde edilen bulgular tablolar halinde gösterilerek yorumlanmıştır.

BULGULAR

Bu bölümde yapılan analizlere ilişkin bulgular yer almaktadır. Farklı programlarda öğrenim gören öğretmen adaylarının duygusal zekâ puanlarının öğrenim görülen programlardaki birinci sınıflarından oluşturulan betimsel istatistikleri Tablo 2'de yer almaktadır.

Tablo 2. Öğretmen Adaylarının Öğrenim Gördüğü Programlara Ait Betimsel İstatistikleri

	Öğrenim Görülen Program	N	Xort.	SS
Schutte Duygusal Zekâ Ölçeği	Fen Bilgisi Eğitimi	87	3,71	,428
	Matematik Öğretmenliği	57	3,70	,471
	Sınıf Öğretmenliği	105	3,73	,398
	Sosyal Bilgiler Öğretmenliği	74	3,63	,415
	Okul Öncesi Öğretmenliği	132	3,80	,448
	Bilgisayar ve Öğretim Teknolojileri Öğretmenliği	29	3,70	,477
	Toplam	484	3,73	,435

Tablo 2 incelendiğinde, öğretmen adaylarının öğrenim gördükleri programa göre elde edilen puanların ortalamaları 3,63 ile 3,80 arasında değiştiği görülmüştür. En yüksek ortalamanın Okul Öncesi Öğretmenliği programında öğrenim gören öğretmen adaylarının, en düşük ortalamanın Sosyal Bilgiler Öğretmenliği programında öğrenim gören öğretmen adaylarının olduğu görülmektedir. Öğretmen adaylarının öğrenim gördükleri program ve mezun olunan lise türünün duygusal zekâ ölçeğinden aldıkları puanların değişimlerini belirlemek için betimsel istatistikleri Tablo 3'te yer almaktadır.

Tablo 3. Mezun Olunan Lise Türüyle Öğrenim Görülen Programların Betimsel İstatistikleri

Öğrenim Görülen Program	Mezun Olunan Lise Türü	N	Xort.	SS
Fen Bilgisi Eğitimi	Genel Lise	34	3,62	,531

Tablo 13'ten de anlaşılacağı gibi, öğretmen adaylarının öğrenim gördükleri program ve ekonomik düzeyden öğretmen adayların duygusal zekâ ölçeği alt boyutlarından iyimserlik faktörüne göre elde edilen puanların ortalamaları 3,70 ile 4,20 arasında değiştiği görülmüştür. En yüksek ortalama, Sınıf Öğretmenliği programında öğrenim gören öğretmen adaylarının yüksek ekonomik düzey, en düşük ortalamaysa Sosyal Bilgiler Öğretmenliği programında öğrenim gören öğretmen adaylarının düşük ekonomik düzeyde olduğu belirlenmiştir. Öğretmen adaylarının öğrenim gördükleri program*ekonomik düzey etkileşiminin duygusal zekâ alt boyutlarından iyimserlik faktörü toplam puan ortalamaları üzerinde anlamlı farklılık olup olmadığına yönelik yapılan iki yönlü ANOVA sonuçları Tablo 14'te yer almaktadır.

Tablo 14. Ölçeğin İyimserlik Faktörünü Puanlarının Öğrenim Gördükleri Program*Ekonomik Düzey Etkileşimine İlişkin İki Yönlü ANOVA Sonuçları

Varyansın Kaynağı	Kareler toplamı (KT)	Sd	Kareler Ortalaması (KO)	F	P

Öğrenim Görülen Program* Ekonomik Düzey	**2,537**	**7**	**,362**	**1,731**	**,100**

Tablo 18’de yapılan iki yönlü ANOVA analizi sonucunda, öğretmen adaylarının duygusal zekâ alt boyutlarından duyguların kullanılması faktörüne göre öğrenim gördükleri program*ekonomik düzey etkileşiminin duygusal zekâ alt boyutlarından duyguların kullanılması faktöründen alınan puan ortalamaları üzerinde anlamlı bir farklılık olmadığı anlaşılmaktadır (p>0.05).

TARTIŞMA, SONUÇ VE ÖNERİLER

Farklı programlarda öğrenim gören birinci sınıf öğretmen adaylarının duygusal zekâlarıyla mezun olunan lise türü ve ekonomik düzey arasındaki ilişkiyi ortaya koymak amacıyla yürütülen çalışmanın birinci alt probleminde katılımcıların öğrenim gördüğü programlar*mezun olunan lise türüne göre duygusal zekâ alt boyutları ve duygusal zekâ puanları üzerinde anlamlı farklılığın olup olmadığı incelenmiştir. Elde edilen sonuçlarda, öğretmen adaylarının duygusal zekâ puanlarının öğrenim gördükleri program*mezun olunan lise türü etkileşiminin duygusal zekâ puan ortalamaları üzerinde anlamlı bir farklılık olmadığı belirlenirken, puan ortalamalarına bakıldığında en yüksek ortalamanın Fen Bilgisi Eğitimi programında öğrenim gören öğretmen adaylarının Anadolu Öğretmen Lisesi mezunu olanları, en düşük ortalamanınsa Sosyal Bilgiler Öğretmenliği programında öğrenim gören öğretmen adaylarının Anadolu Öğretmen Lisesi mezunu olanları olarak belirlenmiştir. Bu durumun sebebi aynı lise türünden mezun olan öğretmen adaylarından lisans öğreniminde sayısal bölümde öğrenim görenlerin sözel bölümde öğrenim görenlere göre bilişsel zekâlarıyla birlikte duygusal zekâlarını da geliştirdikleri olmuş olabilir. Benzer şekilde, öğretmen adaylarının öğrenim gördükleri program*mezun olunan lise türü etkileşiminin ayrı ayrı duygusal zekâ alt faktörlerinden alınan puan ortalamaları üzerinde anlamlı bir farklılık olmadığı sonucuna ulaşılmıştır. Öğretmen adaylarının öğrenim gördükleri program ve mezun olunan lise türünden duygusal zekâ ölçeği alt boyutlarından iyimserlik faktörüne göre elde edilen puanların ortalamaları arasında en yüksek ortalama Fen Bilgisi Eğitimi programında öğrenim gören öğretmen adaylarının Anadolu Öğretmen Lisesi mezunu olanları, en düşük ortalamaysa Matematik Öğretmenliği programında öğrenim gören öğretmen adaylarının Genel Lise mezun olanları olarak belirlenmiştir. Tarhan (2011) duygusal zekânın bir basamağını ümit besleyebilmek olarak belirtmektedir. Yani, hayata pozitif/iyimser/olumlu bakan kişilerin duygusal zekâlarını geliştirip, huzurlu bir hayat sürebilecekleri söylenmektedir. Anadolu Lisesinden mezun öğretmen adaylarının Genel Liseye göre geleceğe pozitif baktıkları, daha gayretli oldukları düşünüldüğünde, çalışmanın sonucunun Tarhan'la örtüştüğü söylenebilir. Duyguların değerlendirilmesi faktörüne göre elde edilen puanların ortalamalarındaysa en yüksek ve en düşük ortalama Fen Bilgisi Eğitimi programında öğrenim gören öğretmen adaylarında olup, en yüksek ortalama Anadolu Öğretmen Lisesi mezunu olanları en düşük ortalamaysa Fen Lisesi mezunu olanları olarak belirlenmiştir. Bu durumun sebebiyse öğretmen adaylarının seçtikleri program aynı olsa da mezun oldukları okullar duygusal zekâlarını etkilemiş olabilir. Anadolu Öğretmen Lisesinden mezun olan öğretmen adaylarında öğretmenlik mesleğine yönelik mesleki derslerin de bulunması duygusal zekâlarını geliştirmiş, eğitim seviyesinin çok başarılı olduğunu düşündüğümüz Fen Liselerindeyse yoğun olarak akademik derslere maruz kalmaları bilişsel zekâlarının baskın olmasına sebep olmuş olabilir. Son faktör olan duyguların kullanılması faktörüne göre elde edilen puanların ortalamalarından da en yüksek ortalama Fen Bilgisi Eğitimi programında öğrenim gören öğretmen adaylarının Anadolu Öğretmen Lisesi mezunu olanları, en düşük ortalamaysa Bilgisayar ve Öğretim Teknolojileri Öğretmenliği programında öğrenim gören öğretmen adaylarının Anadolu Lisesi mezunu olanları olarak belirlenmiştir. Aynı okullardan mezun olan öğretmen adaylarının tercih ettikleri programların farklı olmasında duygusal zekâlarının farklılığı söz konusu olabilir.

Araştırmaya katılan öğretmen adaylarının öğrenim görülen program*ekonomik düzeylerine göre duygusal zekâ alt boyutları ve duygusal zekâ puanları üzerindeki anlamlı farklılığın incelendiği araştırmanın ikinci problemine ilişkin olarak ulaşılan sonuçlar ayrı ayrı incelenecek olursa, öğretmen adaylarının öğrenim gördükleri program*ekonomik düzey etkileşiminin duygusal zekâ puan ortalamaları üzerinde anlamlı bir farklılık ortaya çıkarmadığı tespit edilmiştir. Bunun yanında ortalamalara bakıldığında, duygusal zekâ puanlarından en yüksek ortalamanın Okul Öncesi Öğretmenliği programında öğrenim gören öğretmen adaylarından orta ekonomik düzey, en düşük ortalamanınsa Sosyal Bilgiler Öğretmenliği programında öğrenim gören öğretmen adaylarından yüksek ekonomik düzeye sahip olanlar olarak belirlenmiştir. Bu durumun sebebi Okul Öncesi öğretmen adaylarının Sosyal Bilgiler öğretmen adaylarına göre duygusal zekâlarını kullanabilme yetilerinin daha fazla geliştiğinin göstergesi olup, diğer yandan ekonomik düzeyin gelişmişliğinin duygusal zekâyı etkilemediği söylenebilir. Diğer yandan faktörlere ilişkin sonuçlara bakıldığında, öğretmen adaylarının ayrı ayrı faktörlere göre öğrenim gördükleri program*ekonomik düzey etkileşiminin alınan puan ortalamaları üzerinde anlamlı bir farklılık oluşturmadığı belirlenmiştir. Ortalamalar bazında, öğretmen adaylarının öğrenim gördükleri program ve ekonomik düzey açısından iyimserlik, duyguların değerlendirilmesi ve duyguların kullanımı faktörlerine göre elde edilen puanların ortalamalarından en yüksek ortalama Sınıf Öğretmenliği programında öğrenim gören öğretmen adaylarının yüksek ekonomik düzey, en düşük ortalamaysa Sosyal Bilgiler Öğretmenliği programında öğrenim gören öğretmen adaylarının düşük ekonomik düzey olarak belirlenmiştir. Bu durumun sebebi olarak sınıf öğretmen adaylarının sınıf ortamında öğrencilerle daha çok ekilişim halinde oldukları göz önüne alınırsa, sosyal bilgiler programında öğrenim gören öğretmen adaylarına göre duygusal zekâlarını yönetebilmelerinde daha etkili oldukları söylenebilir.

Bu araştırmada, farklı programlarda (fen bilgisi eğitimi, matematik öğretmenliği, sınıf öğretmenliği, sosyal bilgiler öğretmenliği, okul öncesi öğretmenliği, bilgisayar ve öğretim teknolojileri öğretmenliği) öğrenim gören öğretmen adaylarının duygusal zekâlarıyla mezun olunan lise türü ve ekonomik düzey arasındaki ilişki incelenmiştir. Öğretmen adayların yetiştirilmelerinde duygusal zekâlarını farklı bakış açılarından ve/veya farklı değişkenlere göre konu alan araştırmalar yapılması önerilmektedir.

PROSPECTIVE MATHEMATICS TEACHERS' VIEWS ABOUT THE EXAMS IN HIGHER EDUCATION

Cemalettin YILDIZ
Giresun University

ABSTRACT: The aim of this study is to reveal the views of prospective mathematics teachers about exams they had taken during their learning periods. The study was conducted with 150 prospective mathematics teachers studying at mathematics teacher program in an education faculty of a state university. Qualitative research method was used in this study and a form comprised of open ended questions was used to gather data. Data obtained were analyzed by descriptive and content analysis techniques. At the end of the study, it was determined that prospective mathematics teachers felt themselves stressed before the exams, excited during the exams, and happy after the exams they had taken. Also, it was found that many factors originating from student, teacher, exam environment, lesson, time, and family affected the exam difficulty. The findings indicate that prospective mathematics teachers needed motivation before the exams, they did not want the exam proctors to distract their attention during the exams, and they wanted them to have an attitude which made students feel relaxed after the exams. In terms of preparedness for exams, prospective mathematics teachers prepared for the exams in their own rooms individually a week before the exams, they used mostly their course books, they were afraid of their field exams more, and they prepared less for the exams related to general knowledge. In addition, it was observed that prospective mathematics teachers wanted the kind of exams which did not exceed one hour and mostly including 25 multiple choice questions and five open ended questions. Lastly, prospective mathematics teachers wanted to have exams in a quiet environment, to be detected whether they had a preparation for cheating or not before the exams, to be free for accessory equipment sharing and to have the opportunity for checking their own examination papers after the exams.

Key words: prospective mathematics teachers, exam anxiety, triggering factors, teacher education

MATEMATİK ÖĞRETMENİ ADAYLARININ LİSANS EĞİTİMLERİ SIRASINDA GİRDİKLERİ SINAVLARA İLİŞKİN GÖRÜŞLERİ

ÖZET: Bu çalışmanın amacı, matematik öğretmeni adaylarının öğrenim süreleri boyunca girdikleri sınavlara ilişkin düşüncelerini ortaya çıkarmaktır. Araştırma, bir devlet üniversitesindeki eğitim fakültesinin matematik öğretmenliği programında okuyan toplam 150 matematik öğretmeni adayıyla yürütülmüştür. Nitel araştırma yaklaşımının kullanıldığı bu araştırmada, veri toplama aracı olarak açık uçlu sorulardan oluşan bir form kullanılmıştır. Elde edilen veriler, betimsel ve içerik analizi teknikleri kullanılarak analiz edilmiştir. Çalışmanın sonucunda, matematik öğretmeni adaylarının kendilerini sınav öncesinde stresli, sınav sırasında heyecanlı ve sınav sonrasında mutlu hissettikleri belirlenmiştir. Ayrıca, sınavların iyi veya kötü geçmesini öğrenciden, öğretmenden, sınav ortamından, dersin kendisinden, zamandan ve aileden kaynaklı birçok faktörün etkilediği tespit edilmiştir. Matematik öğretmeni adaylarının sınav öncesinde motive edilmeye ihtiyaç duydukları, gözetmenlerin sınav sırasında dikkat dağıtmamalarını, sınav sonrasında ise öğrencileri rahatlatıcı tavırlar sergilemelerini istedikleri ortaya çıkmıştır. Bununla birlikte, matematik öğretmeni adaylarının sınavlara bir hafta öncesinde bireysel olarak kendi odalarında hazırlandıkları, kaynak olarak daha çok ders kitaplarını kullandıkları, alan derslerinin sınavlarından daha fazla korktukları, genel kültür ile ilgili derslere ise daha az çalıştıkları açığa çıkmıştır. Ayrıca, matematik öğretmeni adaylarının sınavların bir saati geçmeyecek şekilde daha çok 25 soruluk çoktan seçmeli ve beş soruluk açık uçlu olmasını istedikleri görülmüştür. Son olarak, matematik öğretmeni adaylarının sessiz ortamlarda sınava girmeyi arzuladıkları, sınav öncesinde öğrencilerin kopya hazırlayıp hazırlamadıklarının kontrol edilmesini, sınav sırasında araç-gereç yardımının serbest olmasını ve sınav sonrasında gerekli olması halinde yazılı kâğıtlarını görmeyi talep ettikleri ortaya çıkmıştır.

Anahtar sözcükler: matematik öğretmeni adayları, sınav kaygısı, tetikleyici faktörler, öğretmen eğitimi

GİRİŞ

Eğitim sistemlerinin birincil amacı, nitelikli bireyler yetiştirmenin yanı sıra öğrencilerin iyi birer vatandaş olabilmelerini sağlamaktır (Çelikten, Şanal ve Yeni, 2005). Öğrenci, öğretmen, eğitim-öğretim programları, yönetici, eğitim uzmanı, bilgi-iletişim teknolojisi, alt yapı ve finansal kaynaklardan meydana gelen bileşenlerin eğitim sistemini şekillendirdiği bilinmektedir (Şişman, 2007). Eğitimde hedeflenen noktaya ulaşabilmek tüm bu bileşenlerin ilişkilendirilmesi ile mümkün olabilir (Nartgün, 2008; Paliç ve Keleş, 2011).

Son zamanlarda akıl yürütme becerisini kullanan, yaratıcı düşünebilen, bireysel farklılıkların farkında olabilen ve bilgiye ulaşma yollarını bilen öğrenciler yetiştirilmeye çalışılmakta ve bu niteliklere sahip öğrenciler yetiştirecek olan öğretmenlerin yetiştirilmesi hedeflenmektedir (Umay, 2004). Bu hedeflere ulaşabilmek için nitelikli öğretmenlere ihtiyaç duyulmaktadır. Nitelikli öğretmenler, çevresinde olup biten gelişmelerden ve yeniliklerden haberdar olan, bu gelişmeleri alan öğretimiyle birleştirebilen bireyler olmalıdır (Baki, 2000). Bunların yanında öğretmenin, öğrencilerinin öğrenme gereksinimlerini, ön-şart davranışlarını, varsa eksikliklerini ortaya çıkartmak amacıyla ölçme ve değerlendirmeyi de sağlıklı bir şekilde yapması beklenmektedir (Gültekin, 2003). Bu bağlamda, ölçme değerlendirme süreci sonunda öğrencilerin ulaşmaları beklenen bilgi, beceri ve tutumlarının belirlenmesi önemlidir (Semerci, 2008; Slavin, 1997; Tekin, 1993; Tuckman, 1988; Turgut, 1990; Woolfolk, 1995). Dolayısıyla, öğrenme sürecinin değerlendirilmesinin gerektiği ve değerlendirmenin öğrenmenin ayrılmaz bir parçası olduğu unutulmamalıdır (Milli Eğitim Bakanlığı [MEB], 2013).

Eğitim-öğretim sürecinde öğrencilerin belirlenen amaçlara ulaşıp ulaşmadıklarını tespit etmek ve öğrenme eksikliklerini belirlemek için ölçme ve değerlendirmeye ihtiyaç duyulmaktadır (Çeçen, 2011). Bu bağlamda, öğretim elemanları / üyeleri sınavlarda öğrencilerin motivasyonlarını artırıcı ve sınav ortamlarında öğrencileri rahatlatmaya yönelik önlemler alması gerekmektedir. Dolayısıyla, sınav yapma öğrencilere sadece not verme amacı gütmemeli, sınav yaparken öğrencilerin kendilerini rahat hissetmelerinin sağlanması, bu anlamda sınavın sağlıklı geçmesi için tüm hazırlıkların yapılması, öğrencilerin endişe ve heyecanlarının en aza indirilmesine yönelik motivasyonlarının artırılması büyük önem taşımaktadır.

Sınav kaygısı, bir sınav veya değerlendirme durumunda yaşanan, kişilerin gerçek performansını ortaya koymasını olumsuz etkileyen bilişsel, duyuşsal, davranışsal özellikleri olan ve kişide gerginlik meydana getiren hoş olmayan bir duygu atmosferidir (Spielberger, 1980). Öğrencilerdeki sınav kaygısının bir kavram olarak ele alınması ve sınav kaygısı ile ilgili çalışmaların ivme kazanması 1950'lı yıllardan sonra başlamıştır (Erözkan, 2004). Ardından, bu konuyla ilgili ulusal ve uluslararası alanda pek çok çalışma yapılmıştır (Allen, 1970; Baltaş, 2002; Bolger, 1990; Carver ve Scheier, 1994; Casbarro, 2005; Dentado ve Diener, 1986; Devito ve Kubis, 1983; Donegan ve Trepanier-Street, 1998; Kirkland ve Hollandswort, 1980; Stöber, 2004; Trent ve Maxwell, 1980). Türkiye'de sınavlarla ilgili yapılan araştırmaların büyük çoğunluğu üniversite seçme sınavı (YGS ve LYS), ALES, KPSS, OKS ya da SBS'ye ve bu sınavlara girecek öğrencilere yöneliktir. Ancak öğretmen adaylarının lisansta girdikleri sınavlara ilişkin neler düşündükleri ile ilgili bir çalışmaya rastlanmamıştır.

Eğitim-öğretim, ulaşılan bilgiyi derinlemesine anlamayı, anlaşılan bilgiyi yapılandırarak yeni bilgiye ulaşabilmeyi, onu analiz ve sentez ederek değerlendirmeyi ön gören bir süreçtir (Hollins, 2011). Bu sürecin verimli geçmesinde, öğretmen adaylarının lisans dönemindeki donanımlarının güçlü olması çok önemlidir. Bu bağlamda, öğretmen adaylarının göreve başladıklarında etkili öğretimler gerçekleştirmeleri açısından lisansta aldıkları eğitimin önemli olduğunu vurgulayan pek çok çalışma mevcuttur (Arslan ve Özpınar, 2008; Erginer, 1995; Hill, Rowan ve Ball, 2005; Küçük, Demir ve Baran 2010; Peker, 2009; Smith, 2000; Ubuz, 2002). Ancak, lisans döneminde alınan eğitimin yanı sıra uygulanan ölçme-değerlendirme sürecinde yaşanan olumlu ya da olumsuz deneyimler de öğretmen adaylarının meslek yaşamlarında başarılı olabilmeleri için önem arz etmektedir. Buradan hareketle, lisans eğitiminde öğretmen adaylarının süreç boyunca girdikleri sınavlar hakkında neler düşündükleri, sınavlarda neler hissettikleri ve sınavlarla ilgili beklentilerinin neler olduğu önemli bir araştırma konusu olarak ortaya çıkmaktadır. Bu çalışma ile matematik öğretmeni adaylarının lisans eğitimleri sırasında girdikleri sınavlara ilişkin duygu ve düşüncelerini belirlemek amaçlanmıştır.

YÖNTEM

Bu bölümde; araştırma deseni, çalışma grubu, veri toplama aracı ve verilerin analizi ile ilgili bilgiler yer almaktadır.

Araştırma Deseni

Bu çalışmada, nitel araştırma deseni kullanılmıştır. Nitel araştırmalarda, araştırmacının genelleme amacı olmamasına rağmen çalışmanın sonuçları genele ışık tutabilir (Yıldırım ve Şimşek, 2008; Çepni, 2014). Ayrıca, nitel araştırmaların keşfedici bir özelliğe sahip olması, üzerinde çok fazla çalışılmamış konuları aydınlatmada araştırmacılara yardımcı olabilmektedir (Neuman, 2012).

Çalışma Grubu

Araştırma, 2015-2016 eğitim-öğretim yılı güz döneminde bir devlet üniversitesinin eğitim fakültesinin ilköğretim matematik öğretmenliği programında okuyan toplam 150 matematik öğretmeni adayıyla yürütülmüştür. Çalışma grubu tespit edilirken, maksimum çeşitlilik örnekleme yöntemi kullanılmış ve örneklemde çalışılan probleme taraf olabilecek kişilerin çeşitliliği maksimum derecede sağlanmıştır (McMillan ve Schumacher, 2006; Yıldırım ve Şimşek, 2008). Öğretmen adaylarına ait bazı demografik özellikler Tablo 1'de sunulmuştur.

Tablo 1. Öğretmen Adaylarının Bazı Demografik Özellikleri

		1. Sınıf		2. Sınıf		3. Sınıf		4. Sınıf		Toplam	
Özellikler	**Kategoriler**	**f**	**%**	**f**	**%**	**f**	**%**	**f**	**%**	**f**	**%**
Cinsiyet	Erkek	11	7.3	9	6.0	14	9.3	12	8.0	46	30.7
	Kız	32	21.3	25	16.7	24	16.0	23	15.3	104	69.3
Mezun olunan lise	Fen Lisesi	1	0.7	0	0	0	0	0	0	1	0.7
	Anadolu Öğretmen Lisesi	18	12.0	10	6.7	5	3.3	5	3.3	38	25.3
	Anadolu Lisesi	17	11.3	22	14.7	17	11.3	10	6.7	66	44.0
	Düz Lise	6	4.0	1	0.7	15	10.0	19	12.7	41	27.3
	Süper Lise	0	0	1	0.7	1	0.7	0	0	2	1.3
	Açık Öğretim Lisesi	1	0.7	0	0	0	0	0	0	1	0.7
	Sağlık Meslek Lisesi	0	0	0	0	0	0	1	0.7	1	0.7
Mezun olunan bölüm	Eşit Ağırlık	1	0.7	4	2.7	0	0	4	2.7	9	6.0
	Sayısal	42	28.0	30	20.0	38	25.3	31	20.7	141	94.0

Tablo 1 incelendiğinde, öğretmen adaylarının çoğunun kız, Anadolu lisesi mezunu ve sayısal bölümden mezun oldukları anlaşılmaktadır.

Veri Toplama Aracı

Çalışmada veri toplama aracı olarak 11 açık uçlu sorudan oluşan bir form kullanılmıştır. Araştırma kapsamında kullanılan formdaki sorular hazırlanırken literatürden faydalanılmış ve iki uzmanın görüşlerine başvurulmuştur. Alanında uzman akademisyenlerin düşünceleri alınarak formda yer alan soruların kapsam ve yordama geçerlilikleri sağlanmıştır. Ayrıca, hazırlanan sorular pilot uygulama sürecinde 10 öğretmen adayına okutturulmuş ve anlaşılmayan yerler düzeltilmiştir. Bununla birlikte, bir Türkçe öğretmeni soruların anlaşılır olup olmadığını inceledikten sonra sorulara son hali verilmiştir. Son olarak, 25 matematik öğretmeni adayı ile pilot uygulama yapılmış ve soruların anlaşılırlığı denetlenmiştir.

Verilerin Analizi

Veriler, nitel veri analiz yöntemlerinden betimsel ve içerik analiz yöntemleri birlikte kullanılarak analiz edilmiştir. Öncelikle, veriler Word dosyası şeklinde kayıt edilmiş, daha sonra öğretmen adaylarının sorulara verdikleri cevaplar betimsel analize tabi tutulmuştur. Ardından, aynı verilerden içerik analizi ile kod ve kategoriler oluşturulmuştur. Araştırmacı, kod ve kategorileri belirledikten sonra, kodların frekans ve yüzde değerlerini hesaplamıştır. Matematik öğretmeni adaylarından bazıları açık uçlu soruları cevaplarken aynı cevap içerisinde birden fazla koda ilişkin fikir belirttiğinden, kodlara ilişkin frekansların toplamı, araştırmadaki toplam öğretmen adayı sayısından farklı çıkabilmektedir. Veriler tablolar halinde sunulmuştur. Nitel bir araştırmada, bireylerden doğrudan alıntılara yer verilmesi araştırmanın geçerliğinin sağlanması bakımından önemlidir (Yıldırım ve Şimşek, 2008). Bu nedenle, bu çalışmada doğrudan alıntılara yer verilmiştir.

Araştırmanın güvenilirlik hesaplaması için yazıya dönüştürülen veriler içerisinden rastgele seçilen üç tanesi iki araştırmacı tarafından ayrı ayrı kodlanmıştır. Araştırmacıların oluşturdukları kodlar arasındaki tutarlılık [Görüş birliği / (Görüş birliği + Görüş ayrılığı)] formülü kullanılarak (Miles ve Huberman, 1994) 0.89 olarak hesaplanmıştır. Öğretmen adayları, araştırmanın etiği gereği; K1, K2, K3, … , K150 biçiminde kodlanmıştır.

BULGULAR

Öğretmen adaylarının sınav öncesinde, sırasında ve sonrasında neler hissettiklerine yönelik görüşlerinden oluşturulan kodlara ait frekans ve yüzde değerleri Tablo 2'de verilmiştir:

Tablo 2. Öğretmen Adaylarının Sınav Öncesinde, Sırasında ve Sonrasında Hissettikleri

Kodlar	Sınav Öncesi		Sınav Sırası		Sınav Sonrası	
	f	%	f	%	f	%
1.Stresli	53	35.3	9	6.0	7	4.7
2.Heyecanlı	45	30.0	21	14.0	-	-
3.Bildiklerimi unutmuş gibi	13	8.7	10	6.7	-	-

20.Umursamaz	1	0.7	-	-	-	-
21.Umutsuz	-	-	-	-	1	0.7
22.Üzgün	-	-	-	-	9	6.0
23.Yorgun	1	0.7	-	-	1	0.7

-: Bilgi yok.

Tablo 2 incelendiğinde, sınav öncesinde "stresli", "heyecanlı", "bildiklerini unutmuş gibi", sınav sırasında "heyecanlı", "rahat", "panik", sınav sonrasında ise "mutlu" ve "rahat" kodlarının ön plana daha çok çıktığı anlaşılmaktadır. Öğretmen adaylarının ön plana çıkan bu kodlara yönelik verdikleri cevaplardan bazıları sırasıyla aşağıda sunulmuştur:

Sınav Öncesinde
"Sınavdan önce kendimi çok fazla stresli hissediyorum çünkü hocaların soru sorma biçimlerini tahmin edemiyorum. (K24)"
"Çok heyecanlı oluyorum, acaba nasıl not alacağım fikri beynimi kemiriyor. (K21)"
"Çalıştığım şeyleri hatırlamıyormuşum gibi hissediyorum. (K73)"

Sınav Sırasında
"İlk başta heyecanım devam ediyor ama sonra geçiyor. (K9)"
"Soruları görünce biraz rahatlıyorum... (K23)"
"Yapamadığım soru ile karşılaşınca panik oluyorum... (K37)"

Sınav Sonrasında
"Sınav bittiği için çok mutlu oluyorum. (K74)"
"Sınav bittiği için rahatlıyorum. (K53)"

Öğretmen adaylarının sınavların iyi veya kötü geçmesini etkileyen faktörlere ilişkin görüşlerinden oluşturulan kodlara ait frekans ve yüzde değerleri Tablo 3'te verilmiştir:

Tablo 3. Öğretmen Adaylarına Göre Sınavların İyi veya Kötü Geçmesini Etkileyen Faktörler

Kategoriler	Kodlar	f	%
Öğrenci	1.Konu hâkimiyeti (sınava çalışıp çalışmama)	35	23.3
	2.Sınav anındaki psikolojik durum	23	15.3
	3.Heyecanlı olup olmama	22	14.7
	4.Stresli olup olmama	17	11.3
	5.Hasta olup olmama	10	6.7
	6.Başarma inancı (özgüven)	7	4.7
	7.Dikkatli olup olmama	7	4.7
	8.Yorgun olup olmama	3	2.0
	9.Sınava son gün çalışma	2	1.3
	10.Kopya çekip çekmeme	1	0.7
Öğretmen	11.Hocaların sınav anındaki tutumu	24	16.0
	12.Sınav sorularının anlaşılır olup olmaması	1	0.7
Sınav Ortamı	13.Ses veya gürültü	14	9.3
	14.Oturma düzeni	2	1.3
Ders	15.Dersin zorluk derecesi	8	5.3
	16.Bazı sınavların çakışması	3	2.0
Zaman	17.Sınavın süresi	5	3.3
Aile	18.Aile baskısı	1	0.7

Tablo 3 incelendiğinde, öğretmen adaylarına göre sınavların iyi veya kötü geçmesini etkileyen faktörlerin "öğrenci", "öğretmen", "sınav ortamı", "ders", "zaman" ve "aile" olmak üzere altı kategori altında toplandığı görülmektedir. Bu kategoriler altındaki "konu hâkimiyeti", "sınav anındaki psikolojik durum", "heyecanlı olup olmama", "hocaların sınav anındaki tutumu", "ses veya gürültü", dersin zorluk derecesi", "sınavın süresi" ve "aile baskısı" kodlarının ön plana daha çok çıktığı anlaşılmaktadır. Öğretmen adaylarının 1, 2, 3, 11, 13, 15, 17 ve 18 numaralı kodlara verdikleri cevaplardan bazıları aşağıda sunulmuştur:

"Eğer konulara hâkimsem sınav iyi geçer… (K1)"
"Sınav anındaki ruh hali, hastalık gibi faktörler. (K80)"
"Stres ve heyecan kötü geçmesini sağlar. (K5)"
"Hocalar da çok önemli, özellikle gözetmenlik yapanlar. Hocanın yüzündeki sert, imalı bakış bile beni çok etkiliyor. (K47)"
"Sesten rahatsız oluyorum. Özellikle konservatuar bölümündeki arkadaşların davul seslerinden... (K93)"
"Dersin zorluk derecesi sınavın iyi veya kötü geçmesinde önemli faktörlerden biri. (K75)"
"Zaman kesinlikle sınavların iyi ve kötü geçmesini etkileyen bir faktör… (K86)
"Ailem çok fazla stres oluşturuyor, kötü geçerse ne yaparım düşüncesi sonucunda hastalanıyorum. (K82)"

Öğretmen adaylarının gözetmenlerin sınav öncesinde, sırasında ve sonrasında kendilerine nasıl davranmalarını istedikleri ile ilgili görüşlerinden oluşturulan kodlara ait frekans ve yüzde değerleri Tablo 4'te verilmiştir:

Tablo 4. Öğretmen Adaylarının Gözetmenlerin Sınavlarda Kendilerine Nasıl Davranmalarını İstedikleri

Kodlar	Sınav Öncesi		Sınav Sırası		Sınav Sonrası	
	f	%	f	%	f	%
1.Motive etmeliler.	34	22.7	-	-	-	-
2.Sert davranmamalılar.	21	14.0	21	14.0	-	-
3.Dikkat dağıtmamalılar.	-	-	54	36.0	-	-
4.Rahatlatıcı tavırlar sergilemeliler.	-	-	20	13.3	19	12.7
5.Sınav sorularını çözmeliler.	-	-	-	-	7	4.7
6.Aceleci davranmamalılar.	-	-	-	-	2	1.3
7.Anlayışlı olmalılar.	-	-	4	2.7	-	-
8.Bol puan vermeliler.	-	-	-	-	3	2.0
9.Duygusuz davranmamalılar.	-	-	1	0.7	5	3.3
10.Düşük not alanların nedenlerini araştırmalılar.	-	-	-	-	1	0.7
11.Ek süre vermeliler.	-	-	-	-	4	2.7
12.Güler yüzlü olmalılar.	2	1.3	-	-	3	2.0
13.Herkese eşit davranmalılar.	-	-	2	1.3	-	-
14.Kopya çekilmemesi konusunda önlemler almalılar.	2	1.3	-	-	-	-

15.Öğrencilere kopya çekiyormuş gibi baskı yapmamalılar.	-	-	5	3.3	-	-
16.Öğrencileri tehdit etmemeliler.	2	1.3	4	2.7	-	-
17.Öğrencilerin yerlerini değiştirilmemeliler.	2	1.3	-	-	-	-
18.Önyargılı davranmamalılar.	-	-	-	-	2	1.3
19.Sınav hakkında bilgi vermeliler.	10	6.7	-	-	-	-
20.Sınav kâğıtlarını adaletli okumalılar.	-	-	-	-	2	1.3
21.Sınav notlarını derse yansıtmamalılar.	-	-	-	-	3	2.0
22.Sınavda çıkacak soruları söylemeliler.	1	0.7	-	-	-	-
23.Soru sorulmasına izin vermeliler.	-	-	3	2.0	-	-
24.Yüksek beklenti içinde olmamalılar.	-	-	-	-	3	2.0

-: Bilgi yok.

Tablo 4 incelendiğinde, sınav öncesinde "motive etme", "sert davranmama", sınav sırasında "dikkat dağıtmama", "sert davranmama", "rahatlatıcı tavırlar sergileme", sınav sonrasında ise "rahat tavırlar sergileme" ve "sınav sorularını çözme" kodlarının ön plana daha çok çıktığı anlaşılmaktadır. Öğretmen adaylarının ön plana çıkan bu kodlara yönelik verdikleri cevaplardan bazıları sırasıyla aşağıdaki gibidir:

Sınav Öncesinde
"Sınavın kolay olduğunu, yapılabilir derecede olduğunu söyleyip bizi motive ediyorlar. Bence böyle yapmaları güzel. Ben de böyle olmasını isterim. (K12)"
"Hocalarımız ya da öğretmenlerimiz … çok sert davranmamalarını tercih ederim. (K123)"

Sınav Sırasında
"Başıma gelip beklediklerinde sinir oluyorum. (K133)"
"Bazen çok sert davranıyorlar. Sert davranmaları sınavı etkiliyor. (K73)"
"Rahatlatıcı tavırlar sergilesinler. (K23)"

Sınav Sonrasında
"Bizlerle biraz konuşarak bizleri rahatlatabilirler. (K4)"
"Soruları çözmeliler. (K33)"

Öğretmen adaylarının sınavlara ne zaman ve nasıl çalıştıkları ile ilgili görüşlerinden oluşturulan kodlara ait frekans ve yüzde değerleri Tablo 5'te verilmiştir:

Tablo 5. Öğretmen Adaylarının Sınavlara Ne Zaman ve Nasıl Çalıştıkları

Kategoriler	Kodlar	f	%
Ne Zaman	1.Bir hafta önce	56	37.3
	2.Birkaç gün önce	28	18.7
	3.İki hafta önce	15	10.0
	4.Sınav yaklaştıkça	12	8.0
	5.Derse göre değişir.	10	6.7
	6.Günü gününe	9	6.0
	7.Son gün	6	4.0
	8.Sınav haftası	5	3.3
	9.Sınav akşamı	4	2.7
	10.İki-üç hafta önce	3	2.0
	11.Bir-iki hafta önce	2	1.3
	12.Bir ay önce	1	0.7
	13.Çalışmam gerektiğini hissettiğim zaman	1	0.7
Nasıl	14.Bireysel	88	58.7
	15.Arkadaşlarla	40	26.7
	16.Derse göre değişir. (bireysel veya arkadaşlarla)	19	12.6

Tablo 5 incelendiğinde, öğretmen adaylarının sınavlara daha çok bir hafta önce ve bireysel olarak çalıştıkları anlaşılmaktadır. Öğretmen adaylarının 1, 2, 3, 14, 15 ve 16 numaralı kodlara verdikleri cevaplardan bazıları aşağıda sunulmuştur:

"Bir hafta önce. (K2)"
"Bir veya iki gün önce. (K111)"
"Sınavlara kesinlikle 2 hafta önceden çalışmaya başlıyorum… (K93)"

"Bireysel çalışıyorum. (K109)"
"Arkadaşlarla birlikte çalışıyoruz. (K118)"
"Bazı sınavlarda bireysel bazılarında ise arkadaşlarla çalışıyoruz. (K39)"

Öğretmen adaylarının hangi derslere daha çok ve daha az çalıştıklarına ilişkin görüşlerinden oluşturulan kodlara ait frekans ve yüzde değerleri Tablo 6'da verilmiştir:

Tablo 6. Öğretmen Adaylarının Hangi Derslere Daha Çok ve Daha Az Çalıştıkları

Kategoriler	Kodlar	f	%
Daha Çok Çalışılan Dersler	1.Alan dersleri	50	33.3
	2.Öğretmenlik meslek bilgisi dersleri	38	25.3
	3.Alan eğitimi dersleri	25	16.7
	4.Genel kültür dersleri	16	10.7
	5.Tüm dersler	6	4.0
	6.Hiçbir ders	5	3.3
	7.Sözel dersler	4	2.7
	8.Genel yetenek dersleri	1	0.7
Daha Az Çalışılan Dersler	9.Genel kültür dersleri	59	39.3
	10.Öğretmenlik meslek bilgisi dersleri	37	24.7
	11.Alan dersleri	5	3.3
	12.Alan dışı dersler	3	2.0
	13.Seçmeli dersler	3	2.0
	14.Genel yetenek dersleri	2	1.3
	15.Sayısal dersler	2	1.3
	16.Sözel dersler	1	0.7

Tablo 6 incelendiğinde, öğretmen adaylarının alan derslerine daha çok; genel kültür derslerine ise daha az çalıştıkları anlaşılmaktadır. Öğretmen adaylarının 1, 2, 3, 9, 10 ve 11 numaralı kodlara verdikleri cevaplardan bazıları aşağıda sunulmuştur:

"Alan derslerinden korkuyorum, kalırım diye. (K4)"
"Öğretmenlik meslek bilgisi dersleri çünkü sözel oldukları için ezber yapmada bazen zorlanıyorum. (K8)"
"Alan eğitimi derslerinden daha çok çalışıyorum. Çünkü kredisi çok yüksek dersler. (K51)"
"Genel kültür çünkü genelde bilindik konular olduğu için. (K3)"
"Sınıf yönetimi gibi meslek derslerini az bir çalışmayla yapabildiğim için. (K15)"
"Genelde alan dersleri geride kalıyor. Bir şeyler bildiğimi düşündüğüm için… (K71)"

Öğretmen adaylarının sınavlara hangi kaynaklardan ve nerede çalıştıkları ile ilgili görüşlerinden oluşturulan kodlara ait frekans ve yüzde değerleri Tablo 7'de verilmiştir:

Tablo 7. Öğretmen Adaylarının Sınavlara Hangi Kaynaklardan ve Nerede Çalıştıkları

Kategoriler	Kodlar	f	%
Kaynaklar	1.İlgili dersin kitapları	133	88.7
	2.Derste tutulan notlar (defter)	89	59.3
	3.Lise ders kitapları	22	14.7
	4.İnternet	14	9.3
	5.KPSS kitapları	8	5.3
	6.Fotokopiler	2	1.3
	7.Hocaların önerdiği kitaplar	2	1.3
	8.Makaleler	1	0.7
Sınava Çalışılan Yerler	9.Kendi odasında	54	36.0
	10.Etüt odasında	40	26.7
	11.Evde	27	18.0
	12.Kütüphanede	8	5.3
	13.Sessiz ortamlarda	6	4.0
	14.Yalnız kalınabilecek bir ortamda	5	3.3
	15.Fark etmez.	3	2.0
	16.Derse göre değişir.	2	1.3
	17.Okulda	1	0.7

Tablo 7 incelendiğinde, öğretmen adaylarının sınavlara ilgili dersin kitaplarından, derste tutulan notlardan ve lise ders kitaplarından daha çok çalıştıkları görülmektedir. Ayrıca, öğretmen adaylarının sınavlara kendi odalarında, etüt odalarında ve evde daha fazla çalıştıkları anlaşılmaktadır. Öğretmen adaylarının 1, 2, 3, 9, 10 ve 11 numaralı kodlara verdikleri cevaplardan bazıları aşağıda sunulmuştur:

"Dersin kitabından çalışıyorum. (K25)"
"Kendi notlarım önemlidir. Onlardan çalışıyorum. (K104)"
"Lisedeki kitaplarımdan çalışıyorum. (K39)"
"Daha verimli olduğu için kendi odamda çalışıyorum. (K150)"
"Etüt odasında çalışıyorum, çünkü herkes çalıştığından daha kolay adapte oluyorum. (K4)"
"Evde çalışıyorum, çünkü en sakin yer orası. (K19)"

Öğretmen adaylarının sınavlarda ne tür soruların sorulmasına yönelik görüşlerinden oluşturulan kodlara ait frekans ve yüzde değerleri Tablo 8'de verilmiştir:

Tablo 8. Öğretmen Adaylarının Sınavlarda Ne Tür Soruların Sorulmasına Yönelik İstekleri

Kategoriler	Kodlar	f	%
Sınav Çeşitleri	1.Çoktan seçmeli	74	49.3
	2.Açık uçlu	42	28.0
	3.Karışık	19	12.7
	4.Doğru-yanlış	10	6.7
	5.Boşluk doldurma	3	2.0
Diğer	6.Derse göre değişir.	18	12.0
	7.Fark etmez.	2	1.3

Tablo 8 incelendiğinde, öğretmen adaylarının sınavlarda çoktan seçmeli, açık uçlu ve karışık türden soruların sorulmasını daha çok istedikleri anlaşılmaktadır. Öğretmen adaylarının ilk üç koda verdikleri cevaplardan bazıları aşağıda sunulmuştur:

"Çoktan seçmeli çünkü o an cevap aklıma gelmediyse şıkta görüp yapabiliyorum. (K1)"
"Açık uçlu çünkü hocalar fazla puan verebiliyor. (K9)"
"Hepsinden azar azar karışık sorular sorulmalı, çünkü hocalar öğrenciyi her türde değerlendirmeye almalılar. (K22)"

Öğretmen adaylarının sınav yapılan ortamların nasıl olması gerektiği ile ilgili görüşlerinden oluşturulan kodlara ait frekans ve yüzde değerleri Tablo 9'da verilmiştir:

Tablo 9. Öğretmen Adaylarının Sınav Yapılan Ortamların Nasıl Olması Gerektiği İle İlgili İstekleri

Kategori	Kodlar	f	%
Sınav Ortamının Özellikleri	1.Sessiz olmalı	64	42.7
	2.Sıralar geniş ve rahat olmalı	20	13.3
	3.Sıcak olmalı	17	11.3
	4.Havadar olmalı	13	8.7
	5.Kalabalık olmamalı	10	6.7
	6.Aydınlık olmalı	6	4.0
	7.Ne sıcak ne de ne soğuk olmalı	5	3.3
	8.Dikkat dağıtıcı şeyler olmamalı	3	2.0
	9.Geniş olması	3	2.0
	10.Temiz olmalı	3	2.0
	11.Düzenli olmalı	2	1.3
	12.Sıralarda, duvarlarda ve tahtada yazı olmamalı	1	0.7

Tablo 9 incelendiğinde, öğretmen adaylarının sınav ortamlarının sessiz, sıcak, sıraların geniş ve rahat olmasını istedikleri anlaşılmaktadır. Öğretmen adaylarının ilk üç koda yönelik verdikleri cevaplardan bazıları aşağıda sunulmuştur:

"Sınav ortamı sesten, gürültüden uzak bir ortam olmalı. (K127)"
"Sıralar geniş ve rahat olmalı. (K9)"
"Sıcak bir ortam olmasını isterim. (K114)"

Öğretmen adaylarının sınav öncesinde, sırasında ve sonrasında nelerin serbest ve nelerin yasak olmasına ilişkin görüşlerinden oluşturulan kodlara ait frekans ve yüzde değerleri Tablo 10'da verilmiştir:

Tablo 10. Öğretmen Adaylarının Sınavlarda Nelerin Serbest ve Nelerin Yasak Olmasına İlişkin İstekleri

Kodlar	Sınav Öncesi		Sınav Sırası		Sınav Sonrası	
	f	%	f	%	f	%
1.Öğrencilerin kopya hazırlayıp hazırlamadıkları kontrol edilmeli	10	6.7	-	-	-	-
2.Sınavda çıkacak konular hakkında bilgi verilmeli	7	4.7	-	-	-	-
3.Araç-gereç yardımı serbest olmalı	-	-	35	23.3	-	-
4.Kopya içerikli her şey yasak olmalı	-	-	18	12.0	-	-
5.İhtiyaç halinde sınav kâğıtlarına bakabilmek serbest olmalı	-	-	-	-	14	9.3
6.Sınav soruları derste çözülmeli	-	-	-	-	11	7.3
7.Sınav hakkında konuşmak yasak olmalı	-	-	-	-	11	7.3
8.Birlikte tekrar yapmak yasak olmalı	1	0.7	-	-	-	-
9.Cevap anahtarına bakmak serbest olmalı	-	-	-	-	4	2.7
10.Defter, kitap yasak olmalı	1	0.7	-	-	-	-
11.Defterlere veya kitaplara bakmak serbest olmalı	-	-	7	4.7	-	-
12.Ek süre vermek serbest olmalı	-	-	-	-	1	0.7
13.Gözetmenlerin dikkat dağıtması (sınıfta dolaşmak gibi) yasak olmalı	-	-	5	3.3	-	-

-: Bilgi yok.

Tablo 10 incelendiğinde, sınav öncesinde "öğrencilerin kopya hazırlayıp hazırlamadıkları kontrol edilmeli", "sınavda çıkacak konular hakkında bilgi verilmeli", sınav sırasında "araç-gereç yardımı serbest olmalı", "kopya içerikli her şey yasak olmalı", sınav sonrasında ise "ihtiyaç halinde sınav kâğıtlarına bakabilmek serbest olmalı", "sınav soruları derste çözülmeli" ve "sınav hakkında konuşmak yasak olmalı" kodlarının ön plana daha çok çıktığı anlaşılmaktadır. Öğretmen adaylarının ön plana çıkan bu kodlara yönelik verdikleri cevaplardan bazıları sırasıyla aşağıda sunulmuştur:

Sınav Öncesinde
"Hocalarımızın öğrencilerin kopya hazırlayıp hazırlamadıklarını kontrol etmelerini isterim. (K71)"
"Hocaların sınavda sorulacak soruların hangi konularla ilgili olduğunu daha önceden bizlere söylemelerini çok isterim. (K15)"

Sınav Sırasında
"Silgi, kalem tıraş alışverişi serbest olmalı… (K16)"
"Kopya kesinlikle olmamalı. Kopya çekenler benim hakkıma giriyorlar. Bazen o kadar çalışıyorum onlar kopya ile hemen halledebiliyorlar. (K51)"
Sınav Sonrasında
"Kâğıtlarımıza notlar açıklandıktan sonra bakabilelim. (K12)"
"…Sınavdan sonraki derste sorular çözülmeli. (K39)"
"Sınavla ilgili konuşmak yasak olabilir. (K67)"

Öğretmen adaylarının açık uçlu sorulardan oluşan sınavlarda kaç soru sorulmasına ve bu sınavların sürelerinin ne kadar olması gerektiğine ilişkin görüşlerinden oluşturulan kodlara ait frekans ve yüzde değerleri Tablo 11'de verilmiştir:

Tablo 11. Öğretmen Adaylarının Açık Uçlu Sınavlarda Kaç Soru Sorulmasına ve Bu Sınavların Sürelerinin Ne Kadar Olmasına İlişkin İstekleri

Kategoriler	Kodlar	f	%
Soru Sayısı	1.Beş soru	32	21.3
	2.On soru	27	18.0
	3.Dört-beş soru	5	3.3
	4.Fark etmez.	4	2.7
	5.Dört soru	3	2.0
	6.En az on soru	3	2.0
	7.Yedi soru	2	1.3
	8.Beş-altı soru	2	1.3
	9.Beş-on soru	2	1.3
	10.Beş ya da on soru	2	1.3
	11.Sekiz soru	2	1.3
	12.Diğer (2, 6, 2-3, 6-7, 5-8 soru)	5	3.3
Sınav Süresi	13.Bir saat	91	60.7
	14.50 dakika	11	7.3
	15.Derse göre değişir.	5	3.3
	16.Her soruya bir-üç dakika	3	2.0
	17.Bir buçuk saat	2	1.3
	18.Sınav süresi öğretmene bırakılmalı	2	1.3
	19.Diğer (2 saat, her soruya on dakika, 30 dakika, 35 dakika, 45 dakika, 70 dakika, 50-75 dakika, 60-80 dakika, 90 dakika ve sınav süresi öğrencilerle kararlaştırılmalı)	10	6.7

Tablo 11 incelendiğinde, öğretmen adaylarının açık uçlu sınavlarda beş soru sorulmasını ve sınavların süresinin bir saat olması gerektiğini daha fazla dile getirdikleri anlaşılmaktadır. Öğretmen adaylarının 1 ve 13 numaralı kodlara verdikleri cevaplardan bazıları aşağıda sunulmuştur:

"5 soru, açık uçlu sınavlarda ideal oluyor, yapabildiğini zaten yapıyorsun. (K1)"
"Açık uçlu sınavlarda bir saat verilmelidir. Çünkü soruları düşünmek, yorumlamak, kağıda dökmek uzun zaman alıyor. (K50)"

Öğretmen adaylarının çoktan seçmeli sorulardan oluşan sınavlarda kaç soru sorulmasına ve bu sınavların sürelerinin ne kadar olması gerektiğine ilişkin görüşlerinden oluşturulan kodlara ait frekans ve yüzde değerleri Tablo 12'de verilmiştir:

Tablo 12. Öğretmen Adaylarının Çoktan Seçmeli Sınavlarda Kaç Soru Sorulmasına ve Bu Sınavların Sürelerinin Ne Kadar Olmasına Yönelik İstekleri

Kategoriler	Kodlar	f	%

	14.25 dakika	3	2.0

	15.75-90 dakika	2	1.3
	16.Her soruya 1,5 dakika	2	1.3
	17.35 dakika	2	1.3
	18.30-40 dakika	2	1.3
	19.Derse göre değişir.	2	1.3
	20.Diğer (her soruya 3 dakika, 45 dakika, 50 dakika, 60 dakika, 75 dakika)	5	3.3

Tablo 12 incelendiğinde, öğretmen adaylarının çoktan seçmeli sınavlarda 25 soru sorulmasını ve sınavların süresinin bir saat olması gerektiğini daha fazla ifade ettikleri anlaşılmaktadır. Öğretmen adaylarının 1 ve 9 numaralı kodlara verdikleri cevaplardan bazıları aşağıda sunulmuştur:

"Çoktan seçmelide 25 soru yeterli. (K50)"
"Çoktan seçmeli sınavlarda 25 soru soruluyorsa bir saat idealdir. (K75)"

TARTIŞMA ve SONUÇ

Bu araştırma, öğretmen adaylarının öğrenim süreleri boyunca girdikleri sınavlara ilişkin düşüncelerinim değerlendirilmesine yönelik yapılan bir çalışmadır.

Öğretmen adayları kendilerini sınav öncesinde "stresli", "heyecanlı", "bildiklerini unutmuş gibi", sınav sırasında "heyecanlı", "rahat", "panik", sınav sonrasında ise "rahat" ve "mutlu" olarak hissettiklerini ifade etmişlerdir. Dolayısıyla, öğretmen adaylarının sınav öncesinde ve sırasında sınavla ilgili kaygılandıkları, sınav sonrasında ise kendilerini daha iyi hissettikleri anlaşılmaktadır. Erözkan, (2004) çalışmasında, üniversite son sınıf öğrencilerinin alt sınıflara göre daha kuruntulu tutum içinde olduklarını ayrıca sınav kaygısının öğrencilerin akademik anlamda amaçlarına ulaşmalarını engellediğini ortaya koymuştur. Aysan, Thompson ve Hamarat (2001) da çalışmalarında, sınav kaygısının yaşa bağlı olarak artış gösterdiğini ileri sürmüşlerdir. Eğitim süresince sınav öncesinde ve sınav sırasında yaşanan kaygının ortadan kaldırılması ya da aza indirgenebilmesi, öğretmen adaylarının akademik hayatta başarılı olmalarına, günlük ve öğrenim hayatlarında karşılaşacakları pek çok sıkıntıyı giderebilmelerine ve bu sorunların üstesinden gelmelerine yardımcı olacaktır. Ayrıca, öğretmen adaylarının süreç boyunca girdikleri sınavların günlük yaşamın bir parçası olduğuna alışmalarına yardımcı olunarak, sınav kaygısından uzak, motivasyonları yüksek bir şekilde derslerde daha başarılı olmaları sağlanabilir.

Sınavların iyi veya kötü geçmesini etkileyen faktörlerin "öğrenci", "öğretmen", "sınav ortamı", "ders", "zaman" ve "aile" başlıkları altında toplandığı açığa çıkmıştır. "Konu hâkimiyeti", "sınav anındaki psikolojik durum", "heyecanlı olup olmama", "hocaların sınav anındaki tutumu", "ses veya gürültü", dersin zorluk derecesi", "sınavın süresi" ve "aile baskısı" gibi durumların bu başlıklar altında daha çok ortaya çıktığı belirlenmiştir. Güler ve Çakır (2013), babadan algılanan tutumların sınav kaygısının yordayıcısı olmadığını, annelerin sıkı denetim ve kontrol biçimindeki tutumlarının öğrencilerin sınav kaygısını artırdığını belirlemişlerdir. Bu sonuç, çalışmanın aile baskısına yönelik bulgusuyla benzerlik göstermektedir. Ayrıca, öğretmen adaylarının sınavlarla ilgili kaygı yaşamalarının nedenlerinden biri de ailelerine yük olmak istememeleri olabilir (Eraslan, 2005). Öğrenme sürecinin değerlendirilmesinin gerektiği ve değerlendirmenin öğrenmenin ayrılmaz bir parçası olduğu (MEB, 2013) göz önünde bulundurulursa, öğretmen adaylarının sınavların iyi ya da kötü geçmesine yükledikleri anlamların önemli olduğu söylenebilir. Çünkü bu faktörler onların günlük hayatlarına ve akademik başarılarına olumlu ya da olumsuz yansıyabilir.

Öğretmen adaylarının, öğretim elemanlarından / üyelerinden sınav öncesinde "motive etme", "sert davranmama", sınav sırasında "dikkat dağıtmama", "sert davranmama", "rahatlatıcı tavırlar sergileme", sınav sonrasında ise "rahat tavırlar sergileme" ve "sınav sorularını çözme" gibi isteklerinin olduğu tespit edilmiştir. Kumral (2009) çalışmasında, sınav dönemlerinde öğrencilerin yaşadığı stresin öğretim elemanlarının / üyelerinin sınav döneminde öğrencileri birer potansiyel suçlu olarak görmelerinden kaynaklandığını ifade etmiştir. Aynı çalışmada, öğretim elemanlarının / üyelerinin süreçte ele alınan konulardan sınavda çıkması muhtemel sorulara yönelik bilgilendirmelerde bulunmaları, öğrenciler tarafından olumlu görülen tutumlar olarak ifade edilmiştir. Bu sonuç, çalışmanın bazı bulgularıyla paralellik göstermektedir. Öğretim elemanlarının / üyelerinin sınav ortamlarında gergin olmaları, adayların motivasyonunu düşürebilir. Dolayısıyla, öğretim elemanlarının / üyelerinin öğrencilere sert davranmadan ve onların dikkatlerini dağıtmadan onlara karşı yumuşak tavır almaları önemli görülmektedir.

Öğretmen adaylarının sınavlara daha çok bir hafta önce ve bireysel olarak çalıştıkları elde edilen sonuçlar arasındadır. Öğretmen adaylarının sınavlara bir hafta kala çalışılmaları istenilen bir durum değildir. Demir ve Bütüner (2014) çalışmalarında, öğretmen adaylarının sınavlara sınav gecesinde ders geçme odaklı olarak çalıştıklarını belirlemişlerdir. Öğretmen adaylarının bu alışkanlıklarını terk etmelerini sağlayacak bir takım önlemler alınmalıdır. Bu durum, yapılandırmacı yaklaşımda benimsenen öğretmen rolüne de uymamaktadır. Ayrıca, öğretmen adaylarının sadece sınavlarda ders çalışmalarının yeterli olmadığına, süreç boyunca çalışmaları gerektiğine inandırılmasını sağlayacak önlemler alınması gerekmektedir. Böylece, öğretmen adayları düzenli ders çalışma alışkanlığı kazanacak, süreçte derslerle iç içe olacak ve dersleri uğraşılmaya değer bulacaktır. Bununla birlikte, öğretmen adaylarının daha çok bireysel ders çalıştıkları sonucundan hareketle, adayların bireysel anlamalarını sağlayabilecek ortamları tercih ettikleri söylenebilir. Ancak yapılandırmacı yaklaşımda grup çalışması yöntemine yapılan vurgu dikkate alınırsa, ders sürecindeki etkinliklerin bu yönteme göre planlanması ve uygulanması adayların sınavlara hazırlanırken grup çalışması yöntemini tercih etmelerine yardımcı olabilir.

Öğretmen adaylarının alan derslerine daha çok, genel kültür derslerine ise daha az çalıştıkları tespit edilmiştir. Bu durum, eğitim fakültelerinde okutulan genel kültür derslerinin çok fazla önemsenmediğine yönelik bir sonuç olabilir. Bir başka açıdan bakıldığında, genel kültür derslerinin lisede de görülmesinden dolayı öğrencilerin bu dersleri kolay olarak algılaması ya da bu derslerin öğrenilmesinin alan derslerine göre daha basit olması bu duruma sebep olarak gösterilebilir.

Öğretmen adaylarının sınavlara daha çok ilgili dersin kitabından, derste tutulan notlardan ve lise ders kitaplarından çalıştıkları ortaya çıkmıştır. Bu durum, öğretmen adaylarının ders çalışma kaynaklarının çeşitliliğinin bir göstergesi olabilir. Ayrıca, öğrencilerin sınavlara daha çok kendi odalarında, etüt odalarında ve evde çalıştıkları belirlenmiştir. Öğretmen adaylarının sınavlara hazırlanırken daha çok bu ortamlarda ders çalışmaları üniversite kütüphanesinin yetersiz oluşundan veya kalabalık oluşundan kaynaklanmış olabilir. Belki de evde, yurtta ve kendi odalarında çalışmak öğretmen adaylarının daha rahat olmalarına sebebiyet vermektedir.

Öğretmen adaylarının sınavlarda çoktan seçmeli, açık uçlu ve karışık türden soruların sorulmasını daha çok istedikleri belirlenmiştir. Özellikle, öğrencilerin sınav sorularının çoktan seçmeli olması yönündeki isteklerine bakılırsa, ortaöğretimde ve üniversiteye hazırlanma sürecinde alıştıkları bir sınav türü olması nedeniyle bunu sürdürmek istemeleri beklenen bir durumdur.

Öğretmen adaylarının sınav ortamlarının özellikle sessiz, sıcak, sıraların geniş ve rahat olmasını istedikleri görülmüştür. Güneş (2008) çalışmasında, öğretmenlerin öğretim programına göre hazırlanan kaynaklardan yararlanmalarının, yapılandırmacı öğrenme ortamı oluşturmaları için yeterli olmadığını ortaya koymuştur. Dolayısıyla, sınav ortamının öğrenme ortamı kadar uygun olması gerektiği unutulmamalıdır. Öğretmen adaylarının başarılarının artmasında uygun öğrenme ortamlarının tasarlanmasının önemini göz önüne alırsak, benzer şekilde bu durumun sınav ortamlarına da yansıtılması gerekmektedir.

Öğretmen adaylarının sınav öncesinde "kopya hazırlanıp hazırlanmadığının kontrol edilmesi", "sınavda çıkacak konular hakkında bilgi verilmesi"; sınav sırasında "araç-gereç yardımının serbest olması", "kopya içerikli her şeyin yasak olması"; sınav sonrasında ise "ihtiyaç halinde sınav kâğıtlarına bakabilmenin serbest olması", "sınav sorularının derste çözülmesi" ve "sınav hakkında konuşmanın yasaklanması" yönünde öneriler verdikleri tespit edilmiştir. Özdemir ve Üzel (2010) çalışmalarında, öğretmen adaylarının öğrencilerine tarafsız davranan, sınav sorularını basitten karmaşığa göre hazırlayan, derste anlatmadığı konularla ilgili soyu sormayan, öğrencinin sınav sonrası kâğıdına bakmasına izin veren, değerlendirme kriterleri açık olan, not kaygısı oluşturmayan, ödev yapmaya özendiren ve ödev yapan öğrencileri ödüllendiren öğretim elemanlarını / üyelerini tercih ettiklerini belirtmiştir. Bu durum, çalışmanın bazı bulgularını destekler niteliktedir. Buradan, öğretmen adaylarının sınav kaygısı duymayacakları, severek ve isteyerek ders çalışacakları bir sınav ortamı hazırlayan öğretim elemanlarına / üyelerine ihtiyaç duydukları söylenebilir.

Son olarak öğretmen adaylarının açık uçlu sınavlarda beş, çoktan seçmeli sınavlarda yirmi beş soru sorulmasını ve sınavların süresinin bir saati geçmemesini arzu ettikleri elde edilen sonuçlar arasındadır. Öğrencilerin bu şekilde düşünmelerinde, alan ve alan eğitimi derslerinin sınavlarında hocaların genelde açık uçlu beş soru sormaları ayrıca öğretmenlik meslek bilgisi ve genel kültür derslerinin sınavlarının daha çok çoktan seçmeli 25 soruluk sınavlar şeklinde yapılması ve bu sınavların bir saati geçmemesi etkili olmuş olabilir.

ÖNERİLER

Araştırmanın sonuçları dikkate alınarak yeni araştırmalar için aşağıdaki öneriler sunulmuştur:

1.Öğretmen adaylarının önerilerinden yola çıkarak sınavlarda sessiz ortamların hazırlanması, sınav öncesinde öğrencilerin kopya hazırlayıp hazırlamadıklarının kontrol edilmesi, sınav sırasında araç-gereç yardımının serbest bırakılması ve sınav sonrasında gerekli olması halinde yazılı kâğıtlarının görülmesi sağlanabilir.

2.Bazı öğrencilerin sınavlara üniversite kütüphanelerinde çalıştıkları dikkate alınarak, kütüphanelerin imkânlarının artırılması faydalı olabilir.

3.Öğretim elemanları / üyeleri, sınav kaygısı ile başa çıkma konusunda öğretmen adaylarını cesaretlendirme yoluna gidebilirler.

4.Sınav kaygısı ile başa çıkma bağlamında üniversitelerin rehberlik ve psikolojik danışma bölümü öğretim elemanlarının / üyelerinin ya da son sınıf öğrencilerinin yürütücülüğünde çeşitli grup rehberliği etkinlikleri düzenlenebilir.

5.Öğretmen adaylarının süreç boyunca girdikleri sınavların günlük yaşamın bir parçası olduğuna alışmalarına yardımcı olunabilir. Böylece, adayların sınav kaygısından uzak, motivasyonu yüksek bir şekilde derslerde daha başarılı olmalarına zemin hazırlanabilir.

6.Öğretmen adaylarının spor, sanat ve sosyal etkinliklere ya da öğrenci kulüplerine yönelmeleri sağlanabilir. Bu konularda öğretim elemanlarına / üyelerine ve fakülte yöneticilerine önemli sorumluluklar düşmektedir.

7.Bu çalışmanın sonuçlarına, bir devlet üniversitesinin eğitim fakültesinin ilköğretim matematik öğretmenliği programında öğrenim gören öğretmen adaylarının düşüncelerinden elde edilen bulgularla ulaşılmıştır. Üniversitelerin (devlet-vakıf) farklı ana bilim dallarında (sınıf, okul öncesi öğretmenliği vb.) öğrenim gören öğretmen adayları ile karşılaştırmalı daha kapsamlı araştırmalar yapılabilir.

8.Bu çalışma, sadece öğretmen adayları ile yapılmış olup daha geniş kapsamlı bir inceleme için öğretim elemanlarının / üyelerinin, öğretmenlerin, ortaokul ve ortaöğretim öğrencilerinin görüşleri alınabilir.

9.Öğretmen adaylarının sınav öncesindeki, sırasındaki ve sonrasındaki durumlarını daha iyi ortaya çıkarabilmek için gözlemler yapılabilir.

THE IMAGES OF SCIENTIST ON MIDDLE SCHOOL STUDENTS WHO MAKE PROJECT TO SCIENCE FAIR AND ITS EFFECTS ON THEIR LIVES

Sema AYDIN-CERAN
Millî Eğitim Bakanlığı

Seda ÇAVUŞ-GÜNGÖREN
Giresun Üniversitesi

ABSTRACT: The aim of this study is to determine the images of scientists on middle school students who make project to science fair and its effects on their lives. The research was conducted in the spring term of 2014-2015 academic year in Ankara. It was designed as a case study in qualitative research methodology. Totally 34 students attended to the research. The 17 of them made project in TUBITAK 4006 Science Fair and the other 17 who selected randomly in school did not make a project. Data were collected through DAST (draw a scientist test) test developed by Chambers (1983). Beside this, an open-ended questionnaire which was developed by researchers used to determine students who make project to science fair and its effects on their lives. The results were obtained from comparing two groups' responds. Content analysis was used for the analysis of data. While making content analysis, it was pointed out that the original expressions were used in the determined categories. To ensure the validity and reliability, the data was analyzed on the basis of consensus. The findings were interpreted according to calculation of the repetition frequencies of the specified code in each category. The results showed that students who made project and not made projects have same perceptions on physical properties of the scientists. However, the expression frequencies of the students who made project like "continuously drink coffee, his eyes swollen and a man working hard in its time separation" and "science cannot be an age limit for producing scientific information regarding the age of the people," are take attention. The opinions about scientists produce scientific knowledge and share this information (broadcasting) has only expressed by the students on the project group. According to the result of the experiences in the process of preparation for the science fair showed that there was a positive effect for learning, increased their curiosity towards science, enjoyed them this experience. Beside these, the impact of the project on the career choices of students examined and the majority of the students stated that the project contribute to their career choices.

Key words: The images of scientist, science fair, DAST, science education.

BİLİM FUARINA PROJE ÜRETEN ORTAOKUL ÖĞRENCİLERİNİN BİLİM İNSANI İMAJLARI VE BİLİM FUARININ ÖĞRENCİ YAŞANTILARINA ETKİSİ

ÖZET: Bu araştırmanın amacı bilim fuarına proje üreten ortaokul öğrencilerinin sahip oldukları bilim insanı imajını belirlemek ve kendi yaşantılarına etkisini araştırmaktır. Araştırma 2014-2015 eğitim öğretim yılı ikinci döneminde Ankara'da gerçekleştirilmiştir. Araştırma nitel araştırma metodolojisinden durum çalışması olarak tasarlanmıştır. Çalışma grubu Tübitak 4006 Bilim Fuarı Projesine katılan ve proje geliştiren 17, projede görev almayan ve rastgele seçilen 17 olmak üzere toplam 34 öğrenci oluşturmaktadır. Veri toplama aracı olarak Chambers (1983) tarafından geliştirilen DAST (Bir Bilim İnsanı Çiz) testi kullanılmıştır. Ayrıca bilim fuarına proje hazırlayan öğrencilerin deneyimlerinin kendi yaşantılarına olan etkisini belirlemek için araştırmacılar tarafından hazırlanan açık uçlu sorular kullanılmıştır. Bilim fuarına proje hazırlayan öğrencilerin bilim insanı imajı ve bilim fuarının kendi yaşantılarına etkisi, bilim fuarı hazırlık sürecine katılmayan öğrenciler ile karşılaştırılarak belirlenmiştir. Verilerin analizinde içerik analizi kullanılmıştır. İçerik analizi sırasında var olan kategorilerde, verilen cevap içerisinde belirtilen ifadelerin kullanılmasına özen gösterilmiştir. Geçerlik ve güvenirliğin sağlanması için veriler görüş birliğine dayalı olarak analiz edilmiştir. Her bir kategoride belirlenen kodun tekrarlanma sıklıkları hesaplanarak bulgular yorumlanmıştır. Araştırma sonuçlarında bilim insanının fiziksel özelliklerine ilişkin proje geliştiren ve geliştirmeyen öğrencilerin algıları benzer olmakla birlikte, bilim fuarına katılan öğrencilerin fiziksel özelliklere yönelik; "sürekli kahve içen, gözleri şişmiş ve çok çalışmaktan kendine vakit ayırmayan bir insandır" şeklindeki görüşleri ve "bilim insanının yaşına yönelik bilimsel bilgi üretmede yaş sınırı olamaz" gibi ifadelerinin sıkılığı dikkat çekmektedir. Bilim insanlarının bilimsel bilgi üretmesi ve bu bilgileri paylaşması (yayın yapma) konusundaki görüşler sadece proje grubundaki öğrenciler tarafından ifade edilmiştir. Bilim fuarına hazırlık sürecinde edinilen deneyimin kendi hayatlarına ne kattığı yönündeki görüşleri incelendiğinde ise, fen dersini öğrenmeye yönelik olumlu bir etkisi olduğu, bilime karşı

meraklarının arttığı, bu deneyimin kendilerine keyif, verdiği şeklindeki ifadeleri dikkat çekmektedir. Projenin öğrencilerin meslek seçimlerine etkisi incelenmiş ve öğrencilerin büyük bir çoğunluğunun meslek seçimlerine katkı sağladığını ifade ettikleri belirlenmiştir.

Anahtar Sözcükler: bilim insanı imajı, bilim fuarı, DAST, fen eğitimi.

GİRİŞ

Öğrencilerin bilim insanı hakkındaki imajları fen eğitiminde önemli bir araştırma konusudur (Örneğin: Chambers, 1983; Karaçam, 2016; Cakmakci, Tosun, Turgut, Orenler, Sengul, & Top, 2011; Leblebicioğlu, Metin, Yardımcı, & Çetin, 2011; Kaya, Dogan, & Öcal, 2008; Erten, Kıray, & Şen-Gümüş, 2013). Çünkü bilim insanı algısı öğrencinin bilime olan yaklaşımını ortaya koymada önemli bir ipucu olmaktadır. Diğer bir taraftan bilim insanları da toplumun bilime, biliminde topluma olan algısını oluşturmada önemli bir rol oynamaktadır (Martín-Sempere, Garzón-García, & Rey-Rocha, 2008). Finson (2002)'a göre öğrencilerin sahip oldukları bilim insanı algıları onların bilime ilişkin tutumlarını, kontrol odaklarını, öz yeterlikleri ile kariyerlerini bilimle ilgili alanlardan seçmeleriyle de ilişkilidir. Bu doğrultuda bu çalışmayla bilim fuarlarının bilim insanı algılarına etkisini değerlendirmek araştırmacıların sonuçlarına paralellik gösterip göstermediğini belirlemek ve benzer çalışmalara yön vermek amaçlanmıştır.

Bilim fuarları öğrencilerin ilgi alanlarına göre belirledikleri araştırmaları yapmaları ve araştırmalarının sonuçlarını sergileyebilecekleri, kendileri ve izleyiciler için eğlenerek öğrenebilecekleri bir ortam oluşturmayı amaçlamaktadır (Türkiye Bilimsel ve Teknolojik Araştırma Kurumu [TÜBİTAK], 2016). Bu süreçte öğrenciler oldukça aktif katılımla çalışmalarını sürdürmek zorundadır. Bunun amacı bir anlamda yapılandırmacı yaklaşımın ön gördüğü yaparak yaşayarak kalıcı öğrenmeler yaşamasını sağlamaktır. Gerber, Cavallo ve Marek (2001), bilgiyi edinme süreci içerisinde bireyler ne kadar çok aktif olursalar, o kadar kısa sürede kalıcı öğrenmeleri gerçekleştirebileceklerini belirtmişlerdir. Bozdoğan (2007) özellikle ilköğretim düzeyinde edinilen bilgilerin, somut olarak sunulması, yapılan çalışmalarda bireylerin kalıcı öğrenmelerine daha çok etkisinin olduğunu ortaya koyduğunu ifade etmiştir. Jeffs ve Smith, (2005), informal ortamlarda, bilinçli bir şekilde, doğal öğrenmelerin gerçekleştiğini ve bireylerin "ne öğrendiklerini" keşfetmeleri konusunda cesaretlendirici bir rol üstlendiğini belirtmiştir. Ancak okulların sahip oldukları olanaklar belirli sınırlar içerisinde kalmaktadır. Bu nedenle okuldaki eğitime ek olarak hazırlanacak informal öğrenme ortamları; öğrenme için gerekli olan desteğin yanı sıra, kendini ifade edebilme, özgüven, akran iletişimi gibi sosyal becerileri arttırması ve bilginin sosyal etkileşimle kazanılmasına da imkân sağlamaktadır (Doğan, Çavuş, & Güngören, 2011; Bozdoğan, 2007; Gerber, Cavallo, & Marek, 2001). Yaşar ve Baker (2003) eğitimcilerin, bilim fuarlarındaki uygulamaların öğrencilerin bilgi, beceri ve tutumlarını gelişimleri ile gelecekte başarılı bir kariyer oluşturmalarını sağlayacak en iyi yol olarak gördüklerini ifade etmiştir. Bu doğrultuda bilim fuarlarının bireylerin bilim insanını algılamadaki etkilerini incelemek gerekmektedir.

Bilim insanı imgesi/algısı/imajı kavramı ilk olarak 1957 yılında Mead ve Metraux tarafından araştırılmaya başlanmıştır. Daha sonraki yıllarda yazılı doküman hazırlama tekniğiyle birlikte Likert tipi ve anlamsal farklılık ölçekleri geliştirilerek öğrencilerin bilim insanı algıları betimlenmeye çalışılmıştır (Karaçam, 2016). 1980'li yıllara gelindiğinde ise Chambers (1983), Mead ve Metraux(1957)'un sonuçlarını temel alarak Bir Bilim İnsanı Çiz Testi (Draw –A Scientist Test - DAST) isimli ölçeği geliştirmiştir (Toğrol Yontar, 2000). Bu ölçek çok sayıda araştırmacı tarafından farklı yaş gruplarındaki katılımcıların bilim insanına yönelik imajlarını belirmede kullanılmıştır. Chambers, Amerika Birleşik Devletleri, Avusturalya ve Kanada'dan 4807 okul öncesinde beşinci sınıfa kadar okuyan çocuk üzerinde yaptığı araştırmasında, bilim insanlarının genellikle *erkek, laboratuvar önlüklü, gözlüklü, sakallı, dağınık saçlı, deney malzemeleri ile meşgul kişiler* olarak algılandıklarını belirlemiştir (Ağgül Yalçın, 2012). Chambers (1983) araştırmasını farklı sınıf düzeyi, cinsiyet gibi değişkenlerle de ilişkilendirerek sunmuştur.

Karaçam (2016) çalışmasında, bilim imajına ilişkin alanyazınındaki çalışmaları bazı değişkenlerle arasındaki ilişkiyi incelemelerine göre sınıflandırmıştır. Buna göre cinsiyet, öğrenim düzeyi, kültür, öğrenim alanı, sosyo-ekonomik düzey gibi değişkenlerle bilim insanı imajı arasındaki ilişkiler araştırmacılarca incelenmiş araştırma alanlarıdır (Karaçam, 2016). Bunun yanında bazı araştırmacılar ise ders kitapları (Karaçam, Aydın, & Digilli, 2014), bilim kampı (Leblebicioğlu ve diğ., 2011), üstün yetenekli öğrenciler (Bayri, Köksal, & Ertekin, 2016), kanıt temelli uygulamalar (Çakmakçı ve diğ., 2011) gibi araştırmalarla da katılımcıların bilim insanı imajını belirlemeye çalışılmıştır. Ancak bilim fuarına katılan öğrencilere yönelik çalışmalara erişilen alanyazınında bilim insanı imajına yönelik çalışmalara rastlanmamıştır. Bu araştırmanın amacı da bu konuya eğilerek yeni çalışmalara ve araştırmacılara ışık tutmaktır. Araştırmanın problem cümlesi "Bilimsel faaliyetlerin (Bilim Fuarı) ortaokul öğrencilerinin sahip oldukları bilim insanı imajına ve kendi yaşantılarına etkisi nasıldır?" olarak belirlenmiştir.

YÖNTEM

Araştırma Modeli

Bilimsel faaliyetlerin bilim insanı imajı ve öğrenci yaşantılarına etkisini belirlemeyi amaçlayan bu araştırma, 2014-2015 eğitim öğretim yılı ikinci dönemi boyunca Ankara'da bir ortaokulda gerçekleştirilmiştir. Araştırma nitel araştırmalardan durum çalışması olarak tasarlanmıştır. Yin durum çalışmasını "güncel bir olgunun gerçek yaşam bağlamında, özellikle bağlam ve olguların sınırlarının kesin olarak belli olmadığı durumlarda görgül olarak araştırılması" şeklinde ifade etmektedir (Yin, 1994 s.13 akt. Merriam, 1998, s.27).

Çalışma Grubu

Çalışma grubunu Tübitak 4006 Bilim Fuarı Projesi kapsamında çalışan ve bu süreçte proje geliştiren 17 öğrenci ile aynı okulda öğrenim gören ancak proje kapsamında yer almayan ve rastgele seçilen 17 olmak üzere toplam 34 ortaokul öğrencisi oluşturmaktadır. Öğrenciler 5-8. sınıf aralığında farklı sınıf seviyelerinde öğrenim görmektedir ve yaşları 11 ile 14 arasında değişmektedir.

Veri Toplama Araçları ve Verilerin Analizi

Veri toplama aracı olarak Chambers (1983) tarafından geliştirilen DAST (Bir Bilim İnsanı Çiz) testi kullanılmıştır. DAST, öğrencilerin bilim insanlarına yönelik tutumları hakkında bilgi sağlamak için hazırlanmış açık uçlu bir testtir. Çalışmada öğrencilerden "bilim insanı" denince zihinlerinde canlanan resmi çizmeleri istenmiştir. DAST'ın geçerliği öğrencilerin çizdikleri bilim insanı resmine yönelik sorulan destekleyici ve detaylandırıcı sorular ile sağlanmıştır. Bununla birlikte projede çalışan öğrencilerin deneyimlerinin kendi yaşantılarına olan etkisini belirlemek için araştırmacılar tarafından hazırlanan açık uçlu sorular yoluyla da veri toplanmıştır. Öğrencilerin favori bilim insanlarını belirlemek amaçlı bir soruya da yer verilmiştir. Verilerin analizinde içerik analizi kullanılmıştır. İçerik analizinin amacı okuyucuya benzer ifadelerin bir araya getirilerek daha anlamlı sunulmasını sağlamaktır (Yıldırım, & Şimşek, 2006). İçerik analizi sırasında kategorilerde anlamsal kaymalara neden olmamak için, verilen cevap içerisinde belirtilen ifadelerin kullanılmasına özen gösterilmiştir. Geçerlik ve güvenirliğin sağlanması için de araştırmacılar arasında görüş birliğine dayalı analize özen gösterilmiştir. Bunun sonucunda her bir kategoride belirlenen kodun tekrarlanma sıklıkları hesaplanmış ve buna göre bulgular yorumlanmıştır.

BULGULAR

Bilim İnsanının Fiziksel Özelliklerine İlişkin Bulgular

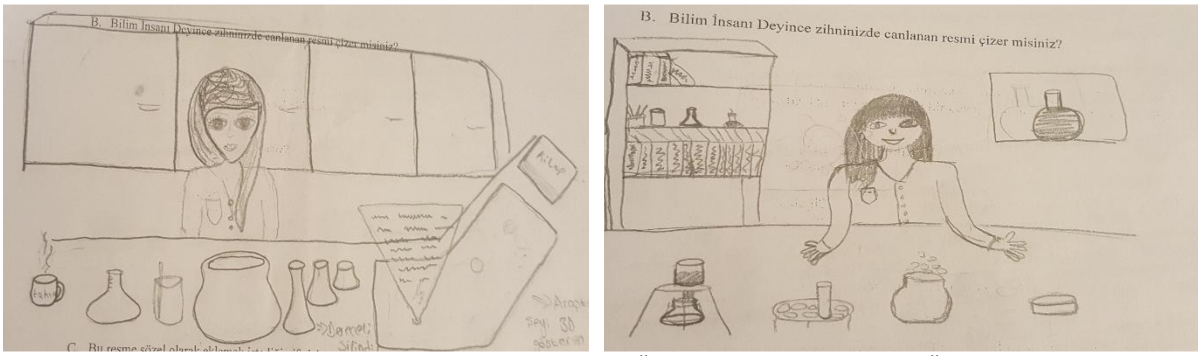
Bilim insanının fiziksel özelliklerine ilişkin proje geliştiren ve geliştirmeyen öğrencilerin bilim insanının "Laboratuvar Önlüklü ve gözlüklü" olması bakımından algılarının benzer olduğu gözlenmiştir. Proje geliştirmeyen grupta bilim insanının kirli, kötü kokan ve dağınık kıyafetler giydiğine, saçlarının dağınık ya da kabarık ve sakallı olduğuna ilişkin bulguların sıklığı dikkat çekmektedir. Bununla birlikte proje geliştiren öğrencilerin bilim insanının fiziksel özellikleri; rahat kıyafetler giyen, gözlüklü ve sakalsız olduğu belirlenmiştir. Ayrıca bu öğrenciler bilim insanlarını sürekli kahve içen, gözleri şişmiş ve çok çalışmaktan kendine vakit ayıramayan bir insandır şeklindeki görüşleri dikkat çekmektedir.

Bilim İnsanın Yaşına İlişkin Bulgular

Bilim fuarına proje geliştirmeyen grupta yer alan öğrencilerden bilim insanının yaşının 60 ve üzerinde olduğunu ifade eden öğrencilerin oranının yüksek olduğu gözlenmiştir. Bununla birlikte proje geliştiren öğrencilerin bilim insanının yaşına yönelik "*yaşla ilgili değil yeter ki bilimsel bilgi üretsin", "bilimin yaşı olmaz", "yaş sınırı yoktur kendine güvenen başarabilirim diyen herkes bilim insanı olabilir", "yaş sınırlaması olmaz"* gibi ifadeleri sık kullandıkları belirlenmiştir.

Bilim İnsanının Cinsiyetine İlişkin Bulgular

Proje geliştirmeyen grupta yer alan 17 öğrenciden 16'sı, bilim insanının cinsiyetini "erkek" olarak ifade etmiştir. Proje geliştiren grupta yer alan 17 öğrencinin 12'si ise bilim insanının cinsiyetini "kadın", 5'i "erkek" olarak ifade etmiştir. Aşağıda bazı öğrencilerin çizimlerine yer verilmiştir.



Şekil 1. Proje Grubunda Yer Alan Bazı Öğrencilerin Çizimlerine Örnekler

Bilim İnsanının Kullandığı Bilimsel Araçlara İlişkin Bulgular

Proje geliştiren grupta bilim insanının kullandığı araç gereçlere yönelik verilen örneklerin oldukça çeşitli olduğu (beherglas, koruyucu gözlük, deney tüpü, güç kaynağı, sac-sac ayağı, kitap-ansiklopedi, bilgisayar, laptop vb., 3D hologram, ispirto ocağı, erlen, dereceli silindir, balon joje, kimyasal madde, DNA modeli, atom modeli, termometre, plazma küresi, mikroskop, mıknatıs) gözlenmiştir. Ancak proje geliştirmeyen gruptaki öğrencilerin ise yalnızca "beher, mikroskop, deney tüpü, teknolojik aletler" gibi araçları çizmiş ya da ifade etmiş oldukları ve örneklerin sınırlı çeşitlilikte olduğu belirlenmiştir.

Bilim İnsanının Uğraştığı İşlere İlişkin Bulgular

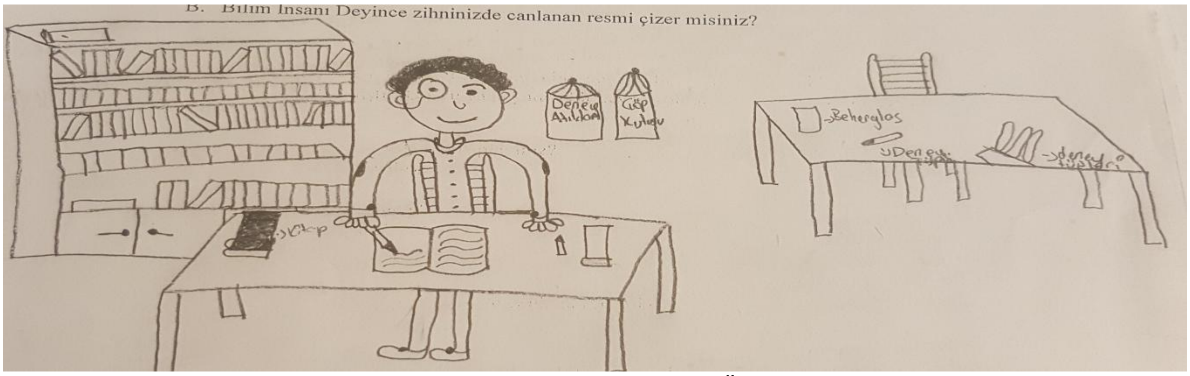
Bilim insanlarının uğraştığı işlere ilişkin elde edilen bulgular Tablo 1'de sunulmuştur.

Tablo 1. Bilim İnsanının Uğraş Alanına Yönelik Öğrenci Görüşlerinin Dağılımı

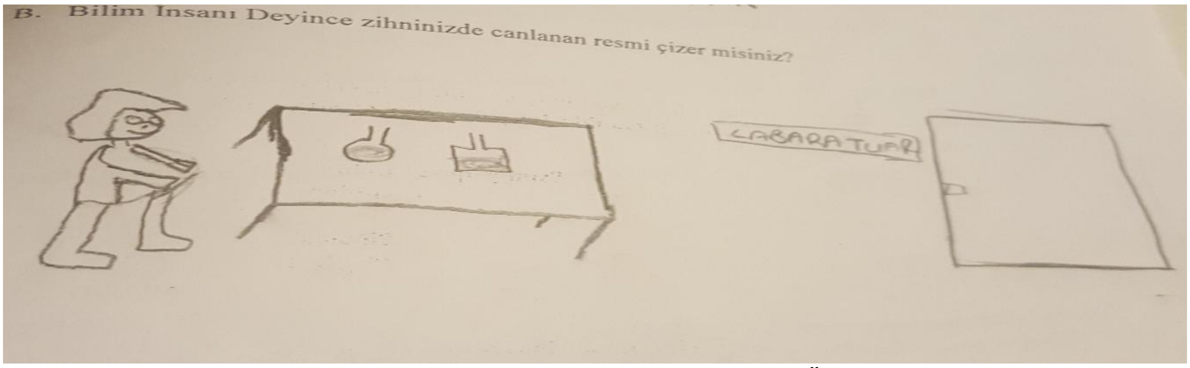
Uğraş alanı	Proje Geliştiren Grup (f)	Proje Geliştirmeyen Grup (f)
Deney	5	6
Araştırma	5	2
Bilimsel bilgi üretir (teori, kanun..)	4	-
Yayın yapar	1	-
Bilinmeyeni bulmaya çalışır	3	-
Fen bilimleri / Bilim	1	7
İcat	5	3
Teknoloji	1	2
Laboratuvar	1	1
Hayvanlar	1	-
İnsan hayatı (yararlı işler)	4	3
Doğa	1	-
Dünya	1	-
Sürekli çalışır	1	-
Keşif yapar	2	-
Proje	1	-
Toplam	**37**	**25**

Öğrencilerin bilim insanlarının hangi işlerle uğraştıklarına yönelik görüşleri incelendiğinde proje geliştiren öğrencilerin bu konuda daha fazla görüş belirttikleri belirlenmiştir. Her iki grup tarafından da bilim insanlarının daha çok deney ve araştırma yaptığı ifade edilmiş olmakla beraber, bilim insanlarının en önemli görevi olan bilimsel bilgi üretmesi ve bu bilgileri paylaşması (yayın yapma) konusundaki görüşler sadece proje geliştiren öğrenciler tarafından ifade edilmiştir.

Proje geliştiren gruptaki öğrenciler tarafından ifade edilen bilinmeyeni bulmaya çalışma, hayvanlar, doğa, dünya, proje, keşif yapma ve sürekli çalışma kategorileri proje geliştirmeyen öğrenciler tarafından ifade edilmemiş ayrıca bu öğrencilerin büyük bir çoğunluğu kendilerine yöneltilen soru kökünden etkilenerek bilim cevabını verdikleri belirlenmiştir. Öğrenciler bilim insanlarının teknologlar gibi icatlar yaptıklarını da belirtmişlerdir. Buna paralel olarak proje geliştiren gruptan 1, proje geliştirmeyen gruptan ise 2 öğrenci bilim insanlarının teknolojiyle uğraştıklarını belirtmiştir.



Şekil 2. Proje Grubunda Yer Alan Bir Öğrencinin Çizimi



Şekil 3. Proje Geliştirme Sürecinde Yer Almayan Bir Öğrencinin Çizimi

Favori Bilim İnsanına İlişkin Bulgular

Öğrencilerin favori bilim insanlarına yönelik görüşleri Tablo 2'de sunulmuştur.

Tablo 2. Öğrencilerin Favori Gösterdikleri Bilim İnsanlarının Proje Geliştiren ve Geliştirmeyen Gruplara Göre Dağılımı

Bilim insanı	Proje Geliştiren Grup (f)	Proje Geliştirmeyen Grup (f)
Einstein	11	14
Edison	7	6
Graham Bell	6	1
Lemark	1	
Mendel	1	1
Newton	2	
Leonardo Da Vinci	2	
Democritus	2	
Darwin	1	
Pastör	1	
Rutherford	1	
Madame Cruie	1	
Steve Jops	1	
Stephen Hawking	1	
Öğretmenim	2	
Toplam	40	22

Öğrencilerin favori bilim insanları incelendiğinde % 40'ının Einstein'ı favori gösterdiği belirlenmiştir. Daha sonra en çok favori olarak gösterilenler ise Edison ve Graham Bell olmuştur. Ayrıca proje geliştiren grupta favori olarak gösterilen bilim insanlarının çeşitliliği dikkat çekmekle birlikte 2 öğrenci kendi ders öğretmenini de favorisi olan bilim insanlarına dâhil etmiştir. Sanata olan katkılarıyla tanınan Da Vinci'de proje geliştiren öğrenciler tarafından favori gösterilmiştir.

Bilim Fuarına Proje Geliştirmenin Öğrenci Yaşantısına Katkısına İlişkin Bulgular

Bu araştırmanın ikinci problemi bilim fuarına katılarak proje hazırlayan öğrencilerin bu deneyimlerinin kazanımlarını belirlemektir. Bu doğrultuda bu deneyimin kendi hayatlarına ne kattığı yönünde görüşleri sorulmuştur. Elde edilen bulgular Tablo 3'te sunulmuştur.

Tablo 3. Bilim Fuarının Öğrencinin Kendi Yaşantısına Etkisine Yönelik Görüşler

Kategoriler	f
Fen öğrenmeye olumlu katkı	3
Bilime karşı merakın artması	3
Keyif /heyecan/Mutluluk	3
Bildiklerimi anlatma/gösterme	2
Hayatın içinde bilimi görme	2
Tecrübe	1
Öğrendiklerini hayatta kullanma	1
Kendini değerli hissetme	1
Eğlendim	1
Fen dersine bakış açısının değişmesi	1
Bilime bakış açısının değişmesi	1
Daha çok öğrenmeliyim	1
Özgüven artışı	1
Meslek seçimi	1

Öğrenciler fen dersini öğrenmeye karşı *olumlu* bir etkisi olduğunu belirtmişlerdir. Ayrıca bilime karşı *meraklarının arttığını*, bu deneyimin kendilerine *keyif, heyecan ve mutluluk verdiğine* dikkat çekmişlerdir. Bunun yanında *bilimi hayatın içerisinde farkına varmalarını* ve *öğrendikleri bilgilerini kendi hayatlarına uygulamak* için sabırsızlandıklarını belirten öğrenciler olmuştur. Bilim fuarının öğrencilerin *kendi bilgilerini başkalarına anlatma* ve *bildiklerini gösterme* fırsatı da sağladığı ifade edilmiştir. Bu konuda *tecrübe kazandığını, kendini değerli hissettiğini, özgüvenin arttığını* ve *eğlendiğini* belirten öğrenciler de olmuştur. Bir öğrenci *fen dersine karşı bakış açısının değiştiğini* ifade ederken başka bir öğrenci ise *bilime karşı bakış açısının değiştiğini* ifade etmiştir. Bir öğrenci de *meslek seçimine katkı* sağladığını belirtmiştir.

Projenin öğrencilerin meslek seçimlerine etki edip etmediği de sorgulanmıştır. Buna göre öğrencilerin büyük bir çoğunluğu etkilediğini belirtirken, bir öğrenci etkilemediğini, iki öğrencinin de bu soruya cevap vermedikleri tespit edilmiştir. Etkilediğini belirten öğrencilerden üçü doktor olmaya karar verdiğini de ifade etmiştir. Bir öğrenci laboratuvarda araştırma yapabileceği bir meslek istediğini ifade etmiştir.

SONUÇ

Yeni kuşağın kariyerini bilim ve mühendislik gibi alanlara yönlendirmede doğru bilim ve bilim insanı imajına sahip olması gerekmektedir (Ambusaidi, Al-Muqeemi, & Al-Salmi, 2015). Bunu başarmak için ise doğru programlanmış bir öğrenme ortamı ve öğretmen önemli bir rol üstlenmektedir. Bu doğrultuda bilim fuarı gibi informal bir öğrenme ortamı oluşturmak öğretmenlerin ödevlerindendir. Ülkemizde özellikle TÜBİTAK tarafından 4006 koduyla öğretmenlerin desteklendiği bilim fuarı projeleri giderek artış göstermekte ve farklı eğitim seviyelerinde (ilkokul, ortaokul, lise) öğretmenlerce planlanmaktadır. Bu araştırmanın amacı da bu proje kapsamında gerçekleştirilen bilim fuarının ortaokul öğrencilerinin sahip oldukları bilim insanı imajına ve kendi yaşantılarına etkisini araştırmaktır. Bireylerin bilim insanı algılarını tespit etmeye yönelik farklı ülke, çalışma grubunda yapılan çalışmalar oldukça farklı değişken barındırmasına karşın aslında bireylerin birbirine benzer algılara sahip olduklarını göstermiştir. Genelde bilim insanını beyaz önlüklü, gözlüklü, kimyasal maddeler ve malzemelerle çevrili laboratuvar, çalışma odası veya mağara gibi kapalı ortamlarda yalnız çalışan bir erkek tanımladıklarını belirtmişlerdir (Karaçam, 2016). Bu araştırmada da benzer fiziksel özellikler hem proje geliştiren hem de geliştirmeyen öğrenciler tarafından belirtilmiştir. Ancak proje geliştirmeyen öğrenciler tarafından daha çok kullanılması dikkat çekmektedir.

Bilim insanının cinsiyetine ilişkin yapılan çalışmalar incelendiğinde bireylerin bilim insanını zihinlerinde daha çok "erkek" olarak canlandırdığını göstermektedir (Yontar, 2000; Chambers, 1983; Flick, 1990; Nuhoğlu & Afacan, 2011; Demirbaş, 2009). Ancak bu çalışmada proje geliştiren grupta yer alan öğrencilerin çoğunun bilim insanını "kadın" olarak resimlemeleri dikkat çekmektedir. Bu durumun projeyi yürüten öğretmenin kadın olmasından kaynaklanabileceği düşünülmektedir. Bu sonuç öğretmenin öğrenci yaşamındaki etkisi ve öğrenciye bakış açısı kazandırmadaki etkin rolü bakımından önem taşımaktadır. Alanyazında bilim insanın yaşına yönelik öğrencilerin algılarının genellikle orta yaş ve üzeri olduğu gözlenmektedir (Kara &Akarsu, 2013; Erdoğan-Camcı, 2013; Song & Kim, 1999; Korkmaz & Kavak, 2010). Araştırmada proje geliştiren öğrencilerin genel olarak herhangi bir yaş aralığı ifade etmektense bilimsel bilgi üretmede yaş sınırının olmayacağına yönelik yapmış oldukları yorumlar, ön plana çıkmaktadır. Ayrıca bu durum bilimsel bir faaliyetin içinde aktif olarak yer almanın ve bilimsel bilgi üretmenin o yaş seviyesinde de gerçekleştirilebileceğine olan inancın ve öz yeterliğin bir göstergesi olabileceği düşünülmektedir.

Yaşar ve Baker (2003) birçok çocuğun bilime olan ilgisinin bilim fuarında edindikleri tecrübelerden kaynaklandığını belirtmişlerdir. Ayrıca bilim fuarlarının öğrencilerin oldukça eğlendikleri yeni şeyler öğrendikleri ortam olarak görüldüğünü ifade etmişlerdir. Bu araştırmadaki sonuçlarda Yaşar ve Baker'in (2003) çalışmasını destekler niteliktedir. Öğrenciler bilime dair tecrübe kazandıklarını, hayatın içinde bilimi görme ve bileme karşı merakın artması, keyif, heyecan ve mutluluk gibi ifadeleri kullandıkları belirlenmiştir. Ayrıca bir bilimsel faaliyet içinde yer alan öğrencilerin bilim insanının kullandığı araçlara göstermiş oldukları çizimlere dair örneklerin çeşitliliği de bilim fuarında edinilen deneyimi ortaya koymaktadır.

Öğrencilerin bilim insanının uğraş alanı ile ilgili açıklamaları incelendiğinde proje geliştiren öğrencilerin daha çeşitli uğraş alanları ifade ettiklerini göstermektedir. Bilim insanlarının en çok "deney ve araştırma" yaptığı her iki grup tarafından da belirtilmiştir. Ağgül ve Yalçın'ın (2012) öğretmen adaylarıyla gerçekleştirmiş olduğu çalışmada "deney yapma, düşünme, gözlem yapma ve araştırma-inceleme yapma" yine yaygın bilim insanı aktivitesi olarak ifade edildiği belirlenmiştir. Araştırmanın bu bulguları Buldu (2006), Song ve Kim (1999)'in araştırma sonuçlarıyla da paralellik göstermektedir. Ancak bu araştırmalardan farklı olarak öğrencilerin bilimsel bilgi üretimine olan dikkatleri olmuştur. Bilim insanlarının en önemli görevi olan bilimsel bilgi üretmesi ve bu bilgileri toplumla paylaşması konusundaki görüşlerin sadece proje deneyimi yaşayan öğrenciler tarafından ifade edilmesi oldukça dikkat çekici bir sonuç olarak değerlendirilmektedir. Bu durumun bilim fuarı sırasında hazırladıkları projeleri rapor olarak sunmaları ve kendilerini bilim insanları ile özleştirmiş olmalarından kaynaklandığı düşünülmektedir.

Bireylerin favori bilim insanlarına yönelik araştırmalar incelendiğinde Ağgül-Yalçın'ın (2012) yapmış olduğu bir çalışmada en çok saygı duyulan bilim insanı olarak öğretmen adayları Einstein'ı görürken bunu Edison ve İbn-i Sina izlemektedir. Yine Nuhoğlu ve Afacan'ın (2013) ilköğretim öğrencilerinin bilim insanına yönelik düşüncelerinin değerlendirildiği çalışmalarında Edison, Demirbaş'ın (2009) araştırmasında ise Einstein favori bilim insanı olarak gösterilmiştir. Bu araştırmada benzer bir sonuç izlenmiştir. Öğrenciler en çok favori bilim insanı olarak Einstein'ı belirtmiş, onu Edison izlerken üçüncü sırada Graham Bell yer almıştır. Bu sonuçlar alanda yine favori bilim insanını araştıran araştırmalarla paralellik göstermektedir (Song & Kim, 1999). Bununla birlikte proje grubunda yer alan öğrencilerin favori gösterdikleri bilim insanlarının çeşitliliği proje geliştirme sürecinin araştırma ve sorgulama bağlamında öğrenciye katkısı açısından önemli olduğu düşünülmektedir. Ayrıca proje grubunda yer alan öğrencilerin favori bilim insanı olarak kendi öğretmenlerini göstermeleri yine öğretmenin öğrenci yaşamında en önemli rol modellerden biri olduğunu kanıtlar niteliktedir.

Araştırma sonuçları bilim fuarı projesinde görev almanın fen öğrenmeye, bilime bakış açısının değişmesi gibi olumlu katkılarının olduğunu göstermiştir. Bilim fuarına katılan öğrencilerin bu sürecin meslek seçimlerine katkı sağladığını ifade ettikleri belirlenmiştir. Bun karşın Yaşar ve Baker (2003), tüm bilim fuarlarının başarıyla sonuçlanmadığının da altını çizmiştir. Bazı öğretmenler öğrencilerin yapmış oldukları çalışmalarda akademik bir yarışmaya dönüştürdüğünü ve öğrencilerin yarışma içinde olmalarını sağladıklarını belirtmiştir. Bu durum ödül ya da yüksek puan kazanamayan öğrenciler için bilim fuarının hayal kırıklığına uğramasına neden olacaktır. Bu bağlamda bu türde araştırmalar yürütülürken önceliğin projenin başarıya ulaşmasından çok öğrencinin bilime yönelik tutumunu ve motivasyonunu artırmak ve sürecin öğrenci yaşamında bilimi sevdirmek adına bir pencere açmak olduğu unutulmamalıdır.

ADVANCED EDUCATION TECHNOLOGY: VIRTUAL REALITY SIMULATION FOR MARINE FIRE FIGHTING TRAINING

Yalçın DURMUŞOĞLU
Istanbul Technical University, Department of Marine Engineering

Gazi KOÇAK
Istanbul Technical University, Department of Marine Engineering

ABSTRACT: There are mandatory education programs for safety of life at sea. One of these programs is fire-fighting training on board ship. The fire-fighting training is an applied training which necessarily consists of basic and advanced levels. Because it is applied training, it has some advantages and also some disadvantages. In the applied fire training a real fire is started and real fire extinguisher is used. That's why these trainings are very expensive, harmful to human health and environment and have risk for human life. The developing technologies are promising to eliminate these disadvantages. One of these technologies is virtual reality. It is possible to simulate realistic environment and make the trainings very close to real fire-fighting using virtual reality glasses and some other equipment such as heat generator, breathing apparatus, fireman outfits etc. Thus, the trainers will realistically feel the fire while the risk for human life and damage to environment will be eliminated. Besides, the training expenditures will be reduced because the real equipment is not used. Even more, it is possible to simulate different environments and scenarios for different types of ships and different fire types. In this study, the fire-fighting training of seafarers is inspected and the contribution of virtual reality technology to these trainings is discussed.

Key words: environment, marine, risk, virtual reality, fire training

İLERİ EĞİTİM TEKNOLOJİSİ: GEMİLERDE YANGINLA MÜCADELE EĞİTİMİNDE SANAL GERÇEKLİK SİMÜLASYONU

ÖZET: Gemilerde can güvenliği ile ilgili zorunlu eğitimler mevcuttur. Bu eğitimlerden biri gemilerde yangın eğitimleridir. Gemilerde yangın eğitimleri uygulamalı eğitimler olup, temel ve ileri düzeyde verilmesi uluslararası bir zorunluluktur. Bu eğitimlerin uygulamalı olmasının avantajları olduğu gibi bazı dezavantajları da vardır. Uygulamalı eğitimlerde gerçek yangın çıkarılmakta ve gerçek yangın söndürücüler kullanılmaktadır. Bu nedenle bu eğitimler çok pahalı, çevreye ve insana zararlı ve insan hayatı açısından riskli hale gelmektedir. Yeni gelişen teknolojiler bu dezavantajları ortadan kaldırabilecek potansiyele sahiptir. Bunlardan biri sanal gerçeklik teknolojisidir. Sanal gerçeklik gözlükleri ve ekstra donanımlar (ısı, solunum cihazı, yangın giysisi vs.) kullanılarak oluşturulacak ortamlarda gerçeğe yakın eğitimler vermek mümkündür. Bu sayede öğrencilerde gerçek bir yangın hissi oluşturulurken kendilerine gelebilecek sağlık ve hayati riskler ortadan kaldırılmış ve çevreye hiçbir zarar verilmemiş olacaktır. Bunun yanında yangın malzemeleri kullanılmadığı için eğitim maliyetlerinde ciddi bir düşüş olacaktır. Ayrıca simülasyon ile çok farklı ortamlar ve senaryolar geliştirilerek farklı tipteki gemilere ve farklı yangın tiplerine göre senaryolar oluşturmak mümkün olacaktır. Bu çalışmada gemi adamlarının yangın eğitimi incelenerek sanal gerçeklik ortamının bu eğitime kazandıracağı avantajlar ele alınmıştır.

Anahtar sözcükler: çevre, gemi, risk, sanal gerçeklik, yangın eğitimi

GİRİŞ

Günümüzde konusu ve kapsamı eğitim olan her disiplin için teknolojiden yararlanmak artık bir zorunluluk olmuştur. Çağımız dijital çağ olarak anılmaktadır. Başarı için sürdürebilirlilik çok önemli bir kavramdır ve her sektörde olduğu gibi eğitim sektöründe de geçerliliği olan bir olgudur. Rekabet yalnızca endüstriyel sahalarda değil aynı zamanda eğitim sahalarında da geçerlidir ve hatta denilebilir ki, eğitim sektörü en başta gelmektedir. Dünyamız kabuk değiştiriyor ve tam anlamıyla dijital gençlik ya da nesil yetişiyor. Elbette bunlara kayıtsız kalınamaz. Bu nedenle eğitim artık bir sektör olmuştur. Modern dünyanın teknolojide hızla yol alması karşısında eğitim bilimlerinin buna kayıtsız kalması düşünülemez. Teknoloji, yetişen yeni nesillerin en önemli materyalleridir. Dolayısıyla teknoloji ve eğitim bir bütündür.

Sanal gerçeklik aslında insanoğlunun doğal hayatı içerisinde yabancı olmadığı bir durumdur. Rüyalar aslında sanal alemde yaşadıklarımızdır. Hiçbir insan rüyalarını kontrol edemez. Ancak insan eliyle oluşturulabilecek bir sanal gerçeklik ortamları daha kontrol edilebilir ortamlar olabilir. Bunun için ileri teknolojiler gereklidir. Bu sayede sanal gerçeklik ortamları ile istenilen simülasyonlar gerçekleştirilerek her türlü amaca uygun şekilde kullanılmaları sağlanabilir. Günümüzde tıptan, askeri amaçlara, eğitimden eğlence sektörüne kadar geniş yelpazede kendine kullanma alanları bulmuş olan sanal gerçeklik ortamları aslında onlarca yıl öncesinde keşfedilmişlerdir.

Sanal gerçeklik alanında ilk çalışma 1962 yılında Mortan Heilig tarafından yapılmıştır [1]. İnsanın tüm duyu organları ile bir tiyatro oyununu hissetmesini hayal ediyordu ve bunu ilk icadı olan Sensorama adlı bir makinesi ile başarmıştı. Makine geniş açılı üç boyutlu stereoskobik görüntü, vücut sarsma mekanizması, stereo ses çıkışı ve aromatik koku salınım yapan özelliklere sahipti. Sensorama, geliştirildiği yıl itibariyle izleyiciyi ortamın içine çekebilecek her türlü donanıma sahipti. Ancak Heilig yeteri kadar finansal destek bulamadğı için ilk düşü olan Sensorama' yı tozlu raflara kaldırmak zorunda kalmıştı.

Günümüzün sanal gerçeklik ortamlarına çok benzeyen çalışma ise 1968 yılında Amerikalı bir bilgisayar mühendisi olan Ivan Sutherland ve öğrencisi Bob Sproull tarafından yapılmıştı. Çalışmaları görüntünün çift mercekli bir dürbün yardımıyla bir ekrana aktarıldığı ve çok ağır olan bir kasktan oluşmaktaydı. Kask ağır olduğu için tavandan asılı bir donanım ile kontrol edilebilmekteydi ve bu nedenle bu buluşlarına "The Sword of Damocles" adını vermişlerdi. Sword of Damocles, sunduğu arayüz ve gerçeklik algısı bakımından günümüz kasklarıyla karşılaştırıldığında ilkel bir izlenim yaratsa bile modern kasklı ekranların gelişiminde önemli bir kilometre taşı olmuştur.

Sanal gerçeklik kavramı, tarihsel gelişim süreci içerisinde üretilen cihazların hiçbiri günümüzdeki anlamında kullanılmıyordu ve ilk olarak 1987 yılında klasik müzik yazarı ve aynı zamanda bir bilgisayar uzmanı olan Jaron Lanier tarafından ortaya atılmıştı. Benzeri özelliklere sahip cihazlar bu kavramın ortaya atılmasından sonra bir ünvan edinmiş oldular. İlerleyen yıllar içerisinde bilgisayar sektörü ve oyun programlarının hızla gelişim gösterdiği yıllar olduğundan sanal gerçeklik ortamları ile ilgili çalışmalarda artmaya başlamıştır. Virtual Boy, 1995 yılında geliştirilmiş ve üç boyutlu görüntü sağlayan ilk mobilize oyun konsolu olarak karşımıza çıkmaktadır. Bu oyun konsolu, fiyatının pahalı olması, uzun süre kullanımının yorucu olması ve kötü pazarlama sebebiyle piyasada fazla tutunamamıştır.

Son yıllarda yeniden gözde olmaya başlayan ve popülerliği hızla artan sanal gerçeklik teknolojisi kullanım kolaylığı, esnek ara yüzü, ucuz olması ve son derece basit yapılı olmaları ile göze çarpmaktadır. Özellikle sanal gözlükler ile oyun alanında çok önemli aşamalar kaydedilmiştir. Bu özellikleri ile sanal gerçeklik yalnızca eğlence sektöründe değil aynı zamanda eğitim sektörünün de ilgi odağı olmaktadır. Sanal gerçeklik ortamlarla eğitim daha ilgi çekici, daha eğlenceli ve bilgilerin, öğrencilerin sanal olarak oluşturulan ortamlarda interaktif etkileşimde bulunmasından dolayı, daha kalıcı ve net bir şekilde aktarımı söz konusu olabilmektedir. Yani bilgiyi edinme süreleri öğrenme sürelerinin artmasından dolayı kısalmaktadır. Özetle sanal gerçeklik ortamları ile eğitim materyallerinin geliştirilmesi ve öğrenim hayatına adapte edilmesi oldukça kolay ve etkili bit yol olacaktır.

Bu bildiride geleceğin gemi kaptanı ve gemi makineleri işletme mühendislerinin yetiştirildiği İTÜ Denizcilik Fakültesinde yer alan yangın eğitim merkezinin teknolojik modernizasyonu ve eğitimin teknolojik araç ve gereçlerle nasıl geliştirilebileceği ile ilgili araştırmaların sonuçlarına yer verilmiştir. Sanal gerçeklik ortamları ile gemi adamlarının temel ve ileri yangın eğitimlerinde kullanılmasının önemine vurgu yapılmış ve uygulanabilir bir yöntemden söz edilmiştir. Böylece daha ucuz, daha güvenli, ve daha çevreci ortamlarda yangın eğitimleri için simülasyonların sanal gerçeklik ortamlarında kullanılmasının önemi gösterilmiştir.

YÖNTEM

Eğitimde Yapılandırıcı Metot ve Sanal Gerçeklik

19. yüzyıla kadar örgün eğitimde dersler genellikle okuma-yazma eğitimi şeklinde gerçekleştirilmekteydi. Bu klasik yöntem modern dünyanın ihtiyacına cevap vermekte yetersiz kalmaya başlayınca araştırmacılar eğitimde yönlendirici ara yüzlerin etkisini araştırmaya başlamışlardı. Uygulamalı öğrenme olarak da bilinen bu çalışmaların ilk isimlerinden birisi Johann Heinrich Pestalozzi'dir. Pestalozzi öğrencilerin öğrenme sürecinde fiziksel aktiviteler yaparak ve duyularını daha aktif kullanarak öğrenmelerini önermiştir [4].

Özellikle bilgi edinme sürecinde pasif alıcı durumundan, aktif katılımcı duruma geçiş için öğretim yöntemlerinde önemli değişimler gerekmekteydi [5]. Bu ihtiyaçlara yanıt olarak, 1990'lı yıllardan itibaren yapılandırmacı öğrenme teorisine dayalı öğretime ilgi artmış [6-8]. Yapılandırmacı öğrenme, öğrenenin bilgiyi pasif olarak edinmesi değil, bilgiyi aktif olarak oluşturduğu bir süreç olarak anlaşılmaktadır [9].

Yapılandırmacı yaklaşıma en uygun pedagojik etkinlikler deney, tartışma, proje gerçekleştirme gibi faaliyetlerdir. Roussou (2004), bir sınıfta yapılandırmacı yaklaşımla öğretim yapabilmek için dinamik bir öğrenme ortamı hazırlamak ve mümkün olduğunca öğrenme ortamında fikirlerin test edilip, deneyimlenmesi gerektiğini ileri sürmüştür [10]. Kabul gören bu yaklaşımdan dolayı günümüzde yeni öğretim programlarının bireylerin daha bilgili ve üretken olmalarını sağlamak için esnek, ilgi çekici, yenilikçi ve yaratıcı olmaları gerektiği görüşü yaygınlaşmıştır. Özellikle bilişim teknolojilerinin okullarda yeni öğretim programlarını desteklemek amacıyla kullanılması ve bu programlarla bütünleşebilmesi okul içinde ve dışında gerçekleşen öğrenmelerin dönüşümünde önemli hale gelmiştir. Buna göre, sanal gerçeklik ile eğitimde yapılandırıcı uygulamalar gerçekleştirmek oldukça başarılı sonuçlar doğuracaktır.

Gelişen teknoloji öğrencilerin karmaşık içerikli konuları, sanal gerçeklik cihazları aracılığıyla eğlenceli ve kolay bir şekilde öğrenmelerini sağlayacaktır. Ayrıca öğrenciler bu ortamdaki nesneler ile etkileşime geçip onlar hakkında daha çok şey öğrenebilecektir. Bu sayede öğrencilere istenilen bilgi çok net ve açık bir şekilde anlatılabilecek, öğrencilerin konuyu doğru şekilde anlayacak ve öğrenme yüzdelerinde önemli ölçüde artışlar sağlanabilecektir.

Gemiadamlarının Yangın Eğitimleri: Klasik Yöntem

Bir gemi adamı iki farklı yangın eğitiminden geçerek, yeterliliğini kanıtlayan bir sertifika alması gerekmektedir. Bu yangın eğitimleri sırasıyla temel yangın eğitimi ve ileri yangın eğitimidir. Her iki yangın eğitimleri teorik ve uygulamalı olacak şekilde verilmektedir. Uluslar arası denizcilik örgütü (IMO); STCW sözleşmesi ile yangın eğitimlerinin içeriği ve şekli ile ilgili gerekli asgari standartları belirlemiştir. Bunlara ilave olarak eğitim kurumlarının müfredatlarının hazırlamasında yardımcı bir rehber niteliği taşıyan "IMO model kurslar" geliştirmiştir [11,12].

Temel yangın eğitimleri gemiadamı olmaya aday herkes için temel bir eğitimdir ve operasyon düzeyi yeterliliğine (gemi kaptanı ve ikinci kaptanı ile gemi baş mühendisi ve ikinci mühendisi ehliyetlerinin altında yer alan tüm yeterlilikler) sahip her gemiadamı sınıfı için uygulanmak zorundadır.

İleri Yangın Eğitimleri uluslar arası STCW sözleşmesinde yer alan ikinci tip yangın eğitimleridir ve Yönetim düzeyi yeterliliğine aday gemiadamlarına verilir. Bu eğitimi, yangınla mücadele faaliyetlerinde planlama ve yönetmekle sorumlu olan gemi adamları (yönetim düzeyi ehliyetlerine sahip gemi adamları: Kaptan ve ikinci kaptanı ile gemi baş mühendisi ve ikinci mühendisi), özellikle organizasyon, taktik ve komuta alanında olmak üzere yangınla mücadele tekniklerine yönelik ileri eğitim konularını kapsamaktadır.

Her iki tip yangın eğitimleri uygulamalar da içermektedir. Uygulamalı eğitimler gerçek gemi koşullarının simüle edildiği açık alan ve kapalı alanlardan ibarettir. Uygulamalarla öğrencilere çeşitli beceri ve yetenek düzeyi kazandırılmaya çalışılan bu sahalarda bulundurulması zorunlu olan araç ve gereçlerle, ekipman ve donanımlar T.C. Ulaştırma, Denizcilik ve Haberleşme Bakanlığının 2014 yılında çıkardığı "Gemiadamları Eğitim ve Sınav Yönergesi" nin Ek-31' de yer almaktadır (Şekil 1). Beklenen beceri düzeyi çıktıları şu şekildedir [13]:

- Farklı tipteki taşınabilir yangın söndürücüleri kullanabilme,
- Solunum cihazlarını kullanabilme,
- Küçük ölçekli yangınların söndürülebilmesi,
- Jet ve sprey su kullanarak büyük ölçekli yangınların söndürülebilmesi,
- Köpük, kimyasal toz ya da uygun kimyasal söndürücülerle yangın söndürme,
- Solunum cihazı olmaksızın, can halatıyla yüksek genleşmeli köpüğün uygulandığı bir bölmeye girebilme ve buradan geçebilme,
- Duman ortamında ve etrafı kapalı bir ortamda solunum cihazı kullanarak yangınla mücadele etmek,
- Su sisi veya başka bir uygun yangın söndürücü maddesi kullanarak yoğun duman ve yangın bulunan bir yaşam mahallinde veya simüle edilmiş bir makine dairesinde yangın söndürme,
- Akaryakıt yangınını sis aplikatörü, su püskürtme nozulları, kuru kimyasal toz veya köpük nozulları kullanarak söndürme,
- Solunum cihazı takarak duman dolu bir alanda kurtarma gerçekleştirebilme.

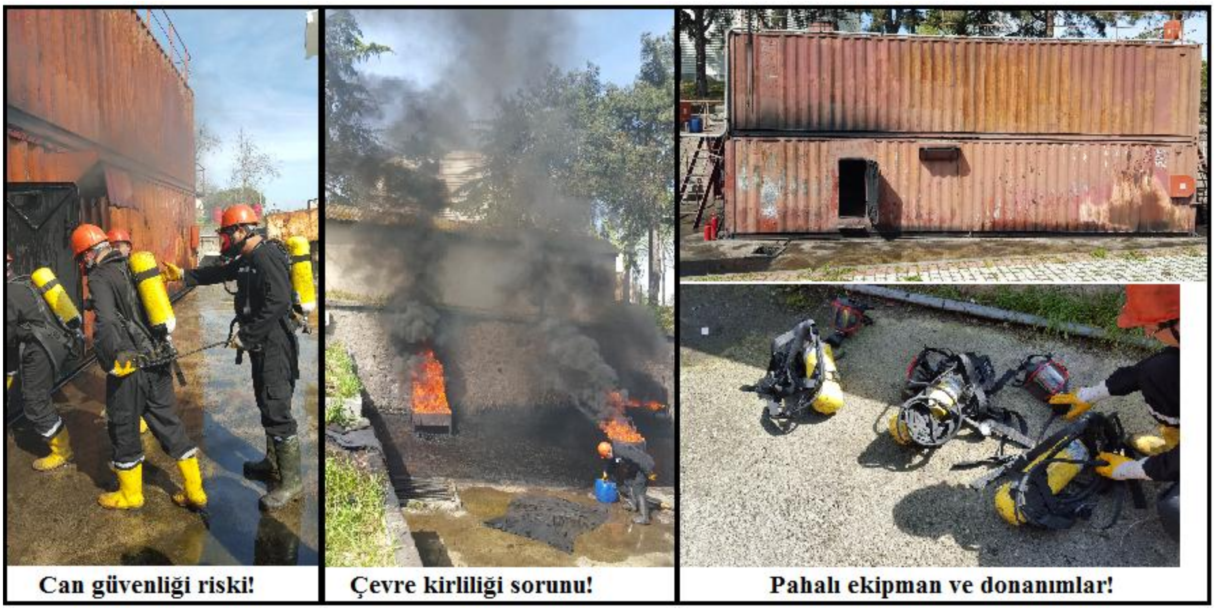
Şekil 2. Gemiadamları eğitim ve sınav yönergesi ek-31' e göre istenen platform

Yangın Eğitiminde Teknolojik Yaklaşım: Önerilen Yöntem (Sanal Gerçeklik Yaklaşımı)

Klasik yöntemle yapılması istenen zorunlu yangın eğitimleri oldukça teferruatlı, donanımlı ve pahalı bir metottur. Ayrıca eğitimlerde öğrencilerin tecrübesizliği de dikkate alındığında tehlikeli bir yoldur. Bunun yanında çevre kirliliği de bu işin sıkıntılı başka bir boyutudur (Şekil 3). Özellikle kapalı mahalde yapılan uygulamalarda öğrencilerin sevk ve idaresi ve kontrolleri çok zorlaşmaktadır. Amacı gemi güvenliğinin sağlanması olan bu zorunlu eğitimlerde, öğrencilerin güvenliği riske atılmaktadır.



Şekil 3. İTÜ Denizcilik Fakültesi yangım eğitim sahası

Teknolojinin gelişmesi ile birlikte eğitsel uygulamalardaki bu riskler tamamen ortadan kaldırılması mümkündür. Günümüzde eğitim simülatörleri bu amaç için geliştirilmiş ve teknolojik açıdan en ileri düzeyde araç-gereçlerdir. Yangın eğitimleri için de bu amaçla simülatör tasarımları gerçekleştirilebilir. Bu bildiride temel düzey ve ileri düzey yangın eğitimleri için örnek bir simülasyondan söz edilmiştir.Bilindiği üzere bilgisayar tabanlı oyun programları ve bunların donanımları son yıllarda hızla gelişmiş ve hak ettiği yerine ulaşmıştır. Özellikle her yaştan insana hitap ediyor olması, kolay ulaşılabilmesinin yanında daha çevreci ve ekonomik uygulamalardır. Bu uygulamaların eğitim faaliyetlerinde de bir araç olarak kullanılması, bu sahalardaki gelişmelere bakıldığında, kaçınılmazdır. "Virtual Reality 3D" oyun gözlükleri veya diğer adıyla "Sanal Gerçeklik" gözlükleri oldukça popüler bir oyun donanımıdır (Şekil 3). Bu araçlarla bir ortamı bire bir simüle edilebilir. Kişi bu gözlüklerle gerçek bir ortamdaymış gibi hareket edebilmektedir. Geriye uygun ortam ve koşulların bilgisayar oyun programlarıyla geliştirmekten başka bir şey değildir.

Bu sayede istenilen eğitimler sanal ortamlarda uygulamalı olarak çok daha pratik, ekonomik ve hızlı bir şekilde yapılabilmektedir. Yapılan bir çalışmada bir yangın simülatörü için gerekli olabilecek yazılım ve donanımlar Tablo 1 'de verilmiştir [14]. Donanım bakımından böyle bir sistemin maliyeti 3000 USD civarındadır. Bu tür oyun programlarında yazılım daha pahalı olmaktadır. Ancak gerçek saha uygulamalarına göre ucuz bir yöntem olduğu rahatlıkla söylenebilir.

Tablo 18. Bir yangın simülatörü çevre birimleri ve özellikleri [14].

	Category	Specification
H/W	CPU	Xeon 2.66 GHz

YORUMLAR

Genellikle sanal gerçeklik cihazı, kullanıcının hareketlerini algılayan sensörler ve elektronik devreler içeren bir kart, küçük iki ekrana sahip gözlük ve üç boyutlu görüntüler oluşturan bilgisayar ile çalışmaktadır. Bir konuda deneyim elde etmek için gerekli malzemeye ulaşılamadığında ya da ekonomik sorunlardan dolayı gerçek saha tesisleri kurmaya imkânlar el vermediğinde, sanal gerçeklik bir çözüm olarak karşımıza çıkmaktadır. Cihazın eğitimde kullanımı yaygınlaşmaktadır. Örneğin, Coğrafya dersinde öğrenci öğrendiği dağ, nehir ya da ovaya gidip, kendi gözleriyle görme hissini yaşayacak, tarih dersinde ise bir anlaşma imzalanıyorsa, orada kimlerin olduğunu kendi gözleriyle görüp, imzalanan belgede yazanları okuyabilecek. Bu bilgiler yaşanarak öğrenildiği için unutulmayacak bir deneyim olacak ve öğrencilerin öğrenme kapasitesini artıracaktır. Mimari çalışmalarda da, henüz proje aşamasında olan bir evin içerisinde gezip dolaşmayı sağlayabilecek özelliktedirler. Turizmde de tatile gidilmek istenen yeri önceden gezip görme olanağı sunabilirler. Sanal gerçeklikte teknolojisi üzerinde biraz daha çalışılarak, tıp alanında da kullanılabileceği bilim insanları tarafından söylenmektedir. Örneğin, öğrenciler sanal bir kadavra üzerinde çalışabilir ya da önemli bir ameliyat öncesi, doktorlar sanal olarak ameliyatın pratiğini yapıp, operasyonun başarısı artırabileceği ifade edilmektedir.

Şekil 4. Sanal gerçeklik gözlüğü

SONUÇLAR

Sanal gerçeklik ortamlarının eğitim sektöründe yararlanılması halinde sağlanan faydalar aşağıdaki şekilde özetlenebilir:

- Sanal gerçeklik teknolojileri eğitim sektöründe pahalı, can ve mal güvenliği riski taşıyan, deneyim isteyen tehlikeli uygulamalar için önerilebilir yapılandırıcı bir eğitim yöntemidir.
- Senaryolar üretmek eğitimcinin hayal gücü ile sınırlıdır.
- Eğitimin her kesiminde (Coğrafya, Tarih, Matematik vs.) kullanılabilirler.
- Sağlık açısından çok ciddi riskler taşımamaktadır.
- Çok büyük alan veya hacimlere ihtiyaç duyulmamaktadır.
- Kullanımı son derece basittir.
- Amaca göre yerli imkânlarla üretmek ve geliştirmek kolaydır.
- Öğrenciler için hem eğlenceli hem de kolay öğretici araçlardır.

SIR CUMFERENCE SERIES (A MATH ADVENTURE) TURKISH MATHEMATICS EDUCATION PROGRAMS' COMPATIBILITY TALE BOOKS'

Mihriban HACISALİHOĞLU KARADENİZ
Giresun Üniversitesi, Eğitim Fakültesi, İlköğretim Matematik Eğitimi ABD, Giresun

ABSTRACT: The purpose of this research, Cindy Neuschwander's "Sir Cumference series (A Math Adventure)" fairy tale book called the elemantary school reveal the situation is no place for achievements in mathematics curriculum. In this study, because it allows to examine the scope of the research aims to evaluate the suitability of fairy tale books and teaching material document analysis method was used. As a data source in the study implemented in Turkey Education Programs' and the have benefited from Neuschwander table book. Within the framework of the fairytale book "Sir Cumference series" has been used fairy tale books. Tales developed by the researchers in the study of the book 'Tales book in the mathematics curriculum outcomes data collection form' is used. Offering by addressing the compatibility with the tale of the curriculum according to the findings of this research, especially that focus on concepts in fairy tales, so is determined to focus on more conceptual dimension of the operational aspect highlighted in the curriculum. Therefore, the primary school teachers' in math class when the species is advisable to include time-based events.

Key words: "Sir Cumference series (A Math Adventure)", mathematics education curriculum.

"SÖR ÇEPÇEVRE'NİN MATEMATİK MACERALARI" ADLI MASAL KİTAPLARININ TÜRK MATEMATİK ÖĞRETİM PROGRAMINA UYUMLULUĞU

ÖZET: Bu araştırmanın amacı, Neuschwander'ın "Sir Cumference Series (A Math Adventure)" adlı masal kitaplarının öğretim programı ile uyumluluğunu ortaya koymaktır. Bu çalışmada, araştırmanın amacına uygunluğu ve öğretim materyali kapsamında değerlendirilen masal kitaplarını incelemeye olanak sağlaması sebebiyle doküman inceleme yöntemi kullanılmıştır. Araştırmada veri kaynağı olarak Türkiye'de uygulanan öğretim programlarından ve Neuschwander'ın masal kitaplarından yararlanılmıştır. Masal kitabı çerçevesinde "Sör Çepçevre'nin Matematik Maceraları" adlı masal kitapları kullanılmıştır. Masal kitaplarının incelenmesinde araştırmacı tarafından geliştirilen 'Masal kitaplarında matematik öğretim programı kazanımları veri toplama formu' kullanılmıştır. Masalların öğretim programına uyumluluğunu ele alarak sunan bu araştırmanın bulgularına göre, masallarda özellikle kavramlar üzerinde durulduğu, bu yüzden de öğretim programlarda vurgulanan işlemsel boyuttan daha çok kavramsal boyuta ağırlık verildiği belirlenmiştir. Bu sonuçlara dayalı ilköğretim öğretmenlerinin matematik derslerinde zaman zaman masal gibi olaya dayalı türlere yer vermesi önerilebilir.

Anahtar sözcükler: "Sör Çepçevre'nin Matematik Maceraları" masal kitapları serisi, matematik öğretim programları.

GİRİŞ

Bilgi çağının yaşandığı günümüzde eğitimdeki temel amacın öğrencilere mevcut bilgiyi aktarmaktan çok bilgiye ulaşma yollarını kazandırmak ve edinilen bilginin yeni durumlara uygulayabilmesini sağlamak olduğu belirtilmektedir. Bu yüzden, öğrenilen bilgiyi günlük hayatında kullanabilen, karşılaştığı problemleri çözebilen, düşüncelerini paylaşabilen, ekip çalışması yapabilen, kendine güvenen araştırmacı bireylerin yetiştirilmesi amaçlanmaktadır. Bu becerilerin kazandırılmasında matematik dersi önemli bir yer tutmaktadır (Baki, 2008). Matematik, anne karnında hayat buluşumuzdan ölüme dek geçen her anda bizimle iç içe olmuş, hayatımızla bütünleşmiştir. Bebeklik döneminde annemizin söylediği ninnilerden, dinlediğimiz masallara, okuduğumuz hikâyelere, oynadığımız oyunlardan, söylediğimiz tekerlemelere ve bilmecelere kadar yaşamın her alanında matematikle iletişim halinde olmuşuzdur. İnsan için bu kadar önem taşıyan insanın ayrılmaz bir parçası olan matematik nedir? Matematik herkesin en azından temel eğitime başladığı yıllarda tanıştığı, sevdiği ya da nefret ettiği, bazen de korktuğu bir bilim dalıdır (Umay, 2002).

İlköğretim matematik öğretim programı; matematiği anlayabilen, günlük hayatında kullanabilen bireyler yetiştirmeyi hedeflemektedir. Bu amaçla, matematik öğretim programının hazırlanması sürecinde, ulusal ve uluslararası alanlarda yapılan araştırmalar, gelişmiş ülkelerin matematik programları ve ülkemizdeki matematik eğitimi deneyimleri temel alınarak hazırlanmıştır (MEB, 2005, 2009, 2013, 2015). Amerika'daki Matematik Öğretmenleri Ulusal Konseyi (National Council of Teachers of Mathematics-NCTM), matematik eğitiminde uluslararası düzeyde kabul gören bir kuruldur (NCTM, 2000). Bu kurulun çalışmaları, bugün dünyada matematik eğitimi alanında çalışan pek çok araştırmacı için referans kabul edilmektedir (Cai 2003; Reys, Reys, Lapan, Holliday ve Wasman, 2003; Riordan ve Noyce, 2001). NCTM, 2000 yılında Okul Matematiği İçin Prensipler ve Standartlar (Principles and Standards of School Mathematics) adlı bir doküman yayımlamıştır. Bu dokümanda, okul öncesi dönemden 12. sınıfın sonuna kadar farklı düzeylerde matematiğin genel ilkelerinin neler olması, matematiksel içerik ve süreçlerin hangi standartları sağlaması gerektiği belirtilmiştir. Bu dokümana göre içerik standartları; 'sayılar-işlemler, cebir, geometri, ölçme, veri analizi-olasılık' olmak üzere beş ana başlık altında toplanmıştır. Bununla birlikte, Türkiye'de de güncellenen ilkokul ve ortaokul matematik öğretim programlarında da öğrenme alanları benzer bir biçimde ele alınmıştır (MEB, 2013, 2015).

Yenilenen eğitim sisteminde, çocukların erken yaşlarda okula başlaması (Örge Onuk, 2013) bilişsel, duyuşsal ve dil becerilerinin geliştirilmesinde (Taşdemir, 2005; Gökşen, 2009; Asutay, 2013) çocukların ilgisini çeken (Lüle Mert, 2012), beceri alanına hitap eden, hayal ve ilgi dünyasına cevap veren, olaya dayalı türlerin evde-okulda kullanımı (Örge Onuk, 2013) ve okul programlarını destekleyici olması (Taşdemir, 2005) önemlidir görülmektedir. Bu türlerden çocukların en severek okudukları ve okutturdukları tür olan masallar (URL 1), genellikle yaşanmamış, yaşanması mümkün olmayan olaylar ya da yaşanmış ancak sonradan anlatıla gelerek olağanüstülüklere bürünmüş olayları anlatan bir sözlü edebiyat ürünüdür (Elçin, 2004; Yalçın ve Aytaş, 2003). Türk Dil Kurumu (TDK) Türkçe Sözlükte masalı: "genellikle halkın yarattığı, ağızdan ağza, kulaktan kulağa sürüp gelen, çoğunlukla insanların veya tanrıların başından geçen, olağan dışı olayları anlatan hikâye" olarak tanımlanmaktadır. Bazı araştırmacılar da (Yaldız, 2006; Yalçın, 2002; Ciravoğlu, 1999) masalı, "olağanüstü olaylarla biçimlenmiş, içinde ahlaksal ve dinsel öğretiler barındıran kısa öyküler biçimindeki anlatılar" olarak tanımlamıştır. Fantastik bir yapıya sahip olan masalların (Asutay, 2013), çocukların gelişimine birçok önemli ve değerli katkıları vardır. Çocukların, özellikle davranış kurallarını öğretme ve çevrelerini kavramsallaştırmasını sağlayabilen masallardan (Türkyılmaz, 2009), öğretim aracı olarak da faydalanılmaktadır (URL 1; Akal, 2000). Şahin (2011) çalışmasında, öğrenme-öğretme etkinliklerinde masallardan faydalanan öğretmenlerin, çocukların çeşitli yönlerden gelişimlerine etkilerini doğrudan gözlemleyebildiklerini ortaya koymuştur.

Masalların öğretimsel anlamda katkılarına ilişkin (Gökşen, 2009), masal kahramanlarının her daim kendi işini kendilerinin yaptıklarını, masallardaki dev, korsan, şövalye, peri kızı, kral, pamuk prenses, cüceler, padişah vb. gibi karakterlerin masal kahramanlarının yerine kendilerini tehlikeye atmadığını, yalnızca rehber olduklarını ve gerektiğinde malzeme sağladıklarını belirterek, masalları yaparak yaşayarak öğrenme ile ilişkilendirmiştir. Böylece bugün eğitimde gelinen noktaya masallar sayesinde binlerce yıl önce gelindiğini dile getirmiştir. Çok köklü, belki de en eski bir yazın çeşidi olan masalların (Asutay, 2013) insanlığın düş gücü ile yaşıt ve ondan canlı bir parça olduğu, içinde doğasıyla birlikte insana özgü ne varsa barındırdığı, çocuklara iyi ile kötüyü belki de en iyi anlatabilen sımsıcak öykülerdir.

Eğitim-öğretimde bu denli önem taşıyan masalların, öğretimde kullanılmasına yönelik çalışmaların daha çok Türkçe öğretiminde çocuk edebiyatında (Temizyürek, 2008; Lüle Mert, 2012; Çetinkaya, 2007; Okur, 2003; Derman, 2002; Örge Onuk; 2013) ve yabancı dil öğretiminde (İşler ve Dursun, 1998) ele alındığı görülmektedir. Ancak matematik öğretiminde kullanılmasını içeren yeterince araştırmaya rastlanmamıştır.

Sonuç olarak geniş ve çok boyutlu düşünmenin başladığı soyut işlemler dönemi olan 9-11 yaşları arası, çocuk edebiyatı açısından düşünce stratejileri ile kavram bilgisinin arttığı dönemken (Trim, 2004), araştırmaların genellikle okul öncesi ya da ilkokulun ilk sınıflarındaki öğrencilerle yapıldığı söylenebilir (Derman, 2002; Çetinkaya, 2007; Şahin, 2011). Ancak eğlenceli olmanın yanında öğretici yönü de bulunan masalların küçük yaş grupların dışındaki gruplarda da faydalı olabileceği düşünülmektedir. Bu nedenle; araştırmada adı geçen yazarın masal kitaplarında yer alan kazanımlar ile Türkiye'de uygulanan ilköğretim matematik dersi öğretim programına uygunluğuna, programdaki kazanımların masallarda geçen durumları karşılayıp-karşılamadığı ve kazanımlara ne sıklıkla yer verildiği incelenmiştir.

Araştırmanın Amacı

Çalışmanın amacı, "Sir Cumference Series (A Math Adventure)" adlı masal kitaplarında yer alan kazanımlarla Türkiye'de uygulanan matematik öğretim programına uygunluğunu, programdaki kazanımların masallarda geçen durumları karşılayıp-karşılamadığını ortaya çıkarmaktır. Araştırmada aşağıdaki sorulara cevap aranmıştır:
1. "İlk Yuvarlak Masa" kitabının öğretim programı ile uyumluluğu nasıldır?
2. "Pi Ejderhası" kitabının öğretim programı ile uyumluluğu nasıldır?

3. “Kralın onlukları” kitabının öğretim programı ile uyumluluğu nasıldır?
4. “Açı Diyarının Büyük Şövalyesi” kitabının öğretim programı ile uyumluluğu nasıldır?
5. “Konideki Kılıç” kitabının öğretim programı ile uyumluluğu nasıldır?
6. “Çetre Adası” kitabının öğretim programı ile uyumluluğu nasıldır?
7. “Viking Haritası” kitabının öğretim programı ile uyumluluğu nasıldır?

Öğretimde kullanılacak olan masallar

Araştırmanın doküman incelemesinde kullanacağı masallar, Türkçe çevirisi “Prof. Dr. Enis Sınıksaran” tarafından yapılan Cindy Neuschwander’ın “Sir Cumference Series (A Math Adventure)” adlı yedi kitaplık serisinin kitapları yayınlandığı yıla göre:

- 1997 yılında “İlk Yuvarlak Masa”
- 1999 yılında “Pi Ejderhası”
- 2009 yılında “Kral’ın Onlukları”
- 2001 yılında “Açı Diyarının Büyük Şövalyesi”
- 2003 yılında “Konideki Kılıç”
- 2006 yılında “Çetre Adası”
- 2006 yılında “Viking Haritası”

olarak sıralanabilir. Bu masallar aşağıda özetlenmiş olarak sunulmuştur.

İlk Yuvarlak Masa

İncelenecek birinci kitap, "İlk Yuvarlak Masa" çokgenler kavramını ele almaktadır. Bu masalda Ölçer-Biçerler'in askerlerini sınıra yığdığını gören Kral Arthur onların bir savaş hazırlığında olduğunu düşünüp en güvendiği şövalyelerini acil toplantıya çağırır. Ancak toplantı masası uygun değildir. Kral Arthur bu sıkıntısını toplantıya eşi Leydi Çap ve oğulları Yarıçap ile birlikte katılan Sör Çepçevre'ye anlatır. Sör Çepçevre de eşi Leydi Çap'a anlatır. Leydi Çap'ın fikirlerinden yola çıkılarak çokgen şeklinde birçok masa yapılır, ancak uygun masa bir türlü bulunamaz. Yarıçap sayesinde doğru masa için uygun şekil bulunur. Leydi Çap'ın ölçümleri sonucunda masanın yapımına karar verilir ve ilk yuvarlak masa yapılır.

Pi Ejderhası

İncelenecek ikinci kitap, "Pi Ejderhası" pi sayısının bulunmasını ele almaktadır. Bu masalda yemek yerken birden Sör Çepçevre'nin midesi yanar. Yarıçap doktorun odasından ilaç alıp babasına içirir ve Sör Çepçevre bir ejderhaya dönüşür. Babasını tekrar eski haline döndürmek için doktorun odasına giden Yarıçap üzerinde ejderha başı olan bir şişe bulur. Şişenin üzerinde ' Çemberin Ölçüleri' başlığıyla yazan yazıda babasına vermesi gereken ilacın ölçeğini bulması gerektiği yazıyormuş. Yarıçap yazılanlardan yola çıkarak çember şeklindeki birçok nesne ile ölçüm yapmış ve çevreyi genişliğe böldüğünde hep aynı sayı $3\frac{1}{7}$ çıktığını görmüş. Babasına $3\frac{1}{7}$ ölçeğinde iksir vererek eski haline dönüşmesini sağlamış.

Kral'ın Onlukları

İncelenecek üçüncü kitap, “Kral’ın Onlukları” basamak değeri kavramını ele alan bir masaldır. Bu masalda Sör Çepçevre ve eşi Leydi Çap, yaşadıkları ülkenin kralı olan Kral Arthur’a bir sürpriz doğum günü partisi hazırlarlar. Ülkedeki herkes bu partiye davetlidir. Ancak Leydi Çap’ın yapılacak yemeklerin miktarını ve hazırlanacak yatakların sayısını bilmesi için bir anda biriken çok büyük ve düzensiz kalabalıkta kaç kişi olduğunu hesaplaması gerekmektedir.

Açı Diyarının Büyük Şövalyesi

İncelenecek dördüncü kitap, "Açı Diyarının Büyük Şövalyesi" açı ve açı ölçüsü kavramını ele almaktadır. Bu masalda en büyük hayali çok iyi bir şövalye olmak isteyen Sör Çepçevre ve Leydi Çap'ın oğulları Yarıçap artık büyümüş ve zorlu göreve hazırdır. Görevi uzun zamandır kayıp olan komşu ülkenin hükümdarı Kral Lel'i kurtarmaktır. Uzun uğraşlar sonucunda Kralın hapsedildiği kaleye ulaşan Yarıçap'ın; ejderhalara yem olmadan Kral Lel'i kurtarması için doğru kapıları açması gerekmektedir. Ancak doğru kapıları açabilmesi için kapılara denk gelen açıların ölçüsünü bulmak zorundadır.

Konideki Kılıç

İncelenecek beşinci kitap, "Konideki Kılıç" geometrik cisimler kavramını ele almaktadır. Bu masalda Kral Arthur kendisine varis aramaktadır. Bunun için kılıcı Eskalibar'ı bir yere saklar ve bulmacayı çözüp kılıcını bulan kişinin varisi olacağını söyler. Sör Çepçevre ve Leydi Çap'ın oğulları Yarıçap'ın en yakın arkadaşı Köşe de varis olmak istemektedir. Bunun için Yarıçap'la beraber Eskalibar'ı aramaya koyulurlar. Bulmacanın yazılı olduğu parşömenin üstündeki geometrik şekillerin açınımlarından yola çıkarak kılıcın kalede bir geometrik şeklin içinde saklı olduğu sonucuna varırlar. Birçok geometrik şekille ilgili ölçüp yapıp sonunda kılıcı bir koninin içinde bulurlar.

Çetre Adası

İncelenecek altıncı kitap, "Çetre Adası" kare ve dikdörtgenin alanını ele almaktadır. Bu masalda Sör Çepçevre ve Leydi Çap'ı ziyarete gelen yeğenleri Evra gündüz hep beraber oynadıkları oyunu çok beğenir ve akşam tek başına oyunu oynar. Bu sırada oyun kutusunun üstündeki yazıyı fark eder. Uyuduktan sonra bu yazıyla ilgili değişik rüyalar görmesi üzerine Çetre Adası'ndaki sırrı çözmeye karar verir ve sabah uyanır uyanmaz Yarıçap'la beraber Çetre Adası'na giderler. Adayı koruyan ejderhaya yem olmadan adanın sırrını çözmeleri için doğru odaları ulaşmaları gerekiyor. Doğru odaları bulmak için de odanın şeklinin içindeki karelerinin dışındaki kenar sayısıyla ilişkisini bulmaları gerekmektedir.

Viking Haritası

İncelenecek yedinci kitap, "*Viking Haritası*" koordinat sistemi kavramını ele almaktadır. Bu masalda Yarıçap ve kuzeni Evra ormanda gezerken yollarını kaybederler. Karanlık çöktüğü için kampa kurmaya karar verirler. Kamp kurmayı düşündükleri yere ulaştıklarında karşılarına ağaç dallarıyla örtülü bir kapı çıkar. İçeri girdiklerinde bunun bir mağara olduğunu anlarlar ve içerideki eşyaları incelemeye başlarlar. Evra fıçının içinde bir harita bulur. Haritanın üzerinde Viking Xaxon Yelpaze sakalın bu haritayı koordinatçı İnkel'in hazinesin bulunması için çizdiği yazıyormuş. İki kuzen hazineyi bulmaya karar verirler. Haritadaki x ve y koordinatlarından yola çıkarak hazineyi bulurlar.

YÖNTEM

Araştırmada, doküman inceleme yönteminden yararlanılmıştır. Doküman inceleme yönteminde araştırılmak istenen konuyla ilgili kitaplar, dergiler, biyografiler, günlükler gibi birbirinden farklı yazılı ve görsel materyaller incelenir (Balcı, 2001). Bu çalışmada doküman inceleme yöntemi, araştırmanın amacına uygunluğu ve öğretim materyali kapsamında değerlendirilen masal kitaplarını incelemeye olanak sağlaması sebebiyle kullanılmıştır.

Veri Kaynakları ve Verilerin Toplanması

Araştırmada veri kaynağı olarak Türkiye'de uygulanan 'İlkokul ve Ortaokul Matematik Dersi Öğretim Programı'ndan ve 'Cindy Neuschwander'ın masal kitaplarından yararlanılmıştır. Masal kitabı çerçevesinde "Sir Cumference series (A Math Adventure)" adlı masal kitapları kullanılmıştır. Araştırmada kullanılan öğretim materyallerinin künyeleri aşağıda verilmiştir:

- ✓ İlkokul ve Ortaokul Matematik Dersi Öğretim Programları (MEB, 2015, 2013)
- ✓ İlk Yuvarlak Masa
- ✓ Pi Ejderhası
- ✓ Kral'ın Onlukları
- ✓ Açı Diyarının Büyük Şövalyesi
- ✓ Konideki Kılıç
- ✓ Çetre Adası
- ✓ Viking Haritası

Masal kitaplarının incelenmesinde araştırmacı tarafından geliştirilen "Masal Kitaplarında Matematik Öğretim Programı Kazanımları Veri Toplama Formu" kullanılmıştır. Veri toplama formu geliştirilirken öncellikle literatür taranarak masal kitaplarında matematik kazanımlarının incelenmesi için kullanılabilecek bir veri toplama aracı olup olmadığı belirlenmeye çalışılmıştır. Daha sonra araştırmanın amacı, araştırma soruları ve kapsamı bağlamında masalların hangi ölçütlerle incelenebileceği tartışılmış, bu doğrultuda üç matematik eğitimi uzmanı ile iki Türkçe eğitimi uzmanının görüşlerine başvurulmuştur. Bu bağlamda verilerin; masal kitabının adı, öğrenme alanı, alt öğrenme alanı, kazanım ve frekans başlıkları altında toplanmasına karar verilmiştir.

Veri toplama formunda öğrenme alanı başlığı; masal kitaplarında matematik kazanımlarının kullanıldığı öğrenme alanını, alt öğrenme alanı başlığı masallarda geçen cümlelerde matematiğin vurgulandığı alt öğrenme alanlarını belirtmektedir. Kazanımlar başlığı; masal kitaplarında yer alan cümlelerle ait kazanımları, sayfa numarası başlığı; masalın kazanımın geçtiği sayfa numaralarını, örnek cümleler başlığı; masalda kazanıma uygun cümlelerden oluşan alıntıları ve frekans başlığı ise masalların içeriğinde matematik kazanımlarının kaç defa kullanıldığını göstermektedir.

Verilerin Analizi

Araştırmada toplanan veriler, içerik analizi yardımıyla çözümlenmiştir. Bu bağlamda araştırmaya ilişkin veriler, masal kitabının adı, sınıf düzeyi, öğrenme alanı, alt öğrenme alanı ve kazanımları, frekans çerçevesinde içerik kodlaması yapılarak tablolar oluşturulmuştur. Araştırmanın güvenirliği ise üçgenleme yapılarak sağlanmıştır. Veriler, alan uzmanı olan iki araştırmacı ve bir matematik öğretmeni tarafından bağımsız bir şekilde analiz edilmiş, daha sonra yapılan kodlamaların uyuşum yüzdesi hesaplanmıştır (Miles ve Huberman, 1994). Yapılan hesaplama sonucunda üç ayrı incelemenin uyuşum yüzdesi %83,6 olarak tespit edilmiştir.

BULGULAR

İncelemeler sonucunda ulaşılan bulgular; ilkokul ve ortaokul matematik dersi öğretim programına ilişkin bulgular olmak üzere aşağıdaki şekilde sunulmuştur.

"İlk Yuvarlak Masa" Adlı Masal Kitabının İlköğretim Matematik Dersi Öğretim Programına İlişkin Bulguları

Masal kitabının ortaokul (5-8.sınıflar) matematik dersi öğretim programlarına ilişkin bulgular tablo halinde verilmiştir.

Tablo 1. "İlk Yuvarlak Masa" Adlı Masal Kitabının Matematik Öğretim Programına İlişkin Bulgular

Öğrenme Alanı	**Alt Öğrenme Alanı**	**Kazanımlar**	**Sayfa No**	***f***
Geometri ve Ölçme	Üçgenler ve Dörtgenler	5.2.2.1. Çokgenleri isimlendirir, oluşturur ve temel elemanlarından kenar, iç açı, köşe ve köşegeni tanır.	6, 8, 9, 11, 12	5
		5.2.2.3. Dikdörtgen, paralelkenar, eşkenar dörtgen ve yamuğun temel özelliklerini anlar.	11	1
	Temel Kavramlar ve Çizimler	5.2.1.1. Doğru, doğru parçası ve ışını açıklar ve sembolle gösterir.	13, 14	2
	Çember	6.3.3.1. Çember çizerek merkezini, yarıçapını ve çapını belirler.	20, 29	2
	Çokgenler	7.3.2.1. Düzgün çokgenlerin kenar açı özelliklerini açıklar.	17, 18	2
		7.3.2.3. Dikdörtgen, paralelkenar, yamuk ve eşkenar dörtgeni tanır; açı özelliklerini belirler.	16	1
	Çember ve Daire	7.3.3.3. Daire ve daire diliminin alanını hesaplar.	24	1
Olasılık	Bir Olayın Olma Olasılığı	8.5.1.1. Bir olaya ait olası durumu belirler.	18	1

Tablo 1'de İlk Yuvarlak Masa masal kitabının matematik öğretim programında yer alan "Geometri ve Ölçme" ve "Olasılık" öğrenme alanlarına ait kazanımlara yer verilmiştir. Tablo 1 incelendiğinde "Geometri ve Ölçme" öğrenme alanının 'Üçgenler ve Dörtgenler' alt öğrenme alanı ilişkin kazanımlara daha çok yer verilmiştir (6 defa). Bunun yanı sıra 'Temel Kavramlar ve Çizimler' (2 defa), 'Çember' (2 defa), 'Çokgenler' (3 defa), 'Çember ve Daire' (1 defa), "Olasılık" öğrenme alanının 'Bir Olayın Olma Olasılığı' alt öğrenme alanına ilişkin kazanımlara (1 defa) yeteri kadar yer verilmediği görülmüştür. Matematik öğretim programında ilk önce dörtgenler daha sonra da dörtgenlerden yola çıkarak paralelkenar, eşkenar dörtgen ve yamuk ile ilgili kazanımlar anlatılmaktadır. Yazar da bundan yola çıkarak bu masal kitabında 'Üçgenler ve Dörtgenler' alt öğrenme alanı ile ilgili kazanımlara daha fazla yer vermiş olabilir.

"Pi Ejderhası" Adlı Masal Kitabının Matematik Öğretim Programına İlişkin Bulguları

Masal kitabının ortaokul (5-8.sınıflar) matematik dersi öğretim programlarına ilişkin bulgular tablo halinde verilmiştir.

Tablo 2. Pi Ejderhası Adlı Masal Kitabının Matematik Öğretim Programına İlişkin Bulgular

Öğrenme Alanı	Alt Öğrenme Alanı	Kazanımlar	Sayfa No	*f*
Geometri ve Ölçme	Çember	5.2.3.2. Pergel ve cetvelle çember çizerek Merkezini, yarıçapını ve çapını adlandırır.	31	1
		6.3.3.4. Çapı veya yarıçapı verilen bir çemberin uzunluğunu hesaplar.	13, 17	2
		6.3.3.3. Bir çemberin uzunluğunun çapına oranının sabit bir değer olduğunu ölçüm yaparak belirler	13, 17, 18, 21, 24, 30	6

Tablo 2'de Pi Ejderhası masal kitabının matematik öğretim programında yer alan "Geometri ve Ölçme" öğrenme alanına ilişkin kazanımlarına yer verilmiştir. Tablo 2 incelendiğinde "Geometri ve Ölçme" öğrenme alanının 'Çember' alt öğrenme alanına ilişkin kazanımlara 9 defa yer verildiği görülmüştür. Ortaokul matematik öğretim programında 6.sınıf 'Çember' alt öğrenme alanı ile ilgili toplam 4 kazanım yer almaktadır. Bu kazanımlardan biri de pi sayısı ile ilgilidir (6.3.3.3). Programda yer alan etkinlikte çember şeklindeki birçok geometrik şeklin uzunluğu ve çapı hesaplanır. Daha sonra uzunluğun çapa oranının her seferinde;

$$3\frac{1}{7} = (3{,}14)$$

olduğu sonucuna ulaşılır. Bu sonuçtan sonra öğrencilere bu özel sayıya pi denildiği vurgulanır. π ile ilgili problemler verildiğinde kullanılması istenen yaklaşık değer her seferinde; "π'yi 3 alınız, $\frac{22}{7}$ alınız ya da 3,14 alınız" gibi ifadelerle belirtilir.

"Kral'ın Onlukları" Adlı Masal Kitabının Matematik Öğretim Programına İlişkin Bulguları

Masal kitabının ortaokul (5-8.sınıflar) matematik dersi öğretim programlarına ilişkin bulgular tablo halinde verilmiştir

Tablo 3. Kral'ın Onlukları Adlı Masal Kitabının Matematik Öğretim Programına İlişkin Bulgular

Öğrenme Alanı	Alt Öğrenme Alanı	Kazanımlar	Sayfa No	*f*
Sayılar ve işlemler	Doğal Sayılarla İşlemler	4.1.1.1. 4, 5 ve 6 basamaklı doğal sayıları okur ve yazar.	19, 22	2
		4.1.1.2. 4, 5 ve 6 basamaklı sayıların bölüklerini ve basamaklarını, basamaklarındaki rakamların basamak değerlerini belirler.	22, 28	2
		4.1.1.3. 4, 5 ve 6 basamaklı sayıları çözümler.	20	1
		5.1.1.2. En çok dokuz basamaklı doğal sayıların bölüklerini basamaklarını ve rakamların basamak değerini belirtir.	17	1
		5.1.2.2. İki basamaklı doğal sayılarla toplama ve çıkarma işlemlerinde uygun stratejiyi seçerek kullanır.	9	1
Cebir	Cebirsel İfadeler	6.2.2.1. Aritmetik dizilerin kuralını harfle ifade eder; kuralı harfle ifade edilen, dizinin istenilen terimini bulur.	24	1
Olasılık	Bir Olayın OlmaOlasılığı	8.5.1.3. Eşit şansa sahip olan olaylarda çıktının eş olasılıklı olduğunu ve bu değerin $\frac{1}{n}$ olduğu açıklar.	13	1
		8.5.1.1. Bir olaya ait olası durumları belirler.	12	1

Tablo 3 'te Kralın Onlukları masal kitabının matematik öğretim programında yer alan "Sayılar ve İşlemler" , "Cebir" ve "Olasılık" öğrenme alanlarına ait kazanımlara yer verilmiştir. Tablo 3 incelendiğinde "Sayılar ve İşlemler" öğrenme alanının 'Doğal Sayılarla İşlemler' alt öğrenme alanına ait kazanımlara daha çok yer verilmiştir (7 defa). Bunun yanı sıra "Cebir" öğrenme alanının 'Cebirsel ifadeler' alt öğrenme alanlarına ilişkin kazanımlara (1 defa), "Olasılık" öğrenme alanının 'Bir Olayın Olma Olasılığı' alt öğrenme alanına ilişkin kazanımlara (2 defa) yeteri kadar yer verilmediği görülmüştür. Matematik öğretim programında "Sayılar ve İşlemler" öğrenme alanı bütün sınıflarda ilk öğrenme alanıdır. Yani diğer bütün öğrenme alanlarının temelinde bu öğrenme alanı vardır. Yazarın da bunu göz önünde bulundurup "Sayılar ve İşlemler" öğrenme alanına daha fazla yer verdiği söylenebilir. Ayrıca masalda matematik kavramlarından 'doğru' kavramından da bahsedilmektedir.

"Açı Diyarının Büyük Şövalyesi" Adlı Masal Kitabının Matematik Öğretim Programına İlişkin Bulguları

Masal kitabının ilkokul 4.sınıf ve ortaokul (5-8.sınıflar) matematik dersi öğretim programlarına ilişkin bulgular tablo halinde verilmiştir.

Tablo 4. Açı Diyarının Büyük Şövalyesi Masal Kitabının Matematik Öğretim Programına İlişkin Bulgular

Öğrenme Alanı	Alt Öğrenme Alanı	Kazanımlar	Sayfa No	*f*
Ölçme	Temel Geometrik Kavramlar	4.2.1.9. Açının kenarlarını ve köşesini belirler, açıyı isimlendirir ve sembolle gösterir.	4	1
		4.2.1.5. Ölçüsü verilen bir açıyı çizer.	5	1
		4.2.1.6. Açıların ölçülerini tahmin eder ve tahminlerini açıyı ölçerek kontrol eder.	16, 21, 22	3
		4.2.1.4.Açıları standart ölçme araçlarıyla ölçerek açıları; dar, dik geniş ve doğru açı olarak belirler.	17, 19, 23	3
		4.2.1.3. Açıları standart olmayan birimlerle ölçerek standart açı ölçü biriminin gerekliliğini anlar.	30	1
Geometri ve Ölçme	Temel eometrik Kavramlar	5.2.1.5. Kareli veya noktalı kağıt üzerinde 90° lik bir açıyı referans alarak da, dik ve geniş açıları oluşturur.	15	1
		5.2.1.4. Kareli veya noktalı kâğıt üzerinde bir doğru parçasına paralel doğru parçaları inşa eder; çizilmiş doğru parçalarının paralel olup olmadığını yorumlar.	32	1
	Açılar	6.3.1.1. Açıyı başlangıç noktaları aynı olan iki ışının oluşturduğu şekil olarak tanır ve sembolle gösterir.	14	1
	Çember	6.3.3.1. Çember çizerek merkezini, yarıçapını ve çapını belirler.	8, 14, 17	3
		7.3.3.2. Çember ve çember parçasının uzunluğunu hesaplar.	30	1
	Dönüşüm Geometrisi	8.3.3.2. dönmenin şekil üzerindeki her bir noktanın bir nokta etrafında belirli bir açıyla saat veya tersi yönünde dönüşüme tabi olduğunu ve şekil görüntüsünün eş olduğunu keşfeder.	4, 8	2

Tablo 4'de 'Açı Diyarının Büyük Şövalyesi' masal kitabının matematik öğretim programında yer alan 4.sınıf "Ölçme" öğrenme alanı ile 5, 6, 7 ve 8.sınıf "Geometri ve Ölçme" öğrenme alanına ait kazanımlara yer verilmiştir. Tablo 4 incelendiğinde "Ölçme" öğrenme alanının 'Açı ve Açı Ölçüsü' alt öğrenme alanına ait kazanımlara daha çok yer verilmiştir (8 defa). Bunun yanı sıra "Geometri ve Ölçme" öğrenme alanının alt öğrenme alanlarına ilişkin kazanımlara 'Temel Geometrik Kavramlar' (2 defa), 'Açılar' (1 defa), 'Çember' (4 defa), 'Dönüşüm Geometrisi' (2 defa) yeteri kadar yer verilmediği görülmüştür. 'Açı ve Açı Ölçüsü' alt öğrenme alanına daha çok yer verilmesi; bu alt öğrenme alanının diğer alt öğrenme alanlarının temeli niteliğinde olması şeklinde açıklanabilir. Ayrıca kitapta paralellik ve eğim kavramlarından da bahsedilmektedir.

"Konideki Kılıç" Adlı Masal Kitabının Matematik Öğretim Programına İlişkin Bulguları

Masal kitabının ilkokul 4.sınıf ve ortaokul (5-8.sınıflar) matematik dersi öğretim programlarına ilişkin bulgular tablo halinde verilmiştir.

Tablo 5. Konideki Kılıç Masal Kitabının Matematik Öğretim Programına İlişkin Bulgular

Öğrenme Alanı	Alt Öğrenme Alanı	Kazanımlar	Sayfa No	*f*
Ölçme	Uzunluk Ölçme	4.3.4.4. Doğrudan ölçebileceği bir uzunluğu en uygun uzunluk ölçme birimleriyle tahmin eder.	25	1
Geometri ve Ölçme	Geometrik Cisimler	5.2.5.1. Geometrik cisimleri tanır ve Temel özelliklerini belirler.	9, 10, 12, 14	4
		5.2.2.1. Çokgenleri isimlendirir, oluşturur ve temel elemanlarından kenar, iç açı, köşe ve köşegeni tanır.	11	1
		8.3.4.1. Dik prizmaları tanır ve temel özelliklerini belirler.	12	1
		8.5.4.2. Dik dairesel silindirin temel Elemanlarını belirler; inşa eder ve açınımını çizer.	12, 13, 14, 17	4
		8.3.4.6. Dik koniyi tanır, temel elemanlarını belirler; inşa eder ve açınımını çizer.	13, 14, 17, 18, 19, 22, 24, 25, 29	11
		8.3.4.5. Dik piramidi tanır ve temel elemanlarını belirler; inşa eder ve açınımını çizer.	10, 12, 14	4

Tablo 5'te Konideki Kılıç masal kitabının matematik öğretim programında yer alan 4.sınıf "Ölçme", 5 ve 6.sınıf "Geometri ve Ölçme" öğrenme alanlarına ait kazanımlara yer verilmiştir. Tablo 5 incelendiğinde "Geometri ve Ölçme" öğrenme alanının 'Geometrik Cisimler' alt öğrenme alanına ilişkin kazanımlara daha çok yer verilmiştir (25 defa). Bunun yanı sıra "Ölçme" öğrenme alanının 'Uzunluk Ölçme' alt öğrenme alanına ilişkin kazanımlara yeteri kadar yer verilmediği (1 defa) görülmüştür. Masal kitabında birçok geometrik cisim ile ilgili ölçüm yapıldığı anlatılmaktadır; ancak tablo5'e bakıldığında 'Uzunluk Ölçme' öğrenme alanı ile ilgili sadece bir kazanıma yer verildiği görülmektedir. İlkokul matematik programında 4.sınıf 'Uzunluk Ölçme' alt öğrenme alanı ile ilgili beş tane kazanım bulunmaktadır. Yazar bunlardan sadece bir tanesine yer vermiştir. Ayrıca ortaokul matematik öğretim programı 5.sınıf 'Uzunluk Ölçme' alt öğrenme alanı ile ilgili kazanımlara da yer verilmemiştir. Kitapta uzunluk ölçme birimlerinden biri olan santimetreye de değinilmektedir.

"Çetre Adası" Adlı Masal Kitabının Matematik Öğretim Programına İlişkin Bulguları

Masal kitabının ilkokul 4.sınıf ve ortaokul (5-8.sınıflar) matematik dersi öğretim programlarına ilişkin bulgular tablo halinde verilmiştir.

Tablo 6. Çetre Adası Masal Kitabının Matematik Öğretim Programına İlişkin Bulgular

Öğrenme Alanı	Alt Öğrenme Alanı	Kazanımlar	Sayfa No	*f*
Ölçme	Geometrik Cisimler ve Şekiller	4.2.1.2. Kare ve dikdörtgenin kenar özelliklerini belirler.	3	1
	Alan Ölçme	4.3.2.3. Kare ve dikdörtgenin alanını toplama ve çarpma işlemleri ile ilişkilendirir.	5, 8	2
		4.3.2.2. Şekillerin alanının bu alanları kaplayan birim karelerin sayısı olduğunu belirler.	17, 29	2
Geometri ve Ölçme	Çember	6.3.3.1. Çember çizerek merkezini, yarıçapını ve çapını belirler.	18	2
		6.3.3.4. Çapı veya yarıçapı verilen bir çemberin uzunluğunu hesaplar.	22	1
	Çember ve Daire	7.3.3.3.Dairenin ve daire diliminin alanını hesaplar.	29	1

Tablo 6'de Çetre Adası masal kitabının matematik öğretim programında yer alan 4.sınıf "Ölçme", 6 ve 7.sınıf "Geometri ve Ölçme" öğrenme alanlarına ait kazanımlara yer verilmiştir. Tablo 6 incelendiğinde "Ölçme" öğrenme alanının 'Alan Ölçme' alt öğrenme alanına ilişkin kazanımlara daha çok yer verilmiş (4 defa). Oysa "Geometrik Şekiller ve Çizimler'" (1defa), 'Uzunluk Ölçme' (2 defa), "Geometri ve Ölçme" Öğrenme alanının alt öğrenme alanına ilişkin kazanımlara 'Çember' (3 defa), 'Çember ve Daire' (1 defa) yeteri kadar yer verilmediği görülmüştür.

3.7. "Viking Haritası" Masal Kitabının Matematik Öğretim Programına İlişkin Bulguları

Masal kitabının ortaokul (5-8.sınıflar) matematik dersi öğretim programlarına ilişkin bulgular tablo halinde verilmiştir.

Tablo 7. Viking Haritası Masal Kitabının Matematik Öğretim Programına İlişkin Bulgular

Öğrenme Alanı	Alt Öğrenme Alanı	Kazanımlar	Sayfa No	*f*
Geometri ve Ölçme	Açılar	6.3.1.3. Bir doğrunun üzerindeki veya dışındaki bir noktadan doğruya dikme çizer.	4	1
		6.2.1.4. Aynı düzlemdeki iki doğrunun birbirine göre durumlarını belirler.	4	1
	Doğru, Doğru Parçası ve Işın	6.2.1.1.Doğru ile nokta arasındaki ilişkiyi açıklar.	32	1
Sayılar ve İşlemler	Tam Sayılar	6.1.3.1.Tam sayıları yorumlar ve sayı doğrusunda gösterir.	32	1
Cebir	Doğrusal Denklemler	7.2.2.1.Koordinat sistemini özellikleriyle tanır ve sıralı ikilileri gösterir.	4, 12, 13, 15, 16, 19, 23, 31	15

Tablo 7'de Viking Haritası masal kitabının matematik öğretim programında yer alan "Geometri ve Ölçme", "Sayılar ve İşlemler" ve "Cebir" öğrenme alanlarına ilişkin kazanımlara yer verilmiştir. Tablo 7 incelendiğinde; "Cebir" öğrenme alanının 'Doğrusal Denklemler' alt öğrenme alanına ilişkin kazanımlara daha çok yer verilmiştir (15 defa). Oysa "Geometri ve Ölçme" öğrenme alanının alt öğrenme alanına ilişkin kazanımlara 'Açılar' (2 defa), 'Doğru, Doğru Parçası ve Işın' (1 defa), "Sayılar ve İşlemler" öğrenme alanına 'Tam Sayılar' alt öğrenme alanına ilişkin kazanımlara (1 defa) yeteri kadar yer verilmediği görülmüştür. Ayrıca masal kitabında matematiksel kavramlardan, diklik kavramı ve matematiksel birimlerden uzunluk ölçme birimi olan kilometreye de değinilmektedir.

TARTIŞMA, SONUÇ ve ÖNERİLER

Masalların öğretim programına uyumluluğunu ele alarak sunan bu araştırmanın bulgularına göre, masallarda özellikle kavramlar üzerinde durulduğu, bu yüzden de öğretim programlarda vurgulanan işlemsel boyuttan daha çok kavramsal boyuta ağırlık verildiği belirlenmiştir. Özellikle kavramlara duyulan ihtiyaca, kavramlar arası ilişkilere dikkat çekilen bir öğretim ortamının varlığından söz edilebilmektedir.

Yazarın *'İlk Yuvarlak Masa'* adlı kitabında; "Geometri ve Ölçme" ve "Olasılık" öğrenme alanlarına ait kazanımlara sıklıkla yer verdiği belirlenmiştir. Bunun yanı sıra 'Temel Kavramlar ve Çizimler' (2 defa), 'Çember' (2 defa), 'Çokgenler' (3 defa), 'Çember ve Daire' (1 defa), "Olasılık" öğrenme alanının 'Bir Olayın Olma Olasılığı' alt öğrenme alanına ilişkin kazanımlara (1 defa) yer verildiği ortaya çıkmıştır. Bu açıdan bakıldığında masal kitaplarının Türk Matematik Öğretim Programlarında yer alan bazı kazanımlarla uyumlu iken bazı kazanımlarla uyumlu olmadığı söylenebilir.

Yazarın *'Pi Ejderhası'* adlı kitabında; "Geometri ve Ölçme" öğrenme alanının 'Çember' alt öğrenme alanına ilişkin kazanımlara 9 defa yer verildiği görülmüştür. Bunun nedeninin Ortaokul matematik öğretim programında 6.sınıf 'Çember' alt öğrenme alanı ile ilgili toplam 4 kazanımın yer alması, bu kazanımlardan birinin de pi sayısı ile ilgilidir olması olabilir. Programda yer alan etkinlikte çember şeklindeki birçok geometrik şeklin uzunluğu ve çapı hesaplanır. Daha sonra uzunluğun çapa oranının her seferinde '3, 14' sayısına ulaşıldığı, sonra öğrencilere bu özel sayıya 'pi' denildiği vurgulanır. Açıkça görülmektedir ki öğretim programında bu konunun önemi oldukça büyüktür. Buna paralel olarak yazarın *'Pi Ejderhası'* alı masal kitabında bu konuya çok fazla yer verdiğini görmekteyiz. Programdaki kazanımların bu masal kitabında geçen durumları karşıladığı söylenebilir.

Yazarın *'Kral'ın Onlukları'* adlı kitabında; "Cebir" öğrenme alanının 'Cebirsel ifadeler' alt öğrenme alanlarına ilişkin kazanımlara (1 defa), "Olasılık" öğrenme alanının 'Bir Olayın Olma Olasılığı' alt öğrenme alanına ilişkin kazanımlara (2 defa) yeteri kadar yer verilmediği görülmüştür. Yazar, "Sayılar ve İşlemler" öğrenme alanının 'Doğal Sayılarla İşlemler' alt öğrenme alanına ait kazanımlara daha çok yer verilmiştir (7 defa). Matematik öğretim programında "Sayılar ve İşlemler" öğrenme alanı bütün sınıflarda ilk ve en temel bir öğrenme alanı olması ve sayıların temelinde bu öğrenme alanının önemi göz önüne alınırsa '*Kral'ın Onlukları'* masal kitabının bu öğrenme alanları ile uyumluluk gösterdiği söylenebilir. Programdaki kazanımların bu masal kitabında geçen durumları karşıladığı söylenebilir.

Yazarın '*Açı Diyarının Büyük Şövalyesi'* adlı kitabında; "Ölçme" öğrenme alanının 'Açı ve Açı Ölçüsü' alt öğrenme alanına ait kazanımlara daha çok yer verdiği tespit edilmiştir (8 defa). Bunun yanı sıra "Geometri ve Ölçme" öğrenme alanının alt öğrenme alanlarına ilişkin kazanımlara 'Temel Geometrik Kavramlar' (2 defa), 'Açılar' (1 defa), 'Çember' (4 defa), 'Dönüşüm Geometrisi' (2 defa) yeteri kadar yer vermediği görülmüştür. Yazarın 'Açı ve Açı Ölçüsü' alt öğrenme alanına daha çok yer vermesi; bu alt öğrenme alanının diğer alt öğrenme alanlarının temeli niteliğinde olması şeklinde açıklanabilir. Dolayısıyla '*Açı Diyarının Büyük Şövalyesi'* adlı masal kitabının öğretim programlarıyla uyumlu olduğu düşünülebilir.

Yazarın '*Konideki büyük Kılıç'* adlı kitabında; "Geometri ve Ölçme" öğrenme alanının 'Geometrik Cisimler' alt öğrenme alanına ilişkin kazanımlara daha çok yer verdiği incelemeler sonucunda ortaya çıkmıştır (25 defa). Bunun yanı sıra "Ölçme" öğrenme alanının 'Uzunluk Ölçme' alt öğrenme alanına ilişkin kazanımlara yeteri kadar yer vermediği (1 defa) görülmüştür. Masal kitabında birçok geometrik cisim ile ilgili ölçüm yapıldığı anlatılmaktadır; ancak 'Uzunluk Ölçme' öğrenme alanı ile ilgili sadece bir kazanıma yer verildiği görülmektedir. İlkokul matematik programında 4.sınıf 'Uzunluk Ölçme' alt öğrenme alanı ile ilgili beş tane kazanım bulunmaktadır. Yazar bunlardan sadece bir tanesine yer vermiş, ortaokul matematik öğretim programı 5.sınıf 'Uzunluk Ölçme' alt öğrenme alanı ile ilgili kazanımlara yer vermemiştir. Buradan hareketle '*Konideki büyük Kılıç'* masal kitabında geçen kazanımların öğretim programıyla çok fazla uyumlu olmadığı ifade edilebilir. Programdaki kazanımların bu masal kitabında geçen durumları yeteri kadar karşılamadığı ifade edilebilir.

Yazarın '*Çetre Adası'* adlı kitabında; "Ölçme" öğrenme alanının 'Alan Ölçme' alt öğrenme alanına ilişkin kazanımlara daha çok yer verdiği belirlenmiştir (4 defa). Bunun yanı sıra "Geometrik Şekiller ve Çizimler'" (1defa), 'Uzunluk Ölçme' (2 defa), "Geometri ve Ölçme" Öğrenme alanının alt öğrenme alanına ilişkin kazanımlara 'Çember' (3 defa), 'Çember ve Daire' (1 defa) ise yeteri kadar yer verilmediği görülmüştür. Bu açıdan bakıldığında '*Çetre Adası'* adlı masal kitabının, öğretim programıyla yeteri kadar örtüşmediği görülmektedir. Programdaki kazanımların bu masal kitabında geçen durumları tam olarak karşılamadığı söylenebilir.

Yazarın son incelenen masal olan '*Viking Haritası'* adlı kitabında; "Cebir" öğrenme alanının 'Doğrusal Denklemler' alt öğrenme alanına ilişkin kazanımlara daha çok yer verdiği ortaya çıkmıştır (15 defa). Bunun yanı sıra "Geometri ve Ölçme" öğrenme alanının alt öğrenme alanına ilişkin kazanımlara 'Açılar' (2 defa), 'Doğru, Doğru Parçası ve Işın' (1 defa), "Sayılar ve İşlemler" öğrenme alanına 'Tam Sayılar' alt öğrenme alanına ilişkin kazanımlara (1 defa) yeteri kadar yer verilmediği görülmüştür. Bu bağlamda '*Viking Haritası'* adlı masal kitabı da programda yer alan bir öğrenme alanına sıklıkla yer vermiş ancak diğer öğrenme alanlarıyla yeteri kadar uyumluluk gösterememiştir.

Masalların matematik öğretim hedeflerini kazandırma amacında olduğunu düşünürsek zaman zaman pek çok matematik kavramlarına da (paralellik, doğru parçası, eğim ve yükseklik gibi) yer verildiğini, sembol ve birimlerin önemine de değinildiğini görmekteyiz.

Ayrıca masallarda kavramları anlatmaya yönelik benzetim ve örneklerle ilgili durumların dışında örnek ve benzetimlere de (kesirler konusunda verilen kek örneği, saatteki akrep ve yelkovanın belli saatlerde oluşturduğu açılar gibi) yer verilmiştir. Masallarda ortaya çıkan matematiksel durumlara gerçekmiş gibi yaklaşılması da öğrencilerin ders süresince ilgisini çekebilir ve eğlenerek öğrenmelerini sağlayabilir.

Öğrencilerin matematik endişesi ve korkusuna; matematik derslerindeki odaklanma eksikliğinin, dersi dinlememenin, önbilgilerdeki eksikliğin, matematik dersiyle baş etmedeki motivasyon ve öz güven yetersizliğinin ve matematiğin zor oluşunun sebep olduğu düşünülebilir. Dolayısıyla bu kaygı ve korkunun engellenmesine yardımcı olacak faktörlerden biri de masalların öğretim sürecinde yer almasıdır.

Çocukluğumuzda okumaktan zevk aldığımız masal ve hikâyelerin genellikle belli değerler kazandırma amacıyla yazıldığı bilinmektedir. Her ne kadar matematik konularına yönelik de olsa bu araştırmada incelen masallarda da bu tür öğelerin varlığı göze çarpmaktadır. Dolayısıyla masallarda birçok sosyal değerin tartışıldığı ortaya çıkmıştır. Bunları, ön yargılı olmama, sabırlı ve hoşgörülü olma, enerji tasarrufunun önemi, zorluklara karşı gayretli olma öne çıkan sosyal değerler olmuştur.

RELATIONSHIP BETWEEN CONCEPTUAL AND PROCEDURAL LEARNING: THE CASE OF GENERAL MATHEMATICS COURSE

İlknur ÖZPINAR
Niğde University, Faculty of Education

Selahattin ARSLAN
Karadeniz Technical University, Fatih Faculty of Education

ABSTRACT: In the current study, it was aimed to determine the relation between conceptual and procedural learning types in the course of General Mathematics among primary school pre-service mathematics teachers. The study group consisted of 97 freshmen studying at Primary School Mathematics Teacher Training Department. Case study method was used within the scope of descriptive approach. Pre-service teachers were asked questions measuring procedural and conceptual learning within the context of general mathematics course. At the end of the study, it was found that while there was no positive relation towards procedural learning $\rightarrow$ conceptual learning, there was positive relation towards conceptual knowledge $\rightarrow$ procedural learning.

Key words: Procedural Learning, Conceptual Learning, General Mathematics Course, Pre-service Mathematics Teachers.

İŞLEMSEL VE KAVRAMSAL ÖĞRENME ARASINDAKİ İLİŞKİ: GENEL MATEMATİK DERSİ ÖRNEĞİ

ÖZET: Bu çalışmada ilköğretim matematik öğretmen adaylarının Genel Matematik dersinde kavramsal - işlemsel öğrenme türleri arasındaki etkileşimin nasıl olduğunun belirlenmesi amaçlanmaktadır. Çalışmanın örneklemini İlköğretim Matematik Öğretmenliği programında öğrenim görmekte olan 97 birinci sınıf öğrencisi oluşturmaktadır. Araştırmada betimsel yaklaşım kapsamında örnek olay yöntemi kullanılmıştır. Çalışmada öğretmen adaylarına Genel Matematik dersi kapsamında işlemsel ve kavramsal öğrenmeyi ölçen sorular sorulmuştur. Çalışmanın sonucunda işlemsel öğrenme$\rightarrow$ kavramsal öğrenme yönünde pozitif bir ilişki yokken kavramsal öğrenme$\rightarrow$ işlemsel öğrenme yönünde pozitif bir ilişki olduğu ortaya konulmuştur.

Anahtar sözcükler: İşlemsel Öğrenme, Kavramsal Öğrenme, Genel Matematik Dersi, Öğretmen Adayı.

GİRİŞ

Matematik, birbirinden farklı konu, işlem ve kuralların oluşturduğu bir bilgi yığını değil, temel ilke ve kavramlara dayanan bir düşünme yöntemidir (Yıldırım, 2004). Bu nedenle matematik ezberlemekten çok anlamaya dayanmaktadır. Bunun doğal bir neticesi olarak da matematikte, kavramsal ve işlemsel olmak üzere iki tür bilgiden ve buna bağlı olarak matematiksel öğrenmenin işlemsel ve kavramsal olmak üzere iki türlü gerçekleştiğinden söz edilir (Groth & Bergner, 2006).

Hiebert ve Lefevre (1986), en genel anlamda işlemsel bilgiyi "nasıl yapıldığını bilme", kavramsal bilgiyi de "neden öyle olduğunu/yapıldığını bilme" olarak tanımlamaktadır. Daha ayrıntılı tanımlamak gerekirse, kavramsal bilgi, bir alanın ilke, kural ve tüm bilgi parçacıkları arasındaki karşılıklı ilişkilerin açık veya örtük bilgisi iken işlemsel bilgi, matematiksel soruları çözmek için kullanılan kural ve işlemler ile bilgiyi temsil etmek için kullanılan sembolleri içerir (Hiebert & LeFevre, 1986; Hiebert & Carpenter, 1992; Rittle-Johnson, Siegler & Alibali, 2001; Schneider & Stern, 2010).

Matematiksel bilgiyi her zaman işlemsel veya kavramsal bilgi olarak kesin çizgilerle birbirinden ayırmak güçtür. Zaten matematik öğrenmek için hem işlemsel hem de kavramsal bilgiye ihtiyaç vardır. Bu iki tip bilgi de birbirinden bağımsız olarak gelişmez (Van de Walle, 1994; Rittle-Johnson & Alibali, 1999). Kavramsal ve işlemsel öğrenme arasındaki ilişki geçmişten günümüze araştırmacılar tarafından çeşitli kademedeki öğrenciler için araştırılmış olmasına rağmen bir fikir birliği sağlanamamıştır. Araştırmacıların bir bölümü işlemsel öğrenmenin kavramsal öğrenmeyi etkilediği yani bireylerin ancak doğru prosedürleri öğrendikten sonra o prosedürlerin altında yatan kavramları öğrendiklerini belirtmektedir (Briars & Siegler, 1984; Frye, Braisby, Lowe, Maroudas & Nicholls, 1989). Fakat bu araştırmaların tersine bazı çalışmalarda da prosedür oluşumunun temelinde kavramsal öğrenmenin bulunduğu üzerinde durulmaktadır (Baki & Kartal, 2004; Cauley, 1988; Hiebert & Wearne, 1996; Rittle-Johnson & Alibali, 1999). Bazı araştırmacılar ise bu iki anlamanın çift yönlü olduğu (Rittle-Johnson, Siegler & Alibali, 2001) görüşünde iken bazıları da kavramsal ve işlemsel anlamanın ilişkili olmadığı (Resnick & Omanson, 1987) görüşündedir.

Üniversite öğrencilerinin matematik derslerindeki işlemsel ve kavramsal öğrenmeleri ile ilgili yapılan çalışmalar incelendiğinde Analiz dersinin ön plana çıktığı (örn. Engelbrecht, Harding & Potgieter, 2005; Porter & Masingila, 2000; Mahir, 2009) görülmektedir. Öğretmen adaylarıyla yapılan çalışmalar incelendiğinde de Lineer Cebir (İşleyen & Işık, 2005), Diferansiyel Denklemler (Arslan, 2010) gibi dersler ile belirli integral (Delice & Sevimli, 2010), istatistiksel alan bilgileri (ortalama, medyan, mod) (Groth & Bergner, 2006) gibi konularda işlemsel/kavramsal öğrenmenin araştırıldığı görülmektedir.

Çalışmanın Amacı

Eğitim Fakültelerinde okutulan Genel Matematik dersinin içeriğinde "Sayılar, İkinci Dereceden Denklem ve Eşitsizlikler, Doğrunun ve Çemberin Analitik İncelenmesi, Fonksiyon kavramı, Fonksiyonların Grafikleri, Tümevarım İlkesi, Karmaşık Sayılar" gibi konular mevcut olup bu içeriğin lise matematik dersi müfredatıyla örtüştüğü görülmektedir. Yapılan literatür taraması, Genel Matematik dersinde öğretmen adaylarının işlemsel/kavramsal öğrenmelerini sorgulayan bir çalışma bulunmadığını göstermektedir. Oysa öğretmen adaylarının ortaöğretimde gördükleri konuların daha geniş kapsamlı ele alınıp sonraki dönemlerde alacakları alan derslerine temel oluşturması açısından Genel Matematik dersinin önemli olduğu düşünülmektedir. Bu tespitten hareketle ilgili çalışmada öğretmen adaylarının Genel Matematik dersindeki işlemsel ve kavramsal öğrenmeleri arasındaki ilişkinin araştırılması amaçlanmaktadır.

YÖNTEM

Araştırma problemine cevap vermek amacıyla betimsel yaklaşım kapsamında örnek olay yöntemi kullanılmıştır. Çalışmanın örneklemini, bir devlet üniversitesinin İlköğretim Matematik Öğretmenliği programında Genel Matematik dersine devam öğretmen adayları oluşturmaktadır. İki ardışık yıl tekrarlanan araştırmaya, ilk yıl 47, ikinci yıl 50 olmak üzere toplam 97 öğretmen adayı dahil edilmiştir. Çalışmanın iki yıl üst üste yapılmasındaki amaç -uzman görüşleri doğrultusunda- örneklem sayısını arttırmak ve kapsamı genişletmektir (Özpınar & Arslan, 2012). Böylece sonuçların güvenirliğini arttırmak amaçlanmıştır. Her iki yılda da katılımcılara hem işlemsel hem de kavramsal sorular sorulmuştur. Soruların içeriği Genel Matematik dersinin farklı konularıyla ilişkili olup kapsam geçerliği sağlanmıştır.

İşlem ve Veri Toplama Araçları

Bu çalışmada öğretmen adaylarına matematik dersi kapsamında işlemsel ve kavramsal öğrenmeyi ölçen sorular sorulmuştur. Bir sorunun hangi öğrenme türünü (işlemsel veya kavramsal) ölçmeye yönelik olduğunu belirlemek için literatür incelemesi (Arslan, 2010; Baki & Kartal, 2004; Baki, 2008; Olkun & Toluk-Uçar, 2009; Schneider & Stern, 2010; Siegler & Alibali, 2001; Van de Walle, 1994) sonucu bir karakterizasyon ölçeği geliştirilmiştir.

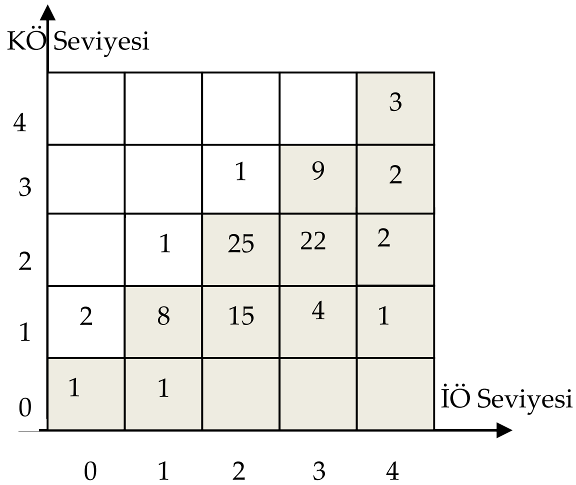
Veri Analizi

Öncelikle soruların cevap anahtarları hazırlanarak çözümün her bir aşaması için verilecek puan belirlenmiştir. Ardından öğrencilerin sorulara verdikleri cevaplar puanlanarak öğrencilerin her sorudan aldıkları puanlar ayrı ayrı hesaplanmıştır.

Öğrencilerin işlemsel öğrenmeyi ölçen sorular ile kavramsal öğrenmeyi ölçen sorular için 100 üzerinden iki ayrı notu hesaplandıktan sonra Arslan (2010) tarafından geliştirilen seviye aralıkları kullanılarak öğrencilerin seviyeleri tespit edilmiştir. Buna göre öğrenciler beş seviyeye ayrılmış olup seviyeler 20 puanlık aralıklardan oluşmaktadır: [0-20) puan aralığı 0. seviye, [20-40) puan aralığı 1. seviye, [40-60) puan aralığı 2. seviye, [60-80) puan aralığı 3. seviye ve [80-100] puan aralığı 4. seviye olarak belirlenmiştir. Son aşamada ise bu seviyeler çift yönlü olarak karşılaştırılarak işlemsel kavramsal öğrenme ilişkisine bakılmıştır. Burada anlatılan işlem her iki yıldan elde edilen veriler için ayrı ayrı yapılmıştır.

BULGULAR

Bulgular aşağıdaki grafikte özetlenmiştir. Aşağıda yer alan grafik işlemsel (İÖ) ve kavramsal öğrenme (KÖ) ile ilgili öğrenci seviyelerini özetlemektedir. Grafiklerde x ve y eksenleri üzerinde yer alan sayılar (0, 1, 2, 3, 4) seviyeleri, grafiğin içindeki sayılar da ilgili işlemsel ve kavramsal öğrenme seviyesindeki öğrenci sayısını göstermektedir. Öğrencilerin işlemsel ve kavramsal öğrenme türlerinden hangisinin öne çıktığının ve bu iki öğrenme türü arasındaki ilişkinin daha rahat görülmesi amacıyla bulgulara toplu halde göz atılmasının faydalı olacağı düşünülmektedir.



Şekil 1. İşlemsel ve Kavramsal Öğrenme Türleri Arasındaki İlişki

Şekil 1'de işlemsel seviyesi düşük olan öğrencilerin genel olarak kavramsal seviyelerinin de düşük olduğu görülmektedir. Verilen grafik göz önünde bulundurarak işlemsel öğrenmesi üst seviyede olan bir öğrencinin kavramsal seviyesinin üst düzeyde olmasının gerekmediği yani işlemsel öğrenmeyi gerçekleştiren bir öğrencinin her zaman kavramsal öğrenmeyi gerçekleştiremeyebileceği söylenebilir. Örneğin işlemsel seviyesi 4 olan bir öğrencinin kavramsal seviyesi 1, iki öğrencinin kavramsal seviyesinin 2 ve iki öğrencinin ise kavramsal seviyesinin 3 olduğu görülmektedir.

Diğer yandan, grafik incelendiğinde kavramsal öğrenmesi üst düzeyde olan bir öğrencinin işlemsel öğrenmesinin de üst düzeyde olduğu, kavramsal öğrenme seviyesi düşük öğrencilerin işlemsel öğrenme seviyesinin de genel olarak düşük olduğu görülmektedir. Bu durum göz önünde bulundurularak kavramsal öğrenmeyi gerçekleştiren bir öğrencinin işlemsel öğrenmeyi de gerçekleştireceği söylenebilir. Elde edilen bu bulgu literatürdeki bazı çalışmaların bulguları ile de örtüşmektedir (Arslan, 2010; Mahir, 2009; Rittle-Johnson, Siegler & Alibali, 2001).

Şekil 1 incelendiğinde öğretmen adaylarının işlemsel öğrenme seviyelerinin 2. ve 3. seviyede yoğunlaştığı görülmektedir. İşlemsel olarak 4. seviyede olan yalnızca 8 öğrenci bulunmaktadır. Diğer yandan Şekil 1 öğrencilerin kavramsal seviyelerinin 1. ve 2. seviyede yoğunlaştığını ortaya koymaktadır. Kavramsal seviyesi 3 olan 12, 4 olan ise 3 öğrenci bulunmaktadır. Öğrencilerin işlemsel öğrenme gerektiren sorulardaki performanslarının kavramsal öğrenme gerektiren sorularda sergilediklerine göre daha yüksek olduğu bulgusu ilgili literatürün bulguları ile de örtüşmektedir (Arslan, 2010; Baki & Kartal, 2004; Bekdemir, 2012; Bekdemir & Işık, 2007; İşleyen & Işık, 2005).

SONUÇ

Bu çalışmada Genel Matematik dersinde işlemsel öğrenme ile kavramsal öğrenme arasındaki ilişkinin araştırılması amaçlanmıştır. Çalışmada, işlemsel öğrenme $\rightarrow$ kavramsal öğrenme yönünde doğrusal bir ilişki ortaya çıkmazken kavramsal öğrenme $\rightarrow$ işlemsel öğrenme yönünde doğrusal bir ilişki olduğu sonucuna varılmıştır. Dolayısı ile kavramsal olarak başarılı olan öğrencilerin işlemsel olarak da başarılı, kavramsal olarak başarısız olan öğrencilerin ise işlemsel olarak da başarısız oldukları fakat bunun aksinin doğru olmadığı söylenebilir. Bu sonuç ise kavramsal öğrenmenin işlemsel öğrenmeyi desteklediğinin fakat bunun tersinin doğru olmadığının bir göstergesidir.

NOT

Bu çalışmanın ilk yıl toplanan veriler ile oluşturulan ilk hali Niğde Üniversitesi'nde düzenlenen X. UFBMEK'te sunulmuştur (Özpınar ve Arslan, 2012).

DESIGN AND EVALUATION OF THE DYNAMIC MANIPULATIVE AND ACTIVITIES IN PROBABILITY EDUCATION

Tuba ADA
Anadolu Üniversitesi

Selçuk Alkan
Mustafa Kemal Üniversitesi

ABSTRACT: Manipulative is defined as controllable materials. Manipulatives are especially used in the education to teach the notions to the students. It may materialize the abstract notions by visualization that students have difficulty in understanding. Therefore students can learn these notions more easily. It also both enables to enrich problem solving activities and renders the class more attractive and efficient and it helps students to develop their creative thinking (Moyer, 2002). Akkan and Çakıcıoğlu (2009) have stated in their study -in which virtual and physical manipulatives are compared with each other- that students find virtual manipulatives more practical. At the same study it has been concluded that virtual manipulatives are not used in the class frequently. However using the physical materials in probability teaching is both difficult and expensive and it may lead to misconception. Therefore virtual manipulative can be used in probability subjects (Van De Walle,2012). At the each step of the probability education (in basic notion teaching, definition of the relation between theoretical and experimental probability, dependent and independent event teaching) virtual manipulatives can be used. In this context, this study aims to design manipulatives that will be used at the teaching of dependent event notion and to design appropriate activities with prepared manipulatives that are related to basic notions and to evaluate efficiency of these tools. The qualitative research pattern will be used in the study. The manipulatives which will be used during the activity was developed by means of Unity 3d 5.0 version game engine. When the manipulative was being designed, it was benefited from the internet site of the American National Virtual Manipulative (unvl.com) Library. In addition, new activities were designed by benefitting from the activities that were developed by NCTM and MNE. These activities and manipulative are shown to the 5 teacher and the interviews with teacher are recorded. By this way the deficiencies and the point which are needed to correct will be determined.

Key words: mathematics education, probability teaching, virtual manipulatives.

OLASILIK EĞITIMINDE BAĞIMLI OLAY ILE ILGILI SANAL DINAMIK MANIPÜLATIF VE ETKINLIKLERIN TASARLANMASI

ÖZET: Manipülatif, kontrol edilebilir materyal olarak tanımlanmaktadır. Sanal manipülatifler genellikle öğrencilere, bir kavramın öğretiminde kullanılmaktadır. Özellikle öğrencilerin anlamalarında zorluk yaşadıkları soyut kavramları görselleştirerek somutlaştırmaktadır. Böylece kavramı öğrenmeleri daha kolay hale gelmektedir. Ayrıca problem çözme etkinliklerinin zenginleşmesine olanak sağladığı gibi dersi daha ilgi çekici ve etkili hale getirmekte ve öğrencilerin yaratıcı düşüncelerini geliştirmelerine yardımcı olmaktadır(Moyer,2002). Akkan ve Çakıcıoğlu (2009)' nun sanal ve fiziksel manipülatifleri karşılaştırdıkları çalışmada öğrencilerin sanal manipülatifleri daha kullanışlı bulduklarını belirtmişlerdir. Ayrıca aynı çalışmada manipülatiflerin sınıflarda fazla kullanılmadığı sonucuna ulaşılmıştır. Halbuki olasılık gibi konularda fiziksel materyali kullanmak çok zor, pahalı ve kavram yanılgısı oluşumuna neden olabilmektedir. Bundan dolayı olasılık konusunda sanal manipülatifler kullanılabilir(Van De Walle,2012). Olasılık öğretimin her basamağında (temel kavramların öğretiminde, teorik-deneysel olasılık arası ilişkinin belirlenmesinde, bağımlı ve bağımsız olay kavramının öğretiminde) sanal manipülatifler kullanılabilir. Bu bağlamda bu çalışmanın amacı olasılık konusu içerisinde bulunan bağımlı olay kavramını öğretiminde kullanılacak bir manipülatif ile daha önce temel kavramlar ile ilgili hazırladığımız manipülatife uygun etkinlikler tasarlamak ve geliştirilen bu araçların etkililiğini değerlendirmektir. Çalışmada nitel araştırma deseni kullanılmıştır. Etkinlik sırasında kullanılacak olan sanal manüpülatif Unity3d 5.0 sürüm oyun motoru yardımıyla geliştirilmiştir. Manipülatif tasarlanırken Amerikan Ulusal sanal Manipülatif (unvl.com) kütüphanesi internet sitesinden yararlanılmıştır. Ayrıca NCTM ve MEB tarafından geliştirilmiş etkinliklerden yararlanılarak yeni etkinlikler tasarlanmıştır. Daha sonra bu etkinlikler ve manipülatif 5 öğretmene gösterilerek, öğretmenlerle yapılacak görüşmeler ses kaydına alınmıştır. Bu şekilde eksiklikler ve düzeltilmesi gerekilen noktalar belirlenmiştir.

Anahtar sözcükler: matematik eğitimi, olasılık eğitimi, sanal manipülatif.

GİRİŞ

Manipülatif, genel olarak kontrol edilebilir materyal olarak tanımlanmaktadır. Hynes'e (1986) göre manipülatifler matematiksel kavramlarla ilişkili olan ve birkaç duyuyu harekete geçiren modeller olarak tanımlamıştır. Swan ve Marshal (2010) ise kişisel olarak kullanılabilen ve bilinçli ya da bilinçsiz olarak matematiksel düşünceyi geliştirebilen araçlar olarak tanımlamışlardır. Manipülatifleri sanal ve somut (fiziksel) olarak ikiye ayırabiliriz. Fiziksel manipülatiflerin eğitimde kullanımı Fröbel(1826) ve Montessory (1912) yapmış olduğu çalışmalar gibi çok eski tarihlere kadar gitmektedir. Bilgisayar ortamında tasarlanmış materyale ise sanal manüpülatif denilmektedir (Durmuş ve Karakırık, 2006 akt. Yaman ve Şahin,2013) ve özellikle son yıllarda bu tür manipülatifler önemi giderek anlaşılmada ve kullanımı artmaktadır. Literatürde sanal manipülatifler kendi içerisinde dinamik ve statik olmak üzere iki alt türe ayrılmıştır. Statik manipülatifler sadece okumak ya da gözlemlemek için tasarlanmış olup kullanımı oldukça kısıtlıdır. Dinamik manipülatifler ise kullanıcıların etkileşim haline girebildiği materyaller olarak tanımlanmaktadır (Spicer, 2000). Sanal dinamik manipülatifler, matematik eğitimine olumlu katkı sunacaktır.

Sanal dinamik manipülatifler genellikle öğrencilere, bir matematiksel kavramın öğretiminde kullanılmaktadır. Özellikle öğrencilerin anlamalarında zorluk yaşadıkları soyut kavramları görselleştirerek somutlaştırmaktadır böylece kavramı öğrenmeleri daha kolay hale gelmektedir. Problem çözme etkinliklerin zenginleşmesine olanak sağlamaktadır. Dersi daha ilgi çekici ve etkili hale getirmekte ve öğrencilerin yaratıcı düşüncelerini geliştirmelerine yardımcı olmaktadır(Moyer,2002). Manipülatifler matematikte çok sık kullanılmaktadır. Özellikle olasılık gibi fiziksel materyal kullanmak çok zor, pahalı ve kavram yanılgısı oluşumuna neden olabileceği durumlarda sanal manipülatifler kullanılabilir(Van De Walle,2012).

Bundan dolayı olasılık konusunun temel kavramların öğretimi için kullanılabilecek sanal dinamik manipülatiflerin tasarlanması çok önelidir. Ayrıca son dönemlerde eğitim için geliştirilen araçların kullanımının, etkililiğinin değerlendirilmesinde hatta tasarımında kullanıcılar da katılımcı olarak kullanıldığından (Bossen vd. 2010; Kafai 2003; Druin 1999; Scaife vd. 1997 akt. Hansan vd. 2016,) manipülatif tasarımında aşamasında öğretmen değerlendirmesini belirlemek önemlidir. Bu amaçla biz tasarladığımız manipülatifleri, etkinliklere yönelik öğretmen görüşlerini ve değerlendirmelerini belirledik. Bir sonraki adımda bu öğretmenlerin görüşlerini ve değerlendirmelerin göz önüne alarak manipülatiflerde değişikliğe gideceğiz.

YÖNTEM

Çalışmada nitel araştırma deseni kullanılmıştır. Etkinlik sırasında kullanılacak olan sanal manüpülatif Unity3d 5.0 sürüm oyun motoru yardımıyla geliştirilmiştir. Manipülatif tasarlanırken Amerikan Ulusal sanal Manipülatif (unvl.com) kütüphanesi internet sitesinden yararlanılmıştır. Nctm ve meb tarafından geliştirilmiş etkinlikler yararlanılarak yeni etkinlikler manipülatiflere uygun olarak tasarlanmıştır.

Tasarlanan bu etkinlikler ve manipülatifler öğretmenlere tanıtılmıştır. Öğretmenlerin manipülatifler hakkındaki görüşler belirlemek için yarı yapılandırılmış görüşme soruları hazırlanmış ve görüşmeler ses kayıt cihazı ile kaydedilmiştir. Daha sonra bu görüşmeler içerik analizine tabi tutularak temalar oluşturulmuştur. Görüşme soruları temel olarak iki sorudan oluşmuştur:

Manipülatif ve etkinliklerin eğitime katkısı var mı?
a)Kavramların öğretimine
b)Öğrencilerin motivasyonuna ve katılımına
Tasarım yönünden düzenleme yapılmalı mıdır?
Çalışmaya 5 öğretmen katılmıştır. Bu öğretmenlerin üçü bu mesleği 10 yıldan uzun diğer iki öğretmen beş yıldan az süredir bu mesleği yapmaktadır. Öğretmenler hakkındaki bilgiler aşağıdaki tabloda verilmiştir:

Tablo: 1 Öğretmen çalışma yılı

Öğretmen	Çalışma yılı
Öğretmen 1	5 yıllık
Öğretmen 2	3 yıllık
Öğretmen 3	10 yıllık
Öğretmen 4	12 yıllık
Öğretmen 5	14 yıllık

BULGULAR

Çalışmada öğretmenlerin tamamı manipülatifi olasılık ile ilgili kavramların öğretimde kullanılabilir mı? sorusuna olumlu yanıt vermiştir. Özellikle manipülatiflerin görselleştirme ve somutlaştırma özelliklerinden bahsetmişlerdir.

Öğretmen4: *«tabiki önce öğretmen anlatacak matematikte yüzme gibidir yüzmeyi öğrencilere göstermek yetmiyor tekrar yaşatmak lazım. Mutlaka katacaktır.»*
Öğretmen3: *«Muhakkak sağlar dersin görselleştirmesi açısından biliyorsunuz olasılık biraz soyut bir konu biraz daha somutlaştırmasını sağlayabilir»*

Öğretmenlerden ikisi manipülatiflerin özellikle teorik ve deneysel olasılık ile ilgili kavramların öğretiminde etkili olacağını belirtmiştir.

Öğretmen3: «*Bir de bu teorik ve deneysel olasılığı anlatıyoruz biz kendilerine teorik olasılık sabittir, deneysel olasılık ise deney sayısı arttıkça teorik olasılığa yaklaşır. Mesela bunu göstermek açısından bu iyi bir şey olmuş*»
Öğretmen5: «*özellikle ikinci etkinlikte teorik ve deneysel olasılık öğretimde zorluk yaşıyoruz. Bu materyaller kullanışlı olabilir.*»

Öğretmenin üçü sınıf içerisinde manipülatiflerin kullanımının öğrencilerin motivasyonlarının ve derse olan ilgisini artıracağını söylemiştir.

Öğretmen 4: «*Etkinlik olsun diye dediğiniz gibi yarışma düzenlenebilir. Öğrenciler arası motivasyonu artırır. Hatta ilk oynadığınızda 2. Ve 3. Defa daha oynayalım önerileri de gelir. Ama abartmamak lazım.»*
Öğretmen 5: «*Matematiğe ilgisi olmayan öğrenci dönüp bakabilir bence hatta bu durumda bile ilgisi olmayan öğrenci mutlaka dönüp bakar o yüzden güzel bir materyal.»*

Öğretmenlerinden ikisi manipülatiflerin kavram yanılgılarını engelleyebileceğini belirtmiştir.

Öğretmen 5: «*evet bu materyal çok güzel (ikinci manipülatiften bahsediyor) öğrenciler tarafından en çok zorlandıkları kısım bu zaten. 6 gelme olasılığını direk 6 (pay kısmına) yazabiliyorlar.»*

Öğretmenlerden ikisi ilk manipülatifte bulunan yüzdeliklerin gösterilen bölümün öğrencilerin anlamlandırmada zorluk yaşayacaklarını belirtmiştir. Çünkü öğrencilerin çok büyük bir kısmının yüzdelik konusunu ve özellikle yüzdeliklerin ondalık kısmını anlamlandıramayacağını belirtmişlerdir.

Öğretmen 3: «*Bu yüzdeler kafa karıştırabilir çünkü yüzdeler olasılığın içerisine hemen girdiği zaman sıkıntı yazabilir. Bir de burada yüzdeler tam net sayı çıkmayacak hep virgüllü çıkacak bundan sıkıntı yaşayabilir. Bunun yanına kesir gelebilir.»*
Öğretmen 5: «*İlk manipülatifte yüzdeler verilmiş ya bu kısım öğrencilerin kafasını karıştırır gibi geldi. Yüzdeyi hesaplarken sıkıntı yaşıyorlar genellikle. Mesela top seçiyorsunuz yan tarafta küsüratlı yüzdelikler çıkıyor bunlar bence kafa karıştırır bence yüzdelik ve küsüratlı olduğu için. Çünkü genelde virgüllü sayılarda çok takılıyorlar ya yani bu yüzdelik kısım değiştirilsin*»

Öğretmenlerin tamamı manipülatiflerin daha renkli olması gerektiğini ve öğretmenlerin dördü de animasyonlarla zenginleştirilmesi gerektiğini belirtmişlerdir.

Öğretmen 4: *«Burayı (arka plan) daha renklendirelim. İlgi çekici olsun. Mesela topu çektiğiniz zaman ne topu çektiğiniz belli olsun. Mesela gösterecek bak 5 geldi daha sonra bunun içerisine atacak. yoksa burada düğmeye basıyor burada 1 yazıyor 2 yazıyor öğrenci o şeyi göremez. Top çek denildiğinde burada bir top çıksın ve bize göstersin daha sonra top torbanın içine konulduğu belli olsun. Arkadan bir el çıksın çekiyor el gösteriyor burada 5 yazdı. Daha sonra topu içeri atıyor. Rastgele çekecek bir baktı 4 çıktı diğerinde baktı tekrar 4 çıktı diğerinde 0 çıktı yani topu görsün ve içeri atıldığını bilsin.»*
Öğretmen 3: *«Ekran sadeleştirilmeli ve görsellik artırılmalı bence sayılar büyütülebilir ve zar atmada zar sonucu görünür. 1 sayısı görünür ve yanda öyle yazar, ilk materyalde de topu çeker, öğrenci çekilen topu görür ve yana geçer. Ekranın rengi daha ilgi çekici olabilir. Koyu renk mesela daha açık renk olabilir. Yazıların boyutu bunu akıllı tahtada gösterebiliriz. Yazı tipi değiştirilse Comic sans ile yazılırsa daha iyi olur. Sadelik ve görsellik önemli çünkü öğrencilerin dikkati çok çabuk dağılabiliyor»*

Öğretmenlerden sadece bir tanesi sanal manipülatif yerine somut materyal kullanılmasını önermiştir.

Öğretmen1*: «İlk materyal güzelde dokunarak kullanacağımız bir materyal olsa daha güzel olmaz mı? Ekranda değil de top olsa kağıt olsa elle öğrencinin yaşadığı şeyi öğrenmesi daha fazladır. Çünkü kendi yaşıyor. İkinci materyal ise elektronik ortamda kullanılabilir çünkü bu konuda elle materyal yapmak daha zordur.»*

SONUÇ

Araştırmaya katılan öğretmenlerin genel olarak bilgisayar üzerinde tasarlanan materyallere karşı olumlu görüşlere sahip olduğu özellikle motivasyonu artıracağını belirtmişlerdir. Çağıtay ve arkadaşları (2001) yaptığı çalışmada benzer sonuçlara ulaşmıştır.

Öğretmenler, manipülatiflerin eğitimde kavramların gelişimine katkı sağlayacağını belirtmişlerdir. Bilgisayar destekli eğitimin öğrencilerin akademik başarıları artırdığı ve kavramsal öğrenmenin gerçekleştirdiği birçok çalışmada belirlenmiştir (Güven ve Sülün,2012, Yeniçeri, 2013). Öğretmenlerin manipülatif hakkındaki görüşlerinin belirlenmesi, manipülatifin birçok yönden gelişimine neden olmuştur. Özellikle biçimsel olarak verilen görüşler manipülatifi öğrencilerin gözünde daha değerli ve öğretici hale getirecektir.

ÖNERİLER

Buna benzer çalışmalar için vereceğimiz için vereceğimiz öneriler şunlardır:

1. Çalışma sırasında öğretmenler bağımlı olay ile ilgili bir materyalin hazırlanmasını önermiştir.
2. Bilgisayar ortamları için tasarlanacak materyaller için grafikerlerden yardım alınmalıdır.
3. Yeniçeri (2013) yapmış olduğu çalışmada Türkçe manipülatiflerin tasarlanmasının önemine vurgu yapmıştır.
4. Bu tür materyallerin niteliği ve niceliği artırılmalıdır.
5. Üretilen manipülatifler sınıf ortamında uygulanmalıdır

FRACTIONAL LITERACY LEVEL OF STUDENT MATHEMATICS TEACHERS

İsmail ŞAN
Inonu University, Education Faculty, Department of Educational Sciences

ABSTRACT: The purpose of this study is to determine the student mathematics teachers Fractional Literacy level. Survey method was used in this study. The sample of this study consists of 176 student mathematics teachers from Inonu University Faculty of Education, in Malatya, in 2016 spring semester. Data was collected by Fractional Literacy Test and personal information form developed by researcher. Findings show that, student teachers fractional literacy level is average. Based on this result, it can be recommended that, in teacher training process, lecturers should focus on activities that improve student teachers' fractional (mathematical) literacy.

Key words: mathematics literacy, fractional literacy, student teachers.

MATEMATİK ÖĞRETMEN ADAYLARININ KESİR SAYI OKURYAZARLIĞI DÜZEYLERİ

ÖZET: Bu çalışmanın amacı matematik öğretmen adaylarının kesir sayı okuryazarlığı düzeylerini tespit etmektir. Araştırmada tarama yöntemi kullanılmaktadır. Araştırmanın örneklemi 2014 bahar yarıyılında Malatya İnönü Üniversitesi Eğitim Fakültesi İlköğretim Matematik Öğretmenliği programında öğrenim gören 176 matematik öğretmeni adayından oluşmaktadır. Veriler araştırmacı tarafından hazırlanan "Kesir sayı Okuryazarlığı Ölçeği" ve kişisel bilgi formu aracılığıyla toplanmıştır. Bulgular, öğretmen adaylarının kesir sayı okuryazarlığının orta düzeyde olduğunu göstermektedir. Bu sonuca dayalı olarak, öğretim elemanlarının öğretmen adaylarındaki kesir sayı okur-yazarlığı gibi matematik okuryazarlığının alt dallarını geliştirici etkinliklere yönelmesi gerektiği söylenebilir.

Anahtar sözcükler: matematik okuryazarlığı, kesir sayılar, öğretmen adayları.

GİRİŞ

2005 yılında hazırlanıp 2013 yılında güncellenen ortaokul matematik öğretim programı eski programlara göre birçok farklılıklar içermektedir. Bu farklılıklar nedeniyle, matematik eğitiminde köklü bir değişime ihtiyaç vardır. Öğretmenlerin, sistemin uygulayıcıları olarak bu değişimin öncüleri arasında yer aldığı söylenebilir. Bu da öğretmenlerin hizmet içi eğitimlerinin yanı sıra öğretmen yetiştiren kurumların değişimi daha yakından takip etmesini gerektirmektedir.

Matematik eğitiminde reform için yazılagelen bütün önerilere rağmen, yapılan ihtiyaç analizi çalışmalarında genellikle yeni anlayışın eksikliği göze çarpmaktadır (MEB, 2008). 2005 yılında hazırlanan programdaki aksaklıkların giderilmesi için öğretmenlerin anahtar rolünde olduğunu varsayarsak, eğitim sistemimizdeki reformların önünün tıkalı olduğu görüntüsü karşımıza çıkar. Programla ilgili öğretmenlerden kaynaklanan sorunlar incelendiğinde öğretmenlerin bu programı uygulamada ve yetersiz olduğu görüşünün çok sık tekrarlandığı görülmektedir. Farklı çalışmalarda çıkan sonuçlara göre yetersizliğin en fazla değerlendirme boyutunda olduğu görülmektedir. Öğretmenlerin yetersiz oluşunu sebeplere dayalı açıklamaya çalışan bazı araştırmalarda özellikle kıdemli öğretmenlerin araç-gereçleri kullanmayı beceremediği ve dolayısıyla ders kitaplarına yöneldikleri; öğretmenlerin ders kitaplarını incelemeden konuları anlatıyor ve kendilerini derse adamıyor olmaları; ücretli öğretmenlik uygulaması; programın felsefesinin öğretmenlerce kavranamamış olması (Yapıcı, 2009) gibi sebeplerden dolayı programın uygulanmasında aksaklıklar ortaya çıkmaktadır. Bu aksaklıklar bir bütün olarak düşünüldüğünde baş edilmesi zor görünse de parçalara ayırmak suretiyle üstesinden gelinmeyecek sorunlar değildir. Öğretmenlerin süreçteki yetersizliği ile ilgili olumsuz görüş bildiren (Gözütok vd., 2005; Yazıcı, 2009) çalışmalara göre öğretmenlerin ve öğretmen adaylarının eğitimine ağırlık verilmesi gerekmektedir.

2005 yılındaki program değişikliğinin ardından, daha önce aranmayan bazı becerilerin de kazanımlar arasında kendine yer bulduğu görülmüştür. Bunlardan biri olan matematik okuryazarlığı, oldukça geniş bir kavramdır.

"Matematiksel okuryazarlık; bireyin düşünen, üreten ve eleştiren bir vatandaş olarak bugün ve gelecekte karşılaşacağı sorunların çözümünde matematiksel düşünme ve matematiksel karar verme süreçlerini kullanarak çevresindeki dünyada matematiğin oynadığı rolü anlama ve tanıma kapasitesidir" (OECD, 2000, s.10).

Matematik okuryazarlığı oldukça geniş bir kavram olup, alt boyutlara ayrılarak daha doğru değerlendirilebileceği varsayımına dayanılarak hazırlanan bu çalışmada, "kesir sayı okuryazarlığı" (KSOY) terimi kullanılmaktadır. Bu çalışmada kullanılan KSOY: verilen bir kesir sayı ifadesini ve kesir sayılarla yapılan dört işlemi görsel olarak ifade edebilme; görseli sunulan kesir sayıyı ve kesir sayılarla yapılan dört işlemi çıkarsayabilme; verilen bir kesir sayının veya kesir sayılarla yapılan dört işlemin kullanılmasını sağlayacak problem durumları oluşturabilme anlamında kullanılmıştır. Bu vesileyle çalışmada, öğretmen adaylarının bu yönlerini ölçmeyi amaçlayan sorulara yer verilmiştir.

Bu çalışmada, matematik öğretmen adaylarının KSOY düzeyleri ortaya konulmaya çalışılmış olup, Türk Eğitim Sistemi'ndeki program değişikliğinin ardından, öğretmenlerin hangi alanlarda eğitime ihtiyacı olduğunu göstermesi bakımından önem arz etmektedir. Matematik okuryazarlığının çalışıldığı çok sayıda çalışma olmakla birlikte matematiğin tamamının ele alınmasının ve ölçülmesinin zorluğu nedeniyle alt öğrenme alanlarına ayırmak gerekmektedir. Bu çalışma matematikteki alt öğrenme alanlarındaki okuryazarlığı inceleyen ilk çalışma olması nedeniyle önemlidir.

YÖNTEM

Bu bölümde araştırmanın problem cümlesi, modeli, evren-örneklemi ve veri toplama aracı hakkında bilgiler verilmektedir.

Problem Cümlesi

Matematik öğretmen adaylarının, kesir sayı okuryazarlığı düzeyleri nasıldır?

Araştırmanın Modeli

Bu araştırma, ilköğretim matematik öğretmen adaylarının KSOY düzeylerinin belirlenmesi amacıyla veri toplamaya yönelik "tarama modelinin kullanıldığı betimsel nitelikli bir çalışmadır. Betimsel çalışmalar olayların, objelerin, varlıkların, kurumların, grupların ve çeşitli alanların "ne" olduğunu betimlemeye, açıklamaya çalışan çalışmalardır. Betimleme araştırmaları, mevcut olayların geçmişteki olay ve koşullarla ilişkilerini dikkate alarak, durumlar arsındaki etkileşimi ortaya koymayı hedefler (Kaptan, 1998).

Evren-Örneklem

Araştırmanın evrenini 2015- 2016 yılı bahar yarıyılında İnönü Üniversitesi Eğitim Fakültesi İlköğretim Matematik Öğretmenliği programında öğrenimlerine devam eden matematik öğretmen adayları oluşturmaktadır. Çalışmada evren örnekleme yöntemi kullanılmış olup, programın 3. ve 4. sınıflarında öğrenim gören tüm öğretmen adaylarından veri toplanmıştır. Çalışmada yer almaya razı olan toplam 176 öğretmen adayından veriler toplanmıştır.

Veri Toplama Aracı

Araştırmanın verilerinin toplanması için toplam 8 maddeden ve demografik değişkenlerden oluşan, "KSOY Ölçeği" araştırmacı tarafından geliştirilmiştir. Denemelik formdaki maddelerin ölçeğe dâhil edilmesinde güçlük ve ayırt edicilik indeksleri temel alınmıştır. Ölçek oluşturulurken aşağıdaki adımlar takip edilmiştir.

Özel Öğretim Yöntemleri dersi kapsamında öğretmen adaylarına sunulan Sayılar öğrenme alanında yer alan Kesir Sayılar alt öğrenme alanındaki hedefler göz önüne alınarak açık uçlu sorulardan oluşan madde havuzu oluşturulmuştur.

Öğretmen adaylarının Kesir sayılar alt öğrenme alanı okuryazarlığı düzeylerini belirlemeye yönelik denemelik sorular oluşturulmuştur. Denemelik sorular İnönü Üniversitesi Eğitim Fakültesi Eğitim Bilimleri Bölümü Eğitim Programları ve Öğretim Bilim Dalı'nda görev yapan 2 ve İlköğretim Matematik Öğretmenliği Programında görev yapan 2 öğretim elemanı ve MEB'e bağlı okullarda çalışan 3 matematik öğretmeni tarafından incelenmiş, yapılan düzeltmelerin ardından 11 açık uçlu sorudan oluşan deneme formu oluşturulmuştur.

Deneme formundaki maddelerin anlaşılabilirliğinin belirlenmesi için, matematik öğretmenliği yapan 5 öğretmene uygulanmıştır. Öğretmenlerden anlamakta güçlük çektikleri soruları belirtmeleri istenmiş ve gerekli düzeltmeler yapılmıştır. Deneme formu 2015-2016 yılı güz yarıyılında 52 matematik öğretmenine uygulanmış uygulanmıştır. Uygulamanın ardından madde ve test analizleri yapılmıştır. Testteki tüm maddelerin güçlük ve ayırt edicilik indeksleri bulunmuştur. Deneme formunun madde analizi için verilen cevapların frekansları, yüzdeleri, maddelerin güçlük, ayırt edicilik değerleri ve bunların gerektirdiği yorumlar tablo 1'de verilmiştir.

Tablo 1. KSOY Ölçeği Madde Analizi Sonuçları

Deneme formu (OİBT)	Güçlük (P)	Güçlük Yorumu	Ayırt Edicilik (D)	Ayırt Edicilik Yorumu
1 (1)	0,750	Kolay	0,458	Çok iyi
2 (2)	0,429	Orta	0,729	Çok iyi
3 (3)	0,464	Orta	0,625	Çok iyi
4 (4)	0,321	Orta	0,208	Düzeltilmesi gerek
5 (5)	0,571	Orta	0,958	Çok iyi
6 (6)	0,286	Orta	0,396	Düzeltilmesi gerek
7 (7)	0,643	Orta	0,646	Çok iyi
8 (8)	0,286	Orta	0,563	Düzeltilmesi gerek
9 (yok)	0,143	Zor	0,208	Çok zayıf
10 (yok)	0,071	Zor	0,125	Çok zayıf
11 (yok)	0,107	Zor	0,250	Çok zayıf

Güçlük ($0.25<P<0.75$ orta güçlük) ve ayırt edicilik (0.40 çok yüksek) değerlerinin yorumlanmasında Tekin (1993: 249-252) tarafından belirlenen sınırlar esas alınmıştır.
Tekin (1993: 249) madde ayırt edicilik indeksine göre, maddeler hakkında yapılacak yorumların aşağıdaki gibi olması gerektiğini belirtmektedir:

0,40 veya daha yüksek:	Çok iyi bir madde,
0,30 - 0,39:	Geliştirilmesi gereken bir madde,
0,20 - 0,29:	Düzeltilmesi ve geliştirilmesi gereken bir madde,
0,19 veya daha düşük:	Çok zayıf bir madde (Testten çıkarılmalıdır).

Ayırtedicilik indeksleri çok zayıf olan 9, 10 ve 11 numaralı sorular testten çıkarılmıştır. Bu soruların çıkarılması ile testte kalan 8 madde arasında düzeltilmesi gereken 4, 6 ve 8 numaralı maddelerdeki kesir sayılar en sade hale getirilerek ve ek açıklama eklenerek daha anlaşılır hale getirilmiştir. Son durumda kalan 8 madde için yapılan analizlere ilişkin bulgular tablo 2'de verilmiştir.

Tablo 2. KSOY Ölçeği için Betimsel İstatistikler

	Genel	Alt Grup	Üst Grup
Soru Sayısı	8	8	8
Uygulanan Kişi Sayısı	52	14	14
En Yüksek Puanlı Öğrencinin Puanı	8 (%100)	3 (%21,4)	14 (%100)
En Düşük Puanlı Öğrencinin Puanı	0 (%0)	0 (%0)	5 (%35,7)
Ortalama	4 (%50,0)	1,5 (%18,8)	6,07 (%75,9)
Standart Sapma	1,921 (%24.0)	0,824 (%10,3)	0,961 (%12,0)
Çarpıklık z-değeri	-0,008	-0,725	0,660
Basıklık z-değeri	-1,206	-0,341	0,312
KR-20 Güvenirlik Katsayısı	.825	-	-
Madde Güçlük Ortalaması	.500	-	-
Madde Ayırt Edicilik Ortalaması	.563	-	-

Tablo 2'de görüldüğü gibi testte en yüksek puan alan öğrenci 8 puan alabilmiştir. Teste katılan öğrenciler ortalama 4 (%50) puan, alt gruptaki öğrenciler 1,5 (%18,8) puan, üst gruptaki öğrenciler ise 6,07 (%75,9) puan elde etmiştir. Testin geneli için çarpıklık z-değeri (Skewness/Std.Err.) -0,008; basıklık z-değeri (Kurtosis/Std.Err.) ise -1.206 olarak hesaplanmış olup, dağılımın normal dağılıma uygun olduğu diğer bir ifade ile verilerin homojen olduğu görülmektedir. Madde güçlük ortalaması 0.500 olan testin ayırt edicilik ortalaması 0.563'dir.

Hazırlanan test için hesaplanan KR20 güvenirlik katsayısı 0.772 olup, testin güvenirliğinin yeterli (Murphy & Davidshoper, 1988; Nunnally, 1978; Kaplan & Saccuzzo, 2001) olduğunu göstermektedir. KSOY ölçeği öğretmen adaylarının kesir sayı alt öğrenme alanı okuryazarlığının ortaya konulması amacıyla uygulanmıştır. KSOY'den alınan yüksek puan yüksek kesir sayı okuryazarlığını ifade etmektedir.

BULGULAR

Örneklemde yer alan öğretmen adaylarının kişisel bilgileri tablo 3'de görüldüğü gibidir.

Tablo 3. Öğretmen Adaylarının Demografik Değişkenlere göre Dağılımı

Değişkenler		N	%	Değişkenler		N	X
GANO	0-1,99	8	4,5	Öz-yeterlik İnancı	Belirtilmemiş	3	1,7
	2-2,49	47	26,7		0-44	33	18,8
	2,5-2,99	72	40,9		45-54	75	42,6
	3-3,49	46	26,1		55-69	7	4,0
	3,5-4	3	1,7		70-84	36	2,5
Öğretmenlik Tecrübesi	Yok	106	60,2		85-100	22	12,5
	MEB	9	5,1	Sınıf	3. sınıf	97	55,1
	Özel ders	32	18,2		4. sınıf	79	44,9
	Dershane	20	11,4	Cinsiyet	Erkek	65	36,9
	Özel Okul	9	5,1		Kadın	111	63,1
TOPLAM		176	100			176	100

Öğretmen adaylarının kişisel bilgileri incelendiğinde büyük çoğunluğunun kadın (%63,1) ve öğretmenlik tecrübesi olmadığı (%60,2) görülmektedir. Çalışmada toplanan veriler ışığında, araştırmanın problemine yönelik aşağıdaki bulgulara ulaşılmıştır.

Öğretmen Adaylarının KSOY Düzeyleri Nasıldır?

KSOY Ölçeği'ndeki 8 madde üzerinden yapılan değerlendirmeye ilişkin elde edilen ortalamalar ve standart sapmalar tablo 3'de verilmiştir.

Tablo 3. KSOY Ölçeği'ndeki Maddelere İlişkin Ortalama ve Standart Sapma Değerleri

	KAZANIMLAR	x*	Std. Sap.
1.	Kesirlerde toplama	,82	,029
2.	Kesirlerde çıkarma	,49	,038
3.	Kesirlerde çarpma	,67	,036
4.	Kesirlerde bölme	,58	,037
5.	Basit kesir gerektiren problem durumu oluşturma	,66	,036
6.	Bileşik kesir gerektiren problem durumu oluşturma	,20	,030
7.	Basit kesirlerin toplanmasını gerektiren problem durumu oluşturma	,61	,037
8.	Bileşik kesrin bölünmesini gerektiren problem durumu oluşturma	,26	,033
	Şekilleri Formülleştirme (İlk 4 soru)	,64	,022
	İşlemleri Yorumlama (Son 4 soru)	,43	,023
	Kesir Sayı Okuryazarlığı	0,537	0,018

*: elde edilen yüzde başarı yüzdesini göstermektedir.

Ölçekteki maddelerin ilk dördünün, verilen şekillerden yola çıkarak kesir sayılardaki dört işlemi sorguladığı, kalan dört soruda ise, verilen kesir sayının veya işlemin kullanılmasını gerektirecek problem durumlarının oluşturulmasının istendiği görülmektedir. Tablodaki ortalama ve standart sapma değerleri incelendiğinde, öğretmen adaylarının şekilden kesir sayıya gitme becerilerinin formülden somut veriye gitme becerisinden daha yüksek olduğu görülmüştür. Başka bir deyişler, öğretmen adayları verilen somut görsellerden formüle ulaşmada formülden somut veriye ulaşmaya göre daha yüksek başarı elde etmişlerdir. Öğretmen adaylarının ortalama puanlarının 0,537 olduğu görülmektedir. Ölçeğin ölçmeyi amaçladığı kesir sayı okuryazarlığı düzeyinin, bu veriye göre orta düzeyde olduğu görülmektedir. Elde edilen değerler incelendiğinde matematik öğretmen adaylarının yorumlama becerisinin matematiksel ifadeye dönüştürmeye göre daha düşük olduğunu göstermektedir.

Sorular teker teker ele alındığında özellikle şematik olarak verilen kesirlerde toplama işlemini ifade etme konusunda başarılı oldukları (%82); buna karşın bileşik kesir gerektiren sorularda ise oldukça düşük başarı (6.soruda %20, 8. soruda %26) görülmektedir.

SONUÇ

Öğretmen adaylarının kesir sayı okuryazarlığı düzeyini belirlenmeyi amaçlayan bu çalışmada, örneklemde yer alan öğretmen adaylarının orta düzeyde kesir sayı okuryazarı olduğu sonucuna ulaşılmıştır. Bu sonuç alanda yapılan birçok çalışmayla karşılaştırıldığında matematik öğretmenlerinin düzeyi konusunda uyuşum göstermemektedir. Alanda yapılan çalışmalarda matematik okuryazarlığının başarı testi yerine matematik okuryazarlığı özyeterlik ölçeği ile yoklanmış olması, düzeyin farklı çıkmasının sebebi olabilir. Zira özyeterlik, performansın göstergelerinden biri olmakla birlikte çoğu zaman yanıltıcı olabilmektedir (Kruger & Dunning, 1999).

Veriler incelendiğinde örneklemdeki öğretmen adaylarının şekilleri formülleştirme konusunda problem durumu oluşturmaya göre daha başarılı oldukları görülmektedir. Bu sonuç çoktan seçmeli sınavların öğretmen adayları üzerindeki etkisinin (Roediger & Marsh, 2005) bir yansıması olarak ele alınabilir. Çoktan seçmeli teste alışan öğrencilerin üretmek yerine hazırla yetinme eğilimi içinde olması bu sonucu beraberinde getirmiş olabilir.

ÖNERİLER

Matematik öğretmen adaylarının orta düzeyde olan kesir sayı okuryazarlığı düzeyi, öncelikle öğretim elemanları tarafından ele alınmalıdır. Öğretmen adaylarının kendi bilim alanı ile ilgili problem ortaya koymadaki başarısızlığının azaltılması için, öğretim programını merkezine alan ders saatleri artırılabilir. Diğer taraftan matematik okuryazarlığı dersi öğretim programına eklenerek, öğretmen adaylarının bu konuya daha fazla dikkat etmeleri sağlanabilir. Öğretim üyeleri öğretmen adaylarına problem üretme etkinlikleri yapabilir.

Araştırmacılar, öğretmen adaylarının matematik okuryazarlığını özyeterlik ölçümlerinden ziyade performans testleri aracılığıyla ölçerek, bu alandaki eksikliği doldurabilirler. Diğer taraftan matematik okuryazarlığı çalışılırken konuların ayrı ayrı ele alınması ilgili alanın resmini daha net göstereceği için araştırmacıların genel matematik okuryazarlığı yerine özel alanlara yönelmesi, bu çalışmaların verimini artırabilir. Ayrıca, nitel veya deneysel çalışmalar ile bu alanın zenginleştirilmesi de matematik okuryazarlığını artırıcı önlem olarak değerlendirilebilir.

THE PERCEPTIONS OF SOCIAL SCIENCES TEACHERS ABOUT FATIH PROJECT

Yrd. Doç. Dr. Erol KOÇOĞLU
İnönü Üniversitesi Eğitim Fakültesi
İlköğretim Sosyal Bilgiler Eğitimi ABD

ABSTRACT: With the inclusion of student-centered education concept in the education-learning process in our country, various visual, audio, audio-visual, and technology-assisted materials, which are different from each other, have been brought into use. These materials leaving positive influences on the attention, motivation, and success levels of students increased the necessity for the use of additional materials in education. In this study, the purpose is determining the perceptions of social sciences teachers on Fatih Project by focusing on the support for student development with the help of technologic materials in education in our country. The Qualitative Research Method has been used in this study, and the content and descriptive analysis techniques have been used in data analysis. When the findings of the study are analyzed, it has been determined that the social sciences teachers have positive and negative perceptions on Fatih Project.

Key Words: Social Sciences Teacher, Project, Perception.

SOSYAL BİLGİLER ÖĞRETMENLERİNİN FATİH PROJESİNE İLİŞKİN ALGILARI

ÖZET: Öğrenci merkezli eğitim anlayışının ülkemizde yaygın bir şekilde öğrenme-öğretme sürecinde merkeze alınmasıyla birlikte birbirinden farklı görsel, işitsel, hem görsel hem de işitsel ve teknoloji destekli materyaller kullanılmaya başlanmıştır. Bu materyallerin öğrencinin dikkat, güdülenme ve başarı düzeyi üzerinde olumlu etki bırakması, materyal kullanımının gerekliliğini eğitimde daha da arttırmıştır. Bu çalışmada da ülkemizde eğitimde teknolojik materyaller yardımıyla öğrencinin gelişimini her alanda desteklememeyi temele alıp uygulanmakta olan Fatih projesine ilişkin sosyal bilgiler öğretmenlerinin algılarını belirlemektir. Nitel araştırma yönteminin kullanıldığı bu çalışmada veri analizinde içerik ve betimsel analiz teknikleri kullanılmıştır. Çalışma bulguları irdelendiğinde sosyal bilgiler öğretmenlerinin fatih projesine yönelik birbirinden farklı olumlu ve olumsuz algılara sahip olduğu ortaya çıkmıştır.

Anahtar Sözcükler: Sosyal bilgiler öğretmeni, proje, algı

GİRİŞ

Dünyanın bir çok ülkesinde teknoloji entegrasyonu ile ilgili yapılan çalışmalar, teknoloji entegrasyonunun çok boyutlu, karmaşık, yavaş işleyen, zorlu ve dinamik bir süreç olduğunu, ayrıca teknolojilerin öğretmenler ve öğrenciler tarafından istenilen düzeyde kullanılmadığını göstermektedir (Harris, Mishra, Koehler, 2009; Hsu, 2010; Mishra, Koehler, 2006; Roblyer, 2006; Teo, 2009; Usluel ve Demiraslan, 2005; Yurdakul Kabakçı, 2011; Karal, Aktaş, Turgut, Gökoğlu, Aksoy ve Çakır, 2013). Eğitim dünyası açısından bakıldığında, bilgi ve iletişim teknolojilerinin (BİT) eğitime entegrasyonu sürecinde genel olarak karşılaşılan zorluklar; donanım, yazılım ve alt yapı eksikliği (Empirica, 2006; Korte, Husing, 2007; Pelgrum, 2001), öğretmenlerin yeterli bilgi ve beceriye sahip olmamaları, özgüven, teknik destek ve eğitim eksikliği, öğretmenlerin isteksizlikleri ve değişime karşı direnç göstermeleri (Becta, 2004; Lim, Khine, 2006; Karal, Aktaş, Turgut, Gökoğlu, Aksoy ve Çakır, 2013) olarak sayılabilir. Bu sorunların ortadan kaldırılması amacıyla bilgi ve iletişim teknolojilerinin (BİT) farkına varan başta gelişmiş ülkeler olmak üzere bir çok ülke, sınıfların teknolojik alt yapılarının geliştirilmesi ve eğitime entegrasyonu için çalışmaktadır. Ülkemizin eğitim politikaları bağlamında düşünüldüğünde, özellikle son on yıllık süreçte teknolojideki gelişime ayak uyduracak çeşitli politikaların zaman zaman işe koşulduğu fakat ülke geneline yaygınlaştırılan ulusal bir eğitimde teknoloji projesinin hayata geçirilemediği görülmektedir (Dursun, Kuzu, Kurt, Güllüpınar ve Gültekin, 2013). Bundan dolayı Milli Eğitim Bakanlığı bu sorunların ortadan kaldırılması ve öğrenme-öğretme sürecine etkili entegrasyonun sağlanmasında "Fırsatları Artırma ve Teknolojiyi İyileştirme Hareketi (FATİH)" projesini hayata geçirmiştir. Bu proje kapsamında; teknolojiyle zenginleştirilmiş öğretim ortamlarında, etkili öğretim stratejileriyle birlikte daha etkili öğretimin sunulması ve fırsat eşitliğinin sağlandığı, bireysel farklılıkların göz önünde bulundurulduğu eğitim ortamlarının oluşturulması amaçlanıp bu amaç çerçevesinde gerekli uygulamalar hala devam etmektedir (Bilici, 2011; Karal, Aktaş, Turgut, Gökoğlu, Aksoy ve Çakır, 2013). FATİH Projesi (Fırsatları Artırma ve Teknolojiyi İyileştirme Hareketi) gerek kapsam gerekse sağladığı teknolojik donanım açısından öncül örneklerinden farklılaşmaktadır. FATİH Projesi açılımından da çıkarılacağı gibi, tüm yurt genelinde yaşanan eğitimdeki kalite farklılaşmasını ortadan kaldırmak, teknolojiyi iyileştirmek ve tüm paydaşlar arasında fırsat eşitliği sağlamak adına işe koşulan bir projedir. Bilindiği gibi gerek internet teknolojilerinde yaşanan gelişmeler gerekse mobil teknolojilerin giderek yaygınlaşması bu teknolojilerin eğitsel yönünü de ön plana çıkarmıştır fakat bu teknolojilere sahip olma konusunda hali hazırda tüm öğrencilerin eşit şartlara sahip olduklarını söylemek güçtür. İlgili teknolojiler, erişim sağlayabilen öğrenciler için önemli yardımcılar olurken, bu olanaklardan yoksun öğrenciler için ise fırsat eşitsizliğini artıran teknolojilerdir (Alkan ve diğerleri, 2011).

Araştırmanın Amacı

Araştırmanın amacı, ülkemizde eğitimde teknolojik materyaller yardımıyla öğrencinin gelişimini her alanda desteklememeyi temele alıp uygulanmakta olan Fatih projesine ilişkin sosyal bilgiler öğretmenlerinin algılarını belirleyip genel amaç çerçevesinde çeşitli öneriler sunmaktır. Bu genel amaç çerçevesinde şu sorulara cevap aranmıştır:

- ✓ Fatih projesinin siz öğretmenlere yüklediği en önemli sorumluluklar nelerdir?
- ✓ Ülkemizde uygulanan Fatih projesini eğitime katkı açısından verimli buluyor musunuz, niçin?
- ✓ Fatih projesiyle birlikte öğrenme – öğretme sürecinde ne gibi değişiklikler oldu?
- ✓ Fatih projesinin uygulanma sürecinde karşılaşılan olumsuz durumlar sizce nelerdir?

YÖNTEM

Araştırma Modeli

Türkiye'de eğitimde teknolojik materyaller yardımıyla öğrencinin gelişimini her alanda desteklememeyi temele alıp uygulanmakta olan Fatih projesine ilişkin sosyal bilgiler öğretmenlerinin algılarını belirlemeye yönelik bu araştırma, nitel araştırma yaklaşımına dayalı yarı yapılandırılmış görüşme yöntemiyle gerçekleştirilmiştir. Bu araştırma da durum çalışması modeli kullanılmıştır. Durum çalışması modeli "güncel bir olgunun gerçek yaşam bağlamında, özellikle bağlam ve olguların sınırlarının kesin olarak belli olmadığı durumlarda görgül olarak araştırılması" şeklinde ifade edilmektedir.(Yin,1994: 13; Merriam, 1998: 27).

Çalışma Grubu

Araştırmada çalışma grubunu, Malatya ve Elazığ'da çeşitli okullarda görev yapan 30 sosyal bilgiler öğretmeni oluşturmaktadır. Araştırmacının, öğrencilere daha rahat ulaşmak, araştırmacıya araştırmanın güvenirliği açısından kolaylık sağladığından dolayı çalışma grubu üyeleri bu illerden seçilmiştir.

Veri Toplama Aracı

Araştırmanın kuramsal boyutu oluşturulduktan sonra sosyal bilgiler öğretmenlerinin Fatih projesine yönelik görüşlerini almak üzere yarı yapılandırılmış görüşme formu hazırlanmıştır. Görüşme formu hazırlanırken öncelikle sorulacak sorular belirlenmiştir. Sorular oluşturulurken kolay anlaşılabilecek sorular yazma, açık uçlu sorular sorma, odaklı sorular hazırlama, yönlendirmekten kaçınma, çok boyutlu sorular sormaktan kaçınma ve soruları mantıklı bir biçimde düzenleme gibi ilkelere (Yıldırım ve Şimşek, 2008) dikkat edilmiştir.

Araştırmada kullanılacak olan görüşme formu, Fırat Üniversitesi ve İnönü Üniversitesi Eğitim Fakültelerinde görev yapan alan uzmanlarına, içerik geçerliliğini sağlamak amacıyla görüşlerine sunulmuştur. Alan uzmanlarından gelen görüş ve öneriler doğrultusunda görüşme formuna son şekli verilmiştir. Görüşme formunda 4 soru yer almaktadır.

Verilerin Analizi

Görüşme formu ile ilgili çözümlemeler nitel boyutta gerçekleştirilmiştir. Kodlamalar araştırmacıların ortak görüşleri doğrultusunda oluşturulmuştur. Bu çerçevede, sosyal bilgiler öğretmenlerinin Fatih projesine yönelik görüşlerinden elde edilen veriler içerik ve betimsel analiz teknikleriyle belli temalar altında gruplanarak çözümlenmeye çalışılmıştır. Araştırmanın güvenirliğini sağlamak için, araştırmada ulaşılan uzman görüşüne başvurulmuştur. Araştırmacı ve uzmanlar tarafından öncelikle ana temalar ardından bunlara bağlı tema ve alt temalar oluşturulmuştur. Çözümlemeler sonucunda ortaya çıkan temalar aralarındaki bağları gösterir şekilde modellenmiş ve görselleştirilmiştir. Modelde yer alan ilişkileri gösteren temayı söyleyen kişi sayısı (frekansını) belirlenmiştir. Araştırmacıların ve uzmanın, temalarda yer alması gereken görüşlere ilişkin değerlendirmeleri karşılaştırılarak "*görüş birliği*" ve "*görüş ayrılığı*" sayıları tespit edilmiştir. Araştırmacı dışında iki uzmanla birlikte analizler yapılıp, Miles ve Huberman'ın (1994) formülüne göre araştırmacılar arasındaki uyum hesaplanmıştır. Bu hesaplama sonucunda, P =(83/83+1) x 100 = %92 olarak hesaplanmıştır.

BULGULAR

Bu bölümde, Elazığ ve Malatya'da çeşitli okullarda görev yapan sosyal bilgiler öğretmenlerinin Fatih projesine ilişkin görüşleri belirlenip ve bu görüşleri uygun temalara dönüştürüldükten sonra tablolar halinde sunulmuştur.

Fatih Projesinin Öğretmenlere Yüklediği Sorumluluklar Durumu

Araştırmada çalışma grubunu oluşturan sosyal bilgiler öğretmenleri "Fatih projesinin siz öğretmenlere yüklediği en önemli sorumluluklar nelerdir?" şeklindeki soruya yanıtlar verirken farklılaştıkları ortaya çıkmıştır. Çalışma grubunun verdiği yanıtlar içerik ve betimsel analize tabi tutularak tablo halinde sunulmuştur.

Tablo 1: Çalışma Grubu Üyelerinin Fatih Projesinin Öğretmenlere Yüklediği Sorumluluklara İlişkin Algıları

1.TEMA*: Fatih projesinin öğretmene yüklediği sorumluluklar*	
Alt Temalar	***f***
G.1. *Teknolojiyi iyi bilip kullanma*	*14*
G.2. *Sınıfta teorik ve pratik etkinlikleri birlikte yapma*	*7*
G.3*. Öğrenci merkezli kontrole önem verme*	*4*
G.4. *Dönütleri yerinde ve zamanında yapma*	*3*
G.5. *İyi bir gözlemci olma*	*2*

Tablo 1'de çalışma grubunu oluşturan sosyal bilgiler öğretmenlerinin verdiği cevaplar alt temalar şeklinde gruplandırılarak verilmiştir. Bu alt temaları oluşturan öğretmen görüşleri aşağıda örneklendirilmiştir.

> *"Fatih projesi biz öğretmenlere bir çok sorumluluk yüklemekle beraber aslında bir çok alanda eksikliğimizi görmemize yardımcı oldu diyebilirim. Çünkü ben 26 yıllık öğretmenim ben teknolojiyle hiç bu kadar etkileşim halinde olmadım. Bu proje sayesinde aldığımız eğitimler bize bu proje kapsamındaki teknolojik aletleri daha iyi kullanmamızı sağladı. Bundan dolayı bana göre en önemli sorumluluk öğretmenlerin bu proje kapsamında kullanılması gereken teknolojik araçları kullanmasını Bilmesidir."* **(G.1)**

Fatih Projesinin Eğitime Katkı Durumu

"Ülkemizde uygulanan Fatih projesini eğitime katkı açısından verimli buluyor musunuz, niçin?" şeklindeki soruya sosyal bilgiler öğretmenlerinin birbirinden farklı yanıtlar verdiği tablo 2'de görülmektedir.

Tablo 2: Çalışma Grubu Üyelerinin Fatih Projesinin Eğitimdeki Verimliliğine İlişkin Algıları

2.TEMA*: Fatih projesinin eğitimde kullanımının sonuçları*		
	Alt Temalar	***f***
Evet	*G.1.Öğrencinin dersi dinleme süresinin artması*	*10*
	G.2. Daha çok duyunun öğrenme sürecine katılımı	*7*
	G.3.Farklı yöntem ve tekniklerin bir arada kullanımı	*2*
	G.4.Öğrencide oluşan özgüven yüksekliği	*4*
Hayır	*G.5. Öğretmeni pasifleştirmesi*	*3*
	G.6.Öğrencide dikkat dağınıklığına sebep olması	*4*

Çalışma grubu üyelerinin "Ülkemizde uygulanan Fatih projesini eğitime katkı açısından verimli buluyor musunuz, niçin?" şeklindeki soruya araştırmada verdikleri yanıtların içerik ve betimsel analize tabi tutularak tablo 2'de verilmesine bağlı olarak öğretmenlerin görüşleri de şu şekilde örneklendirilmiştir:

> *"Şu hiç bir zaman unutmayalım ki hiç bir materyal öğretmenin yerini tutamaz. Soruya gelince ben bu projeyi gereksiz ve yersiz gören öğretmenlerden biriyim. Çünkü daha önceki sistemde öğretmen aktif dersini anlatan bir bileşen iken bu proje sayesinde sadece akıllı tahtada var olanı öğrenciye okuyan ya da aktaran bir birey haline gelmiştir. Ayrıca öğretmen yapması gereken etkinliklerin tamamını bir arada yapması bu projenin verimsizliğinin en önemli sebeplerinden biri olduğunu düşünüyorum."* **(G.5).**

Fatih Projesinin Öğrenme-Öğretme Sürecinde Oluşan Değişiklikler Durumu

Araştırmada elde edilen bulguların oluşmasında belirleyici role sahip olan ve çalışma grubunu oluşturan sosyal bilgiler öğretmenlerinin yarı yapılandırılmış görüşme formunda yer alan "Fatih projesiyle birlikte öğrenme – öğretme sürecinde ne gibi değişiklikler oldu?" şeklindeki soruya birbirinden farklı yanıtlar vermişlerdir. Öğretmenlerin verdiği yanıtlar tablo 3'de içerik ve betimsel analize tabi tutulara alt temalara ayrılmıştır.

Tablo 3: Çalışma Grubu Üyelerinin Fatih Projesinin Öğrenme Öğretme Sürecine İlişkin Algıları

***3.TEMA**: Öğrenme-öğretme sürecinde fatih projesi*	
Alt Temalar	***f***
***G.1.** Öğrencinin dikkat düzeyinin yükselmesi*	*9*
***G.2.** öğrencinin kavrama ve anlama seviyesinin artması*	*7*
***G.3**. Öğrencinin somutlaştırma düzeyinin azalması*	*6*
***G.4.** Öğretmenin hazırlıksız sınıfa gelmesi*	*3*
***G.5.** Öğrencinin daha çok sayıda duyuyla sürece katılması*	*5*

Çalışma grubunu oluşturan sosyal bilgiler öğretmenlerinin yarı yapılandırılmış görüşme formunda yer alan bu soruya verdiği yanıtlar yukarıdaki tabloda alt temalara ayrılarak verilmiştir. Öğretmen görüşlerinin benzerlik ve farklılığından oluşan bu alt temaları her biri örneklendirilebilir. Bu örneklerden biri aşağıda verilmiştir.

> *"Fatih projesi ile birlikte bu projenin uygulanabildiği okullarda" Öğrenme-öğretme sürecinde bir takım değişiklikler olmuştur ve olmaya da devam edecektir. Bu değişikliklerin başında öğrencinin soyut ve anlaşılmaz olan konun öğrenilmesinde karşılaştığı zorlukların ortadan kalkması durumunu sağlayan projede ki araçların öğrenciye sağladığı somutlaştırmaya dayalı öğrenmeye ihtiyaç duyulmamasıdır."* **(G.3)**

Fatih Projesinin Uygulanması sürecinde karşılaşılan Olumsuzluklar Durumu

Araştırmada görüşme formunda yer alan **"**Fatih projesinin uygulanma sürecinde karşılaşılan olumsuz durumlar sizce nelerdir" şeklindeki soruya çalışma grubu üyelerinin cevaplarda farklılaştıkları ortaya çıkmıştır. Çalışma grubu üyelerinin farklılaşması çalışmada birbirinden farklı temaların ortaya çıkmasını beraberinde getirmiştir. Ortaya çıkan bu farklı temalar tablo 4'de verilmiştir.

Tablo 4: Çalışma Grubu Üyelerinin Fatih Projesinin Uygulama Sürecinde Karşılaşılan Olumsuzluklara İlişkin Algıları

***4.TEMA**: Fatih projesinin uygulama sürecindeki olumsuzlukları*	
Alt Temalar	***f***
***G.1.** Teknik donanım eksikliği*	*9*
***G.2.** Öğretmeninin teknolojik bilgi ve kullanım eksikliği*	*11*
***G.3**. İçeriğin olduğu gibi aktarımı*	*5*
***G.4.** Öğrencinin oryantasyon problemi*	*3*
***G.5.** Öğrencinin sorumluluklarını yerine getirmemesi*	*2*

Çalışma grubu üyelerinin "Fatih projesinin uygulanma sürecinde karşılaşılan olumsuz durumlar sizce nelerdir" şeklindeki soruya araştırmada verdikleri yanıtların içerik ve betimsel analize tabi tutularak tablo 2'de verilmesine bağlı olarak öğretmenlerin görüşleri de şu şekilde örneklendirilmiştir:

> *"Fatih projesinin uygulanma sürecinde bir takım olumsuzların yaşanması çok da problem değildir, ancak bunlar giderildiği müddetçe bu böyledir. Eğer bu problemler giderilmezse ya da giderilemiyorsa o zaman sıkıntı büyük olur. Ben derste proje kapsamında akıllı tahta kullanarak ders anlatıyorum ve dersi anlatırken yaşadığım en büyük problem tahtayı kullanmayı tam anlamıyla bilmememdir. Belki biraz garip olacak ama bunun için kurs verdiler ama yine öğrenemedik."* **(G.1)**

SONUÇLAR

Elazığ ve Malatya'da çeşitli okullarda görev yapan sosyal bilgiler öğretmenlerinin Fatih projesine ilişkin görüşleri belirlenip ve bu görüşleri uygun temalara dönüştürülüp verildiği bu araştırmada elde edilen bir çok dikkat çekici sonucun olduğunu yukarıda verilen tablolarda görmekteyiz. Fatih projesinin tasarlanıp uygulanmasının birbirinden farklı bir çok amacı olmasına rağmen asıl amaç proje ile, öğrencilerin bilgi ve iletişim teknolojileri ile daha erken yaşta tanışması ve böylece topluluğun bilgi iletişim teknolojileri okuryazarlığının artması sağlanarak, bilgi iletişim teknolojilerinin toplumsal, sosyal ve ekonomik yaşamı etkilemesi planlanmaktadır. Böylelikle, ülkenin BIT, yazılım ve donanım üretiminin artırılması, elektronik ve bilgiye dayalı sanayinin geliştirilmesi, kısaca ekonomik ve sosyal büyümenin sağlanması hedeflenmesidir (Ekici ve Yılmaz, 2013). Ancak bu hedefin gerçekleştirme boyutunda bir çok sorunun ortaya çıkabileceğini yapılan bu araştırma ortaya koymuştur. Örneğin araştırmada elde edilen bir çok dikkat çekici sonuçtan biri, proje için okulların teknik donanım eksikliği ve öğretmenlerin teknolojik bilgi ve kullanım eksikliğine sahip olmalarıdır. Her iki eksikliğin olduğu bir ortamda siz öğrencilere bilgi ve teknolojilere dayalı bir eğitim vermekte zorlanmakla birlikte öğrencilere bu becerileri kazandırmakta da başarısız olmanız kaçınılmazdır. Çünkü işin gereklerinin yapılması için bir ortam ve işten anlayan bilgi ve beceri düzeyi gelişmiş bir aktarana sahip olmanız gerekiyor.

Çalışmada elde edilen bir diğer önemli sonuç, bu projenin kullanımının öğrenme öğretme sürecinde meydana getirdiği bir çok değişiklikten biri olan öğrencinin dikkat düzeyinin yükselmesidir. Öğrenciler için dikkat çekici unsurlar öğrenciye görelilik ilkesi doğrultusunda farklılık göstermektedir. Öğrenme öğretme sürecinde öğrencinin verimliliğini arttıran öğrenciyi sürdürülebilir bir şekilde etkinliklerle öğrenme sürecine dahil eden her türlü strateji, yöntem, teknik ve materyal öğrencinin dikkatini çekmektedir. Fatih projesi bu öğelerin tamamını içerisinde barındıran bir bir uygulama olduğundan öğrencinin dikkat düzeyi üzerinde etkili olabildiğini söyleyebiliriz.

ÖNERİLER

Yapılan çalışmada elde edilen sonuçlardan hareketle:

- ✓ Projenin uygulanması için uygulamanın yapıldığı bütün okullarda teknik ve donanım olarak eksiklikleri tamamlanıp giderilmelidir,
- ✓ Projenin uygulayıcıları olan öğretmenlere proje ile ilgili bütün yeterlilikler kazandırılmalıdır,
- ✓ Projenin ülke, bakanlık, veli, öğrenci ve öğretmen açısından bütün kazanımları eğitimin bileşenleri olan öğrenci, veli ve öğretmene anlamlı bir şekilde anlatılmalıdır,
- ✓ Teknolojinin sadece bir sohbet ve oyun aracı olmadığı bu proje için temel işlevinin öğrencinin bilgiyi algılma, kavrama, tekrar ederek anlamlı bir şekilde öğrenme olduğu öğrencilere ve velilere anlatılmalıdır.

EXAMINATION OF THE PRIMARY TEACHER CANDIDATES' TECHNOLOGICAL PEDAGOGICAL CONTENT KNOWLEDGE (TPACK) COMPETENCIES AS TO DIFFERENT VARIABLES

Akın KARAKUYU
Mustafa Kemal University

Yunus KARAKUYU
Uşak University

Yusuf AY
Eskişehir Osmangazi University

ABSTRACT: The aim of this study is examination of primary teacher candidates' technological pedagogical content knowledge (TPACK) competencies as to gender, high school type and overall academic average. 308 primary teacher candidates student in final year spring 2014-2015 at department of primary school teaching constitute the sample of the research. Survey method used for the study. Data was collected with the TPACK Scale adapted to Turkish by Sahin (2011). So as to analyze the data obtained, Independent samples t test and one way ANOVA was used. According to the research results while there was no difference between gender variable (t(306): -1,831, p>0,05), there were significant differences between high school type and overall academic average (F(4, 303)= 5,055 p<.05).

Key words: TPACK, Primary teacher candidates, Technology integration

SINIF ÖĞRETMENİ ADAYLARININ TEKNOLOJİK PEDAGOJİK ALAN BİLGİSİ (TPAB) YETERLİKLERİNİN ÇEŞİTLİ DEĞİŞKENLERE GÖRE İNCELENMESİ

ÖZET: Bu çalışmanın amacı sınıf öğretmenliği adaylarının, TPAB becerilerini cinsiyet, mezun oldukları lise türü ve genel akademik ortalama gibi demografik özelliklerine göre incelemektir. Çalışmaya 2014-2015 bahar döneminde sınıf öğretmenliği son sınıfında okuyan 308 öğretmen adayı katılmıştır. Veriler, Şahin (2011) tarafından Türkçeye uyarlanan TPAB ölçeği ile toplanmıştır. Verilerin analizi için Bağımsız t-testi ve Tek yönlü varyans (ANOVA) analizi kullanılmıştır. Çalışma sonuçlarına öğretmen adaylarının TPAB seviyeleri; cinsiyet değişkeni için istatiksel olarak anlamlı bir farklılık yok (t(306): -1,831, p>0,05) iken, mezun oldukları lise türüne ve akademik ortalamaya göre anlamlı fark söz konusudur (F(4, 303)= 5,055 p<.05).

Anahtar sözcükler: TPAB, Sınıf Öğretmeni Adayları, Teknoloji entegrasyonu

GİRİŞ

Bir ülkenin geleceğini inşaa eden mimarlar öğretmenlerdir. Öğretmenler genç nesillerin nitelikli ve günün şartlarına uygun donanıma sahip olarak yetişmesinde başrol oynarlar. Öğretmenlerin bu başrolü oynayabilmeleri için kendi yeterliliklerini tamamlaması gerekir. Günümüzde bu yeterlilik ise teknoloji bilgisi ve bu bilgi türü ile birlikte Teknolojik Pedagojik Alan Bilgisi(TPAB)dir.

Milli Eğitim Bakanlığı Öğretmen Yetiştirme ve Eğitimi Genel Müdürlüğünce hazırlanan öğretmenlik mesleği yeterlik alanlarında "Kişisel ve Mesleki Değerler" alanının üçüncü alt boyutundaki performans göstergesi "Bilgi ve iletişim teknolojileri ile ilgili yasal sorumlulukları bilir ve bunları öğrencilere kazandırır"(MEB, 2012).şeklinde düzenlenmiştir. Türk Eğitim Derneği tarafından gerçekleştirilen Öğretmenlik Mesleği Genel Yeterlikleri konulu araştırmada TPAB, öğretim programları ve konu alanı, programın ne şekil öğretileceği alanın diğer alanlarla ilişkisi, alandaki en son gelişmeler, alanın temel kavram, araç ve yapıları, öğretilecek içeriğin teknoloji ile bütünleştirilmesi hakkında bilgili olma" şeklinde tanımlanmıştır (TED, 2009). TPAB, öğretmen veya öğretmen adayının teknoloji, pedagoji ve alan bilgisinin bileşiminden oluşan ve alanlarıyla ilgili bir konuyu öğretmek için kullanabilecekleri teknolojiler ve öğretim yaklaşımları hakkındaki bilgisidir (Mishra ve Koehler, 2006).

TPAB kavramının bileşenleri olan alan, pedagoji ve teknoloji bilgisinin içeriği aşağıda Tablo 1 de verilmiştir.

Tablo 1. Alan Bilgisi, Pedagojik Bilgi ve Teknolojik Bilginin İçeriği

Alan Bilgisi	**Pedagojik Bilgi**	**Teknolojik Bilgi**
Öğretim Programı	Sınıf Yönetimi	Temel Kullanım
Temsil Sistemleri	Öğretim Strateji ve Yöntemleri	Standart Ayarlar
Öğrenci Zorlukları (Nelerdir?)	Öğrenci Zorlukları, Kavram Yanılgıları (Nasıl Giderilir?)	Teknik Sorunları Çözebilme
Ölçme ve Değerlendirme (Nedir?)	Ölçme ve Değerlendirme (Nasıl?)	

Bozkurt ve Cilavdaroğlu, (2011)

TPAB modeli, temelini oluşturan PAB modeli çerçevesinde ele alınarak bütünleştirici ve dönüştürücü olmak üzere iki şekilde teknoloji entegrasyonu öne sürmektedir. Pierson (1999, s.225), TPAB'ı en basit haliyle alan bilgisi, pedagojik bilgi ve teknolojik bilginin birleşimi veya teknoloji entegresyonu olarak açıklamıştır. Keating ve Evans (2001)'e göre TPAB, teknoloji kullanarak konu alan bilgisini en uygun şekilde sunma olanağı sağlamaktadır (Ay, 2015). Margerum-Lays ve Marks (2003)'ın teknolojinin pedagojik alan bilgisi şeklinde tanımladığı TPAB kavramı, eğitim teknolojisinin kullanıldığı öğretme-öğrenme durumlarından türetilmiş ve uygulanabilir bir bilgi olarak ifade edilmektedir. Araştırmacılara göre, bu bilgiye sahip olan öğretmen; belirli teknolojilerin öğretimde nasıl kullanılacağını, bu teknolojiler ile gerçekleştirilecek öğretim için gereken zamanı, öğrencilerin olası problemlerinin belirli teknolojilerle nasıl çözüleceğini, öğretim ve öğrenmenin teknolojik imkânlara göre nasıl düzenlenmesi gerektiğini bilmektedir. Teknolojiyi mantıklı bir şekilde kullanma kabiliyetine sahiptir ve öğrencisinin konu ile ilgili sahip olduğu kavramları öğrenmesinde teknolojinin etkisinin farkındadır (Ay, Karadağ ve Acat, 2015). TPAB ile ilgili yapılan çalışmalarda, öğretmen ve öğretmen adaylarının öğretim sürecinde teknolojinin eğitim içerikli kullanımı konusunda kendilerini yetersiz gördüklerinden (Bilgin, Tatar ve Ay, 2012) öğretmen eğitim programlarında TPAB' ları geliştirmeleri için neler yapılabileceği hakkında araştırmalara duyulan ihtiyaç belirtilmektedir (Ay, Karadağ ve Acat, 2016).

İçinde bulunduğumuz yüzyıl bilgi ve teknolojinin ön planda olduğu bir çağdır. Günümüzde ülkeler arasındaki önemli ihracat dallarından biriside teknoloji ve teknolojik araç gereçlerdir. Ülkelerin gelişmişlik düzeyleri eğitim sistemlerinin gelişmişlikleri ile doğru orantılı olduğu için eğitim sistemlerine ve yeni nesillere teknolojiyi entegre edebilenler her alanda bir adım önde olacaklardır. Bu yüzden devletler geleceklerinin inşası anlamında olmazsa olmaz gördükleri eğitim alanında teknolojiyi eğitim programlarının merkezine koydukları görülür (Karakuyu, 2015). Ayrıca başarılı bir eğitim öğretim için ve hedeflenen başarıya ulaşabilmek için öğretmen ve adaylarının mesleklerinde öncelikle teknolojinin eğitimdeki rolünü kabul etmeleri ve kullanabilme becerisine sahip olmaları gerekir. Çünkü karşılarında teknoloji ile iç içe olan öğrenci grubu vardır (Erdemir, Bakırcı ve Eyduran, 2009).

Araştırmanın Amacı

Araştırmada sınıf öğretmeni adaylarının TPAB seviyelerini cinsiyet, mezun olunan lise türü ve genel akademik ortalama gibi demografik özelliklere göre incelemek amaçlanmıştır.

YÖNTEM

Araştırmanın Modeli ve Çalışma Grubu

Araştırmada tarama yöntemi kullanılmıştır. Araştırmanın çalışma grubunu 2014-2015 yılı bahar döneminde eğitim fakültesi sınıf öğretmenliği son sınıfında öğrenim gören 308 sınıf öğretmeni adayı oluşturmaktadır.

Veri Toplama Araçları

Teknolojik Pedagojik Alan Bilgisi Ölçeği: Ölçeğin orijinali Schmidt ve diğ. (2009) tarafından geliştirilmiş olup, sınıf öğretmenlerinin TPAB'lerine yönelik yeterliliklerini belirlemek amacıyla Şahin (2011) tarafından Türkçeye uyarlanmıştır. Ölçek 47 madde ve "Kesinlikle Katılıyorum", "Katılıyorum", "Kararsızım", "Katılmıyorum" ve "Kesinlikle Katılmıyorum" şeklinde 5'li Likert yapıdan oluşmaktadır. Ölçekten alınabilecek puanlar 47-235 arasındadır.

Verilerin Analizi

Öğretmen adaylarına fotokopi yoluyla çoğaltılarak dağıtılan ölçeklerden toplanan veriler SPSS analiz programına girilmiştir. Sınıf öğretmeni adaylarının cinsiyet değişkeni için, bağımsız t testi, mezun oldukları lise türü ve genel akademik ortalamaları için ise tek yönlü varyans analizi (ANOVA) yapılmıştır.

BULGULAR

Tablo 1. Sınıf Öğretmeni Adaylarının Cinsiyetlerine Göre TPAB Seviyeleri

TPAB	X	SS	t	df	p
Erkek	160,96	28,05	-1,831	306	0,068
Kadın	166,94	27,47			

N=308; *p>0,05

Tablo 1 de görüldüğü gibi erkek öğretmen adaylarının aldıkları puanların ortalamaları 160,96 ve standart sapma değeri 28,05 iken, bayan öğretmen adaylarının aldıkları puanların ortalamaları 166,94 ve standart sapma değeri 27,47 dir. Bağımsız t-testi sonuçları sınıf öğretmeni adaylarının cinsiyet değişkenine göre TPAB ölçeğinden aldıkları puanların ortalamaları arasında istatiksel olarak anlamlı bir fark olmadığını göstermektedir (t(306): -1,831, p>0,05).

Tablo 2 Sınıf Öğretmeni Adaylarının Lise Türüne Göre TPAB Seviyeleri

TPAB	df	OK	F	P
Mezun Oldukları Lise				
Gruplar Arası	4	3711,5	5,055	0,001
Grup içi	303	734,2		
Toplam	307			

N:308 *P<0,05

Tablo 2 de verilen Tek yönlü varyans analiz (ANOVA) sonuçları, sınıf öğretmeni adaylarının mezun oldukları lise türü değişkenine göre TPAB ölçeğinden aldıkları puanların ortalamaları arasında istatiksel olarak anlamlı bir fark olduğunu göstermektedir (F(4, 303)= 5,055 p<0,05). Bu farklılığın hangi grubun lehine olduğunu anlamak için ise Post.Hoc analizi yapılmış sonuçlar tablo 3 de verilmiştir.

Tablo 3 Sınıf Öğretmeni Adaylarının Lise Türüne Göre Post-Hoc.Analiz Sonuçları

(I)	(J)	Mean Difference (I-J)	Std.Hata	p
Meslek	Normal	2,22	12,30	1,000
	Anadolu	5,49	12,34	1,000
	And.Öğretmen	2,81	13,19	1,000
	Fen	-65,0	19,78	0,011*
Normal	Anadolu	3,26	3,17	1,000
	And.Öğretmen	0,58	5,63	0,882
	Fen	-67,22	15,78	0,000*
Anadolu	And.Öğretmen	-2,67	5,71	1,000
	Fen	-70,64	15,81	0,000*
And.Öğretmen	Fen	-67,81	16,49	0,000*

Tablo 3 de ki post-hoc analiz sonuçlarına göre sınıf öğretmeni adaylarının TPAB ölçeğinden aldıkları puanların ortalamaları mezun olduğu lise türü fen lisesi olan grup lehine anlamlı bir fark vardır.

Tablo4 Sınıf Öğretmeni Adaylarının Genel Akademik Ort. Göre TPAB Seviyeleri

TPAB	df	OK	F	P
Genel Akademik Ort.				
Gruplar Arası	4	1780,5	2,349	0,048
Grup içi	303	757,9		
Toplam	307			

N:308 *P<0,05

Tablo 4 de verilen Tek yönlü varyans analiz (ANOVA) sonuçları, sınıf öğretmeni adaylarının genel akademik ortalama değişkenine göre TPAB ölçeğinden aldıkları puanların ortalamaları arasında istatiksel olarak anlamlı bir fark olduğunu göstermektedir (F(4, 303)= 2,349 p<0,05). Bu farklılığın hangi grubun lehine olduğunu anlamak için ise Post.Hoc analizi yapılmış ve sonuçlar tablo 5 de verilmiştir.

Tablo 5. Sınıf Öğretmeni Adaylarının Genel Akademik Ortalamalarına Göre Post-Hoc.Analiz Sonuçları

(I)	(J)	Mean Difference (I-J)	Std.Hata	p
1,99 ve altı	2,00 – 2,49	-7,06	6,25	1,000
	2,50 – 2,99	-3,17	4,17	0,071
	3,00 – 3,49	-9,71	3,67	0,027*
	3,50 – 4,00	-6,12	4,07	0,082
2,00 – 2,49	2,50 – 2,99	5,13	5,21	1,000
	3,00 – 3,49	-5,62	4,34	0,842
	3,50 – 4,00	-3,51	4,84	1,000
2,50 – 2,99	3,00 – 3,49	-7,76	3,04	1,000
	3,50 – 4,00	-5,64	4,72	0,762
3,00 – 3,49	3,50 – 4,00	2,56	4,58	1,000

Tablo 5 da ki post-hoc analiz sonuçlarına göre önlisans öğrencilerinin TPAB puanların ortalamaları arasında, genel akademik ortalaması 3,00 – 3,49 olan grup lehine anlamlı bir fark vardır.

SONUÇ

Öğretmen adaylarının mezun oldukları lise türü değişkenine göre TPAB ölçeğinden aldıkları puanların ortalamaları arasında fen lisesi mezunları lehine anlamlı bir farklılık bulunmuştur. Fen liselerinin sayısal ağırlıklı eğitim veren liseler olması bu grup lehine anlamlı bir farklılığın çıkmasının sebebi olabilir. Gündoğmuş (2013) yaptığı çalışmada öğretmen adaylarının liseden mezun oldukları puan türüne göre sayısal puan türünden mezun olan öğretmen adaylarının teknolojik bilgilerinde anlamlı bir farklılık bulmuş fakat TPAB'lerinde anlamlı bir farklılık bulamamıştır.

Çalışmamızda ortaya çıkan bir diğer sonuçta sınıf öğretmeni adaylarının genel akademik ortalamalarında ortalaması 3,00 – 3,49 arasında çıkan grup lehine anlamlı bir farklılık olmasıdır. Akademik ortalaması daha yüksek olan öğretmen adaylarının hem öğretmenlik mesleğini hem de mesleğin gereklerinden olan TPAB'ni daha fazla içselleştirdiklerini söyleyebiliriz.

Analiz sonuçlarına göre ortaya çıkan bir diğer sonuç sınıf öğretmeni adaylarının TPAB'lerinin cinsiyetlerine göre anlamlı bir farklılığın olmamasıdır. Literatürdeki bazı araştırmalarda çıkan sonuçlarda çalışmamızdaki bu sonucu doğrular niteliktedir (Şimşek, Demir, Çağçeci ve Kınay, 2013; Mutluoğlu, 2012; Gömleksiz ve Fidan, 2013; Çuhadar, Bülbül ve Ilgaz, 2013; Gündoğmuş, 2013; Sancar-Tokmak, Yavuz-Konokman ve Yanpar-Yelken, 2013).

MIDDLE SCHOOL STUDENTS' USE OF REPRESENTATIONS FOR PROPER FRACTIONS

H. Bahadır YANIK
Anadolu University

Osman BAĞDAT
Anadolu University

ABSTRACT: Fractions are one of the challenging topics for middle school students in mathematics. One reason behind this difficulty might be related to representations. Fractions can be represented through various forms. Area models and number line models are often used by students to represent fractions. The purpose of this study was to investigate how middle school students represented proper fractions using these two models. Data were collected through a written instrument which was administered to 34 6th grade students. The instrument included 4 tasks. While two of the tasks required students to find the part of a whole, the other two tasks asked students to find the whole using the given parts on area and number line model. The data showed that while the majority of students were able to represent the proper fraction on the given area model, very few of them were able to locate fractions on a number line.

Key words: fractions, representations, area model, number line.

ORTAOKUL ÖĞRENCİLERİNİN BASİT KESİRLER İÇİN TEMSİLLERİ KULLANIMI

ÖZET: Kesirler ortaokul öğrencilerinin güçlük yaşadıkları konulardan bir tanesidir, Bu güçlüğün altında yatan nedenlerden biri de temsiller ilgili olabilir. Kesirler çeşitli şekillerde temsil edilebilir. Alan ve sayı doğrusu temsilleri, öğrencilerin sıklıkla kullandıkları temsillerdir. Bu çalışmanın amacı ortaokul öğrencilerinin bu iki modeli kullanarak basit kesirleri nasıl temsil ettiklerini incelemektir. Veriler 34 adet 6. sınıf öğrencisine uygulanan yazılı dokümanlar aracılığıyla toplanmıştır. Dokümanda 4 adet soru bulunmaktadır. Soruların iki tanesi alan ve sayı doğrusu temsilleri ile bir bütünün parçalarını bulmaya yönelik iken, diğer ikisi yine bu modeller üzerinde verilen parçaları kullanarak bütünü bulmaya yöneliktir. Elde edilen bulgular öğrencilerin çoğunluğunun alan temsilini kullanarak basit kesri gösterebildiğini; buna karşın sayı doğrusu temsilinde ise çok az bir kısmının başarılı olduğunu göstermiştir.

Anahtar sözcükler: kesirler, temsiller, alan modeli, sayı doğrusu.

GİRİŞ

Kesirler konusu 1. sınıftan itibaren 7. sınıfta yer alan rasyonel sayılar sisteminin inşasına kadar, okul programının bütün kademelerinin kazanımlarında yer alan (MEB, 2013; MEB, 2016) matematiğin önemli konularından bir tanesidir. İlkokul birinci sınıfta bütün, yarım, çeyrek gibi somut kavramların öğretimi ile başlayan bu süreç, birim kesir kavramı, kesirlerin büyüklüklerinin karşılaştırılması, kesirlerle işlemler gibi daha soyut konularla devam etmektedir. Kesirler, öğretim kademelerinin ilerleyen yıllarında ondalık gösterimler, yüzdelik gösterimler, oran kavramı, rasyonel sayı sistemleri gibi birçok konunun temelini oluşturmaktadır.

Yapılan bir çok çalışma öğrencilerin kesirler konusunda çeşitli zorluklar yaşadıklarını ortaya koymaktadır (örn Behr vd., 1983; Hodgen vd., 2010; Işık vd. 2012; Kieran, 1980; Tabak vd. 2010; Wachsmuth & Post, 1985; Yanik, Helding & Flores, 2008). Bu zorlukların bir nedeni kesirlerin farklı temsilleri ile ilgili olabilir (Yanik, Helding & Flores, 2008). Kesirler çeşitli temsillerle (alan modeli, çubuk modeli, sayı doğrusu gibi) gösterilebilmektedir. Literatür (Alacacı, 2010; Watanebe, 2002; Yanik, Helding & Flores, 2008) incelendiğinde alan ve sayı doğrusu modellerinin en sık kullanılan temsillerden biri olduğu görülmektedir. Bu temsiller soyut bir kavram olan kesir kavramının somutlaştırılmasında öğrencilere yardımcı olan araçlardır. Buna karşın, öğrencilerin temsilleri zihinlerinde canlandırmaları her zaman kolay olmamaktadır. Literatür incelendiğinde öğrencilerin bazı temsilleri diğer temsillere göre daha rahat kullanabildikleri gözlemlenirken, özellikle sayı doğrusu gibi temsilleri (bkz. Yanik, Helding & Flores, 2008) öğrencilerin tam olarak kavrayamadıkları görülmektedir. Bu çalışmanın amacı, ortaokul öğrencilerin sıklıkla kullanılan bu iki temsili basit kesirleri göstermede ne ölçüde kullanabildiklerini incelemektir.

YÖNTEM

Ortam ve Katılımcılar

Bu çalışma 2014-2015 eğitim-öğretim yılının ikinci döneminde Eskişehir il merkezinde, bir devlet okulunun 6. sınıfında bulunan 34 öğrenci ile yürütülmüştür. Bu çalışmada 6. sınıf öğrencileri ile çalışılmasının sebebi, bu öğrencilerin kesir kazanımlarının çoğunu derslerinde görmüş olmalarıdır.

Veri Toplama ve Analiz

Bu çalışmada veriler, öğrencilere dağıtılan yazılı dokümanlar aracılığıyla toplanmıştır. Bu dokümanlarda öğrencilere 4 adet soru yöneltilmiştir. Aşağıda bu 4 soruya yer verilmiştir:

Soru 1) Eğer şekildeki kare  bir bütünse, bu bütünün $\frac{3}{4}$ 'lük kısmını çizim yaparak gösteriniz

Soru 2) Aşağıdaki sayı doğrusu üzerinde $\frac{5}{6}$ kesrini gösteriniz

Soru 3) Şekildeki  dilim bir bütünün $\frac{1}{5}$'ini gösteriyorsa bu bütünü çizerek gösteriniz. (Tam daire olmak zorunda değildir.)

Soru 4) "1" sayısını verilen sayı doğrusunda gösteriniz.

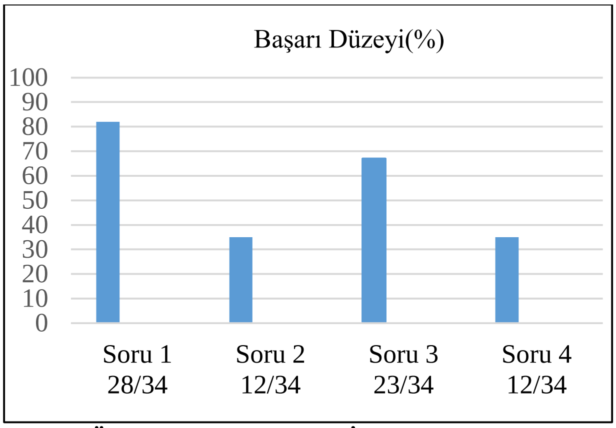
Toplanan veriler analiz edilirken öncelikle her bir soruya ilişkin yüzde-frekans değerleri ortaya çıkarılmıştır. Daha sonra ise sorulara verilen cevapların her biri incelenerek ortaya çıkan yanılgıları anlamlı kategorilere ayırmaya çalışılmıştır. Kategorilere ayrılan cevapların frekans değerleri verilerek yanılgıların sıklığı ortaya çıkarılmaya çalışılmıştır. Katılımcıların bazılarının verdikleri cevaplar belirlenen anlamlı kategorilerden herhangi birine yerleştirilemediğinden sınıflandırma dışı bırakılmıştır.

BULGULAR

Bu bölümde, öğrencilere yöneltilen sorulara ilişkin elde edilen bulgulara yer verilmiştir. Bulgularda öncelikle öğrencilerin bu 4 soruya ilişkin başarılarının ne düzeyde olduğu yüzde-frekans değerleri verilerek paylaşılmıştır (bkz. Şekil 1). Sonrasında ise her bir soruya ilişkin ortaya çıkan bulgular öğrenci cevaplarından elde edilen doğrudan alıntılara yer verilerek paylaşılmıştır.

Öğrencilerin Başarı Düzeylerine İlişkin Bulgular

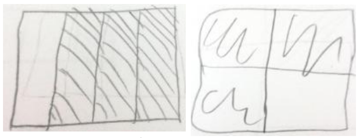
Bu çalışmada öğrencilere kesir temsillerine ilişkin 4 adet soru yöneltilmiştir. Bu soruların ilk ikisi alan ve sayı doğrusu temsillerini kullanarak verilen bir basit kesri göstermeyi, diğer iki soru ise yine alan ve sayı doğrusu temsillerini kullanarak verilen bir basit kesrin bütününü bulmaya yönelik sorulardır. 34 öğrencinin 4 soruya ilişkin cevaplar incelendiğinde birinci soruyu 28, ikinci soruyu 12, üçüncü soruyu 23 ve dördüncü soruyu ise 12 öğrencinin doğru bir şekilde cevaplayabildikleri görülmektedir (Şekil 1).



Şekil 1. Öğrencilerin Sorulara İlişkin Başarı Düzeyleri

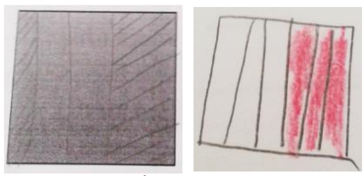
Birinci Soruya İlişkin Bulgular

Birinci soruya ilişkin cevaplar incelendiğinde 28 öğrencinin soruyu doğru bir şekilde cevaplayabildiği görülmektedir. Doğru kabul edilen cevaplarda öğrencilerden bütünü 4 eşit parçaya bölerek 3 tanesini işaretlemesi beklenmektedir. Şekil 2'de öğrencilerin vermiş oldukları doğru cevaplara ilişkin örneklere yer verilmiştir.



Şekil 2. Birinci Soruya İlişkin Doğru Cevap Örnekleri

Geriye kalan öğrencilerin 4 tanesi soruyu yanıtsız bırakırken, diğer ikisi Şekil 3'de yer alan cevapları vermişlerdir.

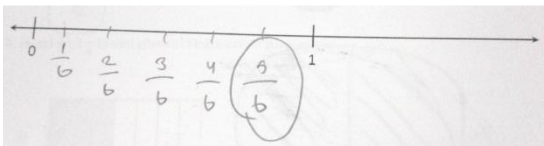


Şekil 3. Birinci Soruya İlişkin Yanlış Cevap Örnekleri

Bu cevaplarda birinci öğrencinin bir bütünü eş parçalara bölmediği, 3 parça yerine 2 parçayı işaretlediği görülmektedir. İkinci öğrencinin ise bütünü 4 eş parçaya bölmek yerine 6 parçaya böldüğü ve 3 parçasını işaretlediği görülmektedir.

İkinci Soruya İlişkin Bulgular

İkinci soruya ilişkin cevaplar incelendiğinde, 12 öğrencinin soruyu doğru bir şekilde cevaplayabildiği görülmektedir. Doğru kabul edilen cevaplarda öğrencilerin 0 - 1 aralığını 6 eş parçaya bölerek $\frac{5}{6}$' in konumunu doğru bir şekilde bulabilmesi beklenmektedir. Şekil 4'te doğru kabul edilen bir cevap örneğine yer verilmiştir.



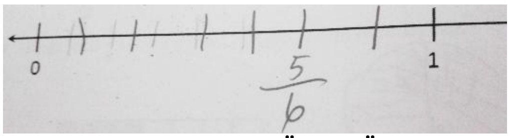
Şekil 4. İkinci Soruya İlişkin Doğru Cevap Örneği

Geriye kalan öğrencilerden 2 tanesi soruyu yanıtsız bırakırken, diğer 20 öğrenci sorunun çözümünde çeşitli yanılgılara düşmüşlerdir. Bu yanılgılar analiz edildiğinde 3 farklı kategori ortaya çıkmıştır (Tablo 1). Bu kategorilerin dışında kalan öğrenciler (n=3) için herhangi bir sınıflama yapılamamıştır.

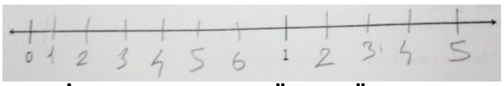
Tablo 1. İkinci Soruya İlişkin Yanlış Cevap Kategorileri

Kategori	f
1. 0-1 aralığını verilen kesir kapsamında doğru bir şekilde parçalara ayıramama	7
2. Kesrin pay ve paydasını iki ayrı doğal sayı olarak ele alma	5
3. Pay ve paydayı ters yazma	5

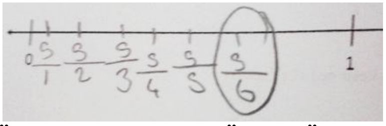
Aşağıda bu kategorilere ilişkin örnek öğrenci cevaplarına yer verilmiştir:



Şekil 5. Birinci Kategoriye Örnek Öğrenci Cevabı



Şekil 6. İkinci Kategoriye Örnek Öğrenci Cevabı



Şekil 7. Üçüncü Kategoriye Örnek Öğrenci Cevabı

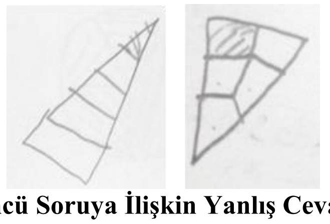
Şekil 7'de görüldüğü gibi öğrencilerin bazıları kesrin pay ve paydasını ters yazmakla kalmayıp aynı zamanda birinci kategoride yer alan 0-1 aralığını doğru bir şekilde eş parçalara ayıramama hatasını yapmışlardır. Bu durumda birinci kategori hatasını yapan öğrencilerin sayısının artacağını söylemek mümkündür.

Üçüncü Soruya İlişkin Bulgular

Üçüncü soruya ilişkin cevaplar incelendiğinde 23 öğrencinin soruyu doğru bir şekilde cevaplayabildiği görülmektedir. Doğru kabul edilen cevaplarda öğrencilerin $\frac{1}{5}$ olarak kabul edilen 5 daire dilimini birleştirerek bir bütünü elde etmesi beklenmektedir. Soruda açıklandığı üzere öğrencilerin tam daire elde etmeleri şart değildir. Şekil 8'de doğru kabul edilen bir cevap örneğine yer verilmiştir.

Şekil 8. Üçüncü Soruya İlişkin Doğru Cevap Örneği

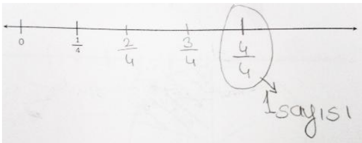
Geriye kalan 11 öğrencinin cevabı incelendiğinde öğrencilerin çoğunlukla daire dilimlerini birleştirerek bir bütünü elde etmek yerine, $\frac{1}{5}$'lik daire dilimini parçalara bölmeye çalıştıkları görülmektedir. Diğer bir ifade ile öğrenciler parçadan bütüne ulaşmak yerine verilen parçanın diğer bir parçasını bulma arayışına girdikleri görülmüştür. Ancak, bu süreçte öğrencilerin daire dilimini eş parçalara ayıramadıkları da gözlenmiştir. Şekil 9'da öğrencilerin vermiş oldukları yanlış cevaplara ilişkin örneklere yer verilmiştir.



Şekil 9. Üçüncü Soruya İlişkin Yanlış Cevap Örnekleri

Dördüncü Soruya İlişkin Bulgular

Dördüncü soruya ilişkin cevaplar incelendiğinde 12 öğrencinin soruyu doğru bir şekilde cevaplayabildiği görülmektedir. Doğru kabul edilen cevaplarda öğrencilerin 0 - $\frac{1}{4}$ aralığını bir birim olarak ele alarak bu aralığı toplam dört defa tekrarlayarak 1 tamsayısını (bütünü) elde etmeleri beklenmektedir. Şekil 10'da doğru kabul edilen bir cevap örneğine yer verilmiştir.



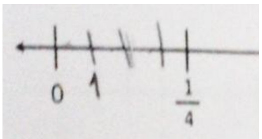
Şekil 10. Dördüncü Soruya İlişkin Doğru Cevap Örneği

Geriye kalan öğrencilerden 2 tanesi soruyu cevapsız bırakırken, diğer 20 öğrenci sorunun çözümünde çeşitli yanılgılara düşmüşlerdir. Bu yanılgılar analiz edildiğinde anlamlı 3 farklı kategori ortaya çıkmıştır (Tablo 2). Bu kategorilerin dışında kalan öğrenciler (n=5) için sınıflama yapılamamıştır.

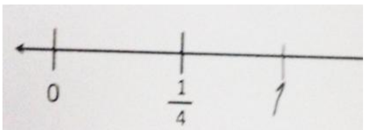
Tablo 2. Dördüncü Soruya İlişkin Yanlış Cevap Kategorileri

Kategori	f
1. Parçanın parçasını bulmak	5
2. Verilen birimi tekrarlamadan herhangi bir nokta belirleme	3
3. Pay ve paydayı yorumlayamama- paydayı arttırarak ilerleme	7

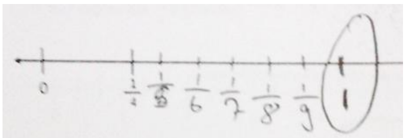
Aşağıda bu kategorilere ilişkin örnek öğrenci cevaplarına yer verilmiştir:



Şekil 11. Birinci Kategoriye Örnek Öğrenci Cevabı



Şekil 12. İkinci Kategoriye Örnek Öğrenci Cevabı



Şekil 13. Üçüncü Kategoriye Örnek Öğrenci Cevabı

SONUÇ

Bu çalışmada 34 tane 6. Sınıf öğrencisine kesir temsillerine ilişkin 4 adet soru yöneltilmiştir. Bu 4 sorunun ilk ikisi alan ve sayı doğrusu modellerini kullanarak verilen bir bütünün ya da aralığın belirli bir parçasını bulmaya, diğer iki soru ise yine alan ve sayı doğrusu modellerini kullanarak verilen bir parçadan yola çıkarak bütünü bulmaya yönelik sorulardır. Elde edilen bulgular incelendiğinde, öğrencilerin alan modeline ilişkin temsillerde bütünün parçasını gösterme görevlerinde sayı doğrusuna ilişkin temsillere oranla çok daha başarılı oldukları görülmektedir. Benzer durum parçadan bütüne ulaşmada da gözlemlenmiştir.

Alan modeline ilişkin temsillerde, öğrenciler bir bütünün belli bir parçasını bulmada, parçadan yola çıkarak bütünü bulmaya oranla daha başarılı oldukları görülmektedir. Bu durum öğrencilerin, verilen bir parçanın bütününü bulmaya yönelik sorulara çok fazla aşina olmadıkları şeklinde yorumlanabilir. Nitekim 3. soruya verilen yanlış cevaplarda öğrencilerin kendilerine verilen kesir parçasının bütününü bulmaya değil, parçanın parçasını bulmaya çalıştıkları görülmektedir (örn. Şekil 9). Ayrıca 4. soruya ilişkin cevaplar incelendiğinde, sayı doğrusu temsillerinde de benzer bir durumun söz konusu olduğu görülebilir (örn. Şekil 11). Bu sorulara ilişkin cevaplarda ortaya çıkan bir diğer önemli husus öğrencilerin eş parçalara ayırmada yaşadıkları sorunlardır (bkz. Şekil 9 ve Şekil 12).

Sayı doğrusuna ilişkin sorularda bütünün (0-1 aralığı) belli bir parçasını bulabilen öğrencilerin neredeyse tamamının parçadan yola çıkarak bütünü elde edebildikleri görülmektedir. Cevaplar incelendiğinde öğrencilerin sayı doğrusuna özgü bazı yanılgılarının olduğu ortaya çıkmaktadır. Bunlardan birincisi kesirlerde pay ve paydayı yorumlayamamalarıdır. Kesirleri sayı doğrusuna yerleştirirken paydanın 0-1 aralığının kaç eşit parçaya ayrıldığını gösterme, payın ise eşit parçalardan ne kadar tekrarlandığını gösterme (örn. $\frac{1}{5}$, $2(\frac{1}{5})$, $3(\frac{1}{5})$) gibi bir fonksiyonu vardır. Bu tekrarlama öğrenciler tarafından tam olarak anlamlandırılmadığı zaman Şekil 13 örneğinde olduğu gibi farklı yanılgılar ortaya çıkabilmektedir. İkinci soruda 5, dördüncü soruda 7 öğrencinin bu yanılgıya düştüğü göz önünde bulundurulursa, bu durumun yaygın karşılaşılan bir kavram yanılgısı olduğu söylenebilir. İkinci bir yanılgı, öğrencilerin kesrin pay ve paydasını ayrı birer doğal sayı gibi ele alarak sayı doğrusuna yerleştirmeleri ile ilgilidir. İkinci soruya verilen cevaplarda 5 öğrencinin (örn, Şekil 6) bu yanılgıya düştüğü görülmektedir. Üçüncü bir yanılgı ise öğrencilerin sayı doğrusu üzerinde aralık saymak yerine nokta saymalarından kaynaklanmaktadır. Bu durum da öğrencilerin (Şekil 5 örneğinde olduğu gibi) iki tamsayı aralığını daha fazla birime bölmelerine neden olmaktadır.

ÖNERİLER

Bu çalışmada ortaya çıkan sonuçlar ortaokul öğrencilerinin sayı doğrusu temsilinde, alan temsiline oranla daha fazla zorlandıklarını ortaya koymaktadır. Sayı doğrusu sayıların sürekliliğini göstermek için elverişli bir temsil olması nedeniyle öğrencilere rasyonel sayı sisteminin kavratılması için önemli bir araçtır. Ancak, öğrencilerin erken yaşlardan itibaren kesirleri daha çok alan temsili ile öğrenmeleri, onların sayı doğru temsiline yeterli ölçüde odaklanmamalarına neden olmuş olabilir. Bu nedenle, okullarda kesirlerin bütün temsillerine ilişkin çalışmalara yeterince yer verilmelidir. Çalışmanın bulguları ayrıca, sıklıkla kullanılan alan modelinde, öğrencilerin parçadan bütüne ulaşmada zorlandıklarını göstermektedir. Bu nedenle derslerde bütünün parçasına odaklanan örneklerin yanında parçadan bütüne ulaşmayı gerektiren örneklerin de ele alınması gereklidir.

VIEWS OF SCIENCE TEACHER CANDIDATES ON TEACHING A LESSON IN LABORATORY AND EXAMINATION OF THE EXPERIMENTS WHICH THEY IMPROVE

Dr. Sibel DEMİR KAÇAN
Ondokuz Mayıs University

ABSTRACT: It is an indisputable fact that laboratory lessons are very important in science education. Having qualified lessons may be effective for younger generation to gain different perspectives. There are so many factors in teaching a qualified laboratory lesson such as material used, equipment, place and experiments to be conducted. The experiments to be conducted are one of the most important elements of a good quality of a laboratory lesson. Selection and implementation of an efficient experiment or experiments, are very important to have a qualified laboratory lesson. In accordance with this importance, the science educators studying in faculties need to have certain abilities in terms of laboratory competency and experiment editing skills. Based on this expectation, the aim of this study is to identify the suggestions, regarding the operation of laboratory lessons, of teacher candidates who study at science teaching department in 2nd grade and to examine the experiments that have been created by these teacher candidates. This study has been conducted with 80 2nd grade students who study in science teaching department of a university in Black Sea region of Turkey. Two open-ended questions have been asked to the teacher candidates in the study as an obtainment tool. The data which were obtained in open-ended questions have been evaluated with content analysis. According to Büyüköztürk et al. (2008), content analysis is defined to be a renewable technique in which some words of a text are summarized with smaller content categories by means of coding. In consequence of the results that have been obtained in the study, interpretations have been made and suggestions have been offered with the purpose of enlightening other researchers.

Key words: laboratory, science education, experiment, teacher candidate

FEN ÖĞRETMEN ADAYLARININ, LABORATUVAR DERSİ İŞLENİŞİNE YÖNELİK GÖRÜŞLERİ VE GELİŞTİRDİKLERİ DENEYLERİN İNCELENMESİ

ÖZET: Laboratuvar derslerinin fen eğitimi bakımından yeri tartışmasız bir önem arz etmektedir. Laboratuvar derslerinin nitelikli geçmesi yeni yetişen neslin de farklı bakış açıları kazanmalarında etkili olabilecektir. Nitelikli laboratuvar dersinin işlenişin de ise; kullanılan malzeme, ekipman, mekan ve yapılacak deneyler… gibi bir çok etken bulunmaktadır. İyi bir laboratuvar dersinin olmazsa olmaz elemanlarının belki de en önemlilerinden biri, uygulanacak olan deneylerdir. Etkin bir deneyin ya da deneylerin seçilmesi ve uygulanması nitelikli bir laboratuvar dersinin gerçekleşmesinde oldukça önemlidir. Bu önem doğrultusunda fakültelerde yetişen fen eğitimcilerinin laboratuvar yetkinliği ve deney kurgulama becerileri açısından iyi bir noktada olması gerekmektedir. Bu beklentiden yola çıkarak araştırmanın amacını; fen bilgisi öğretmenliği programı 2.sınıfında okumakta olan öğretmen adaylarının, laboratuvar derslerinin işleyişine yönelik önerilerini belirlemek ve kendi geliştirdikleri deneylerin incelenmesi oluşturmaktadır. Bu çalışma Türkiye'nin Karadeniz bölgesindeki bir üniversitenin fen bilgisi öğretmenliği anabilim dalında okumakta olan 80 2. Sınıf öğrencisi ile yürütülmüştür. Çalışmada veri elde etme araçları olarak fen bilgisi öğretmen adaylarına iki adet açık uçlu soru sorulmuştur. Açık uçlu sorulardan elde edilen veriler içerik analizi ile değerlendirilmiştir. Büyüköztürk ve diğerlerine (2008) göre içerik analizi, kodlamalarla bir metnin bazı sözcüklerinin daha küçük içerik kategorileri ile özetlendiği yinelenebilir bir teknik olarak belirtilmektedir. Çalışmadan elde edilen sonuçlar neticesinde yorumlamalar yapılmış ve diğer araştırmacılara ışık tutması amacı ile öneriler sunulmuştur.

Anahtar sözcükler: laboratuvar, fen eğitimi, deney, öğretmen adayı

GİRİŞ

Yapılandırmacılık öğretmeye değil, insanın nasıl öğrendiği üzerine temellenmiş bir kuramdır. İnsanın nasıl öğrendiği, bilgiyi nasıl oluşturduğu ortaya konabilirse ona uygun bir öğrenme ortamı oluşturulabilmektedir (Duban, 2008). 1960'lı yıllarda Amerika eğitim programındaki reform ile öğretmenler, bilgi sunucu olmaktan çıkıp, öğrencilere soru soran ve onlara rehberlik eden kişiler olmaya yönlendirilmiştir (Çelik, Şenocak, Bayrakçeken, Taşkesenligil ve Doymuş, 2005). Günümüzde de özellikle fen ve matematik eğitiminde bu modelin önemi vurgulanmaktadır (Çelik, Şenocak, Bayrakçeken, Taşkesenligil ve Doymuş, 2005). Yaparak yaşayarak öğrenme felsefesini içeren yapılandırmacı yaklaşım özellikle fen eğitimde oldukça önem arz etmektedir.

Bu yaklaşımda buluş yoluyla öğrenmede olduğu gibi öğretmen yine yol gösteren, öğrenci araştıran; öğretmen öğrencilere kaynak eser ya da kişiler öneren, bunlardan yararlanma yollarını gösteren, öğrenciler de istenen bilgiye ulaşan kişiler olarak tanımlanmaktadır (Arıcı, 2006). Yapılandırmacı öğrenme ortamlarında sorgulayıcı-araştırma yaklaşımı sıklıkla kullanılmakta; böylece sorgulayıcı-araştırma etkinlikleri ile eleştirel olarak sorgulamaları teşvik edilmektedir. Sorgulayıcı araştırma, bu özellikleriyle öğrenci merkezli ve bilgi yapılandırmasını destekleyen bir yaklaşımdır (Köseoğlu ve Tümay, 2013). Bu yaklaşım hipotez test etme deney türüne karşılık da gelmektedir. Bu noktada öncelikle öğrenci bir hipotez kurar, bu hipotezi ile ilgili deney planlar, araç-gereçleri temin eder, deney düzeneğini oluşturur, deneyi yapar, verileri, gözlemleri kaydeder, verilerden sonuçlar çıkarır ve yorum yapar; elde ettiği verilerle hipotezini kabul ya da reddeder, duruma göre yeni deneyler planlar ve gerekliyse hipotezini değiştirir. Böylece bilinen bilimsel gerçeklere yeni bilgi ve yaklaşımlar ilave edebilir (Karamustafaoğlu ve Yaman, 2006).

Araştırma sorgulamaya dayalı öğretim, bilişsel faaliyetler, farklı etkinlik kullanımı ve sınıf içi tartışma türleri gibi öğretim uygulamalarının çeşitliliği açısından değiştirilerek gerçekleştirilebilmektedir (McNeill, Pimentel ve Strauss, 2013). Fen eğitimcilerinin büyük bölümü laboratuvarların (ve uygulamalı etkinliklerin) fen öğrenimi ve öğretimindeki önemini tartışmasız biçimde kabul etmektedir. Fenin doğası nedeni ile araştırma, sorgulama, yorumlama gibi birçok üst düzey becerinin kazandırılabileceği, geliştirilebileceği, uygulamalı etkinlik ve deneylerin yapılabileceği tek ortam, laboratuvarlar olarak görülmektedir. Nitekim fen derslerinin tamamıyla laboratuvarda gerçekleştirilmesi veya sınıfların laboratuvar gibi düzenlenmesi gerektiği belirtilmektedir (Bahar, Aydın, Polat ve Bertiz, 2008).

Özellikle açık uçlu laboratuvar deneyimleri öğrencilere genel yanlış kavramları sezgileri ile eleştirme ve yaratıcı çözümler aramalarına imkan tanımaktadır (MacLean, 2003). Laboratuvar uygulamalarının geliştirdiği becerilerden bazıları; problem çözme, yaratıcı düşünme, grup halinde çalışma, koordinasyon ve mantıksal düşünme olarak sayılabilmektedir (Sarıbıyık, Altunçekiç ve Yaman, 2004). Bu sebeple araştırma-sorgulamaya dayalı öğrenmenin fen öğrenimi ve özellikle laboratuvar uygulamalarında oldukça önem arz ettiği düşünülmektedir.

Bu noktadan hareketle araştırmanın amacını; fen bilgisi öğretmenliği programı 2.sınıfında okumakta olan öğretmen adaylarının, laboratuvar derslerinin işleyişine yönelik önerilerini belirlemek ve kendi geliştirdikleri deneylerin incelenmesi oluşturmaktadır.

YÖNTEM

Bu çalışma Türkiye'nin Karadeniz bölgesindeki bir üniversitenin fen bilgisi öğretmenliği anabilim dalında okumakta olan 80 2. Sınıf öğrencisi ile yürütülmüştür. Çalışmada veri elde etme araçları olarak fen bilgisi öğretmen adaylarına iki adet açık uçlu soru sorulmuştur. Veri elde etme aracı olarak kullanılan bu açık uçlu sorular için uzmanlar tarafından görüş alınmıştır. Açık uçlu sorulardan elde edilen veriler içerik analizi ile değerlendirilmiştir. Büyüköztürk ve diğerlerine (2008) göre içerik analizi, kodlamalarla bir metnin bazı sözcüklerinin daha küçük kategoriler ile özetlendiği yinelenebilir bir teknik olarak belirtilmektedir.

BULGULAR

Bu çalışmada öğretmen adaylarının, laboratuvar derslerinin işleyişine yönelik önerilerin ve kendi geliştirdikleri deneylerin incelenmesinden elde edilen veriler tablolar halinde sunularak yorumlanmıştır.

Tablo1. Öğretmen Adaylarının, Laboratuvar Derslerinin İşleyişine Yönelik Önerileri

Temalar	f
Tüm laboratuvar malzemeleri tanıtılmalı	35
Laboratuvar kuralları öğretilmeli	22
Laboratuvar eğlenceli işlenmeli	13
Laboratuvara hazırlıklı gelinmesi gerektiğini anlatır	13
Deneyden önce hazırbulunuşluğa bakmalı	10
Malzeme ve laboratuvar temizliğine dikkat etmeli	9
Maliyeti az/ bulunabilen deney malzemeleri kullanmalı	8

Önce soru sormalı/bilgi vermeli	7
Önce soru sormalı/bilgi vermeli	7
Öğrencilerin dokunmalarına izin vermeli	6
Laboratuvarı iyi bilen birinden yardım almalı	6
Önce teorik bilgi vermeli, sonra uygulamayı göstermeli, öğrenciye yaptırmalı	6
Önce laboratuvarda eksik var mı kontrol etmeli	6
Birşeyler kırıldığında/zarar gördüğünde kızmamalı	5
Deneylerde kullanılan malzemeyi bilmeli	4
Önlük giyilmesini söylemeli	4
Malzemeleri kullanırken kızmamalı	4
Seviyeye uygun deneyler seçmeli	4
Günlük yaşamla ilgi deneyler olmalı	4
Eşyaları dikkatli kullanmaları gerektiği konusunda uyarmalı	4
Bazı deneyleri öğrencilerin yapmalarını ister	4
Grup çalışması yaptırmalı	4
Deneylerle ilgili bilgi toplamalı	3
Tehlikeli olan deneyleri kendisi yapmalı	3
Konuya hakim olmalı	3
Malzeme eksikliği varsa tamamlamalı	2
Kendi de konuya çalışmalı	2
Büyük kısmını öğrenciye yaptırmalı	2
Bilgi vermeli	2
Ciddiyeti ve disiplini ön planda tutmalı	2
Zararlı maddeleri öğrenciye öğretmeli	2
Önceden hazırlanmalı	2
Önce kendisi yapmalı, sonra öğrencilere yaptırmalı	2
Konuları düzenlenmeli	2
Rapor istemeli	2
Derste işlediği teorik konuları laboratuvarda desteklemeli	2
Diğer	103

Tablo1'de de görüldüğü üzere öğretmen adayları tarafından en çok "Tüm laboratuvar malzemeleri tanıtılmalı; Laboratuvar kuralları öğretilmeli; Laboratuvar eğlenceli işlenmeli; Laboratuvara hazırlıklı gelinmesi gerektiğini anlatmalı; Deneyden önce hazırbulunuşluğa bakmalı" temalarının ifade edildiği görülmektedir.

Tablo2. Öğretmen Adaylarının Geliştirdikleri DeneyTiplerinin İncelenmesinden Elde Edilen Veriler

Deney tipi	f
Temelde sorgulayıcı deney oluşturma	50
Klasik deney oluşturma	26
Yaratıcı düşünce ile deney oluşturma	12

Tablo2'de görüldüğü üzere öğretmen adaylarının kurguladıkları deneylerde en çok "sorgulayıcı ve klasik deney" oluşturdukları görülmektedir.

Tablo3. Öğretmen Adaylarının Geliştirdikleri Deneylerin Yapılışından Elde Edilen Veriler

Deney yapılışı	f
Öğretmen yapar	46
Öğretmen-öğrenci	31
Öğretmen rehber öğrenci yapar	7
Öğrenci yapar	4

Tablo3'de görüldüğü gibi öğretmen adaylarının deneyleri, daha çok "öğretmen ve öğretmen-öğrenci" kurgusuyla oluşturdukları görülmektedir.

Tablo4. Öğretmen Adaylarının Geliştirdikleri Deneylerin Alan Olarak İncelenmesinden Elde Edilen Veriler

fizik	kimya	biyoloji	disiplinlerarası
20	10	59	1

Tablo4'de görüldüğü üzere, fen öğretmen adayları en çok biyoloji alanında; en az disiplinlerarası alanda deney kurgulamışlardır.

Tablo5. Öğretmen Adaylarının, Geliştirdikleri Deneylerin Konu Olarak İncelenmesinden Elde Edilen Veriler

Konu başlıkları	f
Kan grubu	27
Renk oluşturma (yansıma)	7
Asidik-bazik	4
Kırılma	4
Bitki-hayvan hücresi	4
Hayvan hücresi	4
Bitki hücresi	3
Mitoz-mayoz	3
Gölge	2
Yaprak	2
Harf	2
Diğer	24

Tablo5'de görüldüğü üzere fen öğretmen adaylarının en çok kan grupları konusunda deney kurguladıkları belirlenmiştir.

SONUÇ

Fen eğitiminin olmazsa olmaz yöntemlerinden olan laboratuvar uygulamalarının önemi yadsınamaz. Bu laboratuvar etkinliklerinin etkin olabilmesi ise içeriğinin nasıl yapılandırıldığına dayanmakta ve öğrencilerin farklı bakış açılarının gelişmesi hedeflenerek yaratıcı etkinlikler barındırması gerekmektedir. Wingate'e (2011) göre; bilim insanlarının deneylerini nasıl oluşturduklarını ve bilim yaptıklarını, kalıcı olarak algılamak için eğitimde modeller ve hipotezlerle yaratıcı ve sezgisel düşünmeye odaklanılması gerektiği düşünülmektedir. Koray, Köksal, Özdemir ve Presley'e (2007) göre, etkili fen eğitiminin en önemli araçlarından biri olan laboratuvar yönteminde, yaratıcı ve eleştirel düşünmenin kullanılması, bu yöntemin fen öğrenimine olan katkısını kat kat arttırmaktadır. Bu nedenle öğretmen adaylarının bir laboratuvar dersini etkin kılabilmek adına neler düşündüklerini ortaya koymanın oldukça önem arz ettiği düşünülmektedir. Yapılan çalışmada öğretmen adaylarının, bir laboratuvar dersinin nasıl işleneceğine dair sorulan açık uçlu soruya en çok "Tüm laboratuvar malzemeleri tanıtılmalı; Laboratuvar kuralları öğretilmeli; Laboratuvar eğlenceli işlenmeli; Laboratuvara hazırlıklı gelinmesi gerektiğini anlatmalı; Deneyden önce hazırbulunuşluğa bakmalı" temaları ile yanıt verdikleri görülmektedir. Bu noktada öğretmen adaylarının laboratuvar derslerinin etkin uygulanmasına yönelik önerilerden ziyade bir takım kurallara daha çok değindikleri tespit edilmiştir. Bu noktada öğretmen adaylarının sorgulayıcı ya da yaratıcı laboratuvar yapılandırması ile ilgili fikir ifade etmedikleri görülmektedir. Koray, Köksal, Özdemir ve Presley'in (2007) gerçekleştirmiş oldukları araştırmada; yaratıcı ve eleştirel düşünme temelli fen laboratuvarı uygulamalarının sınıf öğretmeni adaylarının bilimsel süreç becerilerinde etkili olduğu belirlenirken; Ketpichainarong, Panijpan ve Ruenwongsa da (2010), sorgulama temelli laboratuvar uygulamasının eleştirel düşünme ve bilimsel süreç becerilerinde önemli olduğu ortaya konmuştur. Yapılan çalışmada öğretmen adaylarının geliştirdikleri deneyler incelendiğinde en çok "temelde sorgulayıcı ve klasik deney" oluşturdukları görülmesine karşın; deneyler ayrıntılı incelendiğinde daha çok "öğretmen ve öğretmen-öğrenci" kurgusuyla deneylerin oluşturulduğu belirlenmiştir.

Söz konusu bu çalışmanın sonucu, sorgulayıcı deney oluşturma ile ilgili olarak öğretmen adaylarının düşünce yapısında olumlu bir durum oluşmasına karşın; uygulama aşamasının çok gerçekleşemediğini gösterir nitelikte bulunmuştur. Ayrıca bu deneyler incelendiğinde öğretmen adaylarında deney konusu ve içeriği açısından disiplinlerarası bakışın da çok oluşamadığı tespit edilmiştir. Halbuki sorgulayıcı bakış açısını yakalamada olaylara disiplinlerarası bakmanın oldukça önemli olduğu düşünülmektedir. Nitekim Bozkurt (2012) araştırmaya dayalı öğrenme yönteminin sınıf öğretmenliği adaylarının; Duru, Demir, Önen ve Benzer (2011) ise, sorgulamaya dayalı laboratuvar uygulamalarının fen bilgisi öğretmen adaylarının bilimsel süreçleri becerilerinde olumlu etki gösterdiğini ortaya koymuştur. Yine Demir'in (2014) yapmış olduğu araştırmaya göre araştırma sorgulamaya dayalı laboratuvar uygulamalarının, öğretmen adaylarının bilimsel yaratıcılık becerileri üzerinde etkili olduğu belirlenmiştir. Sorgulayıcı öğrenmeyi laboratuvara yansıtma, bireyde disiplinlerarası bakış açısını etkin kılarken; olaylara farklı açılardan bakabilen, yorumlayabilen, sorgulayabilen bireyler yetiştirilebilmeyi de sağlayabilecektir.

ÖNERİLER

Bu çalışmadan yola çıkarak öğretmen adaylarının nitelikli ve sorgulayıcı laboratuvar ortamları ile sık sık deneyim yaşamaları gerektiği düşünülmektedir. Sorgulayıcı laboratuvar ortamları ile bireylerin bakış açılarının genişletilmesi, olaylara farklı bakabilmeyi hedeflemesi ve yeni bilgiler üretme konusunda heveslendirilmesi oldukça önemlidir. Bu noktada sorgulayıcı laboratuvar ortamlarının öğretmen adaylarına özellikle fakültelerde yaşatılması gerektiği düşünülmektedir.

MICROSCOPE USAGE INFORMATION: SAMPLE OF SCIENCE TEACHER CANDIDATES

Dr. Sibel DEMİR KAÇAN
Ondokuz Mayıs University

ABSTRACT: A qualified laboratory lesson is of great importance in science education. In a qualified laboratory lesson there are so many essential elements such as material, tool and place. One of the most important elements of a qualified laboratory lesson is the equipment used, and usage information and ability of this equipment. Microscope which is frequently used in science education is one of such tools. Microscope usage information is very important for a science educator. Therefore, a teacher who acquired this information and usage ability will be effective in encouraging students to use the microscope correctly, to have interest in science and even to do research in this field. In parallel with this importance, it is thought that the science educators who study in faculties need to have a good ability of microscope usage information. Based on this expectation, the aim of this study is to identify the ability of microscope usage information of the candidate students who study at science teaching department in 2nd grade. This study has been conducted with 80 2nd grade students who study in science teaching department of a university in Black Sea region of Turkey. Microscope usage information scale which was improved by Benzer and Demir in 2014 has been used as obtainment tool in the study. Microscope usage information scale is composed of tripple likert type 20 articles and two open-ended questions. The data which were obtained from likert type articles have been evaluated with frequency calculation whereas the data which were obtained from open-ended questions have been evaluated with content analysis. According to Büyüköztürk et al. (2008), content analysis is defined as a systematic technique where certain words of a text are summarized with smaller content categories through coding. Based on the results that were obtained in the study, interpretations have been made and suggestions have been offered in order to enlighten other researchers.

Key words: microscope usage information, teacher candidate, science education

MİKROSKOP KULLANIM BİLGİSİ: FEN BİLGİSİ ÖĞRETMEN ADAYLARI ÖRNEĞİ

ÖZET: Fen eğitiminde nitelikli bir laboratuvar dersi oldukça önem taşımaktadır. Nitelikli bir laboratuvar dersinde ise, olmazsa olmaz malzeme, araç, mekan… gibi bir çok eleman söz konusudur. İyi bir laboratuvar dersinin elemanlarının belki de en önemlilerinden biri, kullanılan ekipman ve bu ekipmanı kullanım bilgisi ve becerisidir. Fen eğitiminde sıklıkla kullanılan mikroskop da bu araçlardan biridir. Mikroskop kullanım bilgisi bir fen eğitimcisi için oldukça önem arz etmektedir. Dolayısıyla bu bilgiyi iyi edinmiş ve kullanabilme yetisinde olan öğretmen, çocukların da mikroskobu doğru kullanabilmesinde, fen alanına olan ilgisinde ve hatta araştırma yapmasında oldukça etkili olacaktır. Bu önem doğrultusunda fakültelerde yetişen fen eğitimcilerinin mikroskop kullanım bilgilerinin iyi bir yetkinlikte olması gerektiği düşünülmektedir. Bu beklentiden yola çıkarak araştırmanın amacını; fen bilgisi öğretmenliği programı 2.sınıfında okumakta olan öğretmen adaylarının, mikroskop kullanım bilgisini belirlemek oluşturmaktadır. Bu çalışma Türkiye'nin Karadeniz bölgesindeki bir üniversitenin fen bilgisi öğretmenliği anabilim dalında okumakta olan 80 2. Sınıf öğrencisi ile yürütülmüştür. Çalışmada veri elde etme aracı olarak Benzer ve Demir tarafından 2014 yılında geliştirilen mikroskop kullanım bilgisi ölçeği kullanılmıştır. Mikroskop kullanım bilgisi ölçeği, üçlü likert tipi 23 maddeden ve iki adet açık uçlu sorudan oluşmaktadır. Likert tipi maddelerden elde edilen veriler frekans hesabı ile, açık uçlu sorulardan elde edilen veriler ise içerik analizi ile değerlendirilmiştir. Büyüköztürk ve diğerlerine (2008) göre içerik analizi, kodlamalarla bir metnin bazı sözcüklerinin daha küçük içerik kategorileri ile özetlendiği sistematik bir teknik olarak belirtilmektedir. Çalışmadan elde edilen sonuçlar doğrultusunda yorumlamaya gidilmiş ve diğer araştırmacılara farklı çalışmalar yapılabilmesi adına öneriler sunulmuştur.

Anahtar kelimeler: mikroskop kullanım bilgisi, öğretmen adayı, fen eğitim

GİRİŞ

Laboratuvar fen eğitiminde yeri tartışmasız bir önem derecesine sahiptir. Fen eğitimindeki mevcut yöntemler içerisinde en etkili olanlardan biri laboratuvar yöntemidir (Hofstein, Kipnis ve Kind, 2008; İlhan, Sadi, Yıldırım ve Bulut, 2009; Demirbaş ve Pektaş, 2010; Dahar ve Faize, 2011). Laboratuvar uygulamaları basit veya karmaşık, günlük hayattan veya çok çeşitli materyallerin birlikte kullanılmasını gerektirmektedir (Güler ve Çobanoğlu, 1997). Laboratuvar çalışmaları; bilimsel düşünmeyi, bilime ve bilimsel uygulamalara yönelik olumlu tutum geliştirmeyi, bilimsel süreç becerileri kazandırmayı, soyut fen konularını yaparak yaşayarak daha iyi öğrenmeye olanak tanımaktadır (Harman, 2012). Laboratuvar materyalleri, öğrencilerin bilim insanı gibi çalışarak bilimsel bilgiyi yapılandırmasını ve bilim alışkanlığı kazanmalarına neden olmaktadır (Jewitt, Kress, Ogborn ve Tsatsarelıs, 2001). Bu anlamda laboratuvar, bilimin mutfağı olarak tanımlanabilmektedir.

Flick ve Bell (2000) yapmış oldukları araştırmada öğretmenlerin bilim ve teknolojiyi kullanmaları adına mikroskop kullanılmasının önemini ortaya koymuşlardır. Öğrencilerin biyoloji alanında kavramları öğrenmelerini kolaylaştıran en önemli araçların başında "Mikroskop" gelmektedir (Ekici, 2016). Mikroskop "Çıplak gözle görülemeyecek kadar küçük canlı ve cansız nesnelerin incelenmesini sağlayan mercek sistemlerinden oluşan optik bir araç" olarak ifade edilebilmektedir (Özata ve Türe, 1999; Dökme, Doğan ve Yılmaz, 2010; MEB, 2011). Böylece soyut olan ve gözle görülemeyen nesnelerin görünür hale dönüştürülebilmesinde önem taşımaktadır. İlköğretim okullarının birçoğunda var olan mikroskop (Akpınar ve Turan, 2002; Demir, Böyük ve Koç, 2011) diğer teknolojik araçlar gibi eğitimde kullanıldığında anlamayı kolaylaştıran bir materyaldir (Yavuz ve Coşkun, 2008). Bu nedenle gerek öğretmen ve gerekse öğretmen adaylarının mikroskop kullanımında yeterli nitelikte olması gerektiği düşünülmektedir. Nitekim Ural Keleş, Er Nas ve Çepni'nin (2009) yaptıkları çalışmada da öğretmen adaylarının mikroskopta görüntü oluşturma aşamasında kavram yanılgılarına sahip oldukları görülmüştür. Bu bağlamda öğretmen adaylarının mikroskop ile daha çok ve kaliteli vakit geçirmelerinin gerektiği düşünülmektedir. Nitekim Yeşilyurt (2004) yaptığı çalışmada öğretmen adaylarının mikroskopla daha az uğraştıklarında anlama zorluğu yaşadıklarını ortaya koymaktadır. Demir'in (2015) yapmış olduğu araştırmadan elde edilen sonuçların neticesinde ise, fen öğretmen adaylarının mikroskop kullanım bilgilerinin genel olarak orta düzeyde ve yetersiz olduğu belirlenmiştir.

Tüm bu çalışmalardan da yola çıkarak, öğretmen adaylarının mikroskop kullanımı konusunda yeterli düzeyde olup olmadıklarını ya da durumlarının ne olduğunu saptamanın önemli ve gerekli olduğu düşünülmektedir. Dolayısıyla bu çalışmanın amacını; fen bilgisi öğretmenliği programı 2.sınıfında okumakta olan öğretmen adaylarının, mikroskop kullanım bilgisini belirlemek oluşturmaktadır

YÖNTEM

Bu çalışmada, fen bilgisi öğretmenliği anabilim dalında öğrenim görmekte olan öğretmen adaylarının mikroskop kullanım bilgilerinin bir ölçme aracı ve açık uçlu sorularla betimlenmesi amaçlandığından, tarama modeli kullanılmıştır. Tarama modelindeki çalışmalar; yaşayanların ve yaşananların ne olduğunun betimlenip açıklanarak ortaya konulması olarak ele alınabilmektedir (Sönmez ve Alacapınar, 2011).
Bu çalışma Türkiye'nin Karadeniz bölgesindeki bir üniversitenin fen bilgisi öğretmenliği anabilim dalında okumakta olan 80 2. Sınıf öğrencisi ile yürütülmüştür. Çalışmada veri elde etme aracı olarak Benzer ve Demir tarafından 2014 yılında geliştirilen mikroskop kullanım bilgisi ölçeği kullanılmıştır. Mikroskop kullanım bilgisi ölçeği, üçlü likert tipi 23 maddeden ve iki adet açık uçlu sorudan oluşmaktadır. Likert tipi maddelerden elde edilen veriler frekans hesabı ile, açık uçlu sorulardan elde edilen veriler ise içerik analizi ile değerlendirilmiştir. Büyüköztürk ve diğerlerine (2008) göre içerik analizi, kodlamalarla bir metnin bazı sözcüklerinin daha küçük içerik kategorileri ile özetlendiği sistematik bir teknik olarak tanımlanabilmektedir.

BULGULAR

Bu çalışmada mikroskop kullanım bilgisi ölçeğinden elde edilen veriler tablolar halinde sunularak yorumlanmıştır.

Tablo1.Ölçek Maddelerinden Elde Edilen Yüzdelikler

Ölçeğe ilişkin bazı maddeler	evet	hayır	bilmiyorum
1-Makrovida görüntüyü netleştirmeye yarar.	45	53,8	1,3
2-Mikroskopta inceleme yapmak için önce tabla yukarı kaldırılır, sonra preparat yerleştirilir.	10,0	87,5	2,5
3-Yapılacak çalışmaya göre diyafram açılıp kapanabilir.	65,0	22,5	12,5
4-Materyalin uzun eksenine dikey olan düzlemden alınan kesit enine kesittir.	87,5	10,0	2,5
5-Enine, boyuna ve yüzeysel olmak üzere genel olarak üç tip kesit alınır.	95,0	5,0	0,0
7-Mikroskopta inceleme yaparken, çizim için 4'lük objektif görüntüsü kullanılır.	25,0	67,5	7,5
8- 4'lük objektifte makrovida ile oynanmaması gerekir.	18,8	73,8	7,5
10-Lam ve lamel ikilisine preparat denir.	21,3	76,3	2,5
11-Mikroskopta inceleme yapmak için objektif kontrol edilir, preparat	88,8	7,5	3,8

yerleştirilir ve sonra tabla yukarı kaldırılır.			
12-Mikroskoptaki görüntü olduğu gibi çizilmeli ve sonra bilgilerle doğrulanmalıdır.	95,0	5,0	0,0
13-Mikroskoptaki görüntü kitaplardaki gibi ayrıntılı çizilmelidir.	43,8	43,8	12,5
14-Mikroskop sağlık sektöründe kullanılır.	86,3	10,0	3,8
15-40'lık objektifte makrovidayla oynamanın bir sakıncası yoktur.	20,0	70,0	10,0
17-Diyafram mikroskop tablasının üzerinde bulunur.	21,3	72,5	6,3
19-Mikroskop büyütmesi, "objektif x oküler" olarak yazılır.	85,0	5,0	10,0
20-İnceleme ortamı alınan kesiti daha iyi görebilmek için damlatılan çözeltidir.	50,0	35,0	15,0
22-Mikroskop kriminal suçlarda kullanılır.	78,8	2,5	18,8
23-Mikroskopta inceleme yapmak için objektif kontrol edilmeden, preparat yerleştirilir ve sonra tabla yukarı kaldırılır.	11,3	85,0	3,8

Tablo1 incelendiğinde öğretmen adaylarının birçok madde için olumlu yanıtlar verdiği belirlenirken; özellikle "Makrovida görüntüyü netleştirmeye yarar; Mikroskoptaki görüntü kitaplardaki gibi ayrıntılı çizilmelidir" maddelerinde çelişkide kalındığı görülmektedir.

Tablo2. Mikroskopta Herhangi Bir Bitkisel Dokuyu İncelemek Adına Gerekli Tüm Aşamalara İlişkin Temalar

Temalar	evet	hayır
Doğru sıralama	43,8	56,2
Tam inceleme	3,8	96,2
Doğru preparat oluşturma	71,3	28,7

Tablo2'de de görüldüğü üzere öğretmen adaylarının mikroskopta herhangi bir bitkisel dokuyu incelemek adına gerekli tüm aşamaları yazmalarından elde edilen ifadeler temalaştırıldığında, doğru sıralama temasının ağırlıklı olarak yapılabildiği ancak hemen hemen eşit bir dağılım görüldüğü; tam inceleme temasının yüksek oranda yapılamadığı; doğru preparat oluşturma temasının ise yüksek oranda gerçekleştirilebildiği görülmüştür.

Tablo3. Öğretmen Adaylarından Elde Edilen Diğer İfadeler

İfadeler	f
Taşırken altından tutulmalı, sürüklenmemeli	6
İşlem bitince 4x10 objektife alınmalı	4
Öncelikle 4'lük objektifte bulunur.	3
Diğer objektiflerde makrovida ellenmeden netleştirme yapılır.	3
İnceleme bitince preparat alınır ve mikroskop kapatılır.	3
Mikrovida netleştirir.	2
İşlem bitince tabla indirilmelidir.	2
İşlem bitince temizlenip toparlanmalı	2
Preparatın kırılmamasına dikkat edilmeli	2
Diğer	26

Tablo3'de de görüldüğü üzere öğretmen adayları en çok "Taşırken altından tutulmalı, sürüklenmemeli; İşlem bitince 4x10 objektife alınmalı; Öncelikle 4'lük objektifte bulunmalı; Diğer objektiflerde makrovida ellenmeden netleştirme yapılmalı; İnceleme bitince preparat alınmalı ve mikroskop kapatılmalı" ifadelerinin verildiği görülmüştür.

SONUÇ

Doğrudan öğretim; deney tasarlama, mikroskop kullanarak öğrenme ve ölçümler yapma… gibi bir dizi etkinlik boyunca öğrencilere rehberlik yaparak öğretmenin, bilgiyi oluşturması olarak tanımlanabilmektedir (Schroeder, Scott, Tolson, Huang ve Lee, 2007). Nitekim yapılandırmacı öğrenme, öğrencinin etkin kılınması ile gerçekleştirilen yaparak yaşayarak öğrenme felsefesidir. Bu alanda beklenen amaçların gerçekleştirilmesi; laboratuvar ve ders araç-gereçlerinin en iyi şekilde kullanılması ile mümkün olmaktadır (Köseoğlu ve Soran, 2006). Keskin, Özbek, Ulaş ve Müdok'un (2015) yapmış oldukları çalışma sonuçları değerlendirildiğinde günümüzün teknolojik yenilikleri ile büyüyen öğrencilerin dijital mikroskop kullanımını daha çok tercih ettikleri ve bu görüntüler ile daha rahat çalıştıkları anlaşılmaktadır. Mikroskop kullanımı deneyim gerektiren bir süreç içermektedir. Uzel ve arkadaşlarının (2011) yaptıkları çalışmada, fen bilgisi öğretmen adaylarının mikroskobun bölümlerinden en çok oküler, tabla, makrovida ve mikrovidayı doğru bildikleri; kondansatör vidası ve kondansatörü ise yanlış bildikleri belirlenmiştir. Yapılan bu çalışmada ise, öğretmen adaylarının birçok madde için ölçeğe olumlu yanıtlar verdiği belirlenirken; özellikle "Makrovida görüntüyü netleştirmeye yarar; Mikroskoptaki görüntü kitaplardaki gibi ayrıntılı çizilmelidir" maddelerinde çelişkide kaldığı tespit edilmiştir. Mikroskopta görüntünün incelenmesi ile ilgili olarak Uzel ve arkadaşlarının (2011) yaptıkları çalışmada ise, fen bilgisi öğretmen adaylarının kesit almada zorluk çektikleri görülmektedir. Yapılan bu çalışmada ise, öğretmen adaylarının mikroskopta herhangi bir bitkisel dokuyu incelemek adına gerekli tüm aşamaları yazmalarından elde edilen ifadeler temalaştırıldığında, doğru sıralama temasının ağırlıklı olarak yapılabildiği; tam inceleme temasının yüksek oranda yapılamadığı; doğru preparat oluşturma temasının ise yüksek oranda gerçekleştirilebildiği belirlenmiştir. Bu anlamda öğretmen adaylarının preparat oluşturmada problem yaşamadıkları, ancak tam bir inceleme gerçekleştiremedikleri görülmektedir. Yine bu çalışmada görüldüğü üzere öğretmen adaylarının en çok "Taşırken altından tutulmalı, sürüklenmemeli; İşlem bitince 4x10 objektife alınmalı; Öncelikle 4'lük objektifte bulunmalı; Diğer objektiflerde makrovida ellenmeden netleştirme yapılmalı; İnceleme bitince preparat alınmalı ve mikroskop kapatılmalı" ilave ifadelerini verdikleri görülmüştür. Bir başka çalışmada Benzer ve Demir'in (2014) mikroskopta görüntü bulma ve inceleme teması ile ilgili kodları incelediğinde; görüntünün bulunması ve netleştirilmesi kodlarında, en yüksek doğru cevap oranı 3. sınıflarda bulunurken, 2 ve 4. sınıfların doğru cevap oranlarının birbirine yakın olduğu, 1. sınıfların ise bu konu ile ilgili hiç bilgilerinin olmadığı saptanmıştır. Bu noktada Taşdelen ve Güven (2012) de yapmış oldukları araştırmada öğretmen adaylarının deneysel uygulamalara daha çok yer verilmesini ve gözlemlerin bizzat mikroskop kullanılarak yapılmasını istediklerini tespit etmişlerdir.

Dikmenli, Türkmen ve Çardak'ın (2002) çalışmasında, üniversite fen bilimleri öğrencilerinin biyoloji laboratuvarlarında mikroskop çalışmaları ile ilgili alternatif kavramları belirlenirken; Ekici'nin (2016) yapmış olduğu araştırmada da biyoloji öğretmen adaylarının mikroskopla ilgili oldukça zengin, anlamlı ve farklı bakış açılarıyla ifade ettikleri metaforları ve açıklamaları tespit edilmiştir. Fen eğitiminde mikroskop kullanımının olmazsa olmaz bir yeri olduğu kabul edilmektedir. Bu sebeptendir ki, gerek mikroskop teknik bilgisinin ve gerekse mikroskop kullanım bilgisinin bir fen eğitimcisinde yeterli düzeyde olması gerektiği düşünülmektedir. Böylece öğrencilerinin doğayı laboratuvara taşımada ve bilinmeyen görünmeyen bazı yapıları, organizmaları, nesneleri keşfetmelerini sağlamada fen eğitimcilerinin etkin olacağı düşünülmektedir (Demir, 2015). Ketelhut, Nelson, Clarke ve Dede (2010) de sanal mikroskoplarla bile, öğrencilerin bir deneyi etkin olarak gerçekleştirme hissini yaşayabileceğini ve bir bilim insanı gibi hissedebileceğini ifade etmektedirler. Mikroskop konusunda yanlış anlamaların neler olduğunun tespiti, biyoloji ve biyoloji laboratuvar çalışmalarının bu yanılgıları yok edecek veya azaltacak şekilde düzenlenmesi, öğrencilerin başarılarını artırmada son derece önem kazanmaktadır (Yeşilyurt, 2004). Bu sebeptendir ki; öğretmen adaylarının mikroskop kullanım becerilerinin geliştirilebilmesi adına oldukça zengin deneyim ortamları yaşatılması gerektiği düşünülmektedir.

ÖNERİLER

Yapılan bu çalışmadan yola çıkarak, lisans seviyesindeki programlarda özellikle biyoloji içerikli konuların mümkün olduğu kadar mikroskop kullanılarak ve uygulamalı olarak yürütülmesi gerektiği düşünülmektedir. Yine bu programlarda öğrenim gören öğretmen adaylarının mümkün olduğunca fazla örnek uygulamaları yaşamaları ve deneyim içerisinde bulunmaları oldukça önemlidir. Özellikle fen bilgisi öğretmen adaylarının, ileride mesleklerini nitelikli olarak yürütebilmeleri ve mikroskobun ilkokul ve ortaokul öğrencileri için etkin bir şekilde kullanımının sağlanabilmesi adına bu program öğrencilerinin mikroskop kullanımı konusunda bilgi ve becerilere sahip olması gerekmektedir.

OBJECTIVES OF PHYSICS TEACHER CANDIDATES TO DESIGN 3D MATERIAL AND PROBLEMS THEY ENCOUNTERED IN THE PROCESS

Doç. Dr. Güner TURAL
Ondokuz Mayıs Üniversitesi, Eğitim Fakültesi, OFMAE Bölümü

Demet TARAKÇI
Ondokuz Mayıs Üniversitesi, Eğitim Fakültesi, OFMAE Bölümü

ABSTRACT: The aim of this study was to determine objectives of physics teacher candidates to design 3D material, problems they encountered in the process and their views about contribution of their materials to subject and course process. The working group of the study was 15 physics teacher candidates that received instructional technology and material design course. Aim oriented interview form that contains three questions was developed. Semi-structured interviews were conducted with teacher candidates. The obtained data were presented on the basis of qualitative data analysis. It was determined that physics teacher candidates prepared their 3D materials mostly to eliminate misconception about the subject and to make the subject more understandable. In this process, the problems that physics teacher candidates mostly stated were to provide necessaries to serve the purpose and construction of material.

Key words: 3D material, physics teacher candidate, material design

FİZİK ÖĞRETMEN ADAYLARININ ÜÇ BOYUTLU MATERYAL TASARIMI AMAÇLARI VE SÜREÇTE KARŞILAŞTIKLARI PROBLEMLER

ÖZET: Bu çalışmanın amacı fizik öğretmen adaylarının üç boyutlu materyal tasarlama amaçlarını, süreçte karşılaştıkları problemleri, hazırladıkları materyallerin ilgili konuya ve ders sürecine nasıl katkı sağladığına yönelik görüşlerini belirlemektir. Araştırmanın çalışma grubunu öğretim teknolojileri ve materyal tasarımı dersini almış olan gönüllü 15 fizik öğretmen adayı oluşturmaktadır. Veri toplama aracı olarak araştırmanın amacı doğrultusunda üç sorudan oluşan bir görüşme formu hazırlanmıştır. Öğretmen adayları ile yarı yapılandırılmış mülakat gerçekleştirilmiştir. Elde edilen veriler nitel veri analizlerinden içerik analiz yaklaşımı esas alınarak sunulmuştur. Fizik öğretmen adaylarının en fazla konu ile ilgili kavram yanılgılarını gidermek ve konuyu daha anlaşılır kılmak amaçlı üç boyutlu materyal hazırladıkları belirlenmiştir. Bu süreçte fizik öğretmen adaylarının en fazla dile getirdikleri problemler amaca hizmet edecek malzemeleri temin etme ve materyalin yapım aşaması olmuştur.

Anahtar sözcükler: Üç boyutlu materyal, fizik öğretmen adayı, materyal tasarımı

GİRİŞ

Öğrenme-öğretme sürecinde hedeflenen davranışlara ulaşabilmek için uygun öğrenme ortamlarının oluşturulması önem taşımaktadır. Birçok araştırmacı (Acer, 2011; Akkoyunlu, 2002; Aydın, 2011; Karataş ve Yapıcı, 2006; Uyangör ve Ece, 2010; Yaşar, 2004) ders sürecinde öğretim materyali kullanımının öğrencilerin öğrenmesinde olumlu etkilerinin olduğunu belirtmiştir. Derste öğretim materyali kullanımı öğrencilerin algılamalarını ve öğrenmelerini kolaylaştırmakta, unutmayı azaltmakta ve hatırlamayı sağlamaktadır. Ayrıca ulaşılamayan, sınıfa taşınması güç olan olay, olgu ve varlıkları sınıfa taşımaktadır (Yaşar, 2004). Ateş ve diğ. (2010) öğrenme-öğretme sürecinde öğrencilerin gereksinimini karşılayacak hazır materyallerin seçilmesi ve kullanılması gerektiğini, bu sağlanamadığında var olan materyallerin daha uygun hale getirilip kullanılması gerektiğini, bu da olanaklı değilse öğretmenin kendisinin materyal geliştirebileceğini belirtmektedirler.

Öğretim teknolojileri ve materyal tasarımı öğretmen yetiştirme programlarında zorunlu dersler arasında yer almaktadır. Bu ders geleceğin öğretmen adaylarının, öğrenme sürecini etkili kılmak için kullanabilecekleri öğretim materyalleri tasarlamalarında gerekli olan ilkeleri öğrenmelerine ve bu doğrultuda materyal geliştirebilmelerine olanak vermektedir. Bu nedenle bu ders kapsamında öğretmen adaylarının materyal hazırlama süreçlerine yönelik görüşleri önem arz etmektedir.

Bu araştırmanın amacı fizik öğretmen adaylarının üç boyutlu materyal tasarlama amaçlarını, süreçte karşılaştıkları problemleri, hazırladıkları materyallerin ilgili konuya ve ders sürecine nasıl katkı sağladığına yönelik görüşlerini belirlemektir.

YÖNTEM

Bu araştırma öğretmen adayları ile gerçekleştirilen yarı yapılandırılmış mülakattan elde edilen veriler ile nitel bir boyut taşımaktadır.

Katılımcılar

Araştırmanın katılımcılarını öğretim teknolojileri ve materyal tasarımı dersini almış olan gönüllü 15 fizik öğretmen adayı oluşturmaktadır.

Veri Toplama Aracı

Veri toplama aracı olarak araştırmanın amacı doğrultusunda üç sorudan oluşan bir görüşme formu hazırlanmıştır. Öğretmen adayları ile yarı yapılandırılmış mülakat gerçekleştirilmiştir. Mülakatta öğretmen adaylarına materyallerini hangi amaç ile geliştirdikleri, materyallerini hazırlama sürecinde karşılaştıkları problemler, hazırladıkları materyallerin konuya ve ders sürecine nasıl bir katkı sağladığı sorulmuştur.

Verilerin Analizi

Elde edilen veriler nitel veri analizlerinden içerik analiz yaklaşımı esas alınarak sunulmuştur. İçerik analizinde temel amaç, toplanan verileri açıklayabilecek kavramlara ve ilişkilere ulaşmaktır (Yıldırım ve Şimşek 2006: 227).

BULGULAR

Bu bölümde öğretmen adaylarının mülakatta vermiş oldukları cevaplardan oluşturulan kodlamalara yer verilmiştir.

Tablo 1. Materyallerin hangi amaç ile geliştirildiğine yönelik kodlamalar

Kodlamalar	Frekans
Bilgi eksikliğini gidermek (Ö1)	**1**
Kavram yanılgısını gidermek (Ö1, Ö3, Ö4, Ö5, Ö8, Ö10, Ö11, Ö14)	**8**
Konuyu daha anlaşılır kılmak (Ö2, Ö5, Ö6, Ö7, Ö12, Ö13, Ö14, Ö15)	**8**
İçeriği somutlaştırmak (Ö3, Ö9, Ö10)	**3**
Üç boyutlu hayal etme zorluğu (Ö3, Ö11)	**2**

Fizik öğretmen adaylarının kendi oluşturdukları materyalleri hangi amaç ile geliştirdiklerine ilişkin kodlamaların yer aldığı Tablo 1 incelendiğinde; öğretmen adaylarının en fazla konu ile ilgili kavram yanılgılarını gidermek ve konuyu daha anlaşılır kılmak amaçlı üç boyutlu materyal hazırladıkları görülmektedir.

Tablo 2. Materyali hazırlama sürecinde karşılaşılan problemlere yönelik kodlamalar

Kodlamalar	Frekans
Amaca hizmet edebilecek malzemeleri temin etme (Ö1,Ö2,Ö3,Ö5,Ö6,Ö7,Ö8,Ö9,Ö12,Ö13,Ö14)	**11**
Yapım aşaması (Ö1, Ö3, Ö5, Ö6, Ö7, Ö10, Ö11, Ö12, Ö13, Ö15)	**10**
Ne yapılacağı konusunda kararsızlık (Ö4, Ö8)	**2**
Nasıl yapılacağı (Ö4)	**1**
Zamanın kısıtlı olması (Ö7, Ö8)	**2**
Düzeneğin çalışmaması (Ö9)	**1**

Fizik öğretmen adaylarının materyallerini hazırlama sürecinde karşılaştıkları problemleri gösteren Tablo 2 incelendiğinde; öğretmen adaylarının en fazla dile getirdikleri problemler amaca hizmet edecek malzemeleri temin etme ve materyalin yapım aşamasıdır. En az karşılaştıkları problemler ise materyali nasıl yapacakları konusunda zorlanma ve oluşturdukları düzeneklerin çalışmamasıdır.

Tablo 3. Materyalin konuya ve ders sürecine nasıl bir katkı sağladığına yönelik görüşlere ait kodlamalar

Kodlamalar	Frekans
Soyut kavramları somutlaştırma (Ö1, Ö9, Ö11)	3
Derse ilgi çekme (Ö1, Ö2, Ö3, Ö4, Ö15)	5
Konuyu anlaşılır kılma (Ö2, Ö3, Ö4, Ö6, Ö7, Ö8, Ö10, Ö12, Ö13, Ö14, Ö15)	11
Akılda kalıcılığı sağlama (Ö3, Ö8, Ö14)	3
Kavram yanılgısını giderme (Ö5, Ö6, Ö10)	3
Görsellik (Ö11, Ö12, Ö15)	3

Fizik öğretmen adayları hazırladıkları materyallerinin ilgili konuya ve ders sürecine sağladığı katkı hususunda en fazla konuyu anlaşılır kılmayı ifade etmişlerdir. Bu görüşü derse ilgi çekme katkısı takip etmektedir.

SONUÇ

Bu araştırma fizik öğretmen adaylarının üç boyutlu materyal tasarlama amaçlarını, süreçte karşılaştıkları problemleri, hazırladıkları materyallerin ilgili konuya ve ders sürecine nasıl katkı sağladığına yönelik görüşlerini belirlemek amacıyla yapılmıştır. Elde edilen bulgular incelendiğinde; fizik öğretmen adaylarının üç boyutlu materyallerini en fazla konu ile ilgili kavram yanılgılarını gidermek ve konuyu daha anlaşılır kılmak amacı ile tasarladıkları belirlenmiştir. Aynı zamanda öğretmen adaylarının üç boyutlu materyal tasarlamada; bilgi eksikliğini gidermek, içeriği somutlaştırmak ve üç boyutlu hayal etme zorluğunu ortadan kaldırmak amaçları da bulunmaktadır.

Fizik öğretmen adayları üç boyutlu materyal tasarlama sürecinde en çok karşılaştıkları problemlerin amaca hizmet edecek malzemeleri temin etmenin zor olduğunu ve materyalin yapım aşamasında problemlerle karşılaştıklarını belirtmişlerdir. Öğretmen adaylarının materyal tasarlama sürecinde karşılaştıkları problemler arasında hangi materyali nasıl yapacakları, zamanın kısıtlı olması ve geliştirdikleri düzeneğin çalışmaması da bulunmaktadır. Özer ve Tunca (2014)'nın öğretmen adaylarının materyal hazırlama ve kullanmaya yönelik görüşlerini belirledikleri çalışmanın sonuçları bu araştırma ile benzerlik gösterip öğretmen adayları materyallerini hazırlama aşamasında malzemeye ulaşma, malzemeyi biçimlendirme, zaman yönetimi konularında problem yaşadıklarını ifade etmişlerdir.

Öğretmen adayları hazırladıkları materyallerin en çok konuyu anlaşılır kılmada ve derse ilgi çekmede fayda sağladığını dile getirmişlerdir. Buna ek olarak materyallerin soyut kavramları somut hale getirme, akılda kalıcılığı sağlama, kavram yanılgısını giderme ve görsellik katkıları belirtilmiştir. Özer ve Tunca (2014)'nın çalışmasında da öğretmen adaylarının büyük çoğunluğu öğretim materyali hazırlama ve kullanmayı; dikkati çekme, kalıcı öğrenmeler sağlama, öğrencileri derse güdüleme ve öğrenmeyi kolaylaştırma açılarından önemli gördüklerini belirtmişlerdir. Geleceğin öğretmeni olacak olan fizik öğretmen adaylarının öğretim materyallerinin konuya ve ders sürecine yönelik olumlu yöndeki bu görüşleri öğrenme sürecini etkili kılmak adına önem arz etmektedir.

EXAMINATION OF PRESERVICE TEACHERS' ATTITUDES TOWARDS SUSTAINABLE ENVIRONMENT IN TERMS OF VARIOUS VARIABLES

Burcu UĞURLU
Ministry of National Education

Ayhan ÇİNİCİ
Adıyaman University

Nihat ŞİRECİ
Adıyaman University

ABSTRACT: Sustainability defines as living generations' fulfilling their improvement without endangering next generations' opportunities to meet their vital needs. Accordingly, the concept of sustainability can be expressed as a development process going on. In this sense, both teaching of sustainability conceptually and developing of positive attitudes towards this issue have become an important matter of educational research. In this process, individuals aimed to develop cognitive, affective and psychomotor acquisitions towards natural, social and cultural environment. According to related literature, it was echoed that supporting the teachers and preservice teachers' development of awareness in this regard are very important. In this study, it was aimed to compare attitudes of preservice teachers studying in different programs and at different grades towards sustainable environment in terms of various variables (program, grade and gender). Totally, 330 preservice teachers studying in three different teacher education programs (Science, Social Studies and Primary School Teacher Education) in a state university in the south-eastern region of Turkey were involved in this study. At the end of the study, the preservice teachers' average points towards sustainable environment were calculated in terms of their gender, programs they are studying in, and finally, in terms of their grades. To test the significance of the differences among average scores, it was carried out suitable parametric test procedures. As a result, a significant difference was found (p>. 05) among the attitudes of preservice teachers towards sustainable environment in terms of gender. However, it was not found a significant difference regarding grades. As for the programs in which the participants studying, social studies teacher candidates were determined to have the lowest average scores of sustainable environmental attitudes compared to preservice primary school teachers and preservice science teachers. And these difference found as statistically significant. These differences among the groups in terms of attitude for sustainable environment were discussed by comparing with other studies related to the issue and various suggestions were made.

Key words: sustainable environment, sustainable development, attitude, preservice teachers

ÖĞRETMEN ADAYLARININ SÜRDÜRÜLEBİLİR ÇEVREYE YÖNELİK TUTUMLARININ ÇEŞİTLİ DEĞİŞKENLER AÇISINDAN İNCELENMESİ

ÖZET: Sürdürülebilirlik, yaşayan kuşağın, gelecek kuşakların gereksinimlerini sağlama olanaklarını zorlamadan, kendi gelişmelerini gerçekleştirebilmeleri şeklinde tanımlanmıştır. Dolayısıyla, sürdürülebilirlik kavramı, gelecek zaman diliminde de devam eden bir gelişme süreci olarak ifade edilebilir. Bu sebeple önce sürdürülebilir kalkınma ardından da sürdürülebilir çevre kavramı ortaya çıkmıştır. **Bu bağlamda sürdürülebilirliğin hem kavramsal olarak öğretiminin yapılması ve hem de bu konuya ilişkin olumlu tutumların geliştirilmesi, eğitim araştırmalarının önemli bir konusu haline gelmiştir. Bu süreçte bireylerde doğal, yakın, sosyal ve kültürel çevreye yönelik bilişsel duyuşsal ve psiko-motor kazanımların geliştirilmesi hedeflenmektedir. Bunun için ise öncelikle öğretmenlerde ve öğretmen adaylarında, söz konusu gelişimleri desteklemenin gerekliliği ortaya çıkmaktadır. Bu çalışmada, eğitim fakültesinin farklı programlarında ve sınıf düzeylerinde öğrenim görmekte olan öğretmen adaylarının sürdürülebilir çevreye ilişkin tutumlarının çeşitli değişkenler (program, sınıf düzeyi ve cinsiyet) açısından karşılaştırılması amaçlanmıştır.** Çalışma, Türkiye'nin Güneydoğu Bölgesinde yer alan bir devlet üniversitesinin eğitim fakültesinde, üç farklı programda (Fen Bilgisi Öğretmenliği, Sosyal Bilgiler Öğretmenliği ve Sınıf Öğretmenliği) öğrenim görmekte olan toplam 330 öğretmen adayı ile yürütülmüştür. Veriler, "Sürdürülebilir Çevre Eğitimi Kapsamında Tutum Ölçeği" ölçme aracı kullanılarak toplanmıştır. Verilerin analizinde uygun betimsel ve kestirimsel analiz teknikleri uygulanmıştır. Çalışma sonucunda, öğretmen adaylarının sürdürülebilir çevreye ilişkin tutum puan ortalamaları, cinsiyetleri öğrenim gördükleri programlar ve son olarak sınıf düzeyleri açısından ele alınmıştır. Betimsel analizler sonucu belirlenen ortalamalar arasındaki bu farkların anlamlılığını test etmek için ise bağımsız gruplar t testi (sınıf düzeyi ve cinsiyet değişkenleri için) ve tek yönlü varyans analizi (program değişkeni için) yöntemleri kullanılmıştır. Cinsiyet ve sınıf düzeyi değişkenleri için yapılan bağımsız gruplar t-testi sonuçlarına göre, öğretmen adaylarının sürdürülebilir çevre tutumları arasında cinsiyet değişkeni açısından anlamlı fark bulunmuş ($p<.05$), ancak sınıf düzeyi açısından anlamlı fark bulunmamıştır ($p>.05$). Bölüm bazında yapılan analiz sonucunda ise, sosyal bilgiler öğretmenliği ile sınıf ve fen bilgisi öğretmenliği arasında anlamlı farkların olduğu bulgusuna ulaşılmıştır ($p<.05$). Sürdürülebilir çevre tutumu açısından gruplar arasında ortaya çıkan farklar, konuyla ilgili diğer çalışmalarla karşılaştırılarak tartışılmış ve çeşitli önerilerde bulunulmuştur.

Anahtar sözcükler: sürdürülebilir çevre, sürdürülebilir kalkınma, tutum, öğretmen adayları

GİRİŞ

İnsanoğlu, özellikle sanayi devriminden itibaren, üzerinde yaşadığımız mavi kürenin kaynaklarını uzun süre bilinçsizce tüketme yoluna gitmiştir. Ancak, geleceğe yönelik sosyal, ekonomik, politik ve çevresel etkileri pek dikkate alınmadan yürütülen bu tüketim çılgınlığı ve buna dayalı endüstrileşme, diğer alanlarda olduğu gibi çevreyle ilgili alarm zillerinin çalmasına da neden olmuştur. Nihayet, 80'li yıllardan itibaren, doğal kaynakların daha sağlıklı ve verimli kullanımına ilişkin toplumsal bilincin gelişmeye başlamasına paralel olarak, sürdürülebilirliği esas alan çevreci politikaların üretilmesi ihtiyacı kendini iyiden iyiye hissettirmeye başlamıştır. Sürdürülebilirlik, yaşayan kuşağın, gelecek kuşakların gereksinimlerini sağlama olanaklarını zorlamadan, kendi gelişmelerini gerçekleştirebilmeleri şeklinde tanımlanmıştır. Dolayısıyla, sürdürülebilirlik kavramı, gelecek zaman diliminde de devam eden bir gelişme süreci olarak ifade edilebilir. Bu sebeple önce sürdürülebilir kalkınma ardından da sürdürülebilir çevre kavramı ortaya çıkmıştır. Bu bağlamda sürdürülebilirliğin hem kavramsal olarak öğretiminin yapılması ve hem de bu konuya ilişkin olumlu tutumların geliştirilmesi, eğitim araştırmalarının önemli bir konusu haline gelmiştir. Bu süreçte bireylerde doğal, yakın, sosyal ve kültürel çevreye yönelik bilişsel duyuşsal ve psiko-motor kazanımların geliştirilmesi hedeflenmektedir. Bunun için ise öncelikle öğretmenlerde ve öğretmen adaylarında, söz konusu gelişimleri desteklemenin gerekliliği ortaya çıkmaktadır.

Sürdürülebilirlik, dünyadaki çevre dengesi ile ekonomik büyümeyi aynı anda ele alan, gelecek nesillerin ihtiyaçlarını göz ardı etmeden ve tehlikeye sokmadan, doğal kaynakların verimli kullanımını sağlayan ve kaliteli bir çevre için kalkınmaya önem veren bir kavramdır (Babaoğul, 2015). Sürdürülebilirlik çevrenin kalkınma ile ele alındığını vurgulamaktadır (Afacan ve Demirci-Güler, 2011). Bu aşamada çevre eğitiminin önemi artmış bulunmaktadır (Tanrıverdi, 2009).

Sürdürülebilir kalkınma, insan ile doğa arasında denge kurarak gelecek kuşakları tehlikeye atmadan onlarında ihtiyaçlarının karşılanması koşuluyla, doğal kaynakların verimli kullanımını vurgulayan hem bugünün hem de geleceğin kalkınmasını amaç edinen bir programlamadır (Afacan ve Demirci-Güler, 2011). Sürdürülebilirlik, geçmişten bugüne birçok siyasal sistemin içinde yer alan bir kavram olmuştur (Summers, Corney ve Childs, 2004). İnsanoğlunun hem bugün hem de geleceğini göz önüne alarak kaynak kullanımını temel alan sürdürülebilirlik (WCED, 1987) ilk kez 1972 yılında İsveç'te Birleşmiş Milletler İnsan Çevresi Komisyonunda sonra 1976 yılında Kanada'da Birleşmiş Milletler Habitat I Konferansında, 1987 yılında ortak geleceğimiz Bruntland raporunda ve 1992 yılında Brezilya'da BM çevre ve kalkınma komisyonunda (UNCED) yer bulmuş, 2003 yılında da dünya bankası 2003 yılı faaliyet raporunda yer almıştır.

Yukarıda özetlendiği üzere sürdürülebilirlik birçok uluslararası toplantılarda ele alınmış ve daha iyi bir gelecek için adımlar atılmıştır ve atılmaktadır. Ancak bu aşamada sürdürülebilir kalkınmanın sadece ekonomi odaklı yapılmaması, bu süreçte doğal çevrenin de dikkate alınması gerektiği vurgulanmaktadır (Demirci-**Güler, 2013).** Bu nedenle sürdürülebilir kalkınma ardından da sürdürülebilir çevre kavramı ortaya çıkmıştır (Tanrıverdi, 2009). Bu dönemlerde UNESCO da bir program değişikliği yaparak Uluslararası Çevre Eğitimi Programını, Sürdürülebilir Gelecek için Eğitim Programıyla değiştirmiştir (UNESCO, 1997).

Çevresel sorunlarının, insan kaynaklı olduğu görülmekte ve bu nedenle insana dayalı çözümler bulunmaya çalışılmaktadır. Bu çözümlerin ilk sırasında insanların çevre ile ilgili eğitimi ön plana alınmalıdır. Çevre eğitimi; çevre ile ilgili bilinçli, duyarlı, bireyi geliştirmeyi amaç edinen, kişilere toplumda görevler yükleyen ve bir ömür devam edecek bir yaklaşımdır (Moseley, 2000). Bu aşamada ayrıca insanlar belli başlı tutumlar geliştirmelidir. Çevre tutumu ise, insanların bulundukları doğaya karşı olumlu ya da olumsuz bir algısının olması olarak, ifade edilebilir (Pelstring, 1997). Bireylerin çevre ile ilgili tutumlarını birbirinden farklı olabilir. Bunun nedenleri ise kişinin gelir düzeyi, eğitim durumu, yaşam tecrübeleri, yaşadığı toplumun gelenek ve görenekleridir. (Özgen, 2012). Son yıllarda üniversitelerde sürdürülebilirlik kavramına değinilmiş ve bu kavram, sürdürülebilir gelecek ve çevre şeklinde bazı dallarda ele alınmıştır. Bazı üniversiteler 1990 yılında, sürdürülebilir gelecek ile ilgili çalışmalara katkı sağlamak maksadıyla düzenlenmiş olan "*Talloires Declaration*" 'a imza atmışlardır (Wright, 2002). Tüm bunlara rağmen, öğretim programlarında çevre eğitimine yapılan vurgunun yetersiz olduğu savunulmaktadır (Tanrıverdi, 2009). Bu nedenle, sürdürülebilir bir gelecek için, eğitim sistemimizde sürdürülebilirlik kavramını iyice benimsetmeye ve aktif hale getirmeye çalışmalıyız; bu sebeple yükseköğretimde çevre ve sürdürülebilir kalkınma eğitimi verilmelidir (Teksöz, vd. 2010).

Yükseköğretimde Fen Bilgisi, Sınıf, Biyoloji, Sosyal Bilgiler Öğretmenliği ve Çevre Mühendisliği bölümleri gibi bazı bölümler haricinde çevre eğitimi dersi alan bölümler çok bulunmamaktadır. Bu durum ise üniversite öğrencilerinin çevre ile ilgili tutumlarının gelişememesine neden olmuştur (Sadık ve Çanak, 2010). Yükseköğretimde öğrenim gören tüm öğrencilere bu dersin, kendilerinin de aktif katılımı sağlanarak verilmesi önerilmiştir (Şahin, vd. 2004).

Çalışmanın Amacı

Bu çalışmanın amacı; öğretmen adaylarının sürdürülebilir çevreye yönelik tutumlarını belirlemek ve bu tutumlarını; öğrenim gördükleri program, sınıf düzeyi ve cinsiyet değişkenleri açısından karşılaştırmaktır. Bu amaç doğrultusunda bazı sorulara cevap aranmıştır.

1. Öğretmen adaylarının sürdürülebilir çevre tutumları arasında;
    1a. Cinsiyetleri açısından anlamlı bir fark var mıdır?
    1b. Sınıf düzeyleri açısından anlamlı bir fark var mıdır?
    1c. Öğrenim gördükleri programlar açısından anlamlı bir fark var mıdır?
2. Her bir programın kendi içinde cinsiyet ve sınıf düzeyi değişkenleri açısından sürdürülebilir çevre tutumları arasında anlamlı bir fark var mıdır?

YÖNTEM

Araştırma Deseni

Araştırmada ilişkisel tarama modeli kullanılmıştır. Bu model Karasar (2005, ss. 5) tarafından "Çok sayıda elemandan oluşan bir evrende, evren hakkında genel bir yargıya varmak amacı ile evrenin tümü ya da ondan alınacak bir grup örnek ya da örneklem üzerinde yapılan tarama düzenlemeleri" olarak tanımlanmaktadır. Tarama tipi araştırmalarda cinsiyet, yaş, gelir düzeyi, öğrenim durumu, sınıf, gibi bazı özellikler belirlenmek amacıyla yapılır (Can, 2016). Veriler üzerinde mod, medyan, aritmetik ortalama gibi istatistiksel işlemler yapılmaktadır.

Çalışma Grubu

Araştırmanın örneklemini, 2015-2016 eğitim öğretim yılında Türkiye'nin güneydoğusunda yer alan bir devlet üniversitesinin eğitim fakültesi 2. ve 3. sınıflarında öğrenim görmekte olan toplam 330 öğretmen adayı oluşturmaktadır. Katılımcıların 113'ü fen bilgisi öğretmenliği, 129'u sınıf öğretmenliği ve 88'i sosyal bilgiler öğretmenliği programındandır. Diğer taraftan, öğretmen adaylarının 234'ü kız, 96'sı erkektir. Araştırmaya katılan fen bilgisi öğretmenliği bölümü öğretmen adayları III. ve IV. yarıyılda 6 AKTS'lik "*Genel Biyoloji I ve II*", VI. yarıyılda ise 3 AKTS'lik "*Çevre Bilimi*" dersi almışlardır. Sınıf öğretmenliği öğretmen adayları I. yarıyılda 5 AKTS'lik "*Genel Biyoloji*" ve III. yarıyılda 3 AKTS'lik "*Çevre Eğitimi*" dersi almışlardır. Sosyal bilgisi öğretmenliği bölümü öğretmen adayları ise 5. yarıyılda 3 AKTS'lik "*Çevre Bilimi*" dersi almışlardır.

Veri Toplama Aracı

Afacan ve Demirci-Güler (2011) tarafından geliştirilen "Sürdürülebilir Çevre Eğitimi Kapsamında Tutum Ölçeği" ölçme aracı olarak kullanılmıştır. Bu çalışmada, ölçeğin Cronbach Alpha iç tutarlılık katsayısı 0.89 olarak bulunmuştur.

Veri Analizi

Araştırmada cinsiyet ve bölüm açısından kız ve erkek öğretmen adayları arasında sürdürülebilir çevre tutumu açısından bir fark olup olmadığını saptamak için bağımsız gruplar t testi (sınıf düzeyi ve cinsiyet değişkenleri için) ve tek yönlü varyans analizi (program değişkeni için) yöntemleri kullanılmıştır.

BULGULAR

Problem 1: Öğretmen adaylarının sürdürülebilir çevre tutumları arasında cinsiyetleri açısından anlamlı bir fark var mıdır?

Tablo 1. Fen Bilgisi, Sınıf ve Sosyal Bilgiler Öğretmen Adaylarının Cinsiyet Değişkenine İlişkin Bağımsız Gruplar t-Testi Sonuçları

Cinsiyet	N	$\bar{X}$	S	sd	t	p
Kız	234	4,13	,40	328	2,91	,004
Erkek	96	3,92	,65			

Öğretmen adaylarının sürdürülebilir çevre tutumları arasında cinsiyet açısından anlamlı bir fark olup olmadığını ortaya koymak için yapılan ilişkisiz örneklemler için t testi sonucuna göre kızlar lehine anlamlı bir fark olduğu bulunmuştur [$t_{(328)} = 2{,}91$, $p<0.05$ (p=0,004)].

Problem 2: Öğretmen adaylarının sürdürülebilir çevre tutumları arasında sınıf düzeyleri açısından anlamlı bir fark var mıdır?

Tablo 2. Fen Bilgisi, Sınıf ve Sosyal Bilgiler Öğretmen Adaylarının Sınıf Düzeyi Değişkenine İlişkin Bağımsız Gruplar t-Testi Sonuçları

Sınıf Düzeyi	N	$\bar{X}$	S	sd	t	p
2. Sınıf	148	4.06	,48	328	0,055	,95
3.Sınıf	182	4.07	,50			

Öğretmen adaylarının sürdürülebilir çevre tutumları arasında sınıf düzeyi değişkeni açısından anlamlı bir fark olup olmadığını ortaya koymak için yapılan ilişkisiz örneklemler için t testi sonucuna göre ise gruplar arasında anlamlı bir fark olduğu bulunmamıştır [$t_{(328)} = 0.055$, $p>0.05$ (p=0,95)].

Problem 3: Öğretmen adaylarının sürdürülebilir çevre tutumları arasında öğrenim gördükleri programlar açısından anlamlı bir fark var mıdır?

Tablo 3. Fen Bilgisi, Sınıf ve Sosyal Bilgiler Öğretmen Adaylarının Bölüm Değişkenine İlişkin Tek Yönlü Varyans Analizi ve LSD Sonuçları

Varyansın Kaynağı	Kareler Toplamı	sd	Kareler Ortalaması	F	p	Anlamlı Fark
Gruplar arası	5,699	2	2,849	12,283	,00	Sınıf-Sosyal/Fen-Sosyal
Gruplar içi	75,85	327	,232			
Toplam	81,55	329				

Üç farklı bölümde okuyan toplam 330 öğretmen adayının, sürdürülebilir çevre tutumları arasında program bazında anlamlı bir fark olup olmadığını sınamak için, öğrenim gördükleri program değişkeni ile sürdürülebilir çevre tutumu ortalamaları ilişkisiz örneklemler için tek yönlü varyans analizi ile karşılaştırılmıştır. Buna göre, sınıf öğretmenliği öğretmen adaylarının ortalaması 4.19, fen bilgisi öğretmen adaylarının ortalaması 4.08 ve sosyal bilgiler öğretmen adaylarının ortalaması ise 3.86 olarak bulunmuştur. Fen bilgisi ve sınıf öğretmenliği öğretmen adaylarının sürdürülebilir çevre tutum ortalamaları, sosyal bilgiler öğretmen adaylarına göre anlamlı düzeyde daha yüksek bulunmuştur. Sınıf ve fen bilgisi öğretmen adaylarının puanları arasında ise istatistiksel olarak anlamlı bir fark bulunmamıştır.

Problem 4: Her bir programın kendi içinde cinsiyet ve sınıf düzeyi değişkenleri açısından sürdürülebilir çevre tutumları arasında anlamlı bir fark var mıdır?

Farklı bölüm değişkeninin, kız ve erkek öğrencilerin başarıları üzerindeki etkisini belirlemek için yapılan analiz sonucuna göre; fen bilgisi ve sınıf öğretmen adaylarının cinsiyet değişkeni açısından ortak etkisi incelendiğinde anlamlı fark bulunmamıştır ($\bar{X}_{fen\text{-}kız}=4{,}10$, $\bar{X}_{fen\text{-}erkek}=3{,}95$, $\bar{X}_{sınıf\text{-}kız}=4{,}18$, $\bar{X}_{sınıf\text{-}erkek}=4{,}22$). Sosyal bilgiler öğretmen adaylarının cinsiyet değişkeni açısından ortak etkisi incelendiğinde ise anlamlı fark bulunmuş [p=0,002 ($p<0{,}05$)] ve bu farkın kızlar lehine olduğu görülmüştür ($\bar{X}_{kız} = 4.05$, $\bar{X}_{erkek} = 3.68$).

Tablo 4. Fen Bilgisi, Sınıf ve Sosyal Bilgiler Öğretmen Adaylarının Sınıf Düzeyi Değişkenine İlişkin Ayrı Ayrı Eşleştirilmiş Gruplar T-Testi Sonuçları

Program	Sınıf Düzeyi	N	X	ss	t	sd	p
SINIF ÖĞRETMENLİĞİ	2. sınıf	54	4,2233	,31681	,659	127	,511
	3. sınıf	75	4,1791	,41354			
FEN BİLGİSİ ÖĞRETMENLİĞİ	2. sınıf	55	4,0355	,57915	-,917	111	,361
	3. sınıf	58	4,1247	,45014			
SOSYAL BİLGİLER ÖĞRETMENLİĞİ	2. sınıf	39	3,8997	,49352	,464	86	,644
	3. sınıf	49	3,8431	,62261			

Farklı bölüm değişkeninin, sınıf düzeyi açısından başarıları üzerindeki etkisini belirlemek için yapılan analiz sonucuna göre; fen bilgisi, sınıf ve sosyal bilgiler öğretmen adaylarının sınıf düzeyi değişkeni açısından ortak etkisine bakıldığında anlamlı fark bulunmamıştır ($\overline{X}_{fen\text{-}2}$=4,03 , $\overline{X}_{fen\text{-}3}$=4,12 , $\overline{X}_{sınıf\text{-}2}$=4,22 , $\overline{X}_{sınıf\text{-}3}$=4,17).

Tablo 5. Fen Bilgisi, Sınıf ve Sosyal Bilgiler Öğretmen Adaylarının Cinsiyet Değişkenine İlişkin Ayrı Ayrı Eşleştirilmiş Gruplar T-Testi Sonuçları

Program	Cinsiyet	N	X	ss	t	sd	p
SINIF ÖĞRETMENLİĞİ	Kadın	97	4,1870	,332679	-0,461	40,94	,647
	Erkek	32	4,2297	,487512			
FEN BİLGİSİ ÖĞRETMENLİĞİ	Kadın	94	4,1063	,459560	0,843	20,87	,409
	Erkek	19	3,9574	,741446			
SOSYAL BİLGİLER ÖĞRETMENLİĞİ	Kadın	43	4,0593	,391307	3,294	72,92	,002
	Erkek	45	3,6856	,647181			

SONUÇ

İnsanoğlu var olduğu günden itibaren yaşamını devam ettirebilmek için bulunduğu çevrenin kaynaklarından yaralanıyordu. İnsanlar zamanla kullandığı kaynakların azalmasından dolayı üretim ve ticarete yöneldi. Artan nüfusun etkisiyle sanayi devrimi ve ham madde ihtiyacı doğdu. İnsanoğlu doğaya daha fazla yönelmeye başladı. Günümüzde ise bu durumda herhangi bir azalma olmadı aksine artış yaşandı ve doğa alarma vermeye başladı. Yaşanan bu süreç yarınlarımızı tehdit eder hale geldi. İnsanoğlu kendi elleriyle ekosistemi tahrip etmiş, küresel ısınmaya yol açmış ve iklim değişiklikleri gibi çevresel sorunların oluşmasına neden oldu. Birleşmiş milletler raporları ve bu konuyla ilgili yapılan diğer çalışmalar bu problemleri göz önüne sermektedir. İnsanoğlunun hem bugün hem de geleceğini göz önüne alarak kaynak kullanımını temel alan sürdürülebilirlik (WCED, 1987) ilk kez 1972 yılında İsveç'te Birleşmiş Milletler İnsan Çevresi Komisyonunda sonra 1976 yılında Kanada'da Birleşmiş Milletler Habitat I Konferansında, 1987 yılında Ortak geleceğimiz Bruntland raporunda ve 1992 yılında Brezilya'da BM çevre ve kalkınma komisyonunda (UNCED) yer bulmuş, 2003 yılında da dünya bankası 2003 yılı faaliyet raporunda yer almıştır.

Yaşanan bu kadar olumsuzluk sonucunda öncelikle toplumun tüm bireylerine çevre eğitimi verilmeli ve insanlarda çevreye yönelik olumlu tutumlar geliştirmesi sağlanmalıdır. Bu eğitim öncelikle çevre eğitimi veya ekoloji gibi dersler almış üniversite öğrencilerinden başlanmalıdır. Thomas ve Nicita (2002) da, yükseköğretimde sürdürülebilir kalkınma konulu çalışmalarında çevre okuryazarlığının belirlenmesi amacı ile araştırmalar yapılması gerektiğini ve bu yolla üniversitelerdeki çevre ve sürdürülebilir kalkınma eğitiminin etkinliğinin belirlenmesi gerektiğini vurgulamışlardır. Bu nedenle araştırmadaki katılımcılar, ilköğretimde sınıf, fen bilgisi ve sosyal bilgiler öğretmeni olarak görev alabilecek adaylardan oluşturulmuştur.

Öğretmen adaylarının çevre yönelik daha bilinçli olması, çevre sorunlara karşı olumsuz düşüncelere sahip olup olmadığı, çevreye yönelik gönüllü davranışlara sahip olup olmaması, çevre eğitiminde tutumlu, duyarlı ve tasarruflu olup olmaması konusunda farklı tutumlara sahip oldukları görülmüştür. 330 öğretmen adayı arasında cinsiyet değişkeni açısından kızlar lehine anlamlı fark vardır. Yapılan çalışma kızların erkeklere göre daha çevreci bireyler olduğunu göstermektedir. Bayan öğretmen adaylarının duyarlılık seviyelerinin de yüksek olduğunu ortaya koymaktadır. Bu sebeple sürdürülebilir çevre oluşturabilmek için en başta elimizdeki kaynakları korumak; sürdürülebilir üretimi ve tüketimi amaç edinmemiz gerekmektedir. Cinsiyetin ekoloji ve çevre bilgileri ile çevreye yönelik tutumlara etkisi inceleyen Eroğlu Doğan, (2013)'a göre tutumun kızlar lehine olduğu belirlenmiştir. Teksöz vd. (2010)'ın yaptığı çalışmada da bayan öğretmen adaylarının çevre problemlerine daha fazla ilgi gösterdikleri görülmüştür. Aynı zamanda Özgen (2012)'de öğrencilerin çevre sorunlarına yönelik tutumlarına yönelik yaptığı araştırmasında kız öğrencilerin daha duyarlı olduğunu tespit etmiştir. Demirci-Güler, (2013)'in yaptığı çalışmada da akamdemik personeller arasında bayanların yüksek düzeyde olumlu tutum gösterdikleri görülmüştür. Çalışmalarda ki ortak sonuçlara bakıldığında genelde çevreye yönelik tutumun kızlar lehine olduğu , bunun da kızlara yüklenen toplumsal cinsiyet rolleri ile ilgili olabildiği düşünülmektir (Eroğlu Doğan, 2013). Kız çocuklarının erkek çocuklara oranla yetişme tarzları birbirinden farklılık göstermektedir. Kızların küçük yaştan itibaren genelde evde annelerine temizlik konusunda yardım etmeleri onların ileriki hayatlarında da çevre temizliği konusunda daha duyarlı hale gelmelerini sağlayabileceği düşünülmektedir. Bayan ve erkek arasında böyle bir farklılık oluşmasına rağmen üniversite de eğitim yapılırken asla bu göz önüne alınmamalı ve eşit düzeyde bilgi verilip, bütün bireylerin çevre eğitimi konusunda duyarlı vatandaşlar olarak yetişmesi sağlanmalıdır. Bu eğitimler de sürdürülebilir çevreye yönelik tutumu arttırarak bizlere daha iyi bir gelecek hazırlar.

Sınıf düzeyi değişkeni açısından, farklı programlarda öğrenim gören aday öğretmenlerin sürdürülebilir çevreye yönelik tutumlarına olan etkisini araştırmak amacıyla yapılan analiz sonuçları, sınıf düzeyleri arasında sürdürülebilir çevreye yönelik tutumlar açısından istatistiksel olarak anlamlı bir farklılık olmadığını göstermiştir. Yapılan ilişkisiz örneklemler için t testinde, sınıfların test puan ortalaması yine de yüksek çıkmıştır. Bu da 2 ve 3. sınıfların dönem olarak birbirlerine yakın olmasının sürdürülebilir çevre tutumlarında çok fark yaratmayacağını göstermektedir. Ancak sınıf düzeyleri birbirine daha uzak dönemler arasında karşılaştırma yapılırsa bazı anlamlı farklılıklar ortaya çıkabilir. Gürbüz, Çakmak ve Derman (2013)'nın yaptığı çalışmada 1 ve 5. sınıf öğretmen adaylarının sürdürülebilir çevre eğitimine yönelik gönüllülük alt boyutunda 5. sınıflar lehine anlamlı fark olduğu bulunmuş ve bunun da birinci sınıflara oranla daha bilinçli olmalarından kaynaklandığı görülmüştür.

Bölüm değişkeni açısından öğretmen adaylarının sürdürülebilir çevre tutumları karşılaştırıldığında fen bilgisi ve sınıf öğretmenliği öğretmen adaylarının sürdürülebilir çevre tutum ortalamaları, sosyal bilgiler öğretmen adaylarına göre anlamlı düzeyde daha yüksek bulunmuştur. Sınıf ve fen bilgisi öğretmen adaylarının puanları arasında istatistiksel olarak anlamlı fark bulunmamıştır. Sosyal Bilgiler Öğretmenliği programında öğrenim gören öğretmen adayları ikinci sınıfta “Türkiye Fiziki Coğrafyası”, üçüncü sınıfta “Türkiye Beşeri ve Ekonomik Coğrafyası” konusu yer alırken Fen Bilgisi Öğretmenliği programında ikinci sınıfta “Genel Biyoloji”, üçüncü sınıfta hava kirliliği, asit yağmurları, sera etkisi gibi günümüz çevre konularını içeren “Kimyada Özel Konular” ve “Çevre Bilimi” ile ilgili ders almaktadır. Buna karşın Sınıf Öğretmenliği programında birinci sınıfta “Genel Biyoloji”, ikinci sınıfta “Çevre Eğitimi” dersinde çevre konuları yer almaktadırlar. Her üç bölümünde yeterli sayıda ders almasına karşın sosyal bilgiler öğretmen adaylarının fen ve sınıf öğretmen adaylarına göre tutum ortalamalarının daha düşük olduğu görülmektedir. Bu da fen ve sınıf öğretmenliği derslerinin çevre konularıyla daha ilişkili olduğunu bize göstermektedir. Sosyal bilgiler öğretmenliğinin ders yoğunluğu tarih bilgisi üzerine olduğu için çevre konularında biraz daha düşük tutumlara sahip oldukları söylenebilir. Farklı programlarda öğrenim gören öğretmen adaylarının en başta ailelerine ardından kendi yetiştirecekleri öğrencilerine ve çevrelerine, sürdürülebilir çevreye yönelik olumlu tutumlar kazandırmalarında önemli roller ve görevler düşecektir (Eroğlu Doğan, 2013). Alkış (2008)'e göre sürdürülebilir kalkınma eğitiminin tüm eğitim kademelerinde disiplinler arası bir şekilde ele alınması son derece önem taşımaktadır [Aktaran: Kaya & Tomal (2011)].

ÖNERİLER

Sürdürülebilir çevreye yönelik tutumu arttırabilmek için; yükseköğretimde çevreye yönelik verilen derslerin arttırılması gerekmektedir. Sadece teorik bilgi vermek yerine, yaparak yaşayarak öğretim modeli kullanılmalı ve çevre eğitimi işlevsel hale getirilmeli, uygulama kısmı oluşturulmalı ve merak düzeylerini artırıcı etkinliklere yer verilmelidir. Öğretmen adayları çevre ile ilgili bilinçlendirilmelidir. Çevreye yönelik tutumu artırmak için doğal alanlara geziler ve yürüyüşler düzenlenmeli ve öğretmen adaylarının bu etkinliklere düzenli olarak katılmaları teşvik edilmelidir. Öğretmen adayları ile görüşme ve mülakat üzerine kurulu bir çalışma yapılabilir. Son dönemlerin en gözde konularında olan "Okul dışı öğrenme" kapsamında sürdürülebilir çevre eğitimi, doğada verilmelidir. Verilen eğitimler ve uygulamalar sadece yükseköğretim bazında kalmamalı ve öncelikle geleceğimizi emanet edeceğimiz çocuklardan başlamalıdır. Bu sebeple ilköğretim bazında uygulama içerikli etkinliklerle sürdürülebilir çevre bilinci aşılanabilir. İlköğretimden itibaren müfredatta daha çok çevre üzerinde durulabilir. Eğitim kurumlarının sürdürülebilir kalkınma felsefesini programlarına yansıtması, öğrencilerde küçük yaştan itibaren bu bilincin oluşmasında katkı sağlamakla beraber, çözüm yollarının üretilmesinde ve uygulanmasında da büyük bir bilinç oluşturur (Yapıcı, 2003). Öğretmen adaylarının çoklu zekâ türlerine göre ayrılıp özellikle doğa zekâsına sahip olanlar belirlenebilir ve çeşitli etkinlikler yapılabilir. Çünkü doğa zekâsına sahip olanlar doğa olaylarına çok meraklıdır, bitki yetiştirmeyi çok sever ve çevreye karşı duyarlıdır.

DETERMINATION OF THE DIFFERENCES BETWEEN PRESERVICE TEACHERS' AND PEDAGOGICAL FORMATION STUDENTS' SELF EFFICACY AND PERSPECTIVES TO TEACHING PROFESSION

Gülfem MUŞLU KAYGISIZ
Hasan Kalyoncu Üniversitesi

Hikmet SÜRMELİ
Mersin Üniversitesi

ABSTRACT: The purpose of this study is to find self efficacy and teaching profession perspectives of preservice teachers' and pedagogical formation students' based on various variables. In this study it was examined that whether preservice teachers' and students' from different disciplines efficacy change in terms of their disciplines. In addition, it was also searched whether their perspective on teaching show any changes in terms of their disciplines.

The data was collected from two different universities in spring semester of 2015-2016 academic year in Turkey. Preservice teachers in four year teacher prepation programme and students graduated from different disciplines and attended in one year pedagogical formation programmes in educational faculty were attended in this study.

Data related to self efficacy was collected through Teachers' Sense of Efficacy Scale developed by Çapa, Çakıroğlu and Sarıkaya (2005). Data related to teaching profession of preservice teachers and students from different disciplines was collected by openended questions. While open ended questions were analysed by using qualitative analysis method including content analysis, responses gathered from the scale was analysed by using quantitative analysis. Statistically analysis of the data including descriptive statistics and t test for independent groups was carried out by means of SPSS 17.00 program.

The findings show that preservice teachers and formation students' self-efficacy beliefs changed only one subdimension of the scale. Also participants teaching professions are paralel to each other but in some professions it changes.

Keywords: Teaching profession, self efficacy, preservice teachers, pedagogical formation students

ÖĞRETMEN ADAYLARININ VE PEDAGOJİK FORMASYON ÖĞRENCİLERİNİN ÖZYETERLİKLERİ VE ÖĞRETMENLİK MESLEĞİ İLE İLGİLİ GÖRÜŞLERİNİN BELİRLENMESİ

ÖZET: Bu çalışmanın amacı öğretmen adaylarıyla pedagojik formasyon öğrencilerinin özyeterlikleri ve öğretmenlik mesleğine ilişkin görüşlerini çeşitli değişkenler bakımından incelemektir. Çalışmada farklı disiplinlerden gelen öğretmen adaylarının özyeterliklerinin ve öğretmenliğe ilişkin görüşlerinin bu disiplinler doğrultusunda değişiklik gösterip göstermediği araştırılmıştır. Araştırma verileri 2015-16 akademik yıl güz döneminde iki farklı üniversitede toplanmıştır. Araştırmaya farklı disiplinlerden eğitim fakültesi 4. Sınıf öğrencileri ve formasyon öğrencileri katılmıştır.

Araştırmada veri toplamak amacıyla Çapa, Çakıroğlu ve Sarıkaya (2005) tarafından uyarlanmış olan "Öğretmen Özyeterlik Ölçeği" kullanılmıştır. Ayrıca Eğitim Fakültesi son sınıf öğretmen adayları ve pedagojik formasyon öğrencilerinin öğretmenlik mesleğine yönelik görüşlerini belirlemek üzere açık uçlu sorular sorulmuştur. Açık uçlu soruların analizinde nitel veri analizi tekniklerinden içerik analizinden yararlanılmıştır. Nicel verilerin analizinde SPSS17 analiz programı kullanılmıştır.

Araştırma sonucunda son sınıf öğretmen adaylarının özyeterliklerinin formasyon öğrencilerine göre ölçeğin sadece bir alt boyutunda farklılaştığı ve öğretmenlik mesleğine ilişkin görüşlerinin de genel olarak birbirine paralel olduğu ancak bazı mesleki boyutlarda farklılar olduğu tespit edilmiştir.

Anahtar sözcükler: Öğretmenliğe ilişkin görüşler, özyeterlik, öğretmen adayı, pedagojik formasyon öğrencileri,

GİRİŞ

Öğretmenlik mesleği, toplumumuzu şekillendirecek olan bilgi, beceri, tutum ve değerlerin gelecek nesillere kazandırılması açısından önemlidir. Bu bağlamda, eğitim ve öğretim yolu ile gelecek nesillerin yetişmesinde rol alarak ülkenin kalkınmasında, nitelikli insan gücünün yetişmesinde, kültür ve değerlerin kuşaklar arasında aktarılmasında (Eskicumalı, 2004) önemli bir göreve sahip olan öğretmenlerin, sorumluluklarının farkında olarak öğretmenlik mesleğini tercih etmeleri önemlidir.

Eğitim kalitesini belirleyen en önemli etkenlerden birisi, öğrenme ortamının kalitesini de belirleyen öğretmen kalitesidir (Hattie, 2000; Marzano, 2003). Araştırmacılar öğretmen kalitesinin sağlanması için gerekli bilgiler konusunda görüş birliğindedir. Bunlar; alan bilgisi, pedagojik bilgi, pedagojik içerik bilgisi olarak belirlenmiştir (Schulman, 1987; van Driel, Verloop, de Vos, 1998). Öğretmen kalitesini belirlemek için farklı ülkelerde yapılan bir çalışmada ise öğretmen kalitesinin farklı yeterlilikler ile ilişkilendirildiği ve etkili öğretim, okul içinde ve dışında birlikte çalışma, yansıma ve kişisel gelişim olmak üzere genel olarak üç özelliğin vurgulandığı tespit edilmiştir (Snoek ve diğ., 2009)

Öğretmen kalitesini belirlemek için sıkça kullanılan ifadelerden birisi "iyi bir öğretmen" dir. İyi bir öğretmen olma özellikleri eğitim reformlarında ele alınan önemli konular arasında her zaman yerini almıştır. Bu ifadenin içeriği ile ilgili uluslararası düzeyde genel bir görüş birliğine varılamamış olsa da (Waldrip, Fisher, 2005) iyi bir öğretmenin sahip olması gereken niteliklerin belirlenmesi ile ilgili yapılan çalışmalarda sahip olunması gereken özellikler şu şekilde belirlenmiştir (Manchanda, 2010; Orlando, 2003; Parkay, Stanford, Vaillaniant, Stephens & Harris, 2012)

Öğrencilere saygı duyma-Öğrencilerle ilgilenme	Profesyonel organizasyon
Öğrenmeyi sevme	Etik kurallar
Alanda uzmanlık-Bilgi	Özerklik-Otonomi
Öğrencilerle iletişim kurma becerileri	Sürekli eğitim
Sorumluluk	Topluma hizmet
	Prestij-Statu

Araştırmacılar belirtilen özelliklerin öğrencilerin derse dahil edilmesi için önemli olduğunu vurgulamaktadırlar (Manchanda 2010). Belirlenen bu özellikler genel olarak akademik, etik ve sistemik olmak üzere üç boyut altında toplanmıştır (Maskit, 2013). Akademik boyutta uzmanlık eğitimi temel gerekliliktir. Bu da öğretmen olunması için alınması gereken eğitimi ve öğretmenlik sürecinde devam eden eğitimi kapsar. Program bilgisini, sınıf yönetimini, öğretim materyalleri bilgisini ve öğrenci özelliklerini anlama bu boyuta dahil olan konular arasında sayılmaktadır (Parkay ve diğ., 2012). Son dönemlerde yapılan araştırmalar küresel konuları (yoksulluk, çevre gibi) içeren küresel bilginin de bu niteliklere eklenebileceğini göstermektedir (Holden & Hicks, 2007). Etik boyut, öğretmen sorumluluğudur. Öğrencilerin öğrenmesinden, bilgi ve beceri ve akademik başarının artırılmasından sorumlu olmayı kapsar (Sahlberg, 2007). Organizasyonel boyut, öğretmenlerin içerikle ilgili konu seçiminde, programda ve tercih edilen konularda karar vermede özerkliği ifade eder (Maskit, 2016).
Öğretmenin kişiliği ile ilgili özellikler de iyi bir öğretmenin sahip olması gereken özellikler arasında sayılmaktadır (Benekas, 2016; Leblanc, 1998). Buna göre;

Etkili bir dinleyici olan ve soruları yanıtlayan
Arkadaşça bir yaklaşıma sahip olan
Esprili
Öğrencilerin öğrenmesini benimseyen
Tutkulu
Alçakgönüllü
İlham veren
Enerjik
Sevecen

özelliklerine sahip olan öğretmenler eğlenceli, keyifli öğretmenleri işaret etmektedir (Leblanc, 1998).

Öğretmenlerin kişisel özellikleri öğretmeye olan davranışlarını, tutumlarını da etkilemektedir. Bandura'ya göre (1986) kişinin kendi yeteneklerine olan inancı ve gösterdiği çaba, ne yaptığının ve nasıl davrandığının iyi bir belirleyicisidir. Kişinin özyeterliği, davranışının belirleyicisi olarak vurgulanabilir. Bir başka ifade ile bir kişinin özyeterliği bir işte gösterdiği performansını etkileyebilir (Brandon, 2000). Özyeterlik, istenilen sonuca ulaşmak için bir eylemi başarılı bir şekilde sürdürebilme yeteneğine olan inançtır (Bandura, 1986). Tschannen-Moran, ve arkadaşları (1998) ise öğretmen yeterliğini, öğretim yeterliğine olan algı ve öğretim içeriği ile ilgili inanç olarak ele almışlardır.

Özyeterliğin en fazla odaklandığı konulardan birisi de öğretimdir (Brandon, 2000). Öğretimde özyeterlik, öğretmenlerin, öğrencilerinin performanslarını etkileme kapasitelerine olan inançlarıdır ve bu inancın öğrencilerin performansları üzerine güçlü bir olumlu etkisi vardır (Tschannen-Moran, Hoy, Hoy, 1998; Greenwood ve diğ., 1990). Öğretmen yeterliği, bir dersi planlama ve belirli bir konunun öğretimini başarılı bir şekilde tamamlama yeteneğine olan inanç ya da öğretme yeteneği ve bu konuda kendilerine olan güven olarak da ifade edilmektedir (Carleton ve diğ., 2008; Tschannen-Moran, ve diğ., 1998).

Yüksek özyeterlik düzeyine sahip olan öğretmenler öğrenci başarısını ve motivasyonunu kontrol edebileceklerine inanırlar, öğretimi anlamlı ve faydalı bulurlar, öğrenci başarısız olduğunda kendilerini değerlendirirler, hedefler belirler ve onlara ulaşmak için stratejiler oluştururlar, yeni öğretim yöntem ve tekniklerini kullanmaya daha isteklidirler. Bununla birlikte, kendilerine ve öğrencilerine karşı olumlu tutuma sahiptirler, daha az tükenmişlik eğilimi gösterirler (Ashton, 1984, Brandon, 2000; Brouwers ve Tomic, 2000; Guskey, 1988)

Ülkemizde öğretmenlerin niteliği ve kalitesi MEB tarafından oluşturulan Öğretmenlik Mesleği Genel Kriterleri'ne göre belirlenmektedir. Bu bağlamda 6 yeterlik, 31 alt yeterlik ve 233 performans göstergesi oluşturulmuştur. Yeterlik alanları şu şekilde belirlenmiştir (MEB, 2006):

A.Kişisel ve Mesleki Değerler- Kişisel Gelişim
B.Öğrenciyi Tanıma
C.Öğrenme ve Öğretme Süreci
D.Öğrenmeyi, Gelişimi İzleme ve Değerlendirme
E.Okul-Aile-Toplum İlişkileri
F.Program ve İçerik Bilgisi

Mesleki yeterliklerin geliştirme ve uygulama sürecinde öğretmenlik mesleğinin yükseltilmesi amaçlanmakta, belirlenen yeterliklerin bilinmesinin yanı sıra, hizmet öncesi ve hizmet içi eğitim programlarıyla bu yeterliklerin öğretmen adaylarına ve öğretmenlere kazandırılmasına çalışılmaktadır. Ayrıca MEB ve üniversiteler arasında gerçekleştirilen işbirliği ile öğretmen yeterlikleri sorgulanmakta ve geliştirilmesine yönelik çalışmalar yapılmaktadır. Bu çalışmalardan birisi 2006-2007 yılında öğretmen yetiştirme programlarına yönelik olarak gerçekleştirilmiştir. Buna göre, alanlara göre farklılaşacak şekilde programların %50'si alan bilgisi, %30'u öğretmenlik meslek bilgisi ve becerileri (eğitim bilimleri, alan öğretim yöntemleri ve öğretim yöntem ve teknikleri), %20'si genel kültür derslerinden oluşmuştur. Bu boyutlara ek olarak uygulama boyutu da dahil edilmiştir (www.yok.gov.tr).

Ülkemizde öğretmen eğitimi üniversitelerde yürütülmekte, öğretmen yetiştirme programları tüm Eğitim Fakülteleri için benzer şekilde hazırlanmakla birlikte %25 esneklik sağlanmaktadır. Öğretmen yetiştirme programları üç aşamadan oluşmaktadır. İlk aşama programa dahil olan adayların belirli bir süre içinde ve belirli bir program çerçevesinde yetiştirilmeleridir. İkinci aşama, programı bitiren adayların görevlendirilmek üzere seçilmeleri, son aşama ise görevdeki öğretmenlerin hizmet içi eğitime alınmalarıdır (YÖK, 2007).

Eğitim fakültelerinde öğretmen yetiştirme amaçlı uygulanan bir diğer program Pedagojik Formasyon Programı'dır. Bu programın açılması ile ilgili öğretmen istihdamı-öğretmen yetiştirme ya da programın uygulanması gibi tartışmalar yaşansa da program, çeşitli alanlardaki öğretmen ihtiyacını karşılamak üzere düzenlenmektedir. Pedagojik Formasyon Eğitimi Sertifika Programı yükseköğretim programlarına devam eden lisans programı öğrencilerini ve mezunlarını kapsamakta olup, eğitim süresi en az iki yarıyıl olarak belirlenmiştir. Programın amacı, belirlenen öğrenci grubuna öğretmenlik mesleğine yönelik becerilerin kazandırılmasıdır. Bu programda, öğretmenlik meslek bilgisi derslerinin yanı sıra alan eğitimi ve öğretimine (Özel öğretim yöntemleri, Öğretim teknolojileri ve materyal geliştirme, öğretmenlik uygulaması) özgü dersler verilmektedir.

Öğretmenlik mesleğinin önemi ve sahip olunması gereken nitelikler göz önünde bulundurulduğunda, eğitim fakültelerinde öğrenim gören öğretmen adaylarının ve öğretmen olmak amacıyla formasyon programına katılan öğrencilerin öğretmenlik mesleğine bakış açılarının ve özyeterliklerinin tespit edilmesinin önemi ortaya çıkmaktadır.

YÖNTEM

Araştırmaya 2015-2016 eğitim öğretim yılında iki üniversitenin Eğitim Fakültesi'nde gerçekleştirilmiştir. Çalışmaya Eğitim Fakültesi'nde dört yıl süresince öğrenim gören son sınıf öğretmen adayları ve farklı fakültelerin farklı bölümlerinden mezun olmuş ve Eğitim Fakültesi'nde pedagojik formasyon programında öğrenim gören 215 öğrenci katılmıştır.

Araştırmada veri toplamak amacı ile Çapa, Çakıroğlu ve Sarıkaya (2005) tarafından Tschannen-Moran ve Wool folk Hoy(2001)'dan uyarlanmış olan "Öğretmen Özyeterlik Ölçeği" kullanılmıştır. Ayrıca Eğitim Fakültesi son sınıf öğretmen adayları ve pedagojik formasyon öğrencilerinin öğretmenlik mesleğine yönelik görüşlerini belirlemek üzere açık uçlu sorular sorulmuştur. Açık uçlu soruların analizinde nitel veri analizi tekniklerinden içerik analizinden yararlanılmıştır. İçerik analizinde uygulanırken literatürde yer alan çalışmalarda elde edilmiş olan temalar dikkate alınmış, uygun olmayan kodlar için yeni temalar oluşturulmuştur.

Ölçek uygulamasından elde edilen verilerin analizi için nicel veri analizinden yararlanılmıştır. Bu amaçla SPSS 17 istatistik programı kullanılmıştır. Öğretmen özyeterlik ölçeğinden elde edilen Cronbach alpha değerleri Tablo 1'de verilmiştir.

Tablo.1. Öğretmen Özyeterlik Ölçeği Cronbach Alpha Değerleri

Ölçekler	Cronbach α
Özyeterlik	,93
Öğrenci Katılımı	,83
Öğretim Stratejisi	,85
Sınıf Yönetimi	,82

BULGULAR

Tablo 2. Özyeterlik Puanları Dağılımın Normalliğini Denetlemek Amacı ile Yapılan Bir Örneklem Kolmogorov-Smirnov Testi Sonuçları

Değerler		Özyeterlik Ölçeği	Öğrenci Katılımı	Öğretim Stratejisi	Sınıf Yönetimi
N		215	215	215	215
Normal Parametreler	$\bar{x}$	94,82	31,47	31,84	31,50
	ss	11,78	4,16	4,31	4,25
Kolmogorov-Smirnov Z		1,53	1,72	1,62	1,80
p		,01*	,00*	,01*	,00*

Özyeterlik ölçeği ve alt boyutlarından elde edilen puanların normal dağılım gösterip göstermediğini belirlemek amacı ile yapılan tek örneklem Kolmogorov-Smirnov testi sonucunda ölçeğin tamamından ve alt boyutlarından elde edilen verilerin dağılımlarının normal dağılımdan farklılığı anlamlı bulunmuştur.

Tablo 3. Özyeterlik Ölçeği Puanlarının Program Değişkenine Göre Farklılaşıp Farklılaşmadığını Belirlemek Üzere Yapılan Mann Whitney-U Testi Sonuçları

Puan	Gruplar	N	$\bar{x}_{sira}$	$\sum_{sira}$	U	z	p
Özyeterlik	Öğretmen adayları	73	115,62	8440	4627	-1,28	,19
	Formasyon	142	104,08	14780

	Toplam	**6**	**59**

Tablo 4'de araştırmaya katılan katılımcıların öğretmenlik mesleğini seçme nedenleri verilmiştir. Tabloya (4) göre her iki grup katılımcıların öğretmenlik mesleğini seçme nedenleri en fazla içsel gerekçelerde yer aldığı görülmektedir. İçsel gerekçeler içinde her iki grup katılımcıları da mesleği sevmeyi ve ilgi duymayı gerekçe en fazla sıklıkta belirtmişlerdir. İçsel gerekçeler içinde, öğretmen adayları, insanları sevmeyi, formasyon grubu da duygusal etkenleri ikincil gerekçe olarak ifade etmiştir. Katılımcılar tarafından ikinci olarak en fazla değinilen gerekçe lisans grubunda dışsal gerekçeler iken, formasyon grubunda çıkarcı gerekçeler olarak tespit edilmiştir. Özgeci gerekçeler her iki grup tarafından üçüncü olarak vurgulanmıştır.

Tablo 5. İyi Öğretmenin Sahip Olması Gereken Özellikler

	Özellikler	Öğretmen adayları	Formasyon
Alan Bilgisi	Bilgili	**15**	**57**
Öğrenme-Öğretme Süreci	Davranış yönetimi	10	12
	Zaman yönetimi	2	-

Öğrenciyi Tanıma	Öğrenciye rehberlik etmek, değer verme	**14**	**42**
Kişisel Özellikler		**80**	**112**
Diğer		**4**	**-**

Araştırmaya katılan lisans ve formasyon grubundan elde edilen iyi öğretmenin niteliklerine ilişkin yanıtlar Alan Bilgisi, Öğrenme-Öğretme Süreci, Kişisel ve Mesleki Gelişim, Öğrenciyi Tanıma, kişisel özellikler olmak üzere 5 temada toplanmıştır. Bu temalara Milli Eğitim Bakanlığının öğretmen yeterliklerine ilişkin belirttiği ana noktalardan hareketle oluşturulmuştur. Tabloya göre her iki grupta da frekansı en yüksek olan özellikler kişisel ve mesleki gelişim ile ilgilidir. Kişisel ve mesleki gelişim boyutunda her iki gruptaki katılımcılar sıklıkla kişisel gelişim sağlama özelliğini belirtmişlerdir. Kişisel özellikler Öğretmen adayları ve formasyon grubu öğrencilerinin ikinci, öğrenme-öğretme süreci üçüncü, alan bilgisi de son olarak sıklıkla vurguladıkları özellikler olmuştur.

Tablo 6. Öğretmenlik Mesleğinde Fark Yaratma

Öğretmenin Kişisel Özellikleri		**20**	**46**

Tablo 6'da katılımcıların öğretmen olduklarında öğrenciler üzerinde farklılık yaratıp yaratmayacakları ile ilgili görüşleri yer almaktadır. Tabloya göre öğretmen adayları en fazla öğrenme-öğretme süreci ile, formasyon grubu öğrencileri ise en fazla öğrencilerine olan inan konusunda farklılık yaratacaklarını belirtmişlerdir. İkinci olarak lisans grubu öğrencileri öğrenciyi tanıma, formasyon grubu öğrencileri ise kişisel özellikleri konusunda farklılık yaratacaklardır. Öğrencilere olan inanç lisans grubunun, öğrenme-öğretme süreci de formasyon grubunun üçüncü olarak vurguladıkları özelliklerdir. Öğretmenin kişisel özellikleri öğretmen adalarının, öğrenciyi tanıma da formasyon grubunun dördüncü olarak vurguladıkları özelliklerdir. Öğretmen adaylarından 4, formasyon grubundan 14 farklılık yaratabileceği özelliği belirtmeyerek sadece evet yanıtını vermişlerdir.

TARTIŞMA

Araştırmacılar, öğretmen özyeterlik düzeyleri yüksek olan öğretmenlerin öğretmeye daha fazla olumlu tutuma sahip olduklarını vurgulamaktadır (Carleton ve diğ., 2008; Guskey, 1988). Bu araştırmadan elde edilen sonuçlar öğretmen adaylarının öğretmen özyeterlik düzeylerinin formasyon öğrencilerinin özyeterliklerinden yüksek olduğunu ancak aralarında istatistiksel açıdan anlamlı farklılık olmadığını göstermektedir. Bezer şekilde, öğretmen adaylarının öğretim stratejileri ve sınıf yönetimi konularında sahip oldukları özyeterlikleri formasyon öğrencilerinin sahip olduğu düzeyden yüksek olmakla birlikte gruplar arasında anlamlı farklılık tespit edilmemiştir. Buna karşılık, öğrenci katılımına yönelik özyeterlik açısından öğretmen adaylarının lehine anlamlı farklılık olduğu belirlenmiştir. Bu sonuca göre, öğretmen adaylarının, öğrenciyi derse dahil etme, motive etme, başarılı olacakları konusunda destekleme gibi konularda özyeterlik düzeylerinin yüksek olduğu anlaşılmaktadır. Araştırmaya katılan öğretmen adaylarının birinci açık uçlu sorulara verdikleri yanıtlara incelendiğinde literatürle eşleşen kodlara ulaşıldığı görülmüştür. Buna göre, öğretmen adaylarının ve formasyon öğrencilerinin öğretmenlik mesleğini seçme nedenleri incelendiğinde, katılımcıların öğretmenlik mesleğini tercih etme nedenlerini özgeci, içsel, dışsal ve çıkarcı gerekçelere dayandırdıkları görülmektedir. Bu nedenler arasında her iki grup tarafından da en sık vurgulanan neden "içsel gerekçeler" olmuştur. Ortaöğretim öğretmen adaylarının öğretmenliği tercih etme nedenlerinin incelendiği bir araştırmada katılımcıların içsel ve dışsal nedenlerden ötürü öğretmen olmayı tercih ettikleri belirlenmiştir. İçsel nedenler arasında öğretmeyi sevme, alanı sevme, dışsal nedenler arasında ise Kimya ve Matematik öğretmenini sevme gibi nedenleri belirlenmiş, bunların yanı sıra meslek tatmini, topluma katkısı ve sınav sisteminden kaynaklanan zorunluluk belirlenmiştir (Boz ve Boz, 2008). Mevcut çalışmada ise içsel gerekçeler altında, öğretmen adayları “mesleği sevmek” ve insanları sevmek” nedenlerini en fazla sıklıkta belirtirken, formasyon öğrencileri, “mesleği sevmek”, “duygusal etkenler” ve “kişisel özellikler” etkisini sıklıkla vurgulamışlardır. Bu durumda, formasyon grubundaki öğrencilerin iş yaşamlarında da insanlarla yakın iletişime dayalı çalışmaları nedeniyle öğretmenlik mesleğini seçme nedenlerine ilişkin içsel gerekçelerinde kişisel özelliklerinin öğretmenliğe uygun olduğu ve insanlarla çalışma konusunda sorun yaşamayacaklarını düşünmekte oldukları sonucu çıkarılabilir.

Formasyon grubu öğrencilerin “duygusal etkenler”e dayalı nedenleri altında ise öğretmenlik mesleğinin çocukluk hayalleri olması da göze çarpmaktadır. Bu durum lisans öğrencilerine ilişkin gerekçelerde daha az sıklıkla karşımıza çıkmaktadır.

“Çıkarcı gerekçe” formasyon grubu öğrencileri tarafından, “dışsal gerekçeler” ise öğretmen adayları tarafından öğretmenlik mesleğini seçme nedeni olarak ikinci sırada vurgulanmıştır. Formasyon gurubunun çıkarcı gerekçe ile öğretmenlik mesleğini seçmelerinin nedenleri arasında göze çarpan nokta, çalışma saatlerindeki belirginlik ve çalışma koşullarının sağlık sektörüne göre daha rahat olmasıdır. Mesleğin iş garantisi sağlaması öğretmenlik mesleğinin tercih nedenler arasındadır (Eskicumalı, 2002; Gürbüz ve Sülün, 2004). Fen Bilgisi Öğretmenliği programında öğrenim gören öğretmen adaylarının katıldığı bir çalışmada katılımcıların çıkarcı ve içsel nedenlerden dolayı bu mesleği tercih ettikleri bulunmuştur. Katılımcıların, geleceğe yönelik güvence sağlaması gibi mesleğin sağlayacağı faydaları göz önünde bulundurarak tercih anlaşılmaktadır (Candaş, Bebek, 2015). Yapılan çalışmalar çıkarcı ve dışsal nedenlerin aksine, özveriye dayalı ve içsel nedenlerle öğretmenlik mesleğini tercih edenlerin yaptıkları işte daha istekli olduklarını ve mesleği daha uzun süre sürdürdüklerini göstermektedir (Wang, Fwu, 2001). Bu nedenle öğretmenlerin daha çok içsel ve özveriye dayalı nedenlerle mesleği tercih etmeleri mesleğe karşı olumlu yaklaşabilmeleri için önemlidir (Boz ve Boz, 2008).

Formasyon grubu öğrencileri “dışsal gerekçeler” grubuna girecek herhangi bir neden belirtmemiştir. Öğretmen adayları ise çevrelerinde öğretmenlik mesleğini yapanların etkisiyle ya da istemeyerek bölümü tercih ettiklerini belirtmişlerdir. Bu bulgu yapılan çalışmalarla da paralellik göstermektedir. Bireyin öğretmen bir akrabasının olması, çevrenin etkisi ve üniversite sınavında tercih sırası olması dışsal gerekçeler olarak nitelendirilmiştir (Kılcan, Keçe, Çepni, Kılınç, 2014; Özbek, 2007).

“Özgeci gerekçeler” de her iki katılımcı grubu tarafından üçüncü sırada vurgulanmıştır. Her iki öğrenci grubu da topluma faydalı olma ve insanlara hizmet etme, kutsal bir meslek olması gerekçeleri ile öğretmenlik mesleğini tercih ettiklerini belirtmişlerdir. Yapılan çalışmalarda da toplumun gelişmesine ve refahına katkı sağlama isteği bu mesleği tercih etme nedenleri arasında sayılmaktadır. Bu durum öğrencilerin toplumun gelişmesine yönelik gösterdikleri hassasiyet olarak ifade edilmiştir (Kılcan ve diğ., 2014). Araştırmaya katılan öğretmen adaylarının yanıtları incelendiğinde lisans ve formasyon öğrencileri arasında bazı noktalarda görüş farklılıkları olduğu görülmüştür. Bunun nedenleri arasında formasyon gurubu öğrencilerinin tamamına yakınının çalışıyor olması ve özelde de sağlık sektöründe çalışıyor olmasına bağlanabilir.

Araştırmaya katılan öğretmen adayları ve formasyon grubu öğrencilerinin yanıtları doğrultusunda, “iyi bir öğretmenin sahip olması gereken özellikler” arasında kişisel ve mesleki gelişim, kişisel özellikler ve öğrenme-öğretme süreci temaları konusuna daha fazla odaklandıkları görülmektedir. Kişisel ve mesleki gelişimi sağlama teması araştırmaya katılan lisans grubu öğrencileri tarafından en fazla sıklıkla kod belirtilen temalardandır. Kişisel ve mesleki gelişimi sağlamada “kişisel gelişim” ve “öğrenciye değer verme, anlama, saygı duyma” önemli özellikler olarak belirtilmiştir. Bu tema altında öğretmenlerin öğrencilerine karşı hoşgörülü, anlayışlı olmaları, onları anlama, saygı duyma, onlarla iletişim kurabilmeleri gibi özellikler belirtilmiştir. Kişisel gelişimi sağlamada ise öğretmenlerin donanımlı, yenilikçi, yaratıcı, girişken, teknolojiyi kullanma becerisi gibi niteliklere sahip olması gerektiği belirtilmiştir.

Kişisel özellikler teması altında öğretmen adayları, bir öğretmenin sahip olması gereken kişilik özelliklerinden bahsetmişlerdir. Bu tema içerisinde en fazla oranda bir öğretmenin duyarlı, sabırlı, özgüvenli, ahlaklı olması ve insanları-çocukları seven, insani değerleri yüksek bir kişi olması belirtilmiştir. Formasyon öğrencileri ile öğretmen adaylarının fikirleri en fazla oranda sabır konusunda farklılık göstermektedir. Formasyon öğrencilerinin çoğunluğu öğretmenlerin sabırlı olması gerektiği konusunda görüş bildirmiştir.

Araştırmaya katılan formasyon grubu öğrencileri için iyi öğretmenin sahip olması gereken nitelikler içerisinde alan bilgisi, öğretmen adaylarına göre daha önemli bir nokta olarak görülmektedir. Bunun nedeni formasyon gurubunun çoğunluğunun sağlıkçı olmasından kaynaklanabilmektedir. Çünkü sağlıkçı olan bu gurup yeni sağlıkçıların yetiştirilmesi konusunda çalışacaklardır ve bu nedenle alan bilgisi onlar için özellikle önem taşımaktadır. Bazı öğretmen adayları yanıtları içerisinde bundan özellikle bahsetmiş ve staja gelen hemşire adayları ile olan deneyimlerinden de yola çıkarak alana ilişkin bilgilerinin önemini belirtmişlerdir.

Öğrenme-öğretme sürecine ilişkin olarak, öğretmen adayları çağdaş görüşler çerçevesinde görüşler belirtmişler ve özellikle yöntem tekniklerin kullanılması konusunun öneminden bahsetmişlerdir. Bu sonuç öğretmen adaylarının öğretim stratejilerine yönelik özyeterliklerinin formasyon öğrencilerinden yüksek olması sonucu ile de desteklenmektedir. Öğretmen adaylarının görüşleri sınıf yönetimi konusunda farklılaşmaktadır. Formasyon öğrencileri yaşları fark etmeksizin sınıf yönetimi konusunda otoriter tutum sergilenmesi gerektiğini söylemişlerdir. Bu durum genel olarak çağdaş öğretim konusunda fikir beyan etmeleri ile çelişmektedir, Öğrencilere rehberlik edebilmeye yönelik olarak da öğretmen adayları öğrencileri tanımaya yönelik fikir beyan etmişlerdir.

İyi bir öğretmenin hangi özelliklere sahip olmasına yönelik elde edilen sonuçlar, yapılan çalışmaların sonuçları ile de paralellik göstermektedir. İyi bir öğretmeni tanımlamak amacı ile yapılan çalışmalardan birisinde çeşitli fakülteleri öğretim üyeleri dahil olmuş ve iyi bir öğretmeni tanımlayan on altı özellik tespit edilmiştir. Belirlenen özellikler arasında en sık vurgulanan özellik "öğretmeye ve alana olan tutku" olmuştur. "Öğrencilerin ilgisini çekme ve öğrenen olma" ise en sık vurgulanan ikincil özellikler olarak ifade edilmiştir. Aynı çalışmada "iyi öğretmen kimdir" sorusuna yönelik katılımcıların çoğunun (%63) kişisel özellikleri yansıtan yanıtlar verirken, çok azının da pedagojik becerilerle ilgili (organizasyon, pedagojik beceriler, bilgili olma, öğrenen olma) yanıtlar verdiği tespit edilmiştir (Benekas, 2016).

Araştırmaya katılan öğretmen adayları büyük çoğunluğu öğretmen olduklarında öğrencileri üzerinde farklılık yaratabileceklerini düşünmektedirler. Bu farklılığı nasıl yaratabileceklerine ilişkin görüşleri istendiğinde ise öğrenme öğretme süreci, öğrenciyi tanıma, öğretmenin kişisel özellikleri, kişisel ve mesleki gelişim olmak üzere 4 tema altında birbirlerine yakın görüş bildirmişlerdir. Formasyon öğrencilerinin fark yaratacaklarını düşündükleri konular, iyi bir öğretmenin sahip olması gereken özellikle yönelik görüşleri ile paraleldir. Öğretmen adaylarının görüşlerinde ise en çok vurguladıkları konular sıralama olarak farklılaşmaktadır. Araştırmaya katılan öğretmen adayları en fazla oranda öğrenme-öğretme süreçleri ile farklılık yaratabileceklerini belirtmişlerdir. Bu noktada farklılığı öğretimin çeşitlendirilmesi ve öğrenme ortamının öğrencilere göre düzenlenmesi ile yaratabileceklerini düşünmüşlerdir. Bunlarla birlikte sınıf yönetimi, ödüllendirme ve ders-okul-bilimi sevdirerek de farklılık yaratabileceklerdir. Formasyon öğrencileri ise daha çok kişisel ve mesleki gelişimi sağlama ve kişisel özellikler gibi konularda bir öğretmen olarak fark yaratacakları görüşündedirler. Kişisel gelişimi sağlamada öğrencileri anlama, onlara saygı duyma, değer verme, kişisel özelliklerde de sevilen, yardımsever, sempatik, sabırlı vb. gibi özelliklere sahip olarak öğretmen olduklarında farklılık yaratabileceklerini düşünmektedirler. Öğretmen adayları öğretme-öğrenme sürecinde fark yaratabilecekleri görüşünde oldukları halde, öğretim stratejilerine yönelik özyeterliklerinin formasyon grubu öğrencilerinden farklı olmadığı tespit edilmiştir. Öğretmen adayları öğrencilerin olumlu yönde desteklenmesi, yüreklendirilmesi, kişisel gelişimlerinin desteklenmesi, onlara değer verilmesi gibi öğrenciyi tanıma noktasında da farklılık yaratabileceklerini düşünmüşlerdir. Öğrencilere olan bu olumlu inanç onların desteklenerek başarmalarını sağlayacaktır. Ayrıca öğrencilerin çeşitli beceriler ve kişisel özellikler ile donanımlı olarak yetiştirilmeleri de farklılık yaratabilmelerine olanak sağlayabilecektir. Örneğin onların eleştirel düşünme, sorgulama becerilerini geliştirmek, bilinçli, sorumluluk sahibi, hoşgörülü, mutlu bireyler olmalarını desteklemek de farklılık yaratabilmelerine imkan sağlayacaktır. Bunlarla birlikte lisans öğrencileri ideal öğretmen tipine uyan kişisel özellikleriyle de öğrencilerde farklılık yaratabileceklerini düşünmektedirler. Sempatik, sabırlı, sevilen-sayılan, öğrencilerini seven, araştırmacı öğretmen olarak öğrencileri etkileyebileceklerini düşünmüşlerdir.

Öğretmen adayları iyi bir öğretmenin nitelikleri için belirttikleri bazı özellikleri bu soruda da beyan etmişlerdir. Örneğin kişisel özellikler ve öğrenme-öğretme sürecine ilişkin ortak kodlara bu sorularda rastlanmaktadır. Bu durum öğrencilerin görüşlerini destekler nitelikte olduğunu göstermektedir. Açık uçlu sorulara verilen yanıtlar incelendiğinde genel olarak lisans ve formasyon öğrencilerinin ortak fikirleri olduğu görülürken bazı noktalarda formasyon öğrencilerinin hemen hepsinin çalışması ve sağlık çalışanı olması nedeniyle bazı kodların sıklıklarında farklılıklar olduğu da görülmüştür. Bu durum daha çok mesleği seçme nedenlerinde, iyi bir öğretmenin nitelikleri içerisinde kişilik özelliği olarak sabırlı olması noktasında ve öğrencilerde farklılık yaratabilmede öğrencilere değer verme, anlama, saygı gösterme boyutunda göze çarpmaktadır.

Araştırmadan elde edilen sonuçlar doğrultusunda her iki gruptaki katılımcıların da çoğunun içsel gerekçelerle öğretmenlik mesleğini seçmeleri, kişisel ve mesleki gelişimi ön planda tutmaları, öğretmenlik mesleğini önemsediklerinin ve daha istekli gerçekleştireceklerinin göstergesi olarak düşünülebilir. Ancak öğretmen adaylarının dışsal gerekçeler, formasyon öğrencilerinin önemli bir bölümünün çıkarcı gerekçeler ile mesleği tercih etmeleri, öğretmenlik mesleğini gönüllü olarak yapmak istemediklerini göstermektedir. Bu durum ülkemizde öğretmen yetiştirme sorunları arasında ele alınması gereken önemli problemlerden birisi olarak görülebilir.

Katılımcıların, iyi bir öğretmenin sahip olması gereken özellikler arasında kişisel özellikleri de vurgulamaları, meslek-kişilik ilişkisini dikkate aldıklarını göstermektedir. Öğretmen adaylarının, formasyon öğrencilerine göre, öğrenme-öğretme sürecinde fark yaratacaklarına inanmaları ve bu konudaki özyeterliklerinin de daha yüksek düzeyde olması, aldıkları eğitim ile ilişkilendirilebilir.

Sonuç olarak, ülkemizde bireylerin öğretmen olma nedenleri, öğretmenliğe yönelik özyeterlikleri ve öğretmen yetiştirme programlarının olumlu ve olumsuz niteliğinin yetişen öğretmen kalitemizi de etkilemektedir. Bu sonuçlar doğrultusunda, öğretmen özyeterliklerinin öğretme yetiştirme programlarında dikkate alınması, meslek seçiminde öğrencilere öğretmenlik mesleğinin önemi ve niteliğinin anlatılması, özellikle pedagojik formasyon programlarında mesleğin özelliklerini içeren ve öğretim derslerine önem verilmesi önerilmektedir.

ABSTRACT: Student teacher learns to whom, why and where to teach theoretically through teaching profession knowledge lessons. And the skill to use the theoretical knowledge is learned through School Experience and Teaching Practice lessons in Turkey. In gaining these skills, the personal and professional characteristics of the practice teacher at the school where the student teacher had his internship are of importance. This research aims to determine the ideas of the student teachers who are studying elementary school maths teaching about the personal and professional characteristics of the Teaching Practice lesson teachers. In line with this aim, the ideas of the student teachers were determined with regard to how they evaluated the practice teachers who are in charge of teaching practice lesson. The study group of the research consists of the senior year students who are studying at Elementary School Maths Teaching at Ahmet Keleşoğlu Faculty of Education at Necmettin Erbakan University. The data was collected with an unstructured question in which the student teachers were asked to evaluate the practice teachers in personal and professional terms. The data was evaluated by making content analysis.

Key words: math teacher candidate, practice course teachers, teaching practice course.

MATEMATİK ÖĞRETMEN ADAYLARININ GÖRÜŞLERİNE GÖRE ÖĞRETMENLİK UYGULAMASI DERSİ ÖĞRETMENLERİNİN DEĞERLENDİRİLMESİ

ÖZET: Öğretmen adayı kime, niçin, nerede ve nasıl öğreteceğini teorik olarak öğretmenlik meslek bilgisi dersleri ile öğrenmektedir. Teorik bilgilerini kullanma becerisini de Türkiye'de Okul Deneyimi ve Öğretmenlik Uygulaması dersleri ile öğrenmektedir. Bu becerileri kazanmasında staj yaptığı okuldaki uygulama öğretmeninin kişisel ve mesleki özellikleri önemlidir. Bu araştırmada ilköğretim matematik öğretmenliğinde öğrenim gören öğretmen adaylarının öğretmenlik uygulaması dersi öğretmenlerinin kişisel ve mesleki özelliklerine ilişkin görüşlerinin belirlenmesi amaçlanmaktadır. Bu amaç doğrultusunda öğretmen adaylarının öğretmenlik uygulaması dersinden sorumlu uygulama öğretmenlerini nasıl değerlendirdiklerine ilişkin görüşleri saptanmıştır. Araştırmanın çalışma grubunu Necmettin Erbakan Üniversitesi Ahmet Keleşoğlu Eğitim Fakültesi İlköğretim Matematik Öğretmenliğinde öğrenim gören son sınıf öğrencileri oluşturmaktadır. Veriler öğretmen adaylarının, uygulama öğretmenlerini kişisel ve mesleki açıdan değerlendirmeleri istenen yapılandırılmamış bir soru ile toplanmıştır. Veriler, içerik analizi yapılarak değerlendirilmiştir.

Anahtar sözcükler: matematik öğretmen adayı, uygulama öğretmeni, öğretmenlik uygulaması.

GİRİŞ

Eğitim faaliyetlerini yürütmekle görevli öğretmenlerin hizmet öncesinde iyi yetişmiş olmaları gerekmektedir. İyi bir öğretmen yetiştirme, teorik eğitimin yanı sıra uygulama faaliyetleri ile mümkün olabilir.

Öğretmen adayları sınıf ortamında ihtiyaç duydukları bilgi ve becerileri ancak deneyimle öğrenilebilirler. Çağdaş öğretmen yetiştirme modellerinde uygulama çalışmalarının önemi vurgulanarak, uygulamaya daha fazla yer verilmektedir (Çelikkaya, 2011).

Öğretmen adayına öğretmenlik becerilerini kazandırmak amacıyla eğitim fakültelerinin programlarında teorik dersler yanında Öğretmenlik Uygulaması dersi de bulunmaktadır. 8. dönemdeki öğretmenlik uygulaması, 2 saat teorik ve 6 saat okulda uygulamadan oluşmaktadır. Öğretmenlik uygulaması, öğretmen adayının daha önce edinmiş olduğu bilgi ve becerileri okul ortamında uygulamaya koyup geliştirmesi ve mesleğinin gerektirdiği yeterlilikleri kazanması için planlanmış bir derstir (YÖK, 2016).

Öğretmenlik uygulamasında okuldaki uygulama öğretmeninin mesleki ve kişisel özellikleri önemlidir. Etkili bir uygulama öğretmeni: öğrencilerini dinler, onlarla iletişim kurar, onları anlar ve öğretmen adaylarının gelişmesine yardımcı olur. Uygulama öğretmenlerinin genç ama tecrübeli öğretmenler olması, alan bilgisinin yanı sıra öğretim bilgisinin iyi düzeyde olması, açık fikirli, iletişim kanallarını açık tutabilen ve öğrenci ve öğretmen adayları ile tartışabilen öğretmenler olması gerektiği vurgulanmıştır (Boreen, 2009; Akt: Kırksekiz, Uysal, İşbulan, Akgün, Kıyıcı ve Horzum, 2015).

AMAÇ

Bu araştırmada ilköğretim matematik öğretmenliğinde öğrenim gören öğretmen adaylarının öğretmenlik uygulaması dersi öğretmenlerinin kişisel ve mesleki özelliklerine ilişkin görüşlerinin belirlenmesi amaçlanmaktadır.

YÖNTEM

Matematik öğretmen adaylarının öğretmenlik uygulaması dersi öğretmenlerinin kişisel ve mesleki özelliklerine ilişkin görüşlerinin belirlenmesine yönelik bu araştırma nitel yöntemle yürütülmüştür.

Çalışma Grubu

Araştırmanın çalışma grubunu NEÜ Ahmet Keleşoğlu Eğitim Fakültesi İlköğretim Matematik Öğretmenliği programında öğrenim gören 40 son sınıf öğrencisi oluşturmaktadır. Katılımcıların 33'ü kadın, 7'si erkektir. Katılımcılar en az 3, en fazla 28 kez olmak üzere ortalama 10 kez uygulama öğretmeni ile görüşmüşlerdir.

Verilerin Toplanması ve Analizi

Veriler, açık uçlu anket yoluyla toplanmıştır. Katılımcılara, "Öğretmenlik uygulaması için gittiğiniz okuldaki uygulama öğretmeninizi, sizinle ve öğrencilerle kişisel ve mesleki ilişkileri, size olumlu ve olumsuz etkileri açılarından kısaca değerlendirebilir misiniz?" sorusu sorularak, uygulama öğretmenlerini kişisel ve mesleki açıdan değerlendirmeleri istenmiştir.

Veriler, içerik analizi yapılarak değerlendirilmiştir. Kodlanan veriler, benzerlikleri dikkate alınarak temalarda bütünleştirilmiştir.

BULGULAR

Katılımcıların verdikleri cevaplar analiz edilerek 80 kod çıkarılmıştır. Kodlar benzer özellikleri itibariyle öğrencilerle ilişkiler, mesleki özellikler, kişisel özellikler ve uygulama öğrencileri ile ilişki ve uygulama öğrencilerine etkisi temalarına ayrılmıştır. Her temanın altında alt temalar da oluşturulmuştur. Temalar ve özellikleri aşağıda açıklanmıştır.

1. Öğrencilerle İlişkiler

24 kod bu tema altında bütünleştirilmiştir. Kodlardan 15 tanesinin uygulama öğretmeninin öğrencileriyle olumlu ilişki kurduğuna, 5 tanesinin olumsuz ilişki kurduğuna, 4 tanesinin olumlu ilişki ile birlikte olumsuz ilişkilerine işaret ettiği görülmektedir.

Olumlu

Bu temada bütünleştirilen görüşlere göre, uygulama öğretmenleri; öğrencileri ile çok iyi iletişim kurmakta, öğrenciler arasında ayrım yapmamakta, öğrencilerine ismiyle hitap etmekte, bütün öğrencileriyle ilgilenmeye çalışmaktadır. Bir öğrenci bu durumu, "Beni etkileyen en önemli nokta, öğrenciler arasında ayrım yapmaması ve her öğrenciye adıyla hitap etmesi" şeklinde ifade etmiştir.

Olumsuz

Bu temada bütünleştirilen görüşlere göre, uygulama öğretmenleri öğrenciler arasında ayrım yaparak, öğrencilere kırıcı davranarak, azarlayarak hatta fiziksel şiddet uygulayarak öğrencilerin öğrenme isteklerini azaltabilmekte, özgüvenlerine zarar verebilmektedir. Bu durumu bir katılımcı, "Öğrenciler arasında ayrımcılık yapmakta, erkeklere karşı daha soğuk, şiddete meyilli, kızlara daha ılımlı tavır sergiliyor" şeklinde ifade etmiştir.

Hem Olumlu-Hem Olumsuz

Bu temada bütünleştirilen görüşlere göre, uygulama öğrencileri uygulama öğretmenlerinin öğrencileriyle ilişkilerini genel olarak olumlu bulurken bazı davranışlarını da olumsuz olarak değerlendirmektedirler. Bir katılımcı bu durumu "Öğrencilerine karşı bazen kırıcı olsa da ılımlı ve olumluydu, teneffüslerde öğrencilerle ilgiliydi" şeklinde ifade etmiştir. Bir başka katılımcı da "Öğrencilerin hepsine söz vermeye çalışıyor. Bunun yanında birkaç öğrenciyi azarladığını gördüm ve bir kez dövdü. Bu olumsuz bir olaydı, kırıcı sözler sarf edebiliyor" şeklinde ifade etmiştir.

2. Mesleki Özellikleri

16 kod bu tema altında bütünleştirilmiştir. Kodlardan 11 tanesinin uygulama öğretmeninin mesleğinde başarılı, kendini yetiştirmeye çalıştığına, 4 tanesinin klasik, yenilikçi olmayan, soğuk duruşuna vurgu yaptığı görülmektedir.

Yenilikçi

Bu temada bütünleştirilen görüşlere göre, uygulama öğretmenleri mesleğinde başarılı ve daha başarılı olmak için çabalamaktadırlar. Bir katılımcı bu durumu, "Mesleğinde gayet iyi ve daha iyisi için çabalamaktadır" şeklinde ifade etmiştir. Bir başka katılımcı da "Konu anlatımlarında bizden farklı stratejiler kullanmamızı isteyerek, kendisi de bu konularda bilgilenmek istedi" diye ifade etmiştir.

Geleneksel

Bu temada bütünleştirilen görüşlere göre, uygulama öğretmeni, öğretmen merkezli ders işlemekte, matematik öğretimine ilişkin yeni yöntem ve teknikleri kullanmamaktadır. Bir katılımcı bu durumu, "Ders anlatım tarzı çok eski, klasik ezbere dayalı anlatım tarzı beni üzdü" diyerek ifade etmiştir.

3. Kişisel Özellikler ve Uygulama Öğrencileri İle İlişki

Bu tema altındaki 25 koddan 14 tanesinin, uygulama öğretmeninin uygulama öğrencilerine karşı olumlu davrandığı, 1 tanesinin ise olumsuz özellikleriyle öne çıktığı görülmektedir. 10 kod da uygulama öğretmeninin kişisel özellikleriyle ilgili olup tümü olumlu alt teması içine yerleştirilmiştir.

Olumlu

Bu temada bütünleştirilen kodlara göre, uygulama öğretmenleri uygulama öğrencilerine, saygılı, sıcak, içten, yardımsever davranışlar sergilemektedirler. Uygulama öğrencileri, danışman öğretmenlerinin, insanlara karşı olumlu tutum içinde olmalarından ve kişilik özelliklerinden memnundurlar. Bir katılımcı bu durumu "Bana karşı, saygılı ve sıcak davranıyor. Bir isteğim olduğunda yardım etmeye çalışıyor, beni geri çevirmiyor" şeklinde ifade etmiştir.

Olumsuz

Bu temada bütünleştirilen kodlara göre, uygulama öğretmeni uygulama öğrencileri ile ilgilenmemekte, öğrenciye yeterli zaman ayırmamakta, dönüt vermemektedir. Bir öğrenci bu durumu, "Bizimle pek ilgilenmedi, bizimle sadece konu anlatacağımız zaman konuştu" şeklinde ifade etmiştir.

4. Uygulama Öğrencilerine Etkisi

Bu tema altındaki 15 koddan 11 tanesinde uygulama öğretmeninin uygulama öğrencisine olumlu etkisinin olduğu, 1 tanesinde olumsuz etkisinin olduğu, 3 tanesinde hem olumlu hem de olumsuz etkisinin olduğu görülmüştür.

Olumlu

Bu temada bütünleştirilen görüşlere göre, uygulama öğretmenleri uygulama öğrencilerine öğretmenlik mesleğini tanıtmış; örnek uygulamalar, davranışlar göstererek, onlara öğretmen olarak özellikle öğretmen-öğrenci iletişimi, sınıf yönetimi konularında kullanabilecekleri davranışları göstermişlerdir. Bir öğrenci bu durumu, "Bana etkisi daha çok olumlu yönde oldu, öğrencilerle nasıl güzel iletişim kurabileceğimi, dersimi nasıl işlersem verimli olabileceğimi, konu anlatım tarzımın nasıl olacağı konusunda etkili oldu." şekilde ifade etmiştir.

Olumsuz

Bu temada bütünleştirilen görüşlere göre, danışman öğretmenin uygulama öğrencisine olumsuz etkisi olmuştur. Bir öğrenci bu durumu, "Çok sert bir öğretmendi, bazen iş arkadaşlarına da sesini yükseltebiliyordu. Genelde öğrencileri azarlayarak disiplin altında tutmaya çalışıyordu. Beni olumsuz etkiledi" şeklinde ifade etmiştir.

Hem olumlu-Hem Olumsuz

Bu temada bütünleştirilen görüşlere göre, uygulama öğrencileri uygulama öğretmeninden genel olarak memnun olmalarına, kendilerini olumlu etkilediğini ifade etmelerine rağmen, öğretmenin bazı davranışlarından da rahatsız olduklarını dile getirmişlerdir. Bir öğrenci bu durumu "Gerek ders anlatımı, gerek sınıf yönetimi olsun son derece takdir ettiğim bir öğretmendi. Erkek öğrencilerin sınıfındaki dersini dinleyene kadar, onlara kaba davranıyor, hakaret içerikli konuşuyor. Bu yönünü beğenmiyor, hiç tasvip etmiyorum" şeklinde ifade etmiştir.

TARTIŞMA VE SONUÇ

1. Uygulama öğrencileri, uygulama öğretmenlerinin; öğrencileri ile çok iyi iletişim kurduklarını, ifade etmişlerdir. Saracaloğlu, Yılmaz, Çöğmen ve Şahin'in (2011) yaptıkları bir araştırmada da öğretmen adayları; uygulama öğretmeni sayesinde öğrencilerle nasıl sağlıklı iletişim kurulabileceğini öğrendiklerini ifade etmişlerdir. Ancak katılımcılar, uygulama öğretmenlerinden öğrencileriyle olumsuz ilişki kuranların da olduğunu ifade etmişlerdir. Demircan (2007)'ın yaptığı bir araştırmada da öğretmen adayları, uygulama öğretmenlerinin, uygulama öğrencilerini derse katabilecek; okul yaşantısına ısındırabilecek; uygulamayı istekli sürdürmelerini sağlayabilecek her hangi bir çaba göstermedikleri ve uygulamayı isteksizce sürdürdüklerini ifade etmişlerdir.

2. Katılımcılar, uygulama öğretmenlerinin mesleğinde başarılı ve daha başarılı olmak için çabaladıklarını ifade etmişlerdir. Saracaloğlu vd.'nin (2011), yaptıkları bir araştırmada da öğretmen adayları; alan bilgisi açısından uygulama öğretmenini yeterli gördüklerini ve yine uygulama öğretmeninin ders araç-gereçlerini etkin biçimde kullandıklarını ifade etmişlerdir. Ancak uygulama öğrencileri, geleneksel tipte uygulama öğretmenlerinin de bulunduğunu ifade etmişlerdir. Bu bulgu öğretmenlerden kendilerini yenileme ve geliştirme yönünde çaba göstermeyenlerinde olduğu düşüncesini ortaya çıkarmaktadır.

3. Uygulama öğrencileri uygulama öğretmeninin kendileriyle, olumlu ilişki kurduğunu ve öğretmenin kişilik özelliklerinden memnun olduklarını ifade etmişlerdir. Kale'nin (2011) yaptığı bir araştırmada da uygulama öğretmenlerinin uygulama öğrencilerine hakaret sayılabilecek bir söz ya da davranışlarının olmadığı görülmüştür. Ancak katılımcılar, uygulama öğrencileri ile ilgilenmeyen, olumsuz özellikler gösteren uygulama öğretmenlerinin de olduğunu belirtmişlerdir. Çelikkaya'nın (2011) yaptığı bir araştırmada da öğretmen adayları; ders işledikten sonra uygulama öğretmeniyle 10 dakikalık teneffüste ayaküstü bir iki dakika görüşebildiklerini bunun da hiç yeterli olmadığını ifade etmişlerdir.

4. Uygulama öğrencileri, uygulama öğretmeninin uygulama öğrencisine olumlu etkisinin olduğunu ifade etmişlerdir. Şişman ve Acat'ın (2003) yaptığı bir çalışmada da; öğretmen adaylarının, öğretmenliğin sosyal statüsüne, öğretmenliğin etik değerlerine ve kendi yeterliliklerine ilişkin algıları uygulama çalışmalarıyla olumlu yönde değişmiştir. Ancak katılımcılardan, uygulama öğretmenin, uygulama öğrencisine olumsuz etkisi olduğunu ifade edenlerde olmuştur. Kuzu ve Dursun'un (2006) yaptıkları bir çalışmada da, uygulamalar süresince gerek uygulama öğretmeninden gerekse de uygulama öğretim elemanından kaynaklanabilecek çeşitli sorunların öğretmen adayını olumsuz yönde etkileyebildiği görülmüştür (Akt: Becit, Kurt, ve Kabakçı, 2009).

ÖNERİLER

Uygulama öğretmenlerinin belirlenmesinde mesleğinde başarılı, insan ilişkileri ve mesleki yönden kedini geliştirmiş olmasına dikkat edilmelidir.

Uygulama öğretmenleri için uygulama öncesinde, uygulamada dikkat edilmesi gereken hususlar vb. konularda bir seminer programı hazırlanmalıdır.

Uygulama öğretmeni, uygulamadan sorumlu öğretim elemanı ve uygulama öğrencisi zaman zaman bir araya gelerek uygulamada karşılaşılan sorunları değerlendirmeli ve uygulamanın daha fazla etkili olması için yapılması gerekenleri belirlemelidir.

Farklı branşlarda benzer araştırmaların yapılarak araştırma sonuçlarına dayalı öğretmenlik uygulama ilke ve standartlarının belirlenmesi, öğretmenlik uygulamasının daha etkili olmasına ve dolayısıyla öğretmenlerin hizmet öncesinde iyi yetişmiş olmalarına yarar sağlayacaktır.

ABSTRACT: In the Mathematics curriculum which has been used since 2013 in Turkey, instead of transferring the knowledge, the teachers should include guiding activities for students during the classes. In order to carry out these activities in a proper way, it is necessary to create educational environment where students can understand these activities. In the studies carried out, a big majority of maths teachers support the idea that maths classes should be carried out in specially designed classrooms for maths. The purpose of this study is to identify the opinions of secondary school maths teachers on rotating class system. To do that, the "Teacher Questionnaire on Rotating Class System" developed by Ersöz was revised and administered to maths teachers.

The sample group of the study was maths teachers working at 10 official secondary schools of the Ministry of National Education at Ordu province during 2014-2015 academic year. All the maths teachers working at the aforementioned secondary schools were accessed and the questionnaire was administered on a total number of 41 maths teachers. And since the data in this study didn't have a normal distribution, nonparametric tests were used in the analyses. The analyses were conducted using SPSS 16.0 package programme. Whether there was a significant difference in teachers' opinions on rotating class system based on gender, seniority in the profession and whether they worked on a school where this system was used was analysed.

MATEMATİK ÖĞRETMENLERİNİN BRANŞ DERSLİK SİSTEMİNE BAKIŞ AÇILARININ BELİRLENMESİ (ORDU ÖRNEĞİ)

ÖZET: Ülkemizde 2013 yılından itibaren uygulanmakta olan Matematik öğretim programına göre öğretmenler derslerinde bilgiyi aktarmak yerine yol gösterici etkinliklere yer vermek durumundalar. Bu etkinliklerin sağlıklı bir şekilde uygulanabilmesi için bireylerin anlamalarını sağlayacak eğitim ortamlarının oluşturulması önemlidir. Yapılan çalışmalarda, matematik öğretmenlerinin büyük çoğunluğu, matematik derslerinin özel olarak düzenlenmiş dersliklerde yapılması görüşünü desteklemektedir. Bu çalışma ile amaçlanan, eğitim ortamı açısından ortaokul matematik öğretmenlerinin branş derslik sistemine ilişkin görüşlerinin belirlenmesidir. Bu bağlamda matematik öğretmenlerine Ersöz tarafından geliştirilen "Branş Derslik Sistemi Öğretmen Anketi" revize edilerek uygulanmıştır.

Araştırmanın örneklemini, 2014-2015 eğitim ve öğretim yılında Ordu İl merkezinde bulunan ve Milli Eğitim Bakanlığına bağlı 10 resmi ortaokulda görev yapan matematik öğretmenleri oluşturmaktadır. Bu okullarda görev yapan matematik öğretmenlerinin tamamına ulaşılarak toplam 41 öğretmene anket uygulanmıştır. Bu çalışmada veriler normal dağılım göstermediğinden analizlerde nonparametrik testler kullanılmıştır. Veriler SPSS16.0 paket programı ile analiz edilmiştir. Öğretmenlerin, branş derslik sistemine ilişkin görüşleri arasında anlamlı bir

fark olup olmadığı cinsiyet, mesleki kıdem ve daha önce bu sistemi uygulayan bir okulda çalışma durumlarına göre yoklanmıştır.

Araştırmanın sonucunda matematik öğretmenleri, okulda kendilerine ait bir matematik dersliği istediğini ve bu dersliklerin kendilerini motive edeceğini belirtmiştir. Ayrıca öğretmenler, matematik dersliğinde işlenecek dersler ile öğrencilerin derse ilgisinin artacağını, araç gereçlerin sınıflara taşınmasından kaynaklanan yıpranmaların azalacağını ve derslerinin daha verimli geçeceğini düşünmektedirler.

Anahtar sözcükler: branş derslik sistemi, eğitim, matematik

DEVELOPMENT OF A VALID AND RELIABLE ACHIEVEMENT TEST IN THE UNIT OF FORCE AND MOVEMENT

Dr. Şahin İdin
Assoc. Prof. Cemil AYDOĞDU

ABSTRACT: This study aimed to develop a valid and reliable measurement instrument in relation to subject of "Force and Movement" in order to measure student unit achievement in a seventh grade science course. In the scope of this study, an achievement test in the Force and Movement unit of seventh grade science course was developed in order to assess students' achievement in relation to this subject. The validity and reliability research of the test was ensured. The test included questions prepared originally in accordance with the Science and Technology course curriculum. Prior to develop the final version of the test, the test was presented to expert and in-service science teachers' opinion and then, a pilot study was conducted with 25 eighth grade students. The eighth grade students had studied the subject in the previous academic year. At this stage, incomprehensible and illegible test phrases, pictures, shapes and graphics were identified and required revisions were applied. After all, the revisions were made and test was finalized, it was implemented to 270 eight grade students in order to compute the validity and reliability coefficients of the test. In this study, the sampling is determined to be as Typical Sampling within the aimful sampling unit of non-random sampling method. The sample of the study includes 270 eight grade students that were studying in secondary schools located in three districts of Ankara in the first period of 2014-2015 academic years. The two of the schools included in the sampling were in Keçiören district and one was selected from Sincan district and one was selected from Çankaya district. The number of students participated in the test are 35 from School A, 95 from School B, 70 from School C and 70 from School D. The unit of Force and Movement includes the sub-topics of "Force and Movement, Simple Machines, Work, Energy and Power. This unit includes a total of 31 objectives. In this test, 62 multiple choice items were prepared in accordance with each objective. Each test item has equal points. In the test development process, first, the unit objectives were determined. The researchers cared about develop the test basing on the unit objectives. Additionally, the question banks on this unit, different science textbooks, questions asked in Secondary School Student Selection National Examination, Placement Test, PISA and TIMMS were examined before a total of 62 questions were prepared. The questions were originally prepared by the researchers. In order to provide the content validity, the test questions were reviewed by three science and technology teachers having at least a master degree and at least five years of professional experience. The unclear, uncompleted and improper question parts in terms of the content and student grade level were revised in accordance with the teacher feedbacks. After that, the test questions were examined by considering its content and format by an instructor in the Master of Science in Science Education Department. Finally, a specialist in the area of measurement and assessment reviewed the questions and resulting feedbacks developed the final version of the test. The experts' opinions on the finalized test are as following. The test represents the entire unit subjects. The language of the test is clear and the font size of the written texts, images, and shapes are eligible for the seventh grade students. The questions are appropriate to assess the determined objectives and two class hours are required to implement the test. The final comments of the in-service teachers and experts were applied to the test and the resulting number of questions was determined to be as 62. The test comprises multiple choice questions having four alternatives. The alternatives were constructed based upon to distracter answers. Accordingly, items with a discrimination value smaller than 0.20 is extracted from the test. It is identified in the analysis that, even though the item has discrimination value larger than 0.20, it was left blank by many students. In this case, required revisions to the question were applied in accordance with the expert opinions. The following are the samples to extracted and developed questions, respectively. The achievement test was implemented to eighth grade students who had studied the unit in the previous academic year. The Cronbach alpha reliability coefficient of the achievement test was found to be 0.804. Item analysis was conducted using the ITEMAN item analysis program. Based on to item analysis results, the item difficulty index was found to be 0,309 and the discrimination index as 0,367. The results revealed that the achievement test is a valid and reliable measurement tool. This achievement test can be used by researchers in scientific studies and it is recommended that science teachers should use it in their science course.

Key Words: Achievement test, force and movement, reliability, validity

Note: This study was compiled from a part of the doctoral dissertation of Şahin İDİN under supervision of Assoc. Prof. Cemil AYDOGDU. The research data was presented at ICEMST 2016.

DETERMINATION OF SCIENCE STUDENT TEACHERS' VIEWS RELATED TO COMPUTER SUPPORTED INSTRUCTION

Hava İPEK AKBULUT
Karadeniz Technical University Fatih Faculty of Education

ABSTRACT: The aim of the science and technology course is to ensure students to learn by doing. Students getting this course in a early age raises some problems like embody some abstract concepts, inability to observe some of the highlights. Computers are the one of the educational tools used in solving these problems in science teaching. Computers play an important role to concretize abstract concepts at a level student can understand, provision of animations in mind, doing the experiments which are difficult to observe in school environment, to repeat the experiments take time. Frequency of use of technology, science teachers, is closely related to be aware of technology and its benefits. How much knowledge they have acquired during his university years when they become teachers they will be more likely to use it. Therefore, to determine science student teachers knowledge and ideas on computer supported teaching and use of computer in science teaching, is expected to arrange training to eliminate misunderstandings and negative thoughts on using them.

The aim of this study was to investigate science and technology student teachers views about computer supported teaching and its contribution to science and technology courses. The study was carried out with eighty two student teachers in Fatih Faculty of Education at Karadeniz Technical University in Trabzon. Data obtained from a questionnaire composed of two open-ended questions was analyzed by using content analysis. Student teacher views are coded and in order to reflect prospective teachers opinions direct quotations were used. It has seen that prospective teachers defined computer supported materials as execution tool for courses, providing for effective teaching that appeals to the senses, supporting tool for teaching, a technique that facilitates education, a tool to prevent loss of time, teaching material. Prospective teachers views about contribution of computer to science and technology are to provide permanent learning, secure experiment doing tool, presentation tool, a method used to ensure effective teaching, a tool provides visuality and student participation, used to embody abstract concepts, used to increase students interest to courses, facilitates learning, draw attention.

Key words: science student teacher, computer supported teaching

FEN BİLGİSİ ÖĞRETMEN ADAYLARININ BİLGİSAYAR DESTEKLİ ÖĞRETİM İLE İLGİLİ GÖRÜŞLERİNİN BELİRLENMESİ

ÖZET: Fen ve teknoloji dersi kapsamında amaç öğrencilerin yaparak yaşayarak öğrenmelerinin sağlanmasıdır. Öğrencilerin küçük yaşlarda bu dersi alıyor olmaları bazı soyut kavramları somutlaştırma, bazı olayları gözlemleme imkanı bulamamaları gibi sorunları beraberinde getirmektedir. Fen öğretiminde bu sorunları çözmede kullanılan eğitim araçlarından biri de bilgisayarlardır. Fen öğretiminde, soyut kavramların öğrencinin anlayabileceği seviyede somutlaştırılması, zihninde canlandırmasının sağlanması, tehlikeli, gözlemlenmesi zor deneylerin sınıf ortamında öğrencilere izlettirilmesi, yapılması zor ve zaman gerektiren deneylerin tekrarlanması noktasında bilgisayarlar önemli rol oynamaktadır. Fen bilgisi öğretmenlerinin teknolojiyi kullanma sıklıkları, teknolojiden ve faydalarından haberdar olmaları ile yakından ilişkilidir. Üniversite yıllarında ne kadar çok bilgi edinirlerse öğretmen olduklarında sahip oldukları bu bilgileri de kullanma olasılıkları artacaktır. Bu nedenle bu çalışmayla fen bilgisi öğretmen adaylarının bilgisayar destekli öğretim ve bilgisayarın fen eğitiminde kullanımına ilişkin bilgi düzeylerinin ve düşüncelerinin belirlenmesinin sahip oldukları yanlış anlamaları ve olumsuz düşünceleri giderilmesi yönünde eğitimi düzenleme imkanı sağlayacağı düşünülmektedir.

Bu çalışmanın amacı, fen bilgisi öğretmen adaylarının bilgisayar destekli öğretim ve fen ve teknoloji dersine sağlayacağı katkılar ile ilgili görüşlerini araştırmaktır. Çalışma bir eğitim fakültesinin 3. sınıfında öğrenim gören 82 fen bilgisi öğretmen adayı yürütülmüştür. İki açık uçlu sorudan oluşan bir anket ile elde edilen veriler içerik analizi ile çözümlenmiştir. İçerik analizinden elde edilen verilerinden matrisler oluşturulmuştur. Öğretmen adayı görüşleri kodlanmış ve kodlardan temalar oluşturulmuştur. Temaların öğretmen adayları tarafından tekrarlanma sıklığına göre frekansları hesaplanmıştır.

Öğretmen adaylarının görüşleri incelendiğinde birçoğunun bilgisayar destekli öğretimi bilgisayarlı öğretim olarak tanımladıkları görülmektedir. Demircioğlu ve Geban (1996) tarafından yapılan çalışmada da bilgisayar destekli öğretimi "Bilgisayarların öğrenme ve öğretme ile ilgili bütün faaliyetlerde kullanılması" olarak tanımlamışlardır. Öğretmen adaylarının bilgisayarda yer alan power point, animasyon, vb. bilgisayar

programlarını ve birçok bilgisayar yazılımını derste sıklıkla kullandıkları için bilgisayar destekli öğretimi bununla ilişkilendirdikleri görülmektedir. Bu anlamda fen bilgisi derslerinde kullanılan bilgisayar yazılımlarının sorulan sorulara aynı anda cevap bulabilecekleri şekilde geri bildirimli, öğrencinin kontrol edebileceği, anlamadığı bir konuyu tekrar ve her istediğinde izleyebileceği şekilde görsellerle desteklenerek hazırlanması gerekmektedir (Demircioğlu ve Geban, 1996). Öğretmen adaylarının bilgisayar destekli öğretimle birlikte hazırlanan materyallerin göze ve kulağa hitap etmesi ile kalıcı öğrenmenin sağlandığını ifade ettikleri görülmektedir. Arslan, (2003)'ün yürüttüğü çalışmasında yer alan “Bilgisayarlar bütün duyu organlarına hitap etmediğinden yeterli bir biçimde işitsel yaşantı sağlayamamaktadır” şeklindeki anket maddesinin öğretmenler tarafından kabul edilmediği, bilgisayar destekli materyallerin hem göze hem de kulağa hitap eder nitelikte olduğunu belirttikleri görülmektedir. BDÖ'nün fen derslerinde kullanılması ile birlikte soyut olan fen kavramlarının somutlaştırılabildiği, sınıf ortamında yapılması, tekrarlanması zor olan deneylerin bilgisayar simülasyonları, animasyonları ile öğrenciye sunulmasına imkan sağladığı, öğrenciler için kalıcı öğrenme ortamı, görsel materyal zenginliği sunduğu, sınıf ortamına getirilemeyen bazı malzemelerin bilgisayar ortamından öğrencilere gösterilerek bilgi sahibi olmalarının sağlandığı, öğrencilerin derse ilgillerini çekmede etkili olduğu, öğrencilere tekrar yapma imkanı sunduğu, bireysel, kendi hızlarında çalışma imkanı sunduğu, ders anlatımlarının eğlenceli hale getirildiği, öğrenmenin kolaylaştırıldığı, zaman kaybının önlendiği, sunu aracı olarak sınıf ortamında kullanıldığı öğretmen adayları tarafından belirtilmiştir. Fen bilgisi öğretmen adayların büyük bir çoğunluğu BDÖ'nün fen ve teknoloji dersine fayda sağlayacağı görüşünü savunmuştur (Akpınar, Aktamış, Ergin, 2005). Bu sonuç yapılan diğer çalışmalar ile desteklenmektedir. Örneğin, Demircioğlu & Geban (1996) yapmış oldukları çalışmada geliştirdikleri geri bildirimli bilgisayar yazılımı sayesinde öğrencilerin anlamadıkları kavramlar ve anlatılan dersi tekrar incelenmesine fırsat tanındığı için kalıcı öğrenmenin gerçekleştirildiğini ifade etmişlerdir. Güven ve Sülün (2012)'nin yaptıkları çalışmada ise öğretmenlerin derslerde gerekli gördükleri yerlerde bilgisayarı destek aracı olarak kullanarak soyut kavramların somutlaştırılmasını sağladıkları, konu işledikten sonra çeşitli bilgisayar programları aracılığıyla uygulamalar yapmalarının öğrencilerin algılamalarını, bilgilerin kalıcılığını artırdığı bunun sonucu olarak da akademik anlamda başarılı olmalarında etkili olduğunu belirtmişlerdir. Ayrıca Karamustafaoğlu, Aydın ve Özmen (2005)'in yaptıkları çalışmada da benzer şekilde BDÖ uygulamalarında bilgisayar destekli yazılımlardan yararlanmanın soyut kavramlarla ilgili simülasyonların ve animasyonların kullanılmasının, anlamakta güçlük çekilen kavramları daha kolay yapılandırmaya olanak sağladığını belirtmişlerdir. Yapılan çalışmalarda fen bilgisi derslerinde sınıf ortamında zaman açısından, maddi açıdan ve güvenlik açısından yapılması zor olan deneylerin simülasyonlar sayesinde yapılarak öğrencilere izlettirilmesinin öğrenci açısından bir avantaj olduğu belirtilmektedir (Tekdal, 2002; Çelik, 2007; Genç, 2013). Benzer şekilde Daşdemir, Uzoğlu ve Cengiz, (2012) yaptıkları çalışmalarında animasyon destekli öğretim ile birlikte öğrencilerin akademik başarılarının, öğrendikleri bilgilerin kalıcılığının ve bilimsel süreç becerilerinin arttığını belirtmiştir. Akpınar, Aktamış ve Ergin (2005) ise yaptıkları çalışmada eğitim teknolojisinin fen bilgisi derslerinde kullanılmasının derse ilgiyi artırma, araştırma imkanlarını genişletme, öğrenmeye destek sağlama ve bu sayede başarıyı artırmada etkisi olduğu sonucuna varmışlardır. Yenice, Sümer, Oktaylar ve Erbil, (2003) yaptıkları çalışmada da kullanılan bilgisayar yazılımlarının uygulama yapma, problem çözme, tekrar ve yanlışları görebilme, geri dönme gibi işlemlerin öğrencilerin öğrenme düzeyini olumlu yönde etkilediği yönünde görüş belirttikleri görülmektedir. Bununla birlikte öğretmen adaylarının bazılarının bilgisayarın fen derslerinde sürekli kullanılmasının öğrencilerin doğa ile etkileşimine engel olduğunu, deneylerin ilk elden yapılması yerine bilgisayar ortamından izlettirilmesinin öğrenciye katkı sağlamadığını, kalabalık sınıflarda öğrenci dikkatinin çabuk dağılması sebebiyle BDÖ'nün uygulanmasında zorluklar yaşandığını ifade ettikleri görülmektedir.

Bilgi teknolojileri ile ilgili öğrenci tutumlarının öğretmen tutumlarından etkilendiği göz önüne alındığında öğretmen adaylarının bilgisayarların fen derslerinde kullanımı ile ilgili olumlu tutum geliştirilmeleri sağlanmalıdır. Öğretmen adaylarına fizik, kimya ve biyoloji derslerinde bilgisayarın farklı kullanım alanları ile ilgili örnek uygulamalar sunulmalı ve teknolojinin eğitim alanında kullanımı ile ilgili öğretmen adaylarının farkındalıkları artırılmalıdır. Bilgisayar dersinin fen bilimleri dersi ile ilişkisi kurulmalıdır ve öğretmen adaylarının bilgisayarı bir sunum aracı olarak kullanmalarından ziyade bir öğretim aracı olarak kullanmalarına teşvik edilmeleri sağlanmalıdır. Öğretmen adaylarına kullanımı kolay, kullanıcı dostu arayüzleri ve ihtiyaca uygun geniş ürün yelpazesi ile eğitim sürecine alternatif bir boyut getiren Web 2.0 teknolojileri anlatılarak bu teknolojiler ile bilgisayar destekli fen öğretimine yönelik materyaller geliştirmeleri sağlanabilir.

Anahtar sözcükler: fen bilgisi öğretmen adayı, bilgisayar destekli öğretim

MIDDLE SCHOOL STUDENTS' MODELING EXPERIENCES: A PAPER PLANE CONTEST PROBLEM

Neslihan ŞAHİN
Ondokuzmayıs University

Ali ERASLAN
Ondokuzmayıs University

ABSTRACT: Given the goals of mathematics education, it has become critical for students to understand and explain mathematical concepts and concept systems, test hypotheses, analyze and explain relationships as well as learn how to reconstruct. Today, it is not enough to only memorize the mathematical processes and then apply it to similar problem situations. To prepare students for their future beyond the school, it is required that students are able to gain experience on complex problem situations that help them to develop mathematical thinking and constructing new mathematical concepts. Mathematical model and modeling approach can be used for the solution of complex problems that represent real-life situations in which students have actively participated. Therefore, the purpose of this study is to examine 7th grade students' modeling processes while working on the *Paper Plane Contest Problem* and identified difficulties they confronted in the process.

This qualitative research was conducted during the 2015-2016 academic year, in a middle school in a large city along the Black Sea Region of Turkey. Participants were 7th grade students in a state school. Three students among them were selected as a focus group using criterion sampling technique. They then were given the *Paper Plane Contest Problem* and asked to work on this problem. They were video-taped while they were working on the problem. Mathematical thoughts and written responses of the seventh-grade students were analyzed using Blum and Ferri's modeling cycle. They explained the four phases of the modeling cycle as follows: At the *understanding the task* phase, in order to understand a problem that has been taken out of the context of daily life, the student performs tasks such as reading, imagining, drawing and reading tables that have been designed to bring simplification to the problem at hand. In *establishing models,* students create the data needed, find and recognize the relationship and rules, become aware of the patterns and form a hypothesis. In the *using mathematics* step, the students are expected to determine the appropriate mathematical concepts, perform the suitable mathematical operations and thus reach a mathematical solution at the end of these operations. The cycle ends with the students' checking the accuracy of what they have done, verifying the validity of the model by comparing the result with real life and reporting the solution, all of which make up the *explaining the results* phase, the last in the cycle. The order above is not a linear order (understanding the problem, setting up the model, mathematizing, explaining the result) but is the order of the thinking processes of the students in the study as they analyze the data.

In general, the results showed that students (a) had difficulties to understand the problem, (b) developed different strategies for required situations, and (c) selected winner for Best Overall while taking into account of each measurement. In addition, although students faced difficulties to make mathematical operations, they were able to work together in group to overcome this problem. In particular, while students in groups had difficulties to understand the *Paper Plane Contest Problem*, they separately developed different strategies for required situations. They also took into account of all variables and reached a solution in order to select winner for best overall. In addition, even though students had challenges to make mathematical calculations on the developed strategies, they overcame these challenges to discuss and work together. At the very beginning of modeling process, they misınterpreted the given data and had trouble to make sense of the variables presented in the problem. At the process of the establishing model, students selected and used appropriate parameters, worked on the different assumptions and successfully identified teams by using given data. Students then identified a new criterion (velocity) and made required calculations while taking into together account of the variables of *distance travelled in a straight path* and *time in the air* at the data table. However, they did not make any assumptions on the *scratches* in the given table and did not make any calculations on them. In the using mathematics step, students showed some difficulties to make mathematical calculations because of learning deficiency. But, they checked their solutions and corrected them when they reached different results and made new assumptions when they failed. As a result, these students interpreted mathematical and scientific knowledge presented in the data table; read data table; analyzed and represented the data, and made assumptions on them. They also worked in a group; wrote a report at the end; shared their results with each other.

Keywords: Paper Plane Contest Problem, Middle School Students, Mathematical Modeling, Model Eliciting Activity

INTRODUCTION AND ASSESSMENT OF A FORMATIVE ASSESSMENT STRATEGY APPLIED IN MIDDLE SCHOOL SCIENCE CLASSES: ANNOTATED STUDENT DRAWINGS

Nermin BULUNUZ
Uludağ Üniversitesi, İlköğretim Bölümü

«If a picture is worth a thousand words, perhaps drawing and
visualizing can help science students enhance their learning potential»
(National Science Teachers Association [NSTA], 2006, p.20)

ABSTRACT: Formative assessment is a teaching method that helps to determine the prior knowledge of students, schedule the course plan accordingly, give it the final shape based on the feedback received from students, and encourage conceptual learning. The aim of this study is to introduce the "annotated student drawings" as one of the common formative assessment strategies used in science courses in middle schools and to evaluate the practices. The study was conducted during the classes of two science teachers who are doing their master's degree. In total, 48 students participated in the study from 5^{th} (20) and 6^{th} (28) grades. For data collection tools, annotated student drawings on the concepts of "pollination" and "water cycle" before and after the intervention and the science teachers' feedback about the strategy were used. The pre and post-interventional annotated drawings of the middle school students were compared. On both concepts, it was several alternative conceptions from the students' pre-interventional annotated drawings that were recovered on the post-interventional drawings. The findings indicated that the annotated student drawings are fairly effective formative assessment strategies in uncovering the prior knowledge and alternative conceptions of students in class. After the intervention, the students' second drawings gave detailed information on how the students' level of understandings improved. Formative assessment techniques are suggested to be used by science teachers instead of traditional assessments in order to: 1) Getting info about their students' initial understanding; 2) Reshaping their classroom instruction according to the feedback they get from their students; and 3) Always revising their interventional methods until the students got the main idea during the teaching period.

Key Words: Science Education, formative assessment strategies, conceptual understanding

Nedim ALEV
K.T.Ü.

Tuncay ÖZSEVGEÇ
K.T.Ü.

Alpaslan ŞAHİNOĞLU
K.T.Ü.

ABSTRACT: The general aim of the current physics curriculum is to develop scientifically literate students and therefore encourage them to solve the cases or problems they faced using their scientific knowledge. Bearing teachers' roles in achieving these goals of the curriculum in mind, this study aims to determine physics teachers problems throughout the application of the existing curriculum. The participants of this case study are four physics teachers working in Anatolian High Schools. The participating physics teachers' actual practices were observed and video-recorded throughout four weeks. The video-recorded data consisting of 32-lesson hours were analyzed by using Nvivo9 software. Considering the pre-determined themes within the scope of this study, such as introductory activities, didactical structure of the lessons, teacher-student communication, student-centered approaches, assessment and evaluation, and classroom management, general state of current teachers' practices was analyzed and the basic problems encountered were determined. Findings revealed that the participating teachers had some issues in particular aspects of performing within the framework of the current curriculum, such as creating scientific debates, providing short repetitions or summaries towards the end of lesson, providing examples from daily life, linking topics or concepts, directing students to reach knowledge and using assessment-evaluation activities.

Key words: physics curriculum, self assessment

Öğretim programlarının yürütülmesinde ve başarılı olmasında büyük rol oynayan öğretmenlerin programlara karşı tutum, inanış ve görüşleri birçok araştırmaya konu olmuştur. Eğitim öğretimin paydaşları olarak düşünülen öğretmen-program-öğrenci üçlüsünün ortak hedefi nitelikli toplumu oluşturan bireyleri yetiştirmek olarak tanımlanabilmektedir. Nitelikli bireyler yetiştirme konusunda önemli bir yeri olan öğretim programlar ile o programların uygulayıcısı olan öğretmenlerin uyumu programların başarısını destekleyen en önemli etkenler arasında ilk sırada yer almaktadır. Bu durumla ilişkili olarak Karacaoğlu ve Acar (2010) öğretmenler yeni programlar vasıtasıyla kendi öğretim uygulamalarını değiştiremiyor veya uygulamada zorluk yaşıyorlarsa bu durumun programın yetersizliği olarak nitelendirilebileceğini ifade etmişlerdir. Bu bakış açısına göre birçok araştırmada da (Gömleksiz, 2005; Bümen, 2006; Gökleksiz, 2007; Aksu, 2008; Türkmen, 2010 ; Çiftçi ve Tatar, 2015; Uyar, 2016) belirtildiği gibi güncel gelişmelere paralel olarak kendi bilgisinden sorumlu, araştıran, sorgulayan bireylerin eğitimi için tek başına programların değiştirilmesi yeterli olmamaktadır. Buna göre radikal program değişiklikleri öğretmenlerin tutum, inanış ve uygulamaları ile bağdaşmazsa basit "teorik" değişimler olarak kalmakta ve sınıf içi uygulamalarda yer bulamamaktadır. Bilindiği gibi eğitim alanında reform olarak nitelendirilen bu değişim, geleneksel yaklaşımları sınıf dışına iterek yapılandırmacı öğrenme kuramını ön plana çıkaran çağdaş yaklaşımların uygulanması esasına dayanmaktaydı. Çağımızın gereklilikleri ile beslenen ve eğitim alanında öncü ülkelerde geniş uygulama alanı bulan bu yaklaşıma dayanan öğretim programları, haklı bazı gerekçeler nedeniyle ülkemizde istenilen nitelikte uygulanamamıştır. Değişime karşı gösterilen direnç, nasıl öğretilirse öyle öğretilir durumu, deneyimsizlik, hakimiyet kaygısı ve gerekli malzeme ve ortam eksikliği vb. bu konuya odaklanan çalışmaların (örn. Çepni ve Çil, 2009; Taşçı, 2011) ortaya koyduğu, programların uygulanmasını olumsuz yönde etkileyen, ortak nedenler arasında yer almaktadır.

Yukarıda yer alan nedenlerin önemli bir bölümünün öğretmenlerin bilgi, deneyim ve tecrübeleri ile ilgili olması öğretmenlerin programların başarı veya başarısızlığı üzerindeki etkilerini bir kez daha açık bir şekilde ortaya koymaktadır.

Bu durum, dikkate alınarak 2013 yılında revize edilen fizik dersi öğretim programlarının sınıf içi uygulamalarının analiz edilmesi ve öğretmen pratiklerin analizi için kullanılabilecek bir ölçeğin geliştirilmesi hedeflenmiştir. Bu amaçla çalışma kapsamında Trabzon ili ve çeşitli ilçelerindeki Anadolu liselerinin fizik derslerini yürüten toplam 4 öğretmenle çalışılmıştır ve katılımcı öğretmenlerin dersleri 4 hafta süresince toplam her öğretmen için sekiz saatlik ders gözlemleri gerçekleştirilmiş ve bu derslerin video kaydı alınmıştır. Bu çalışma kapsamında video kaydı alınan ders gözlemlerinin betimsel analizi sonucunda ders gözlem formu olarak da kullanılabilecek "Ders Değerlendirme Formu" geliştirilmiştir.
Öğretmenlerin mevcut durumlarını belirlemek için ilk gözlemlerden elde edilen kayıtlar önce transkript yapılmış ve bu transkriptlerin betimsel analizi sonucunda, bu çalışma kapsamında, ders gözlem formu olarak da kullanılabilecek "Ders Değerlendirme Formu (DDF)" geliştirilmiştir. Verilerin analizi DDF'de yer alan temalar altında Nvivo9 paket programı kullanılarak analiz edilmiştir. DDF 6 tema (Derse giriş faaliyetleri,Dersin didaktiksel analizi, Öğretmen-öğrenci iletişim analizi, Öğrenci merkezli yaklaşımlar, Ölçme-değerlendirme yaklaşımları, Sınıf yönetimi) ve 47 koddan oluşmaktadır. Bu bağlamda, ilk olarak, Nvivo'da ham veriler, temalar altındaki kodlara göre analiz edilmiş daha sonra bu kodlamadan öğretmenlere ait veri tablolar ve grafikler oluşturulup öğretmenlerin sınıf içi pratikleri belirlenmiştir.

Ders video kayıtlarının DDF ölçeği eşliğindeki analizi A teması[12] için katılımcı öğretmenlerin tamamının "*A2: Ön bilgileri yoklama-hatırlatma", A3: Dikkatin çekilmesi, A4: Güdüleme* ve *A5: Hedeften haberdar etme"* faaliyetlerinde bir takım eksikliklerinin olduğu saptanmıştır. B-Teması olan Dersin Didaktiksel Analizine[13] göre öğretmenlerin sınıf içi pratikleri incelendiğinde, FÖ2 ve FÖ4 kodlu öğretmenlerin *"B3: öğretimsel açıklamaların yapılması"* faaliyetini çok fazla yaptıkları ve öğretmen merkezli bir yaklaşım sergiledikleri görülmüştür. Diğer taraftan B teması altında ortak olarak *B1*,B2, *B4, B5, B11, B12, B13, B14ve B15*kodlu uygulamaların tüm öğretmenlerde eksik olduğu saptanmıştır.

Öğretmen-Öğrenci İletişimi[14] (C Teması) açısından katılımcıların pratikleri incelendiğinde *C5: Beden dilini kullanma; C6: Ses tonunu etkili bir biçimde kullanma* faaliyetlerinde bir takım eksikliklerin olduğu belirlenirken öğretmenlerin bu başlık altında yer alan diğer faaliyetler için nitelikli uygulamalar yaptıkları tespit edilmiştir. mevcut öğretim programının en önemli esaslarından olan Öğrenci Merkezli Yaklaşımlar[15] (D Teması) açısından ders kayıtları analiz edildiğinde ortak olarak öğretmenlerin eksik olduğu faaliyetlerin; *D2, D4, D7, D8, D9, D10* olduğu belirlenmiştir.

Eğitim öğretim faaliyetlerinin en önemli bileşenlerinden olan Ölçme Değerlendirme Yaklaşımlarına[16] (E teması) göre öğretmen pratiklerinin analizi, bu tema altında yer alan faaliyetlerin önemli bir bölümünde eksikliklerin olduğunu ve bunların eğitim sisteminde süre gelen bazı nedenlerden dolayı nitelikli bir şekilde gerçekleştirilemediklerini göstermektedir (örn. *Materyal ve gereç kullanma (Teknolojiden faydalanma); Performansa dayalı ölçme-değerlendirme araçlarını kullanma, Değerlendirme çalışmalarına (Sınav, portfolyo, sunu, proje ödevi...) dönüt verme, Ders içi performans ödevi verme)*. Son olarak F temasını[17] ait kodların uygulamasında öğretmenlerin ortak olarak *"F-1:Sınıf içi etkili hareketler"* konusunda eksik oldukları saptanmıştır.

---

[12] A1: Selamlama, sınıfa giriş; A2: Ön bilgileri yoklama-hatırlatma; A3: Dikkatin çekilmesi (örnek verme, soru sorma, karikatür vs.); A4: Güdüleme; A5: Hedeften haberdar etme

[13] B1: Bilimsel tartışmaların yapılması; B2: Öğrencilerin ders içerisinde etkili şekilde not tutmalarını teşvik etme; B4: Kasıtlı bilimsel tartışma ortamı hazırlama; B5: Dersin ana temalarını toparlayıcı açıklamalarda bulunma; B11: Ders sonu kısa tekrarlar; B12: Konu veya kavramları ilişkilendirme; B13: Ders sonu öğrenmeleri yoklama; B14: Günlük hayattan örnekler; B15: Bir sonraki dersin içeriğinden haberdar etme)

[14] C1; Karşılaşılan problem ve güçlüklere müdahale etme (Sınıf hâkimiyetini sağlama), C2; Gerginlik ve zıtlığın olduğu durumları kontrol altına alma, C3; Normlar, kurallar ve düzenlemeleri uygulama(Ahlaki davranışlar), C4; Öğrencilere isimleriyle hitap etme; C5; Beden dilini kullanma, C6; Ses tonunu etkili bir biçimde kullanma, C7; Sınıfta rahat bir öğrenme ve iletişim ortamı oluşturma)

[15] D-1: Konu anlatım sırasında düşündürücü kısa soru yapma (Alt düzeyde zihinsel aktivite, D-2: Öğrenciyi bilgiye ulaşma sürecinde zihinsel olarak aktif tutma, D-3: Öğrenciyi fiziksel olarak aktif tutma, D-4: Öğrenciyi bilgiye (yeni bilgiye) ulaştırma sürecini yaşatabilme, D-5: Öğrencinin cevaplarını, açıklamalarını dinleme ve dönütler verme, D-6: Öğrencinin yanlış yaptığında düzeltmesini sağlama ve yanlışının üzerine gitme, D-7: Öğrenciler arasında işbirliğinin olması, D-8: Bireysel aktivitelerin yapılması, D-9: Öğrenciye bilgiye ulaşma sürecinde rehber olma ve D-10: Öğrenci ihtiyacına göre esnek zaman planlaması yapma)

[16] E-1: Materyal ve gereç kullanma (Teknolojiden faydalanma), E-2: Geleneksel ölçme-değerlendirme araçlarının kullanma, E-3: Performansa dayalı ölçme-değ. araçlarını kullanma, E-4: Değerlendirme çalışmalarına (Sınav, portfolyo, sunu, proje ödevi...) dönüt verme, E-5: Ders içi performans ödevi verme ve E-6: Ders içi performans notu verme

[17] F-1: Sınıf içi etkili hareketler, F-2: İstenmeyen davranışı görmezden gelme ve F-3: Dışsal motivasyonu sağlama

Elde edilen bulgular, gözlenen öğretmenlerin etkili öğretimin gereklilikleri arasında yer alan sınıf içi faaliyetlerim uygulanmasında önemli eksikliklerinin olduğunu göstermektedir. Bir öğretim programının başarıya ulaşması öncelikle programın uygulayıcıları olan öğretmenlerin yeterlikleri ile ilgilidir. Bu konuda yapılan çalışmalar (Toptaş, 2006; Bulut, 2007; Özmantar vd. 2009), öğretmenlerin programlarda reform olarak nitelendirilen değişimi içselleştiremedikleri ve bu nedenle de uygulayamadıkları sonucunu ortaya koymuştur. Bu çalışma kapsamında kullanılan DDF'de yer A, B, C ve D Temalarının 2013 Fizik dersi öğretim programının çatısını oluşturan "temel beceriler ile öğrenme kuram ve yaklaşımları" ile ilişkili olduğu görülmektedir. Karakuyu (2008) yapmış olduğu çalışmada öğretmenlerin öğrencileri nasıl aktif hale getirmesi gerektiğine ilişkin gerekli tekniklere sahip olmadıklarına ve öğretmenlerin fizik dersini anlatmada günlük hayattan örnekler verme konusunda eksikliklerinin olduğuna vurgu yapmaktadır. Aynı şekilde bu çalışmada da özellikle öğrenci merkezli yaklaşımla ilişkili olarak "*D-2 öğrencilerin zihinsel olarak aktif tutma"* ve dersin didaktiksel analizi ile ilgili olarak "*B-15 günlük hayattan örnek verme* "konularında katılımcı öğretmenlerin sınıf içi faaliyetlerinin yeterli olmadığı tespit edilmiştir. Ölçme-değerlendirme ile ilgili sınıf içi faaliyetlerin analizi, katılımcı öğretmenlerin ölçme değerlendirme çalışmalarından faydalanmadıklarını ve buna bağlı olarak dönüt verme mekanizmasını nitelikli şekilde kullanmadıkları sonucunu ortaya koymuştur. Ölçme-değerlendirme açısından bakıldığında programın uygulanmasında Karacaoğlu ve Acar (2010) da programın ölçme-değerlendirme açısından uygulamada eksiklikleri olduğunu tespit etmiş ve bunu ders süresinin yeterli olmamasına bağlamışlardır.

Elde edilen sonuçlar, öğretmenlerin mevcut öğretim programlarını uygulama sürecinde desteklenmesi gerektiğini ortaya koymaktadır. Bu bağlamda belirli zamanlarda MEB tarafından tasarlanan ve uygulanan Hizmet İçi Eğitim Seminerleri ile ilgili akademik çalışmalar (Çelikten, Şanal ve Yeni, 2005; Öztürk ve Sancak, 2007) bu seminerlerin yetersizliğine işaret ederken bu çalışma kapsamında öğretmenlerin sürekli eğitiminin akademik başarıya, kariyer gelişimine ve kişisel gelişime olumlu katkılar sağladığı farklı araştırmacılar tarafından kabul edilen mentorluk uygulamaları (Kuzu vd. 2012) ile desteklenmesi önerilmektedir.

RELATIONSHIP OF MIDDLE SCHOOL STUDENT STEM INTEREST TO CAREER INTENT

Rhonda CHRISTENSEN
University of North Texas

Gerald KNEZEK
University of North Texas

ABSTRACT: Understanding middle school students' perceptions regarding STEM dispositions, and the role attitudes play in establishing STEM career aspirations, is imperative to preparing the STEM workforce of the future. Data were gathered from more than 800 middle school students participating in a hands-on, real world application curriculum to examine the relationship of the students' interest in STEM and their intentions to pursue a career in a STEM field. Among the middle school students who completed surveys for the MSOSW project, 46.6% expressed a desire to pursue a career in STEM at the time of the post test. Regarding alignment of positive interest in STEM with intent to purse a STEM career, middle school students who have stated that they plan to pursue a career in STEM, also show higher dispositions toward STEM and STEM career measures. Gender differences were also examined, resulting in the finding that middle school males generally have greater intent to pursue a career in STEM, and also show more positive interest in STEM areas. However, females appear to more positively react to the project activities presented in this study than males, so over the course of a project year females tend to "catch up." This is true regarding assessed STEM interest as well as stated intent to pursue a career in STEM. These findings provide additional contributions to the growing base of knowledge about the importance of middle school aspirations for STEM careers.

Keywords: STEM interest, career intent, gender, climate change

MOTIVATED STRATEGIES FOR LEARNING IN SCIENCE, ENGINEERING AND MATHEMATICS COURSES

Assoc. Prof. Aytaç Göğüş
Okan University, Faculty of Education, Educational Sciences

Assoc. Prof. Nihat Gökhan Göğüş
Sabancı University, Faculty of Engineering and Natural Sciences, Mathematics

ABSTRACT: This study presents college students' motivational orientations for courses from Science, Technology, Engineering and Mathematics (STEM). A self-report instrument including *Motivated Strategies for Learning Questionnaire* (Pintrich, Smith, Garcia, & McKeachie, 1991) was used in four courses of an international metropolitan university to investigate university students' motivation. This presentation discusses the students' motivational orientations by using six factors of motivation including control beliefs, intrinsic goal orientation, extrinsic goal orientation, self-efficacy, task value, test anxiety.

Motivated Strategies for Learning Questionnaire (MSLQ) was developed by Pintrich and De Groot (1990), revised by Pintrich and others (1991) and adapted to Turkish by Karadeniz and others (2008). Although MSLQ includes two parts, first part is to assess motivational orientations and second part is to asses learning strategies. This study is used only the first part, the motivation scale of MSLQ. The motivation scale includes six subscales (intrinsic goal orientation, extrinsic goal orientation, task value, control of learning beliefs, self-efficacy, and test anxiety) to assess students' motivational belief (Pintrich & DeGroot, 1990; Pintrich et al., 1991).

The subjects of the research consisted of 346 students from a metropolitan international university. Confirmatory Factor Analysis (CFA) was used in order to ensure whether the original factor structure of the motivation scale (MS) is valid for the current sample as well. According to goodness of fit (GOF) statistics for a model with 6 factors set in the scale, the results showed excessive latent correlation between two factors Intrinsic Goal Orientation and Task Value. Therefore, it was decided to combine these two factors, and thus, five-factorial model was accepted in this study. The internal consistency computed in terms of Cronbach's alpha and are presented in Table 1.

Table 1. Measures of Motivation Scale

Factors	Reliability (Cronbach-alpha)
Intrinsic Goal Orientation & Task Value	.87
Control Beliefs	.60
Extrinsic Goal Orientation	.71
Self-Efficacy	.92
Test Anxiety	.81

The combined subscales of Intrinsic Goal Orientation and Task Value (α=.87) represents perceived importance of class work (e.g., 'It is important for me to learn what is being taught in this class'), preference for challenge and mastery goals (e.g., 'I prefer class work that is challenging so I can learn new things'), and viewing course content and class materials as personally useful, interesting, and worth learning (e.g., 'I think I will be able to use what I learn in this course in other courses') (Pintrich & DeGroot, 1990; Pintrich et al., 1991).

The Control of Learning Beliefs subscale (α=.60) represents students' beliefs and efforts to learn in order to be able to have control over their level of achievement (e.g., 'If I study in appropriate ways, then I will be able to learn the material in this course') (Pintrich & DeGroot, 1990; Pintrich et al., 1991).

The Extrinsic Goal Orientation subscale (α=.71) assesses the degree to which a student participates in the academic task in to obtain good grades or rewards (e.g., 'Getting good grade in this class is the most satisfying thing for me right now') (Pintrich & DeGroot, 1990; Pintrich et al., 1991).

The Self-Efficacy subscale (α=.92) represents confidence in performance of class work (e.g., 'I'm certain I can master the skill being taught in this class') (Pintrich & DeGroot, 1990; Pintrich et al., 1991).

Test Anxiety subscale (α=.81) represents students' concerns and cognitive interference on tests (e.g., 'When I take a test I think about how poorly I am doing compared with other students') (Pintrich & DeGroot, 1990; Pintrich et al., 1991). Higher scores on this scale reflected greater test anxiety.

The current study showed that the construct of four subscales (Control Beliefs, Extrinsic Goal Orientation, Self-Efficacy, and Test Anxiety) functioned well with university students in STEM courses, while the combined two subscales (Intrinsic Goal Orientation and Task Value) was considered that they measured the same feature by differently its original form as in the MSLQ.

Keywords: motivational orientations, university students, STEM, MSLQ.

PROPERTIES OF EDUCATIONAL GAMES FOR MATHEMATICS: IOS APPLICATIONS FOR ARITHMETIC OPERATONS

Doç.Dr.Ayfer ALPER
Ankara Üniversitesi

İhsan Balkan
Ankara Üniversitesi

Games are stated as whether goal-oriented or not, performed regular or irregular, in which children take part in willingly and delightfully, which is a basic for physical, cognitive, language, emotional and social development, a part of a real life and the most effective learning process (Dönmez, 1992). Games are an activity which effects the character of children totally in a broad sense (Gürün, 1984).

In several studies in which the effects of educational games to the learning process, the findings that the games positively affect the success and attitude towards lessons (Taşlı, 2003; Yıldıran, 2004; Tural, 2005; Songur, 2006; Yurt, 2007; Yağmur, 2013); the students actively participate in the lessons when the subjects are learned via educational games and activities (Stupiansky, Stupiansky and Nicholas, 1999; Geer (1992); learning with games help students develop new skills in their knowledge and comprehension levels (Monroe and Nelson, 2003); and the learnings supported by games are more permanent (Altunay, 2004) have been figured out (cited by Duran and Kaplan, 2014).

As a result of recently performed studies; it is observed that by mathematical games and game assisted teaching, the attitude and success level towards mathematics is increasing day by day (Aksoy, 2010; Clark & Ernst, 2009; Kablan, 2010). Accordingly, especially in digital platforms, as in many disciplines, many games are recently being developed also in Mathematics and the children are enabled to play. However, considering that these games are not only fun aimed and they have educational aspects, these kinds of games should have some specific characteristics.

The method of the study has been determined as document research. Document research is called to obtain data by analysing written documents including information on facts and events about the research subject in the scope of research. A great deal of information about the research area can be obtained by document research without needing interview or observation. Documents such as the reports, books, archive files, video and voice recordings and photographs about the research subject should be analysed systematically by controlling the originality (Yıldırım and Şimşek, 2008).

Study Group: The games, performed by IOS applications which include four mathematical operations used in Mathematic education, form the study group. 25 IOS applications in http://www.edshelf.com platform and in App Store have been selected for this study. .

Data Collecting Tool: For evaluating the chosen applications for the study in educative aim, some criteria have been developed and opinions have been taken from five experts in the area. Obtained criteria are as follows:

1. The level of the classroom and the questions
2. Chronometry in the games
3. Question types in the games
4. Clues in the games
5. True or False notifications at the end of the games

In none of the 25 games researched in the scope of the study, a class level selection takes place at the beginning in the game. In most of the games, speed is important for the players because time is measured. In the games, multiple choice and open ended questions are used. In very few of the games clues are given to lead the students to the correct answers or to provide to correct the wrong answers. In very few of the games players learn the correct answer when they make a mistake.

As a result of the performed research, it could be uttered that, generally, in the design of the educational games, "educative" dimension has not been taken into consideration. Accordingly, to the studies to be performed hereafter it would be recommended that criteria having importance in the design of educational games should be determined and appropriate designs should be developed according to those criteria.

STUDENT VIEWS WITH REGARD TO THE WEB-BASED PROBLEM SOLVING METHOD

Baris EMLEK
Selcuk University, Cumra Vocational School / Turkey

Ahmet Oguz AKTURK
Necmettin Erbakan University, Eregli Faculty of Education / Turkey

ABSTRACT: The purpose of this study is to determine the views of 2nd year students at a university who received the Programming course designed in accordance with the Web-based Problem Solving Method about the said method (WBPSM). The views of 11 students selected from among the 29 students who had taken the course on a voluntary basis were elicited concerning WBPSM. In this study, in which the qualitative research method was used, the semi-structured interview technique was used as the data collection instrument. The interview form, which consisted of 12 open-ended questions, was administered to the 11 students, who had taken the course. As a result of the analysis of the data obtained from the students, it was seen that the students had stated that WBPSM supported individual learning, raised interest in the course, ensured non-spatial learning, increased their self-confidence in learning on their own, gained them problem solving ability, enabled them to assume responsibility in learning, encouraged them investigate, saved time and that it was applicable for other courses, too.

Key words: Web-based learning, Problem solving, Qualitative research.

THE EFFECTS OF KINDS AND NUMBERS OF TECHNOLOGY EDUCATION ON TEACHERS' PERCEPTIONS OF TECHNOLOGIC-PEDAGOGIC KNOWLEDGE, ACCESS TO TECHNOLOGY TOOLS AND SUPPORT OF USE OF TECHNOLOGY TOOLS

Özhan KARACA
Department of Computer and Teaching Technologies

Prof. Dr. İlhan VARANK
Department of Computer and Teaching Technologies

ABSTRACT: In this study, investigate in service technological educational with and without teachers to different variables(Perceptions of Technological Pedagogical Knowledge, Perception Towards the Use of Technology and Perceptions Towards Technological Instruments to Access) whether significant differences between perceptions.

Research questions is formed technological-pedagogical knowledge perceptions, perceptions regarding the use of technology and teachers receive support on the use of technology and encountered barriers with related according to teachers taken different technological education (Fatih Project Technology Education, General Technology Education and Their Self-study) whether significant differences between perceptions of teachers and according to number of teachers taken different technological education [taken 1,2 or 3 training (Fatih Project Technology Education, General Technology Education and Their Self-study)] technological-pedagogical knowledge perceptions, perceptions regarding the use of technology and teachers receive support on the use of technology and encountered barriers with related whether significant differences between perceptions of teachers.

Working group is formed (297) branch teachers who in service technological educational with and without teachers 2014-2015 academic year of working in middle schools and high schools in Konya. In this study, data were collected through questionnaires and survey, "personal information" and "Questionnaire" is made up of parts.

Personal information is formed gender, age, graduation, length of service, branch, types of schools made the task, the use of technology level, access status to the technology needed in schools, the case of teacher training about technological information. The part of survey is formed 4Likert-type(Absolutely I agree, I agree, I disagree, strongly disagree) 40 questions which using teachers' perceptions of technology, pedagogical beliefs, technological beliefs, teachers receive among support on the use of technology and encountered barriers to determine how a relationship.

Alpha reliability coefficient was calculated for each a scale on item of scale and on the overall survey scores is made the Shapiro-Wilk normality tests. None of the scale total score was normally distributed($p<.05$). This conclusion is based on non-parametric Kruskal-Wallis test was used in order to determine whether significant differences in intra-group to answer of two research questions and Mann-Whitney U test was used to compare pairs subgroups (types of technology training and technology training received numbers).

Research results have been shown to have effects on different perceptions (technological-pedagogical knowledge perceptions, perceptions regarding the use of technology and perception of teachers received support on the use of technology and encountered barriers) about technology, technology-in service training of teachers making both negatively and positively.

Key words: Technology education, in-service training, technological pedagogical perception, use of technology, integration

ÖĞRETMENLERİN ALDIKLARI FARKLI TEKNOLOJİ EĞİTİMLERİNİN VE BU EĞİTİMLERİN SAYILARININ ÖĞRETMENLERİN TEKNOLOJİK PEDAGOJİK BİLGİ ALGILARINA, TEKNOLOJİK ARAÇLARIN ERİŞİMİNE YÖNELİK ALGILARINA VE TEKNOLOJİK ARAÇLARIN KULLANIMINA YÖNELİK DESTEK ALGILARINA ETKİSİ

ÖZET: Bu çalışmada, hizmet içi teknoloji eğitimi alan ve almayan öğretmenlerin farklı değişkenlere[Teknolojik Pedagojik Bilgi Algıları (TPBA), Teknoloji Kullanımına Yönelik Algıları (TKYA) ve Teknolojik Araçların Erişimine Yönelik Algıları (TAEYA)] göre algıları arasında anlamlı farklılık olup olmadığı araştırılmıştır. Araştırma soruları, öğretmenlerin aldıkları farklı teknoloji eğitimine göre (Fatih Projesi Teknoloji Eğitimi, Genel Teknoloji Eğitimi ve Kendi Kendine Çalışma) teknolojik-pedagojik bilgi algıları, teknoloji kullanımına yönelik algıları ve teknoloji kullanımına ilişkin aldıkları destekler ve karşılaştıkları engeller ile alakalı algıları arasında anlamlı farkın olup olmadığı ve öğretmenlerin aldıkları farklı teknoloji eğitimi sayısına göre [1, 2 veya 3 tane eğitim alan) Teknoloji Eğitimi, Genel Teknoloji Eğitimi ve Kendi Kendine Çalışma] teknolojik-pedagojik bilgi algıları, teknoloji kullanımına yönelik algıları ve teknoloji kullanımına ilişkin aldıkları destekler ve karşılaştıkları engeller ile alakalı algıları arasında anlamlı farkın olup olmadığı ile alakalı sorulardan oluşmuştur.

Çalışma grubu FATİH Projesi kapsamında hizmet içi eğitim alan ve almayan 2014–2015 Eğitim-Öğretim yılında Konya'da orta okullarda ve liselerde görev yapan (297) branş öğretmenlerinden oluşmuştur. Bu araştırmada veriler anket yoluyla toplanmış ve anket, "Kişisel bilgiler" ve "Anket" kısımlarından oluşmuştur. Kişisel bilgiler kısmı; cinsiyet, yaş, mezuniyet, hizmet süresi, branş, görev yapılan okul türü, teknoloji kullanım seviyesi, okuldaki ihtiyaç duyulan teknolojiye erişim durumu, teknolojik bilgi konusundaki öğretmenlerin eğitim durumundan oluşmakta, anket kısmı ise öğretmenlerin teknoloji kullanma algıları, pedagojik inançları, teknolojik inançları, teknolojiyi kullanmada aldıkları destekler ve teknolojiyi kullanmada karşılaştıkları engeller arasında nasıl bir ilişki olduğunu belirlemeye yönelik 4'lü likert tipi(kesinlikle katılıyorum, katılıyorum, katılmıyorum, kesinlikle katılmıyorum) kırk tane sorudan oluşmaktadır.

Ölçek maddeleri üzerinden her bir ölçeğin alfa güvenirlik katsayısı hesaplanmış ve toplam anket puanları üzerinde de Shapiro-Wilk normallik testleri yapılmıştır. Ölçeklerin toplam puanlarının hiç birisi normal dağılmamıştır ($p<.05$). Bu sonuca göre iki araştırma sorusunun cevabı için grup içi farkların anlamlı olup olmadığını belirlemek amacı ile parametrik olmayan Kruskal-Wallis testi ve alt grupları (teknoloji eğitimi çeşitleri ve alınan teknoloji eğitimi sayıları) ikişerli karşılaştırmak için Mann-Whitney U testi kullanılmıştır.

Araştırma sonucunda hizmet içi teknoloji eğitimlerinin yapılmasının öğretmenlerin teknoloji konusundaki farklı algıları (Teknolojik Pedagojik Bilgi Algısı, teknoloji kullanımına yönelik algıları ve teknoloji kullanımına ilişkin aldıkları destekler ve karşılaştıkları engeller ile alakalı algıları) üzerinde hem olumlu hem de olumsuz yönde etkilere sahip olduğu görülmüştür.

Anahtar Sözcükler: Teknoloji eğitimi, hizmet içi eğitim, teknolojik pedagojik algı, teknoloji kullanımı, entegrasyon

INVESTIGATION OF OPINIONS OF PRE-SERVICE TEACHERS REGARDING ONLINE CASE STUDY LIBRARY (fatih2023.net)

ÖZET: Bu araştırmanın amacı, öğretmenlerin Fırsatları Artırma ve Teknolojiyi İyileştirme Hareketi (FATİH) Projesi uygulamalarını kullanma durumlarının öğretmen adayları tarafından gözlemlenmesi ile oluşturulan etkileşimli-çevrimiçi bir örnek olay kütüphanesine yönelik öğretmen adaylarının görüşlerinin incelenmesidir. Bu amaç doğrultusunda, oluşturulan örnek olay kütüphanesi Coğrafya Öğretmenliği bölümündeki öğretmen adaylarının öğretmenlik uygulaması dersinde kullanılmıştır. Daha sonra, örnek olay kütüphanesinin eğitsel olarak işlevselliğine yönelik öğretmen adaylarının görüşlerine başvurulmuştur. 11 öğretmen adayının katıldığı araştırmada veri toplama aracı olarak yarı-yapılandırılmış görüşme formu kullanılmıştır. Elde edilen veriler NVivo 10 programı yardımı ile nitel araştırma yöntemlerinden betimsel analiz ile incelenmiştir. Elde edilen verilerin analizine göre araştırma bulguları beş tema altında toplanmıştır. İlgili temalar şu şekildedir: öğretmen adayı olarak sağladığı fayda, öğretmenlikte akıllı tahtaları kullanma, öğretmenlikteki pedagojik yaklaşım, örnek olayların öğretmenlikte sağlayacağı fayda, teknolojiyi kullanan öğretmenin dikkat çekmesi. Çevrimiçi kütüphanede yer alan örnek olayların incelenmesi öğretmen adaylarında *"ben olsam bu durumda ne yapardım düşüncesi", "gelecekteki sınıf-içi problemlere yönelik farkındalık", "teknik bir sorunu gidermede yetersiz hissetme", "öğretimde kullanılan yazılım farkındalığı"* oluşmasını sağlamıştır. Öğretmen adaylarının göre empati ve farkındalık düzeylerine katkı sağlayan çevrimiçi etkileşimli web sayfası öğretmen eğitiminde kullanılabilir.

Anahtar Kelimeler: FATİH Projesi, Örnek Olay, Veri Kütüphanesi, Öğretmen Eğitimi

ÇEVRİMİÇİ ÖRNEK OLAY KÜTÜPHANESİNE (fatih2023.net) İLİŞKİN ÖĞRETMEN ADAYLARININ GÖRÜŞLERİNİN İNCELENMESİ

ABSTRACT: The purpose of this study is to examine pre-service teachers' opinions regarding an interactive online case study library which contains in-service teachers' use of technologies provided by the Movement of Enhancing Opportunities and Improving Technology (FATIH) Project. For this purpose, the case study library designed was utilized in teaching practice classes of pre- service teachers who study at the department of geography education. Afterwards, pre-service teachers have been asked about the educational functionality of the library. A semi-structured interview form was used to collect the data in the study in which 11 pre-service teachers participated in. The obtained data were analyzed by descriptive analysis of qualitative research methods using NVivo 10. According to the analysis of the data obtained, research findings are grouped under five themes. Related themes are as follows: benefits as a candidate, using interactive whiteboards in teaching, pedagogical approaches in teaching, benefits of the case studies in teaching, and drawing attention of a teacher who uses technology effectively. Pre-service teachers' examination of the case studies in the online library has contributed them in these subjects: *"thinking of what I would do in this situation", "awareness for future in-class problem", "feeling incapable of solving a technical problem" and "software awareness used in education."* According to the pre-service teachers, online interactive web site that increases the level of empathy and awareness can be used in teacher education.

Keywords: FATIH Project, Case based library, Teacher education

NOT: Bu çalışma, Türkiye Bilimsel ve Teknolojik Araştırma Kurumu (TÜBİTAK) tarafından desteklenen 113K302 numaralı "FATİH Projesi Uygulamalarının Teknolojik-Pedagojik-Alan Bilgisi (TPAB) Çerçevesinde Gözlemlenmesi ve Çevrimiçi Örnek Olay Kütüphanesi Oluşturulması" başlıklı proje kapsamında hazırlanmıştır. Yazarlar, bu çalışmaya desteğinden dolayı TÜBİTAK'a teşekkür eder. Bu çalışma, ilk yazarın proje kapsamında yapılan doktora tezinden üretilmiştir.

GİRİŞ

2010 yılı Kasım ayında kamuoyuna duyurulmuş olan FATİH Projesi ile e-dönüşüm kapsamında üretilen ve bilgi toplumu olma sürecindeki faaliyetleri tanımlayan Bilgi Toplumu Stratejisi Belgesi, Kalkınma Planları, MEB Stratejik Planı ve Bilişim Teknolojileri (BT) Politika Raporunda yer alan hedefler doğrultusunda 2015 yılı itibariyle dersliklere BT araçları sağlanarak, BT destekli öğretimin gerçekleştirilmesi amaçlanmıştır (MEB, 2015). FATİH Projesinin uygulandığı okullardan mezun olan bireylerin bilgi ve teknolojiyi gündelik ve iş yaşamlarında etkin kullanmaları ile ülkemizin bilgi toplumuna dönüşümü hedeflenmektedir. Bilgi ve iletişim teknolojileri eğitim sürecinin temel araçlarından birisi olduğundan öğrenci, öğretmen ve eğiticiler tarafından bu teknolojilerin etkin kullanımı amaçlanmaktadır (Bilici & ark., 2011). FATİH Projesinde, eğitim ve öğretimde fırsat eşitliğini sağlamak ve okullarımızdaki teknolojiyi iyileştirmek amacıyla BT araçlarından öğrenme-öğretme sürecinde daha fazla duyu organına hitap edecek şekilde; tüm okul kademelerindeki 570.000 dersliğe etkileşimli tahta ve internet altyapısı sağlanacaktır. Proje kapsamında, öğrencilere ve MEB bünyesinde çalışan bütün öğretmenlere tablet bilgisayarlar verilecektir. BT den etkin bir şekilde yararlanılması için öğretmenlere hizmet içi eğitimde verilecek olan FATİH Projesinde, öğretim programları BT destekli öğretime uyum için e-içerikler oluşturulacaktır. Bu kapsamda, eğitimde FATİH Projesinin beş temel bileşeni bulunmaktadır (MEB, 2015).

- Donanım ve Yazılım Altyapısının Sağlanması
- Eğitsel e-İçeriğin Sağlanması ve Yönetilmesi
- Öğretim Programlarında Etkin BT Kullanımı
- Öğretmenlerin Hizmet-içi Eğitimi
- Bilinçli, Güvenli, Yönetilebilir ve Ölçülebilir BT Kullanımının Sağlanması

Çevrimiçi Örnek Olay Kütüphaneleri

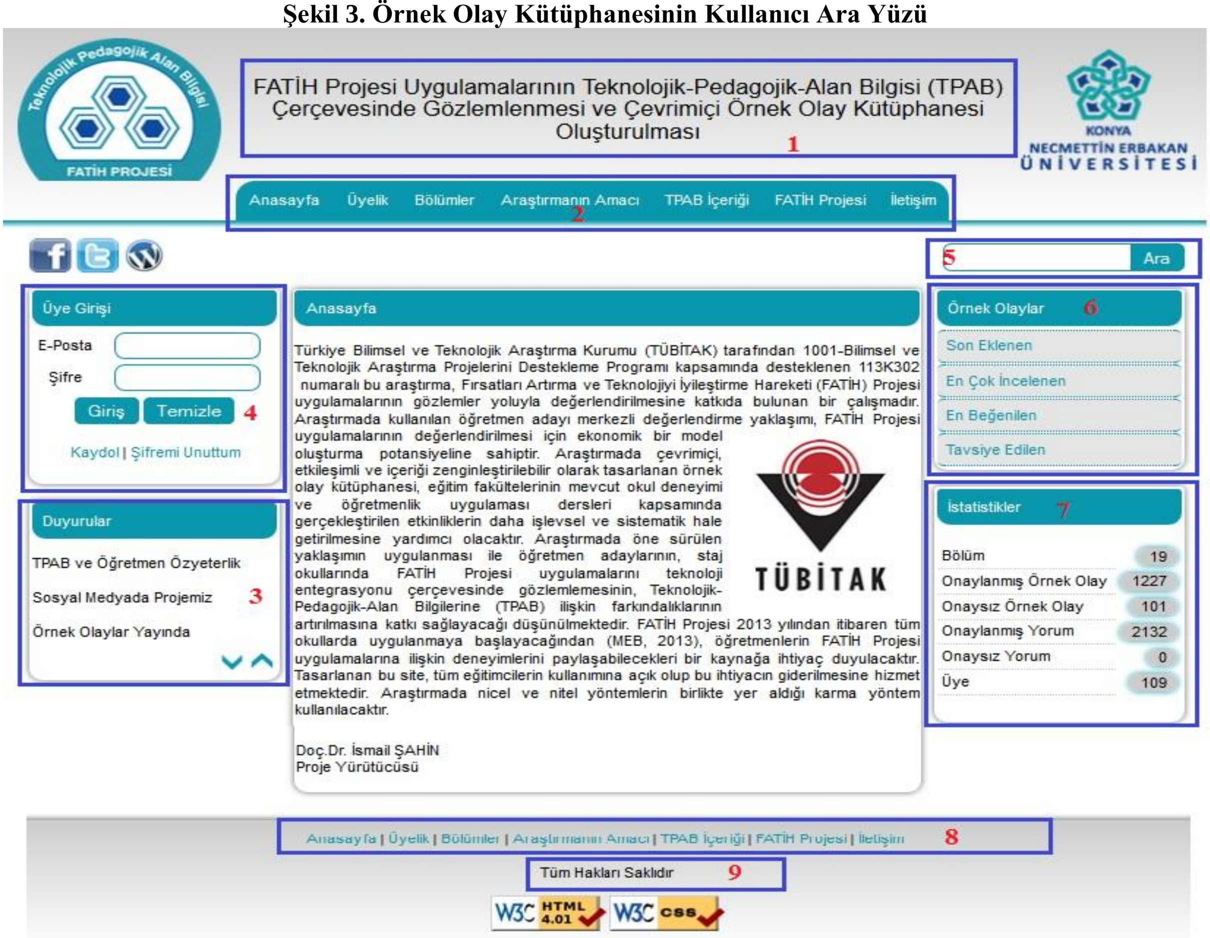
Örnek olay yöntemi, hem bir öğretim yöntemi (Güçlüol, 1985; Küçükahmet, 2001) hem de bir araştırma modeli (Karasar, 2005; Nisbet & Watt, 1984; Yıldırım & Şimşek, 1999) olarak kullanılmaktadır. Araştırma modeli olarak örnek olay yöntemi, güncel bir olguyu kendi gerçek yaşam çerçevesi içinde çalışan, olgu ve içinde bulunduğu içerik arasındaki sınırların kesin hatlarıyla belirgin olmadığı ve birden fazla kanıt veya veri kaynağının mevcut olduğu durumlarda kullanılan, görgül bir araştırma yöntemi olarak tanımlanabilir (Yıldırım & Şimşek, 1999). İlk olarak 1910 yılında Harvard Üniversitesi Hukuk Fakültesinde bir öğretim yöntemi olarak kullanılan örnek olaylar, ilerleyen zamanlarda tıp eğitimi, ekonomi ve diğer sosyal bilimler alanlarında da giderek yaygınlaşmıştır (Kimbal, 2006). Gerçek yaşam deneyimleri ile öğrencileri yüz yüze getirerek öğretim ortamında kuram ve uygulama arasındaki boşluğun doldurulmasına yardımcı olan bir yöntem olarak belirtilen (Stensmo, 1999) örnek olay yönteminin öğretmen eğitiminde kullanılması üzerine ilk çalışmalar Shulman (1988) tarafından yapılmıştır. Shulman eğitim fakültesinde çalışan birçok akademisyenin yaşadıkları okul tecrübelerinden bölümler ve örnekler sunan örnek olaylarla çalıştıklarını belirtmiştir. İlgili alanyazın incelendiğinde örnek olay kütüphaneleri, kullanıcıların gerçek durumlara ait örnek olaylara ilişkin hikâyelere ulaşabilecekleri çevrim içi ortamlar olarak tanımlanabilir (Hughes, Packard, & Pearson, 2000; Kurz, Llama, & Savenye, 2008; Şahin & ark., 2010). Örnek olay kütüphanesinin çevrim içi olması web 2.0 teknolojileri ile etkinliklerin kalitesini yükseltmekte ve öğrenenlerin herhangi bir mekana bağımlı kalmaksızın içeriği derinlemesine analiz edip tartışmalarına olanak sağlamaktadır. Çevrimiçi ortamlardaki örnek olay kütüphanelerinde, örnek olayda geçen problemlerle ilgili olarak öğrenci, uzman veya öğretmenlerin bakış açılarını anında görebilir. Buna ek olarak, öğretmen öğrenciye eş zamanlı olarak geribildirim verebilir. Üstelik metin, video, animasyon ve hikaye gibi öğretimsel multimedya bileşenleri, örnek olaydaki kavram ve ilkelerle ilgili zengin bir anlayışı kazanmalarına yardım edebilir (Uluyol, 2011). Alanyazın incelendiğinde örnek olay yönteminin teknoloji entegrasyonu kapsamında da kullanıldığı görülmektedir. Yapılan bir çalışmada, Geleceğin Öğretmenlerini Teknoloji Kullanmaya Hazırlama Programı (Preparing Tomorrow's Teachers to use Technology-PT^3) kapsamında teknolojinin öğretime entegrasyonu konusunda özellikle kuram ve sınıf uygulamaları arasındaki boşluğu gidermek amacıyla çoklu ortam destekli örnek olayların önemine değinilmiştir. İlgili çalışmada örnek olay, öğretim yönteminin yazılı biçimden video ve çoklu ortam biçimine geçiş sürecini ele alarak, çoklu ortam destekli örnek olayların öğretmen adaylarının teknoloji entegrasyon bilgisini geliştirdiği sonucuna ulaşılmıştır (Monroe-Baillargeon, 2002).

FATİH Projesi Uygulamalarına Yönelik Örnek Olay Kütüphanesi

Prof.Dr.İsmail ŞAHİN'in yürütücülüğünü yaptığı 113K302 numaralı TÜBİTAK projesi kapsamında bir örnek olay kütüphanesi oluşturulmuştur. Bu kütüphane, web-tabanlı olarak geliştirilmiş olup "Örnek Olaylar", "Araştırmanın Amacı", "TPAB İçeriği", "FATİH Projesi", "İletişim" gibi menüleri içermiştir. Web sitesinin geliştirilmesinde, ADDIE Tasarım Modeli'nden yararlanılmıştır. Bu web sitesinde, öğretmen veya öğretmen adayları (okul türü, konu alanı, sınıf düzeyi, okul yerleşim bölgesi veya kullanıcı tanımlı anahtar kelimeler gibi) farklı değişken veya kritere göre örnek olay sorgulaması yapılabilir. Ayrıca, listelenen sonuçlar, örnek olay başlığı, eklenme tarihi, kullanıcı derecelendirmesi, görüntülenme sayısı gibi ölçütlere göre sıralanabilir. Bu sistemin web tabanlı olması; yeni verilerin eklenmesi, güncellenmesi ve bu verilere her zaman ulaşılabilir olması açısından önemlidir. Bu sitede yer alan örnek olaylara kullanıcılar yorum yazıp ve bunları puanlayabilir. Web sayfasının tasarım amacı; projenin amacı doğrultusunda ve kapsamı çerçevesinde, eğitimciler için etkileşimli, zenginleştirilebilir, örnek olay tabanlı ve çevrimiçi eğitsel bir kaynak sunmaktır. Bu amaç doğrultusunda web sitesi ile ilgili aşağıdaki işlemler gerçekleştirilmiştir:

- Araştırmanın amaçları ve kazanımlarından site kullanıcıları haberdar edilmiştir.
- Örnek olay ve TPAB hakkında bilgilendirme yapılarak proje kapsamı açıklanmıştır.
- Kullanıcıların üyelik sistemi ile gözlemlerini dijital olarak da göndermesi sağlanmıştır.
- Kullanıcılara, gönderdikleri gözlemleri gözden geçirme ve düzenleme imkânı sunulmuştur.
- Site yöneticisi tarafından, gözlemlerin bir kontrol paneli aracılığıyla görüntülenmesi sağlanıp, yönetim paneli aracılığıyla gözlemlerin uygun etiket ve açıklamalarla örnek olay formatına dönüştürülerek örnek olay kütüphanesinde yayınlanmıştır.
- Kullanıcılara, yayınlanan örnek olayları oylama ve bunlara yorum bildirme imkânı sunulmuştur.
- Site yöneticilerinin yapılan yorumları kontrol paneli aracılığıyla gözden geçirmeleri ve onay verme/silme/düzenleme işlemlerine olanak sağlanmıştır.
- Örnek olaylar için hızlı (anahtar kelime ile) ve gelişmiş arama (içerik, yazar, etiket, alan, yerleşim, vb. seçimli) özellikleri sunulmuştur.
- Kullanıcılara, örnek olayların arama sonuçlarının, belirli kriterlere (Başlık, Oylama Puanı, Okunma Sayısı, Eklenme Tarihi, vb.) göre artan/azalan olarak sıralatmasına imkân sağlanmıştır.
- Kullanıcıları geri bildirim sürecine dâhil etmek için örnek olaylar altına "Hata Bildirme" linki ve formu yerleştirilmiştir.
- Web sitesi kullanıcılarının site ve araştırma hakkında görüş ve önerilerini almak için "İletişim" menüsü altında bir iletişim formu sunulmuştur.

Şekil 3. Örnek Olay Kütüphanesinin Kullanıcı Ara Yüzü



YÖNTEM

Bu araştırmanın amacı, öğretmenlerin FATİH Projesi uygulamalarını kullanma durumlarının öğretmen adayları tarafından gözlemlenmesi ile oluşturulan etkileşimli-çevrimiçi bir örnek olay kütüphanesine yönelik öğretmen adaylarının görüşlerinin incelenmesidir. Bu amaç doğrultusunda, oluşturulan örnek olay kütüphanesi Coğrafya Öğretmenliği bölümündeki öğretmen adaylarının öğretmenlik uygulaması dersinde kullanılmıştır. Daha sonra, örnek olay kütüphanesinin eğitsel olarak işlevselliğine yönelik öğretmen adaylarının görüşlerine başvurulmuştur. Bu kapsamda elde edilen veriler nitel araştırma yöntemi prensiplerine göre analiz edilmiştir.

Araştırma Süreci ve Katılımcılar

Araştırmanın katılımcılarını Necmettin Erbakan Üniversitesi Coğrafya Öğretmenliği son sınıfta öğrenim gören öğretmen adaylarından oluşmuştur. Öğretmen adayları örnek olay kütüphanesini 2013-2014 eğitim-öğretim yılı bahar döneminde öğretmenlik uygulaması dersi kapsamında kullanmışlardır. Öğretmen adaylarından örnek olayları inceleyip yorumlamalarına ek olarak sitede bulunan gözlem formunu okullarda anlattıkları dersle ilgili kendileri için doldurmaları istenmiştir. Araştırmanın katılımcılarını uygulama sürecinde çalışmalara katılımda gösterdikleri istek ve yazdıkları yorumlar dikkate alınarak çok istekli olanlardan 4, orta düzeyde istekli olanlardan 4 ve isteği düşük olanlardan da 3 kişi olmak üzere 11 kişilik grup oluşturmaktadır. 11 öğretmen adayının 5'i erkek 6'sı kızdır.

Veri Toplama Aracı

Araştırma kapsamındaki veriler öğretmen adaylarından yarı-yapılandırılmış görüşme formları kullanılarak toplanmıştır. Görüşme formu, öğretmen adaylarının oluşturulan çevrimiçi örnek olay kütüphanesinin içeriği hakkındaki düşüncelerini daha detaylı bir şekilde elde edebilmek için oluşturulmuştur. Görüşme formu, araştırmacı tarafından detaylı literatür incelemesi yapılarak hazırlanmıştır. Hazırlanan formda eğitsel işlevsellik bölümü ile ilgili 5 açık uçlu soru yer almaktadır. Bu sorular şu şekildedir:

- Bir öğretmen adayı olarak web sitesinde yer alan örnek olayları incelemenizin size faydalı olduğunu düşünüyor musunuz?
- Öğretmenliğe başladığınızda incelediğiniz örnek olayların sizlere nasıl yol göstereceğini düşünüyorsunuz?
- Web sitesindeki örnek olayları inceledikten sonra öğretmenlikte kullanacağınız pedagojik yaklaşımın değiştiğini düşünüyor musunuz?
- Derslerinde teknolojiyi etkin bir şekilde kullanan öğretmen ilginizi çekti mi? Staj öğretmeninin kullandığı bu yöntemi öğretmenliğe başladığınızda kullanmayı sizde düşündünüz mü? Neler söylemek istersiniz?
- Web sitesindeki örnek olayları inceledikten sonra öğretmenliğe başladığınızda FATİH Projesi teknolojilerini derslerinizde kullanma konusunda neler düşünüyorsunuz?

Verilerin Analizi

Yarı yapılandırılmış görüşme formlarından elde edilen veriler, betimsel analiz ile incelenmiş olup ve verilerin kodlanmasında NVivo 10 programı kullanılmıştır. Betimsel analizde amaç, görüşmeler sonucunda elde edilen bulguları düzenlenmiş ve yorumlanmış bir biçimde sunmaktır. Görüşülen bireylerin görüşlerini çarpıcı bir biçimde yansıtmak amacıyla doğrudan alıntılara sık sık yer verilmektedir. Betimsel analiz dört aşamadan oluşmaktadır(Yıldırım & Şimşek, 2011):

1. Betimsel analiz için bir çerçeve oluşturma,
2. Tematik çerçeveye göre verilerin işlenmesi,
3. Bulguların tanımlanması,
4. Bulguların yorumlanması

Bu amaçla görüşme formlarından elde edilen veriler örnek olay kütüphanesinin eğitsel işlevselliği ile ilgili daha önceden belirlenen temalar altında kodlanarak analiz edilmiştir. Ortaya çıkan bulguları çarpıcı bir şekilde yansıtmak amacıyla doğrudan alıntılara yer verilmiştir. Veri analizinde her bir öğretmen adayına analizi ve bulguları yorumlamayı kolaylaştırmak amaçlı bir kod atanmıştır.

BULGULAR

Görüşme formundaki ilgili sorular için elde edilen verilerden ulaşılan tema ve alt temalar Tablo 1'de verilmiştir.

Tablo 1. Örnek Olay Kütüphanesinin Eğitsel İşlevsellik Durumu

Temalar	*Alt Tema*	*f*	*%*
Öğretmen Adayı Olarak Sağladığı Fayda	Ben Olsam Bu Durumda Ne yapardım Düşüncesi	4	10.26
	Gelecekteki sınıf-içi problemlere yönelik farkındalık	3	7.70
	Nasıl Bir Öğretmen Olunacağına Dair Planlar	2	5.13
	Staj Okulunda Uygulama	2	5.13
Öğretmenlikte Akıllı Tahtaları Kullanma	Hizmet-içi Eğitime İhtiyaç Öngörüsü	1	2.56
	Kullanım Konusunda Öz-Güven	1	2.56
	Teknik Bir Sorunu Gidermede Yetersiz Hissetme	1	2.56
Öğretmenlikteki Pedagojik Yaklaşım	Derslerin Nasıl İşlenmesi Gerektiği Konusunda Farkındalık	3	7.70
	İletişim Şeklinin Nasıl Olması Gerektiği	5	12.82
	Yapılandırmacı Yaklaşımı Benimseyen Öğretmenin Dikkat Çekmesi	1	2.56
Örnek Olayların Öğretmenlikte Sağlayacağı Fayda	Gelecekte Karşılaşılacak Probleme Çözüm Üretme	3	7.70
	Materyalleri İşlevsel Kullanma Farkındalığı	2	5.13
	Yapılan Hataları Tekrarlamama	5	
Teknolojiyi Kullanan Öğretmenin Dikkat Çekmesi	Dersi Planlama Yöntemini Örnek Alma ve Uygulama	3	7.70
	Kullanılan Yazılım Farkındalığı	1	2.56
	Teknolojik Araç Çeşitliliği	2	5.13
Toplam		**39**	**100**

Örnek olay kütüphanesinin eğitsel işlevsellik durumu Tablo-4.19 ve Şekil-4.14 gösterilmiştir. Verilerin analizinden ulaşılan temalara ilişkin örnekler aşağıdadır:

"…Bana gerçekten faydalı oldu mesela oradaki örnek olayı okuyup kendim buradan ne çıkarıyorum yani bu konu hakkında ben olsam ne yapardım şeklinde düşünmemi sağladı.." [12Ady_COG_E]- (Öğretmen Adayı Olarak Sağladığı Fayda/Ben Olsam Bu Durumda Ne yapardım Düşüncesi)

"…ilerde göreve başladığımız zaman aynı problemlerle karşılaştığımda belki onlara yardımcı olabilir bu örnek olaylar..." [23Ady_COG_K]-(Öğretmen Adayı Olarak Sağladığı Fayda/Ben Olsam Bu Durumda Ne yapardım Düşüncesi)

*"…faydalı olduğunu düşünebilirim ya tecrübesizliğime az da olsa katkısı olabilir ve kesinlikle okudukça ben okudukça böyle olmam diyor insan…"[*20Ady_COG_E]-(Öğretmen Adayı Olarak Sağladığı Fayda/Nasıl Bir Öğretmen Olunacağına Dair Planlar)

"…uygulama okulunda ders anlatırken okuduğum ee örnek olaydaki öğretmenin ders anlatış şeklindeki gibi konuyu anlattım..." [31Ady_COG_K]-(Öğretmen Adayı Olarak Sağladığı Fayda/Staj Okulunda Uygulama)

"…ya akıllı tahta konusunda biraz hani uygulamaya dönük bir şey sadece örnek olaylarla okuyarak değil de eee bunun bir eğitimini ya da en azından bir hizmet içi eğitim ya da bir şekilde onda eğitimi almalıyız diye düşünüyorum..." [35Ady_COG_E]-(Öğretmenlikte Akıllı Tahtaları Kullanma/Hizmet-içi Eğitime İhtiyaç Öngörüsü)

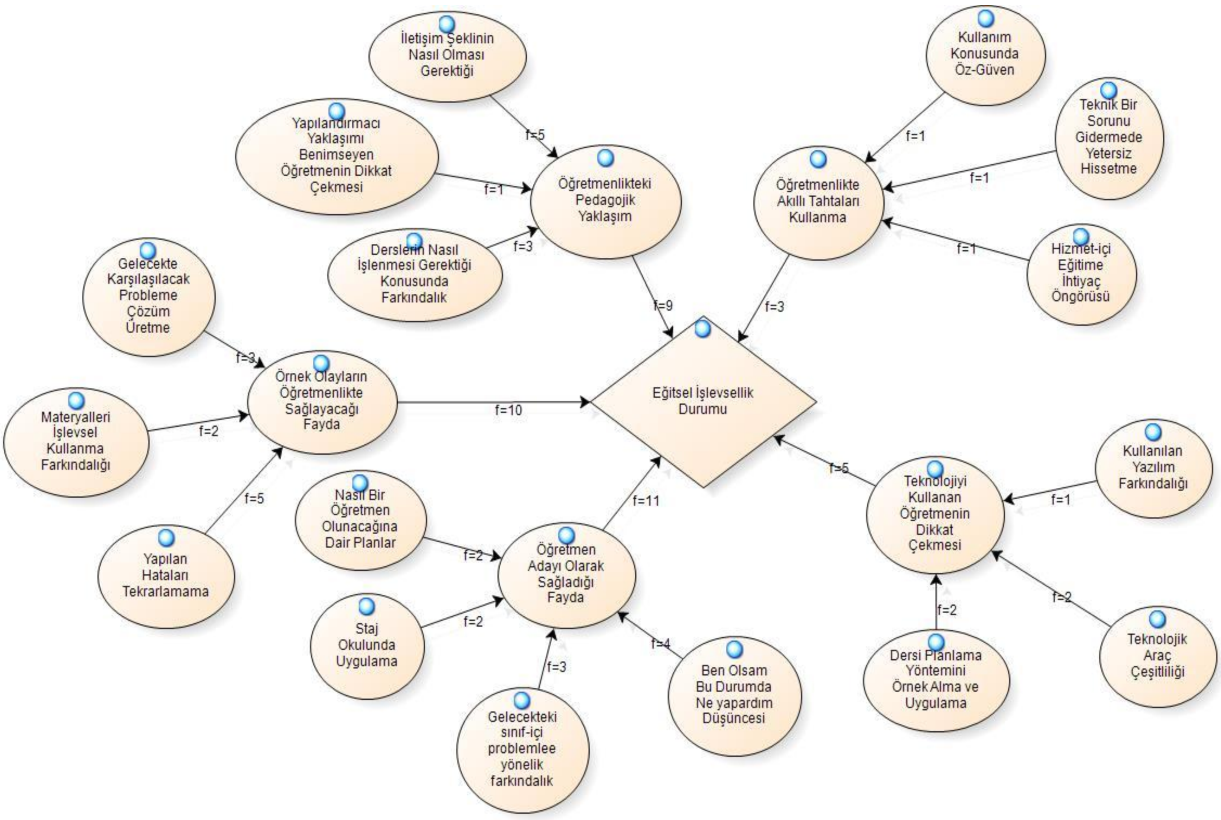
"…evet hatta şu an oldu bile diyebilirim çünkü gerçekten hani bizim aldığımız pedagojik bir eğitime göre çok ters ya da hiç uygun olmayan öğretmenlerde var gayet güzel uygulayan öğretmenler de var hem kendime örnek alıyorum hem arkadaşlarımın yorumlarına bakarak da ne yapılması gerektiğini öğrenebiliyorsunuz…"[30Ady_COG_E]-(Teknolojiyi Kullanan Öğretmenin Dikkat Çekmesi/Dersi Planlama Yöntemini Örnek Alma ve Uygulama)
"…en basitinden bu bizim okullarda mesela öğretmenin kendi bilgisayarından yani sınıfın içindeki tüm öğrencilerinin bilgisayarına ulaşabilmesi adına belli programlar var ben mesela bunun çok faydalı olduğunu düşünüyorum. Öğretmenin laboratuvarda sürekli dolaşması dersi mi anlatacak laboratuvarda mı dolaşacak bunlar çok sıkıntı yaratır o yüzden kendi bilgisayarından hepsinin neler yaptığını adım adım takip edebiliyor örneğin böyle bir programı bende kullanmak isterim öğretmen olduğumda..." [3Ady_COG_K]-(Teknolojiyi Kullanan Öğretmenin Dikkat Çekmesi/Kullanılan Yazılım Farkındalığı)
"…teknolojiyi etkin kullananlar dikkatimi çekti ama şöyle dikkatimi çekti hani derste zaten teknolojiyi kullanmamız gerekiyor ama teknolojiyi hani etkin kullananları gördüğümüz zaman demek ki okulun imkânları yeterliymiş hani okulun imkanlarına yönelik bir yorum yapabildik. Bende öğretmen olduğum zaman kullanmak isterim tabi ki.." [19Ady_COG_K]- (Teknolojiyi Kullanan Öğretmenin Dikkat Çekmesi/Teknolojik Araç Çeşitliliği)

Şekil 1. Örnek Olay Kütüphanesinin Eğitsel İşlevsellik Durumu



SONUÇ

Bu araştırma, öğretmenlerin FATİH Projesi uygulamalarını kullanma durumlarının öğretmen adayları tarafından gözlemlenmesi ile oluşturulan etkileşimli-çevrimiçi bir örnek olay kütüphanesine yönelik öğretmen adaylarının görüşlerinin incelenmesi ile yapılmıştır. Bu amaç doğrultusunda, oluşturulan örnek olay kütüphanesi Coğrafya Öğretmenliği bölümündeki öğretmen adaylarının öğretmenlik uygulaması dersinde kullanılmıştır. Daha sonra, örnek olay kütüphanesinin eğitsel olarak işlevselliğine yönelik öğretmen adaylarının görüşlerine başvurulmuştur. Çevrimiçi kütüphanede yer alan örnek olayların incelenmesi öğretmen adaylarında "ben olsam bu durumda ne yapardım düşüncesi", "gelecekteki sınıf-içi problemlere yönelik farkındalık", "teknik bir sorunu gidermede yetersiz hissetme", "öğretimde kullanılan yazılım farkındalığı" oluşmasını sağlamıştır. Öğretmen adaylarının göre empati ve farkındalık düzeylerine katkı sağlayan çevrimiçi etkileşimli web sayfası öğretmen eğitiminde kullanılabilir.
